Some people have been rather frightened lately. They have read in the daily press certain sensational statements and rumours as to new discoveries, and, as these discoveries seem to touch on the origin of life, they are disturbed.

The writer reassures them by saying:—

But, after all, the position is really very simple and natural. We have known, for a very long time, that the family of life includes many very different members. We have known that if we trace the stream of life backwards along the line of evolutionary development, we descend from man and the higher animals to more lowly forms of life, until we lose the stream in a world of very tiny and very lowly organisms. As our means of exploring become more efficient, as our microscopes become more powerful and our technique more subtle, we find we can trace the stream further and further back. We finally lose it in a region of forms so lowly as hardly to be recognised as living matter, and lose it there, not because the stream comes to any abrupt end, but because we have not the power to trace it further.

After tracing life from its highest manifestation to its lowest, Mr. Tarrant reverses the process, stating:—

If on the other hand, we start in the realm of purely inanimate chemical substances—the chemical element of which all things, living and non-living, are made—we find these substances building themselves up, in obedience to natural laws, into more complex compounds. Some few of these elements—carbon, oxygen, hydrogen and nitrogen—build themselves up into substances of very great chemical complexity, whose ultimate particles are comparatively large. Moreover, these more complex molecules have the property, sometimes of joining one to another almost without limit, and of joining on to themselves simple molecules from the world around, and so growing almost as do lowly forms of life. If we trace the upward development of the stream of chemical complexity, we lose it in a region of complex growing molecules—and we lose it there, not because it comes to an abrupt end, but because chemistry has not the power to trace it further.

The writer then asks,

Has science bridged the gap, and joined these two streams together? Have we now a continuous road, from one end of the scale to the other? It may be so—how strong or how faint is the evidence cannot be discussed here. What then?

Supposing science does bridge the gap,

Surely there is no need for alarm. For science is only doing in the laboratory what nature did on this earth in the dim past. Life on this planet arose, unquestionably, from some such development of inorganic elements into complex compounds, and from these to very rudimentary specks of living matter. This development was continuous. If we have learnt in our laboratories to reproduce some of the steps of this progress, is it a cause for alarm?

Once we realise the continuity of nature, once we abandon the idea of change by catastrophic leaps and sudden discontinuities, then such a development as this must be recognised as the most natural possible. Such discoveries are as blunted at most be greeted with pleasure, as we see one more piece of the puzzle of nature fit into its place under the hand of man.

Mr. Tarrant asks in conclusion, what is

the hearing of this upon religion? His answer is:—

Surely only to confirm us in our wonder at the mystery of creation, and of man's ability to think God's thoughts after him. For the living cell, whether science can create it or not, is not the soul of man. A cell in the body of a man may go to form the brain with which he thinks the sublimest thoughts, or it may grow into a cancer which wrecks the whole bodily fabric. The man is more than a form of animate life.

Love, the choice between good and evil, sin, repentance, these are attributes of man, not of a simple living cell. These, and the religious experiences of man, are still there, unaltered, and there is no fact of biology or chemistry more real than these.

Let us then be re-assured. If science has shown the path from lifeless chemical element to living cell, what of it? Some such path must have existed for life to be on earth at all. And if science tells us a little of the way in which God works, does that mean there is no God?

Modern Indian Languages as Media of Instruction

The Calcutta University Commission does not think that the English medium of instruction in Indian schools and colleges is such a great handicap as it is described to be, writes Mr C. Bhattacharya in *The Progress of Education*.

Mr. Mayhew says that India is not the only country where a bilingual system of education is in vogue and seems almost to suggest that it is a necessary evil. For, was not the higher education in Europe conducted for many years mainly through the medium of Latin? Newton wrote his *Principia* in Latin. The German philosopher Leibnitz wrote his books in the same language or in French. Again every fresh revival of the study of the classics in England gave a new impetus to original thinking and hence to the development of the indigenous literature of the country. The Latin medium was not a handicap in these countries. Why should English be a handicap in India? On the contrary, it should prove itself to be a continual source of inspiration to the stagnant minds of India.

The writer controverts these views by observing:—

The mistake in this argument lies in confusing English as a medium of culture and English as a medium of instruction. The study of the former shall be ever supported. It is necessary in order to broaden our minds and especially in order that we may come into contact with western science and culture. The English literature is full of virile thought, breathing liberty and freedom. Who will not profit by its study? It was Hamdhan Ray supported the Anglicists. But for this, it is enough if the foreign language is under-

stood. The foreign medium is no necessary accompaniment of bilingualism though the latter may be essential for a people whose mother tongue is in an undeveloped condition. Mr. Michel West says in "Bilingualism": "The English student of Chemistry is taught in his mother tongue, but is not cut off from the fountainhead of German chemical research".

He strengthens his argument by citing the example of Japan.

The history of Japanese education of the last fifty years shows what a really serious attempt by a sincere Government can do for the improvement of an undeveloped language. Even today Japanese is a crude tongue. It did not possess any alphabet before the seventh century when it accepted the Chinese alphabet. It is however, such a cumbersome and immobile vehicle for expressing ideas, that it was almost next to impossible to adapt it for the expression of modern thoughts. In the most authoritative dictionary of the Chinese language published recently, the lexicographer has used forty-seven thousand, two hundred and sixteen characters. It can be easily imagined what a difficult task the Government of Japan has performed in making ninety-five per cent of the population literate in less than fifty years. It was in 1870 that scholars were for the first time sent to Europe to bring the culture of Europe to Japan. The first University of Japan was established in 1877. At first foreign teachers were engaged for instruction in higher education. Gradually, they were replaced by Japanese scholars; and at present in the whole of Japan, there are not more than eight or nine European scholars engaged in the domain of higher education. But though the study of some foreign language is compulsory in all secondary and collegiate education, the medium of instruction is almost everywhere Japanese. At first, the work of translation was difficult, owing to the immobility of the Chinese characters, to remove which many Japanese educationalists are thinking of replacing the Chinese by the Roman characters. (*Vide Japanese Education*, by B. Kikuchi).

The position is much better in India so far as our principal languages are concerned though not so far as the inclination of the rulers is concerned.

The Indian dialects, at least those that owe their origin to Sanskrit, have got a richer ancient literature than Japanese. Marathi, Kanarese and Bengali boast of lyrics and ballads mainly on religious themes dating back to a thousand years. Moreover, Sanskrit, the mother of all these languages is a vast store-house of words already in use and is a wonderfully prolific mint that can turn out any number of new words required for new purposes. There are books on astronomy, philosophy, chemistry, algebra, and medicine that were studied in India from generation to generation. One has only to look over the pages of Dr. Seal's "Positive Sciences of India," to be convinced of the truth of this statement. As a witness said before the Calcutta University Commission, "Even the most highly developed modern languages and literatures were at first no better than Bengali. In their case

development was obtained by use. It will be obtained in our case too in the same way." (C. U. R. Page 258).

Complete Political Independence Versus Dominion Status.

Lala Lajpat Rai says in *The People* that no self-respecting Indian could be so base as not to desire complete political independence for his country in the same sense in which the other countries of the world have it. He then asks: "But is there any country in the world which is really absolutely independent? Every country has some limitations on its 'complete independence.'" This is true. When *The Modern Review* says that it is for complete or absolute independence, it only uses popular language, not scientific language. It is prepared, of course, to accept the human limitations on the independence of the freest countries—neither more nor less. Lalaji makes a fair enumeration of the reasons of the seekers of independence for their choice, and observes:—

Every Indian must sympathise with this point of view. If India were free to-day to make her choice, she will not be disposed to join the British Commonwealth. But she is not free. She is included in the British Empire. The question before her then resolves itself into one of expediency,—not hypocritical expediency but one of practical wisdom. Even Mr. Srinivas Iyengar says he would accept Dominion Status if it was granted at once. Some others hold that we should work for Dominion Status as a stepping stone to Complete Political Independence. I do not agree. I am of opinion that we should honestly, wholeheartedly and sincerely work for Dominion Status whether we get it immediately or in the next few years. I say so, because to me in our present circumstances, that seems to be the path of practical political wisdom.

It has been stated more than once in this journal that its editor does not oppose the movement for dominion status, because that status may lead on to independence. But we have not joined any movement either for dominion status or for independence, for reasons which seem to us adequate. We do not see any practicable way to the attainment of independence. Hence we do not join any Independence League. But as the desire for independence is ever present in our mind and has become a sort of creed, we cannot join a movement for dominion status which we do not like without some mental reservation; because whatever we do we want

to do whole heartedly. In fact, it was this attitude which, among other reasons, prevented the present writer from standing for election to the legislature when requested by a representative of the leaders of his district to do so with the assurance that the election would be unanimous and uncontested. Thus the position of the writer is that of a mere journalist, or, in plainer language, that of an armchair onlooker and critic. It is hoped that this bit of egotism will be excused, as it has been considered necessary to define our exact position. Lala Lajpat Rai gives the following reasons for working for dominion status:

(1) That Dominion Status, as at present understood, secures to us full independence and freedom to remain within the Commonwealth as long as it is in our interest to do so.

(2) That the partnership of the Commonwealth does not mean voting by population and that in case any dominion finds that it is out-voted by virtue of race prejudice or other similar considerations, it is free to dissolve the partnership.

(3) That the first task of the Indian Nationalists is to take the Indian States with them. No attempt in this direction has the ghost of a chance if you declare Complete Political Independence as your immediate goal. That a combination of the British Government and the Indian States against you will be a formidable obstacle in the way of your political progress.

(4) That the cry of complete Political Independence leads people away from constructive political and social work and is a disturbing element in the nation-building departments of the country.

(5) That it gives the British an excuse for repression and suppression. I recognise that in the case of subject peoples repression and suppression is sometimes more beneficial to the political freedom than petty conciliations and superficial concessions. But even then in the present circumstances of India with our economic helplessness staring us in the face at every step, the balance of advantage lies in not giving the British an additional excuse for excessive repression and suppression.

(6) That any practical active steps towards Complete Political Independence cannot be taken except in secrecy and through revolutionary violence. The preachers of non-violence may talk as much as they like, but they will not advance an inch towards the goal unless they actively grapple with the problem of how and by what means?

(7) That the dream of an Asiatic Federation is a mere fantasy, and we cannot build upon it.

These reasons would have sufficed for us, too, to work for dominion status, if we had not independence on the mind.

India's Three Great Words

Under the pen name of "Calamns," a writer in the London *Inquirer* quotes

Rabindranath Tagore as saying that India is "incurably religious." According to this writer, the Soul of India is the belief that spirit is the great reality. Atma alone is real. In all things there dwell the Supreme.

Referring to Mr. J. C. Winslow's book, "The Indian Mystic," the writer says:—

Mr. Winslow takes three great words of Hindu religion and shows that behind each of them is an idea that may lead in a deepening of the Christian's religious consciousness.

The first word taken is Bhakti.

This is the Way of Devotion Bhakti is a beautiful and rich term, as Dr Stanley Jones points out in the "Christ of the Indian Road" and Mr. Winslow shows us something of its beauty and richness. Bhakti is that loving devotion to God which has proved the most dynamic force in the religious life of India. It is good to learn from a Christian book that India has a noble conception of God "as One who loves mankind and thirsts for the response of man's love," and that "His most characteristic name is Bhagavan, the Adorable One the supremely Lovable, who gives Himself in love to man."

The second great Indian word is Sannyas.

Sannyas means the Way of Renunciation, which has always made a potent appeal to the heart of India. The sannyasi is a person who has given up everything to live the holy life. The true sannyasi can always win the hearts of the Indian people. Western civilisation, with its frank materialism, has no attraction for the Indian. Amassing wealth simply does not interest him. To quote Holland ("The Indian Outlook"):—

"What his soul worships instinctively, passionately, is poverty. Not the master of industry with his millions, not the Boss of Big Business, has roused India's enthusiasm and thrilled her imagination; this has been done only by the sannyasi, going out from house and home, with no possession but his begging-bowl, to be alone with God." Gandhi's bare feet and simple garment are no small part of the hold he has on Indian reverence.

The third great word is Yoga.

Yoga is the Way of Discipline. The word covers a systematic training in the art of contemplation.

An Indian Christian once told me a story about an orthodox Hindu friend of his. The Christian prevailed on the orthodox Hindu to attend a Christian service. Later he asked him what he thought of it. "It interested me very much," said the orthodox Hindu, "but why do you get up and sit down so much? It is all getting up and sitting down. To me it seems more like drill than worship. But perhaps that is why you call your services religious exercises?" That is how it strikes the Hindu! India is one day going to teach the Christian how to be still.

"Be still and know that I am God," said the Psalmist. "Study to be quiet," said Paul. India knows what these words mean.

At one time the Christian only sneered at the Yoga systems of India. To-day a Christian writer can say that Patanjali's system (to mention one

of the most important) is set forth with considerable psychological acumen, and that it might be described in modern terminology as a method for deliberately isolating and its powers.

India, then, has given us three great words: Bhakti, Sannyas, and Yoga but the greatest of these is Bhakti.

A Hindu Publisher in America

Mr. Hari G. Govil, mentioned in the previous note as the director of the India Society in America, is editor-in-chief of the *Oriental Magazine* and a promising Hindu publisher in America. The name and address of his firm are Hari G. Govil, Incorporated, Oriental Publishers, Times Building, New York City. He was born at Bikaner, Rajputana, and educated at Benares. He went to America in 1920 to study electrical engineering at the Massachusetts Institute of Technology. When Mr. Ram Lal Bajpai, who has sent us a character sketch of Mr. Govil, met the young Indian student, "his application and certificates had already been sent. When it came to the question of money, we found that he actually had five cents in American money and two English pennies and nothing more. When we enquired just how he expected to enter any kind of a college with no money, he assured us with confidence that he was going to work and earn the money." This he did. He subsequently changed his plans, bought an old press for about thirty dollars, repaired it himself, and worked on it far into the night experimenting with printing. Thus he produced his first publication, the *Oriental Magazine*.

Mr. Govil was helped to go to England by Jajodia Brothers, Birla Brothers, Shivaprasad Gupta of Benares. He went to America from London because Sarabhai gave him the passage money.

systems. One of the latest books dealing with these systems is *A History of Socialist Thought* by Dr. Harry W. Laidler (New York, Thomas Y. Crowell Company, 1927. 250 dollars). Reviewing this work in the *Political Science Quarterly* of New York, Professor P. F. Brissenden of Columbia University gives the reader to understand that socialism has had a very long history—"from the ethico-religious Utopias of such Old Testament prophets as Amos and Hosea (700-800 B. C.) to the diluted Communism of the Russian Bolsheviks (A. D. 1927).

"Between the prophets and the Bolsheviks are the Utopias of Plato, More and Bacon, of the French Utopian Socialists, Babeuf, Cabet, Saint-Simon, Fourier, Louis Blanc, Proudhon; of Brisbane, Hertzka, Morris, Bellamy and Wells; the socialism of all socialisms—that called Marxian; Fabian Socialism; the socialism of the German Social Democracy; Revisionism, Syndicalism; Guild Socialism; State Socialism; Socialism of the Chair; Christian Socialism."

There is also post-war socialist thought. There are altogether fifty-seven varieties of socialism.

Russian Communism

There are some admirers of Russian Communism in our midst. They may or may not have read "*Marx and Lenin: The Science Revolution*" by Max Eastman (Albert and Charles Boni, New York). The author wants "to show how to make a communist revolution." So his sympathies are with the Communists. Yet, according to the *New York Nation*,

We are bound to ponder certain of Mr. Eastman's observations by the way: that "wholesale curtailments of liberty and violations of their own ultimate ideal of social relations are a necessary and intrinsic part of the plan of action of all scientific revolutionists"; that the essence of the Russian political situation is the unshakable dominance of the Communist Party, which holds "a position in the new state not unlike that occupied by the personal sovereign in the old"; that the most unsatisfactory feature of the Russian experiment is the failure to establish a great system of education, in place of which has been set up "this great solemn fetish of dialectic materialism, which is nothing but the old shoes of Almighty God"; and that the second most unsatisfactory feature is the absence of a direct and simple purpose "to see to it that the proletarian dictatorship and the collective ownership of the means of production shall create to the full extent possible at any stage of its development, a free and true human society." Alas! After ten years here in another full-sized serpent in the garden.

Lajpat Rai's Gift for a Consumptive's Hospital

Lala Lajpat Rai has given Rupees nun lakh and collected about another lakh for a consumptive's hospital to be named after his revered mother Srimati Gulab Devi. Nothing more need be said than that the act is characteristic of the man.

Hindu Mahasabha Resolutions on Removal of Untouchability

It is satisfactory to note that the following resolutions were passed at the eleventh session of the Hindu Mahasabha held at Jubbulpore in April last :—

1. This Hindu Maha Sabha declares that the so-called untouchables have equal rights with other Hindus to study in public schools, to take water from public wells and other sources of drinking water, to sit with others in public meetings and to walk on public roads. The Maha Sabha calls upon all Hindus to remove such restrictions as may be existing anywhere at present in the way of the so-called untouchable Hindus exercising these rights.

2. This Maha Sabha declares that the so-called untouchables are fully entitled to have Dev Darshan, and the Maha Sabha calls upon all Hindus in general and all Hindu Sabhas in particular to provide the same facilities for Dev Darshan to them as are enjoyed at present by other Hindus.

3. This Maha Sabha calls upon Purohitas (Priests), barbers and washermen to offer their services to the so-called untouchables also.

4. This Hindu Maha Sabha is of opinion that every Hindu to whatever caste he may belong has equal social and political rights.

5. This Maha Sabha appeals to all Municipal Boards to provide healthy quarters to the so-called untouchables specially the sweepers and directs the local branches of the Hindu Maha Sabha to draw special attention of their Local Boards towards this matter.

6. This Maha Sabha looks upon the practice of nomination of the representatives of the depressed classes by the Government to the Local Bodies, Provincial Councils and the Assembly as most harmful and injurious to the true interests of the country and considers that this practice will become a source of creating a great gulf in the near future between other Hindus and the so-called untouchable classes. In the opinion of the Maha Sabha the right course to stop this practice is to put forward and back proper candidates belonging to the so-called untouchable classes to the elected bodies named above.

7. This Mahasabha emphatically protests against the so-called Adi Hindu movement started by some self-seeking persons with a view to create division between the Hindu Community and wars the so-called untouchable brethren against

the dangers of falling a victim to this harmful propaganda and calls upon them to remain faithful to and well wishers of their ancestral Hindu faith.

A resolution, strictly speaking, is something which one resolves to do, is determined to do. Therefore, all members of the Hindu Mahasabha and all others who follow its lead are bound as a matter of sincerity and truthfulness to act up to these resolutions. They should not remain mere paper resolves.

Nomination of representatives of "depressed" classes is undoubtedly undesirable from the nationalist point of view. But it is not quite accurate to say "that this practice will become a source of creating a great gulf in the near future between other Hindus and the so-called untouchable classes." *The gulf was already there before any "representatives" of these classes were nominated.* What the practice of nomination is likely to do is to *sciden and perpetuate* the gulf. It will not do to throw all the blame on Government. Orthodox Hindu society has been for centuries wicked and unrighteous in its treatment of the so-called untouchable classes, and this has been the original cause of the gulf.

We are against the Adi Hindu Movement. But we do not think it is correct to speak of *creating* division in the Hindu community. The division already exists. What the Adi Hindu Movement may do is to make the division rigid and to perpetuate it. This cannot be prevented by mere paper resolutions. The so-called Adi Hindus must in practice be treated exactly as the social equals of the Brahmins. Then alone will the former remain faithful to and become well-wishers of their ancestral Hindu faith. Now that all classes and ranks of people have become self-conscious, the Hindu community must consider itself doomed unless it can take the wind out of the sails of Mosalman, Christian and bureaucratic propagandists by becoming truly democratic and righteous in its social economy.

An Object Lesson to India

Under the above heading *The Young East* of Tokyo for September, just received, reproduces the following editorial from the *Osaka Mainichi* (English edition):

On August 23, 57 years ago (counting from 1929) a proclamation was issued by the Government declaring all the subjects in the Empire equal. It was an epoch-making event. The proclamation

for once and all swept aside the traditional class distinctions that would promote the caste idea and hinder the national progress.

The samurai and common people classes became nominal. It created a new and wider world for the masses: anybody was free to do anything without fear of being subjected to unprincipled prejudices because of the long standing distinctions. Swarms of the common people class seized the opportunity and proved the sagacity of the proclamation.

But tradition persists: a tradition that has had a life of many centuries could not be pushed aside with just one proclamation. People hated the proclamation with cheer, but enough of class prejudice remained. The samurai class would not so easily condescend to mingle with the common people class: much of the old-time haughtiness lingered in their minds that appeared to be making desperate efforts to maintain its ground.

To-day the traces of this traditional class distinctions may be stated as having entirely gone. We have seen sons of the poorest farmer risen to an exalted position in the Government; sons of the smallest storekeeper have climbed up to commanding places in army, navy or business circles. Nobody thinks it strange; everybody regards the fact as inspiring.

It is because of this equal opportunity to all this country has been fortunate to find many men of ability rare in all fields of activity. The absence of a caste spells progress and Japan has experienced it.

The Young East commends these paragraphs to the consideration of its Indian readers. We hope all Indians will seriously reflect on the lesson taught by the Japanese proclamation and its results.

It is not merely orthodox Hindus who are in favour of keeping up caste distinctions. The British Government seeks to perpetuate caste in various ways, which need not be enumerated.

Among other things the *Osaka Mainichi* states that "sons of the smallest storekeeper have climbed up to commanding places in army, navy or business circles." But the British rulers of India have divided our people into military and non-military races!

Two Reports of the Same Interview

The following extract is taken from *The Bengalee*:—

In the report of an interview with the eminent physicist, Prof. Sommerfeld, he is said to have observed:

According to the "Statesman"—

"There is real independent spirit of science in India as seen from the work of Dr. Raman of Calcutta, Dr. Saha of Allahabad and other famous scientists."

According to the "Englishman"— "The real independent spirit of science in India has produced some very important scientific work. There were such men as Prof. Raman of Calcutta, Prof. Saha of Allahabad, Prof. Bose, a nephew of Sir Jagadis Chunder Bose, and Prof. Bose of Dacca."

Why this omission in the *Friend India*? Is there again the hidden hand?

The difference in the two reports of the same interview seems mysterious. Even the two combined may not perhaps be a faithful transcription of what Professor Sommerfeld actually said. He is an eminent physicist, and therefore it would be quite natural for him to confine his observations to his own special branch of science. That may be the reason why there is no reference to the original work done by Indians in chemistry or botany, for example. But even as regards physics, the *Statesman's* report is more meagre than that of the *Englishman*. The name "Bose," whoever among scientists may hear it, seems taboo to the *Chewringhee* paper.

However, it does not much matter what the above-named papers choose to print or omit. Even novices in physics know that before Sir J. C. Bose turned his attention to the study of living matter he made many discoveries in physics, some of which are referred to with a diagram of one of the apparatuses invented by him, in the eleventh edition of the *Encyclopædia Britannica*, Vol. IX, p. 206, under the article *Electric Waves*. It is for this reason that in the Foreword to his "Collected Physical Papers" (Longmans) Sir J. J. Thomson writes:—

"Another aspect of these papers is that they mark the dawn of the revival in India of interest in researches in physical science; this which has been so marked a feature of the last thirty years is very largely due to the work and influence of Sir Jagadis Bose."

The Professor Bose of Calcutta referred to by the *Englishman* is Dr. Debendra Mohan Bose, who, with Prof. Meghnad Saha of Allahabad, represented India at the Volta Centenary in Italy last year; and Professor Bose of Dacca is Professor Satyendranath Bose, after whom and Professor Einstein the Bose-Einstein theory has been named.

Unanimous Demand and the Grant of Self-rule

The condition laid down by the British arbiters of India's destiny for the grant of a small measure of self-rule is that the people of India must make a unanimous demand and produce an agreed constitution.

For a country inhabited by 320 millions of people to make a unanimous demand in the literal sense of the term is an impossibility, particularly when the powers that be are bent on encouraging, if not also producing, diversity of opinion. In spite of this difficulty an agreed constitution has been produced which has been accepted by the main groups of politically minded Indians. Therefore, the bureaucracy have redoubled their efforts to make every insignificant group and every nonentity claiming to speak on behalf of a group appear more important and influential than the parties who have accepted the All-Parties Conference Report. Perhaps the natural reaction has been that in some quarters the support given to the Nehru Committee's report has been claimed to be more unanimous and nation-wide than it actually is.

These circumstances remind one of the very different circumstances under which other parts of the British Empire, spoken of as white men's lands, obtained self-rule. The British and French and original American inhabitants of Canada were not required to produce, nor did they actually produce an agreed constitution and make a unanimous demand of any sort before obtaining self-rule. Lord Durham's Report gave Canada self-rule. Before that the Canadians had rebelled against Britain several times (perhaps that was taken as a proof of their fitness for self-rule) and the British and French sections of the population were at logger heads with one another. As a matter of fact, therefore, unanimity among Canadians, either literal or practical, did not precede the grant of self-rule to Canada, it was self-rule which produced some harmony among the discordant elements of its population. Such was the case in South Africa, as also in Ireland. And in South Africa, even after the introduction of self-rule there is not much agreement in the political aims and ideals of the Boers, the British settlers and the original inhabitants of the country.

In India, therefore, the people's reply to the British demand of unanimity should be

that unanimity in its literal sense does not exist in Britain or any other country and practical unanimity can come only after the country has obtained self-rule and been relieved of the incubus of British domination just as Hindu-Moslem dissensions and riots can cease to a great extent only after the British third party has ceased to profit by such quarrels.

The Aga Khan on the Nehru Report

That parasitic lotus-eater, the Aga Khan, has contributed an article on the Nehru Report to the *London Times*. He suggests a constitution based like the association of free states like the old German Empire. Each of his proposed free states should be based, not on considerations of size, but religion and nationality, race and language, *plus* history.

The German Empire has ceased to exist; it is a republic now. So what is the use of an analogy borrowed from an empire which had the seeds of decay within it? Similarly, as the idea of basing polity on medieval theology and religious dogma has been given up even in Turkey and practically so in Afghanistan, why should the Aga Khan, who is neither a Muslim nor a Hindu, stand up for this exploded and effete old-world idea?

Lord Birkenhead's Resignation

India never liked Lord Birkenhead as her Secretary of State—we mean as a Secretary of State to tyrannise over her. So no Indian will even pretend to wipe his eyes to bid him farewell. Not that India can like any Secretary of State to play the absentee despot at a distance of 6000 miles from her shores. Just as drums as musical instruments are best appreciated when not played upon, so what would be best appreciated in relation to the office of Secretary of State for India would be its abolition together with the abolition of its caudal appendage the Council.

Campaign of Slander in U. S. A.

The vast disgusting scale on which unbridled campaigns of calumination are carried on previous to presidential elec-

tions may be surmised from the following passages in the *Literary Digest*:—

A Campaign of Character Assassination, in which the assassins, using for weapons whispers and innuendoes, strike at the Presidential candidates under the cowardly cover of anonymity, is causing embarrassment both to the Republican and the Democratic party leaders. It was whispered diligently especially during the pre-convention campaign, that Mr. Hoover's Americanism was open to grave suspicion, and that his wealth had been acquired none too scrupulously. Or, as the Republican *Harford Courant* puts it, he has been called virtually everything "from a traitor to a superior type of horse-thief." The whispers against Governor Smith, which are said to be particularly active and sibilant in the South seem to be chiefly concerned with two charges—that he is intemperate in his use of alcohol, and that as President his appointments and other official decisions would be subject to religious bias.

Responsible papers, while admitting that the well-known records of the two candidates both in their private and their public lives place them far beyond the range of such unscrupulous attacks, nevertheless deplore and denounce this degrading feature of the Presidential campaign. "To be privately traduced has been the common lot of men seeking high office in the United States," the *New York Times* (Dem) reminds us but it adds—"Every right-minded citizen must resent the employment of such unfair tactics. It is not a question of the effect upon a party or upon a candidate. What should be of concern is the general influence of all this upon political decency and the morale of voters." "If Presidential campaigns cannot be conducted on a plane above the gutter level, we may as well abolish the election and establish an executive dynasty," declares the *Cleveland Plain Dealer* (Ind Dem.). And it adds:

"Of all the despicable methods of campaigning this whispering device is the worst. It spreads poison and lets the poisoner escape. It is base slander which permits the slanderer to sneak away in the dark. While the civilized powers admit the desirability of abandoning poison gas in warfare, civilized society may well declare a war of extermination against this equally reprehensible method of political offence, which is aptly described as organized mud-slinging."

"The Literary Digest" and National Character Assassination

While the *Literary Digest* of America rightly disapproves of the "whispering" campaigns of slander directed against the presidential candidates, it had no hesitation to aid and abet the assassination of the character of the 320 million inhabitants of India by Miss Mayo, by reproducing some of the worst passages and pictures from her book "Mother India." It has not had the fairness to reproduce refutations of her lies

and half-truths by Hindu authors and journalists. Moreover, it generally manages to extract passages from Anglo-Indian newspapers which are calculated to lower India in the eyes of foreigners.

Rev. Ottama in Japan

The *Young East* of Tokyo writes:—

A news agency reports that a high Burmese priest of the name of Ottama arrived in Tokyo in August. He is a revolutionary leader. He belonged to the Independence Movement of India in 1906 and has ever since dedicated himself to the work of promoting co-operation between India and Burma in opposition to the English rule. He has been imprisoned several times, the latest of which was for four years, coming out in March this year.

This paragraph gives a wrong idea of the character of the movement with which the Rev. Ottama has been connected. He is *not* a revolutionary leader. He, like most Indian and Burmese political leaders, wants dominion status for India and Burma. If Britain will not agree to India's acquisition of such a political status, all sincerely patriotic Indians and Burmese must become revolutionaries with Independence as their goal.

Teaching Music in Bengal Schools

The proposal of the Director of Public Instruction in Bengal to introduce the teaching of music in boys' and girls' schools in Bengal has given rise to a controversy. Being unmusical ourselves we are not competent to take part in it. But there is no harm in our having our say from a commonsense point of view.

Musical is already taught in some boys' schools and more girls' schools. Most of the songs they are taught are Boogali songs, and that is only natural. And the teachers also are naturally for the most part Bengalis. As for instrumental music, it being practically the same all over India, it does not much matter from which province the teacher comes, provided the pupils are able to understand his oral instruction. But, for obvious reasons, most of the teachers of instrumental music also are Bengalis. We are not competent to judge of the relative merits of the musicians of different parts of India, and it is not necessary for our purpose to do so. Suffice it to say that as the schools are situated in Bengal, as the pupils to be

taught are Bengalis and as there are Bengalis sufficiently well-versed in vocal and instrumental music to be able to teach boys and girls, the question of importing musicians from outside Bengal does not arise. It is true Bengal did not produce Tansen, Manla Bakhsh and other famous musicians. But that does not mean that Bengal has not produced and does not possess musicians of such average ability as would suffice for the purpose of teaching school children.

Take the case of European countries. As the science underlying Indian music is practically the same all over India, so the science underlying Western music is practically the same all over Europe—and the technique is also essentially the same. It is an admitted fact that Britain has not produced musicians like Beethoven, Wagner, Bach, etc., of Germany. It is also an admitted fact that Germany excels in music. Britain does not. But these facts have not led to German songs being taught in England by German musicians instead of English songs by English musicians. The question everywhere is how to teach school children and who should teach them, not how to produce or import great experts like Tansen or Wagner.

Another point requires attention. In painting what interests beginners and other ordinary spectators must be the story or other subject of the painting;—understanding and appreciation of the technical excellence of paintings may come afterwards. Similarly, though in vocal music it is taken for granted that the *ragas* and *raginis* should be correctly rendered, what interests beginners and other ordinary listeners must be the verbal composition called the song and its meaning. For them the charm lies not merely in the air and tune but also (and perhaps mainly) in what the words of the song mean. Hence, when children are taught music, it is desirable to begin with songs in their mother-tongue. Bengal possesses plenty of songs in various *ragas* and *raginis* quite fit for children. We cannot say whether Hindi has plenty of such songs. We sometimes hear Bengali children taught by Hindustani teachers to sing Hindi songs of a somewhat erotic or amorous character in complete ignorance of their meaning. They should not be taught such songs. This can be avoided by teaching only Bengali songs to Bengali children. And obviously Bengali

teachers are the fittest to teach such songs.

When Killing is not "Himsa"

A calf in Mr. M. K. Gandhi's Asram had been suffering excruciating pain and in the opinion of Mr. Gandhi and others in touch with him there was no hope of its recovery. Therefore, to shorten and put an end to its sufferings he asked a doctor to inject poison into its body, which caused its death in two minutes. Mr. Gandhi argues that as the killing of the calf was meant to relieve it of pain and as the motive was altruistic, not selfish, the injection cannot be characterized as *himsa*. As orthodox Hindus look upon cows as sacred, the killing of any animal of the bovine species is in their eyes entirely different in character from the killing of other animals. What they think of Gandhi's act and reasoning they are best fitted to say. Others who object to the killing of any animal for food or other selfish purpose, except self-defence, must admit that the killing of the calf in question was different from other kinds of killing. Whether possibly Mr. Gandhi was in the least actuated by the subconscious or unconscious motive of relieving himself of the pain of witnessing the agonies of the calf, is a subtle question which we are not competent to solve. Nor can it be said that human judgment can arrive at absolute certainty regarding the incurable nature of any malady.

Mr. Gandhi has said that even in the case of human beings, when it is thought that they are suffering from a painful and incurable disease, it would be a religious act to kill them. We have not before us the actual words used by him, but we give from memory the gist of what he wrote. We do not consider the principle laid down by him satisfactory. The desire to relieve a patient's misery is apt to get mixed up with the unconscious desire of his relatives or other attendants to free themselves from the suffering caused by witnessing his pain and nursing him. The incurability or otherwise of a disease is a matter of opinion. It would be risky in the highest degree to accept the opinion of all local physicians combined, even were they unanimous, as infallible. The greatest physician in the world, if any were really entitled to be called such, may

hold and pronounce an erroneous opinion regarding the incurability of the disease of a particular patient. Patients have recovered from diseases pronounced incurable by physicians locally available. Next comes the question of the degree of suffering which it would be legitimate to end by killing. Then one has to judge how long before the probably natural death of a patient he should be killed. Suppose the best physicians locally available say that a patient suffering indescribable pain from cancer would die six months hence. When would it be right to kill him? Six months before the probable day of his death? Or six days, or six hours? If it be right to kill him at all, why allow him to suffer any preventable pain even for an hour?

All excruciatingly painful diseases do not render the patients entirely incapable of rendering some little service or other to other persons. Would it be right to deprive the world of this advantage by killing a patient before the moment of his natural expiry?

There is also the question of self-determination. The lower animals cannot say whether in spite of pain they would like to live. Human beings can generally do so. If a patient whom physicians, relatives and neighbours decide to kill for his benefit, hopes and desires to live, ought he to be killed? Take the opposite kind of case. Some curable diseases, from which many patients recover, often become so painful that the patients express a desire to commit suicide or to be killed. They do so because the agony becomes unbearable. Would it be right to fulfil their desire to terminate their connection with the body?

In the last place, it should be noted that pain is not unmixed evil. Apart from the fact that pain is nature's warning and is also often part of the curative process, it has a disciplinary value;—it chastens, purifies and humanises. At what point it ceases to have such value and becomes an unmixed evil which may and ought to be put an end to by killing the patient, we are not presumptuous enough to attempt to determine.

On the whole though we admit Mr. Gandhi's good intention and sincerity and courage of conviction, we unhesitatingly and definitely reject his doctrine, so far at least as it relates to human beings.

Protective Measures for the Simon Seven

Anglo-Indians and stay-at-home Brits bore no sparing themselves no efforts to create the impression that the vast majority of Indians are dying to co-operate with the Simon team. In fact the desire of most Indians to welcome and co-operate with them has been so plain to the white rulers of India that the timings of the arrival of the Simon Commission at Bombay and Poona were changed at the eleventh hour, the district magistrate of Poona refused even to let the leaders of the boycotters know the route which Simon & Co. would take, the Railway Station and roads in its neighbourhood were closed to the public, and the police permit required the processionists to keep 500 yards away from Poona Railway Station.

Ceremonation by Brahmin Priests in Cambodia

The new king of Cambodia was crowned on July 23 last. How Brahmin priests officiated at the ceremony is thus described by the special correspondent of the *London Times*.

"On the entry of the eight officiating Brahmin priests the King rose and seated himself on a low chair immediately in front of the throne-dais. The eight Brahmins approached and knelt around the Sovereign, representing the eight points of the compass. One after another they repeated the traditional prayer for the King's welfare, his Majesty turning his chair so as to face each priest as he spoke. During this ceremony the King, although a Buddhist, held in his hand the images of Vishnu and Siva, the 'Protectors of Cambodia',—a tradition of the old Vedic faith so deeply rooted in the country."

"Not such a Hypocrite"

"We did not conquer India for the benefit of the Indians. I know it is said in missionary meetings that we conquered India to raise the level of the Indians. That is cant. We conquered India as the outlet for the goods of Great Britain. We conquered India by the sword, and by the sword we should hold it. I am not such a hypocrite to say that we hold India for the Indians. We hold it as the finest outlet for British goods in general and for the Lancashire cotton goods in particular."—Sir W. Joynson, *Hicks, Home Secretary*.

"The Dial" on Tagore's "Fireflies"

The Dial, an ultra-modern American magazine, the mouth piece of the American and English "new" writers, notices Rabindranath Tagore's 'Fireflies' as follows :

These delicate moth-wings of elusive wisdom carry...the peculiar spiritual turbanity & serene detachment of the author...Limpid as water-colour vignettes they are characteristically East Indian in tone. Lacking the dramatic intensity of Blake's mystical aphorisms : lacking too the wistful hmnor of Chinese poetry : they convey to the mind a tender resignation, soft and insidious, like a diffused perfume, suspected rather poignantly inhaled.

Sir J. C. Bose's Seventieth Birth-day

The Hindu's benediction or prayer for long life is, "Live a hundred years." But in these days, the generality of Hindus do not live to be centenarians. So the biblical three score years and ten has come to be considered a long life in India, as in some other countries. But in the case of those who have led a useful life and are still active at seventy, we are, justified in wishing for and expecting a longer career of usefulness. Such a life has been that of Sir J. C. Bose. In about a month's time he will complete the seventieth year of his life. There may very well be public rejoicings on the occasion. In any case, it would be well if a function could be arranged at which his former students could meet him.

Reforms in Afghanistan

In the course of a recent important speech at Kabul the King of Afghanistan foreshadowed the formation of a Cabinet among the coming important reforms. His Majesty intimated that, as Sher Ahmad Khan, whom he had entrusted with the formation of a Cabinet, had failed to do so, he would himself for the present discharge the functions of a Prime Minister. The appointment of Ghulam Sadiq Khan as Foreign Minister and of Muhammad Wali Khan as Permanent Regent in the King's absence from the capital, were also announced. Other measures foreshadowed were the reform of Municipal Law and of the Judiciary, foundation of public libraries and factories, compulsory co-education of girls

and boys between the ages of 6 and 11 at Kabul and the introduction of European clothing at Kabul. In an important announcement of the subject of social reform the Amir of Afghanistan reiterated his well-known views on the emancipation of women. While denouncing superstitious practices, he affirmed his intention to carry out the true doctrines of Islam.

On the question of Purda, the King indicated his preference for wearing of modern veils in Kabul at least, while leaving it to the discretion of the people of the provinces to adhere to the old or new fashion.

A dramatic incident ensued when Queen Souriya and other Court ladies present removed their veils. The speech was delivered to a very large audience including all high Afghan officials and Foreign Diplomatic representatives, and was cordially received.

All this shows that a considerable proportion of Afghans is ready to welcome political as well as social reforms.

Mischievous use of Khilafat Movement

The Mussalman writes:—

In the course of the last three or four years we have several times expressed the opinion in these columns that the need for any Khilafat Committee or organization in India has altogether ceased. The Khilafat organization was started at a time when the British Government interfered with the affairs of the Ottoman Empire in a manner that imperilled, and subsequently destroyed, the Khilafat and the object of the Khilafat Committee was to keep up a movement for the restoration of that institution. The Sultan of Turkey, as the world is aware, was then the Khalifa, the spiritual head, of the Muslim world, being the warden of the holy places of Islam, the most important of which is the Hedjaz where Mecca and Medina are situated. Since then there have been catastrophic changes in the world, particularly in the Muslim world. The Sultanate has ceased to exist and Turkey is now a Republic and republican Turkey has herself abolished the institution of Khilafat. Moreover, it must not be forgotten that the Sultan of Turkey was the Khalifa of Islam by virtue of his being the custodian of the Islamic holy places. As a result of the Great War Arabia and other holy places ceased to be under the suzerainty of Turkey and the president of the Turkish Republic could not therefore legitimately be the Khalifa of Islam, even if he so desired. Under the existing circumstances Sultan Ibn Saud, the present ruler of the Hedjaz, may legitimately be the Khalifa as he is the custodian of the holiest places of Islam, namely, Mecca and Medina. But it is apparent that he does not want to adopt the title and shoulder the responsibilities of the position. So it seems to us that Indian Mussalmans can

hardly do anything that may lead to the restoration of the Khilafat. Moreover, there is difference of the opinion now-a-days as to whether it is at all desirable to try to set up a Khalifa receiving the homage of the entire Muslim world, if, of course, to bring about such a situation is at all possible in those days. In these circumstances it appears to us that a Khilafat organization in India is at the present moment a superfluity. It has absolutely no work to do and so the moribund Central Khilafat Committee should without delay go into liquidation. Its continuance means, we are afraid, mischief to the community. Every body knows that when one has no work to do one is inclined to do mischief. And the Central Khilafat Committee is such a body at the present moment.

Our contemporary adds that the public are fully aware that after the Chotani affair the whole Khilafat organisation stands discredited. As an illustration of its remark that "when one has no legitimate work to do one is inclined to create mischief," it writes:—

The Calcutta Khilafat Committee has recently got inspiration from the Central Khilafat Committee—inspiration in the shape of advice and, some say, money—to carry on a propaganda against the Nehru Committee report and the resolutions of the All-Parties Conference and some of those who, in order to save their own skin, could not join the Non-co-operation or the Khilafat movement are now the guiding spirits of this moribund Committee. We only hope that the misguided activities of this Committee will hoodwink none.

Popularising Latin Script in Turkey

With a view to popularising the new alphabet of Latin characters in Turkey, the Government has decided that all inhabitants of Angora, men, women and children, should attend special public courses at which the alphabet will be taught. Coffee-houses, casinos and other places of amusement will be converted into temporary class-rooms and instructors will be recruited from ministers, deputies and the highbrows of Angora under the supervision of Kemat Pasha himself.

All-India Oriental Conference at Lahore

The Fifth Session of the All-India Oriental Conference will be held at Lahore, from the 19th to the 23rd of November, 1928.

The objects of the Conference are the following:—

(a) To bring together Orientalists in

order to take stock of the various activities of Oriental Scholars in and outside India.

(b) To facilitate co-operation and Oriental studies and research.

(c) To afford opportunities to Scholars to give expression to their views on their respective subject and to point out the difficulties experienced in the pursuit of their special branches of study.

(d) To promote social and intellectual intercourse among Oriental Scholars.

(e) To encourage traditional learning.

The conference is held every second year and practically sums up the work done by Oriental Scholars in various branches of Oriental Art and Literature. Mutual exchange of thought and personal contact with Scholars are not only stimulating to further research but have also a tendency to coordination of efforts. As such the utility of these Conferences has long been recognised in Europe and America.

The Conference will be divided into a number of sections, the provisional list of which is given below:—

1. Vedic. 2. Classical. 3. Philosophy. 4. Philology. 5. Fine Arts. 6. Arabic, Persian and Zend. 7. History and Archaeology. 8. Urdu. 9. Hindi. 10. Punjabi. 11. Anthropology.

There will be a concert of classical Indian Music, a Mushaira, and representation of a play in Sanskrit. Excursions to places of historical interest like Taxila and Harappa will also be arranged.

All Orientalists are invited to become members of the Conference by paying a fee of rupees five only to the Honorary Treasurer, Mr. A. C. Woolnor, M.A., C.I.E., University Hall, Lahore.

Mr. Natesan's Experiences in Canada]

Mr. G. A. Natesan was one of the members of the Indian delegation to the Empire Parliamentary conference held this year in Canada.

Interviewed by Renter regarding the part played by the Indian members of the Empire Parliamentary delegation at its meeting in Canada, Mr. Natesan said that opportunities for the discussion of Indian questions had been very few, but the Indians had taken advantage of them to the utmost. He and his colleagues had been everywhere received and treated with courtesy but they had not been able to help feeling the subordinate position occupied by India as a dependency.

Reading between the lines of this part of Mr. Natesan's statement, one feels that the "courtesy" was not such as could make the Indian guests forget that they were helots within the Empire. Why then were they incited?

The Empire Parliamentary Conference had throughout concentrated on the problems of migration and marketing of Empire products. Mr. Natesan said that the Indian delegates had profited by the discussion of the question of migration at Ottawa and had drawn attention to the grievances of Indians overseas, emphasizing that the treatment accorded to them was inconsistent with the profession of equality of British citizens and declaring that the Government of India was in complete accord with the feelings of the people on this question.

What are the proofs of this bureaucratic complete accord with the feelings of the people on this question? What did the Canadians say when their attention was drawn to the "grievances"? They are not insults, of course.

Mr. Natesan said that a Conservative member of the British delegation had once stated that self-government was the product of the West, the gift of which to India had been delayed for her own sake, in order that it might not prove to be a poisoned cup. Mr. Natesan, in the course of a subsequent public speech, challenged this view and pointed out that the art of government was in no way unknown to Indians, who were in many ways qualified for self-government, which they claimed as a right and not as a gift.

Not only in Canada, but in New York, which the Indian delegates had visited, and even among the British Parliamentary delegates, considerable ignorance about India was noticeable.

Mr. Natesan concluded: "My visit to Canada has made me more hopeful about the destiny of India. If Canada, with its many nationalities and races, once warring with each other, can, within a short time after obtaining responsible government, make such a rapid and marvellous progress, India, if given a fair chance, can lay claim to a brighter future."

Though we on our part had never any doubt as to India's power to manage her own affairs, it is really very encouraging to learn that a man of the type of Mr. Natesan has become hopeful about the destiny of India. But what one would be more eager to learn from him is whether, owing to his visit to Canada, he has become more hopeful of India's being given a fair chance by those who think that they rule her destiny.

One would also like to know the impressions and experiences of Messrs. Chaman Lal and Ooswami. Why did not Renter interview them? Or perhaps it is the other way about. It is not always Renter that seeks an interview, but some people want

to be interviewed by Renter. And it does not suit the purpose of that friend of India to interview persons who are outspoken in their utterances to an inconvenient extent.

Indian Delegation to International Agricultural Assembly

Renter understands that Mr. Ourn Saday Dutt, I. C. S., now on leave, has been appointed by the Government of India to lead the Indian delegation to the ninth General Assembly of the International Institute of Agriculture, Rome. Mr. Dutt tried to improve agricultural conditions in the districts of Bankura and Birbhum as magistrate by irrigation facilities and other means. He is, therefore, acquainted with agricultural problems and has thought out some of their solutions.

It is not the custom of the Government of India to select an Indian to lead an Indian delegation to any conference in foreign countries, if it can help doing so. The selection of Mr. Dutt may be due to the fact that there is no politics in this international agricultural assembly.

China's New Constitution

Some idea of China's new constitution may be formed from a brief description, cabled by Renter from Nanking, of a historic document, entitled "The organic Law of the National Government of the Republic of China," which was promulgated there early in October and will be henceforth enforced. From it we learn that the National Government will exercise all governing powers of the Republic and supreme command of the fighting services. The Government will be composed of five "Yuan," namely, executive, legislative, judicial, examination and control, with a President, who will represent the Government and be the Commander-in-Chief of the fighting forces.

There will be twelve to sixteen State Councillors from whom Presidents and Vice-Presidents of the five Yuan will be appointed. The Executive Yuan will be the highest and will establish Ministries and appoint commissions to decide legislation to be introduced in the Legislative Yuan which latter will decide, together with budgets, matters of peace and war treaties, etc. The Judicial

Yuan will be in charge of judicial administration, the Examination Yuan will control examinations and determine qualifications for public service for which everyone must pass an examination and the Control Yuan will exercise impeachment and audit powers.

Quinquennial Review of Progress of Education in Assam

The Quinquennial review of the Progress of education in Assam for the years 1922-23 to 1926-27 by Mr. S. C. Roy is a carefully prepared and exhaustive document. Besides the usual descriptive and statistical matter which such reviews contain, there are observations and suggestions relating to all grades of education, from the university stage downwards, which are worthy of attention. On the question of founding a separate university or universities for Assam, for example, Mr. Roy's review contains much useful information and some observations. After briefly recapitulating the history of the demand for a university in Assam made on different occasions, from the year 1917 onwards, the Review states:—

The reasonableness of this demand, which found expression on so many different occasions is apparent. Even apart from the defects of the Calcutta University in relation to secondary and collegiate education, which led to the appointment of a Commission, and even before the reforms introduced in 1920 were so much as contemplated, the Government of India in their memorable Resolution dated 21st February 1913, which defined the educational policy to be followed in this country, deemed it necessary to restrict the area over which the affiliating Universities of the type of Calcutta should have control, by securing a separate University for each leading Province and even foreshadowed the creation of new local teaching and residential Universities within each of the major provinces in harmony with the best modern opinion as to the right road to educational efficiency.

Besides, after the inauguration of reforms, under which Assam was constituted a major province with a Governor at its head, the idea of its educational tutelage under another province seems inconsistent with the principle of provincial autonomy.

Academically speaking, the geological and mineral wealth as well as the flora and the fauna of Assam, no less than the large variety of tribes and races of mankind, represented in her hills and plain districts, each with its own history, language, manners and customs, offer wide fields of interesting study to be explored by University scholars desiring to carry on research works in Geology, Mineralogy, Biology, Sociology, Anthropology and kindred sciences.

The reason why the question was not actively debated in the Council nor pushed to the front by

the Department in spite of such favourable reception on the part of Competent leaders is mainly financial.

Considering that Assam is a region of vast undeveloped resources, the financial difficulty can not be considered insuperable. Many independent countries having a smaller population than Assam have one or more universities. We have given a table in *Prabasi* in support of this statement of ours.

Another difficulty pointed out in the Review is that "the agitation of a section of the people of Sylhet for rannion with Bengal has kept the fate of the Province hanging in the balance, and this cloud of uncertainty will not be finally removed till the Statutory Commission meets in 1929." It has met earlier though it will be some time before it drafts and publishes its report.

In *Prabasi* and *Welfare* we have stated most of our reasons for thinking that the Bengali-speaking areas included in Assam should not be separated from that province and re-included in Bengal. If our view prevails, one difficulty in the way of Assam having a university of her own will be removed.

Girls' Education in Centrally Administered Territories

The Government of India has accepted the proposal made by non-official members in the Legislative Assembly that a committee should be appointed to enquire into the question of primary education for girls in the territories under its direct administration. This belated move will no doubt be properly advertised by the publicity agency of the bureaucracy. But what have the Government of India been doing all these years? All over India, the education of girls is in a most backward condition. But in the provinces the state of things is somewhat better than what it is in the territories under the direct administration of the Government of India. It is understood that in these small areas sanitation is also very much neglected.

A Condition Imposed on Nawab of Bahawalpur

The Feudatory and Zemindari India writes that the Nawab Sahib of Bahawalpur

recently took a loan from the Government of India which amounted to five crores of rupees for the improvement of the Sutlej canal.

"The amount was paid out on sufficient security. We fail to understand how a novel condition was imposed by the British Government and accepted by the Nawab to the effect that till the loan is repaid the appointment of the Prime Minister of the State should have the approval of the Government. We do not see the reasonableness of this strange imposition. If there was a systematic maladministration of the state, that must be due to other causes. The Indian Government recommended some time back one Sikandar Hayat Khan as prime Minister. The Nawab appointed him. Not satisfied with his administrative capacity the Nawab had to pass orders to dismiss him from service as the Dewan refused to resign. We understand that the Nawab Sahib has been called upon to go to Simla to confer with the British authorities on this subject."

States Subjects Deputation to England

As some Princes have been very busy in England to preserve, among other things, their "right" to govern their states despotically,

Prof. Abhyankar and Mr. P. Chudgar who left for England as members of the States Subjects Deputation

cally, the states' subjects have acted wisely in sending a deputation to England to place their case before the authorities and the people there.

The Bundi Administration

According to the *Indian States*, in Rajputana the State of Bundi is making good progress under the new Prime Minister, Mr. N.

Bhattacharya, M.A., who was for a longtime the Dewan of Banswara State. Our contemporary writes that "Mr Bhattacharya is an experienced administrator, has imagination and is keen on developing Bundi."

The First India Conference in America

According to a news sheet issued by the India Society of America, Inc., the First India Conference is to be held in New York city from October 14 to November 5, 1928, in order to present a survey of India's life and thought, art and culture. Mr. Hari G. Govil is the Chairman of the India Conference and

Mr. Hari G. Govil

director of the India Society of America. The conference will be conducted through general and round-table sessions. At the general sessions, lectures of interest to the general public will be offered. Vital issues pertaining to India, with particular reference to America, will be discussed at the various round-table conferences.

her own interests. The cardinal feature of British diplomacy is to adapt itself to all conditions to serve the best interest of the nation, and there is no question of sentimentalism or altruism about it. However, it always disguises its selfish motive by assuming the character of altruism.

T. D.

The plan for establishing peace is, first, to have an *entente* among the English-speaking peoples of the world; secondly, to include other white peoples in the *entente*; and finally, to include the Japanese and other possible strong and independent peoples. This peace edifice is to be built upon the foundations of (i) division of spoils among the strong and (ii) intimidation of the weak. But it would be a difficult job to satisfy so many robber claimants that their 'just' claims have been conceded. And among the weak nations there would always be rash and desperate men to strike a blow for strength and liberty. So world peace cannot be achieved by the division of the earth's riches among the strong and the bullying and intimidation of the weak.

A Phase of Italian Policy in South Tyrol

Italians, especially the Fascists, are brutally frank to admit that the German-speaking people in South Tyrol must be *Italianised*, even by depriving them of their mother-tongue. Language forms the most important factor in all movements for nationalism. To deprive a nation of its own language is the surest way of denationalising it. The German Catholics in South Tyrol have petitioned to the Pope so that German children may not be forced to receive religious instruction in Italian. The following news-item published recently in the *Times* (London) gives only one of the many phases of the sufferings of South Tyrolians at German descent:—

The *Innsbrucker Nachrichten* learns from the Unter Adige or South Tyrol that the fact that 18,000 children of German tongue are compelled to receive religious instruction in Italian in the diocese of Trentino, or Trent, has actuated the local German-speaking clergy to renew their petition to the Pope for intervention with the Italian Government.

The petition in question sets forth that in 79 parishes of the diocese Italian is not the mother-tongue of any child attending school, and that as neither their parents nor other adults in the home

speak Italian such children can obtain no coaching in it. To correct this evil the petition embodies two requests:

(1) That the Italian priests who are already in the diocese may be instructed to bestow their spiritual care only upon children whose mother-tongue is Italian; and (2) that a departure be made in future from the practice of confiding the *Missioni canoniche* to Italian clergy for the benefit of German children while the German priests in the diocese have to forego the privilege of teaching scripture in the schools.

The memorandum also asks for the dispatch of a German-speaking Apostolic Inspector who is a citizen of a neutral State to report on the religious problem in South Tyrol.

A petition similar to the above has been submitted to the Pope by the German-speaking clergy of the diocese of Bressanone, or Brixen.

The Italians are not the only guilty party in their activities in favour of their own nationalism. On the contrary, it must be recorded that the Christians and the people of Europe have had for centuries carried on oppressive wars of conquest amongst themselves. They have oppressed the defeated and the subjugated peoples with unspeakable brutality and tyranny. The history of Ireland under British domination, the history of Holland under Spanish rule, the history of the Poles under the Russians, Austrians and Germans are but a few of the many instances of barbarous practices of the so-called civilized West to subjugate their fellow "white-men", not to speak of their brutalities against the peoples of Asia and Africa.

T. D.

Anglo-American-French Economic Entente in the Near East

Recently it has been announced that negotiations have been concluded by which American Oil Companies will be able to participate in the Turkish Petroleum Company which has a concession for the development of the oil resources of the Bagdad and Mosul Vilayets of Irak. The "Turkish" Petroleum Company is called *Turkish* by way of a joke, one may suppose; for there are no Turkish participants in evidence.

The shares in the Turkish Petroleum Company will in future be held as follows:—

	Per cent.
D'Arcy Exploration Company (Anglo-Persian Oil Company)	23.75
Anglo-Saxon Petroleum (Royal Dutch-Shell Group)	23.75
Compagnie Française des Pétroles (French Group)	23.75

the Government of the United States has accepted Great Britain's special interests in the region of the Suez Canal.

A Memorial to Maharani Lakshmi Bai

About twenty-five years ago we were taught in Indian Schools that Sivaji, the Great national hero of the Hindus was nothing but a "free-booter," a "coward" and "most unscrupulous" man. Now, thanks mainly to the efforts of the late Lokmanya Tilak and his followers, the Sivaji Memorial is an accomplished fact, and even the British officials see in Sivaji "a great hero and statesman". This achievement on the part of Indian Nationalists is an event which must be regarded as epoch-making. It will certainly become a source of inspiration for the Indian Nation to establish memorials to other Indian National Heroes.

Maharani Lakshmi Bai, the Queen of Jhanshi, has been rightly characterized by many as the "Joan of Arc" of India. It is needless to discuss her life; but it may be said without any fear of contradiction from any quarter, that she in her life represented the best of Indian womanhood. Her life, courage, loyalty, devotion and love of freedom may well serve as the right source of inspiration for Indian women of all classes and all ages. It will be the happiest day for those who feel proud of the ideal of Indian womanhood, when adequate measures will be taken to perpetuate the memory of "the Heroine of India". May I suggest that effort be directed towards the erection of a statue of Maharani Lakshmi Bai at Benares, where the "Heroine of India" spent her early life; and to establish a Maharani Lakshmi Bai Memorial Foundation to spread education among Indian women?

An American Estimate of British Policy in Egypt

The Nation (New York) of August 8th editorially makes the following comment on the present Egyptian situation:—

"The British Plan of governing Egypt is quite simple. Give the natives a show of self-government but keep all the police power in British hands. Create a parliament with permission to talk but with no power to drive out the British invaders, or tax them directly, or take away their extraterritorial rights. Then, if the Parliament becomes obstreperous, suspend it for three years through a king appointed from London, who is a creature of the British High Commissioner. That is what the British Government did on July 19—ten years after Egyptian workers had been drafted into a labor corps and compelled to help Britain win a war for the self-determination of subject peoples. For Egypt self-determination has included complete suppression of freedom of the press, with British control of the Suez Canal, British armies on Egyptian soil and a British general in command of Egyptian police. The Nationalists, who comprise about nine-tenths of the native population, have lost faith in a government which has promised them "freedom" some sixty-odd times, so they rejected the Srawat-Chamberlain treaty last spring and their Ministry resigned in a body. Today their "government" consists of King Fuad, who talks like a ventriloquist's dummy and gets his picture in the London papers."

We may add that the present policy of the British conservatives regarding Egypt has received full support from British Liberals and Laborites, specially the Rt. Hon. J. Ramsay MacDonald, who refused all Egyptian demands for independence by the late Zaglul Pasha. It may not be out of place to mention that by no indirect method

British Oil Interests in Mosul and Bagdad Vilayets

A Baghdad despatch of Aug. 30th, 1928 indicates new and significant activity on the part of British Oil interests and the Colonial office. It says:—

An influential British financial group has made important proposals to the Irak Government, which

has power next November to submit for sale by tender certain oil plots in the Mosul and Baghdad Vilayets.

The group will tender for these plots, and, if successful, will sign forthwith agreements to construct the Iraq section of the Baghdad-Haifa Railway without any financial contribution from Iraq.

The whole distance of the projected line is about 500 miles, half of which is in Iraq territory and the other half in Transjordan and Palestine. If the company's offer is accepted negotiations will be opened with the Colonial Office regarding the construction of the line in Palestine and Transjordan.

It is understood that Lord Inverforth, Lord Wemyss, and Sir John Latta are concerned in the group—Renter.

According to the existing understanding between the Government of Great Britain and Iraq, and the Government of Transjordan and Great Britain, Great Britain, *i.e.* the British Colonial Office, has the final say about the development of natural resources and granting concessions. Thus if the British Colonial office deems it important to build the 500 miles rail road for strategic and other purposes, then the Governments of Iraq and Transjordan will naturally be forced to agree to such a proposition. Furthermore, it is also evident that the plots of oil lands in Mosul and Baghdad Vilayets in the acquisition of which by purchase, Lord Inverforth, Lord Wemyss and Sir John Latta are interested must be extremely valuable, otherwise these gentlemen would not be willing "to sign agreements to construct a railroad line about 250 miles long without financial contribution from Iraq."

Control of oil-resources is not only essential for industrial purposes, but without oil, the British Navy cannot operate to further the holy mission of British imperialism, and thus the British Government can not but be interested in British financial and industrial magnates, controlling the oil-resources and transportation facilities in the Middle East.

interesting news of Franco-Turkish cultural relations:—

"Six French professors have been engaged by the Turkish Government to teach in Constantinople and Smyrna schools. One hundred young Turks are going to France to study shortly.

Already in Egypt French cultural influence is supreme. The Syrians regard France as their intellectual preceptor. Persia lately sent a large number of students to study military science in France. The king of Afghanistan has sent his own son—the heir to the throne to secure his military education in Paris. The Amir has already engaged several French scientists and engineers. Large numbers of students from Siam are in French Universities. Because France affords special opportunity to the Chinese students to earn money by working part-time, while attending educational institutions, the number of the Chinese Students in France is larger than those in other European countries.

The population of the Turkish Republic is very small, and the resources of the Turkish Government, compared with those of India are very meagre. If Turkey can afford to send one hundred students to France, India should send at least two thousands or more students, with Government aid to France and other universities of the West to master science and industry. But the British Government regards it dangerous to send a large number of promising young men and women to free countries and first class universities of the West.

French statesmen are fully aware of the significance of the re-awakening of Asia. They also know that the spread of cultural influence of France in the orient has a special political significance and it is an asset to France. Indian statesmen and scholars should adopt definite and effective means to promote cultural relations with France and other progressive nations of the world.

ANTI-INDIAN MOVES IN CEYLON (*)

By ST NIHAL SINGH

I

OUR people need to follow very closely the anti-Indian moves that are at present being made in Ceylon. They are being engineered—openly or otherwise—by some of the most prominent politicians in the Island. Included among them are some of the leaders of the Ceylon National Congress and other associations of a political or quasi-political character and Members of the Ceylon Legislative Council. In view of the powerful backing that the anti-Indian agitation is receiving from these influential persons, it would be the height of folly for stay-at-home Indians to ignore this hostile movement.

The object behind the agitation is quite obvious. It aims not so much to secure the restriction of immigration from India into Ceylon as to keep the bulk of Indians in the Island in a condition of political helplessness.

The cry "keep out the Indians" has, of course, been raised. A motion designed to secure that object is, indeed, shortly to be debated in the Ceylon Legislative Council.

Moves directed toward the exclusion of

Indians, or even the restriction of Indian immigration, are fictitious, because Ceylon is woefully underpopulated, and without importation of labour from India she could not carry on her economic activities even for a single day. In a country comprising 25 000 square miles there is a permanent population of only some 4,000 000 persons. Many of them are lackadaisical in disposition, and some of them actually semi-drones or drones. Indians build the roads and keep them in repair. Indians work the tea and, to a large extent, the rubber estates. Indians play an important part in loading and unloading goods and in the workshops. There are, to-day, some 900,000 of them in Ceylon. So invaluable are they that most of them have been fetched from India, as I shall relate in a subsequent portion of this article. The talk of shutting Indians out of Ceylon is, therefore, mere bunkum.

The Ceylonese who are crying themselves hoarse, shouting "keep out the Indians", are not, as a rule, regarded as responsible persons. Some of them are, on the contrary, the laughing-stock of their own people. They can do harm, therefore, only if they are permitted to inflame the passions of the mob, which is highly excitable by nature. Racial animosities—the legacy of conflicts in ancient and mediæval times—

(*) This article may not be reproduced or translated outside India without securing the prior written permission of the author.

smoulder in the Island and any oratorical breeze might fan them into flames; but of this more later.

II

The real purpose behind the anti-Indian move is political, as already related. At present the bulk of our people in Ceylon, with few exceptions, are voteless. The anti-Indian Ceylonese politicians are bending all their energies to keep them in that condition. They are striving to do so at a time when a proposal has been made from the outside to place upon the electoral register all Ceylonese male adults and the bulk of the Ceylonese female adults.

The intention behind the move is sinister. It is, in plain language, an attempt to keep our people residing in the Island in conditions of semi-slavery, while all the other communities, including the other non-Ceylonese owing allegiance to the British Sovereign, are to be permitted to enjoy an almost full measure of political powers and privileges.*

Tortuous tactics are being employed by the anti-Indian Ceylonese planter-politicians to accomplish this end. Instead of coming out into the open and declaring that no non-Ceylonese is to be given the franchise, or even publicly avowing their intention to deprive Indians of that privilege, they are advocating proposals which would have the effect of discriminating against Indians without even mentioning the word "Indian." They seek to accomplish that object by making the grant of franchise conditional upon certain qualifications that most of the Indians in the Island manifestly cannot fulfil.

Recourse to such devious devices is necessitated by the fact that these Ceylonese politicians, though influential, are afraid of offending the British officials, bankers, insurance agents, merchants, shippers and planters in Ceylon. If they found themselves in a different position they would no doubt immediately proceed to lay down the law making it impossible for any non-Ceylonese,

whatever his race or creed, to become enfranchised. Prudence, however, impels them to conciliate the all-powerful British, and, therefore, all the schemes put forward are designed to discriminate against Indians in Ceylon and yet more than adequately secure British interests.

III

What lies at the back of these anti-Indian moves?

The motives are many. Playing politics is one. The determination to exploit the Indians by keeping them politically helpless is another. Spite inspired by the desire to punish the Indians now in Ceylon, for the most part poor and unfettered, for the sins of their forefathers, who, centuries gone by, invaded the Island and wrought havoc, is still another. Let me explain:

Some Ceylonese seem to feel that their little Island is about to be converted from a Crown Colony into a self-governing Dominion. Since the imitative instinct is very strongly developed in them, they have already started to model upon the Dominion pattern their conduct toward the strangers within their gates. Such action raises them in their own estimation.

It will, needless to say, take some time and effort for the Ceylonese to persuade the British to render Ceylon back to the Ceylonese. A few problems will have first to be solved before the rulers of to-day embark upon such a course. The British officials, for instance, must get over their repugnance of Ceylonese legislative control. The British merchants and planters must overcome their mistrust of the "native" politicians. Ceylon must cease to be an important link in the British Imperial chain of defence and communications.

The British might conceivably lay down a condition or two prior to abdicating in favour of the Ceylonese. They might insist upon the Islanders furnishing them with satisfactory proof that they will be able to defend Ceylon against any attack by sea or air. They might also require the indigenous politicians to show that they have managed to overcome racial rancour, credal quorulousness and caste invidiousness. The report issued by the Donoughmore Commission that, at the instance of the Colonial Office in London, investigated the difficulties of Government in Ceylon early this year, shows that these matters were in their minds.

* See the author's article, "Donoughmore Drarchy in Ceylon," in the *Modern Review* for October, 1928 (pp. 396-405). The Earl of Donoughmore and his colleagues recommend the grant of franchise to all Ceylonese male adults and to all Ceylonese females above the age of thirty; and also to all non-Ceylonese British subjects who have resided in the Island for five years and can fulfil certain other residential qualifications.

The removal of obstacles of this nature involves infinite ingenuity, energy and industry. To imitate a ready-made policy, however, is a simpler matter.

And yet not so easy. The Dominions that shut Indians out are not economically dependent upon labour from India. Ceylon, on the contrary, cannot get along without such labour (how abjectly dependent she is in this respect I shall show in another section).

The Ceylonese cannot, therefore, adopt the policy that the Dominions pursue toward Indians just as it stands. They have to twist it round to suit their own exigencies. They propose, I note, to continue to draw upon India's man-power to exploit Ceylonese resources and at the same time devise schemes for the political enslavement of those Indians so long as they remain in Ceylon.

IV

The agenda paper of the Ceylon Legislative Council furnishes a good example of the nature of these schemes. A motion standing in the name of the Hon'ble Mr. A. F. Molamure, M. L. C., an unofficial member of the Ceylon Executive Council, reads:

"This Council accepts the recommendation of the Donoughmore Commission as regards the extension of the franchise, subject to the following amendments:—

(a) That in the case of females the age for qualification as a voter should be 21 and not 30.

(b) That in the case of non-Ceylonese British subjects a literary qualification should be added to the proposed five years' residential qualification; or in the alternative the qualification should be that the applicant to be registered as a voter should—

(1) have resided in the Island for a period of one year,

(2) be possessed of immovable property of the value of Rs. 500,

(3) or be in the receipt of an income of Rs. 50 per month,

(4) and be able to read and write one of the languages of the Island, *e.g.* English, Sinhalese or Tamil."

What would be the result if the principles enunciated in that proposal were accepted?

Firstly, the only limitations in respect of franchise placed upon the Ceylonese by the Donoughmore Commission would be removed. They, in consequence, would enjoy full adult suffrage.

Secondly, the adoption of either alternative suggested for the restriction of franchise to non-Ceylonese British subjects would have comparatively little effect upon one section of them, *i.e.* the Britons. The imposition of a literary qualification would not keep off the Register a single adult Briton who

possessed the other (five years' residential) qualification. The second alternative would, in fact, give the vote to every British adult in the Island harring the newcomers: for not one of them is in receipt of an income below

Indian Labourers landing in Ceylon

Rs. 50 per month or is unable to read and write English, which the motion describes as "one of the languages of the island."

Thirdly, either alternative would, on the other hand, exclude practically all the Indians in Ceylon from the voting Register. Some of our people in the Island, it is true, are engaged in import, export or retail trade or in professions, are able to read and write and have either immovable property of the value of Rs. 500 or are in receipt of an income of Rs. 50 per month. They, however, constitute a very small minority of the total number of Ceylon Indians. The bulk of them are labourers who are unlettered and who, almost without exception, have no property nor are in receipt of anything like the stipulated income (Rs. 50 a month).

V

About nine-tenths of the Indians in Ceylon, in fact, live and work on plantations of one kind or another, many owned and operated by the British and some by Ceylonese. Only recently the Ceylon Legislative Council passed an ordinance fixing a minimum wage. I anticipate that under that law an Indian male adult will earn, on an average, Rs. 15 a month, a considerable part of which will be deducted for rice issued to him by the estate.

The only Indians employed on an estate who are in receipt of a higher income

the *langanias* (supervisors) and *kanakapullais* (accountants). They, however, constitute a minute fraction of the total Indian force.

Sunday Market at Kuduannawa, near Kandy, where Indian labourers from tea and rubber estates go to buy their supplies.

Indian non-estate labourers who work on the roads, sweep streets, engage in conservancy work and the like, do not, as a rule, earn anything like Rs. 50 a month. The same is true of the other casual labourers. Their wage is seldom in excess of one rupee a day, more often than not it is less than that amount.

Indians employed in the harbour and in workshops are somewhat better paid. As the result of a strike that occurred a little less than two years ago the contractors employing dock labour are forced to pay the employees they engage for unloading cargo Rs. 1.60 a day and Rs. 3.20 a night. For loading, they pay Rs. 1.75 by day and Rs. 3.50 by night. Except during periods of inactivity, a dock labourer would earn perhaps Rs. 50 or more per month. The number of such Indians cannot, however, be much in excess of 2000, persons.

The number of Indians employed as mechanics in Government and private workshops who earn Rs. 50 or more a month is also exceedingly small.

A Ceylonese friend of mine who can speak with authority on this subject estimates that no more than 5,000—Indian skilled workers, including the loaders and unloaders in the harbour, are in receipt of anything like that income. The money wage of the remaining Indians, whether employed on estates or on the roads or in domestic service or performing casual labour of one form or another, falls far below that figure.

In view of these facts, if the proposal to limit the franchise to only those non-Ceylonese who are "in the receipt of an income of Rs. 50 (or more) per month", contained in the motion now before the Ceylon Legislative Council were to be accepted, it would result in keeping most of the Indians in Ceylon off the register. That, indeed, is the intention of its author, as publicly professed by him.

VI

That matter calls for hardly any speculation, for the proposal put forward is analogous to the conditions under which franchise is at present regulated. The principal existing qualifications are that in order to vote, a person must

- (1) be a male adult owing allegiance to His Britannic Majesty;
- (2) be able to read and write English, Sinhalese or Tamil;
- (3) have resided for six months preceding the commencement of the preparation of the register in the electoral district to which the Register relates;
- (4) be in possession or enjoyment of a clear annual income of not less than Rs. 600, such possession or enjoyment having subsisted during the whole of a period of six

months immediately prior to the commencement of the preparation of the Register: or

(5) have immovable property deemed to be of equivalent value.

So few Indians in Ceylon are able to fulfil these conditions that the Earl of Donoughmore and his colleagues are compelled to admit:

"At present, only a small fraction, mainly the supervisors, called Kanganies, and some of the coolies who work in the Government or Municipal Service have the necessary income qualification to vote at elections for the Legislative Council."(*)

The proposal now put forward prescribes exactly the same income qualifications, with this essential difference, that only the non-Ceylonese are to be required to conform to it, whereas the existing regulations apply to the Ceylonese as much as to the non-Ceylonese. The author of the motion, in fact, seeks to secure full adult suffrage for his own people, whether they be workers or drones, rich or poor, literate or illiterate, and at the same time he tries to ensure that only a small fraction of Indians will become enfranchised. Such is his intention.

VII

Mr. Francis Molamure, the author of this motion that would, in effect, condemn the bulk of the Indians in Ceylon to political serfdom, is personally known to me. He was introduced to me several years ago when he visited London as a member of the deputation sent from Ceylon to press for constitutional reforms. That deputation sought and received my assistance. I introduced it to some of my friends in Parliament and also wrote in the press in support of its cause.

Personally Molamure is likeable. He professes Buddhism. He traces, I believe, kinship with the Indo-Aryans, one of whom—Vijaya by name, the grandson of Snppadevi, Princess of Vanga (Bengal), by a robber chief, Sinha—established his way in Ceylon in the year of the Buddha's demise in the sixth century B. C. and founded the Sinhalese Kingdom.

Mr. Molamure, like many of his people, has come into possession of or has perhaps himself acquired a rubber plantation not far from Kandy—the last Sinhalese stronghold. Whether or not he employs Indians on his estate, I cannot say. Many of the other

Sinhalese planter-politicians with whom he is associated in this anti-Indian agitation do depend, to my knowledge, upon Indian labour for working their tea or rubber plantations.

The author found these nine persons, belonging to two distinct families, occupying a single room in the 'lines' on an estate

The very first meeting at which Mr. Molamure gave public expression to his anti-Indian ideas was presided over by one of the richest Buddhist planters, Mr. D. C. Senenayeke, who, in his opening remarks, gave the anti-Indian lead. Another Buddhist planter, the Hon'ble Mr. D. S. Senenayeke, M. L. C., a younger brother of the planter in the chair, was even more vehement than these other two in advocating action politically to handicap Indians in Ceylon. Both the Senenayeke brothers, as they personally admitted to me, employ Indian labour, though neither, despite repeated promises, has given me an opportunity to see the conditions in which their Indian employees live on their estates.

The special session of the Ceylon National Congress held on September 1, at which a motion aimed at the perpetuation of the political disabilities from which our people in Ceylon at present suffer, was passed, was presided over by another wealthy Sinhalese planter, the Hon'ble Mr. W. A. De Silva, M. L. C., who likewise is an employer of

(*) Report of the Special Commission on the (Ceylon) Constitution (1938), p. 97.

Indian labour on a considerable scale. He did, indeed, show me the courtesy of taking me over two of his estates several years ago. In order to give myself the opportunity to examine at leisure the conditions in which his Indian employees lived and laboured, I paid another visit to one of the estates last year.

A group of workers on an estate owned and operated by the President of the Ceylon National Congress.

The only objection that Mr. W. A. De Silva had to the enfranchisement of Indians was stated by him with the delicacy that characterizes him, in his presidential address to the Ceylon National Congress. According to him:

"There are certain principles that should underlie the privilege of becoming a citizen. The first of these is that one should be able to exercise his rights freely and without fear, or favour. If, for instance, a person has to live in an area to which no one has a right of free access, his vote becomes a danger rather than a help to the Community. Before such a person gets his rights the restricted conditions under which he lives should be removed. In this connection we have the case of the immigrant labourer employed on Ceylon plantations. Under present conditions he lives in lines or rooms situated within an Estate and any person who comes to visit him is legally an intruder and can be prosecuted and punished. This is not a hypothetical case, as the records of our (Ceylon) Law Courts show that such prosecutions are rigidly enforced."

Mr. W. A. De Silva, it is to be noted, does not mention the word "Indian" in the passage quoted, just as his planter colleague, Mr. Francis Molamure, refrains from mentioning it in his motion. Indians are, however, the only immigrant labourers in Ceylon, as is known to everyone who has first-hand knowledge of Ceylonese conditions.

It is interesting that a man of Mr. De

Silva's intelligence, who has been engaged in planting for a generation or more, should have just discovered that the Indian workers on Ceylon estates live in the conditions which he describes. He does not say that I helped him to make that discovery; though I do not mind his failure to make any acknowledgement, since we two have been on terms of friendship for almost a quarter of a century. I do mind, however, that he has used this discovery, not as an argument to lift Indians out of those conditions—as I have been using it—but on the contrary, to reinforce his case, in the mild manner that he has until he is thoroughly roused, to keep our people in their present state of political helplessness.

It is, nevertheless, very important that admissions of this grave nature as to the conditions in which Indians live on Ceylon estates should come from a man of Mr. De Silva's position.

That statement implies that the Indians employed on Ceylon estates live virtually in conditions amounting to semi-slavery. It deserves to be carefully pondered since it comes, not from a labour leader—not from a politician of revolutionary tendencies—but from a Sinhalese Buddhist of great culture who, through self-exertion, has become a millionaire and who is regarded—and rightly regarded—as a man of solid, rather conservative views.

Four-fifths of our people in Ceylon live on estates in the conditions depicted by this highly respectable employer of Indian labour. I do not propose to dwell upon that fact in this article, which has for its theme the political status of our people in Ceylon; but I ask Indians unfamiliar with conditions in Ceylon to make a note of it.

Mr. De Silva does not say how precisely the enfranchisement of Indians who, according to him, live in these conditions of semi-slavery, is going to be prejudicial to the interests of the Community. Nor does he explain as to what he means by Community. Is it the planter-community that he has in mind?

Other Sinhalese planter-politicians who have been making such anti-Indian moves have not, however, been so chary of giving expression to their ideas on the subject as the planter-president of the Ceylon National Congress has been. From the statements that they have been making, it is clear, that they fear that if estate-Indians were given the vote, they would cast that vote in favour

of their British employers or candidates recommended by their British employers.

That assumption denies these Indians even the most elementary intelligence. It is, therefore, preposterous. Supposing, for the sake of argument, that this Sinhalese fear is not unfounded, it resolves itself merely into this, that in order to spite the British planters the Sinhalese planters are determined to victimize the Indians.

VIII

The question that needs to be asked immediately is this: Is Mr. W. A. De Silva desirous of removing the disabilities from which Indians employed on Ceylon estates—his own included—according to his own statement, suffer? Or is he in favour of preserving those disabilities and of even making them the pretext for denying the vote to those Indians—the vote that they might employ to get rid of the conditions of semi-slavery in which they admittedly live?

And what is the attitude in this matter of the other Buddhist and non-Buddhist Ceylonese planters who employ Indian labour on their estates? Are they bent upon compelling their Indian employees to live in "areas to which no one has a right of access" or are they anxious to remove conditions which condemn Indians to semi-slavery and which, according to them, make the Indian vote "a danger rather than a help to the Community?"

I put questions of this tenor to these planter-politicians through the columns of the *Times of Ceylon*, which commands the largest circulation in the Island. Addressing specifically those Sinhalese politicians "who own or operate plantations on which a considerable number of Indians live in conditions of semi-slavery", I asked them if they were

"...prepared to lead the way in freeing Indian estate employees (of their own) from these restrictions? I invite them all to set the example." (*)

Though a month has elapsed since this appeal was made no one among the planter-politicians has made any response. Before publicly prescribing that simple test "for their sincerity," I had, however, taken the precaution of discussing the matter *à la voce* with one of the Sinhalese who, at the time, was most active in making the anti-Indian

moves. When "I asked him if he was prepared to wipe out from his own estates the conditions to which the President of the Ceylon National Congress—his own colleague referred," he

A group of important officials of the All-Ceylon Trade Union Congress.

Back Row : Mr. R. Wickremasinghe, Mr. P. V. Gunasekhera, Mr. M. Pereira. Front Row : Mr. G. E. De Silva, Mr. A. E. Goonesinghe, Dr. S. Muttiah.

"...hemmed and hawed—'We of the complications that would arise 'Why, people, may be introduced into my estate,' he argued, 'who may steal some of my property.' When I had cornered him he finally admitted that he was not in favour of the removal of the present restrictions.

"And what is your real reason?" I persisted. "Why, if the restrictions were withdrawn," he confessed, 'the chief reason for keeping the enfranchisement away from them would be gone.'

"This is a fair sample of the motives and methods that characterize the plutocratic anti-Indian agitator in Ceylon." (*)

IX

The attitude assumed by the Sinhalese planter-politicians in this matter can only mean that they are afraid to let the public see the conditions in which Indians live and work on their estates. From what I have myself seen on some of the Sinhalese-owned plantations operated by Indian labour, I know that the owners and managers have cause to fear.

I have space to cite only one instance to illustrate the irregularities that must inevitably

(*) *The Times of Ceylon* for Sept. 10, 1928, p. 7, Col. 3.

(*) *Ibid.*

occur in places completely out of the sight of the public. Some time ago I visited the estate of a Sinhalese whose identity I do not wish to reveal. I found nine persons belonging to two separate families, and, in addition, a hen and four chickens, living in a room that could not have been more than eight or nine feet wide and ten or twelve feet deep. While I was making the photograph reproduced with this article, the Superintendent—a near relative of the owner—admitted to me that the two families had been occupying that room for the last twenty-two days. The second family had moved in, he said, because of a death in the cubicle assigned to it elsewhere, and in spite of his protests.

"Why did you let nine persons continue to live in that dark, stuffy little room for three weeks and more?" I asked him.

No reply was forthcoming. As a matter of fact, the eldest male of the two families had been complaining bitterly to me and the friend who accompanied me, in the presence of the Superintendent, because of the overcrowding to which he and his family were being subjected. (*)

Being sbrowd men, the Ceylonese planter-politicians realize that if Indian workers ceased to be voteless, they would also cease to be dooile—that they would refuse to put up with any conditions in which the owners and managers sought to keep them. They also see that the enfranchisement of the labourers would necessarily break up the isolation in which they are at present made to live—that candidates and their agents would visit them to canvass their votes, and if any legal difficulties stood in the way, there would be agitation and those difficulties would have to be swept aside.

The desire to exploit Indians is, to my mind, at the back of many of the anti-Indian moves.

X

Is it not peculiar, in itself, that while these Ceylonese plutocrats are making such moves, organized labour in Ceylon is friendly to our people?

Mr. A. E. Goonesinghe, President of the All-Ceylon Trades Union Council, raised his voice against the draft resolution aimed

at politically handicapping Indians, at the meeting of the Executive Committee of the Ceylon National Congress held at Stravast—the planter-President's palatial mansion—to consider draft resolutions to be submitted to the Special Session of the National Congress. All the delegates from the labour organizations voted with him. So did the Hon'ble Mr. T. B. Jayah, M. L. C., a broad-minded Muslim educationist who, I may note in passing, has a motion standing in his name on the agenda paper of the Ceylon Legislative Council recommending that "non-Ceylonese British subjects should be placed on a footing of equality with the Ceylonese in respect of status and rights of citizenship." They carried the day.

The anti-Indian Congressmen were thus compelled to move an addendum to the franchise resolution at the Special Session of the Congress. Mr. Goonesinghe, when that motion was being discussed, condemned it. All his labour colleagues also cast their votes against it.

In view of the persistent effort that some persons were making to confuse the issue, I invited Mr. Goonesinghe to my rooms in the Grand Oriental Hotel, Colombo, and asked him to define his attitude. He told me that all the organizations with which he was connected admitted Indians freely—and on exactly the same terms as the Ceylonese—that no differentiation whatever was made by any responsible Union official between the two. Indians, he added, constituted the majority in the Dockers' Union no doubt because they formed some 60 per cent of such workers. He paid a warm tribute to the loyalty they showed during the trying period of the strike. Indians and Ceylonese alike informed him that they would eat grass rather than submit to exploitation. When Indians have shown such staunchness during a crisis, how can the Ceylonese workers be down upon them? he asked.

In Mr. Goonesinghe's view the Sinhalese planter-politicians are seeking to keep the bulk of the Indians voteless because they "are, in their heart of hearts, afraid of democracy." All that they are after, he added, "is the opportunity to be Ministers—to be big bosses." They are playing their own hand. "Kudos and not democracy is the god they worship."

XI

Racial and religious animosity, too, prompts at least one class of these anti-

(*) This incident is described at greater length in the author's article, "Indian Labour on Ceylon Tea and Rubber Estates" in the *Times of Ceylon* for November 22, 1927.

Indian agitators. It so happens that almost all the Indians in Ceylon are Tamils—mostly Hindu Tamils—and in them the excitable Sinhalese see their traditional enemies—or at least the progeny of their ancient enemies who invaded Ceylon again and again and destroyed temples and palaces. Some Sinhalese—most of them irresponsible, no doubt—never tire of making reference to episodes of this character—episodes which took place thousands of years ago.

Allusion to this issue would not be necessary but for the fact that the Sinhalese are emotional people and parrot cries like "drive out the Indians" might excite them. A similar cry was raised in 1915. It was then directed against the Moor—or "Tambr"—as he is called. He is in the Island to-day in greater numbers than ever. So are the bitter memories left behind by the riots that resulted from setting fire to the passions of the unlettered and barely literate people.

There was bloodshed in several places—martial law was proclaimed—some Britons, suddenly armed with power, committed excesses. A few Sinhalese were shot out of hand. Some others were flung into gaol and were rescued from the very jaws of death.

I, whose aid was sought and freely given in behalf of the Sinhalese who, through no fault of their own, suffered during those terrible times, view with gravity the storm that persons of the same mentality and temperament are trying to create. Their methods are the same to-day as they were thirteen years ago. They are stirring up religious prejudices and reviving historic animosities in 1928 just as they did in 1915. Only the Indian in their midst—and not the "Tambr"—is the target of their malignity, which may recoil upon them as it did during the last decade.

It seems strange to me that an organization with the prestige of the Ceylon National Congress should have permitted agitation of this kind to be carried on from its platform, when the Special Session called to consider the Donoughmore Commission reforms was held in Ananda College Hall. The Sinhalese publicist who sat in the President's chair was among the sufferers of the riots in 1916. So were several of his colleagues who supported him on that occasion. Yet not one of them raised his voice in protestation or deprecation. How

soon lessons taught by adversity are forgotten!

XII

But for the fact that rabid harangues from ill-balanced Sinhalese might inflame passions and come of our people in Ceylon might suffer in consequence, this agitation against Indian immigration may be dismissed from Indian thoughts. It is, of course, quite possible that action may be taken to shut off or to restrict the entry of "free" Indians, that is to say, Indians who come of their own accord and without assistance from any agency in Ceylon,—into the Island, while the present system whereby the planters obtain a plenitude of labour supply through the special agents (Kanganies) they send over, from time to time, to the Madras Presidency and the contiguous Indian States may be continued. When that time comes, Indians can easily deal with the problem.

In the mean time, it is necessary for Indians to realise that Ceylon cannot—and will not at least for a long time to come—get along without certain classes of Indian workers. The planters, whether sons and daughters of the soil or Britons, need the Indian estate workers. Owners of broad acres, they can grow tea and (to a lesser extent) rubber only if they can get labourers from India to work for them.

The Sinhalese, as a rule, prefer a free life in their own villages; and even when they can be persuaded to work on plantations will more often than not insist upon living in their own rural homes where they can come and go as they please, regulate the hours of labour as it may suit their convenience or even whim, and are freely accessible to anyone who chooses to call upon them. The labourers imported from India, on the other hand, do not object to living in conditions of semi-slavery and are, moreover, docile. The planters, therefore, prefer to employ Indians, though they usually sprinkle a few Sinhalese among the Indians, just to make the simpletons from the Madras Presidency and the contiguous Indian States feel that they are not indispensable.

There is no question, however, as to the indispensability of the Indian estate labourers. If such labour had not been available, it is certain that thousands of acres now under tea and rubber would have remained the waste that they were some decades (or years) ago; and if India were, for some

reason, to withdraw the Indian workers and refuse a further supply, they would revert to jungle. Shortage of population and the lethargic character of the Sinhalese people would make the continuance of two of the largest industries on anything like the present scale a physical impossibility.

The cutting off of the Indian labour supply would hit the British particularly hard; but the Sinhalese would also be prejudicially affected. The Sinhalese planters who are now dependent upon Indian workers would find it exceedingly difficult to replace them; and even if they chose to submit to the whims and caprices of the Sinhalese, they would have to pay them more and would find planting a worrying and possibly unprofitable job.

Nor would these Sinhalese be the only sufferers. As the result of cutting off the Indian labour supply, such Sinhalese as chose to work would be able to obtain fancy wages. The middle classes would have to do entirely without domestic help and even the very wealthy would be compelled to alter their mode of life.

The depression in the tea and rubber industries that would result from the withdrawal of Indian labour would, moreover, so contract the volume of credit that it would work hardship all round.

To show the indispensability of Indian labour, a British planter, Mr. H. A. Webb by name, wrote to the *Ceylon Daily News* (Colombo), an organ owned by a Sinhalese and edited by a Ceylon Tamil:

"...take my own case for instance: I have a large number of Sinhalese villagers close to my estate. Is it likely that I should import outside labour if I could get the work done by those living close at hand? I should only be too pleased to work entirely with Sinhalese labour if it could be procured.

There is no question but that many villagers who now by cultivating a small piece of ground with difficulty get enough out of it to supply them with food would do far better to take up estate work. But it means, of course, regular work under estate conditions. To stop Tamil immigration in order to provide Sinhalese with work that they are unwilling to do, can only be looked upon as the height of folly."

In order to ensure a plentiful supply of Indian labour the planters in Ceylon—Sinhalese as well as British—make regular contributions toward a fund which runs into seven figures every year. A network of agencies are maintained in southern India under the supervision of an ex-planter (a Briton). Though these agencies are constantly at work, year in, year out, it is found necessary

to send agents out from individual estates to southern Indian villages to drum up recruits. Judging by the disclosures that have been made from time to time in law-courts, the methods that they employ are not always honourable. But into that and cognate matters I cannot enter in the course of this article.

It is not likely that the plutocrats of Ceylon would demand the cutting off of the supply of Indian labour and thereby deliberately shatter the arch upon which their prosperity rests. That is not the way of human nature.

XIII

The Ceylonese planter-politicians think, however, that the stay-at-home Indians do not know that Ceylonese prosperity depends, in no small measure, upon Indian labour in the Island. Or they perhaps feel that the stay-at-home Indians do not care what indignity may be heaped upon their countrymen in Ceylon or how their interests are impaired. India, in other words, is a sleeping giant, and will not protest if Ceylon—a pigmy—slaps it in the face.

If the agitation set on foot by the Sinhalese planter-politicians to condemn the bulk of the Indians in Ceylon to political serfdom succeeds, it will have the most powerful reaction. If India, with the whip hand it has over Ceylon, acquiesces in such action, what will she be able to say to countries which can very well get along without Indians? That constitutes the crux of the situation.

If India will not exert itself to protect Indians in an Island that lies at its feet, is populated by people of Indian stock, and cannot get along without Indians—how will it ever be able to safeguard the interests of Indians in lands far, far away—lands inhabited by people different in colour, race and creed—lands where Indians, economically speaking, are unimportant?

In view of the grave harm that the anti-Indian moves now being made in Ceylon might do to our people in the Island—and its still graver reaction upon the status of Indians in all parts of the world—I trust that this hostile movement in the Island will receive the closest attention and Indians will make the anti-Indian Ceylonese understand that, should they persist in their attitude, they can expect no mercy from India.

EUROPE, ASIA AND AFRICA

By RABINDRANATH TAGORE

NO report of any interview with me has as yet been published which correctly represents my views; almost always the emphasis is put in the wrong place and the report becomes one-sided.

It is undoubtedly true that the most important relation of Europe with those of us who are outside Europe is merely one of exploitation: or, in other words, its origins are materialistic. It is physical strength that is most apparent to us in her enormous empire and enormous commerce, limitless in extent and immeasurable in appetite. Our spirit sickens in its midst; we come against barriers in the realization of ties of human kinship, and the harshness of mere physical or material fetters pains us sorely.

This feeling of unease ever grows more oppressive. There is no nation in the whole of Asia to-day which does not look upon Europe with fear and suspicion. And yet, there was a time when we were fascinated by Europe, we were inspired with a new hope, we believed that the chief mission of Europe was to preach the gospel of liberty in the world; for, we got to know only the ideal side of Europe through her literature and art. But slowly, Asia and Africa have become the spheres of her secular activities, where her chief pre-occupation is the earning of dividends, administration of empires and extension of boundaries and commerce. In the continents of Asia and Europe her warehouses, her administrative and business offices, her police outposts and the barracks for her soldiers have been extending, while human relationship has taken a very secondary place.

Towards those whom we exploit we always feel contempt; or, at any rate, it certainly becomes much easier, this exploitation, if we can succeed in feeling contempt for those whom we exploit. We feel inclined to proclaim that fishes are the least sentient of all living creatures when, out angling, we pierce them with our hooks. It is the same when we come to deal with human beings. It becomes quite pleasant to milk the Orient to the top of our bent, if we can make the moral justification of exploitation

and empire-building easy by relegate coloured races to the farthest and the lowest class in the grouping of humanity.

It is thus that modern Europe, scientific and puissant, has classified this wide earth into two divisions. Through the filter of this classification, whatever is finest in Europe cannot pass through to reach us in the East. In our traffic with her, we have learnt this as the biggest fact that she is efficient, terribly efficient; efficiency, in fact, is the most potent factor in a material civilization. We may feel astounded by this efficiency, but, if through tear, we bring to its feet our homage of respect, we should know that we are fast going down to the very bottom of misfortune; for, it is as the barbarity of bringing sacrificial offerings to some god thirsting for blood. It is on account of this fact, and, to retain her self-respect, that the whole of Asia denies to-day the moral superiority of Europe; while, on the other hand, to withstand the ravaging inroads of Europe, she is imitating that aspect of Europe which slays, which eats raw flesh and which, by putting the blame on the victim, tries to make the process of swatting him easier.

But there is a lack of truth in realizing Europe in this fashion. I, personally, do not believe that Europe is wholly and entirely materialistic. She has lost her faith in religion but not in humanity.

Man in his essential nature can never be solely materialistic. In Europe the ideals of human activity are truly spiritual; for these ideals are not paralysed by shackles of scriptural injunctions, or, to put it in other words, their sanction lies in the heart of man and not in something external to him. This freedom from the changeless irrationate bondage of external regulations, is a very big asset of modern European civilisation. In Europe man is pouring forth his life for knowledge, for the land of his birth and in the service of humanity, through the urge of his own innate ideals and not because some revered pundit has ordained it, nor because the scriptures or regulations of orthodoxy have indicated such

action. It is this attitude of mind which is essentially spiritual. True spirituality gives us freedom. The freedom that Europe has achieved to-day in action, in knowledge, in literature and in art, is a freedom from the rigid idiocy of materialism. The spirit of man has, by this freedom of growth, proclaimed its right to an unfettered progress.

The fetters that we forge in the name of religion, enchain the spiritual man more securely than even ties of worldly affairs. The home of freedom in man is in the spirit of man; that spirit refuses to recognize any limit to action or to knowledge; it is courageous enough to cross over the barriers of nature and the limitations of natural instincts, it never regrets immediate loss in life and means that may or may not lead to gains in a far distant future. When the airplane goes up in the sky, we may wonder at it as the perfection of material power; but, behind this lies the human spirit strong and alive. It is this spirit of man which refused to recognise boundaries of nature as final; nature had put the fear of death in man's mind to moderate his power within the limit of safety, but man in Europe snapped his fingers at it and tore asunder the bonds; it is only then, that he earned the right to fly, a right of the gods.

But even here the titans are alive—they who are ready to rain down death from the airplane. But what I would like to point out to you is that the titans are not there all by themselves. In the civilisation of Europe there is a constant war between the gods and the titans; often the titans are victorious; but the victory is sometimes with the gods also. We should not count the result in numbers, the calculation should be based on Truth, and on the reality of the victory. It is, therefore, that the Bhagavad Gita says that Truth, even though slight, preserves us from great calamity. Manifestation of the gods is on the positive side of Truth; on the negative side are the titans. So long as we have the least response from this positive side, there need be no fear. The war of the gods and titans is only possible where the gods exist. There can be no war where both sides are equally feeble. That strifelessness, that peace, is dark and inert; it can on no account be called spiritual.

Very often, it is easy enough for us when some one reviles us for our social evils, to point at worse evils existing in Europe. But this is merely negative; the positive, bigger thing is that in Europe these evils are not stagnant, the spiritual force in man is ever trying there to come to grips with them. Hence, while we find in Europe the Giant's fortress of Nationalism, we also find the Jack-the-Giant-Killer of Internationalism. The Giant-Killer, though small in size, is real. Even when we are loudest in our denunciation of Europe, it is her Giant's fortress that we long to build in all reverence and worship, and we insult Jack with ridicule and suspicion. The chief reason for this is that it is we who are materialistic, we who are wanting in faith and courage. As in us the gods are sleeping, when the titans come they devour all our sacrificial offerings—there is never even a hint of strife or struggle.

The germs of disease are everywhere; but man can resist them when his vital force is active and powerful. So, too, even when the worship of the blood-thirsty false gods of self-seeking is rampant on all sides, man can lift up his head to the skies, if his spiritual forces are alive. The truth of the matter is that in Europe the whole nature of man is awake; and in man there are both the materialist and the spiritualist. They alone can be entirely materialistic who are uncivilized, who are only half-men, who cripple the native majesty of the spirit before the blind repetition of unintelligent activities, who are negligent in knowledge and palsied in action, who are ever insulting themselves by setting up meaningless ritualism in the place of true worship, who have no difficulty whatever in accepting that there is special sanctity, spiritual profit, inherent in particular places, particular ingredients, particular forms, peculiar formulas, and peculiar rites even when their significance is not known or knowable. That is why they are night and day a tremble with fear of ghosts and ghouls, gods and false gods, in constant dread of life and of loss, terrified by the strong, frightened of the calendar and the stars, of inauspicious days and of inauspicious moments; because they are weak in spirit, they are enslaved within, and unfettered in their outer world.

DEBENDRANATH TAGORE ON SCHOOLS FOR THE MASSES

By BRAJENDRANATH BANERJI

ON 17th May, 1839 the Supreme Government asked Mr. J. P. Grant, the Lieut.-Governor of Bengal, for his views on the subject of providing cheap schools for the masses, and improving and extending Vernacular education generally. Before formulating his own views, however, the Lieut.-Governor consulted not only the officials of the Education Department but also several other gentlemen, both European and Indian, who had either practical experience of village schools or took an interest in the well-being of the peasantry. Among the Indians who furnished the Lieut.-Governor with their views on the subject was Debendranath Tagore, the father of the Poet Rabindranath Tagore. This report, which I have discovered among the Education Dept. records of the Bengal Government, has not, to my knowledge, been published before, and is printed here for the first time:

"In reply to your letter dated 17th June last, No. 238, regarding the practicability of promoting cheap schools for the masses in Bengal, I beg leave to offer the following remarks for the consideration of His Honour the Lieut.-Governor.

I think that the best means immediately available to Government for advancing education among the general body of the people of Bengal, will be to take measures for improving the condition of the indigenous schools already in existence in most vicinities throughout the country and which I believe will be found sufficiently numerous and close to each other to serve the purpose presently in view; if any additional schools are needed in any neighbourhood it will be but matter of after consideration, that should not cause the least difficulty; "I have no doubt that the object of rendering the existing schools when placed on an improved footing available to the people generally, will be easy of accomplishment; and the most feasible plan on which the improvement of these seminaries can be effected, seems to me to be that formerly adopted in Calcutta by the School Society under the superintendence of Mr. David Hare, 1st by leading the teachers gradually to qualify themselves for their duties by proper course of self-instruction under the prospect of being surely rewarded for the labours if well guided; 2ndly, by exciting a feeling of emulation among students and encouraging them in their progress in the most fitting ways possible; 3rdly, by distribution of proper books for study as well as amusement. One additional measure appears to be necessary in the present instance, the establishment of Normal schools for the instruction of teachers employed in the different seminaries. It must

be acknowledged that the indigenous schools now in existence are in need of much improvement before they can become as useful as they ought to be, indeed it is a well known fact that many of the teachers employed in them, are utterly incapable of imparting that knowledge which is to be sought of them. The education of the teachers therefore should be a main object in every attempt to improve the indigenous schools. This can be effected in two ways: first by opening Normal classes in the District Vernacular schools already set on foot and secondly by deputation of some of the masters of those vernacular schools and other competent persons as occasional or periodical inspectors to the village schools with directions on preconcerted plan to seize every opportunity during their visits of inspection to give every proper instruction to the teachers referred to. Perhaps both these ways should be at once resorted to, and the duty of inspection should at all events be performed as frequently as it possibly can be. It is an undoubted fact also that the proper books required for the instruction of the masses, in fact, for an elementary course of instruction to any class of people, does not at present exist and yet without such books every endeavour to advance the course of education must fail. The preparation of books therefore remains another desideratum which must be immediately supplied.

The School Book Society which was I believe originally established to aid the views of the Calcutta School Society, has hitherto failed in its principal object of publishing a regular series of vernacular elementary books adapted to the wants of the people; I know of no better models for this graduated series of school books that is wanted amongst us than that afforded by many of the publications of the Scottish School Book Association and such other secular Societies in Great Britain.

I am inclined to think that none of the above-mentioned measures required to bring about the necessary degree of improvement in the indigenous schools need entail any very large amount of expense on the Government. Means already opened may I think if properly economized go a great way towards the accomplishment of the above objects. Thus the vernacular and English schools that have been established may as above hinted be made the means of extending instruction to the teachers of the indigenous schools. Under proper encouragement and superintendence the teachers of the former class of seminaries may moreover be engaged in the preparation of school books. The same class of men may also economically be employed in the inspection of the village schools and so on. The charge of Government on each teacher and his pupils in the indigenous schools need not exceed I should say Rs. 135 per annum, exclusive of course of the expenses of instructing teachers and of ins;

their schools which too may be lowered down much below their present scale.

I do not exactly comprehend the drift of the observation made by His Honour that there are not the same available means or agency in Bengal as in the North-Western Provinces for introducing a system similar to the Halkatundee System of Hindustan. His honour here probably refers to the means and agency afforded by the recent Revenue Settlement of the North-Western Provinces which cannot of course be available in these days in Bengal. But that both means and agency to effect the same purpose and perhaps in a more efficient way do exist in Bengal, seems to me to be indisputable. It is indeed quite evident, and this His Excellency the Governor-General in Council has himself noticed, that as regards a popular desire for education and a supply of masters the difference is all in favour of Bengal.

There are only three classes of people here who are indifferent to the education of their children.

1st. Those who are not able to read and write themselves.

2nd. Those who are too poor to go to the expense of educating their sons and daughters and—

3rd. Those who are afraid of the effects of education as regards the religious principles of their children.

With regard to female children there is a fourth class of men who consider female education either as practically unnecessary or as improper on social or moral grounds who are opposed to it from a superstitious fear of the consequences of learning upon matrimonial happiness of their daughters. But as all these obstacles raised to the instruction of females are fruits only of ignorance it must be left to time and the spread of popular education to cure people of these misgivings and errors on this subject, and I have nothing to do with this class of men here.

To give the three classes of people mentioned above an interest in the education of their main children, the only course necessary in Bengal seems to be respectively as follows:—

1st to impart a knowledge that will be extensively useful to the children in their after times; this will most speedily bring the first class of indifferent persons to think better and much higher of the means afforded for instructing their sons.

2ndly. To impart this knowledge gratuitously to those who cannot really afford to pay for it, this will obviate the second class of objections.

3rdly. To avoid every instruction in the schools which may in any way be construed as having a religious or doctrinal tendency. This will meet the objections of the third class of people referred to above. It will however necessitate the exclusion of all the Sacred Scriptures whether Christian, Mahomedan, or Brahminical from the general

routine of reading in the schools, though moral instruction must remain as of paramount importance to all.

The branches of useful knowledge that should thus be communicated to the children of the masses might I think be enumerated as follows:—

Reading

Writing and

Correct Spelling

Elements of Arithmetic and of Mensuration as a branch of Arithmetic.

Rudiments of letter writing

Rudiments of account keeping agricultural or mercantile.

First principles of Science connected with agriculture.

Outlines of the law of weights of persons and of real property in this country.

Elements of Geography and History

Lessons in practical morality.

Some knowledge of these various matters should be communicated to each student though of course not to the same extent in each branch of instruction; the degree of knowledge necessarily differing according to the circumstances and opportunities of each student but the kind of instruction given to all should be the same.

If some such course of instruction as the above, be adopted in the indigenous schools in the mofussil and adopted under the patronage of Government, and measures at the same time be taken to qualify the teachers for the duty in which they are engaged, I have not the slightest doubt that everything immediately desirable for successfully advancing the course of popular education in Bengal, will have been done and so done without embarrassing the finances of Government in any unreasonable or unnecessary way. That education will not fail to be desired by most people in Bengal if given on some such principles as those I have just allowed to, is in my belief a self-evident proposition. That the more wealthy people in the mofussil when they find every desirable instruction given in the schools at their villages and see nothing objectionable taught in them under the eyes too of Government will continue those means for maintaining the schools which now exist and that they may perhaps be gradually induced to raise new means for the same purpose, seems to me to be also quite clear, and I cannot but think that the agency of the Gurumoshays who now teach in village Patschals may with very little trouble be rendered much more valuable than it is at present."

*From Balu Debendra Nath Tagore, to E. H. Lushington, Esq., Offg. Junior Secretary to the Government of Bengal, (dated the 8th August 1859). *Education Dept. Procdgs.* Octr. 1860, No. 60.

THE ENGLISH IN INDIA SHOULD ADOPT BENGALI AS THEIR LANGUAGE

By RAJAH RAMMOHUN ROY

I have lately discovered that there are in England some unpublished writings of Rajah Rammohun Roy, and among these has been found the following paper "On the possibility, practicality, and expediency of substituting the Bengali Language for the English." It is a humorous skit which will not fail to interest the reader.—Brajendranath Banerji]

Babu Mast Hathi. It is a great desideratum that the English Governors and their native subjects, should be able to enjoy unrestricted intercourse with one another should we continue to accomplish this, it would be a great blessing to the subject; and it is probable that our rulers might ultimately benefit by it.

Is the scheme possible? Undoubtedly. Have we not various instances of the language of a country being changed? The Hebrew has died away, and is succeeded by Syriac. The Latin was formerly spoken in Constantinople, it has been supplanted by the Turkish. The old Pehlevi has given way to the modern Persian. In England, the Welsh was formerly universal; English is now spoken there. I could mention many others.

Babu Dana. But in these instances, if I recollect right, the nations who spoke the original languages have been swept away, and have been succeeded by others.

Babu Mast Hathi. What is all this to a good theory? Your common sense is the ruin of all grand schemes.

Babu Dana. But if it were possible, what do you say to the practicability?

Babu Mast Hathi. Practicability? Why, I hold the maxim to be a sound one that "what man has done, man may do again"; and I hold it to be at once unsound and injurious to lay down the principle that "what man has not done, man cannot do." The difference in the circumstances of the case is of very little consequence.

Babu Dana. But would such a change be expedient?

Babu Mast Hathi. Undoubtedly. Consider the superiority of the Bengali over the English. The latter is a jargon compounded

of half a dozen languages; whereas the Bengali is derived immediately from the Sanskrit, one of the purest and most regularly formed languages in the world, therefore the English would benefit greatly by the change. Besides we have many works, the perusal of which would add to their stock of knowledge

Babu Dana. It seems to me that the best way would be to translate these books into English, for I doubt whether that people would give up their own language and adopt the Bengali.

Babu M. H. They ought to do so, when we consider how inferior they are to us in caste, cleanly habits, and many other points, if they do not, it will be another proof of their ignorance and prejudices. At any rate, should they be so stupid, I have another plan which, though not quite so good, will be a step gained.

Babu Dana. What is that?

Babu M. H. To teach the English to give up their own alphabet, and write their language in the Sanskrit, Bengali or Deva-nagari letters. By selecting from these we may easily contrive, with the assistance of diacritical marks, to express every sound of the English alphabet.

Babu Dana. Such a scheme is possible certainly, since what one set of letters express, another may be invented to represent the same sounds; but do [you] think it will be practicable to induce the English to give up their old alphabet and adopt this new one?

Babu M. H. Why not? What has been done, can be done again. We have many instances. The language of the Tonga Islands has various peculiar sounds, yet these have been successfully represented by the Roman letters. Look at the old arrow heads and various other characters found in ancient inscriptions in this country: these have been supplanted by the letters now in use.

Babu Dana. But I have heard that the inhabitants of the Tonga Islands had no written character until the Roman was

introduced: and as to the other instances, you forget that the people who used those letters have been swept away. It seems to me that the circumstances are different.

Babu M. H. There again you break in with what you call common sense. I tell you again, circumstances and facts have nothing to do with theory; and that is what I go upon.

Babu Dana But if you did succeed, what would be the benefit?

Babu M. H. Very great indeed. The English letters are incomprehensible to all who have not spent their lives in learning them: hardly one has any fixed sound: every vowel has two or even three: and a great many of the consonants have each two: all given in the most arbitrary way, without any rule. Now I propose that the characters taken from the Sanskrit or Nagri should invariably express the same sound. Such a plan as this would greatly facilitate the reading of

the vernacular languages of India by the English, which would give us a better chance of obtaining justice than we have ever had yet.

Babu Dana. Well, all I can say for your plan is that it appears as practicable as to teach the Natives of India to give up their own language or letters, and to adopt those of Europe.

Babu M. H. A thousand times more so. Are not the English in India few in number? Do not they boast how superior they are to us in everything, above all in freedom from prejudice: surely it is much easier for two or three thousand of them to adopt our language or character, than to expect sixty millions of Natives, most of whom are so poor that they work hard all day at their respective avocations, to give up that which they have used for centuries, and accept a new one.

Babu Dana. Oh Ram, Ram. Wonders will never cease in this world.

THE KARA OF ORISSA

By PROF. R. D. BANERJI M. A.

Benares

THE kings of the Kara dynasty of Orissa were absolutely unknown to the people of India 20 years ago. During this period the labours of a number of epigraphists and the French savant M. Sylvain Levi has enabled us to reconstruct the history and chronology of this dynasty of kings. The date of the dynasty was fixed by M. Levi's fortunate discovery of the reference to an embassy from Orissa to the Chinese emperor Te-tsung towards the end of the 8th century, "in 795 A. D., that is the 11th year of the period Cheng-yan." The king who sent this embassy was called Suhhakara. It was the good fortune of the writer to come across the first inscription of king Suhhakara 14 years ago. In this inscription, the Neulpur plate, three generations of kings of the Kara dynasty are mentioned; (1) Kshemankara (2) Sivakara and (3) Suhhakara. Since then the history of the dynasty has been much better illuminated by the fortunate discovery of two other grants, (1) the

Kumranga plate of Dandi-Mahadevi and (2) the Chaurasi plate of Sivakara. These two newly discovered inscriptions now enable us to link together the information supplied by the two plates of Dandi-Mahadevi at one time preserved in the office of the Collector of Ganjam and the grant of Trihuvana-Mahadevi from Dhenkanal, edited by Mahamahopadhyaya Dr. Hara Prasad Sastri, C. I. E. These inscriptions show that there were two groups of dynasties of Kara kings ruling at different dates. The first group or dynasty is known from two inscriptions only; (1) the Neulpur plate of Suhhakara and (2) the Chaurasi plate of Sivakara. The remaining inscriptions of this dynasty are later in date and belong to the period of second group.

The first group of Kara kings were decidedly Buddhist. The ancestor of the dynasty, Kshemankara, is called simply a lay worshipper (*Paramopasaka*). His son, Sivakara, is styled the devout worshipper of the Tathagata (*Parama Tathagata*) and

his grandson Subhakara is styled the devnat Buddhist *Parama-saughata*). Subhakara was a contemporary of the Chinese emperor Te-tsung and in Chinese records is described as one "who had a big faith in the Sovereign Law, and who followed the practice of the Sovereign Mahayana." His name is given as "the fortunate monarch who does what is pure, the lion." From this M. Sylva Levi guesses that the name of the king of Orissa was Subhakara Kosari. In the year 795 A. D. the Chinese Emperor, Te-tsung, received an autograph manuscript containing the last section of the *Avatamsaka* which is the section dealing with the practice and view of the Bodhisatva Samantabhadra. M. Levi therefore guesses that the work presented to the Chinese emperor was really the *Ganda-vyuha*, "Of which the original is preserved among the Nepali collections"? The autograph manuscript and the letter from king Subhakara was entrusted to the monk Prajna who was requested to translate it. This Prajna was an inhabitant of Ki-pin or Kapisa near Kabul, who had begun his studies in Northern India and then migrated to Nalanda where he had resided for some time. After spending eighteen years in study he settled down in the monastery of the king of Orissa to study Yoga philosophy. Then he went to China as the ambassador of the king of Orissa.¹ Though Subhakara and his ancestors were Buddhists the villages granted by him by the grant discovered at Neolpur was given to Brahmanas. The villages of Komparaka and Dandanklynka were situated in the districts (*Vishaya*) of Pauchala and Vubbyndaya in Northern Tosali. The grant was issued in the 8th year of the reign of Subhakara.² The genealogy is carried one generation farther in the Chaurasi plate of Sivakara II. This inscription is of great importance as it supplies many interesting pieces of informations. After the name of Sivakara I, the word *Kara*, which appears to be the family name is repeated, a feature which is to be found in some of the inscriptions of the second group of Kara kings. We know from this now inscription that Sivakara I married Jayavalidevi, from whom was born Subhakara, the contemporary of the emperor Te-tsung. From Subhakara by this queen Madhavadevi was born Sivakara II. The Chaurasi plate

records the grant of the village of Vuvrada situated in Southern Tosali to a number of Brahmanas in the 13th year of the reign of the king on the 12th day of the bright half of Kartika. Sivakara II and his father Subhakara are given the Imperial titles *Paramesvara-Maharajadhiraja* and *Paramabhattacharya*.³ The village of Vuvrada granted by Sivakara II was situated in the Antaradra district (*Vishaya*) which is identified by Mr. Narayana Tripathi with the *Parganah* of Antarodh in the Sadar Sub-Division of the Puri district of Orissa. The grant was issued from Subhadevipataka which he mistakes for Subhadevipataka mentioned in the Neolpur plate. The special Buddhist titles of Subhakara, his father and grandfather are not given in the Chaurasi plate even in the case of Subhakara.

The second group of Kara kings is known to us in detail from three grants of Dandi Mahadevi and the Dheukanal plate of Tribhuvana Mahadevi. The three grants of Dandi Mahadevi supply us with more information than the plate of Tribhuvana Mahadevi. The earliest known inscriptions of this dynasty were the two grants of Dandi Mahadevi preserved in the office of the Collector of Ganjam and edited by the late Prof. Dr. Kielhorn. Out of these two plates the first one is dated in the year 180 of an unknown era. If this date is assigned to the unknown Ganga era then it was issued in 858 A. D. The Kumuranga plate of Dandi Mahadevi is also dated. The late Mr. H. Pandey read it as 387 but it appears on the analogy of the Ganjam first plate to be 187. The Ganjam plates state that "There was a king named Unmattasimha (1.5), from whose family sprung Mangapada (1.7) and other kings. In their family there was the king Lonabhara (1.9); his son was Ksumabhara (1.13); after him ruled his younger brother-Lalabhara (1.13); he was succeeded by his son Santikara (1.15), and he again by his younger brother Subhakara (1.18). When the last of these princes died, his queen ascended the throne, and afterwards her daughter Dandi Mahadevi (1.20) ruled the earth for a long time." The information supplied by the Dhankanal plate of Tribhuvana Mahadevi is exactly similar but in this plate the name of the first king is spelt as Lolabhara.

1. *Fpi. Ind.*, Vol. XV, pp. 363-64.

2. *Ibid.*, pp. 1-8.

3. *Journal of the Bihar and Orissa Society* Vol. XIV, 1928, pp. 292-306.

From these three inscriptions we learn that one Ummattasimha was regarded as the remote ancestor of this line of kings. The Ganjam plates mention a king named Mangapada after him. The Dhenkanal plate mentions Gayada and others instead of Mangapada. Evidently Prof. Kielhorn could not read the name Gayada correctly. In the family of Gayada was born Lolabhara or Lonabhara. His sons Kusumbhara and Lalitabhara succeeded him. Lalitabhara's son was Santikara according to the inscriptions of Dandi-Mahadevi. We learn from the Dhenkanal plates of Tribhuvana Mahadevi that she was the wife of Lalitabhara who is styled the Moon of the Kumuda flowers of the Kara family, Maharajadhiraja and Paramesvara. Tribhuvana Mahadevi was the daughter of a southern chief named Rajamalla, who upheld the fortunes of the Kara family at the time of a great misfortune. At that time requested by the Gosvami Purayidovi and the assembly of great feudatories (*Mahasamantachakra*). Tribhuvana Mahadevi ascended the throne. We do not know whether Santikara was her son or not. The three grants of Dandi Mahadevi carry the genealogy of the second group of Kara kings three generations further. Santikara, the son of Lalitabhara, was succeeded by his son Subhakara II and he by one of his queens who is not named. Later on, Dandi Mahadevi, the daughter of Subhakara II ascended the throne. The date of the Kumuranga plates of Dandi Mahadevi, the year 187 of an unknown era is the latest known date of this dynasty. If applied to the little known Ganga era it would give 965 A. D. as the latest known date for Dandi Mahadevi.

The foregoing summary of the events connected with the reigns of the second groups of monarchs of the Kara dynasty shows that the Dhenkanal plate of Tribhuvana Mahadevi is the earliest known inscription of the second group. The late Mr. H. Pandey attempted to connect the two dynasties by identifying Kshemankara of the Nalpur plate with Santikara of the inscriptions of Dandi Mahadevi and Subhakara with Sivakara. There are two Sivakaras in the first group of the Kara dynasty and as all other names disagree, it is not possible to identify the kings of these two groups.

Of the kings mentioned as the ancestors of Lolabhara neither Ummattasimha or Gayada are known from other inscriptions.

It is absolutely impossible to identify king Gayada, the ancestor of Lolabhara, with Gayada of the Tunga family, the descendant of Salanungga and Jugattunga. Of Lolabhara and his sons Kusumahara and Lalitabhara no details are given in any of the three inscriptions of Dandi Mahadevi. Tribhuvana Mahadevi was the widow of Lalitabhara and she has left a good deal of information in a grant discovered in Dhenkanal state. This was issued from Subhvesvara-pataka, the capital of Subhakara. The kings Ummattakesari and Gayada are mentioned among the early ancestors. Then we are introduced to a chief of Southern India who had saved the Kara family when it had fallen on evil days. Tribhuvana Mahadevi was the daughter of this Rajamalla and was married to Lalitabhara. Evidently upon the death of her husband the queen was persecuted by the ascetic Purayidovi and the principal feudatories to ascend the throne. Her titles are Paramahattarika-Maharajadhiraja-Paramesvari and she is styled the devout worshipper of Vishnu. The land granted was situated in Kosala, but it is not specified in which part of that country. The village granted, Kontaspara, was situated in the district of Odagrama. The grant is dated as it was issued according to the editor in "*Samvat Lu Chu Kartika sudi di*." Those numerals have not been translated by the learned editor but as the symbol *Lu* denotes the numeral for 100 in two grants of Dandi Mahadevi it would be safer to assume that this symbol expresses the same value that it does in the Ganjam plate of Dandi Mahadevi. The late Mr. H. Pandey transcribed this symbol as 300 but a comparison with the Ganjam plate shows that he is wrong. The symbol *Chu* may be taken to denote 30. With these dates as the basis, the chronology of the second group of Kara kings may be reconstructed. The inscriptions of Dandi Mahadevi do not mention Tribhuvana Mahadevi but bring forth another king named Santikara as the successor of Lalitabhara. We possess two different stone inscriptions of this Santikara, one of which is dated. This inscription was found in a cave on the top of Dhauti hill in the Puri district of Orissa. This inscription records

1. This is the inscription mentioned by late Mr. H. Pandey but it has not appeared in the *Epigraphia Indica* Vol. XV. It will be published in a subsequent volume. *Ibid.*, Vol. V. 1919. p. 569.

a private donation in the year 93. According to all inscriptions of Dandi Mahadevi Santikara was the son and successor of Lalitabharā and according to the Dhenkanal plate Tribhuvana Mahadevi was the latter's wife and successor, but as Santikara was ruling in the year 90 and Tribhuvana Mahadevi in the year 130 there can not be any doubt about the fact that Tribhuvana Mahadevi had succeeded Santikara, her son or step-son, on the throne and not her husband Lalitabharā. The disturbances mentioned in the Dhenkanal plate appears to have taken place either shortly before or after the year 93. There is no reason to suppose that the year 93 belongs to a different era from the year 130 of the Dhenkanal plate. If these be referred to the Ganga era then Santikara was ruling in Central Orissa in 871 A. D. It may therefore be assumed that the disturbances caused by Sattribhanja and Ranabhanja I were the causes of the fall of the Kara or Kesari dynasty after the death of Lalitabharā and that the revival of Kara power under Rajamalla caused Netribhanja I and his successors to retire to the south and transfer their capital from Dhritipura to Vanyulvaka. The two inscriptions of Santikara now become the oldest records of the second group of the Kara dynasty. The first of them was discovered inside the Ganesagumpha cave on Khandagiri hill, three miles to the west of Bhuvaneshvara in the Puri district. It is not dated and simply mentions Bhimata the son of a person named Nannata.¹ The second inscription of the reign of Santikara was found by me in a cave close to Asoka's rock inscription at Dhauli near Bhuvaneshvara. The only important part of this inscription is the date. If the initial year of the so called Ganga era fell in 778 A. D. then this cave was excavated in 871 A. D. Beyond this we do not know anything about Santikara.

The Dhenkanal plate of Tribhuvana Mahadevi proves that she came to the throne after Santikara. In the period which followed the death of her husband Lalitabharā and his son Santikara there were disturbances which were quelled by her father, Rajamalla. In the Dhenkanal plate this chief is simply called, "The mark on the forehead of the Southern region". The only kings of this name known to us are western Chalukya king Vikramaditya I² and the three western Ganga chiefs of that name. Out of these three Rachamalla or Rajamalla

I is too early. The king referred to may be Rajamalla II whose Narasapur plates were issued in 825-202 A. D.³ These identifications depend upon the probabilities of the Karas using the so-called Ganga era and that era having started from 778 A. D.⁴

The object of the inscription on the Dhenkanal plates was to record the grant of the village of Kotaspara to Bhatta Jagaddhara for the purpose of bringing down rain (*Vrishti-kama-nimittaya*).

The three inscriptions of Dandi Mahadevi prove that the statements of the Dhenkanal plates of Tribhuvana Mahadevi that "The Kara family were known only to fama", and "Who flooding the earth with all her Kara kings dead and gone", are incorrect. Tribhuvana Mahadevi was succeeded by Subhakara, the younger brother of Santikara. There can not be any doubt the fact that this Subhakara was quite different from Subhakara, the contemporary of the Chinese emperor Tsung and the son of Sivakara and the grandson of Kshemankara. All inscriptions of Dandi Mahadevi agree in stating that Subhakara was succeeded first of all by his queen, whose name, according to certain scholars, was Gauri. Then Subhakara's daughter Dandi ascended the throne. Out of the three grants of Dandi Mahadevi, two only are dated. The earliest date is to be found in the year 180 which may be equivalent to 638 A. D. By this plate the great queen granted the village of Villagrama situated in the Eastern Division of the Baradabhandu district (*visaya*) of the Kongoda mandala. The Purva-khandu of the Kongoda mandala is still called by that name in the Ganjam district of the Madras Presidency. The grant was issued on the 5th day of the dark half of the month of Magasirsha of the year 180.⁵

The second Ganjam plate of Dandi Mahadevi is undated. It contains the important information that the Kongoda mandala was situated in Southern Kosala. By this plate the queen granted the village of Garasambha in the district of Arttam on the occasion of the *Uttarayana*.⁶ The third and the most recently discovered inscription of Dandi Mahadevi is the Kumuranga plate of the year 187. By this inscription

1. *Ibid.* Vol. VIII, App. II, p. 5; *Epi. Carn. Vol. X*, p. 25, No. 90.

2. *Journal of the Bihar and Orissa Research Society* Vol. II, 1917, pp. 419-27.

3. *Fss. Ind.*, Vol. VI pp. 40,

4. *Ibid.* pp. 140-42.

2. *Ibid.*, Vol. VII, App. p. 5, Note 4.

the queen granted the village of Kantsarunagari in the district of Khidingabhara of the Kungada mandala in Southern Tosala, on the 13th day of the bright half of Jyaishtha of the year 187.¹ The Kumurauga plate informs us that the Kungada or the Kongeda mandala was situated in Southern Tosala where as the second Oanjam plate states that it was situated in Southern Kusula and therefore it is apparent that in Orissa Tosala Kosala were equivalent. The dated inscription of Dandi Mahadevi prove that the queen was reigning from 958 to 965 A. D., if the dates can be referred to the Oanga era. We do not know what happened to the Kara family after Dandi Mahadevi. Evidently the Bhanjas regained power and were able to regain Northern Khinjali under or in the time of Netrihhanja II, the son of Vidynharabhanja.

The discovery of M. Sylvaïn Lovi leaves no doubt about the fact that the first group of Kara kings bore the title of Kesari. The inscriptions of the second group of Kara kings prove that one of their ancestors was called Unmattakesari but the title is not applied to any king of the second group. We do not know whether these later Kara kings had other *virūdas* or not, but kings with the name Kesari are to be met with in some inscriptions of Orissa and records of other countries. At least three inscriptions are known of a king named Udyotakesari. The earliest inscription of the reign of this prince was discovered in a ruined cave assigned to the mythical Lalatendu-kesari of the native tradition of Orissa, on Udayagiri, three miles from Bhuvanavar in the Puri district of Orissa. According to this inscription in the 5th year of the reign of Udyotakesari the old temples and well on the Kumara hill were repaired.² In the Hathigumpha inscription of king Kharavela of Kalinga we have seen that the Udayagiri is called the Kumara hill. From the inscription in Lalatendakesari's we learn that the Khandagiri was called the Kumara hill. The ancient names of the Khandagiri and Udayagiri were therefore Kumara and Kumari. In the Navamuni cave, on the same hill, there is another pilgrim's record belonging to the reign of Udyotakesari. It states that in the year 18 of the reign of Udyotakesari the Acharya Kutachandra's

disciple Subhachandra came to this shrine.³ Another inscription discovered somewhere in Bhuvanavar but now missing was inscribed in the 18th year of the reign of Udyotakesari, Lord of the three Kalingas. From published texts the late Dr. Kielhorn published the following summary of this inscriptions: "Janamejaya of the lunar race, his son Dirgharava, and his son Apavara who died childless: after him, Vichitravirya (another son of Janamejaya), his son Abhimanyu, his son Chandihara, and his son Udyotakesari, whose mother was Kelavati of the solar race."⁴ Beyond this we do not know anything of Udyotakesari. If his ancestor Janamejaya is the same as Mahabhagvata of the Soma-vamsi dynasty of Mahakosala, then, in spite of his affix *Kesarin* he can not be taken to be a descendant of the Kara dynasty.

A king of Orissa with the affix *Kesari* continued to rule over some part of Orissa till the middle of the 11th century A. D. among the feudatories who combined to recover Northern Bengal for the Pal king Ramapala is mentioned Jayasimha of Dandabhukti who is said to have uprooted king Karnakesari of Utkala. The campaign for the restoration of Ramapala to Northern Bengal can not have taken place later than 1060 A. D. and therefore Jayasimha's defeat of Karnakesari must have taken place sometime earlier. Udyotakesari is called the Lord of Trkalina in the lost Bhuvanavar inscription but in the *Ramacharita* of Sandhyakara NANDIN Karnakesari is styled the Lord of Utkala,⁵ evidently because by that time the rest of the three Kalingas had been conquered by the Eastern Ganga king Vajrahasta who ascended the throne in 1038 A. D.⁶ In 1078 A. D. Anantavarman Chodaganga made an end of all minor dynasties, including, perhaps, Karnakesari, who was ruling over Northern Orissa, adjoining Dandabhukti or the modern district of Midnapore, as the last representative of his dynasty. We do not know whether Karnakesari belonged to the Kara dynasty or the lunar dynasty of Udyotakesari.

INDIAN CONSTITUTIONAL PROBLEMS*

(A REVIEW)

By POLITICUS

The paper, printing (there is not a single printing mistake), binding and general get-up of the book are quite as good as those of the best English firms of publishers, and no one handling its pages would suppose, unless he knew it, that it has been printed in India. The questions which arise for discussion and solution in view of the Statutory Commission which was then about to be, and has subsequently been appointed, have been treated in this book and the extensive knowledge and grasp of political problems displayed by the author are bound to command respectful attention among statesmen everywhere. Open the book at any page, and read through a few pages, and you will at once feel that here is a mastermind dealing with a subject of which both the theory and practice is known to him as well as anybody in whose hands the Government of the country has been entrusted. In lucidity and ease the style is a model of what it should be and would be easily mistaken for that of an Englishman. Only the point of view is somewhat different. The sobriety of the author is apparent in all that he writes, as befits one who has inside knowledge of the problems he deals with, and appreciates the difficulties which beset the path of the practical administrator. This vein in the author's make-up will appeal to all the conservative instincts of our rulers, but what will prove obnoxious to them is the other vein of large-hearted sympathy, of progressive advance, and faith in the destiny of the people, of which there is ample evidence in every page. To thoughtful men in the West, his cautious liberalism ought to make a serious appeal, but as the author says, "the chances are that the government will be unable to distinguish friends from foes." The authorities that he quotes are not generally known to our politicians, and the quotations produce a telling effect. The science art and philosophy of government have been studied by the author from the best sources, and applied to the details of Indian administration with a mastery of principle and wealth of well-digested statistical and historical information which are unrivalled. Specially is this the case with reference to the chapters on the Army and the Native States. With regard to army questions, Sir Sivaswamy Aiyer is the greatest authority which India possesses, and he is also a specialist in almost all the subjects he treats of. Besides the preface, introduction and epilogue, the book contains the following chapters.

Provincial autonomy, provincial legislatures, provincial executive, reforms in central government, defence, central legislatures, central executive, judicial appeals and the council of India, the Indian States, objections to advance. There is a well-chosen and select bibliography, and an excellent index.

There is nothing in the theory and practice of government which the author does not touch and which his touch does not illuminate and adorn. In the pages of this book one feels at once that he has come across a master-politician and a statesman of the highest order. One on this side of India cannot but enquire how many men there are in Bengal, in or outside the sphere of politics, who can be placed in the same category with Sir Sivaswamy Aiyer and the answer to the query is bound to be extremely disappointing. If not also disheartening. We give below a few extracts to conclude our review.

"No one in India can believe in this effusive solicitude of the British Government for the depressed classes as a sincere answer to the political demands of the country. It is believed, not without justice, that the various reasons put forward as arguments against any large relaxation of Imperial control are not the real reasons which weigh with the Imperial Government. The true reason is that, though the British Government admits that they hold the country as trustees for people, they are not wholly disinterested trustees. On the other hand, they are deeply interested in the maintenance of the *status quo* and in their own domination of India. One of the first things that English Statesmen have to learn is to clear their minds of cant and not to pretend that they are the disinterested guardians of the millions of people of India."

"The idea of energizing the masses and awakening their political consciousness is one which has been carried out on a large scale by Mr. Gandhi far more successfully than by any other Indian political leader of the past. And it is perhaps his greatest achievement." "It is a good thing to appeal to the two communities [Hindus and Moslems] for a change of heart and for an amicable adjustment of differences whether political or religious. But suppose the communities are unable to come to an agreement. Have the Government no duty to the country in the matter? Is it confined merely to the suppression of breaches of the peace, to the punishment of offenders and to the issue of prohibitory orders? What should an autocratic government like the Government of India, anxious to promote the unification of its subjects and the permanent interests of the country, have done? In the absence of any law or usage, it would have enacted laws clearly laying down the rights and duties of the commu-

* *Indian Constitutional Problems: By Sir P. S. Sivaswamy Aiyer, K. C. S. I., C. I. E., Retired Member of the Executive Council, Madras D. B. Taraporewala, Sons and Co., Hornby Road, Bombay, 1928. With a Preface, Bibliography, and Index. Pp. 384.*

nities in political and religious matters and such laws would have been based not upon the administrative convenience of the day, but upon a just and impartial consideration of the rights of the parties and the true interests of national progress. Having framed its laws, it would have protected the rights created thereby and enforced the corresponding obligations impartially. One may well ask what proof of constructive statesmanship has been given by the Government."

"The exploitation of differences within modest limits is an easy expedient for the maintenance of the power of a ruler and especially a foreign ruler. The methods adopted for such exploitation are too well-known to need description. Sometimes one community is patted on the back and sometimes another. Differences are dilated upon; the suggestion is made that the interests of one community are in conflict with those of another, and under the pretext of describing the facts, ideas of discord are insidiously sown or cultivated in credulous minds. The Sikhs and Pathans are told that they will never allow themselves to be ruled by the Bengali or the Madras, the Mahomedans are told that they will never entrust themselves to the rule of the Hindu majority; and everybody is told that they feel their interests are safer in the keeping of the British than in the hands of their own countrymen. Though the Government of India is based upon the assent and acquiescence of its subjects, it does not possess the moral authority of responsible government and it has reason to fear the consequences of an inconvenient combination among discordant sects which may force its hands to follow a policy not in consonance with that dictated by the Imperial Government." [As Lord Curzon remarked, the consolidation of the rule does not make the task of Government easier].

"The Imperial Government does not pay an iota of the cost of the Indian army and from this point of view the Indian army is not an Imperial force at all. But it is imperial in every other sense, for it is controlled by the Imperial Government and can be used for any imperial purpose and despatched to any part of the world without the consent of the Indian legislature." "It was considered dangerous to allow a spirit of solidarity to grow up among the Indian troops and the expedient was resorted to of forming class companies. The Peel Commission recommended that the Native Army should be composed of

different nationalities and castes, and, as a general rule, mixed promiscuously through each regiment. When it was found that military discipline and service in distant parts of the country tended to obliterate religious and caste differences and promote ties of fellowship, it was suggested that regiments should as far as possible be confined to the provinces in which they were raised, so that they might continue to retain their traditional prejudices and mutual antipathies. How to prevent the emergence of any leaders from the Indian officers and how to prevent the development of any capacity for initiative or leadership were matters of anxious concern to the military authorities. To crown all these various expedients, the Government and the military authorities have followed a systematic propaganda of the inferiority of the Indian to the Britisher by harping in season and out of season upon his incapacity for leadership, so that the Indian soldier and the Indian officer may be hypnotised into the soul-deadening conviction of his ineradicable inferiority to the European soldier and of the invincible superiority of the latter." "If the imperialist is prepared to make the theoretical concession that India has a right to learn to defend herself, he generally couples it with the mental reservation that, God willing, he will take good care that she does not."

The conclusion which the author draws from the history of the various changes introduced into the Indian army as a result of the different committees which have made recommendations from time to time is that Government is disinclined to make any real advance in the Indianization of the army, or the extension and improvement of the Territorial Force. The writer's observations on the party system, the electoral reforms in the central and provincial governments, and the legislatures, are full of a ripe wisdom not every Indian politician should study them. The verdict of the author on the achievements of the various Indian legislatures is distinctly hopeful. "The legislatures of India have been characterised by a breadth of outlook and sympathy and a spirit of progressiveness which compare favourably with the mentality of the British parliament in the nineteenth century and even at the present time."

Want of space compels us to direct the reader to the book itself for many other passages which deserve careful and serious consideration.

WHY AMERICA AND OTHER NATIONS SHOULD SYMPATHISE WITH INDIA'S STRUGGLE FOR FREEDOM!

By J. T. SUNDERLAND

THOSE who claim that India's struggle to free herself from British rule is solely the domestic affair of Great Britain, with which no other nation has a right to concern itself, should do a little reading of history.

As a fact, have nations struggling to free themselves from the oppression of a foreign yoke never received sympathy or encouragement from other nations? Have we Americans never extended sympathy or aid to such struggling nations? Has Great Britain her-

self never done the same? The fact is, the true spirit of both America and England has always been that of wide interest in liberty, and sympathy with nations and peoples in any and every part of the world who were struggling to shake off alien despotisms and gain for themselves freedom and nationhood. England's record in this respect has been very noble. Let us glance at it.

We in America can never forget the sympathy extended to us by several of England's greatest statesmen, and also by many humbler people, in our Revolutionary War. Nor can we cease to remember that in our Civil War the working people of England to a remarkable degree stood by our national government, even against their own interests, because they believed our national cause to be the cause of human freedom.

When Greece early last century went to war to throw off the yoke of Turkey, the English people took a very deep interest in the struggle. They did not for a moment think of it as a mere domestic affair of Turkey, in which they had no right to interest themselves. Lord Byron's dramatic espousal of the Greek cause attracted the attention and was the admiration of liberty-lovers in all lands.

With Italy's struggle to free herself from the yoke of Austria, England warmly sympathized, and showed her sympathy by the strong public utterances of Gladstone and public men, and also by giving shelter and aid to Italian refugees Mazzini, Garibaldi, and many others, who were driven into exile on account of their efforts to obtain their country's freedom. The enthusiasm with which Garibaldi was welcomed to England after his patriot army had won its entry into Rome was not less than that which greeted Kossouth in America after his heroic struggle for liberty in Hungary. A personal witness thus describes the great scene in London:

"I was one of the number who had the honor and pleasure of giving welcome to the brave Garibaldi when he came to London after his glorious victory in freeing his country. He was met at the railway station by tens of thousands of young and old, rich and poor, and escorted through the streets to the Duke of Sutherland's mansion. It was such a spectacle as seldom if ever has been seen to London before or since. Few cannot describe it. When we arrived in front of the house, the three nearest Garibaldi's carriage unhitched the horses, and the carriage with the

hero was dragged the rest of the way by thousands who delighted to do him honor. It was the enthusiasm of a liberty-loving people for the work done by that one man not only for Italy, but for the whole world a victory won for freedom over tyranny."

These facts and incidents show the noble and true England, the England that did not regard the struggle of Greece and Italy as mere domestic concords of Turkey and Austria. If this England had always been in power, India would never have been conquered and enslaved! If this England were in power to-day, India would soon be set free.

Turn now to America. The United States, assisted as she was by other nations in obtaining her own freedom, has manifested throughout a large part of her history an earnest sympathy with nations, wherever located, who were struggling to throw off a tyrannical yoke and to establish for themselves governments based on principles of justice and liberty. Said Washington in a notable public utterance delivered the same year as his Farewell Address:

"My sympathetic feelings and my best wishes are irresistibly excited whenever in any country I see an oppressed nation unfurl the banner of freedom."

When the South American nations were engaged in their struggle to throw off the yoke of Spain and gain their independence, the sympathy for them in the United States was ardent and almost universal. Nobody thought of their struggle as a mere domestic affair of Spain in which we should not interest ourselves. Ours was the first nation to recognize the new republics. This did not occur until 1822 but as early as 1816 Henry Clay urged that we should carry our national sympathy so far as forcibly to intervene in their favor.

President Monroe in his annual message to Congress in 1823 expressed in unmistakable language his own sympathy and that of the American people with Greece in her struggle for freedom. One memorable evidence of America's sympathy is seen in the fact that the eminent Boston philanthropist and educator, Dr. Samuel G. Howe, later the husband of the equally eminent Julia Ward Howe went to Greece (as did Lord Byron in England) and rendered distinguished service to the Greek people in their war for liberty.

With the revolutionary or semi-revolutionary movement in Germany in 1818, to

establish liberal government in that country, the United States manifested profound sympathy from the beginning. Our minister to Berlin, Mr. Donelson, was instructed to keep in close touch with the movement and give it any encouragement he could without diplomatic discourtesy or offence to the Berlin government. He was informed from Washington that an important part of his mission was—"to manifest a proper degree of sympathy (on the part of America) for the efforts of the German people to ameliorate their condition by the adoption of a form of government which should secure their liberties and promote their happiness."

He was instructed that it was the "cordial desire of the United States to be, if possible, the first to hail the birth of any new government adopted" by any of the German States having for its aim the attainment of the priceless blessings of freedom."

The profound sympathy of this country with the struggle of Hungary for freedom under the leadership of Kossuth, in 1849, is well-known. President Zachary Taylor showed his own interest and that of the American people in the struggle by appointing a special agent with authority to recognize the independence of the new State "promptly, in the event of her ability to sustain it." In his annual message (of 1849) President Taylor declared that he had thought it his duty, "in accordance with the general sentiment of the American people, who deeply sympathized with the Magyar (Hungarian) patriots, to stand prepared, upon the contingency of the establishment by her of a permanent government, to be the first to welcome Independent Hungary into the family of nations."

The feelings of the American Nation were strongly enlisted," he declared, "by the sufferings of a brave people who have made a gallant though unsuccessful effort to be free." On the failure of the Hungarian revolution Kossuth and his companions took refuge in Turkey. The American Congress passed a joint resolution (which was approved by the President, March 3, 1851) declaring that the people of the United States sincerely sympathized with the Hungarian exiles, Kossuth and his associates and concluding as follows:

"Resolved by the Senate and House of Representatives of the United States of America, in Congress assembled that the President of the United States

be, and hereby is, requested to authorize the employment of some of the public vessels to convey to the said United States, the said Louis Kossuth and his associates in captivity."

Accordingly an American frigate was sent to bring the exiles from Turkey. Kossuth arrived in this country in October, and his stay here was an uninterrupted triumph, exceeded only by the welcome given to Lafayette twenty-five years before. He was greeted with enthusiasm at the National Capitol by both House of Congress. President Fillmore received him most cordially and invited him to dinner, and Daniel Webster made the principal speech at the great Washington banquet. Said Webster:

"We acclaim the pleasure with which we welcome our honoured guest to the shores of this far land, this asylum of oppressed humanity.....Let it be borne on the winds of heaven that the sympathies of the Government of the United States and of all the people of the United States have been attracted toward a nation struggling for national independence, and toward those of her sons who have most distinguished themselves in the struggle. Let it go out, let it open the eyes of the blind, let it be everywhere proclaimed, what we of this great republic think of the principles of human liberty."

It should not be overlooked that the United States Government was the first to recognize the French Republic in 1848, and also the present French Republic inaugurated in 1870.

One more marked illustration of our hatred of tyranny and our sympathy with liberty abroad should be noticed. I refer to the historic fact that in 1867, our President and Congress compelled Napoleon III to abandon his effort to set up in Mexico an imperial government contrary to the will of the people of that country. In this case we did not stop with expressions of sympathy with Mexican freedom, but we went so far as to offer military aid in its defense.

Such are some of the notable occasions and ways in which, throughout a large part of our national history, the people of this country through our most eminent and honoured leaders have expressed our sympathy with nations and peoples struggling for freedom. I have set forth the facts in some detail so that the true tradition of America in the matter may clearly appear.

Says Dr. E. B. Greeno, Professor of History in the University of Illinois.

"A study of American history shows that the well-established tradition of the Republic has been

that of sympathy with popular Government abroad: that this sympathy has repeatedly been declared in public utterances of our official representatives; and that we have never felt ourselves bound to suppress in the formal documents of our Government, our deep interest in free institutions, and our sense of the essential unity of the cause of liberalism and self-Government throughout the world.*

Have these facts of the past no bearing on struggles for freedom going on in the world now? Have they no bearing upon the greatest of all such struggles, that of the people of India to free themselves from a foreign yoke? If Washington and Monroe and Clay and Webster were alive to-day, would great India in her brave and just struggle for freedom and nationhood, lack friends, sympathizers and defenders in America? Who can believe it? Our fathers did not regard the struggle of any oppressed people anywhere, to shake off their yoke and obtain freedom, as the mere domestic affair of the oppressing nation. They regarded it as a matter of world concern, which ought to enlist the interest and sympathy of every liberty-loving nation and person in the world. In an address delivered before the India Society of New York in February, 1925, Mr. Oswald Garrison Villard, Editor of "The Nation," said:

"I believe that what is going on in India is of such enormous import to America and to the whole

* "American Interest in Popular Government Abroad," page 15. (A pamphlet published by the Committee on Public Information, Washington, D. C., 1917.)

world that no American has a right to overlook it. I think the world needs nothing so much to-day as to see the Indian people set themselves with all their minds and with all their strength to the attainment of self-government. However great the odds with which they must contend. I believe that the heartfelt sympathy of Americans, yes, even those Americans who love England and as I do, should go forth to the people of India in all their aspirations."

In such words as these we hear the voice of Washington, of Jefferson, of Franklin, of the Adamsses, of Patrick Henry, of Webster, of Garrison, of Channing, of Sumner, of Lincoln, of all the men who have done most to make this country illustrious and honored by the world as a leader in the cause of human freedom.

Nothing can be more clear than that the true tradition and spirit of America as manifested in all our noblest history is that expressed in the ringing lines of our honored poet, James Russell Lowell:

"Men! whose boast it is that ye
Come of fathers brave and free,
If there be on earth a slave
Are ye truly free and brave?"

Is true Freedom but to break
Fetters for our own dear sake,
And, with leathern heels, forget
That we owe mankind a debt?

No! true freedom is to share
All the chains our brothers wear,
And, with heart and hand, to be
Earnest to make others free."

THE TREATMENT OF LOVE IN PRE-CLASSICAL SANSKRIT LITERATURE

By DR. SUSHIL KUMAR DE, M. A., P. H. D., D. LITT (LOND)

THE earliest Indian poems which give a passionate expression to the emotion of love are to be found in two so called Vedic ballads or Samvada hymns in the tenth Book of the *Rigveda*. The first of these (*Rgv.* x, 95) is a poem of eighteen stanzas, supposed to consist of a dialogue between Pururavas, a mortal and Urvasi, a divine maiden. This romantic story of the love of a mortal for a nymph has been

retold in Indian literature, and no less a poet than Kalidasa has taken it as the theme of one of his finest dramas. But the Rigvedic hymn takes it up at that point where Urvasi who had lived with Pururavas for years on earth had vanished "like the first of dawns" and Pururavas, having found her after a long search, was pleading in vain that she might return to him. The Satapatha Brahmana

Yami to forget him. Whoever they asked her, she said "Only to-day he has died." Then the gods said: "Thus she will indeed never forget him: we will create night." For at that time there was only day and no night. The gods created night: then arose a sorrow thereupon she forgot him.

But later Vedic literature is singularly devoid of such full-blooded poems as those quoted above, although the power of the sex to enthral and disturb is fully acknowledged. The marriage-verses of the *Rigveda*, of which we have an enlarged collection in the *Atharva-Veda* XIV are of a peaceful and sociable character and consist chiefly of benedictions as well as magic spells and songs relating to marriage and the begetting of children. But more numerous and interesting are the spells in the nature of wild exorcisms and curses which refer to love, intrigues, and disturbances of married life. The two "sleeping spells" (*Rg.* vii, 55: *Atharva* I, 5) have been interpreted as "charms at an assiguation", in which a lover, calling to his sweetheart at night, says: "May the mother sleep, may the father sleep, may the dog sleep, may the eldest the horse sleep, may her relations sleep, may all the people rooed about sleep." We have references also to the primitive superstitious belief that by means of the picture of the beloved one can harm or obtain power over him by piercing the heart of the picture with an arrow having a barb of thorn and feather of an owl, and by reciting the following magic verses (*Atharva* V, III, 25).

May love, the disquieter, disquiet thee. With the terrible arrow of Kama do I pierce thee to the heart. The arrow, winged with longing, barbed with love, whose shaft is undeviating desire, with that, well aimed, Kama shall pierce thee in the heart.... Consumed by burning ardour, with parched mouth, do thou (woman), come to me, with thy plant pride laid aside, mine alone, speaking sweetly and to me devoted.

This is prescribed for the man who desires to obtain the love of a woman. The woman acts in a similar way but the verse she recites is different:

Maddeo him, Maruts, madden him.
Madden, madden him, O Air.
Madden him, Agni, madden him.
Let him consume with love of me.
Down upon thee, from head to foot.
I draw the pangs of longing love.
Send forth desire, Ye Deities!
Let him consume with love of me.

The later *Kausika Sutra* mentions manifold kinds of love-magic and its rites, which are called *Strikarmant* or "women's rituals" and for which these Vedic songs and spells were freely utilised. In some of these magic spells which, for instance, a woman uses in the attempt to oust their rivals, language of unbridled wildness and hatred finds free expression.

There are numerous references in Vedic literature to unmarried girls who grow old, like Ghosa, in the house of their fathers and who adorn themselves in the desire of marriage or of a lover; and 'Kamari-putra' is already mentioned in the *Vajasaneyi Samhita* (XXX, 6). Although polygamy was freely allowed, the marriage tie was not highly regarded and the position of the woman in the household was one of honour and dignity; but the existence of free love and secret love is evidenced by the curious ritual of *Varooapraghasa* in which the wife of the sacrificer is questioned as to her lovers. In the famous hymn, usually known as the Gambler's Lament (*Rg.* X, 31.1), reference seems to be made to the gambler's wife being the object of other men's intrigues, and in another hymn (X, 40, 6) mention is made of a woman resorting to her rendezvous. The word *pumsaah* "running after men" is already found in the *White Yajurveda* (XXX, 22) and *Atharva-Veda* (XV, 2, 1 et seq.) while *jara* in the early texts had not yet acquired a sinister sense but was applied generally to any lover. Judging from the vehemence with which women used to utter magic spells for the destruction of their rivals or co-wives, one would think that the course of free love did not run smooth even in those days. References to betrayal is seen in many passages even in the *Rigveda*: while the word *sadharani* is used not so much with reference to *uxor communis* but to a courtesan generally. Although the Vedic gods are, as a rule, sexually moral, sensuous imagery is often employed in describing them. Ugas is said (I, 124, 7) to display her form, smilingly, as a loving and well-dressed woman does to her lover. Lavinate marriage, in which is found the germs of the later practice of *oiyoga*, was allowed in the case of the widow: but the imagery used in this connexion suggests that it was more often a form of love union than the fulfilment of a social practice. In one hymn, for instance, (X, 40, 2) the Asvins are questioned as to where they wore by night:

Who draws you to his house, as a widow does her husband's brother to the couch, or a woman does a man?

Different views seems to have been entertained with regard to the character of women. While on the one hand, her good qualities are mentioned and praised, we have on the other vehement invectives against her fickleness and her impurity—a note which characterises so much of later religious and didactic literature. The general opinion appears to be intimated in the following words put into the mouth of Indra (*Rgv.* VIII, 33, 17) :

Indra declared that the mind of a woman was ungovernable and her temper fickle.

But later *Samhitas* go further. The *Maitrayani Samhita* (I, x, ii ; III, vi, 3) describes woman as neither end classifies her with dice and drink as the three chief evils. In *Taittiriya Samhita* (VI, v, 8, 2) a good woman is ranked even below a bad man, and the *Kathaka Samhita* (XXXI.) alludes sarcastically to her ability to obtain things from her husband by cajolery at night. All this paves the way to the general attitude of the Brahmana literature in which the woman occupies a decidedly lower position than she did in the age of the earlier *Samhitas*.

We have also in the Vedic texts a foreshadowing of the personification of love in the figure of a deity, which became so conspicuous in later literature, although we have no evidence of the worship of erotic forces or of love as the central deity of an erotic cult, which must have evolved in later times. In *Rigveda* itself Kama appears to be nothing more than an abstract personification, meaning 'Desire' generally. In the famous *Narasadiya Sukta* (X, 129, 4) Kama or Desire is said to have been the first movement that arose in the *Onn* after it had come to life, somewhat in the same way as Eros, the God of love, is connected by Greek mythology with the creation of the universe. This Kama or Desire, not of sexual enjoyment but of good in general, is conceived in the *Atharva Veda* as a great cosmic power superior to all the gods and sometimes identified with Agni or Fire. But in the *Atharva Veda* itself we have other hymns in which the idea of Kama as the God of love is distinctly foreshadowed. One of the spells already quoted above mentions the arrows with which the disquieting pierces hearts, arrows which are winged with pain, barbed with longing and the desire for its shaft. He is the

forerunner of the flower-arrowed God of love, whose appearance, names and personality become established in the *Epics* and fully familiar in later classical literature. Later on, the conception of Kama was not confined mainly to poetry and art but he became the centre of an actual cult, and festivals were held in his honour.

If the earlier Vedic literature is not very rich in love-poems, one would search in vain for the blossoming of such poetry in the desert of desolate theological speculation of the extensive Brahmana literature. In the *Satapatha Brahmana* the story of the love and separation of Pururavas and Urrasi is no doubt related with some fulness, and an allusion is made to the story of Dusyanta and Sakuntala : but the romantic possibilities of the love tales were unknown or were rigidly excluded by the authors of those uninspiring documents. Eroticism also played an unmistakable part in some of the fertility rites described in the Brahmanas, but eroticism here was subservient to religious theory and practice and never came into prominence.

It would seem that in the exclusively religious literature of the Veda there was hardly any scope for poetry of this type. Neither the dialogue-hymns quoted above nor the spells and incantations can be strictly regarded as forming a part of the orthodox Vedic literature of the usual type. The tradition of ritual literature did not know what to make of these secular *Rigvedic* poems and could not ascribe any satisfactory ritual use for them. We must, therefore, admit that we have in these romantic Vedic dialogues the remnant of a style of literature which was essentially of the nature of folk-poetry, as distinguished from the orthodox sacerdotal poetry of the *Samhitas*, but which died out in later Vedic period.

That such a profane literature in its early phase must have been contemporaneous with the religious and sacerdotal literature of the Vedas is indicated not only by the existence of hymns, spells and narratives of a secular type in the Vedas themselves, but also by the growth side by side, of the rich Pali literature of tales, legends and *gathas* on the one hand, and the earliest form of epic stories on the other. It is unfortunate, however, that neither Pali literature nor the epics have preserved any complete poem of the erotic type, although it can hardly be denied that the under-current of profane

NOON-DAY EXPECTATION

SANTINIKETAN.

poetry, which had love as one of its important themes and which supplied the heaven to some of the epic tales and Buddhist stories, continued down to the later Sanskrit and Prakrit poetry of Amaru and Ilala.

The Buddhist view of life was hardly favourable to the development of true love poetry, and the conception of the loved-god as Mara or Death is indeed typical. Even in the *Therigatha* or Palms of the notable sisters of the Buddhist order, for instance, we have little metrical memoirs or cameos of thought which are indeed interesting as conjuring up for us a dream-peasant of these little women of the antique world, bent upon a bligh quest with a devoted heart and indomitable resolve; but in these utterances of the Indian Marys and Magdalees we search in vain for an expression of those human needs and emotions which are covered by the word 'love.' Mrs. Rhys Davids has remarked with great discernment that for these pale women of the past the glory of sainthood was not a white light but prismatic through the circumstances and temperament of each. Here and there, we catch therefore a glimpse into the heart of the woman, but the tender emotion is rigidly excluded in the glory of spiritual attainment. Only in the poem attributed to Bhadda Kapilani we find a tender personal note; but here also spiritual comradeship alone is claimed. Before she entered the Order and earned fame as a teacher, Bhadda was the wife of Mahakassapa who became the leader of the Buddhist Order after the Buddha's death. They helped each other in donning the religious garb, they left the world together, then they parted on their several ways to the Buddha, thereafter enjoying still good comradeship in the Order. In her writings she glorifies in her ex-husband's virtues and in their spiritual friendship and common vision of the truth:

Son of the Buddha and his heir is he,
Great Kassapa, master of self, serene.
The vision of far, hygone days is his,
Ay, heaven and hell no secrets hold
from him...

We both have seen, both he and I the woe
And pity of the world, and have gone forth
We both are arhants, with selves well
tamed.

Cool are we both, ours is Nibbana now.

Elsewhere she says:

Thereafter soon I won the rank of Arhant.
Ah! well for me who held the friendship
wise and good

Of glorious Kassapa.

It is a pathetic touch, however, that while she speaks in such terms of adoration of the gifts of her former husband, his much longer poems have no word concerning her.

This remarkable, again, that none of these palms of the sisters is tinged with that touch of erotic mysticism which expresses religious longings in the language of earthly passion; nor do they reveal any word of quasi-amorous self-surrender to the person or image of the Beloved Saviour, such as characterise not a little of that Christian literature for which the Song of Solomon—'I am my Beloved's and my Beloved is mine'—was the sacred archetype. This is what distinguishes the Indian Marys from their Christian sisters who gave utterance to hymns laden with passionate yearnings for a closer communion with Christ as the Beloved. The Buddha is never conceived as the Bridegroom nor is the church his Bride. Here we have no tradition of a *yearful* saviour, round which quasi-erotic ideas may have easily evolved. Filial love alone is the form wherein the Buddhist sister gave expression to her feelings for the founder of the Order, whom she saw first perhaps late in his long life.

The only one pretty love-song which breathes freely the atmosphere of human sentiment is the one called the Question of Sakka in the *Digha Nikaya*. In all probability it is an old non-Buddhist gatha which has curiously found its way into the canonical Sutta for it is a pure love-song which has hardly any relevancy to the context in which it occurs. Addressing the lady as the Glory-of-the-Sun which was probably her name, the Gandharva sings in passionate words:

Sweet as the breeze to one foredone with sweat,
Sweet as a cooling drink to one athirst,
So dear art thou, O presence radiant!
To me dear, as to Arhants the Truth.

As medicine bringing ease to one that's sick,
As food to starving man, so, lady, quench
As with cool waters, he who am aflame.

His impatience knows no bounds:

Even as an elephant with heat oppressed,
Hies to some still pool, upon whose face
Petals and pollen of the lotos float,

So would I sink within my bosom sweet.
 E'en as an elephant fretted by the hook
 Dashes unheeding curb and goad aside,
 So I crazed by the beauty of thy form,
 Know not the why and wherefore of my acts.
 By thee my heart is held in bonds, and all
 Beat out of course; nor can I turn me back,
 No more than fish, once he hath ta'en the bait.
 With great ardour he bursts forth :
 Within thine arms embrace me, lady, me
 With thy soft languid eyes embrace and hold
 O nobly fair! This I treat of thee.
 She is the summum bonum of his life, the
 ripened fruit of all his merit :
 Whate'er merit to the holy ones
 I've wrought, be thou, O altogether fair,
 The ripened fruit to fall therefrom to me.
 His quest of her is likened to the quest of the
 Buddha for enlightenment :
 As the Great Sakya seer, through ecstasy
 Rapt and intent and self-possessed, doth brood
 Seeking ambrosia even so do I
 Pursue the quest of thee, O Glory-of-the-Sun !
 Ah would that seer rejoice, were he to win
 Ineffable Enlightenment, so I
 With thee made one, O fairest, were in bliss !
 And he has no other boon to ask from
 his God :

And, if perchance a boon were granted me
 By Sakka, lord of three and thirty gods,
 'Tis thee I'd ask of him, lady, so strong my love !

This exquisite little love-song is like a
 little oasis in the immense and arid tract of
 Brahmanical and Buddhist literature of
 many centuries; but it is also a sure
 indication that in the popular gathas of
 which this is the only surviving specimen,
 love must have been an important theme. If
 it was not favoured by the prince or the
 priest, it surely had an irresistible appeal
 to the keener and more robust perceptions
 of the unsophisticated people at large.

The same attitude towards love is also
 illustrated by the epic literature. The epic
 poetry with its serious and didactic bias is
 not rich in what may be called love-poetry
 in the strict sense of the term. Love as a
 motif runs through most of the episodic
 stories eg in those of Savitri, Sakuntala or
 Damayanti; and even the love of Rama and
 Sita form the main theme of one of the great
 epics. Later poets have glorified these
 themes in their immortal poems and dramas;
 but the earlier epic poet is mainly concerned
 with the narrative rather than the lyric
 possibilities of the subject. The only fine

passage which describes the lover's pang of
 separation and rises about to a lyric
 rapture is that in the *Sundara Kanda* of the
Ramayana where Rama, seized with grief and
 despair, laments and wanders through the
 forest in search of his lost wife; but here
 also the passage is mainly descriptive.

The absence of true love-poetry in the
 epics may also be partially explained by the
 position which women held in the epic
 society and the relation which existed between
 the sexes. No doubt, women enjoyed a
 considerable measure of freedom and respect,
 and the commanding position held in the
 household by Kausalya, Gandhari and Satya-
 vati is in conformity with the earlier tradi-
 tions of the Vedic period. Love-matches
 were allowed among warrior-classes, and
 self-choice of husband (*Svayamvara*), though
 not recognised in the *Smritis*, plays a great
 part in the epics. Yet after all is said, it
 cannot be affirmed that in the epic age
 woman, if not in theory, at least in practice,
 was recognised as the equal of man; and
 nothing is more significant of the practical
 character and the prosaic morality of the
 epic age than its attitude toward love and
 marriage. What is principally idealised in the
 epics is conjugal love; but the obligation of
 chastity was laid on the weaker sex, and
 practically no limits were set to the licence
 of man. Although fidelity to a single spouse
 was viewed with approval, polygamy and
 concubinage remained unchecked and seemed
 to have brought no disgrace either to man
 or to the gods; for woman was viewed, if
 not directly as a chattel, certainly as an
 object created for the use and enjoyment of
 man. The picture of the epic heaven with
 its epicurean and sensual gods and its
 glorified courtesans is truly indicative of
 the epic man's attitude towards love and regard
 for his woman. The same impression of
 woman's inferiority is left on the reader's
 mind by the otherwise extremely pathetic
 lament of Gandhari in the *Strivilapa-par-
 vadyaya*. This degradation of womanhood
 probably began, as we have already noted,
 from the age of the Brahmanas but it
 certainly reached its climax among certain
 classes in the epic age. The only exception—
 and the most honourable exception is the
 case of Dasaratha's sons whose faithfulness
 to their single spouses deserves all praise:
 for this certainly does not appear to have
 been the *dharma* of the princes, if it was
 of the people. On the other hand, the

stronger-minded Draupadi is not the typical woman of the higher orders of this age, nor is Savitri who is merely the embodiment of an ideal, but the helpless Sita who suffered for no fault of her own.

It must not, however, be supposed that love as a sentiment was absent or was not favoured in this age. On the other hand, it must have been one of the powerful forces moulding the ordinary man's life. It supplied the leaven to the main plot of the epics

which must have had a popular legendary origin, and it is the main pivot round which move some of the romantic episodic stories which were doubtless derived in the beginning from entirely popular sources. But at the same time neither the culture of the age nor its social environment was favourable to the development of pure love-poetry in the orthodox literature of the higher classes, which was dominated in the main by a serious and didactic motive.

My Mother India

Not where the musk of happiness blows.
Not in the land where darkness and tears ever tread,
Not in the homes of unceasing smiles,
Not in far Heaven or lands of prosperity
Would I born
If I have to put on a mortal garb again!

A thousand famines may prowl
And tear my flesh,
Yet would I love to be again
In my Hindustan!

A million thieves of disease
May try to steal the fleeting health of flesh.
Or the clouds of fate may shower
Scalding drops of piercing sorrow
Yet would I there
In India, love to reappear.

Is this my love a blind sentiment
Which beholds not the pathways of reason?
Ah, no! I love India
For I learned first to love Him, and everything
there.

Some teach to seize the flickle dew-drop-Life
Sliding down the lotus leaf of Time.
Some build stubborn hopes
Around the gilded brittle body-bubble,
But India taught me to love
The soul of deathless beauty in the dew-drop or
bubble.
Not their fragile frame.

Her sages taught me to find my Self
Buried beneath the ash-heaps
Of incarnations and ignorance.
Through many a land
Of power, plenty and science
My soul, garbed as an oriental
Or occidental, travelled far and wide

Seeking Itself—
At last in India to find Itself.

If mortal fires blaze all her homes and golden
paddy fields,
Yet to sleep on her ashes and dream immortality
O India, I will be there!

The guns of science and matter
Have boomed on her shores.
Yet is she unconquered!
Her soul is free evermore.
Her soldier saints are away
To roil with Realization's ray
The handits of hate, prejudice, patriotic selfishness,
And burn the walls of separation dark
Which lie 'tween children of the One, One Father.
The western brothers by force have conquered
my land.

Blow, blow aloud her conch-shells all
India now invades with love to conquer their souls.

Better than Heaven or Arcadia
I love thee, O my Mother India!
And Thy love shall I give
To every brother-nation that lives.

God made the earth and man made his confining
countries

And their fancy-frozen boundaries.
But with the new-found Self I behold
The borderland of India expand into the world.

Hal, Mother of religions, lotus, scenic beauty and
sages,

Thy wide doors are open
Welcoming God's true sons through all the ages.
Where Ganges, woods, Himalayan caves and men
dream God

I am hallowed; my body touched that soul.

ENGLISH

I. THE WEST: A STUDY: By K. Kunhi Kannan M.A. Ph. D. Fellow of the Mysore University Entomologist to the Government of Mysore. S. Ganeson, Madras. 1928. Price Rs. 2-8. Pp. 359.

English books published in India are generally second-rate in get-up and in intrinsic worth. This is however one of the few exceptions. The get-up is good, but the contents are of a high order of excellence. There is not a single quotation, so far as we remember in the entire book, the style is excellent, and new matter for thought is provided in almost every page of the book. The author's outlook is refreshingly original, and he has evidently travelled all over the world with his eyes wide open. He started on his tour with an equipment which is not common among Indian tourists, a mind thoroughly prepared by the best education that his country can give, and an age when the achievements of the west have ceased to dazzle without looking to their interest. The result is a book in which almost all the spheres of western activity have come under the author's searching analysis, and been tested by comparison with the standards of the East, and their limitations have been pointed out with a masterly grasp. This does not mean however that Dr. Kannan is blind to the merits of Western civilization—far from it. In fact, his views would not be worth considering if he were. It is because he has tried to judge from a fair and impartial standpoint, so far as it is possible for a foreigner to do so, that his judgments possess the weight they do. Throughout he writes in a serious vein, and his wide reading of history and cognate subjects has enabled him to take long views and base his generalizations on a bed-rock facts. It is not likely that in matters of this kind the reader will agree with all that he says. But there can be no doubt that the picture which he presents is an important aspect if not the whole, of the picture, and one

that does not reveal itself to the casual observer whose vision is obscured by the gleam of superficial effects produced by an excess of light. In our opinion it is the best and most thoughtful book on the West by an Indian written in English. It would be idle to try to give an idea of its contents by a few extracts, for luminous and thought-provoking ideas abound everywhere, convincing us of the need of a fresh evaluation of values in regard to all that pertains to the occident. One or two extracts culled at random must suffice.

"The abolition of slavery has been so often paraded as a glorious achievement resulting from the highest and purest of human motives that those who have not studied the history of the question are likely to find it hard to believe that beneath all this display of exalting sentiment there lay a powerful motive of self-interest. The land-owning classes in England and the cultivating farmers in the north of the United States were the sufferers from the slavery in the plantations in the Southern States and the West Indies, which placed them in an unequal position, for they could not successfully compete with the plantation-owners who could produce cheaper. Slavery was abolished primarily to set right this inequality and therefore, far less from humanity than from economic necessity."

"East has much to learn from the West more perhaps than she has to teach...The danger of pollution is to the still standing water of the pool, not to the stream coursing along which may pass through filthy beds and yet remain pure. So does the quickened pace of the West prevent, limit or modify the operation of grave social evils...Each principle carried to excess is fast developing its own corrective...What is vital is that behind all the transformation...the one thing that remains unchanged among many things that change and are changed by it, which knows neither defeat nor failure, the creative energy, and the glory of the West [is] its Disciplined Will."

"For all its close identification with self, its subordination to the furtherance of self-interest, in the higher manifestations of will there is an elevating detachment, as high as any that has been achieved in the East by self-control..... who is to say what is better—the self-control of the Indian saint or the mastery of will of Danton. The world has need of both."

Politician.

SOME ASPECTS OF THE PHILOSOPHY OF L. T. HOBBHOUSE: By J. A. Nicholson *University of Illinois Studies in the Social Sciences. Vol. XIV. December, 1936. (No. 4.) Published by the University of Illinois, Urbana. Pp. 66 (paper) price one dollar.*

Those who have read the Cornell Studies in Philosophy will get an idea of what this book is like. The book is an excellent exposition and criticism of Hobbhouse's Philosophy. There are five chapters in the book viz.

(I) Critique of Idealism, (II) A Realistic Theory of Knowledge, (III) The Function of Reason, (IV) The Political and Social Theory and (V) Reconstruction. Hobbhouse is a powerful writer. His books on Logic, Ethics and Sociology are of sterling value. His Theory of Knowledge was first published in 1896, *Morals in Evolution* in 1906, *Social Evolution and Political Theory* in 1911, *The Metaphysical Theory of the State* in 1918, *The Rational Good* in 1921, *The Elements of Social Justice* in 1922, and *Social Development* in 1924. All these books should be carefully studied. Readers will find in Nicholson's book a good introduction to Hobbhouse's Philosophy.

THE THEORY OF IMAGINATION IN CLASSICAL AND MEDIAEVAL THOUGHT: By Murray Wright Bundy, *University of Illinois. Studies in Language and Literary. Vol. XII. May-Aug. 1927. Nos. 2-3. Published by the University of Illinois Press. Urbana, Super. Royal 8°. (10½ x 7). Pp. 289 (paper). Price three dollars.*

It is a comprehensive study of the Theory of Imagination. The study is both literary and psychological. There is no other elaborate book in the English language covering the same ground.

Besides the 'Preface' there are twelve chapters in the book, viz (i) Pre-Socratic Philosophy, (ii) Plato, (iii) Aristotle, (iv) Post-Aristotelian Philosophy, (v) The Theory of Art, Quintilian, Longinus and Philostratus, (vi) Plotinus, (vii) The Lesser Neo-platonists, (viii) Neoplatonic views of Three early Christians, (ix) Mediaeval Descriptive Psychology, (x) The Psychology of the Mystics, (xi) Dante's Theory of Vision and (xii) Conclusion. There is an index also (7 pages).

In this concluding chapter (xii), the author gives a resume of the whole book.

The students of Psychology will find this book very useful.

ELEVEN LESSONS IN KARMA YOGA: By Yogi Bhikshu. Published by the Yogi Publication Society, Chicago, U. S. A. (India Agents: The Latent Light Culture, Tinnareilly, South India). Pp. 133. Price two dollars or Rs. 6-4.

There are some practical hints. But the exposition is vitiated by pseudo-mysticism and forced interpretation. The price is too high.

BHAGAWAT 'GITA': By Babu Radha Charan, B. A., B. Sc., L.L. B., retired Dy. Coll. Published by Dr. Lalit Mohan Basu, M. B. Panini Office, Allahabad. (The Sacred Books of the Hindus: Extra Volume). Pp. xxvii+591. Price Rs. 2-0-3 Shillings.

It contains a preface (26 pages), the Sanskrit text in Devanagari character, pada-patha, word meaning, an English translation, notes and quotations from Hindu scriptures.

The preface is partly historical and partly exegetical. It is full of mistakes and misinterpretations. We may cite one example. About Krishna, the author writes—'His earliest reference is found in the Rig Veda, which mentions him as a hermit and son of Vasdeva (sic) and Devaki (sic), P. XX V. Nothing of the kind. The Rigveda knows of no Vasudeva and no Devaki.'

The author's knowledge of Sanskrit is meagre and defective. In some places he has made curious mistakes. One example may be cited. In verso iv 10 of the Gita occurs the word मनसाः (Manasah). It is explained to mean literally 'mind-me'. The author thinks that the word is made up of two words, viz मन (man) and मयाः (mayah) of which the part मन (man) means 'mind' and मया (mayah) is a case of the first personal pronoun 'I'. It is needless to say that the word comes from मद् (mad) with the suffix मय (may). The word, मद् (mad) is the base of the first personal pronoun in the singular number. In composition मद् (mad) becomes मन् (man). The word मनसा means "full of me", it has nothing to do with mind मन्तु and मया (ay me).

But there are good points also in the book. The quotations from Hindu scriptures are excellent and the translation of the verses of the Gita are on the whole good.

THE PATH OF THE ELDERS. By E. Erle Power. Published by the Theosophical Publishing House, Adyar, Madras Pp 233. Price not known.

A popular exposition of the fundamental principles of original Buddhism called Theravada (The Teaching of the Elders). The subjects discussed in the book are—the Great Recognitions, the Noble Eightfold Path, The Soul, Karma, the five Constituents, Nibbana, the Universe, Deity, and the Brotherhood.

A STUDY OF REALITY By G. R. Malkani, Superintendent of the Indian Institute of Philosophy, Amalner. Published by the Modern Bookstall, 155 Hornby Road, Bombay Pp. 151.

Absolute monism is defended from the standpoint of Vedantism coloured by the modern idealistic theory of experience.

A HAND BOOK ON THE TEACHING OF HISTORY. By H. S. Nayudu B.A., L.T., Published by Jayaraman, Pillayar Koi Street, Chittoor, Pp. 54+21. Price eight annas.

Meant for teachers and students of Training Colleges.

ADMINISTRATION REPORT OF THE LEAGUE OF NON-BRAHMIN YOUTH FOR THE YEAR 1926-27. *Illustrated.* Non-Brahmins have awakened and are advancing. Good signs.

PROCEEDINGS OF THE 2525TH SRI VIR BIRTHDAY CELEBRATIONS *together with a Summary Report of the Jain Mitha Mandal, Delhi.*

Interesting.

THE WISDOM OF THE RISHIS: *By T. L. Vaswani.* Published by the Theosophical Publishing House, Aligarh, Madras. Pp. 62.

The booklet embodies the substance of some of the addresses of Mr. Vaswani.

Thoughtful and readable.

Received also the following booklets and pamphlets.

CHANGE OF SCHOOL HOURS AND THE HEALTH OF THE BOYS: *By Mayatara Haldar, M.A., B.L.*

Useful

THE USAGE OF THE FLOWER: *By Swamy Rim Sarma.*

AWAKE, YE, YOUTH OF THE LAND: *By Radhakrishnam Das. On the need of Physical Culture.*

AN IDEAL ALPHABET: *By N. M. Rama Ayyar.*

A TAMIL PUN OF PAUL: WIDOW PROBLEM OF 1 TIMOTHY V. 16: *By M. S. Rama Swami Ayyar.*

HIS HOLINESS MEHER BABA AND MEHERASHRAM: *By K. J. Dastur.* A Zoroastrian accepting the ideal of God-realisation.

IN THE TEMPLE OF TRUTH: *By G. Ramesh Chandra Ghose. Poems on Truth and Good.*

THE IMMORTAL SOUL: *By Suresh Chandra Ghosh (in Verse).*

INDIAN PHYSIOLOGIST: *Edited by Nibaran Chandra Bhattacharyya, No 1, January, 1928 (Chuckerterty, Chatterjee and Co. Calcutta). Price 8 as per copy.*

MAHESH CHANDRA GHOSE.

BENGALI

VISVA-JANANI BHARAT-MATA (MOTHER-INDIA—THE UNIVERSAL MOTHER): *By Upendra Kumar Kar R.L. Price Rs. 1-1.*

This is a reply to Miss Mayo's notorious book, written in the forceful style of the author. Though he does not altogether avoid the *tu quoque* argument, he is careful to observe that a great country like America must have been built up by great men and women and that it is a mere travesty of justice to confine one's attention only to the wrong side of the national character. The main theme of his book is to show wherein India, and particularly his own province, Bengal, has been and still continues to be great, and what are the regular characteristics of our Aryan civilization and culture by virtue of which India is destined to survive, and, not only so, but contribute its quota to the building up of a new and a better world. In performing this self-imposed task the author had necessarily to assume the role of a *laudator temporis acti*, and his book is, in fact, little more than a string of testimonials. Considering the scheme of the book this was to some

extent perhaps unavoidable, but our complaint against him is that he has shown little discrimination in collecting his authorities. This is a vice which he shares with the majority of vernacular writers, and demands a word of comment. The book before us contains ample evidence of the author's wide reading, and he can express his thoughts in a felicitous style. He has therefore the intellectual equipment for the production of a really good book, and with such equipment an Englishman, a Frenchman or a German would have easily turned out a book which would not be laid aside after a cursory perusal. The reason is that the writer would there write for a class of readers whose minds are scientifically trained to discriminate between different classes of evidence, and who can thus easily detect a false note. Here in India, on the other hand, we write for a class of readers who are not trained in the historic method, to whom comparative study is an unknown quantity, and who are unaccustomed to the rigid tests by which literary evidence is sifted. An atmosphere of proneness to believe, rather than that of critical analysis and a vigilant, watchful scepticism which is disposed to take nothing for granted, pervades our mental horizon. Want of a rational and scientific training, and an over-lively sense of our past greatness to compensate for its loss in the present are responsible for this attitude, which is further intensified by our general credulity. Writing for such a class of readers, we feel inclined to dispense with those exacting standards which prevail in the West and the result is that everything is grist that comes to the mill, and all testimonials, good, bad, and indifferent, possess an equal value in our eyes, and everybody who is anybody in a remote corner of India is held up as an exemplar and a world-figure. If India is to pass for great in these days of world-competition, we must learn to shed our parochialism and cultivate universal standards, which are recognised as valid, not only in our own country, but all the world over. To do so we must learn and know more of other countries, widen our horizon and angle of vision and make mightier efforts to achieve success and falsify whatever may be true in Miss Mayo's scurrilous indictment.

J. C. B.

We have received *new editions* of Rabindranath's CHAYANIKA, KATHA-O-KAHINI and NAIVEDYA, published by Visva-Bharati Granthalaya. The get-up of these books is excellent and the price seems to be moderate.

BANE JANGALE: *By S. Jogindranath Sarkar.* Published by the City Book Society, 61 College St., Calcutta. Pp. 232. Price Rs. Two. 1928.

S. Jogindranath Sarkar, who has fittingly been called "the children's guide to dreamland" needs no introduction at our hands. Hashi Khushi, Majar Gajir, Pashu Pakshi and other books of the children's series written by him have become favourite companions of our boys and girls and we hope this new book, which depicts several thrilling and adventurous jungle stories, will be equally—if not more—popular with them. The cover-illustrations, printing and get-up leave nothing to be desired.

P. C. S.

TAMIL

DHARMA VANAGAM : By *Sadhu. Ke. Vadirelu Chettiar* ; published by *Sri Sadhu Ratna Sarguru Book Depot, Park Town, Madras*. Price *As. 3*.

A very instructive and inspiring booklet on the ideals of life.

SARADA'S TANTRAM AND OTHER STORIES : By *R. Krishnamurthy*. With a foreword by *C. Rajagopalachariar* ; published by *Saraswathi Prasurayalam, Mylopore, Madras*. Pp. 161. Price *As. 12*.

The evils of litigation, the selfish ambitions that mar the public life of the country, the difficulties in the way of social reform, the part that tact can play in life, the unemployment problem of the educated classes and social wrecks, of examinations and the absurd lengths to which popular beliefs in Astrology and Unchangeability are taken advantage of by unenlightened or unscrupulous persons are all well-illustrated in these very interesting stories. They are worth reading.

R. G. N. Pillai

MALAYALAM

SANITYA-KANTUKAM—PART III By *Vidvan G. Sankara Kurup*. Printed and published by the *Yogakshemam Co. : Trichur*. Price *as. 10*.

We had not the opportunity to notice in these columns the first two parts of this remarkably interesting literary work—*Sanitya Kantukam*—by *Vidvan G. Sankara Kurup*. The third part of it which has just come to our hand commences with two short notes of appreciation from the pen of poet Vallathol and Mr. K. M. Panikar. The book contains about twenty-five poetical pieces on different subjects, a greater number of which are composed in a variety of Dravidian metres, such as *Kela, Kakali, Gatha, Pana* and *Annanala*. Besides a boat song there is also a short interesting drama in one act 'towards the end of the book which is commendable. *Vidvan G. Sankara Kurup*, who has already earned a name among the young poets of Kerala, will, we have no doubt, continue to retain it by his further contributions to the Malayalam poetry. We are particularly pleased to see that, unlike most of other young (and even old) poets, Mr. Kurup has taken up to write prose, too, which is both forceful and elegant, as has been shown in his *Ekanakantaka*.

The book is neatly got-up.

THE MITAVADI ANNUAL : 1927 : Editor-in-Chief *C. Krishnan, B. A., B. L., Calcutt*. Pp. 108 (Demi 4).

We have great pleasure to commend this annual, though received late, to the Malayalam reading public. It contains twenty-five learned articles and twenty-one coloured and half-tone illustrations. The get-up is most attractive.

P. Anujan Achau.

MARATHI

HINDI-SUMERI SAMSKRITI—By *Daji N. Apte* of *Daroda*. Publishers: *The Chitra Shala Press, Poona*. Price *Rs. one*.

Some twenty years ago the late Lokmanya Tilak had expounded a theory of the Arctic region being the original home of the Aryas, who thence migrated to India and settled here. This theory has found corroboration lately in the excavations made by the Archaeological Department of the Government of India at Harappa and Mahenjodaro in Sind; where numerous articles have been found which go to establish closest resemblance between the Sumerian and the ancient Indian civilisation, both having a common stock of inheritance in the Vedas. Mr. Apte, taking a cue from these discoveries, has pursued his study of the Sumerian civilisation and as its result has produced this book which is brimful of interesting information. The book will be found indispensable to research students of Indian antiquities.

THE ICHALKARANJI BOOKS SERIES—

The Chief of Ichalkaranji deserves praise for having set apart a decent amount for the publication of a limited number of Marathi books of merit every year under a scheme which will be found serviceable to such authors who cannot otherwise find suitable publishers for their writings. The first instalment of books published under this scheme consists of three books viz. (1) *Stars in the Sky* (with 12 maps) by the late *D. G. Kekar*, a translation of Proctor's *Half Hours with the Stars*. This translation which is a reprint, has gone through a revision by Prof. Nark of the Fergusson College, which is a guarantee of the book being up to the mark. (2) *Manavati Jyoti* *L. T. Parnik*. This is also a translation of Sir Oliver Lodge's "The Survival of man," and will be read with keen interest by those who have a liking for books on Spiritualism and immortality of the soul. One should have wished to see the subject treated from the Indian point of view, abundant material for which was available in Sanskrit literature. (3) *Marathiha Sansar* or the Expanse of the Marathi Literature by *V. K. Nirurkar* is only a magnified pamphlet forcibly advocating the just demand that Marathi be made the medium of instruction in all branches of study, whether primary, secondary or collegiate.

CHANDRAKANT OR FIRST STEP TO VEDANTA IN GUJARATHI—By the late *L. S. Desai* translated into Marathi by *Mr. S. R. Babarkar*. Published by the *Gujarathi Printing Press, Fort Bombay*. Pages 575. Price *Rs. Four*.

In classical Sanskrit literature Chandrakant is often mentioned as a very rare stone cozing away under the influence of the moon.

This is a very appropriate title to the book which explains several tenets of the Vedant philosophy in such an easy flow that the reader forgets that he is reading a work on an abstruse subject like philosophy and enjoys the reading quite as he enjoys novel-reading. Illustrative stories are freely given to facilitate the understanding of the subject, which is a special and charming feature of the book. No wonder that the original Gujarati book has run into nine editions and has been translated into several Indian vernaculars. The translator has given several appropriate quotations from *Manushwar, Tukaram* and other saint-poets of Maharashtra which will strongly appeal to Marathi readers. We shall await with interest for further volumes of the book.

SADHANA-CHIKITSA OR SIFTING OF THE MATERIALS OF HISTORY : By Mr. V. S. Bendre of the *Bharat* I. S. Mandal, Poona. Pages 314. Price Rs. 3-8.

Historical research on modern scientific lines is still almost in its infancy in India. Naturally one often finds books written or statements made, based on some so-called historical papers discovered in the archives of some Math or temple or rescued from the cruel hands of a Bania. Thus the sources of history are vitiated and wrong impressions are created in the minds of readers simply for want of knowledge of the science of historical research on the part of the writer. Mr. Bendre has therefore rendered a great service to history by writing this book, which will give the reader a clear insight into the subject and will teach him how to appreciate, and arrange new papers, coins, &c., how to determine their dates and what importance to attach them. The author has expended an amount of labour, time and money in the preparation of this book, for which he deserves rich thanks from the Marathi-reading public.

KADAMBARDIAYA PESHWAI OR THE HISTORY OF THE PESHWAS IN THE FORM OF NOVELS : By V. V. Hadap. Vols. 1-6. Publishers: Messrs. Parachure, Puranik & Co, Bombay. Price Rs. 1-8 each volume.

Like the Mahabharat of old times, the Maratha Swarajya has been an inexhaustible source of inspiration for young Maratha poets, dramatists and novelists. Hitherto no less than about a hundred dramas and novels have been written and still they are coming. Mr. Hadap alone intends writing twenty-five novels on the history of the Peshwas and a set of the first six novels of the series now before us is a fair indication of the delicious repast that is in store for Marathi readers in the near future. Mr. Hadap deserves congratulations all the more on this enterprise, since he has made a welcome departure in this line from his old way of writing about things considered as highly objectionable in a civilised and cultured society. The novels now turned out by him form interesting and instructive reading and are unexceptionable in taste, which means a good deal in these days.

V. G. Apte.

GUJARATI

BABA RAMNI VARTAN : By Mahanlal Mehta.

A small book of twenty-four pages, written in the language or patois of the Bhils. It is an exact reproduction of the way in which these aboriginal inhabitants of Gujrat's forests talk and serves in-

cidentally to portray the sort of religious life they lead.

SHRI DATTI PRABODHA KALPADRUM, PART IV : By Dattatraya Bova Tambe.

This is a continuation of the three parts noted by us before. It contains in addition the Life of Sri Jnanaswar, the great religious teacher of the Deccan.

JANMUR NE ZANKARE : By Chapsi Redeshi. Printed at the *Gurjar Prabhak Printing Press, Calcutta*. Illustrated. Cloth bound. Pp. 122. Price Re 1. Second edition (1927)..

Although it is Mr. Chapsy's first attempt at novel writing, the book has run into a second edition. It is written in simple language and has a high ideal in view, i. e., that every one should act according to the dictates of his or her conscience. There are instances given of Rajput chivalry and courage and altogether the attempt is an encouraging one.

KNOWLEDGE OR INFORMATION ABOUT ISLAM : By Karim Mahammad Master: M. A. LL. B. S. T. C. D. Printed at the *Sharda Bijoya Printing Press, Nadiad*. Paper cover. Pp. 170. Price Rs. 1 (1927).

Mr. Karim Master is an experienced writer and has already shown his intimate knowledge of Gujarati literature as one of the editors of the *Kabita Pravesb*.

This book is written with a very laudable object, namely, to represent to the public what Islam really is and thus to remove the misunderstandings which have of late clouded its real tenets. The mischief is due to the teachings of fanatic Maulvis. Being a Mohammedan himself by religion and a great friend of the Hindus by association, Mr. Master is entirely fitted for the task. In addition he says what he has to say in chaste Gujarati, which is a special feature of this book.

He has taken parts of the chapters of the Koran and expatiated on them, so as to bring out their true meaning. We recommend every one to read the book. The work is done so intelligently and sympathetically that we are emboldened to make the above recommendations.

SHRI ANAND KANTA MAHODADHI, PART 7TH. By Muniraj Shri Sampat Vijaya, printed at the *Jasvant Sanhja Printing Press, Sindh Cloth bound*. Pp. 192+66+185+118. Price Re 1-8-0. (1926).

This collection of old Gujarati poems falls in no way short of the prior publications. Its introductions from the pen of Mr. Mahanlal D. Desai of the times of Sarnaj Sundar, Joyavijaya and Kusbhal Labh are monuments of elaborate research,

K. M. J.

THE GARDEN CREEPER

By SAMYUKTA DEVI

(10)

IT was nearly summer in the metropolis. The fogs of winter had cleared away. The goddess of spring could not be clearly seen here. Only by roadsides, behind old houses, in the gardens of the rich and in the back terraces of the poor, could her green mantle be seen waving in the breeze.

There was a magnificent avenue of deodars within the grounds of a girls' boarding school. Here spring reigned in all its glory. The trees were decked with masses of rich new foliage, gladdening to the eyes of the damsels, residing in the boarding house. The south wind played merrily amongst the leaves, giving rise to a joyous melody.

The girls would crowd here morning and evening. They liked to gaze at the trees, who were like so many friends to them. And more often than not, a small crowd would gather before the iron gates and try to peep within. But it was not on account of the trees.

It was a Sunday. A seller of glass bangles had arrived; he was a great favourite with the bigger girls. Whenever there was a holiday, the man would present himself with his huge basket on his head. It contained bangles of every colour, red, blue, green and pink, and of every description. Some were heavy, some fine, some plain and some corrugated. Some were strung on pieces of ribbons and others were stored in small paper boxes.

Another man too had arrived. He was a Mahomedan from Kashmere, a trader in silks. There were crowds round both men.

A girl was sitting before the glass bangle vendor, putting on some light green bangles. Another damsel suddenly rushed up to her, with a piece of fine cream-coloured silk, which she had snatched from the silk merchant, and cried "My goodness! Krishnadasi, my dear, your head has simply got turned, because people praise your fine complexion. I grant that you are a beauty; still you need not put on so many glass bangles all together on your fat wrists,

like a sweeper woman. And they are light green too! Won't people just faint at your sight!"

Krishnadasi snatched away her hand in a temper, saying "All right, you need not bother about me. My wrists may not be fine and tapering like yours, still I think I may be permitted to wear some bangles."

The man cried out in dismay, "Don't pull away your hand like that, Miss. You will break the bangles. I am a poor man, and cannot afford to lose them."

The silk merchant called out to Mukti, "Come here Miss, I shall tell you which stuff suits you best."

Mukti came back with the piece of cream-coloured silk. The man threw a piece of red Benares silk, profusely embroidered with gold, round her shoulders, and cried out in ecstasy, "Really Miss, you look simply wonderful! I won't take this piece back on any account. You must wear it. If you don't want to pay me, I am ready to make a present of it to you."

A shout of laughter arose amongst the fair crowd. "Very good," they cried. "We all agree to take presents. We should like to save some money."

"No no," said Mukti. "I won't take it. I can't wear red, now. I am too old for it."

The girls nearly had fits! Mukti too old? Then others should begin to think about the other world now, because they were even older.

After a good deal of discussion, Mukti decided to buy the red silk. But the gallant merchant would not reduce the price much, when it came to actual business. At last he got up after collecting the sale proceeds and testing every one of the coins. Just at that moment, some one was heard descending the stairs with loud footsteps, and presently Miss Dutt, the dreaded Lady Superintendent, made her appearance.

"So you have begun already?" she said sharply. "Silk and satin, gold and trinkets! These are all you think about. You are incapable of serious thought of any kind!"

Mukti quickly hid the red silk under the skirt of her Sari. It glared angrily under

the thin white cloth, but Miss Dutt did not pay any attention to it. She passed on towards the school building, saying, "Get ready, quick. You need not hold a meeting here. Don't you remember that we are to go to the Botanical Gardens to-day? I am going to tell them to get the buses ready."

As soon as the Lady Superintendent had gone, the girls made a rush for the dressing room. Some tied ribbons to their flowing hair, some put it up in large buns behind their heads, and some sported long pig-tails. They put on dresses of many colours and many kinds and at last trooped to the school building, where in the drive the buses were waiting for them. They were to spend the afternoon and evening in the garden, and return after taking a drive along the riverside.

The sun cast its departing rays on the face of the fair crowd, and the wind sported through their loose hair as they strolled about in groups.

"I say, Bimala," suddenly said Mukti, "did not Miss Dutt tell us to assemble together at this time, under the big banyan tree?"

"Yes, she did," replied Bimala, "but I hope, Susie-di would allow us to walk about for a bit more. I don't want tea or anything now. It spoils everything."

Mukti ran to their young teacher Susie-di and caught one of her hands; "please Susie-di," she cried in a coaxing tone, "let us go to the riverside for a bit. Miss Dutt won't mind, if you take us."

"Don't listen to her Susie-di," cried Krishnadasi; "Miss Dutt will scold, I know she will."

Suddenly two youths were seen coming on swiftly, on bicycles, their hair tossing wildly in the breeze. "Take care Dhiren," one of them shouted, "don't run over the ladies."

Krishnadasi took a look at the boys and said, "See Mukti, is not that young man very handsome?"

"Which one?" asked Mukti, with a great show of innocence. "Oh, you mean my brother?"

Krishnadasi's temper got a bit ruffled. "Oh, is that so?" she said, "but he does not look so well, at close quarters. He is very effeminate. Just look at his curls! The other boy looks more of a man."

Meanwhile, the boys had passed on to a safe distance. "I say, Jyoti," one of them said, "is that beauty your own sister? I

think she said just now, that you are her brother or something."

"Don't be a fool," said the other. "That's Mukti, my guardian's daughter. She could not have said that I was her brother."

Two British soldiers were seen approaching twirling canes. They were making for the very place where the girls were.

There was a flutter of nervousness amongst the fair crowd. The young teacher tried her best to reassure her charges, though she herself had begun to feel a bit uncomfortable. But she put up a brave front.

Meanwhile the soldiers came on. Perhaps they meant some mischief, or perhaps they did not. But the nervousness of the girls increased every moment. They crowded close to Susie, and became ominously silent.

Suddenly both the Bengali youths cried out, "We must teach these monkeys some manners. They think they are the lords of creation."

They mounted their cycles and rode straight upon the soldiers. They had to move away perforce from the road to escape being run over. They did not feel over-pleased with Jyoti and Dhiren, and one of them struck swiftly with his cane at them. It missed its mark and struck off the head of an unoffending fern. The other soldier swore loudly, and called the boys a few bad names.

But the boys had passed out of hearing by that time. They dismounted near the spot where the girls were gathered, and set down on the grass. Jyoti took out a book from his pocket, and Dhiren began to scrutinise the tyres of his bicycle. The soldiers soon disappeared round a corner.

Dhiren began to scrape off the mud from the wheels of his machine, with a pocket knife. "What a staid chap," he muttered in an undertone, "You have gone down deep in the sea of knowledge, it seems. May I ask, if that copy of Ibsen's Doll's House, happens to be one of your text books?"

Jyoti replied without looking up from the book. "Can't a chap read anything but text books? Don't pretend to be a greater saint than you are. Your machine has just come out of the workshop. May I know, why you seem to be super-anxious about its health?"

"I say Jyoti," said Dhiren, abruptly changing the topic, "that young lady must be a teacher, eh? Her appearance does not tally however with the name though."

"Then, how do you know that she is one?" asked Jyoti.

"It is not hard to guess, if one happens to possess the average intelligence," said Dhiren. "Did not you notice how the girls crowded round her, when the soldiers approached. She is a bit older than the rest, too."

"Your power of observation is very highly developed," said Jyoti. "You are not in your best form in the college. I shall inform myself correctly about that lady from Mukti. I want to know whether you really run a close second to Mr. Sherlock Holmes."

"I accept your challenge," said Dhiren. "By the way, who is Mukti? Is she the one in navy blue?"

"Don't pretend to be a greater ass than you are," said Jyoti. "I have already said that she is the daughter of my gardener, Mr. Ganguli."

Dhiren laughed out aloud and said, "So you did, I forgot."

Meanwhile, the girls had begun to chatter again, the soldiers having disappeared from sight. They seemed to be splendidly unconscious of the presence of the young men, sitting so close to them. These intruders, too, seemed not to know that there were girls in the neighbourhood.

Krishnadasi nudged Aparna, saying, "Look, how studious Mukti's brother is. Boys are fond of their books, are not they? Even when out for a walk, they cannot do without books."

"He reminds me of Marius in the film of *Les Misérables*," said Aparna, "that chap too was immersed in his books, all the time."

"Don't you wish, you played 'Cosette' to his 'Marius'?" asked Krishnadasi slyly, pinching Aparna.

"Good heavens! don't be so silly, Sosie-di will hear you" replied that young lady.

Mukti had been sitting all this while, her face turned the other way. Suddenly, she looked round and said, "You will have to change that interesting topic, my dears. Miss Dutt is coming this way, with the 2nd year girls."

"She must have heard everything," whispered Aparna. "Good lord! if she should tell her brother!"

Krishnadasi put up a brave front. "Let her," she said; "her brother cannot eat us up."

Miss Dutt came on with the other girls. The girls under Susie's care, now sat still, with faces composed, like model young ladies. Two or three took out books and bent over them.

Miss Dutt had at once spotted the boys. "You should not have chosen this place, Miss Roy," she said rather sharply, to Susie. "The big banyan tree would have afforded a better shade. What have you been doing, all these while, girls? Did you walk about? Or did you sit here talking? Remember, you will have to write an essay on it, next week."

Neither Dhiren, nor Jyoti, doubted for a moment, that the latest arrival was a teacher. Jyoti thrust his book in his pocket, and Dhiren ceased to minister to his cycle. In fact, the place they had been occupying was very soon empty. Miss Dutt regarded their departure with great complacency. It was a most direct compliment to herself. "These young teachers are so good," she thought, "No one would take them for teachers and so people take all sorts of liberties."

The evening walk became a dull affair after this. The girls trooped along silently behind Miss Dutt, who talked all the time and pointed out many ferns and bushes, giving them their Latin names. Then they had tea under the big banyan tree. Then as it was beginning to get dark, the buses were called for and the girls packed safely in. They took a drive by the riverside and returned in good time to their boarding house.

(11)

The school hours were over, and the girls were proceeding towards the boarding house, heavily laden with books and papers, when Miss Dutt's voice was heard from the verandah of her room, "Girls, please send Krishnadasi up to me."

That young lady happening to be amongst them, none had the trouble of sending her up. Everyone cast glances of sympathy at her, for an invitation to Miss Dutt's room boded little good.

"What's up, I wonder," said one of the girls. "I suppose, she had noticed that you went barefooted to class. Did I not tell you, that you were sure to catch it?"

Krishnadasi pouted and said, "I don't think I did wrong. I am not a Mem Sahib and I cannot remain wearing shoes and stockings all the time."

The first speaker got offended and said "very well. But see where your orthodoxy lands you."

Krishnadasi mounted the stairs to Miss Dutt's room with angry steps. The other girls crowded to the foot of the stairs, to see the matter through. After about five minutes, Krishnadasi ran down into their room. Her face was red with excitement and she shook with suppressed merriment.

Her companions were bewildered. It was a strange thing to come out laughing from Miss Dutt's room. She generally had quite an opposite effect on her visitors.

Krishnadasi was mopped, as soon as she reached the foot of the stairs. The girls rushed upon her like a wave, and engulfed her. Everybody spoke at the same time and asked the very same question.

After the excitement had subsided a bit, the girls tried to have the mystery cleared up. It transpired that Krishnadasi's father had written a letter to Miss Dutt, requesting her to let him know, how much money he owed to the establishment for his daughter's education and boarding. She was not going to continue her studies and he would arrange very soon for her removal.

The girls dragged Krishnadasi into the dressing room with merry shouts of laughter. It did not take them a moment to understand, why she was being taken home. And every one of the merry band felt a twinge of secret envy. Everyone would have liked to be in her place. But they were quite ready to be glad that it was Krishnadasi. Such good news seldom came their way.

Aparna was Krishnadasi's special friend. "Hallo Miss Innocence!" she cried giving the fortunate one a slap, "were you not feeling very anxious about your examination? You knew nothing about this other arrangement, did you?"

Another pulled her by the hair, saying, "So now I know the reason why you are getting so thin. You actually weighed no ounce less, the other day."

Krishnadasi became the centre of all attention. The girls scarcely paid heed to the bells calling them to various duties. One wanted to be treated to a feast, another made a wild guess at the appearance of the bridegroom, while still another conjured up in imagination the sweet picture Krishnadasi would make, dressed in bridal finery.

Suddenly, one of the maids lifted the

curtain, saying, "The Mem-Sahib sends for you, Miss Mukti."

Another trill of laughter went up. Had Mukti's father sent for her too?

"He may have," said Mukti carelessly, "but certainly not for good, as is the case elsewhere."

Miss Dutt turned round, as Mukti entered, and asked, "Some Jyotirmoy Roy has come to see you. Do you know him? He has never been here before."

Jyoti had really never come alone before. Shiveswar had brought him along, sometimes. But to-day being far too busy, he had sent the boy alone.

"I know him very well," said Mukti. "He lives with us. He has often been here, with my father."

"Oh very well, then. You may see him," said Miss Dutt, dismissing her.

Mukti proceeded to the visitor's room. "Good lord!" said Jyoti, as soon as he saw her, "You took sometime coming."

"Thank your stars, that I came at all," said the young lady. "Miss Dutt was for refusing me permission to see you. You are not on my visitor's list, you know. I had to coax her a good bit."

"Indeed!" said Jyoti, "what did you tell her? That I was a foundling, whom your father had brought up like a son?"

"No," said Mukti, "What's the use of telling her all that? I said that you were the Oriya gardener."

Jyoti shouted with laughter. "But she would never believe you, my dear girl. One look at my face is enough to refute your unkind allegations."

"Oh, don't be so proud of that face of yours," said Mukti. "Because you happen to possess a long-nose and woolly hair like a negro, you need not run away with the idea that you are a perfect Adonis. That day, you did your best to impress the girls, with your study of Ibsen and all that, but let me tell you, that you failed singularly. In fact, one of the girls said you looked like a girl and the other boy was far handsomer."

"What?" said Jyoti with mock incredulity "that fellow Dhiren, handsomer than myself. So much for feminine taste! I won't tell him though. He would begin to walk on his head."

Mukti had been standing all this time. Now she drew a chair forward and sat down. "Good heavens!" she said, "are you going to talk about your looks only?"

"I beg your pardon," said Jyoti, trying to look repentant; "I ought to have talked about your looks. Shall I begin?"

Mukti got up in a rage. "I think you have gone clean off your head. I wonder, what made father send you. If you don't mind, I shall go now, I have no time to waste in listening to nonsense."

Jyoti jumped up and barred her way. "Please don't go," he said. "I have yet to tell you the most important thing."

"May I know, what that is?" asked Mukti. "Anything to do with the growth of your hair or your complexion?"

"It's not so important as all that," said Jyoti. "Only your father asked me to tell you that he has gone home again and given up the hotel. Grand-mother, too, will be down presently. So your ladyship will have to go home to-morrow and live there for the present."

As soon as Jyoti had finished, Mukti cried out, "What a silly you are! What's the use of telling all these to me? Unless father writes to Miss Dutt, she won't allow me to go."

Jyoti took out a letter from his pocket, saying, "Here you are. Thank you for reminding me."

Mukti took the letter, saying, "No wonder, the boys have nicknamed you the post. You are star-gazing all the time."

"Well, there's scarcely anything, worth looking at down here, is there?" asked Jyoti.

A bell clanged loudly at this juncture. "Good lord," cried Mukti, "I have not done my hair yet, hope they don't catch me." With these words, she ran off. Jyoti walked out, twirling his walking stick.

As soon as Mukti's companions heard that she too was going home, they fell upon her like birds of prey. Krishnadasi was cast off and she went away to do a bit of much-needed packing.

Next day, happening to be Saturday, the girls had plenty of leisure. Mukti was selecting her clothes, as the weekly wash had just come in. Suddenly the hoot of a motor horn tore through the silence startling even the washerman's donkeys, who ran off in dismay.

Aparua ran to Mukti, crying, "Here Mukti, your brother has brought a car for you. Kindly ask him to desist from blowing his horn. This is not an institution for the deaf."

Mukti threw down the clothes and ran off to see Jyoti. Her hair blew in the wind and she twisted it up in a tight knot behind.

Jyoti was still bent upon giving them a bit of music. "Stop, for heaven's sake," cried Mukti "Even the donkeys refuse to listen. I am coming in a minute."

Jyoti took away his hand from the horn. Mukti finished her packing at leisure, and appeared with a huge amount of luggage after about half an hour. Her companions flocked behind her. The sight of so many young ladies made Jyoti rather shy. He turned away his eyes.

As Mukti was about to get in, Krishnadasi whispered in her ear. "You too are not coming back my dear, mark my words."

Mukti gave her hair a playful tug and got in. Jyoti blew another loud blast and drove out.

(To be continued)

RAJPUTANA TO-DAY*

By RAMNARAYAN CHAUDHARY

RAJPUTANA to-day is not what it used to be a few centuries ago. In the middle ages, it was a land of heroes

and heroines whose examples inspired millions then and whose names inspire thousands still. But the Rajputana of to-day

* As stated in Rajputana publish no administrative reports as a rule, the figures quoted in this article are taken from the Census reports

of 1921, unless otherwise mentioned. These latter, though obtained from reliable sources, are open to correction.

guaranteeing to the citizen liberty of speech, liberty of the press, liberty of association and security of person and property. No court can issue writs of Habeas Corpus to protect the bodies of persons detained or deported without trial. Even as a matter of fact, these rights of citizenship do not exist anywhere. With the single exception of Jodhpur, there is no political association and save in Bijolia (Mewar) there is no trade union. Even these two bodies have had to pass through the ordeal of repression and are allowed to discuss only economic and social questions. Public meetings of a political nature and public organs dealing with politics are things unknown in Rajputana. Instances of arbitrary expulsion or confinement, proscription of newspapers and confiscation of property are not very rare. In a majority of the states, there are serious statutory restrictions on these elementary rights of humanity. But more potent than anything else to gag personal freedom is the atmosphere of general intimidation and indirect official pressure obtaining in the states. A few instances will better illustrate things as they are.

Act No. 2 of 1909 of the Jodhpur State provides :—

Section 7. Any subject of Marwar, knowing that any other person has received seditious pamphlets or prohibited newspapers or periodicals hostile to the British Government or the Marwar Durbar or any matter likely to cause disturbance of peace, must report the same to the nearest magistrate or police officer.

Section 8. No subject of Marwar shall harbour or give shelter to any person whom he knows to be a notorious seditiousist.

Section 9. No subject of Marwar shall receive or keep in possession or distribute or help in distributing seditious writings or prohibited newspapers or periodicals hostile to the British Government or the Marwar Durbar or correspond or associate with notorious seditiousists.

The Jodhpur Press Act of 1923 provides :

Section 2. Illustration. A cyclostyle is a printing press.

(c) Proscribed foreign publications include publications that have been proscribed by the Government of India or any of its local Governments or by any Indian State having a personal salute of 11 guns.

Section 3. No person shall within the Marwar territory keep in his possession any press for the printing of books, papers or newspapers, except with the permission of Mahkma Khass.

Section 5. No newspaper or book or paper shall be printed or published by any person or press within the Marwar territory except with the previous sanction of the Mahakma Khass.

Section 6. No seditious or obscene literature

or matter relating to state politics or such matters as are calculated to incite anarchical outrages or to acts of violence or to tamper with the loyalty of the army or the navy or to excite racial, class or religious animosities shall be printed or published within the Marwar territory by any person.

Section 9. No printing press or publisher in Marwar shall exchange its or his publications with any foreign publication.

The Alwar State seditious meetings and publications (amended) Act outdoes all. It runs thus :—

"A meeting of more than five persons shall be presumed to be a public meeting within the meaning of this Act until the contrary is proved. No public meeting shall be held for the discussion of any subject likely to cause a disturbance or of any political subject or for the exhibition or distribution of any written or printed matter relating to any such subjects. At any public meeting no such subjects shall be discussed or preached which are likely to do anything which may be contrary to the interest of Alwar State, its government, its sovereign or against the interests of His Majesty the King Emperor of India, his government or against the interests of any other ruling prince of India. No person shall concern himself or conspire in convening or organising or otherwise knowingly take part in the public meeting. No one may write, print or publish or circulate any article or document inside the state or outside it which has a tendency, indirect or direct, against the interests of His Highness the Maharaja of Alwar and his Royal family or his government or His Majesty the King-Emperor of India or any other ruling prince of India. His Highness' Government, when necessary, shall proscribe the newspapers and books, etc., on the ground that they contain seditious matter. No person may subscribe to or import or hold in his possession any such article.

Such persons, whenever found, shall be punished with imprisonment for five years, or fine amounting to two thousand rupees. The offenders, if necessary, may be ordered to quit the state."

The minority administration of Jaipur, presided over by the British, issued this order against the writer of this article on 11th February, 1925. —

"Whereas it appears from information received by the Durbar that one Ramnarayan Chaudhary, Editor of the Tarun Rajasthan, is stirring up discontent in Shekhavati and engaging in a campaign of agitation likely to endanger the public peace, it is hereby ordered that he be directed to remove himself from the territory of Jaipur state within 12 hours from the date of these orders and be prohibited in the future from entering any portion of Jaipur territory without the permission of the Durbar."

It is noteworthy that there is no time limit for the order and that the victim of the order is a bonafide citizen of Jaipur having his home, relatives and ancestral property in the State. In Bikaner no written orders or statutory restrictions are issued

against inconvenient activities. Official ingenuity manages to suppress them through veiled, though by no means ineffective, orders conveyed by subordinate police officers.

SLAVERY

Despite repudiations by the representatives of the Government of India and the Indian Princes to the League of Nations, slavery does exist in Rajputana. The number of slaves in this group of states is 161735. They are known as Chakars, Golas, Darogas and Huzuries and found in the palace of every Rajput prince and the house of every Rajput Jagirdar or feudatory. Men, women and children are openly exchanged as presents and articles of dowry and at times even sold, though secretly. They are allotted the hardest and meanest tasks and given the coarsest food and clothing or the castings-off of their masters. The latter have absolute authority over their persons and chastity, and regulate their marriages and divorces to their own convenience. Personal violence and outrages on modesty are not an uncommon fate of these unfortunate beings. Escapes are not easy. Legal formalities do not stand in the way of a state restoring a slave to his original master in another state. The difficulties of extradition presented by the British Indian Courts are overcome without much trouble by charges, often got up, of theft and other kindred offences against the refugees. The system of slavery prevailing in Rajputana is not only sanctioned by universal custom, but even sanctified by law in some states. Jodhpur provided such a legal sanction till as late as February 1926, while Kotah still retains it, inasmuch as no slave of a feudatory can be employed in the public services of that state without the consent of the master, and slaves of Bundi are ordained to be delivered to Kotah and vice versa without a *prima facie* case.

"BEGAR."

Begar or modern slavery, in the words of Mr. C. F. Andrews, is another curse of Rajputana. Under this system labour can be exacted with little or no payment by any official of a state from certain communities at all times and from others

on certain specified occasions. The communities doomed to perpetual *begar* are generally the depressed classes known as Balais, Bhanhis, Bhils, Chamars, etc. Their number in Rajputana is 1803626, i.e., over 18 per cent. of the total population. They are generally requisitioned for clearing and building roads, bringing big game to hay, cutting grass for state stores, carrying loads for petty officials and doing all sorts of labour for encamped officers. *Begar* is exacted in the acutest form and attended with the greatest hardship to its victims on the occasions of vice-regal visits in the states. When the Viceroy's special train passes through Rajputana, the rail-road is lined by the human beings caught under the system of forced labour. They are posted at each telegraph pillar on both sides of the railway line with torches in hand and their backs towards the train. They have to wait from hours before sunset till the time the Viceroy passes off. As his visits usually occur in winter, which is very severe in Rajputana, the poor people suffer badly from exposure and some die of pneumonia are reported almost every year. Several states have lately legalised forced labour, though determined the wages. In most places, food is laid down as the wage and in some states remuneration in cash is fixed. But it is always inadequate in theory and often denied in practice.

Artizans, cultivators and other manual labourers are also required to render unpaid or ill-paid service of a compulsory nature to the states and their employees. Supplies and transport too are covered by the system. The Jagir areas are its hot-beds.

Factory labour is very scarce in Rajputana, but the little that there is, is no better off. There is no factory law. There are no provisions for education, old age pensions, compensations and maternity benefits for workers. Women and children are freely employed in all sorts of labour. The hours of daily work range from 12 to 15. In the 224 industries, only 19175 persons are employed. Out of them 895 are women and 1021 are children under 14.

AGRICULTURAL CONDITIONS

About 87 per cent of the population of Rajputana reside in the villages. Out of 9814381

persons, 6561623 are peasants and agricultural labourers. They depend absolutely on the produce of the land, which varies with the degree and punctuation of rain-fall. Most of the soil being sandy yields only one scanty harvest. Irrigated lands yielding two crops form a very small fraction of the whole area. Scarcity and famine are, therefore, chronic. There are no supplementary industries worth the name. To add to the cruelty of the situation, assessment of revenue is heavy. Formerly it used to be a share in the produce ranging from one-fourth to two-fifths of the gross output. Most of the states have since changed the levy from kind to cash. But the Jagir areas, which occupy a very considerable extent, retain the system of assessment in kind. This is very vexatious, and often oppressive, as it admits of a number of petty tyrannies. Even in the Khalsa or purely state territories, where revenue is levied in cash, the demand from the peasantry is, with rare exceptions, exorbitant. Few states have any revenue code. Assessment can be and is renewed and increased at the sweet will of the powers that be. Nor is land revenue the only state call upon the slender purse of the cultivator. There are a number of additional cesses, which sometimes present amusing and ingenious methods of exploitation. For example, in the Jodhpur State, the number of such cesses reaches upto a hundred. Except Kotah, no state has established co-operative credit societies or agricultural banks. The consequence is that the peasantry is heavily indebted to usurers. Chronic poverty, want of sanitation and medical relief, ignorance and disease have conspired to reduce his vitality to its minimum and a single epidemic sweeps away thousands at a time. The following figures for variation in population will speak for themselves:— 1891:—12111749; 1911:—10536432; 1921.— 9844384.

Shikar (hunting) rules and reserved forests are another source of hardship to the peasant, who may not lift the jungly marauders teeming in the neighbourhood of his cultivation under state protection, even though they may work havoc with the crops and at times even take away cattle and human lives.

CRIMINAL TRIBES

Over a million persons, including Gujars who are cattle-lifters, are doomed to be criminals from the cradle to the grave. They

are treated as convicts without trial and have to report their movements to the police, whose treatment is hardly human. No opportunities are afforded to civilize them.

CONDITION OF WOMEN

Purdah is rife among the Rajputs, Charans, Kayasthas, Muslins and other official classes. Education of women is poor. Out of a total population of 9844384 only 18851 women, i. e., less than 2 per cent. are literate. Child marriages are in vogue and widowhood is the fate of a large number. The following figures will show the gravity of the situation —

Women:—4659493, Married.—2129155, Widows —893289.

That is, to day about 9 per cent of the total population, over 20 per cent of the female population and over 41 per cent of the total number of married women are widows. The number of young widows is as follows —

Below 5 years of age	410
From 5 to 10 years of age	2681
" 10 to 15 "	7786
" 15 to 20 "	14321
" 20 to 25 "	26570
" 25 to 30 "	43220

Polygamy is prevalent among the ruling classes and there is hardly a Maharaja and few Jagirdars content with a single wife or woman. The late Maharaja of Jaipur had more than 3000 women in his palace, of whom more than 2000 are still confined with in its four-walls under the benign British regency!

EDUCATION

Female education has already been dealt with. The condition of education as a whole will be illustrated by the following figures:

	No. of literates.	Percentage to population
Rajputana	331725	3.3
Alwar	22500	3.1
Bikaner	23844	3.6
Jodhpur	66910	3.6
Jaipur	82128	3.5

According to more recent figures the percentage of literates in Alwar has increased by 1 and in Jodhpur decreased by 6. If this state of variation be taken to be the average, the percentage for the whole of Rajputna comes down to 3.

The ratio of expenditure on education and royalty to the total revenues is even more illuminating. Let us take the professedly advanced states :—

State. Expenditure on royalty. Expenditure on education.

Bikaner	11 per cent.	1.5 p. c.
Jodhpur	16 per cent.	3. p. c.
Alwar	50 per cent.	1 p. c.

The extent of primary education is according to latest available figures, one school for 7011 persons or 31 square miles or 17 villages in Alwar ;

" 12116 persons or 230 square miles or 27 villages in Jodhpur ;

" 10307 persons or 361 square miles or 33 villages in Bikaner.

Private education is discouraged in several states. Alwar and Jaipur have standing orders forbidding the opening of all private schools without the permission of the state, while Jodhpur has placed prohibitive restrictions on non-official educational institutions.

MEDICAL RELIEF

There are no lightings, no roads, no sanitary arrangements and no hospitals or dispensaries in villages proper in any Rajputana state. People die in thousands every year for want of medical help. Good hospitals are provided only in the capitals, and dispensaries in some important towns. The latest figures will tell their own story :—

	Jodhpur	Alwar	Bikaner
No. of medical institutions.	27	10	14
Ratio to persons.	1 to 75000	1 to 70115	1 to 47120
Ratio to Sq. miles.	1 to 1400	1 to 314	1 to 1663
Ratio to villages and towns.	1 to 81	1 to 177	1 to 151.

	Jodhpur	Alwar	Bikaner
Expenditure on medical relief in ratio to total revenue.	2.25 p. c.	3 p. c.	1.1 p. c.
Royal expenditure in ratio to total revenue.	16.	50 p. c.	11 p. c.

POPULAR AWAKENING

These are the material conditions to which despotic rule protected by foreign arms has reduced Rajputana to-day. They were bound to cause discontent. The last decade has seen universal unrest and in some states of an acute nature. The people are no longer in helpless resignation. The adage 'there is no remedy against Raj and Ram' has no more force. The worm has turned. The loyalty of the subject has suffered a rude shock. The slumber of the masses is gone, though their suffering is yet largely unmitigated. The classes have begun to voice their feelings. Public criticism of the administration has been frequent and at times violent. Protests against infringement of civil rights have been attended with extortions and imprisonments. Resistance to tyranny in rural areas has been more intensive, though at times crude. Refusal of taxes has been resorted to on a large scale and force has been freely employed to curb the 'revolt'. There have been wholesale arrests and firing has taken place in Alwar, Bundi, Mewar and Sirohee. Women have had their share in the joys and sorrows of the renaissance. A number of public organs, public bodies and public workers, small but determined, has sprung up with devotion to the cause of the uplift of Rajasthan. These that have faith are convinced that her future will be brighter than her past. Let all her children join to make it a part of the new heaven that India is to be.

Dr. TSEMON HSU AT SANTINIKETAN

By N. C. GANGULY

IT was a pleasant function at which a warm welcome was accorded at Santiniketan to Dr. Hsu, the Chinese poet, scholar and traveller and late of the Peking University, on behalf of the staff and students of the Visva-Bharati Sammilai under the presidency of Rabindranath Tagore. The event has a deep cultural importance and

no less international significance, for rarely are such men met with from distant corners of the globe. Dr. Hsu, like a modern Hsien-Tsiang, has come to India to see "the greatest of men and the greatest of mountains," as he put it, and to visit the Visva-Bharati establishment, which is taking the place of a growing Taxila in the India

of to-day. He was the guest of the President. In the meeting for his reception he was visibly moved, when Pandit Bidhu Sekhar Sastri greeted him and Dr. Tagore at the door of the Kala-Bhavan (Arts Department) in true Hindu fashion, first by putting on their forehead the fragrant sandal-paste and then garlanding them with white flowers strung together.

The large hall was fittingly decorated by the students under the guidance of the well-known painters, Professors Nanda Lal Bose and Surendra Nath Kar. The whole atmosphere was thoroughly Indian, breathing the spirit of the ancient hermitage universities, under the brilliant electric lights and on the white alpana-painted floor. Lotus from a neighbouring pond—symbolic of spiritual exuberance—increased the decorative motif of the hall, while sonorous music in Northern and Southern styles by the girl students under the able direction of Mr D. N. Tagore enlivened the occasion. Tea, and light refreshment on lotus leaves were served by the girl students and each guest was presented with a full-blown lotus flower on its long stalk.

Dr. Hsu was seated at the head of the hall with the poet and Pandit Bidhu Sekhar Sastri, the Principal of the research department. After the first song Rabindranath welcomed him heartily in a short and touching speech. He made personal references to the Chinese poet's invaluable help during the time the Indian party was on tour in China. His words were full of affection for the rising poet, scholar and traveller of China, who could fortunately come from such a great distance to spend a few days in Santiniketan. That a lasting friendship has grown up between the great poet of India and the young and rising poet of China was evident from every word, and Rabindranath expressed his deep appreciation of the culture of that most ancient country and its people. Their kindness and hospitality made an ever-enduring impression on him. He stressed the fact that he went to China not as a Nobel prize-holder, but on a truly poetic mission with a really poetic message seeking international amity and friendship, re-interpreting and re-establishing the age-long Maitri formulated by the sages Confucius and Buddha.

"Political ambassadors are sent out to-day," said the Indian poet, "by the nations of the world to distant countries; their

object is gain; their business is self-interest. But no nation sends out poet-ambassadors. I went to China on no political mission. My message was of friendliness between India and China. You accepted me most cordially as a friend and I am sincerely grateful for that." Incidentally he added that the despatch of Indian troops to China some months ago by the British was against the wishes of the Indian people, and he

Dr. Tsemon Hsu and the Poet Rabindranath Tagore, at Santiniketan.

personally, disliked it thoroughly. In the olden days they overleaped mighty obstacles in order to make friends with others. It is a pity that nations fight one another when communication has become so easy in modern times.

"There has been close and intimate connection between India and China from very ancient times. I wanted to revive it again in a fresh way. This friendly relation was somehow broken for some time. Those, who had established it in the past

bad never been politicians with armed soldiers behind them. Those Indians of yore over-leaped the strong walls of the Himalayas with all the wealth of their mighty spiritual realisations in response to the most human call of finding and founding cultural connections of abiding interest and value.

"I saw caves at many places in your country, and in these caves the great Chinese sages spent their days in meditation and spiritual exercise. There it seemed just as if the memories of my past lives came back to me—just as if these very sages and recluses were reborn in the spirit within me and urged me on to my mission as a post-ambassador to your vast and ancient land. I shall ever remember the spontaneous and natural welcome accorded to me. Particularly about you, I recollect very well the day you first came to me. Your approach was so natural, so friendly. I wished then that the love received from you and your people might some day be shown to you when we should be able to welcome you in our midst. You are here now with us all. You are able to see for yourself the work I am doing in this Ashram, the life that is led by us all. On behalf of the whole Ashram I welcome you most cordially. In this Ashram where I live, I try to create things not simply as a poet in the poetic way. You saw me in your country as a poet only, which was only a part of my life, though quite an important and large portion. You will find me here more fully and through my works. You will see how the poet is trying to realise his dreams in the shape of things created through effort and striving.

"We have invited the whole world to this Ashram; we want them here as honoured guests and it is my earnest desire that you will kindly carry this message of friendship to your country when you return from India."

Dr. Hsu was deeply impressed by the words of the poet and, after another song by the boys, made a suitable reply, which was charged not only with personal reminiscences and friendship, but with sincere appreciation of the ancient history of the two countries of India and China. It was clear to all that the young scholar and poet had carefully studied and understood the meaning of that history in its old settings as

well as in forms of modern thought. In him this age-long chain of relation symbolised one of the greatest facts in human history. He vividly pointed out how Indian messengers of friendship bore to distant China their great ideal and lived and spent their holy lives in meditation in the quiet recesses of the country where they preached the message learned in this land. Addressing Rabindranath Dr. Hsu said: "For long we did not hear that voice of India. It was Mr. Elmhurst who gave us the news of your proposed visit to China. We anxiously looked forward to the day of your arrival. We have in our country a sacred peak where many recluses spent their days in spiritual exercise. One day very early in the morning I looked to the East from this mountain peak. Dark clouds were then hanging in the Eastern sky, but slowly the rays of light burst forth and the sun rose in his wonderful glory, having pierced under the thickly gathered darkness. I thought that morning that you would come exactly in this way—just like this you would appear in the darkening scene of China's national life. This thought, of mine, so full of hope and joy, was expressed in one of my poems of that time.

"Then I remember your actual arrival. At the port, from a distance, I espied your straight, peaceful, sage appearance. I felt that the darkness had given way and the sun had risen above the horizon. We accepted you as one of our own. Personally I felt as if I had regained a dear relative of my own. I called you my grandfather and reciprocated fully the love of a grandfather which you showed in me. But I was not satisfied then with only having you in our own country for a short time. I longed for the day when I might be able to see you in your own country at your home amidst your works. In the past, pilgrims used to come to India to see the land of the great Buddha. From this country too religious preachers went to China carrying the message of Buddha. Our pilgrims brought their offering of loving faith in the days gone by. The new message of peace of the modern age was borne by you to our ancient country. I have likewise come as a pilgrim of the new age to place before you my humble offering of deep reverence. I am now making this offering in person to you and to all of this Ashram, so that you may kindly accept it from me. I shall always look

back with pride to my sojourn here and keep it ever fresh in my memory."

After the meeting many thronged round Dr. Hsu and made many curious enquiries

for a pretty long time. Great interest was evidently roused by his talk. He was also much pleased to find so many people interested in China and the Far Eastern problems.

THE SPIRIT OF WOMANHOOD IN ROERICH'S ART

By FRANCES R. GRANT

"WOMAN above all is destined to bring into the world the joy of the near future."

With these words, in his "Joy of Art" Nicholas Roerich, one of the most towering artistic figures of our day, several years ago pronounced his apostolate of the spiritual destiny of woman.

It was not even necessary for Roerich to translate this feeling and this doctrine into the medium of words. For he had done this long since in his painting into his art he had transmitted this faith in womanhood, and had revealed his ardent and profound prevision of the place of woman in the coming evolutionary change.

If, as a certain writer has said, George Meredith will ever be beloved of woman because he liberated her, then Roerich will be ever revered of woman because he summoned her to a ritual of spirit. Thus he has more than liberated her, he has extolled and exalted her. He has seen her as an advocate of the new spiritual destiny of humanity; and counted her as the ally of a deific force leading the world onwardly in its cosmic evolution.

To know Roerich's stirring evocation to woman, one needs but study the paintings which he has created, or look at the various acts of his career. Of the 3000 paintings completed by this seemingly never-ceasing creative inspiration, it would be impossible here to cite all works, but let us glance at some of the later works. These have fortunately been made permanently available to lovers of art through the foundation of the Roerich Museum in New York devoted to the art of the master and, incidentally, one of the few such museums in the entire history of art.

Perhaps one may first turn to his series

of panels "Dreams of Wisdom" to affirm this tribute which he pays to the mystic powers of women. These twelve panels were finished in London—and the Roerich Museum is

Nicholas Roerich

America has two, "Song of the Waterfall" and "Song of the Morning". In both of these, as in "The Language of the Birds" of the

'The walk of Kuan Yin' By Nicholas Roerich

floating seas of mist are roseate in the glow of the first sun-light, the ritual of nature. Before the curtain of this morning pageantry, setting for the play of men, two figures stand out in relief. A light-robed woman—she who stands for all woman-kind—poises lightly upon the crest of a precipice. Her radiant beauty recalls Kuan Yen that beloved deity of the East, goddess of Mercy. Cautiously making his way over the impending glacier, a man, a pilgrim, feels his trails upon the narrow ledge, touching the garment of Her, as if in want of help. The woman reclines towards him, in a gesture combining at once benignity and tenderness, it is the helping gesture of the attendant guide.

In beauty of colour, of design, the painting again is evidence of the creative mastery of Roerich, as artist. In its philosophy, it bears witness to Roerich's all-containment as personality, as philosopher. If one may translate his work into their suggested word, may one not say that Roerich sees here

woman as the constant helper of the evolutionary forces of life?

Another of these Himalayan paintings, which in its new way, hails victory to woman, is his 'Serpent.' A sea is here, leaping upward waves on waves which meet the surging sky as in a great rhythmic agitation of the world. From out the depths of the sea emerges the mother of mysteries with her attending daughters. The forms evoke the memory of the world. Behind them spread over the sky is the wisdom dragon of the East. Here is a merging world, where elements and men link in a harmonious symphony. Is this Lakshmi; or is it Aphrodite who emerges, wisdom-wise? It may be either, it may be both, for they are one; and East and West become no longer divisible, they are linked through the power of womanhood.

In the same series is his "Remember." Again we see Everest no longer roseate, but blue—the blue of full morning, sunlight. The plateaux give way to gorges, which rise

"The Serpent" ("Banners of the East" Series) By Nicholas Roerich

again into the higher terrestrial summit. And in the foreground is a rider setting out upon his white horse, mission bound. He has paused and looked back toward the starting point. There, two women stand bidding him god-speed, perchance, but in their glance he spells the remembering challenge to victory.

Again in "Star of the Mother of the World"—Roerich indicates his belief in the leading star of womanhood. Here is deep green night upon the desert, full-starred. Over the picture lies the silence of an approaching revelation. Upon the trails, across those sandy dunes ride four in a cameled caravan. The night of the Magi repeats itself, as it will ever repeat itself—but now it is the Star of the Mother which beckons the pilgrims on their way. Shall that Star of the Mother—for so the East calls Venus which is now hastening earth-wards, be the lodestar beckoning onward to a new night of joyous tiding?

As a final, as the most convincing word, one may say, which Roerich imparts upon the belief in womankind—must be mentioned the two paintings "Mother of Tourfan" and

"Mother of the World" The former is the Mother and child from perhaps the earliest conception known, found in the frescoes of Tourfan. In this conception of the Holy Mother sprung on the soil of the East, one may go back centuries, even eons; here is the Holy Mother as early man of all nationalities conceived her—all-beneficent, all-giving.

Of Roerich's "Mother of the World" one may say as had been said of Roerich's paintings before—its beauty can hardly be transmuted into words. Here is the Mother of all living men; here is the mother of a world's spirit—in a world-beyond world, canopied by heaven and the stars, sits she whose image has been worshipped as Isis, as Ishtar and come down the ages, the Holy Mother of all religions. Roerich has enveloped the entire painting in a blue as of the Eastern night. Infinite eternity are in the depths of this creation; boundlessness of earth is here. This figure of Benevolence broods over the cosmos, ever-compassioned, ever-watchful—mother of all the Sons of men.

To those who have seen this in the Roerich Museum, it is a revelation how this

"Remembrance" — "The Country" painted by Nicholas Roerich

painting summons the deepest spirit of women. Many stand long and silently before it—many even weep before its vista, held by its suggestion of the silences which intone their symphony to the ear and the spirit of the one who hearkens.

And, as Roerich—as perhaps the outstanding figure in the artistic and cultural world of today—pronounces unequivocally his belief in the life of womankind, and in her mission. He reiterates in his work that dedicated belief of the East—which beholds the rising star of the Mother of the World approaching the world and enveloping it in her embrace of benevolence.

In the history of culture, Roerich is a unique figure—and his championship of womanhood comes from a voice which has long led the educational cohorts of a score of countries. There is in his art a ceaseless flood of activity. A surging of creative power which endlessly seems to inspire and to invoke, a feeling of a coming apotheosis of spirit.

"When we speak of brotherhood, of love

of harmony," says Roerich, we are not repeating absurd, unbefitting, old-fashioned words, but words pertaining to the immediate practice of life. A miracle is being performed in the midst of life, in the midst of action, amidst intense harmony. The visions of night are being transformed not into fables but into the phenomena of happy communication with the paths of the blessed.

"The window opens into the darkness will bring us the voices of the night, but the call of love will bring the answer of the Beloved. A new world is coming."

Several years ago when Roerich exhibited his works in London, the critics of England and of Scandinavia entitled him the prophetic painter, because in his pre-war paintings, completed when the world still basked in a flood of satisfaction, Roerich saw conflagration ahead, doom was over the grey world.

But now Roerich perceives a miracle. He is not frightened by the agitation of life, by the unrest, by the chaos—he sees victory. His call is loud and clear—on to the coming

"Milaraspa"—One who Hestkued ("Banners of the East" Series) By Nicholas Roerich

of a new day, a day when the new sun will rise over an earth refreshed and full of awaiting!

This essential beauty Roerich sees in the woman of India. As he recently said, "Many things may be changed in India but I would greatly regret the disappearance of one thing—the delicate Sari, full of its tender shells, and which seems to glide along as a sacred cloud. From palace to village, I recall this flowing veil and the woman hearing her water. Is it not from this source that shall come the new rejuvenation of India?"

And passing through India, Roerich ever beholds the Hindu women in the light of her potent influence: he writes:

On the banks of the Ganges, a woman quickly telling her rhythms, perform her morning pranayama on the shore. In the evening she may again be there sending down upon the stream of the sacred river a garland of torches as prayers for her children. So that these fire-flies of a woman's soul, prayer-inspired, sit for long upon the dark surface of the waters."

Or again:

"On the fields are standing, in circles the figures of white ceramic horses. For what are these resplendent mounts? Upon them, the spirits of women are said to gallop through the night. Backs which are doubled during day in the house-

hold tasks, during the night are made erect in flight. Shall one say it is a goat's leap to the gathering of witches. No. It is the flight of the Valkyries—the virgins of the air pursuing a beautiful and wondrous future."

Each day of woman's hand moulds the sand, at the entrance of the house into a special design. This is the symbol that within the house all is well. There is neither sickness, death or discord. If there is no happiness in the house then the hand of the woman become stilled. A seeming shield of beauty is placed by the hand of the woman upon the benevolent hour of the house. And little girls in school are being taught a variety of designs for the signs of happiness. An inexplicable beauty lives in this custom of India."

Roerich's universe of which Andreiev wrote that it was the "realm where the eternal word of God and man came forth speaking eternal love and eternal wisdom"—Roerich's world is ever illumined by the Star of the Mother—the star of the East. For him the time is soon coming when the morning stars shall sing together the harmonies of their celestial song.

It is a world of which Mary Siegrist well wrote—

"—There are those who say
They too have touched those shores and seen
What they have seen and heard
What they have heard—

And all alike are dumb who try to tell of them,
And these shores travellers say are phantom ways
While those front high upon reality."

* Quotations are from "Himalaya", Monograph on Roerich's art; Pub. 1926, Brentano's, New York.

ENAMELLING IN ANCIENT INDIA

By KEDARNATH CHATTERJI

ENAMELLING is the master art-craft of the world, and enamels of Jaipur in Rajputana rank before all others, and are of matchless perfection."

So wrote G. C. M. Birdwood (later, Sir George Birdwood) in 1890. Today, although like a whole host of other Indian art-crafts, it is almost extinct, enamelling can yet rank with the very first in a world competition.

There can be no doubt about the fact that this art attained a very high standard of perfection in this country and that, until very recently, the methods of technique followed was very much Indian in nature. Latterly western methods and materials have been introduced and, as is usual in this country, the master craftsmen not being taught to improve on their time-honoured methods in the light of modern science, the new-comers are wiping out the established houses. The traditional art and skill of the Indian enameller is thus perishing for ever, the cheap and shoddy exterminating the costly but the exquisite. This is not the place to describe this particular Indian art-craft in detail. Those interested may be referred to the following:—

Jeyapore Enamels—By Lient. Col. S. S. Jacob, R. E. and Surgeon-Major T. H. Hendley.—W. Griggs, London, 1886.

The Industrial Arts of India—G. C. M. Birdwood.

The Arts and Crafts of India and Ceylon. Ananda Coomaraswamy. T. N. Ponth. London. And the various articles on jewellery and enamel that appeared from time to time in the *Journal of Indian Art*.

It is proposed in this article to go into the history of this art with regard to the question as to how long it has been known in India.

Hendley considers that it was probably introduced by the "Turaniens" (Scythians) and gives the basis of his deduction as follows:—

"Labarte in his *Hand-book of the Arts of the Middle Ages*, endeavours to prove that the art of

**The Industrial Arts of India* By G. C. M. Birdwood, C. S. I., M. D. (Edin.) The above quotation is the opening paragraph of the article on enamels.

enamelling, originated in Phœnicia, and thence found its way into Persia where it was known in the reign of Chosroes (A. D. 531 to 579). The Greeks and Indians in their turn, he thinks, acquired the art from the Persians. He, however, mentions that Mons Panthier in his *Histoire de la Chine* quotes a document, in which it is stated that a merchant of Yonechi or Scythia introduced into China, in the reign of Thawonli (A. D. 422 to 451) the art of making glass of different colours.

We may therefore, justly conclude that enamelling, which is only a branch of the art of vitrification, was known at an early period, if it did not originate, in Scythia, the home of the Turaniens. In the Boulak Museum, at Cairo, some of the jewels of the Queen Ash-hotep (wife of Ahmes I. of the 18th dynasty) who lived about B. C. 1700, are ornamented with blue glass and a species of cloisonné enamel. These facts seem to indicate a Turanian origin of the art, and there are many points connected with its practice in India which would appear to confirm the theory. It is remarkable that the best enamellers in Europe have been the Etruscan Florentines, and in modern India the Sikhs, both, it is thought, of Turanian descent.—T. H. Hendley in the *Journal of Indian Art*, No 2 (1893) article on "Enamel-Minakari".

Birdwood is of the same opinion, although he does not give any reasons beyond the following:—

"It is probably a Turanian art. It was introduced into China, according to the Chinese, by the Yenechi, and was carried as early, if not earlier, into India—G. C. M. Birdwood in *The Industrial Arts of India* New Edition (1890). Page 167, article on 'Enamels'.

Coomaraswamy is content with saying:—

"Enamellure is essentially a Northern Indian art, and in origin probably not Indian at all". Ananda Coomaraswamy in *The Arts and Crafts of India and Ceylon*, 1913, p. 151.

Baden-Powell in *Punjab Manufactures* gives it as his opinion that the art came from Kabul to the Punjab.

Apart from the above, so far as I know, no opinion has been given on the ancient history of this art in India.

So far as is known today Rajah Man Singh's staff of state is the oldest piece of enamel in India, of which the history is known, dating back to the time of the Emperor Akbar. (Hendley, *Jeyapore Enamels*.)

But it is stated that Rajah Man Singh brought his artisans from Lahore. (Hendley, *Ibid*). Therefore it is probable that the art

had been flourishing there some time prior to that date. Even then, however, we do not get much beyond the post-Mahammedan invasion period. And, therefore, Hendley's theory about the Scythian period (i.e. about the 1st century of the Christian era) being the time of introduction of this art seems to be the earliest date that the history of enamelling in India can lay claim to, and that, at the best, by a wide stretch of imagination.

Philologically we are worse off, if any thing. The common Indian term denoting enamelling is "Minakari", a word of Persian origin, so I am told. We do not possess any word of distinct Sanskrit origin that can be said to mean enamel or the art of enamelling.

Summed up, it seems as if India came to know of this art through the agency of the Muhammadan invaders or, at the earliest, through that of the Scythians.

Therefore, the earliest date that could be ascribed to the beginnings of this art in India, in the opinion of authorities on the subject, would be sometime during the first century A. D.

Now let us go a little deeper into the circumstantial evidence on the matter, for Birdwood and Hendley have theorised on assumptions based on similar evidence, and later writers have either followed them, or been content with the expression of non-committal opinions.

All who are familiar with the technical methods of enamelling know how closely that art is related to that of glass-making specially with its finer branches, such as ornamental glass-ware, imitation gems, decorated beads, etc. The following extract from the *Encyclopaedia Britannica* is given for the information of such as are not :

"Enamel (formerly 'amel') derived through the Fr. *email*, *esmail*, *esmail*, from a Latin word *smaltum*, first found in a 9th century life of Leo IV., a term, strictly speaking, given to the hard vitreous compound, which is 'fused' upon the surface of metallic objects either for the purpose of decoration or utility. This compound is a form of glass made of silica, minium and potash which is stained by the chemical combination of various metallic oxides whilst in a melted condition in the crucible". (*Ency. Brit.* 11th ed. vol. IX. P. 362. Article on Enamel).

Needless to say, that, although there are many kinds of true enamel of which the composition varies from what is given above (silica, minium and potash) they all fall

within the definition of glass, in as much as they are all composed of metallic silicates and borates, mutually dissolved, forming congealed solutions with all typical physical characteristics of substances termed amorphous vitreous bodies.

Therefore, enamelling may be taken to be a highly specialised branch of glass-making now so developed as to form a separate industry. It is probably for the reasons given above, that we find that the history of enamel is tied up with that of glass. In this way all countries or peoples who can claim an indigenous origin for the art of enamelling can almost without exception, as far as is known till now, claim an equally ancient—usually more—history for their knowledge of glass-making. Egypt, Assyria, Phoenicia, Greece, Rome, none are exceptions to the rule.

Conversely, all countries and nations that have an ancient and long continued history of the art of glass-making can also, almost without exception, lay claim to that of the art of enamelling, in some form or other.

It is not possible here to quote chapter and verse in support of the above statements, but those interested can verify the same by looking up Perrot and Chipiez's *History of Art* in various ancient civilisations and similar other treatises.

A comparison of the histories of enamel and glass in various countries as given in monographs on the subjects, such as "glass" by Edward Dillon (Connoisseurs' Library, Methuen) and Cunningham's 'Enamel' etc., will amply bear out my inference.

Therefore, I think it would not be very illogical on my part to deduce from what has been said before, that all such nations as had attained a high standard of proficiency and skill in the art of glass-making were very likely to have discovered that of enamelling for themselves. I do not claim that such discovery would necessarily mean specialized knowledge or very skilled craftsmanship later on. But it would certainly indicate the knowledge of the rudiments of the craft.

Now, as far as the glass industry is concerned, there can be no doubt that it was known and practised in India for a long time prior to the Scythian incursions, as references can be got from reputed ancient texts of Ayurvedic works, Arthashastra, Sukraniti, Amarakosha, Pliny, Periplus, etc.

The extent of the progress made can

PORTIONS OF RAJA MAN SINGH'S ROYAL STAFF

be gauged from the fact that Pliny records that imitation precious stones were made in India in his time. (Pliny xxxvii, 20) It would, therefore, seem quite probable that Indian glass craftsmen of those days possessed sufficient technical knowledge to enable them to discover and work out the rudiments of enamelling.

So far for assumption. Now to turn to facts; that is, to the question as to whether there is any tangible proof that they did know anything about enamelling in those days.

Books on the subject of scientific and technical knowledge in Ancient India do not give any reference to this subject. Neither do translations of Arthashastra, etc. Lexicographers have no word of which the meaning can be definitely said to be enamelling.

Having failed in this search I decided to examine the various processes, etc., described in the Arthashastra in the chapters on "The duties of Superintendent of gold in the goldsmith's office" and "The duties of the state goldsmith in the high road", to see if any process similar to that of enamelling are described therein.

In the course of the search I came across the following passages in विश्वनाथ सायणिक प्रचार: Chapter.

पन सुषिर वा रूपं सुवर्णमुष्मातुका हि युक्तं कश्चो वा ततोऽवशिष्टे । इदं तस्मै वा रूपे वातुकाभिः जलान्तरं परोक्षं हस्तोपयुक्ते । ततोऽन्तर्गमनमनन्तं विमुक्तिः । सपरिभाषं वा रूपे लवणमुष्मातुका वातुकाभिः तत्पराभिः । तस्य स्वापनं युक्तिः ।

Bhattacharya's commentary on these passages is as follows:—

पनसुषिरं पनसं तत् सुषिरं पनसुषिरं तस्मिन्, रूपं कश्चो वा ततोऽवशिष्टे । तत् सुवर्णं मुष्मातुका मातुका वा वातुकाभिः हि युक्तं कश्चो वा ततोऽवशिष्टे । ततोऽन्तर्गमनमनन्तं विमुक्तिः । सपरिभाषं वा रूपे लवणमुष्मातुका वातुकाभिः तत्पराभिः । तस्य स्वापनं युक्तिः ।

Bhattacharya's commentary on these passages is as follows:—

पनसुषिरं पनसं तत् सुषिरं पनसुषिरं तस्मिन्, रूपं कश्चो वा ततोऽवशिष्टे । तत् सुवर्णं मुष्मातुका मातुका वा वातुकाभिः हि युक्तं कश्चो वा ततोऽवशिष्टे । ततोऽन्तर्गमनमनन्तं विमुक्तिः । सपरिभाषं वा रूपे लवणमुष्मातुका वातुकाभिः तत्पराभिः । तस्य स्वापनं युक्तिः ।

Shamsastry (Kant. Arthashastra, second edition, Mysore) translates the above as follows,

"In a compact and hollow piece (Ghana Sushra rūpe) small particles of gold-like mud (Suzarna menvalukhi) or bit of vermilion (tingulaka-lalukhi) are so heated as to make them firmly adhere inside. Even in a compact piece (dhanvastula rūpe), the wax-like mud of Gandhara mixed with the particles of gold-like sand is so heated as to adhere to the piece. These two kinds of impurities are got rid of by hammering the pieces when red-hot.

In an ornament or a coin (Sipari-bhanda va rūpe) salt mixed with hard sand (Kishukharai) is so heated in flame as to make it firmly adhere to the ornament or coin. This (salt and sand), can be got rid of by boiling (Kishukharai)."

A foot-note gives the meaning of Kishukharai as boiling in the acid of the jujube fruit. The translation is inaccurate in my opinion, the learned translator being probably hampered through want of technical knowledge of the subject matter. A paraphrase in the light of the commentary is given below.

"In massive and hollow (scooped out in places) ornaments (such as hollow bangles—comm), "earth-gold" sand (or powder) and the regulus of cinnabar ore, subjected to heat, firmly adhere inside. On compact solid ornaments, sand mixture with lead paste (जलान्तराद- minimum paste) subjected to heat will firmly adhere. For those, burning (ताप-दाह- comm) and hammering is purification. On ornaments like solid bracelets, a mixture of a salt-like substance (लवणमयीतम- comm-natron?) and sand from soft stones, when raised to an incandescence heat (उष्णदाह-मयातुका—comm) firmly adhere. For this kind, prolonged boiling in a decoction of acid jujube fruits—and decomposition thereby (विनाश- comm)—is purification."

Therefore the translation should be as follows.—

"In the case of massive hollow ornaments a mixture of 'earth-gold' powder and cinnabar regulus firmly adheres inside the hollow, if subjected to heat. A (particular) sand mixture, together with a leaden paste, firmly adheres to compact and massive ornaments, when subjected to heat. The purification (i.e., separation of the adherent impurities) in such cases consists of burning and then hammering. On ornaments like (jewel set?) bracelets, a mixture of salts and soft sand-

(b) "Sand mixture" and leaden paste, probably containing the gangue of galena ore as well. This is an ideal enamel mixture. If *Jatu-Gandhar* be impure *Silajatu*, even then the mixture is eminently vitrifiable.

(c) "Lavann Pratim" (may be natron or any other basic salt) and sand from soft sandstones (containing Silicon together with alumina, lime and other alkalis from decomposed felspar). This also is a very common vitrifiable mixture.

2. The process of application. In every case the application is made to adhere by heat. Shamsastry uses the following words—"so heated as to make them firmly adhere" and "so heated in flame as to make it firmly adhere." Hurdley in his introduction to "*Jeypore Enamels*", in describing the process of enamelling, says:

"The colours are placed in depressions hollowed out of the metal to receive them and are made to adhere by fire."

It is, therefore, evident that the process is that of firing enamels and vitreous glazes. Specially in the third kind of application the term used is *Ulkaya* which means firing to a tremendous (literally meteoric-incandescent) heat. This precludes any other process excepting true enamelling, as that temperature would ignite and destroy molten adhesives like pitch, wax, lac, etc.

3. The purification of the coated ornaments.

There are two processes given. Firstly by burning and then hammering. Shamsastry has translated this as, 'impurities are got rid of by hammering the pieces when red hot.' Hammering while red hot (i.e. when the metal is in a malleable state) would do the reverse, that is, a good part of the impurities would be driven into and intimately mixed with the precious metal. But if the article be burnt, then the vitreous coat would be loosened, and rapid cooling would further enhance the action, due to the difference in the coefficients of expansion and contraction between gold and the vitreous coats. Further burning without annealing would reodor the enamel coat highly brittle due to internal stresses. All these would mean that the loosened and brittle coat would fly off into bits on hammering.

This very process, therefore, is an indication of the vitreous nature of the application. The second process, that is "*Kvalhaan*," is

दियुलकनकः। Literally, Cinnabar regulus. It would be a bituminous residue with the gangue, containing decomposed pyrites and alkali from wood ash used in the smelting (Arthashastra, Ch. XII Conducting mining operations and manufacture), or it may be a mixture of ferrous salts, alum, borax, salt, etc., used in 'killing' mercury (Hindu Chemistry-P. C. Roy, Vol. I, p. 40), together with the quartz and pyrites of the gangue.

जुगन्धारपट्ट—Shamsastry translates this as "the wax-like mud of Gandhara". The Commentator gives सीसरकः which Jayaswal and Banerji-Sastri consider to be सीसरक. Now a certain variety of lead ore is still known as *Surma Kandahari* (i.e., of Gandhar) in Punjab (Baden-Powell, Econ. Prod. of the Punjab, p. 103).

Further, the substance known as *Silajatu* in the Indian markets is a basic mixture of Sulphates, Carbonates, etc., of Aluminium, Iron, etc., with Silica, lime, etc., as impurities, in view of the commentary, probably *Jatugandhar* means some decomposed lead ore.

Now for the reasons for considering these processes as being enamelling.

1. The ingredients of the applications.

(a) "Earth Gold" sand and cinnabar regulus. It is a vitrifiable mixture of sand, metallic salts (from pyrites and the regulus) and alkalis from the shale, the wood ash and the regulus. This view is moreover probable in view of the directions given for its disintegration in the purifying processes (See below).

still in use in *Rajputana*. The enamellers even now use a dip made by the decoction of acid fruits, mainly jujube. (*Jeyapore Enamels*—Jacob and Hendley, P. 4.) The enamelled article is given a short dip in the acid solution, which decomposes the rough top layer, leaving an even surface underneath.

To sum up, although there may be some doubts about the first two processes, the third one in which a mixture of salts with sand, alumina, alkalis, etc., are made to adhere on to a metallic surface by firing to a terrific heat, cannot be anything but enamelling, as the identical process is still in use to-day in the art of enamelling. Further, if any other evidence were necessary, the use of the acid fruit decoction (still practised in India by enamellers) places it beyond doubt.

Then comes the question of the term used to denote enamelling. The present-day name in Upper India is *Minn* or *Minalari*, a term derived from Persian sources, according to philologists. There is no recognised Sanskrit word to denote the process of enamelling.

In the fourteenth chapter of the *Arthashastra* ('The duties of the State Goldsmith on the High Road') we find the following processes given as being those of a Goldsmith's craft:—

The processes are *Ghana*, *Ghann* *susira* *Samyukho*, *Atalepyn*, *Samghatya* and *Vasitakam*. Of these *Atalepyn* has been translated by Shamsastry as being amalgamation. But the word amalgam means a mercurial alloy, that is, a metallic mixture of mercury with some other metal. Therefore amalgamation would mean the use of mercury. This is indicated in the *Vasitakam* process by the commentator, who explains

Atalepyn by "*Tanupatra Yojanam*," i.e., the adding or joining of fine leaves (or flowers). The current meaning of *Atalepyn* is an application of some uctuous substance. Now we have seen that the vitreous coat of enamel was applied 'in the form of "*Pankā*", which means a fine mud or paste. Therefore the process of *Atalepyn* might have derived its name from the application of this mud.

Again, the commentator says "*Tanu patra Yojanam*." "*Tanu*" means, fine, delicate, etc. and has the derived meaning of beauty (as in the case of women). So if "*Tanu patra*" means fine, delicate (beautiful flowers), enamelling would again be indicated, specially as all other methods of adding flowers or leaves to the ornament are separately named, such as joining (*Samyukhya*) soldering (*Samghatya*) colouring and gilding (*Vasitakam*), etc.

Therefore, *Atalepyn* probably means enamelling. Finally, to come to visual representation. The Ajanta paintings show a great number of ornaments which have beautifully shaped green, blue and red stones of huge dimensions. If this green or red stones were really precious stones, then it must be said that emeralds and rubies of unheard of huge size were quite common then, and that lapidaries of those days were able to beautifully shape and cut the same in a manner that would be considered almost impossible even today. But we see rough-cut precious stones in the diadem of the Queen in the dressing scene, and in plenty of other places. This would mean that the lapidary's art was not so very advanced then.

The problem would be solved by assuming that those blue, green and red portions indicate enamelling and not precious stones.

K. RANGA RAO

By E. SUBBU KRISHNAIAH

RAI Sateb K. Ranga Rao, the pioneer social reformer in the West Coast of the Madras Presidency, was born on the 29th day of June, 1859, in Mangalore in a poor and highly respected orthodox Saraswat Brahmin family. His father Devappayya was a clerk in one of the local

firms and as such he was highly respected by his employers for his simplicity, piety, honesty and devotion to work. Mr. Ranga Rao was brought up in a strictly orthodox way and he had the advantage of hearing the *Kamayana* and the *Bhakta-Vijaya* read to him in his own house, which helped him to a

very great extent in imbibing the spirit of *Bhakti* early in life. As was usually the case with the orthodox Hindus of those days, Mr. Ranga Rao was married when he was quite young. But it is remarkable how this young boy, brought up under orthodox influences, could cultivate a taste for the spiritual worship of one God and began to attend the prayer meetings of the local *Upasana Samaj* which subsequently developed into a full-fledged *Brahmo Samaj* under the zealous leadership of the late Mr. U. Raghunadiah, who became later on his relative and for whom he had profound respect, and, in fact, he was his guide, friend and philosopher all through his life until the latter gentleman passed away in 1921.

On account of his poor circumstances he had to study privately under very trying and pitiable conditions and pass the Matriculation examination. As he had to shoulder the responsibility of maintaining a big family, he had to give up the idea of further continuing his course for the University degree. Mr. Ranga Rao had to work as a copyist, drawing a daily wages of $2\frac{1}{2}$ annas and afterwards as a teacher getting only Rs 6 a month to start with, before he had passed the pleaders' examination in 1883 and taken to the practice of law. Mr. Ranga Rao tried to improve his worldly prospects by passing the Law Examination of the Bombay University and with this end in view, even remitted the examination fees and was preparing to go to Bombay to sit for the examination. But God's plans for him were otherwise and he was not destined to go to Bombay and appear at the Examination Hall, on account of the sickness of two of his sons in the family at the same time. "God's ways are not ours" and when He wanted our hero to excel in the field of philanthropy and be a benefactor to the down-trodden classes, how could it be possible for a poor and helpless man like our friend to work against His will?

He was practically the first in his community to give higher education to his grown-up daughters. At a time when there was no special college for girls, Mr. Ranga Rao used to send his daughters to the local Government College, to study along with the boys, even at the risk of being jeered at by his caste and other orthodox people. It is needless to mention that the girls were put to much trouble and petty persecu-

tions, which, be it said to their credit, they bore patiently and courageously, with the result that they happened to be the exemplars to their sisters of their own community in the matter of prosecuting higher studies under great obstacles. Mr. Ranga Rao, like a true hero, braved all these persecutions and had the satisfaction of seeing all his three daughters highly educated and accomplished. Mrs. Radhabai Subba Rao, the talented wife of Hon'ble Dr. P. Subba Rao, the chief minister to the Government of Madras, is not only a graduate of the Madras University but also enjoys the unique distinction of being elected for the first time, among ladies, as a member of the Syndicate of that august body. Her younger sister, Miss Shanta Bai, passed her M. A. examination with honors and was subsequently appointed as a Professor in the Queen Mary's College. She recently returned from England where she had been to prosecute higher studies on study leave. She is also a member of the Academic Council of the Madras University. The eldest daughter, Mrs. Lalitabai Subba Rao, though not a graduate, is a highly cultured lady taking interest in all movements that are calculated to advance the cause of her own sex, besides being a first nominated Lady Councillor of the Mangalore Municipality.

Mr. Ranga Rao interested himself in the matter of marriage reform. His three daughters were kept unmarried even after they had attained their nubile age, which was quite contrary to the custom even among the present-day orthodox Brahmins. Besides he had given his second daughter to a non-Brahmin, an act which is not contemplated even by the present-day South Indian social reformers of the advanced type, as they consider that this step is too radical a move for any sage man to undertake, under the prevailing social conditions in Southern India. This was one of the most notable inter-caste marriages that had taken place in the Madras Presidency.

Mr. Ranga Rao was an enthusiastic advocate of the re-marriage of widows himself actively helping in bringing about a number of such marriages, in his lifetime, some of them being within his own family circle and himself acting as the minister or *acharya* in many such functions. Lately, he started a branch of the *Vidhava Vivaha Sahak Samiti* of Lahore at Mangalore of which he was the President until his death.

He was widely known throughout the country as a foremost worker in Southern India to ameliorate the condition of the Depressed Classes, for doing which he even gave up his practice and solely devoted himself to the service of the down-trodden classes, whose condition in the Malabar coast is most miserable. He heard in the year 1907, with great joy from one of his clients, that a Panchama boy had passed the Primary School examination. He got further information about him and finally secured him as a teacher in the school which was opened by him in the same year. Practically he was the first man, in the whole Madras Presidency, probably with the exception of the Southern India Brahmo Samaj at Madras, Theosophical Society at Adyar and a number of Christian missionaries, to conceive the idea of trying to uplift these "untouchables" but who are really "unapproachable, unshadowable and unseeable", in the words of the late Sir Narayana Chaudharkar of Bombay. It was a tremendously uphill task to collect the boys of these classes, who had no settled habitations, just as we find in other parts of the country.

These unfortunate people are human beings only in name. Otherwise they are treated even worse than dogs and pigs. In fact, they were actually called by such names as pig's tail, dog's nose, &c. and they were not allowed to be given the names of Rama, Krishna, &c. which was the exclusive privilege of the so-called higher classes. Once the teacher in the service of Mr. Ranga Rao was brutally beaten by the arrogant caste people for using the umbrella which was presented to him by Mr. Ranga Rao, so that he might protect himself from the heavy rains, which generally continues in these parts continuously for three months. Since Mr. Ranga Rao started his school, various persons and bodies have sprung up throughout the region as the benefactors of these classes, but doing precious little, besides advertising themselves. Therefore, it is no wonder, Mr. Ranga Rao's school, which was kept up steadily and continuously as an independent institution for ten years, became a nucleus of a branch of the All-India Depressed Classes Mission at Mangalore on the suggestion of Mr. V. R. Shinde of Bombay, its General Secretary. Mr. Ranga Rao had to struggle very hard for raising the necessary funds to equip the institution with funds and

at times he used to feel mental agony at the meagre support he had received from the educated people, who were very eloquent with their sympathy on public platforms, but very close-bated in the matter of giving money. Once he even remarked to the present writer that haphazard efforts at im-

K. Ranga Rao

proving the Panchamas by the various indigenous bodies by merely starting ill-equipped primary schools would only result in indirectly strengthening the work of the Christian Missionary, as those who tasted the benefits of education would not remain contented with what they got but would like to continue further and aspire after better a life, which they could have only by joining the Christian Missions. Especially, in the Malabar coast where the Basel German Missionaries have been doing wonderful work with the aid of their Industrial Settlements, and Work-shops, these lower classes were the foremost to take advantage of those

institutions by joining the Christian fold, and at the same time finding work in those institutions. Again, this method of work must have suggested to Mr. Ranga Rao, the idea of starting a Weaving and Industrial Department in his Mission as a branch of its ameliorative activities, which has since developed into a very useful work-shop, where the public place orders for supply of furniture, &c., on reasonable rates.

Mr Ranga Rao was the first man in India to conceive the idea of a colony for these depressed Classes and he had succeeded in starting seven colonies, of which four were situated within two miles from Mangalore, having obtained free gift of land from the Government. This kind of work has since been recognised by the Government, as, being one of the effective methods of improving the condition of the Depressed Classes. In fact, the Labour Department has been starting colonies for these people wherever possible and the Government is willing to encourage the public bodies who are willing to undertake similar work in behalf of the Depressed Classes. Mr. Ranga Rao was again the first man who conceived the idea of starting a Boarding House for the children of the Depressed Classes, he having first felt the difficulty of securing the continued attendance of the boys in his school, as they had to come from long distances. So he started the idea of feeding them during the mid-day, to begin with, and later on he provided a regular Boarding House for the deserving boys as an annex to his school. There are now about 28 boys for whom the Government pays a monthly grant of Rs. 170. From the latest published report of the Mission, which is now conducted by the Servants of India Society, with the assistance of a local committee, of which among others, the Trustees of the Mangalore Brahmo Samaj are the life members of the mission, we find that the mission has a permanent endowment of the value of Rs. 8050 and the receipts during the year were Rs. 8794-13-11 and expenditure Rs. 8711-0-11. The Mission maintains, besides one higher elementary school, a Boarding House, an Industrial Institution and seven colonies, besides giving Medical Relief to the people and encouraging higher education among the boys by giving them scholarships.

There is a co-operative credit society also attached to the mission. As if to give a finishing touch to his lifelong work among the Depressed Classes, he specifically

mentioned in his will that his dead-body should be touched and carried by the Panchamas, which of course was done by the courtesy of his bereaved children. The Depressed Classes have verily lost a sincere friend, well-wisher and benefactor of their community, by the death of Mr. Ranga Rao and the Mangalore Depressed Classes Mission stands as a living monument to his self-sacrificing labours in the cause of the amelioration of the Depressed Classes. If there are only half a dozen good Centres of activity among the Depressed classes managed by indigenous agencies and supported by the public, certainly Mr. Ranga Rao's mission deserves to be counted as one, and it occupies very easily a prominent place among them.

I have already incidentally mentioned his connection with the Mangalore Brahmo Samaj. He was its minister, secretary and later on its President and continued to take all through his life a living interest in its work not only at Mangalore but throughout India and was anxious to propagate its principles in an effective manner. He was one of those few earnest-minded men in the Brahmo Samaj who wanted to see that it is better organised and its work more enthusiastically carried on by a band of well-trained and capable missionaries. With this object in view, he submitted a scheme of mission organisation to the Calcutta Sadharan Brahmo Samaj, which it is hoped will be taken up by its leaders for their consideration and some thing will be done in connection with the centenary celebrations.

The Government of Madras recognised his services in connection with his work among the Depressed Classes and dubbed him with a title of Rai Sahab. Religion had been the main source of inspiration in his life, as it has been the case with many a social and philanthropic worker in all parts of the world. He was a regular worshipper and he had a hankering for the realization of higher spiritual truths. He entered, a few months before his death, the order of Sannyasins and assumed the name of Swami Iswarananda. Quite an unexpected way, he passed away on the 30th January, 1928. Mangalore has lost in him a good and worthy citizen, the Brahmo Samaj, a good worker, and mother India, a noble son and the Depressed Classes, their only hope and mainstay on earth, so far as the West Coast of Madras is concerned. May God grant him peace!

there what they call it, and I expect that he will then be satisfied.

The writer has no claim to competency for dealing with such questions and the value of the view he is supporting depends entirely on the grounds on which it is based, thanks of the readers of *Modern Review*, including the writer, is due to Mr. Sen for bringing the question into prominence. It is unfortunate that it is foreigners alone who take interest in such questions and try to investigate them, we remaining indifferent.

C. C. DAS.

Indian Leaders and International Contacts

In your notes in the *Modern Review* for August, 1928 under the heading "Indian Leaders and International Contacts" You approved of the idea of Indian leaders joining the British Parliamentary union meeting. Pandit Motilal Nehru, Dewan Chaman Lal, Sri Talsi Chandra Goswami and another member of the Central Legislature were elected delegates. At that time there was a strong opposition from the Press and public that the leaders should not leave India at this critical time

particularly in view of the fact that a resolution might be moved in the Legislative Assembly at its autumn session for electing a committee to help the Simon Commission. At that time there was no talk from any quarter that the Panditji was to be elected President of this years Congress. But he declared that if the political condition demanded his presence, he would not leave India. But still you suggest in the aforesaid note that the Panditji resigned his office "because he is most likely to be elected to preside over the next session of the Indian National Congress." You are perfectly entitled to think that some gentleman other than the Panditji should preside over this years congress, but I think you do the Panditji great injustice by saying what you did in the note above mentioned.

Further is not the meeting of the British Empire Parliamentary union going to be held some time in September? and is it not possible for the Panditji to come back in time to preside over the congress after attending the meeting of the Parliamentary union? Then why this ascribing of motives especially from one who is regarded as an impartial journalist?

SUDHAMOY PRAMANIK

THE MEANING OF "NIRVANA"

By NANDA LAL SINHA, M. A., D. L.

THE words "Sunya" and "Nirvana" of Buddhism caused not a little confusion in the minds of the earlier generation of western students of Eastern Philosophy. Naturally they failed, with the scanty material at their disposal, to grasp the spirit and the postulates of the teachings of the Buddha, and were easily misled by the metaphorical language in which some of the highest concepts of Indian thought are usually clothed. It is to be noted that the Buddha himself refused to be drawn into any discourse on the nature of "Nirvana." No wonder, Western scholars put too literal a construction on the word, and interpreted it to mean "extinction" or "annihilation." So that "Nirvana," which is really equivalent to emancipation came to be regarded as the extinction of the soul like the flickering out of a lamp. This is the view of the matter which was taken by Oldenberg and Childers, among others. Even Dr. Rhys Davids was at one time of the opinion that "Buddhism does not acknowledge the existence of a soul

as a thing distinct from the parts and powers of man which are dissolved at death, and the Nirvana of Buddhism is simply Extinction" (*Ency Brit.*, Ninth Ed, 1876, p. 434). Further researches, however, enabled him to realise his mistake and to correct it; and accordingly to vol. iv of the eleventh edition (1910) of the *Encyclopaedia Britannica*, which, with the addition of a few supplementary volumes, has been sold successively as its 12th and 13th editions, he has contributed a very excellent account of Buddhism, where "Nirvana" is no longer a mere negation, but a negation of the causes of human imperfection, and is, in other words, fullness and serenity of soul. He has written therein:—

"To have realized the Truths, and traversed the Path; to have broken the Bonds, not an end to the intoxications, and got rid of the blindrances, is to have attained the Ideal, the Fruit, as it is called, of Arhatship. One might fill columns with the praises, many of them among the most beautiful passages in Pali poetry and prose, lavished on this condition of mind, the state of the man

made perfect according to the Buddhist faith. Many are the pet names, the poetic epithets, bestowed upon it—the harbour of refuge, the cool cave, the island amidst the floods, the place of bliss, emancipation, liberation, safety, the supreme, the transcendent, the uncreated, the tranquil, the home of peace, the calm, the end of suffering, the medicine for all evil, the unshaken, the ambrosia, the immaterial, the impereishable, the abiding, the farther shore, the ascending, the bliss of effort, the supreme joy, the ineffable, the detachment, the holy city, and many others. Perhaps the most frequent in the Buddhist text is *Arahatsip*, 'the state of him who is worthy'; and the one exclusively used in Europe is *Nirvana*, the "dying out"; that is, the dying out in the heart of the hell fire of the three cardinal sins—sensuality, ill-will and stupidity.

The choice of this term by European writers, a choice made long before any of the Buddhist canonical texts had been published or translated, has had a most unfortunate result. Those writers did not share, could not be expected to share, the exuberant optimism of the early Buddhists themselves griving no this world as hopeless, and looking for salvation in the next, they naturally thought the Buddhists must do the same, and in the absence of any authentic scriptures to correct the mistake, they interpreted *Nirvana*, in terms of their own belief, as a state to be reached after death. As such they supposed the "dying out" must mean the dying out of a "soul"; and endless were the discussions as to whether this meant eternal trance, or absolute annihilation, of the "soul". It is now thirty years since the right interpretation, founded on the canonical texts, has been given, but outside the ranks of Pali scholars the old blunder is still often repeated. It should be added that the belief in salvation in this world in this life, has appealed so strongly to Indian sympathies that from the time of the rise of Buddhism down to the present day it has been adopted as a part of general Indian belief, and *Jivanmukti*, salvation during this life, has become a commonplace in the religious language of India." (*Encyclopædia Britannica*, 11th Edition Vol. iv. p. 745)

Lord Haldane, in his article in the *Ibbert Journal* for July, 1928, has also left no room for any misconception on the subject. Says he: "The soul in which the desire for evil had become extinguished had conquered evil, and was free from all interference with its peace. Of evil it was void, and tranquillity had entered in. The 'void' thus became the description of holiness. The final truth is attained in the primal unity, in which all distinctions, even of individual persons, disappear. The individual self in human experience is not a final reality. It tends to vanish. This vanishing is the object to be aimed at. When it is attained, the contentless '*Nirvana*' of Buddhism comes." And, again:—"God

is not separate from man but immanent in the self, and yet absolute. The world contemplated by mind is the creation of mind, as in the great modern systems of idealism in the West. Immortality does not mean a continuation of the individual self in space and time. It signifies eternal life, which, once attained, reduces to unimportance the events of human existence, including death. Such eternal life is a positive truth, inasmuch as in our experience it signifies deliverance. *Nirvana* is, therefore, no mere annihilation. It is rather a transcending of the incidents of an earthly career" (pp. 594-7)

Credit is no less due to our distinguished countryman, Professor Radhakrishnan of the Calcutta University, for his scholarly exposition of the doctrine of "*Nirvana*" in his *Indian Philosophy*, vol. i. It is extremely to be regretted, however, that much of the value of his work should be lost through inaccurate references. The learned professor has done an unintended injustice to Mrs. Rhys Davids by citing her as the author of the opinion that "the *Nirvana* of Buddhism is simply Extinction" (*Indian Philosophy*, vol. i. p. 452). The writer of the article on Buddhism in (the ninth edition of) the *Encyclopædia Britannica* is not Mrs. Rhys Davids, but her husband, Dr. Rhys Davids. Again, the professor has not mentioned to which edition of the *Encyclopædia Britannica* he refers; but, as has been pointed out above, the opinion which first appeared in the ninth edition, was rejected by the writer in the eleventh edition. When any work is referred to without mentioning the edition meant, the latest edition is usually understood to be meant. Professor Radhakrishnan's reference to the *Encyclopædia Britannica* without mention of the edition referred to is, therefore, misleading and wanting in scholarly accuracy. Another such erroneous reference will be found at page 542 vol. i. of the Professor's work, where a verse bearing on the compassionateness of God is said to have been quoted by Madhusudana Sarasvati in his commentary on *Gita*, iv. 8; whereas the verse is actually to be found in the commentary of Sridhara on the same text (and not in the commentary of Madhusudana). We sincerely hope that Professor Radhakrishnan will revise all his references and give to his readers such as do not mislead.

ARYA BHAVAN

By C. F. ANDREWS

ONE of the most difficult problems to be solved in England is the question of the residence of Indian visitors who come over from time to time and wish to keep up their vegetarian habits, which are a matter of principle to them.

Hitherto this problem has been extremely difficult, and many who have come over have suffered very severely on account of this difficulty of finding food suitable to their principles.

GUESTS TAKING TEA IN THE GARDEN
Sir Atul Chatterjee is seen passing sweets. Mr. Khaitan receiving and talking to guests.

In the autobiography of Mahatma Gandhi it is made very clear how great were the difficulties which he himself had to undergo in order to maintain his principles. Others who have come to England since his time have found hardships not much less severe than his. It is true that there are many more vegetarian restaurants in London than there used to be, but it is extremely difficult to find a house in which vegetarian food can be properly prepared. If rooms are taken on the understanding that vegetarian dishes will be provided, the food is then given in a very unpalatable form and health immediately suffers. In a great number of cases Hindus whose principles were very strict in this matter before they came to the West, found themselves very

gradually letting go their fixed principles not because of any change in their convictions, but rather on account of the hardship involved in carrying them out.

It was an exceedingly happy thought of Mr. Ghanshyamdas Birla, when he came over to England in the year 1927, to make, as far as he possibly could, provision for the needs of those of his own fellow-countrymen who had their strict principles with regard to vegetarian diet and could not find suitable arrangements in London for carrying out those principles to the full. Before he left England in 1927 he made arrangements and took the first steps whereby a house in a very healthy part of London should be occupied and fitted out for Indian residents on the understanding that all who came there into residence should strictly abide by the vegetarian and temperance principles which Mr. Birla himself holds so strongly.

Along with Mr. Ghanshyamdas Birla, Mr. Ramgopal Mohta has been acting as founder. These two friends, who are also relatives, have between them purchased the property and entrusted the house at 80 Belsize Park called "Arya Bhavan" to a Board of Trustees of which Mr. Birla, Mr. Ramgopal Mohta, Smt. Jammalal Bajaj of Wardha and Sir Atul Chatterjee are the members.

Mr. Ramgopal Mohta himself has given half a lakh of rupees towards the object. The rest of the cost, which amounts to nearly £10,000, has been provided by Mr. Ghanshyamdas Birla himself.

Since Mr. Birla's visit to England last year as the Employers' Delegate to the Tenth International Labour Conference of Geneva, his scheme, which I have outlined above, has been carried into effect by Mr. K. M. Banthiya and Mr. Devi Prasad Khaitan, who have personally given every possible attention to every detail in it and spent much time and energy in carrying out Mr. Birla's own wishes. In everything, they have consulted Mr. Birla himself, and the house is now not only made ready for occupation, but also fully occupied day by day by visitors such as merchants and others who have found it the greatest possible convenience

in carrying out any work in England without any interference with their strict religious principles as Hindus.

It has been not only a great pleasure, but also a matter of health and power of continuous and strenuous work for me to be allowed to be in residence with my friends in this house and to take part in its life. Whenever I have been passing through London, or staying in London, I have had the great privilege of coming to "Arya Bhavan" as a welcome guest and making my home there

Mr. D. P. Khaitan requests Sir Atul Chatterjee to perform the opening ceremony, and Sir Atul replies.

in every sense of the word. I am thus able to write not only from fact, but actually from my own daily personal experience concerning the extraordinary value of such a house in London when used for the purposes which Mr. Ghanshyamdas Birla intended it.

In order to carry out Mr. Birla's scheme successfully he appointed a Managing Committee consisting of the following members—Mr. Henry S. L. Polak, Chairman, Mrs. N. C. Sen, Vice-Chairman, Mr. K. B. Mavtantar, Mr. R. J. Udani, Dr. R. P. Pranypye, Mr. S. Maltick, Mr. K. P. Kotval, Dr. K. Paity, Mr. K. M. Banthiya, Secretary. This Committee has met regularly and is very keenly carrying out the wishes of the founders in order to make the Institution as successful as possible. The house now contains actually accommodation for 10 guests and has been furnished with all the necessary conveniences for intending visitors who may wish to come there after application has been made. It is intended in the course of time to erect a small temple in the grounds at the back of

the house for private worship of the guests, and the authorities have been approached for the necessary permission in this direction. The rules regulating the house for boarders and visitors are of a very simple character. The first two lay down the principles of the house which can never be departed from on any account.

1. Arya Bhavan is intended to be a strictly vegetarian lodge from which are excluded even eggs and fish.

2. No alcohol, intoxicants or narcotic drugs are permitted on the premises.

The 3rd rule states that the conduct and management of the house shall be left entirely in the hands of the Committee of Management appointed by the Trustees, and that this committee may add to their number from time to time with the consent of the Trustees.

Other rules states that preference shall be given to visitors from India, but whenever room is available students also can be admitted for such time and on such condition as the committee may decide. Visitors from India will ordinarily not to be allowed to stay for more than four months without special permission from the Committee of

SIR ATUL CHATTERJEE DECLARING THE PREMISES OPEN.

Standing from left to right, Mr. K. M. Banthiya, Mr. D. P. Khaitan, Sir Atul Chatterjee, Mr. H. S. L. Polak, Mr. Sukhman Chetty, M. L. A., Mr. Lalchand Hirachand, Mr. Subho, Mr. Devi Prasad Sinha, Mr. S. N. Maltick.

Management, and it is therefore stated that these visitors should as far as possible make their application for residence addressed to Mr. K. M. Banthiya, Hon. Secretary, Arya Bhavan, 30, Belsize Park, N.W.3. at least two months before the date of arrival in England.

The ceremony of opening the house was performed on June 25th. when Sir Atul Chatterjee, High Commissioner for India, opened the house in the name of the founder. Photographs of the opening ceremony and a picture of the house itself are included with this article and will be of interest to those in India who have read news in the press of the intention of this Institution.

The day was a delightfully fine one and the ceremony itself was tremendously suc-

cessful. fruit is given which makes the meal as wholesome as possible.

One of the advantages of the Arya Bhavan is the centre of this new venture, is the fact that it stands on one of the highest parts of London above many of the fogs and mists which are often very thick along the sides of the River Thames in the lower area. It also is conveniently situated in a street which has very little through traffic for motors and heavy lorries. Thus

AFTER THE OPENING CEREMONY. GUESTS IN THE DRAWING ROOM

Second from left: Mrs. N. C. Sen, Sir Atul Chatterjee, Mr. Sukhanam Chetty, M. L. A. Mrs. S. D. Sassoon, Mr. D. P. Khaitan, Mrs. D. Sassoon, Mr. S. J. Gubbay.

cessful. Mr. Khaitan made the speech on behalf of the guests, who thanked Sir Atul Chatterjee for his presence and gave the warmest welcome from India to those who were working in England in the cause of those from India who had come into residence in England. The opening ceremony was well reported in the English Press, and I have felt anxious after my own experience during the past two months of the value of "Arya Bhavan" to make known personally in India how great a privilege has now been given in England to those who wish to come to England and to keep up their strict vegetarian and temperance principles.

I can assure them that within the house itself everything is being done which can possibly be done to provide good, simple and pure food of vegetarian character, which as far as possible, is cooked in Indian style and has all that will satisfy their simple Indian taste in the way of vegetables, curries and cereals. *Puri* is provided at each meal as well as rice dishes and an abundance of

VISITORS RESIDING IN ARYA BHAVAN.

Sitting from left:—Mr. D. P. Khaitan, Delegate, International Labour Conference, Mrs. Walchand Hirachand, Mrs. D. P. Khaitan, Rev. Mr. C. F. Andrews.

Sitting 2nd row:—Mr. K. M. Banthiya, Secretary "Arya Bhavan", Mr. Lalchand Heve, Mr. B. L. Sharoff.

Standing:—The Indian Brahmin Cook Mr. Sukhanam, Mr. Gadgil, Dr. I. S. Gupta, M. B. B. S., D. T. M. H. Mr. Kishonlal Goink, Proprietor, Akola Cotton Mills.

it is extremely quiet compared with other streets in London. Furthermore, it certainly has much more sunshine in this somewhat sunless land of England than more low lying quarters. For instance, I have gone through the city where there was a dark misty atmosphere up to Belsize Park, and have found there sunshine instead of shadow. The house is also very conveniently situated as far as the underground railway is concerned. It lies between the two stations of Swiss Cottage on the Metropolitan and Belsize Park on the Hampstead tube. It is quite easy to get to the city from either station and the journey to Charing Cross from

Belsize Park does not occupy more than a quarter of an hour in the tube. It is also possible to get to the Bank and Mansion House in the same period of time.

It is not possible to speak too highly about such an arrangement for Indian visitors as this. The need was so great that it almost seems surprising that nothing had been effectively done to fulfil such a want before, but now that it has been fulfilled, it is already quite clear that every use will be made of it, and it is likely that the same principle will be further extended and other residential houses will be chosen in the same neighbourhood in order to provide for those who cannot get accommodation owing to want of space in Arya Bhavan.

My own good wishes go with the found-

ers and with the Hon'ble Secretary, Mr. K. M. Banthiya, and with Mr. Derprasal Khaitan who have been so splendidly carrying out the founder's design, and Mr. and Mrs. Pofak have also given most valuable assistance. Considering how short a time the house has been prepared for occupation, it is quite remarkable to see how quickly full use has been made of it. It is also equally interesting to be able to state that the kindest feeling, goodwill and sympathy between the members who are in residence have been fully manifested, and not a single hitch has yet occurred in any of the arrangements, which has been due more than to any other cause to the strenuous work of Mr. K. M. Banthiya.

DR. SUNDERLAND'S BOOK ON INDIA'S RIGHT TO FREEDOM

"**INDIA in Bondage. Her Right to Freedom,**" by the Reverend Dr. J. T. Sunderland, will be available to the public in the course of a week or so.

The Argument of the book, in the Author's words, is printed below.

THE ARGUMENT OF THE BOOK

The central contentions of the book are.

1. That no nation has a right to rule another; therefore Great Britain has no right to rule India.

2. That British rule in India is unjust, tyrannical and highly evil in its effects on the Indian people (as that of any foreign government must be).

3. That for a great civilized nation, anywhere in the world, to be held in forced bondage by another nation, as India is held in forced bondage by Britain, is a crime against humanity and a menace to the world's freedom and peace, and therefore should be condemned by all nations.

4. That the Indian people, who ruled themselves for 3,000 years, making their nation one of the greatest and most influential in the world, are abundantly competent to rule themselves to-day.

5. That if in any respect they are incompetent to rule themselves now, the British are responsible,—it is the result of

Britain's crime of conquering them and holding them in bondage; therefore the remedy is the cessation of the bondage and their restoration to freedom.

6. That the Indian people can rule themselves far better than the British (or any other transient foreigners) can; and for the following four reasons.

(1) The Indian people are the equals in natural intellectual ability and in moral character of the British or any European nation.

(2) They are possessors of a civilization and of a culture far older and in some respects higher than that of Great Britain or any other western nation.

(3) India is the own country of the Indian people, in which they have always lived, their knowledge of India—its civilizations, its institutions and its needs—is incomparably greater than that possessed by the British or any other foreign transients; which means that they can rule India with vastly greater intelligence than the British or any other foreigners can possibly do it.

(4) The fact that India is the own country of the Indian people makes it inevitable that, if they ruled the country, they would do it primarily in the interest of India, primarily for the benefit of India, as every

country in the world ought to be ruled in the interest of its own people and not that of foreigners; whereas, the British, because they are foreign and their interests are foreign, in the very nature of things have always ruled India, are ruling it to-day, and so long as they hold it in forced bondage always must rule it, primarily for the benefit, not of India, but of their own foreign empire, Great Britain; which has always been, and as long as it lasts must continue to be, an unparalleled wrong and disaster to the Indian people.

The grounds for these contentions are stated in detail in the body of the work.

The book contains the following chapters, besides a Bibliography:—

1. Foreword.
2. A visit to India: what British Rule means.
3. America's Interest, "in India".
4. What Eminent Americans say about subject India
5. If other Nations should be free, why not India?
6. Is Britain ruling India "for India's good"?
7. British arrogance and India's humiliation.
8. "Babu English". Rudyard Kipling Insults.
9. The kind of justice Britain gives India.
10. The kind of "Peace" Britain has given India.
11. India's opium curse; who are Responsible?
12. India's drink curse; who are Responsible?
13. The emasculating influence of foreign Rule.
14. Crushing out the genins of a great and gifted Nation.
15. India and Japan. Why Japan is in advance of India.
16. Democracies and republics in India.
17. Caste in India: should it bar Home Rule?
18. India's Illiteracy: should it bar Self-rule?
19. India's "many Languages and Races." Should these bar Home Rule?
20. India's Grave Social Evils: should they bar Home Rule?
21. Hindu and Mohammedan Riots: should they bar Self-Rule?

22. If the British were gone, would India "Run with Blood?"

23. The kind of Military Protection Britain gives to India.

24. Could India, free, protect herself?

25. Are the British "or" any other foreigners" fit to rule India?

26. British Rule in India compared with that of the Moghul Emperors.

27. Is British Rule in India "Efficient"?

28. Are the people of India competent to rule themselves?

29. Testimonies of eminent Englishmen as to the competence of the Indian people to rule themselves.

30. How Parliament guards the interests of India.

31. The Truth about the Amritsar Massacre.

32. Why India Rejected "dyarchy."

33. The great delusion: Britain's claim that she is "educating India for Self Rule."

34. The Great Farce: Britain's claim that India is her "Sacred Trust."

35. How India in bondage injures England.

36. How India in bondage menaces the World.

37. When is India to have Self-Rule?

38. Conclusion.

39. Books on India Recommended for further reading.

Eminent Indians like the late Lala Lajpat Rai, Rabindranath Tagore and M. A. Ansari, having read the book in manuscript, have expressed high appreciation of its contents. Extracts from their letters are given below.

LALA LAJPAT RAI—

I know of no other American who has given so much time and attention to the study of Indian problems as Dr. Sunderland has done. And what is more, he has done it so thoroughly as to entitle him to be considered an authority on all phases of these problems—religious, social, economic and political. His studies have extended over a very long time and include trips to India. His views on Indian question, are absolutely impartial and progressive, and free from bias. I am looking forward to the publication of his forthcoming book on India with great hope. All Indians have nothing but admiration for his straight-forward truthfulness.

RADINDRANATH TAGORE—

The Rev. Dr. Sunderland became personally known to me during his visits to India and my visits to America and won from the first my deep regard. I have greatly admired his courage, earnestness and sincerity in taking up in this book the cause of the Indian people, who are still in subjection under British Rule. Such a knight-errant on behalf of those who have been rendered defenceless, makes the name of the West still respected in India in spite of that domination from the West which has robbed her of freedom and left behind a rankling sense of injustice. The facts, which the Rev. Dr. Sunderland has set down in his book, are impressive. They corroborate the great saying of Abraham Lincoln, which he quotes on the title page,—“No nation is good enough to rule over another nation.” Let me express my gratitude to the author for his chivalry in devoting so many years of his life to the cause of Indian freedom. His love of humanity, which knows no geographical boundaries or racial differences, should be a lesson to all of us who seek to share his ideals and carry on his work.

Dr. M. A. ABEYAN—

Dr. Sunderland's book, besides containing a very unusual wealth of details, possesses also a remarkably comprehensive and synthetic outlook, and therefore should be welcomed by all who wish to understand the real nature of India's difficulties and the only remedy for her misfortunes.

Dr. Sunderland has been a friend of

India for many years, he has travelled extensively in the country, and lived and moved among most of the different peoples that constitute the nation. He has studied almost all the literature on his subject. But what makes his book most valuable is, I believe, his remarkably clear perspective. Dr. Sunderland's sympathy is for the nation as a whole, and with its problems as a whole. Special or exclusive interest in any of its particular problems does not lead him to exaggerate its significance. The cry of the intelligentsia of India for free political growth and the silent struggle of the masses against drink, opium and economic exploitation alike receive their true measures of consideration.

Apart from its merits as a work of true scholarship and undeniably scientific value, what must endear Dr. Sunderland's volume to every one of its readers in this country is the author's deep affection for India and the Indian people, which is evident in every page. His affection, however, does not make him partial or unjust, nor has the ghastly tale of all the wrongs that man can inflict on man shaken his faith in humanity. Let his Indian readers, and all his readers, learn this lesson from him.

American and European readers of this book should congratulate themselves on having at last found a work to tell them all that they wish to learn about India. There is hardly a fact or a generalization in the book which is open to challenge. No author could have studied his subject better, or written with greater authority than Dr. Sunderland has done.

PROBLEMS BEFORE THE INDIAN TRADE UNION CONGRESS

By KISHORILAL GHOSH

THE 9th session of the All-India Trade Union Congress will be held at Jheria—the famous coal-centre and will commence its sittings on the 18th December. That the volume of business of the congress is increasing by leaps and bounds is indicated by the fact that it will continue for

three instead of two days unlike the previous sessions and the sittings will conclude on the 20th December. In the Indian National Congress it is the President-elect who delivers his address to mark his assumption of office for the year. But in the Trade Union Congress the address of the session is delivered by the

retiring president. It is indeed unfortunate to a degree that Mr. C. E. Andrews, who was twice elected to be the President of the Trade Union Congress, at its fifth and eighth sessions, would not be able, owing to his unavoidable absence from India, to deliver his address, as also he was unable for a similar reason to do so on the previous occasion. His weighty utterances this year would be particularly missed because the year 1928 is momentous in the history of the Indian Trade Union movement. Some of the biggest strikes and lock-outs occurred this year and Labour, though only very partially organised, has yet made itself felt to such an extent as to force the Government under the pressure of Big Business to introduce two Bills in the Assembly, viz, the Trades Disputes' Bill and the Public Safety (Bolsheviks' Removal) Bill. The first was reactionary to a degree, while the second was frankly repressive in character.

It is not intended nor is it possible within the space available to discuss the problems the congress will be called upon to deal with at Jheria. I shall attempt only to indicate briefly the nature of the problems rather than discuss the problems themselves. The Indian Trade Union movement, though it is the youngest in the world, has by reason of its potentialities taken a position in the Trade Union world far more important than it is entitled to by virtue of its actual strength. Already two of the biggest International Labour Organisations with different view-points are trying their level best to secure the Indian organisation as an affiliated constituent. The question as to whether the Indian Trade Union Congress should affiliate itself to the Second International at Amsterdam or the Third International at Moscow came up for discussion at its 8th. session last year at Cawnpore. The consensus of opinion was against committing the Indian movement to either side. At a meeting of the Executive Council held at Delhi in February last the question cropped up again and Mr. N. M. Joshi, the General Secretary, was directed to address letters to both the organisations conveying to them the view of the Council to the effect that unless the two organisations were amalgamated into one powerful body, the Indian Trade Union Congress would remain as it is. Mr. Andrews in a recent statement based on the results of personal enquiry has strengthened the decisions of

and its executive, though there may be many within the congress who may not accept in toto the reasons on which his conclusions are based. "... I found," says Mr. Andrews, that what I had expressed to be the basic character of the Third International, namely, the insistence on a revolution of violence to accomplish the end which Labour had in view, was entirely correct. Not only were violent methods regarded as imperative in the long run, but a practical policy amounting to violence was carried on almost in every country, even while preparations were being made for a revolution."

Those who have had occasion to come in touch with Mr. Andrews know how scrupulously fair-minded he is and when he brings such a serious charge against the Third International, we may take it that Mr. Andrews is fully satisfied with the data on which his conclusions are based. But as far as we in India are aware Mr. Andrews did not, during his present travel, visit many countries of Europe. His visit is mainly confined to Britain. He does not mention whether he visited Russia or which of the countries in Europe he visited, where, as he says "a practical policy amounting to violence was carried on." On the other hand, he himself refers to the "bitter struggle" between the Third International's supporters and "the more conservative Trades unions" which sided with the Second International. Force, violence and bloodshed, may I submit, are not the monopolies of the Third International. Those who remember how for a few white men killed at Nanking, the whole town was subjected to six hours' bombardment by British and American ships of war, how the British Press commented with approval on the wholesale executions of Chinese workers suspected of communist tendencies ordered by the Nationalists and how feeble were the protests of the second International and the "more conservative national Trades unions", like the British Trade Union congress, would be inclined to think that violence, force, bloodshed and intrigue should be condemned with equal vigour, by whomsoever practised.

With regard however to Mr. Andrews' reason as to why the Indian movement should not affiliate itself to Amsterdam, very few trade unionists would differ with him. He found that the Second International and its supporters in Great Britain were by no means free from the taint of Imperial discrimination. The Trade

unionist to whom "workers of the world unite" is but a counsel of perfection instead of an article of faith, who has not yet been able to break down the barriers of caste, of race, of creed or of religion, who supports the idea of one nation constituting itself the trustee of another, is a contradiction in terms and the wider berth is given to a body consisting of such units the better for the movement which does so.

But even greater in importance than the question of affiliating itself to Amsterdam or to Moscow is the problem of organisation. The vast natural resources of India, though yet but partially developed, have given this country the 8th. place amongst the industrial nations of the world. Even at this imperfectly developed stage at least five million industrial workers are waiting to be organised. In Bengal, for instance, the jute workers alone number 350,000, which along with the metal, textile, leather, printing workers etc., would bring the total easily up to half a million. The task of organising the workers will become easier if and when intellectual labour takes its stand by the side of the manual workers. It is commonly said that the lot of the clerk, the schoolmaster and, shall I say, the journalist, is much more miserable than that of the manual worker whose earning, as often as not, is on a par with his standard of living and not unoften is equal to, if not larger, than many of those who live by their brains and so those intellectuals who devote themselves to organising the workers should pay more attention to the problem confronting those who by reason of their habits, refinement and culture have a standard of living far higher than they are able to conform to with their small earnings.

Those who say this to disparage the trade union movement labour under a serious misconception as to the aims of the movement. The Trade Union movement originated in the need and utility of collective bargaining with a view to improve the working conditions of those who have to work under a master. This includes all kinds of labour. But the social no less than cultural affiliations of those who live by their brains being more akin to those who live on the labour of others than to those who work with their muscles to produce the requirements of the world—the lower middle class called petty bourgeoisie—generally holds itself aloof from the workers. The

manual workers have grit, stamina, energy and are impulsive, while the intellectual workers have foresight, patience, prudence and perseverance. As long as at least there is no system of compulsory primary education, intellectual workers are bound to lead their comrades who live by the muscle, till there is complete fusion between the two sets of workers.

So to carry out a well thought-out scheme for organisation the first thing necessary is sustained propaganda. The aims and ideals of the movement should be as often discussed amongst intellectual workers as familiarised to their manual comrades. There should be research institutes for the study of economics with a view to analyse the working of every industry, the productive capacity of the worker, the market value of what he produces, the cost of what he produces and the proportion his wages bear to the cost and the market value of the product. There should be a comparative study of the productive capacities of the workers of different countries, the cost of living in those countries and the standard of living as well as the wages paid. The underlying unity of interest of all workers, whether in the different sections of the same industries, or of the different industries in the same country or of the same industry in the different countries, should be brought home to the workers. The movement should have its organs not only for expounding the principles it stands for but also in voicing forth its needs and opinions on current matters.

Men and money are the two things required to carry out propaganda which would prepare the ground for organisation. Men more than money are required, because honest men gifted with intelligence, energy, perseverance and enthusiasm will not find it difficult to raise money from the workers who would by their number make up for the smallness of individual contributions. But money, even if available, without men with requisite qualities would be squandered away or wasted. The Trade Union Congress will be called upon at Jharia to devise ways and means to train up suitable workers to take up the task of organisation and also to establish suitable media for the exposition of the basic principles of the movement. The Indian public at large, including the workers, have very hazy notions about the movement and what it stands for. On the

retiring president. It is indeed unfortunate to a degree that Mr. C. E. Andrews, who was twice elected to be the President of the Trade Union Congress, at its fifth and eighth sessions, would not be able, owing to his unavoidable absence from India, to deliver his address, as also he was unable for a similar reason to do so on the previous occasion. His weighty utterances this year would be particularly missed because the year 1928 is momentous in the history of the Indian Trade Union movement. Some of the biggest strikes and lock-outs occurred this year and Labour, though only very partially organised, has yet made itself felt to such an extent as to force the Government under the pressure of Big Business to introduce two Bills in the Assembly, viz. the Trades Disputes' Bill and the Public Safety (Bolsheviks' Removal) Bill. The first was re-actionary to a degree, whilst the second was frankly repressive in character.

It is not intended nor is it possible within the space available to discuss the problems the congress will be called upon to deal with at Jheria. I shall attempt only to indicate briefly the nature of the problems rather than discuss the problems themselves. The Indian Trade Union movement, though it is the youngest in this world, has by reason of its potentialities taken a position in the Trade Union world far more important than it is entitled to by virtue of its actual strength. Already two of the biggest International Labour Organisations with different viewpoints are trying their level best to secure the Indian organisation as an affiliated constituent. The question as to whether the Indian Trade Union Congress should affiliate itself to the Second International at Amsterdam or the Third International at Moscow came up for discussion at its 8th session last year at Cawnpore. The consensus of opinion was against committing the Indian movement to either side. At a meeting of the Executive Council held at Delhi in February last the question cropped up again and Mr. N. M. Joshi, the General Secretary, was directed to address letters to both the organisations conveying to them the view of the Council to the effect that unless the two organisations were amalgamated into one powerful body, the Indian Trade Union Congress would remain as it is. Mr. Andrews in a recent statement based on the results of personal enquiry has further strengthened the decisions of the congress

and its executive, though there may be many within the congress who may not accept *in toto* the reasons on which his conclusions are based. "... I found," says Mr. Andrews, that "what I had expressed to be the basic character of the Third International, namely, the insistence on a revolution of violence to accomplish the end which Labour had in view, was entirely correct. Not only were violent methods regarded as imperative in the long run, but a practical policy amounting to violence was carried on almost in every country, even while preparations were being made for a revolution."

Those who have had occasion to come in touch with Mr. Andrews know how scrupulously fair-minded he is and when he brings such a serious charge against the Third International, we may take it that Mr. Andrews is fully satisfied with the data on which his conclusions are based. But as far as we in India are aware Mr. Andrews did not, during his present travel, visit many countries of Europe. His visit is mainly confined to Britain. He does not mention whether he visited Russia or which of the countries in Europe he visited, where, as he says "a practical policy amounting to violence was carried on." On the other hand, he himself refers to the "bitter struggle" between the Third International's supporters and "the more conservative Trades unions" which sided with the Second International. Force, violence and bloodshed, may I submit, are not the monopolies of the Third International. Those who remember how for a few white men killed at Nanking, the whole town was subjected to six hours' bombardment by British and American ships of war, how the British Press commented with approval on the wholesale executions of Chinese workers suspected of communist tendencies ordered by the Nationalists and how feeble were the protests of the second International and the "more conservative national Trades unions", like the British Trades union congress, would be inclined to think that violence, force, bloodshed and intrigues should be condemned with equal vigour, by whomsoever practised.

With regard however to Mr. Andrews' reason as to why the Indian movement should not affiliate itself to Amsterdam, very few trade unionists would differ with him. He found that the Second International and its supporters in Great Britain were by no means free from the guilt of imperialism and racial discrimination. The Trade

unionist to whom "workers of the world unite" is but a counsel of perfection instead of an article of faith, who has not yet been able to break down the barriers of caste, of race, of creed or of religion, who supports the idea of one nation constituting itself the trustee of another, is a contradiction in terms and the wider berth is given to a body consisting of such units the better for the movement which does so.

But even greater in importance than the question of affiliating itself to Amsterdam or to Moscow is the problem of organisation. The vast natural resources of India, though yet but partially developed, have given this country the 8th. place amongst the industrial nations of the world. Even at this imperfectly developed stage at least five million industrial workers are waiting to be organised. In Bengal, for instance, the jute workers alone number 360,000, which along with the metal, textile, leather, printing workers etc., would bring the total easily up to half a million. The task of organising the workers will become easier if and when intellectual labour takes its stand by the side of the manual workers. It is commonly said that the lot of the clerk, the schoolmaster and, shall I say, the journalist, is much more miserable than that of the manual worker whose earnings, as often as not, is on a par with his standard of living and not unoften is equal to, if not larger, than many of those who live by their brains and so those intellectuals who devote themselves to organising the workers should pay more attention to the problem confronting those who by reason of their habits, refinement and culture have a standard of living far higher than they are able to conform to with their small earnings.

Those who say this to disparage the trade union movement labour under a serious misconception as to the aims of the movement. The Trade Union movement originated in the need and utility of collective bargaining with a view to improve the working conditions of those who have to work under a master. This includes all kinds of labour. But the social no less than cultural affiliations of those who live by their brains being more akin to those who live on the labour of others than to those who work with their muscles to produce the requirements of the world—the lower middle class called petty bourgeoisie—generally holds itself aloof from the workers. manual workers have grit, stamina, energy and are impulsive, while the intellectual workers have foresight, patience, prudence and perseverance. As long as at least there is no system of compulsory primary education, intellectual workers are bound to lead their comrades who live by the muscle, till there is complete fusion between the two sets of workers.

So to carry out a well thought-out scheme for organisation the first thing necessary is sustained propaganda. The aims and ideals of the movement should be as often discussed amongst intellectual workers as familiarised to their manual comrades. There should be research institutes for the study of economics with a view to analyse the working of every industry, the productive capacity of the worker, the market value of what he produces, the cost of what he produces and the proportion his wages bear to the cost and the market value of the product. There should be a comparative study of the productive capacities of the workers of different countries, the cost of living in those countries and the standard of living as well as the wages paid. The underlying unity of interest of all workers, whether in the different sections of the same industries, or of the different industries in the same country or of the same industry in the different countries, should be brought home to the workers. The movement should have its organs not only for expounding the principles it stands for but also in voicing forth its needs and opinions on current matters.

Men and money are the two things required to carry out propaganda which would prepare the ground for organisation. Men more than money are required, because honest men gifted with intelligence, energy, perseverance and enthusiasm will not find it difficult to raise money from the workers who would by their number make up for the smallness of individual contributions. But money, even if available, without men with requisite qualities would be squandered away or wasted. The Trade Union Congress will be called upon at Jhena to devise ways and means to train up suitable workers to take up the task of organisation and also to establish suitable media for the exposition of the basic principles of the movement. The Indian public at large, including the workers, have very hazy notions about the movement and what it stands for. On the

other hand there is organised hostility to the movement and very clear attempts to give it a bad name at the very outset and to nip it in the bud.

Organisation and exposition at home, detachment but not isolation abroad—this is what the Congress will be called upon to give practical shape to.

RAJA RAM MOHUN ROY'S POLITICS

[Extracts from the Author's Forthcoming Biography of the Raja
to appear in the "Builders of India" series]

By N. C. GANGULI

THE Select Committee of the House of Commons, re-appointed in June 1831, after its first panneling in February, took up now the question of the renewal of the Company's charter. The Raja was consequently invited to appear before it and to give his evidence. He declined the request, the reason of which is not known as yet. Probably his experience of the ethics of Imperialism had taught him to be exceedingly careful with government officials. In successive "communications" he gave to them his opinions and suggestions on the various problems of Indian administration with reference to revenue, judiciary, land, ryots and the condition of the country, which duly appeared in the Blue Books and were also published by him separately. Like all his writings; they reveal a thorough command of materials, careful mastery of the principles involved and an unparalleled stock of information, together with a foresight that is really marvellous.

Mr. Ramananda Chatterjee, in his "Ram Mohun Roy and Modern India" says, in appreciation of the Raja's political pronouncements, that he "laid the foundation of all the principal modern movements for the elevation of the people." A review of his communications to the Board of Control amply bears out the truth of this remark. This group of the political writings of the Raja comprised six papers in all; even the Appendix is extremely useful. The first communication was under date August 19th 1831 on the *Revenue System of India*, in two parts, viz. Answers to questions and New Proposals. The Raja espoused the cause of the rack-rented ryot or cultivator." He

pointed out "such is the melancholy condition of the agricultural labourers, that it always gives me the greatest pain to allude to it." He proposed that rent should not be raised any more, and stipulated a reduction of revenue from the Zemindar ensuring a corresponding reduction in the payment made by the ryot, for rents were so exorbitant that the ryots were in a continuous state of misery. The consequent decrease in revenue could be met from taxation of luxuries and things which were not necessities of life, and the employment of low-salaried Indian collectors instead of highly paid Europeans. He also advocated in this connection the settlement of a few model land-lords from England, but not drawn from the lower classes so as to counter-act the drain by an inflow of capital. He wanted the resources of the country and of the cultivators to be improved by superior methods of cultivation and the proper mode of treating labour. He indicated clearly "the overwhelming poverty throughout the country" and the drain of wealth from India, that is, "from Indian Revenues expended in England" and "the aggregate of tribute, public and private so withdrawn from India." In an appendix he pleaded for "the indefeasible rights of the ryot in the soil" as a fact of Imperial utility.

His remarks on the *Judicial System* bear the date 19th Sept. 1831. This document is an equally important one, illustrating the Raja's political thought just as the former shows his economic ideas. His advocacy of the use of the English language finds prominence here as well. "Its gradual introduction in the courts would prove anti-

mately beneficial by promoting the study of English." He recommended higher judicial posts for Indians and pointed out that the European judges, for lack of knowledge of the language, manners and customs of the people, are not generally expected to discharge judicial duties satisfactorily independent of native assistance. The panchayat-jury system was recommended by him to be adopted with qualified Indian jurors. In his opinion it was not difficult "to find, with proper management, qualified persons among natives for any duty that may be assigned to them." The power of the issuing of the writ of Habeas Corpus was also demanded by him for the Sudder Dewani Court. The separation of judicial and executive functions, over which so many Indian politicians have expended their energy and eloquence in vain, was first of all shown by him to be a national necessity as against "an incompatible and injurious union of offices." He was also the first man to put his finger on a serious defect in the Civil Service, viz, that of giving the highest responsibilities to callow youths from England simply because of their belonging to "the heaven-born service", as it is called in India to day. It was against ordinary common sense and it needed no further comment. The age 24-25 was considered suitable by him.

His *Queries respecting the Condition of India* was issued on Sept. 18, 1831. The principles followed in these were based on solid facts and statistics and they revealed the essentially practical side of his mind. He was no less of an economist than a politician and reformer that he was. The depth of his analysis will strike anyone even to-day, as much as the extensive field of data covered by him. His political thought rose to its highest in the three demands made in these Communications to the India Committee, and still remain for India, after a hard and continuous struggle for a century, the eternally longed-for "consecration of a poet's dream." Indeed he saw truth as a poet does in all its beauty, glory and perfection in every sphere of life, including even economics and politics, for truth for him was the texture of life, and of the universe. No Indian politician has as yet outstripped him in the length and depth of his vision, and his three demands for his country are classical formulations of national rights. First, he wanted both the educated and uneducated classes to be closely

associated with the government of the country as a whole, by throwing open high places in administrative service to the former, and by establishing a militia force for the latter. With reference to the former, he plainly states

"That the only course of policy which can ensure their attachment to any form of government would be that of making them eligible to gradual promotion according to their respective abilities and merits to situations of trust and responsibility in the State"

He was aware of the "undue advantages" possessed by Europeans over Indians in "entertaining a notion of European superiority" over the Indians. But there were also Indians who would "consider it derogatory to accept of the trifling public situations which natives are allowed to hold under the British Government." So much for the intellectual classes, who had not as yet been properly appreciated by the Government in England, whatever might be the protestations in parliamentary speeches from responsible men. For the people at large, his recommendation was the formation of a militia force in which they could serve, and and thus relieve the large standing army. "The saving that might be effected by this liberal and generous policy through the substituting of a militia force for a great part of the present standing army, would be much greater than any gain that could be realised by any system of increasing land-revenue that human ingenuity could devise." But a foreign government had to be always suspicious, as it is even now, and the advice of the greatest Indian of modern times fell on deaf ears. He was right in thinking that the common people should be made to love the Government for the future good of both; for after all, as the Persian sage Sadi said, "to an upright prince his people is an army".

His second and most comprehensive scheme was that for local autonomy, which was put by him in the least offensive way, yet not without the usual sting of plain speaking. In such matters, as those of peace and war, it may be necessary that "the local Government should act on its own discretion and responsibility according to existing circumstances, notwithstanding the opinion of the government in England. But in matters of legislation—judicial and revenue matters—the local government might still remonstrate against them to the home autho-

THE TWO ASVINS

By S. Promode Kumar Chattopadhyaya

Prabasi Press.

Macnool has rightly pointed out Ram Mohun's place as a religious reformer beside Chaitannya, Tusi Das, Kahir, Nanak and Tukuran on the quality of the contributions made by the modern Indian sage.

Ram Mohun's nationalism, sturdy, vigorous and radical, led him to the other truth of internationalism, sound, wide as well as deep. It was a corollary following naturally from the truth he found in Nationalism. A self-governing India must necessarily allow Europeans their rightful place in the land. In his *Settlement of India by Europeans* of 14th July, 1833, he laid stress on the importance of Europeans in this country. He pointed out nine advantages and five disadvantages. He was aware of British feeling over such a proposal, specially with reference to happenings in America and the Indian feeling over the possibility of race mixture. He was above all narrowness and in taking up the side of the planters in 1829, he had in mind, in this connection, the economic, cultural and political good as a whole. He viewed life as a whole, which never allowed him to separate fallaciously culture from economics, or economics from politics, or politics from culture. Yet he was a believer in the legitimate greatness of the East and the potentiality of Asia. His study of world history and the cyclic rise and fall of nations had taught him the facts of human nature from nature's own school. While he was deeply distressed at the degradation of the character of the Asiatics, he explained how weakness entered their constitution through over-civilization. "The cause of such degradation has been our excess in civilisation and abstinence from slaughter of animals". "With respect to Science, Literature or Religion," he added, "I do not acknowledge that we are placed under any obligation, for by a reference to history it may be proved that the world was indebted to our ancestors for the first dawn of knowledge", which sprang up in the East." He concluded by saying "that almost all ancient prophets and patriarchs—may even Jesus Christ himself a divine incarnation and the founder of the Christian faith, were Asiatics." Further he believed in the "superiority of Eastern philosophy over Western systems of thought, and Arabian Logic superior to every other", and held Sanskrit to be the root language for the purposes of comparative study of religion and theology.

The *Remarks on the Settlement of Europeans in India* was produced at a time when the English atmosphere was charged with great political heat over home affairs. Between the Reform Bill and the Charter to the Company, "Ram Mohun, alive to the fingertips with the significance of both phases of imperial reconstruction, was naturally most concerned with what directly affected his own countrymen." Nor was he in the slightest degree indisposed to contemplate the prospect of India as a nation politically independent. He showed pointedly and clearly the kind of India desired by him. He wished to see her free and self-determining in every respect, as he indicated.

"It, however, events should occur to effect a separation between the two countries, still the existence of a large body of respectable settlers (consisting of Europeans and their descendants) speaking the English language in common with the bulk of the people... as well as possessed of superior knowledge, scientific, mechanical and political, would bring that vast empire in the East to a level with other large Christian countries in Europe... enlightening the surrounding nations of Asia."

And then he added the example of Canada as "a standing proof that an anxiety to effect a separation is not natural with a people tolerably well ruled." Moreover, political relation was to his mind the least and lowest of the many kinds of connections, such as cultural, commercial, etc., that can subsist between and bind together the nations of the world.

Miss Collet says "Never has the spokesman of the New India been so outspoken before. Never has he drawn so liberally on the future.—Indian independence was not exactly a prospect most agreeable to British susceptibilities. Yet it is calmly advanced as a future possibility". But he was thinking on international and inter-religious lines—

"If events should occur to effect a separation—a friendly and highly advantageous commercial intercourse may be kept up between two free and Christian countries, united as they will then be by resemblance of language, religion and manners."

Such a statement from the Raja made many halt for a while: Miss Collet thinks he was speaking implicitly of the intimate victory of Christianity, in this important document laying down his international ideal. But the use of the word *Christian* does not mean theological Christianity. The Raja was always explicit as to his own view of the Christian religion and the importance of its

Mrs. IRRAWATI KARVE, M. A., a daughter-in-law of Prof. D. K. Karve of the Indian Women's University, has gone to Germany for higher studies in Ethnology and Anthropology. Mrs. Karve passed her M. A.

Examination last year with Sociology from the University School of Economics and her thesis on the "Ethnic Affinities of the Chitpavan Konkanastha Brabmins," was highly spoken of by the examiners. She intends to work at the "Kaiser Wilhelm Institut für Anthropologie" in Berlin.

Mrs. NARAIN DIALDAS has erected at her own cost a commodious building at Karachi to be utilised as a Ladies' Club house in memory of her mother-in-law Mrs. Daldas Mulchand. Mrs. NARAIN DIALDAS is the wife of the late Mr. Narain Daldas, the well-known philanthropist of Sind. She recently toured round the world with her husband and is the first Sindhi lady to do so.

Mrs. GANGABAI PATWARDHAN, a O. A. of Prof. Karve's Indian Women's University, has just returned from England after attending the Montessory and Kindergarten courses.

Mrs. A. EAPIN has been nominated by the Government of Madras as a Councillor of the Bezwada Municipality.

PROFESSOR HANS MOLISCH

By PROFESSOR SAHAY RAM BOSE, D. SC., F. R. S. E.

PROFESSOR Doctor Hans Molisch, who has recently retired from the chair of plant physiology in the University of Vienna, is one of the foremost plant physiologists of the day and has enriched science by his numerous discoveries in anatomy, physiology and bacteriology. He has been the Rector of the University of Vienna, and as the Director of the famous Plant Physiological Institute, he has gathered round him and inspired the work of many brilliant investigators. He is a distinguished worker of international reputation. He has worked in various branches of botany, everywhere leaving his mark as a very keen and patient worker. One is lost in admiration when one considers his many-sided activities in the field of research. He is a well-known authority on luminous plants. He has carried on very extensive investigations on luminosity in Fungi and Bacteria, and has brought out a standard book on the subject.

He has on many occasions been invited to many Universities to give them the benefit of his wide experience and extensive knowledge. After the War, the Japanese Imperial University of Sendai utilised his services for three years for advancing their biological investigations. During his stay in Japan he brought out two important works: (a) Plant Biology in Japan, in which he has confirmed his former experience with luminous fungi and bacteria, working on materials found in Japan; (b) "In the Land of the Rising Sun", in which he has recorded his thoughtful observations on the Japanese.

He is author of some fourteen books and numerous papers covering almost all the important phases of botany. Among his numerous scientific works which are regarded as classical, mention may be made of "Microchemistry of Plants" and "Luminous Plants."

He has travelled extensively and has

visited a number of densely wooded forests in the dark for studying luminous fungi and bacteria.

He was the first to make pure culture of iron bacteria. It was he who demonstrated that ascent of sap occurred in the Palm in the absence of root-pressure. In his work

is strong enough to enable a man to read a book. Further development of "cold light" will start a new era in science.

One of the principal objects of his visit to India is to make himself intimately acquainted with the methods of investigation

Medallion of Prof. Molisch

Prof. Molisch among the Ainu of Japan

on "Plant in Relation to Iron" he showed that iron is necessary not only for the green plants, but also for the non-green, fungi.

But his most sensational discovery relates to his invention of a "Living Lamp" which he produced by securing the purest cultures of luminous bacteria from dead leaves, marine fishes and other sources. He succeeded in finding out the properties of the bacterial light, its influence on photographic film and its heliotropic action on seedlings. His "Living Lamp" can be seen at a distance of 80 yards, and the light

initiated at the Bose Institute, which have opened out fields of exploration on the phenomena of life. He has for many years followed with keen interest and high appreciation the work that is being carried on at the Institute on the Unity of all Life and its Mechanism.

We offer our distinguished guest our most cordial welcome and believe that his stay in India will be conducive to the closer union of the East and West for the common benefit of humanity.

The Indian Science Congress has already invited him to its Madras sessions to give it the benefit of his deep and extensive knowledge. Botanists will hope that perhaps during his stay in India he will visit some of the Himalayan and other forests to renew his acquaintance with the luminous plants which are available in India.

INDIAN ARCHITECTURE: POSSIBILITY OF A SCHOOL

By SRIS CHANDRA CHATTERJEE
(Architect, Temple Chambers, Calcutta).

A wave of enthusiasm for a national architecture is passing over India. People look to Government as patron. The Government remains silent in the matter and continues building in European styles. It

has made no arrangement to impart education on Indian architecture in Government Engineering Schools or Colleges or to encourage students having training in national architecture from national schools of art or to

provide with works Indian craftsmen of old Indian school who have been languishing for want of support and taking to trades or other professions. Consequently, it rests with Indians themselves to see that Indian architecture lives and develops. The Municipalities and the District Boards which are run by the representatives of the people should take up the cause in right earnest.

A nation is dead when it loses its own architecture. And nowhere it is more noticeable than in India. And nowhere it is truer than in India that architecture is the mother of all arts and the neglect of our national architecture by our national leaders has been one of the principal causes of the decline of other beautiful fine arts of India. Our characters are largely influenced by the architectural environment we are in. The citizens draw the inspiration of their lives from civil architecture. They can never imbibe true national and patriotic spirit unless they dwell in, or move within an environment which is consistent with their life, religion, tradition and culture. Our leaders should seriously consider about the importance of re-establishing our own architectural environment which alone can create and stimulate a healthy nation.

Among other things the fear of cost stands in the way of the revival of Indian architecture. The present writer can say from his experiences that he has gathered from actual construction of buildings, in Indian style of different types, in Calcutta and elsewhere in Bengal, that the fear of cost that obtains with the general public is totally groundless. The houses that are generally built in Bengal as well as in other provinces of

Details of Jharaka

India have generally a certain amount of ornamental work which means expense. We are in the habit of having these on our buildings for several generations and, as a result, have become unconscious

Indian Style, designer S. C. Chatterjee
 [By courtesy of S. Brojendra Kishore Roy Choudhury]

of their cost or even of their very existence. On the contrary, such ornamentation in Indian style appears to be superfluous and cost thereof a burden. The writer dealt with the subject in detail in the articles that he published a few months back and assured the house-building public that stronger and much more beautiful buildings could be built cheaper in Indian style than those with foreign ornamentation in foreign styles. He is tempted to quote here a few lines from a report of Mr. J. Begg, F.R., I.B.A., consulting architect to the Government of India. Mr. Begg says that "there is nothing, as I have already said, in an Indian manner of design that makes it costly. Indeed, my own experience goes to prove that the costliest manner for building in India is a Renaissance or Classical one." These costliest renaissance or classical buildings crowd in every street of Indian towns and the people are unconscious of the stupendous cost because, as has already been said, they are in the habit of having these on their buildings for several generations.

In the present day it may not be possible to completely eschew foreign ideas or to build in strictest conformity to the grammar and conventions of our *Silpa Sastras*, nevertheless demands of free thinking and artistic traditions have to be harmonised as far as possible. An indigenous art with an unbroken chain of tradition of over two thousand years behind it, which has maintained so much vitality in spite of the ban which intellectual Europe has put upon it, can never be allowed to die of starvation. It can be so developed that it can be made to supply all the complex needs of modern India and yet with the canons of true Indian art. It is expected that a new synthesis suitable to our present-day needs will evolve in the near future just like the new school of Indian painting established by Dr. Abanindranath Tagore. Many schools of Indian architecture evolved and developed in the country from the Maurya period down to the advent of the British. And it is quite natural that another school will originate in these days when India is living under political bondage of England, our immediate duty is to turn the tide of our wayward ideas. A combined and sustained effort has to be made to save Indian architecture from starvation. The desired result will come in time. With the development of self-government in the country the real work will commence. We

A foreign style design for the proposed building at Bangalore

shall then be living our own lives. In the meanwhile we should re-introduce those arts and crafts which are about to be wiped out. We should work for the day when India will again gladden the heart of the world by her outpourings of the Good, the True and the Beautiful.

Architecture was "the dominant art of India" from which evolved most others as accessories. Sculpture and painting originated from architecture and their growth primarily depended on the stability of the latter. Owing to the absence of a well-defined and well-established indigenous architecture in Bengal the allied art of painting and terracotta cannot thrive here in the present day as it did in the olden days of Gaur and Vishnupur. The success of Jayporu school of art and craft and industry can be ascribed to the success of its glorious architecture. Their art is a living thing and the artists, sure of patronage and support, not only from their own countrymen but from foreigners as well, can pursue their vocation with ease and freedom. Such an atmosphere for the growth of national art is yet to be created in Bengal, and we should all strive to that end.

Recently it has been proposed to organise a school of architecture in Calcutta. Neither

the Government nor any foreign Institute of architects have been approached to guide the same. Experiment is to be made if it could be run independently with the help of Indian master-builders and master-craftsmen that yet survive. No pupil would be left to imagine independently as far as possible. Passed or unpassed students of a Government Engineering College or School or of Government School of Art would, of course, be welcome and given a special course of training, both theoretical and practical, if they desire to learn their own art. But a Government passport would not be compulsory for admission. Co-operation is desirable from institutions like the Indian Society of Oriental Arts which might impart special training to the students of the proposed school of architecture in painting, iconography &c. Municipalities and District Boards should support the proposed school. The sympathy and co-operation of patriotic building contractors are also to be enlisted. The scheme is yet under consideration and suggestions from the public and others interested in Indian architecture and art are hereby invited and would be taken into consideration during the formative stage of the project.

Plant Pille Grow Bouquets

Amateur gardeners' own flowers, any month in the year, in window boxes, jars, tin cans, or any other receptacle that will hold water.

Sweet peas, planted in jars in the fern box on October 1, will provide abundant bloom for New Year's day. Dalias, zinnias, asters, chrysanthemums, pansies, phlox, stocks, or whatever flower one desires, may be made to bloom indoors, all the year around.

No soil is required, no fertilizer is needed. The secret is a small, white oval lump of the size of a pigeon's egg, that is to say, about two inches long by an inch in diameter, called a "plant pill," soon

to be obtained from the nearest druggist at small cost compared with what one pays for cut flowers at midwinter.

This wonder worker among flowers is the product of some seven years' study by Dr. W. F. Gercke, of the University of California. More than 200 varieties of plants, numbering nearly 2,000 individuals, have been made to produce their blossoms at any selected date, indoors and out, at the university.

But the greatest value of the discovery, as so far applied, is in the production of flowers for the home in defiance of winter temperatures outside. The normal warmth at which most houses are kept during cold weather is ample for the growth and

Rose Cuttings, without Roots, after Growing Four Months in Bottles of Water to Each of Which a "Plant Pill" Had Been Added; the Cut Stems Have Developed Good Root Growths

Nine Weeks' Growth of Columbia Roses from Cuttings Eight Inches Long. No Part of These Flowering Plants Has Ever Touched the Soil, Despite the Well-Developed Roots

blossoming of the plants under the urge of the chemicals in the pill.

Annuals, such as sweet peas, zinnias, asters, pansies, and many others, may be controlled and made to blossom at any time in the same way.

"Electric Doctor" Is Used To Treat Colds

Beneficial results in treating colds with an "electric doctor" are reported from France. The instrument employs high-frequency current to generate heat that penetrates the nose bones and thus destroys germs. Relief has been obtained in ten minutes or less, it is said. The treatment does not injure the nose tissues.

Treating Nose Tissues with High-Frequency-Electric Current to Help Cure Cold

Film Mysteries of Germ Life With Clockwork Camera

Photographic records of the life of a chicken within the egg, of the beating of a turtle's heart, how germs and flowers develop, and many other interesting phenomena, are accurately made with a combination microscope and moving-picture camera

Combination Motion-Picture Camera and
Microscope Operated by Clockwork for
Filming Germ Life

apparatus devised by a student of the University of Maryland. A feature of the apparatus is that exposures are made at regular intervals and at almost any frequency desired, by setting the clockwork mechanism that operates the shutter and moves the film so that, after the instrument has once been properly adjusted, it needs but little attention.

X-Ray Studies of Mummies Reveal Secrets of Past

That Egyptian children who lived centuries ago had diseases common among youngsters of today, is one of the interesting facts revealed by X-ray studies of mummies at the Field Museum of Natural History. Photographs taken with the penetrating rays show cases of curvature of the spine and of malnutrition. The latter condition is disclosed by transverse lines of irregular calcium developmet in

Courtesy Field Museum of Natural History
Diseases and Malformation in Egyptian Children
Revealed in X-Ray Photographs of Mummies

the bones and is caused by improper and inadequate feeding. The X-ray apparatus is used not only on mummies but also on various other specimens and helps to establish many scientific facts without doing any damage. The Field museum is the first institution of its kind to adopt this method of examining relics of the past.

Chemicals To Replace Gans In Wars Of Future

A thousand airplanes each carrying 5,000 pounds of chloroform, could put the inhabitants of cities as large as Chicago or New York to sleep in a few moments, in time of war, according to Dr. Gustav Egloff, a research chemist, who points out that scientists are developing means for making war more humane instead of more horrible. He suggests that anesthetics, far more effective than are now known, may be introduced in the near future and that applications of them from planes flying above trenches, might put whole battalions of soldiers to peaceful slumber. They could be awakened later and suffer relatively little harm.

Soapuds Fountain For Bath Latest Toilet Aid

Press a button and soapuds, salt water, scented water or other toilet preparations gush from a spout in a bath attachment a California inventor has introduced. As many containers as desired

Suds Tank Dispenses Lather Instantly without the Need of Working It up during the Bath can be connected to the arrangement and they are installed in a convenient position for use while bathing.

A Martyr to Science

Prof. Hideo Noguchi, Japanese bacteriologist of the Rockefeller Institute for Medical Research, passed away at Accra in Africa on May 21st, a victim of yellow fever contracted in a laboratory experiment in 1927. Dr. Noguchi was the most distinguished pathologist of his race. He was knighted by the King of Denmark, the King of Sweden, and the King of Spain and honored by the Emperor of Japan. Dr. Noguchi was classed with such scientists as Pasteur and Metchnikoff in his work for humanity. The efforts of Dr. Noguchi were largely responsible for the overcoming of the yellow fever outbreaks in Central and South America.

Weaves Seamless Trousers In Hand Loom

Trousers are woven without seams from such materials as burlap and other cloth by an eastern expert who has had more than sixty years' experience with a hand loom. Even the side openings for the pockets are woven instead of being cut. The garments have a neat appearance.

The Dance of Shiva

The *Vista-Bharati Quarterly* for October publishes another series of Rabindranath's illuminating 'Letters from Java.' The poet gives an interesting description of the Shaiva Temples at Prambanam. We read:

The dance of Shiva, as Nataraj or Mahakala, represents the rhythm of *Decaying*, with its rise and fall of life and death. He is Bhairava, the Terrible, because Death is of the essence of his play. In our country two different aspects of Shiva have been recognised. In the one he is the Infinite, the Perfect, and therefore inactive and tranquil. In the other, it is through him that courses the flow of Time with its perpetual changeableness, the agitated dance of which takes form as Kali. But in Java, this Kali aspect of Shiva is not seen, nor the sportive aspect of Krishna in Vrindavana. We have here the story of Krishna's slaying of the gressa, Putana; but there is no sign of his milkmaid companions. These facts may give us clues to the history of the time of colonisation.

Revival of Sanskrit Culture

In the course of a thought-provoking article in *Triteni* for July-September, Mr. K. Krishna Somayajis laments that there is amongst Indians less knowledge of, and more prejudice against, Sanskrit than can be possibly imagined. He is of opinion that "Sanskrit culture is the culture for us, if we should continue to live as Indians." He further asserts that Sanskrit culture stands (1) by Faith not reason (2) for duties not for rights (3) stands for the economy of the past in the making of the present and lastly:

Sanskrit culture stands for the principle of association and grouping together of individuals with similar tastes and avocations as the most natural and effective principle of social organisation, and if the new world has not adopted it, it is simply because it has not understood the scope and purpose of such organisation. So we see in these and similar other institutions, which are the embodiments of Sanskrit culture, the highest principles of conduct yet known to man turned to social and individual ends, and here is the superiority of Sanskrit culture to any other. If by civilisation you mean the adaptation of means to ends with the minimum of waste and maximum of profit in the moral as in the material world, here it is for

all of us to share. So then, the singular importance as I understand it, that attaches itself to Sanskrit and Sanskrit culture is in its power of curing the lead of civilisation through which the world is run. 'Civilisation and its cure,' the cry has no doubt started, but the cure is not yet found. It is here locked up in this treasure-chest and it is for us Sons of India and Sanskrit, first to cure ourselves through this new power and then to try it upon the chronic ills of the world. We in this country must confess we are in a whirl of life. The old order is changing giving place to new, probably much faster than we think it is, and viewing the phenomenon calmly and dispassionately, we must own we are chancing for the worse. Cry hoarse as we do about our aims and aspirations in any department of life we are caught in the slough of despair, and cut off from the past on one side and with the future throttled and blocked in its path by a mad-rushing humanity on the other, we are without a way out. At this juncture the only safety lies in pulling up in mind and body, and coming to our own. We must realise that we were good and great, and this confidence and faith in our schemes can come only through a study of our past. Without the pride of the past, burning in the Soul, patriotism is a lifeless thing, and all patriotic sacrifice is a make-believe. Sacrifice is born of love, and love of knowledge. To know your great past is surely to love it, and to love the past is not only to discard and trample down the present but to aspire and to soar into the future. Sanskrit Culture which contains in itself all the elements of national life undoubtedly better conceived and better combined than elsewhere, will once more furnish us with the ways and means of organising ourselves for the present successfully against the contending forces, and will also give us now as it did so splendidly in the past, the right viewpoint as to our march into the future. The choice is between English and English culture on the one hand, and Sanskrit and Sanskrit culture on the other. On the one side are ranged Reason Right Social chaos, and thirst for power and self. On the other are ranged Duty, Faith, Order, and Search of Truth and Beauty as the ambition of life. Which is to lead and which to follow? The choice is obvious.

Sakuntala Staged in Australia

It is gratifying to note that the Live Art Society of Australia had staged Kalidasa's *Sakuntala*. The *Journal of the Bombay Historical Society* for September has reproduced the above-mentioned news from *Table Talk* of Melbourne from which we make the following extract:

It was in Sakuntala that the big interest lay, for this was a stupendous effort for a society of young people, even though directed by one of artistic insight and experience like Mr. Howard Eadie. First of all the fine translation of the sixteen-hundred-years old work of Kalidasa by Laurence Binyon was a fine achievement. Then the saturation of the performers and the young musician Stewart Burton, in the spirit and atmosphere of the story and the beliefs of the time, to such an extent that they were unable to positively live the characters, and in the case of Mr. Dudley, to interpret the spirit in musical composition was remarkable. Stewart Dudley had—so those who have lived in India declare—by some miracle caught the spirit of India in his music, in which he had used the Indian graduation of scale, which are three times as many as we employ. Like Wagner he has a leading motive each character running through, and the vocal solos introduced are weirdly quaint and thrilling. While, naturally with such notation, some portions of the music strike the ear with unusual and strange dissonances, there are parts of it that are warily rich and beautiful in tone. The highest and culminating triumph was achieved by the luminous yellow of the celestial charioteer's wonderful costume which seemed almost dazzling in its luminosity. The stage settings were kept indeterminate and subdued, but were effective. The whole production has left an ineffaceable impression upon those who were fortunate enough to see it."

Archaeology in Hyderabad State

Of late lack of original articles has become a feature of *The Hindustan Review*. In the October number of the said quarterly Mrs. E. Rosenthal, F.R.G.S., traces the history of archaeological research in the Hyderabad State and summarises the progress made by the department in course of the last 15 years. We read:

One of the activities which has linked up the work of the Hyderabad Archaeological Department with Egyptian and European research centres, consists of the excavations, carried out in various parts of the Dominions, for the purpose of examining megalithic remains. In the early fifties of the last century, Meadows Taylor contributed several reports on these remains to the journal of the Bombay Branch of the Royal Asiatic Society. In 1915, operations carried out at Maula Ati revealed cairns, and cromlechs—the former containing stone or clay coffins, similar to those discovered in the ancient tombs of Chaldea—the latter consisting of stone circles, partly or fully visible. The graves contained also a large amount of pottery, identical in design with cups, saucers, dishes, etc. dug out in Southern India, and bearing a resemblance to vessels discovered in Chaldea and Assyria. In 1916, one of the most active members of the Hyderabad Archaeological Society, Dr. E. H. Hunt, F.R.C.S., delivered a lecture on "Hyderabad Cairns: Their Problems" which was published subsequently in book form. The most important finds among copper articles consisted of a bell,

an amulet and head bands for bulls. It is significant that bells were objects of superstitious regard among the Celto-Scythian peoples and, moreover, that one bell was buried within a cairn opened, at Maula Ati, in the first half of the last century.

Women's Demands

Sir Tej Bahadur Sapru K.C.S.I., LL.D., in the course of an article in *Stri Dharma* for October emphatically asserts that the time has come when the women of the country should demand definitely the following reforms and enforce them or get them enforced by those who are prepared to support them:

(a) Every local legislature should be asked to undertake the obligation for the establishment of Girls' Schools and Colleges in every Province and to set apart more ample funds than has hitherto been done.

(b) If the legislators are found to be conservative to legislate with regard to the marriage of girls, the educated youth of the country should form themselves into a league and refuse to be married to girls below a certain age.

(c) Educated girls should be encouraged to follow independent professions, as far as they can.

(d) In all matters affecting social reform, we should take care to see that a certain number of women are always included in our representative bodies.

(e) Sex disqualifications, so far as representation in local bodies and legislatures is concerned, should be absolutely removed.

(f) Our personal law should be modified so as to give the woman a stronger legal position than she occupies to-day. It is, to my mind, absurd that we should allow the inferior position which the Hindu Law assigns to her in the matter of property rights to continue indefinitely. It is a perpetual source of litigation and I have, in actual practice, found that even where the law gives her some definite position, the woman is victimised by unscrupulous male relatives and hangers-on. This is probably due more to her want of capacity to protect her own interests, than to any other cause. This can, however, partly be remedied by better education, but it seems to me that a radical cure can only be supplied by a fundamental change of our law.

Development of Mercantile Marine in Japan

The remarkable development of the Japanese Mercantile Marine during the last thirty years has been briefly sketched by Mr. J. M. Ganguli in *The Indian Review* for October. The following figures indicate that progress:

Years	Tonnage	Number of Ships
1893	151,773	
1895	279,668	
1896	331,592	
1901	668,360	
1910	1,234,571	1757
1915	1,601,900	2132
1920	3,011,634	2931
1923	3,322,764	3049
1925	3,496,262	3187
1927	4,010,381	3561

A feature of the Japanese shipping has been that though in other countries with the advent of steamships the tonnage of sailing vessels has been steadily decreasing, in Japan it had been showing an increase, till but recently, along with the progressive development of the steamship tonnage. The number of sailing vessels, which was 4,958 with a tonnage of 390,796 in 1910, had become 8,656 with a tonnage of 5,42,579 and it was 14,932 with a tonnage of 899,333 to 1927.

Proceeding the writer tells us that with the development of the Mercantile Marine, the strength and the importance of the Japanese Navy have also been rapidly increasing. We are told :

The Japanese Navy ranks third to-day among the naval powers of the world, and it has been so recognised in the Washington Agreement. The displacement tonnage in capital ships of the Japanese Navy was fixed by the above Treaty at 315,000 tons, which is more than the strength allowed to France and Italy.

Agriculture in India

Sir M. Visvaraya K.C.I.E., in the course of an Address delivered at the Poona Engineering College (published in *The Mysore Economic Journal* for September) lays special emphasis on the part education and engineering science have to play to meet the immediate needs of our country. Dealing with the problem of agriculture he says :

In this country, agriculture as a profession is distasteful to many at present, because the holdings are small, profits are slender and employment is intermittent. Except during ploughing, sowing and reaping, our farmers in unirrigated tracts have much idle time on their hands. The actual number of days in the year required to cultivate dry crops is probably two months and as the work is not continuous, our cultivators keep up the pretence of farm work throughout the year. Mr. Henry Ford of Automobile fame has stated that he obtains the best yield from his lands by working on them only for 15 days in a year. In America, through the use of machinery, the number of persons employed in agriculture is being reduced though production itself is actually increasing.

The system of agriculture followed in many parts of the country is still of a primitive type. The farmers are too illiterate to understand the value of modern scientific methods and too poor

and too unorganized to adopt improved practices. Agriculture needs to be enriched by the use of capital, scientific methods and sound commercial management ; in other words, agriculture needs to be industrialized.

Engineering and chemistry are the two sciences most concerned with agriculture. The scientific portion of farm work includes soil analysis, selection of seed and fertilizers, destruction of insect pests, animal husbandry, and the use of modern agricultural machinery and tools. Some of our larger agriculturists at least should start the use of ploughing, sowing and harvesting. Every farmer should have some elementary training in mechanical engineering to be able to attend to repairs to his ploughs, pumps and agricultural implements. Every farmer worth the name in some of the advanced European countries I have seen, owns an oil engine when he has no other source of power supply. Every town and every village possess a technical school of some sort and every city a technical college. Agriculture and engineering should go together. At present agriculturists do not know the elements of engineering, and engineers except some of those engaged in irrigation do not know agriculture. In European countries agricultural engineers form a class of experts by themselves. The Agricultural Commission has made many excellent suggestions but they are not likely to materialize unless ground is first cleared by providing liberal agricultural education and banking facilities and by encouraging team work and self-help among the rural population.

Do the Jains want Separate Electorate ?

The Jaina Gazette for August, September and October comments editorially :

It is to be highly deplored that the Jains are not alive to their rights and responsibilities. Their political rights can well be described to be next to nothing. The Government is kept busy by the agitators. It is an old saying whose verity needs no proof viz. "Ask and it shall be given and knock and it shall be opened." The entire political structure of India is in the melting pot. Communities are vying with one another as to their share of rights in the government of the country. This situation is so critical that even communications which have been always speaking for the Congress Creed have now begun to ask and appeal for themselves as a community, provoked by instinct of self-preservation.

But what about the Jains. Where is the Jaina political conference and what is it doing ? The Jains should awake and arise at least now lest they should be for ever fallen and trodden down in the race of communities.

One chief reason why the Jains cannot afford to be negligent of their rights and duties is that they form an important mercantile community. Lord Curzon had said on one occasion that half the merchantable wealth of India passes through the hands of the Jains. With such a large stake in the country it would be nothing short of madness to allow ourselves to be deprived of a voice in the government of our country. Hence

we hope that our leaders would rise up to the occasion, sink their differences, formulate definite proposals and place them before the Government. We may just suggest in passing that the Jams will do well to ask for an electorate of their own, so that they may elect a certain number of members to the provincial and central legislatures.

Plea for an Investment Trust in India

Prof. J. K. Duraiswami Aiyer contributes a thoughtful article in *The New Era* for November wherein he puts forth a vehement plea for the formation of an Investment Trust Company in India because persons who are in possession of spare funds find it rather difficult to invest profitably. We read

There is a fairly large amount of funds waiting for employment on such terms as will yield a return higher than the rate of interest realised from gilt-edged securities. An Investment Trust Company can command the services of experts who will assess the value of different kinds of securities and invest the funds in such a manner as to yield a steady and safe return. The capital of such a Trust must be fairly large say about forty or fifty lacs of Rupees so that it might employ persons of great ability. With a view to spread the risks satisfactorily the Trust will have to go in for different kinds of securities viz debenture bonds, preference shares and ordinary stocks of different industries. In India at present the field for investment is widening, the main lines being Cotton, Jute, Iron and Steel, Tea, Rubber, Oil and Electrical Industries. Instead of the individual investor being left to his own devices the Investment Trust provides an agency which will do the investing much more satisfactorily. An Investment Trust Company under reliable and competent auspices will fill the need on the part of those Indian investors who do not want to gamble in shares but require a steady and safe return slightly above that realised from gilt-edged securities. It will be a great relief to those who find it now a hazardous thing to invest in mortgage of houses, private loans and petty accounts.

Prayers

T. L. Vaswani writes in *The Halpala* for November :

You complain that God does not hear prayers. Do you pray to him as to God, or only as to an "agent" who is to satisfy desires? Are your prayers pure, disinterested? Prayers of love? Love is *ahimsa* Love seeks the Good for His sake, note the sake of success or satisfaction. Believe me, God listens to prayers of love. He becomes a lover of His *bhakta*. And when God Himself is a lover, what is there He will deny?

Reforms in Afghanistan

Commenting upon the recent military, educational and other reforms in Afghanistan S. Ramaswami Chatterjee writes in (weekly) *Welfare* for November 12:

The great importance attached to military preparations cannot fail to arrest attention. King Amanullah evidently feels that, as his country and people are situated between powerful neighbours whose pacific professions cannot be relied upon, the Afghan nation must be armed *cap-a-pie*, as it were. Of course, though his name signifies the "Peace of God," he himself also may have aggressive military ambitions.

The opening of a school for teaching with the Turkish language as the medium of instruction, so that students of this school may be admitted in military schools in Turkey, may be interpreted in different ways. It may be that King Amanullah feels that the Christian nations of the West may not give Afghan Youths as good and complete a military training as they give their own young men so he must depend on Turkey for the accomplishment of his object. It may also be that there is a more complete understanding between the two Islamic powers than there can be between either of them and any Christian power or it may be that Ghazi Kamal Pasha's military schools can give a point or two to the fighting semioaries of the Christian peoples. In any case, it is significant that for obviously military purposes Turkish medium school is to be opened in Afghanistan, but not a German medium, nor a *Jagades-medium*, nor a *French-medium*, nor an English-medium school. By the by, does the adoption of the Turkish medium in one school foreshadow the gradual substitution of the Arabic script by the Latin script in Afghanistan as in Turkey?

That foreign employees in Afghanistan are to have no higher pay than Afghans doing similar work must be rightly meant among other things, to strike at the root of the inferiority complex among Asiatics and the superiority complex among Europeans. Such a thing cannot be expected to be done in British ridden India though Indians are educationally not less advanced than Afghans.

The role against military people becoming Pirs or followers of Pirs is obviously meant to prevent soldiers owing loyalty to religious fanatics as well as to the Afghan King. Such divided loyalty may lead to attempts at reactionary rebellions and revolutions under the leadership of bigoted Mullahs.

The deputation of 15 students to Baku clearly points to the existence of petroleum mines in Afghanistan. The King has been well-advised in not giving any mining concessions to foreigners. The sending of a few thousand youths of Afghanistan to Europe for employment by factories on a mere subsistence allowance, affords a striking contrast to British policy in India in this respect. India is a bigger country with a vaster population and far more immense mineral and other resources than Afghanistan. Yet in place of a thousand Afghan Youths to be employed in European factories the British Government in India have not sent even a few dozen Indian Youths to be trained in European manufacturing industries.

So that unless in the meantime India becomes free, we may expect Afghan goods to be dumped in Indian markets in the not distant future.

The intended connection of Afghanistan with foreign countries by telegraph lines reminds one of the deplorable isolation in which Nepal lives and of the crippling conservatism and superstition of the rulers of the latter country.

The present writer observed the use of wooden poles as telegraph posts in various parts of Germany during his travels in that country. King Amaquiah may also owe this idea of frugality to his visit to Germany.

The opening of a school of political rights is one more proof of the democratic ideals of the King of Afghanistan.

Foreign Students in Paris

Dr. B. K. Siddhanta, M. D. (Paris) in an article in *The Young Men of India* says:

No University in the world contains so many foreign students as are in the Paris University—the Sorbonne. There are various reasons as to why so many foreign students are drawn to Paris. Firstly, the world-wide reputation of Sorbonne—its traditions and its opportunities attract students from every corner of the globe. Secondly, living is cheaper in Paris than any other well-known universities in America or Europe: the tourist may not think so but a student knows so from experience. Thirdly, along with the courses of study in the University, a foreign student sometimes finds opportunities whereby he can earn money—thereby enabling him to live independently. Let us discuss these points in detail.

But he points out that there is a paucity of Indian students there:

In fact, we, Indians, are apt to overlook the value of education in the Continent. To us, British diplomas hold much of charm, because the Government of India naturally gives preference to British degrees. In our country (India) some people have the belief that the continent of Europe (British Isles excepted) is not a fit place for study. The name of Paris brings much of comment from many an Indian guardian: they think that Paris is a land of enjoyment and not a place for study. We do not know how this crazy idea came to be deep-rooted amongst ourselves—those who have not visited the famous University—Sorbonne. True, Paris is a place of enjoyment as is the case with every other big city in Europe—Berlin, London and so on. But those who want to enjoy life will do so everywhere: there is no reason why he should abstain in London or Boston or New York. But those who want to study will find here in Paris more of opportunities and facilities in comparison with other countries. There is another reason why our students do not like the idea of studying in the Continent: that is they are faced with the language difficulty. To an average European student, this language difficulty is overcome to a great extent, because almost every country, French is a second language. As we have said, one

astounded to find so many foreign students in Paris. I am in a position to give our readers an idea about the presence of the foreign element in the Faculty of Medicine because of close association with it for the last three years and a half. There are about 5,000 students in it of which 52 per cent are foreigners. Most of the students come from Roumania, Poland, Czechoslovakia and South America. There are good many students from Canada also. But it is a pity there are only 17 students from India in the Faculty of Medicine—a department which has got the reputation of being one of the best in the world.

Students and Politics

The Educational Review for September writes:

The subject of Students and Politics has often given rise to controversy in the educational world of India. Time was when European educational authorities, devoid of any sympathy with Indian political aspirations, used to throw up their hands in horror at the slightest exhibition of interest in politics on the part of the young men of India. On many an occasion, the intolerant attitude of some bureaucratic Principal resulted in the severe punishment of innocent young men misled by political exuberance into demonstrations of some kind or other considered to be inconsistent with academic life. While it is hardly possible for a really good student, while at College, to spend much of his time in politics and while it is also desirable that active participation in politics should be allowed only to those who are sufficiently mature in understanding, there is no denying the fact that the alumni of Universities must take an intelligent interest in the events which are happening round them, especially when they are fraught with serious consequences for the future of their motherland. We are glad to find that such a keen and radical political enthusiast as Pandit Motilal Nehru, addressing the students of Allahabad the other day, gave the right advice in the matter and warned young men against wasting their time in the distractions of politics, without paying sufficient attention to their legitimate work at the University. Pandit Motilal said that he would not advise students to identify themselves with any particular party. But he did not mean thereby that they should have nothing to do with politics. He did not advise them to take an active part in politics, but he appealed to them to study closely social and political problems, so that in later years, they could work for the advancement of the country with some knowledge of the questions awaiting solution. We would like to commend these words not merely to educational authorities but to students all over India.

The Danger of Meat-eating

We find in *The Oriental Watchman and Herald* for November:

"...tarianism is not a mere or of cultish observance.

the heart. Administer justice according to the ways of every religion. Avoid especially the sacrifice of the cow by which thou canst capture the hearts of the people of India, and subjects of the country may be bound up with royal obligations.

"Do not ruin the temples and shrines of any community which is obeying the Laws of Government. Administer justice in such a manner that the King be pleased with the subjects and the subjects with the King. The cause of Islam can be promoted by the weapons of obligations rather than by the sword of tyranny.

"Overlook the differences of the Shias and Sunnis, else the weakness of Islam is manifest.

"And let the subjects of different beliefs be harmonised in conformity with the four elements of which the human body is harmoniously composed, so that the body of kingdom be free from different diseases. The memoirs of Timur, the Master of Conjunction, should always be before thine eyes, so that thou mayest become experienced in the affairs of administration."

1st Jamadi ul Awwal, 935 A. H.

The Bengal Medical Act

The *Calcutta Medical Journal* for October observes editorially,

The declared object of the Government of Bengal in amending the Bengal Medical Act (1914) was to enhance the representative character of the Bengal Council of Medical Registration by extending the franchise to the medical colleges affiliated to the University, medical schools permanently affiliated to the State Medical Faculty, School of Tropical Medicine and Railway Board and at the same time not to make it too unwieldy by reducing the number of nominated members and representatives of the medical profession. The Council as contemplated in the amending Bill would have been composed of 18 members, 11 of whom were likely to be officials and 7 non-officials including 5 representatives of the registered practitioners. Consequently the section dealing with the constitution of the Council evoked much criticism from the press and the public.

The Bill, however, has been passed into an Act. The Journal is of opinion:

The immediate net result of the passage of the Bengal Medical (Amendment) Bill, 1928 is the formation of the Bengal Council of Medical Registration by 23 members, of whom 9 are likely to be officials and 14 non-officials. But within a year or so, 4 more Government Medical Schools will come into existence and the total number will then be increased to 27, 13 of them will be officials and 14 non-officials. The non-officials will be formed by one representative each of the Faculty of Medicine, the Calcutta University, the Carmichael Medical College, Belgachia, the Calcutta Medical School, the National Medical Institute, and the Bankura Medical School; 4

representatives of the graduates and licentiates in Medicine and Surgery of the University of Calcutta; 2 representatives of the practitioners who are qualified to be registered under the Medical Acts and 3 representatives of the practitioners with registrable qualifications other than the previous.

One duty next is to send the right sort of representatives to the Council. In electing them we should see that we are selecting men who will not be influenced by official favour or frown—men who will be able to assert the rights and privileges of their constituencies. There are other non-official institutions which are teaching medical subjects but are not yet recognized and there are numerous outdoor dispensaries and hospitals with wealth of clinical materials in Calcutta, if the authorities of these combine and the clinical materials available are pooled together, they can more than satisfy all the requirements for affiliation.

The Brass and Bell-Metal Industry of Orissa

In an informative paper read at the Co-operators' Day (published in *Federation Gazette*) Mr S. C. Ghosh gives an account of the above industry—the principal cottage industry of Orissa. Says the writer:

At present there are three principal Bell-metal Societies in Orissa. But I regret to say that they are not working quite to our satisfaction.

There are a few more working successfully though not under co-operative organisations. The principal difficulties with the former group are enumerated by the writer viz.

At the outset I must frankly admit that the Brass-metal and Bell-metal Workers as a class are very conservative in their nature. For the above reasons tangible results are only obtained after a long time, and that when our patience is entirely wearied out, and in most cases even after that. Secondly these *Karigars* have no idea of the Division of Labour. Thirdly, necessity is this that one manufacturer or *Bidhance* is capable of producing one or two kinds of goods only and not all. They do not attempt even at newer ones. Fourthly, the major portion of the producers being under the clutches of the *Malojans* are throwing every possible obstacles in the path of our progress.

The writer concludes—

Our motto is largest sale, small profit and satisfied customers. Pure Bell-metal wares, I emphatically say, are not available elsewhere in the market and they pay in the long run, as they are not of ordinary stuff.

Dr. Fosdick on Trial Marriage

Writing in the *American Magazine* Dr. Fosdick admits that in America, among certain sections, there is a revolt against old-fashioned family life. He does not believe that the solution of the resulting problem is to be achieved through what is called trial marriage—through the substitution of the 'ideals' and customs of trial marriage for old marital ideas and customs. Of his own opinion, Dr. Fosdick writes:—

Personally, I do not for a moment believe that the American people in the long run will consent to that exchange. If they do consent to it, the degeneration of American civilization will come on apace. For the attitudes and actions involved in trial marriage are, first, psychologically disruptive to the individual and, second, socially ruinous to the nation.

The psychological aspect of the matter is primary. Nature has been at work a long time on the sex-problem, and we can not by any swift, slick changes outwit what nature has had in mind. To-day an immense amount of cheap thought and talk is going the rounds, of novels, dramas, movies, magazines, and conversations, to the general effect that sex is an imperious urge towards personal pleasure in general and bodily gratification in particular.

The plain fact, however, is that from nature's standpoint sex is only a lure to get two people to love each other deeply enough and long enough to bring up children. What nature wants is children, and because nature always makes attractive the road to the goal she seeks she has allured men and women into family life by pleasant paths. What she was getting at, however, was not the pleasure of the path, but the goal of the children, anybody and who makes it his principle of action to steal the gratification of nature's lure without fulfilling nature's purpose is committing a psychological theft on which nature wreaks inevitable vengeance.

The whipper-snappers in psychology may speak to the contrary; the seers tell the truth.

Trial marriage, therefore, in its ordinarily accepted meaning, is psychologically a truncated, arrested, balked experience. It means emotional repression and disruption. Some people assume that because the idea is new it is an advance. As well assume that being killed by an airplane or going to war with poison gas is an advance.

Nature is too old at this sex-game to be so easily circumvented. And what she signifies by the game and intends to get out of it is clear.

The complete sex-experience means falling in love, learning the secret of staying in love, mastering the art of growing up in love, enlarging the love-life into a family of children, until within the green cusp of a physical relation grow the flower and fruit of a spiritual union.

According to Dr. Fosdick, Mark Twain said out of his own experience: "No man and woman really know what perfect love is until they have been married a quarter of a century"

Dr. Fosdick continues:—

To-day loose conceptions of marriage as largely consisting in bodily gratification are defended in popular minds by a supposed psychological law to the effect that the sex-instinct must not be suppressed, but expressed. To let yourself go, this teaching says, to do as you please, to give your emotions gapway, abandon yourself and have your fling—this is the law of a healthy sex-life. In consequence of this supposed psychological doctrine, we have wild talk among our young people about the value of promiscuous experimentation during youth, and among our older people about marriage being a temporary arrangement for mutual gratification.

As a matter of fact, this idea that the sex-instinct must not be controlled, and when other interests make it wise, suppress, is psychological nonsense.

Consider the matter with reference to other instincts. We have, for example, the instinct of self-preservation. It is fundamental. If instincts must not be repressed, that of all others must be respected. But if with your wife and children you should be in a shipwreck and, your instinct of self-preservation becoming dominant and imperious, you should crowd into a life-boat and leave your wife and children behind and be saved while they drowned, how would you explain the matter to your friends? Would you say, I have just been reading a book on the new psychology—I felt that if I repress my instinct of self-preservation I would be in danger of serious mental derangement? You would not get off by any such method from being an outlaw and a pariah.

Most of the cheap, popular talk about the danger of repressing instincts is nonsense. The fact is that we repress instincts or, better yet, sublimate them, every hour of our lives, or else we would be in an asylum or a jail. The psychological law of life is not to say to any instinct, Do as you please! but out of all our instincts to build a personality. At the beginning each one of us is a mess. 'I'm not a man, but a mob,' says a character in one of H. G. Wells's stories. *Exc*

one of us must start as a mob of unorganized instincts, and the law of successfully living is to build a personality, until all the instincts—self-preservation, pugnacity, sex, and the rest—become driving power in a mental and spiritual engine, integrated, unified, purposeful, and going somewhere. That is not enacted moral law; that is discovered law."

Dr. Fosdick says that the real psychiatrists, like Doctor Hadfield, see this thing clearly.

Dr. Hadfield, we are told, teaches that in the course of evolution we have long since outgrown the absolute sway of the polygamous impulse, and have come over into the real, if partial, sway of the monogamous impulse. And continues Dr. Fosdick:

So far as enacted law is concerned, therefore, the endeavor must be to encourage, so far as law can help in the matter, this normal, healthy, monogamous relationship. I have emphasized the psychological importance of monogamy to the participants in the marriage. Of course the social significance of monogamy to the children and, therefore, to the nation is obvious. Nature, during the course of evolution, prolonged the infancy of the human child until the family became a biological necessity. The child's long dependence makes sustained paternal and maternal care indispensable, and from this prolonged mutual relationship came all our finest moral qualities.

Human virtue was created out of the family, and human virtue will perish with the family. There are no substitutes for parents.

This is the society at large has in the matter, therefore, is tremendous, and whatever the State's laws can do to encourage monogamy should be done.

The only solution of the problem, if there is such a thing, lies at the marriage end. Let us get clearly in our minds that in revolting from obsolete fashions in the ancient family we must not revolt to trial marriage. Let us see distinctly that the monogamous relationship is the only psychologically complete, emotionally satisfactory, ethically serviceable and socially productive form of marriage. Let us get this truth clearly in our minds, and make it clear to our children. Then let this corollary be taught: that marriage is the most serious decision that men and women can face and that, therefore, it is 'not to be entered into unadvisedly or lightly; but reverently, discreetly, advisedly, soberly, and in the fear of God.'

Bathing in Polluted Waters

In Calcutta and in some other big cities the river water is polluted horribly. Yet thousands bathe in such water. The danger of bathing in such filthy waters will be clear from the following extract from the *New York American*:-

In a conference recently between Dr. Harris and Dr. Charles F. Pabst, it was developed that in addition to the many internal diseases which the filthy waters carried, there were many serious and

painful skin diseases against which the public should be warned. Dr. Pabst, an authority on this phase of the menace, is a city physician and chief attending dermatologist of the Greenpoint Hospital.

Following their talk it was said that physicians and surgeons would not be astonished to see an epidemic of furuncles or boils, abscesses, and other inflammatory diseases of the skin and blood stream. It was said that these are quite likely to be contracted by bathers in the condemned waters, where the subject has slight cuts or abrasions.

These abrasions, it was shown, need not be pronounced, but might merely be the result of chafing by a woolen bathing suit in order to give the bacilli a point of entry.

Eve specialists have pointed out, too, that these waters present the constant peril of pink-eye and all forms of conjunctivitis, some of which could conceivably result in permanent injury to the eye, or even total blindness.

Perhaps the most prevalent aftermath of bathing in water containing sewage, it was said at the Health Department, is that of middle-ear infection, often leading to mastoiditis, abscesses, ear-drum infections, and often deafness, especially where the eustachian tubes become involved.

Respiratory diseases also play their part in the lives of bathers who ignore the Health Department warnings. At the department it was said that 'colds,' which bathers imagine they contract from staying around too long in swimming suits, really are contracted from the organisms in the filthy waters.

Many cases of pneumonia have been traced directly to this source, as have cases of tonsillitis, bronchitis, pharyngitis, and all of the common nose and throat ills.

Swallowing these waters, it was declared might easily lead to disturbances of the digestive tract not from the writer itself, but from the dangerous bacilli they contain and might easily be a predisposing factor of appendicitis.

Great Britain and Egypt

In the course of an article on Britain and Egypt, Mr. Arthur Ponsonby writes in the *Contemporary Review*:-

Criticism is always easier than construction. In the Egyptian question, which year by year becomes further obscured by tresh complications, a solution is far from easy to define. Extreme Nationalist opinion which the Wafd has inherited from Zakiul may not be so hopelessly uncompromising as is generally supposed. It is not so much British proposals as British eventual intentions of which they are suspicious. They are persuaded that it is not the fixed intention of Great Britain to relax completely at any date a controlling hand which must deprive Egypt of absolute autonomy. Take the crucial question of the British garrison. There can be little doubt that the immediate evacuation of every British soldier from Egyptian soil within a month would neither be demanded nor accepted by the great body of majority opinion in Egypt. Not only do they fear the autocratic ambitions of King Fuad but they have learned some

Absolute theism cannot overlook the following difficulties. All reality may be personal, but, if constituted of discordant elements, then endangers the unity of God. The evil, error, and ignorance of the finite is carried up into the Infinite, thus impugning the goodness, truth, and knowledge of God. The parts are equivalent to the Whole, thus leaving uncertainty as to what after all is God. The Whole is identical with the part; if so, why not call the part the whole and avoid the unnecessary and gratuitous assumption of an Absolute beyond empirical demonstration?

Royce has his answer for each of these difficulties.

For each of these difficulties Royce has his answer. All concrete, active, living unity is a unity of contrast, so that the contradictory elements in God contribute to the rich variety and wealth of meaning in his life. The evil and error which enter God's experience are necessary to his complete knowledge of all facts, but do not impugn his goodness and truth, for he overcomes ignorance and error with his larger insight, and renounces evil by triumphing over it in his victorious goodness. The parts are futile and defeated in and of themselves; it is only by union with the Whole that they find meaning. God is the Whole that saves the parts by organizing them into perfect life. The Whole may be identical with the part only in a self-representative system, which is to say that the Whole of God is present in every meaning or expression which he manifests in the part. The Absolute is no gratuitous assumption, for every partial view of reality falls into contradiction and only the Absolute explains.

From this it is evident that Royce can neither be waved aside at the first cry of pantheist, nor readily disposed of by the traditional arguments brought against monism. For the monism of Royce is laid out upon personalistic lines, and while the absolute nature of it may lead us to suspect an eventual falling into pantheistic difficulties, the way to such difficulties must be demonstrated, not taken for granted. Distinctions of value are the property of Personality, and to that extent his internal transcendence may be effective. What becomes of material things and finite beings is another question beyond the limits of this inquiry. It may appear that the finite difficulty is the vulnerable point in Royce's philosophy. But as for the Infinite, we are led by this investigation to conclude that the God of Royce may justly be called theistic.

Capitalism and Religious "Isms".

What Kemper Fullerton writes of Calvinism and Capitalism in the same Review applies equally aptly to other religious creeds. The writer asks:—

And what chance has the Church in a world dominated by a huge and rapidly increasing population which needs subsistence, and by a profit-motive which seeks to make gain out of this need? These two economic factors in their interaction led to the imperialistic expansion which went on throughout the nineteenth century and

resulted in the Great War of the twentieth century, but which has not yet run out its politically devastating course, for American imperialism has just begun its rake's progress. Do the churches realize the situation with which they are confronted? In proportion as they are educated, they have surrendered their dogmatic supports. In proportion as they represent the prosperous middle classes, they have more and more abandoned the heroism of the ethical and religious discipline which once gave them a real spiritual authority, and have adopted in its place a this-worldly orientation largely acquiescing in the domination of the present business formulation of life, consecrated as this is by its association with religion, and they seek to solve their consciences by the adoption of a social-service ideal which too often means a further rationalization of religion in a new form and a dilettante dabbling in the economic and political problems of the times. The situation is probably the most serious the church has faced in its entire history. It is so serious because it is so hard to realize it, for the church no longer feels itself outside the world as it did in its struggle with the Roman Empire, but is itself an organic part of the vast complex which we call modern civilization. Being a part of this civilization, it seems to have lost the power objectively to analyse it. It does not realize that when, in a profoundly religious interest, it adopted the conception of 'calling' within the secular life, it helped, quite unconsciously, to pave the way for its own almost complete secularization.

Religious bodies undertaking social service work, require money, which capitalists give them. This dependence on the propertied classes deprives them to some extent of rebuking vicious luxury, vice, sin and wickedness, and consequently of spiritual authority. What is the remedy?

China's New Industrialism

Writing in *The China Journal* for October, Mr. Arthur De C. Sowerby speaks of a significant change in the industrial outlook of China viz "a desire for the co-operation of foreigners with Chinese in the industrial rehabilitation and development of China after all these years of chaos and strife." The writer says:

Though the Chinese have gone far in the last few decades in following Western business and industrial methods, they are experiencing considerable difficulty in adjusting themselves to all the changes involved; while they naturally lack the background and experience possessed by such countries as Great Britain, whose vast wealth and world-wide interests have been built up by a long period of close application of and adherence to business and commercial principles.

Thus Chinese investors and promoters of industrial and other enterprises have suffered severe losses, sometimes through the dishonesty of rascally managers, at others through mistakes

and errors in judgment, on the part either of their managers or of their technical experts or advisors as the outcome of inexperience.

For this and other reasons Chinese investors have become shy of putting their money into concerns, industrial or otherwise, wholly sponsored by their fellow countrymen, and for sometime past have either kept their money tied up in the foreign banks in the foreign concessions and treaty ports or have invested it abroad.

The Chinese owners of big industries which have failed to attain the success hoped for are approaching foreign groups, in some cases going so far as to ask the latter to take over the entire management of their concerns and to invest the capital necessary to put them on a sound paying basis; and on the other hand, the representatives of the government are doing much the same in regard to big national concerns; while Chinese investors, large and small, are refusing to put any money whatsoever into concerns that are not at least under part control of foreigners of sound reputation and proved ability.

Now that China is master of her own house, she can buy the service of the foreigners at her own terms.

There is no loss of "face" or infringement of Chinese sovereign rights involved in such transactions, for the simple reason that in every case the ownership of the industry concerned remains with the Chinese, the foreigners and their capital merely being employed by the latter.

The writer, however, wants some guarantee from the Chinese Government that the lives and interests of the foreigners who are going as 'guests' will be safeguarded.

At Rammohun Roy's Tomb

The Inquirer (October, 13) gives us an account of the annual gathering at the Raja's tomb, at Bristol:—

The annual service at the tomb of Rajah Rammohun Roy, Arno's Vale, Bristol was held a week ago, a number of Indian visitors who had come down from London having been welcomed by the Lord Mayor and Sheriffs each in the day at the Council House. In the party were included Sir Abbas and Lady Baig, Mr. and Mrs. N. C. Sen, Mr. G. S. Dutt (Indian Civil Service) and Major and Mrs. Das, all members of the Brahma Samaj. They laid wreaths and floral tributes on the tomb and a service of reconsecration was conducted by Mr. N. C. Sen. Afterwards there were addresses by the Rev. Dr. Tudor Jones and the more prominent Indian representatives.

Dr. Tudor Jones said that was the thirteenth occasion he had had the privilege of being there on September 27, but they never had such a large gathering as they had that day. Bristol people had responded well to do honour to the memory of one of the greatest Indians who had ever lived.

They had testimony that some of the Indian gentlemen present remembered the accounts of Bristol from their earliest childhood. From their

cradle they had been told what a marvellous city Bristol was, and what endeared it most to them was the fact that Rajah Rammohun Roy had lived here for some time and passed away at Stapleton. The Rajah loved Bristol and came here at the invitation of that very great woman, Mary Carpenter, who ran ragged and industrial schools for boys and girls in this country. She was interested in the peoples of India and visited the country, which meant a great undertaking in those days.

They were there to give a very cordial welcome to their Indian friends. India was an important part of the British Empire, and it was hoped that the dispute between that country and England would soon be settled and that they would walk together hand in hand for the benefit of the whole world. That was their wish, and they asked their friends to carry it back to the peoples of India.

Mr. G. S. Dutt I. C. S. replied to the address and Mr. N. C. Sen thanked the Rev. Tudor Jones for the care he had taken of the shrine of the Raja.

Tuberculosis

The Inquirer (October 20) informs us:

About thirty medical officers of the Canadian Tuberculosis Association are attending the annual conference of the National Association for the Prevention of Tuberculosis here in London. The Canadian Association is evidently a very active force, and has affiliated to it every anti-tuberculosis committee in Canada. The deaths from tuberculosis have been greatly reduced in recent years, but the following figures tell their own tale as to the difference between town and country life from the point of view of resistance to this disease. In Canada 55 per cent of the people live on 54 per cent of the land area and contribute only 40 per cent of the annual deaths from tuberculosis, or 57 per 100,000. The rest of the population contribute 60 per cent of the yearly tuberculosis deaths or 104 per 100,000.

It would be interesting to compare the Indian figures of mortality from tuberculosis, which have been increasing rapidly, and more interesting to know what steps are being taken to check that.

Russian Justice

Light is thrown by Daniel Harris in *The Lantern* on the Russian judicial system, which has patience with human misconduct, but is ruthless against any offence however trivial against the state. The chief prosecuting officer of the Soviet Government M. Kryleoko elaborated to him the ethics of the system:

Prisons, were regarded as training schools for the re-education of ordinary offenders into useful citizens. The maximum sentence is ten years. The prisoners are never locked up except at night,

Absolute theism cannot overlook the following difficulties. All reality may be personal, but, if constituted of discordant elements, then endangers the unity of God. The evil, error, and ignorance of the finite is carried up into the Infinite, thus impugning the goodness, truth, and knowledge of God. The parts are equivalent to the Whole, thus leaving uncertainty as to what after all is God. The Whole is identical with the part; if so, why not call the part the whole and avoid the unnecessary and gratuitous assumption of an Absolute beyond empirical demonstration?

Royce has his answer for each of these difficulties.

For each of these difficulties Royce has his answer. All concrete, active, living unity is a unity of contrast, so that the contradictory elements in God contribute to the rich variety and wealth of meaning in his life. The evil and error which enter God's experience are necessary to his complete knowledge of all facts, but do not impugn his goodness and truth, for he overcomes ignorance and error with his larger insight, and renounces evil by triumphing over it in his victorious goodness. The parts are futile and defeated in and of themselves; it is only by union with the Whole that they find meaning. God is the Whole that saves the parts by organizing them into perfect life. The Whole may be identical with the part only in a self-representative system, which is to say that the Whole of God is present in every meaning or expression which he manifests in the part. The Absolute is no gratuitous assumption, for every partial view of reality falls into contradiction and only the Absolute explains.

From this it is evident that Royce can neither be waved aside at the first cry of pantheism, nor readily disposed of by the traditional arguments brought against monism. For the monism of Royce is laid out upon personalistic lines, and while the absolute nature of it may lead us to suspect an eventual falling into pantheistic difficulties, the way to such difficulties must be demonstrated, not taken for granted. Distinctions of value are the property of Personality, and to that extent his internal transcendence may be effective. What becomes of material things and finite beings is another question beyond the limits of this inquiry. It may appear that the finite difficulty is the vulnerable point in Royce's philosophy. But as for the Infinite, we are led by this investigation to conclude that the God of Royce may justly be called theistia.

Capitalism and Religious "Isms".

What Kemper Fullerton writes of Calvinism
Capitalism in the same Review applies
"ly apply to other religious creeds. The
iter asks:—

And what chance has the Church in a world dominated by a huge and rapidly increasing population which needs subsistence, and by a profit-motive which seeks to make gain out of this need? These two economic factors in their interaction led to the imperialistic expansion which went on throughout the nineteenth century and

resulted in the Great War of the twentieth century, but which has not yet run out its politically devastating course, for American imperialism has just begun its *race's progress*. Do the churches realize the situation with which they are confronted? In proportion as they are educated, they have surrendered their dogmatic supports. In proportion as they represent the prosperous middle classes, they have more and more abandoned the heroism of the ethical and religious discipline which once gave them a real spiritual authority, and have adopted in its place a this-worldly orientation largely acquiescing in the domination of the present business formulation of life, consecrated as this is by its association with religion, and they seek to solve their consciences by the adoption of a social-service ideal which too often means a further rationalization of religion in a new form and a dilettante dabbling in the economic and political problems of the times. The situation is probably the most serious the church has faced in its entire history. It is so serious because it is so hard to realize it, for the church no longer feels itself outside the world as it did in its struggle with the Roman Empire, but is itself an organic part of the vast complex which we call modern civilization. Being a part of this civilization, it seems to have lost the power objectively to analyse it. It does not realize that when, in a profoundly religious interest, it adopted the conception of 'calling' within the secular life, it helped, quite unconsciously, to pave the way for its own almost complete secularization.

Religious bodies undertaking social service work, require money, which capitalists give them. This dependence on the propertied classes deprives them to some extent of rebuking vicious luxury, vice, sin and wickedness, and consequently of spiritual authority. What is the remedy?

China's New Industrialism

Writing in *The China Journal* for October, Mr. Arthur De C. Sowerby speaks of a significant change in the industrial outlook of China viz. "a desire for the co-operation of foreigners with Chinese in the industrial rehabilitation and development of China after all these years of chaos and strife." The writer says:

Though the Chinese have gone far in the last few decades in following Western business and industrial methods, they are experiencing considerable difficulty in adjusting themselves to all the changes involved; while they naturally lack the background and experience possessed by such countries as Great Britain, whose vast wealth and world-wide interests have been built up by a long period of close application of and adherence to business and commercial principles.

Thus Chinese investors and promoters of industrial and other enterprises have suffered severe losses, sometimes through the dishonesty of rascally managers, at others through mistakes

and errors in judgment on the part either of their managers or of their technical experts or of advisors as the outcome of inexperience.

For this and other reasons Chinese investors have become shy of putting their money into concerns, industrial or otherwise, wholly sponsored by their fellow countrymen, and for sometime past have either kept their money tied up in the foreign banks in the foreign concessions and treaty ports or have invested it abroad.

The Chinese owners of big industries which have failed to attain the success hoped for are approaching foreign groups, in some cases going so far as to ask the latter to take over the entire management of their concerns and to invest the capital necessary to put them on a sound paying basis; and on the other hand, the representatives of the government are doing much the same in regard to big national concerns, while Chinese investors, large and small, are refusing to put any money whatsoever into concerns that are not at least under part control of foreigners of sound reputation and proved ability.

Now that China is master of her own house, she can buy the service of the foreigners at her own terms.

There is no loss of "face" or infringement of Chinese sovereign rights involved in such transactions, for the simple reason that in every case the ownership of the industry concerned remains with the Chinese, the foreigners and their capital merely being employed by the latter.

The writer, however, wants some guarantee from the Chinese Government that the lives and interests of the foreigners who are going as 'guests' will be safeguarded.

At Rammobun Roy's Tomb

The Inquirer (October, 13) gives us an account of the annual gathering at the Raja's tomb, at Bristol —

The annual service at the tomb of Rajah Rammohun Roy, Arno's Vale, Bristol was held a week ago a number of Indian visitors who had come down from London having been welcomed by the Lord Mayor and Sheriffs earlier in the day at the Council House. In the party were included Sir Abbas and Lady Baig, Mr. and Mrs. N. C. Sen, Mr. G. S. Dutt (Indian Civil Service) and Major and Mrs. Das, all members of the *Brahmo Samaj*. They laid wreaths and floral tributes on the tomb and a service of reconsecration was conducted by Mr. N. C. Sen. Afterwards there were addresses by the Rev. Dr. Tudor Jones and the more prominent Indian representatives.

Dr. Tudor Jones said that was the thirteenth occasion he had had the privilege of being there on September 27, but they never had such a large gathering as they had that day. Bristol people had responded well to do honour to the memory of one of the greatest Indians who had ever lived.

They had testimony that some of the Indian gentlemen present remembered the accounts of Bristol from their earliest childhood. From their

cradle they had been told what a marvellous city Bristol was, and what endeared it most to them was the fact that Rajah Rammohun Roy had lived here for some time and passed away at Stapleton. The Rajah loved Bristol and came here at the invitation of that very great woman, Mary Carpenter, who ran ragged and industrial schools for boys and girls in this country. She was interested in the peoples of India and visited the country, which meant a great undertaking in those days.

They were there to give a very cordial welcome to their Indian friends India was an important part of the British Empire, and it was hoped that the dispute between that country and England would soon be settled and that they would walk together hand in hand for the benefit of the whole world. That was their wish, and they asked their friends to carry it back to the peoples of India.

Mr. G. S. Dutt I. C. S. replied to the address and Mr. N. C. Sen thanked the Rev. Tudor Jones for the care he had taken of the shrine of the Raja.

Tuberculosis

The Inquirer (October 20) informs us :

About thirty medical officers of the Canadian Tuberculosis Association are attending the annual conference of the National Association for the Prevention of Tuberculosis here in London. The Canadian Association is evidently a very active force, and has affiliated to it every anti-tuberculosis committee in Canada. The deaths from tuberculosis have been greatly reduced in recent years, but the following figures tell their own tale as to the difference between town and country life from the point of view of resistance to this disease. In Canada 55 per cent of the people live on 54 per cent of the land area and contribute only 40 per cent of the annual deaths from tuberculosis, or 57 per 100,000. The rest of the population contribute 60 per cent of the yearly tuberculosis deaths or 104 per 100,000.

It would be interesting to compare the Indian figures of mortality from tuberculosis, which have been increasing rapidly, and more interesting to know what steps are being taken to check that.

are taught to read and write and encouraged to learn a trade, may take vacations from prison to visit their families and are released on parole as soon as practicable. But the treatment of political offenders is entirely different. Counter-revolution (which includes any opposition to the Communist Party) smuggling (in defiance of the Government monopoly on foreign trade), stealing public funds, sabotaging in industry—anything remotely construable as an attack on the present regime—any of these may be punished with death. More than once he used the phrase, ".....Lenn has written..." and there was a ring of actual pride in his quiet voice as he told us that he had secured the death-penalty, only the day before, for a clerk in the Gosbank (State Bank) who had been caught "lending" 200,000 roubles of state money to private parties.

Mr. Harris witnesses a sitting of the highest tribunal, and as he leaves, he tells us:

We meditated a bit, on that Matter of the transgressing bank-clerk.....Death for embezzlement!

Krylenko is a pious man.
His god is called LENIN.

Fascist Inquisition

Barbaric in its brutality and revolting in its crudity, is the Fascist Inquisition which sits in judgment over 6,000 anti-Fascist prisoners in Italy, and which Henri Barbusse denounces in *The Lantern* in a petition 'in the name of outraged humanity.' Appeals M. Barbusse:

We ask that the whole truth be told as to the tortures already denounced and in all those cases where death was caused by torture as with Gastone Sozzi, Agostina Sanvito, Priola and probably of Ruote (although we still hope that he may have survived).

That an international investigation committee visit the prisons and the islands of exile where approximately 6,000 political prisoners are kept.

The tortures to make prisoners 'talk' are, writes Mr. Barbusse:

Besides the stabbing with sticks filled at the points with powdered lead, beside the fist blows with iron gloves, which are used in all police stations, we have information that the following methods are used upon political prisoners "to make them talk."

1. Blows drawing blood (the cases of Trieste and Monteleone already denounced in the press.)

2. The use of boiling water in which the prisoners' hands are held to extort confessions through physical pain. (Cases of Milan and Brescia.)

3. Starvation, total darkness and blows used alternately (this system was first used in Brescia and later was adopted in all Fascist prisons.)

4. Injections of chemical substances in order to create a state of madness and obtain "information" from the prisoner during his delirium.

5. Pricking the testicles with pins until serious inflammation has begun. (Brescia and Genoa.)

6. In some instances tying the testicles with chains or ropes regulating the pain by a steadily increasing pressure. (Rome, Naples and Genoa.)

7. Thrusting pins deep under the nails. (Turin, Genoa, Milan.)

8. Eneemas of a solution of iodine causing very painful blisters in the intestines. (Perugia.)

9. Engraving the tongue with knives.

10. Pulling out the hair of the pubis. (As in Monteleone and in Milan with Miss Lina Morandotti, sent to a clinic insane from the pain.)

11. Even making use of insects, as in Florence where to secure "confessions" from political prisoners a black beetle under a glass is kept on the victims three and four hours until he "talks."

Mussolini has given Italy on enduring government, strength and stability and prestige: but if half of the charges levelled against his Party be true, he can claim everything except freeing Italian governmental system from mediæval barbarity.

The Ghazi and Turkey's Future

Under the Caption 'The Turkish Mirror, 1928,' Mr. W. E. D. Allen thus speculates on the future of Turkey without the Ghazi's personal magnetism in *The Asiatic Review*:

The future in Turkey depends obviously on two questions: To what extent is the regime and policy of the "Ghazi" a personal regime and a personal policy? and are the Turks, or rather, is the political mechanism of the Popular Party, capable of maintaining the form of his regime and the spirit of his policy after his disappearance from politics, which in the ordinary course of human affairs, is eventually inevitable?

The "Ghazi's" policy is in many ways sound: unadventurous and non-committal foreign policy the amelioration of the condition of the peasants, State-aided economic development, and increased facilities for education. But the bureaucratic spirit of the Turkish regime fails to encourage real development of private enterprise within the country, and actually discourages foreign enterprise—a serious matter, in a long view, for a country so poor in capital resources as Turkey. Further, a virulent anti-religious policy and an unnecessarily compulsory strain in the introduction of social innovations tends to estrange large sections of the more stable if less active sections of the population.

A Page from the Presidential Campaign of America

The Presidential campaign taxed the resources of all propagandists in America. The following from *The Nation* gives an instance of how to tackle an enemy pronouncement ably and without vileness,

WHAT HOOVER SAID

An accurate survey of the Department of Labor showed that even including the usual winter seasonal unemployment, about 1,800,000 employees were out of work as contrasted with five to six million in 1921.

THE FACTS

Ethelbert Stewart, Commissioner of Labor Statistics, reported on March 24 1923 (see *Monthly Labor Review* of the Department of Labor for April, 1923 page 26), an estimate of the shrinkage in the number of employed workers between 1925 and 1923 as 1,800,000. *The figure was not an estimate of unemployment; no account was taken of the number of unemployed in 1923.* The Labor Bureau, Inc. estimates the unemployment this year at about 4,000,000.

The foreword to the report of the President's Conference on Unemployment, signed by Herbert Hoover, refers to "four to five million unemployed as a result of the business depression of that year." This conference met in September, 1921. It appointed a subcommittee of experts to report on the number of unemployed. Their estimate, as contained in the official record says: "It is highly improbable, taking all occupations into account, that more than 3,500,000 persons now remain unemployed in the sense that they desire and are unable to find work suited to their capacities."

Party and Purity

The 'Solid South' is said to have cracked in the last Presidential election of America principally because of the Democratic candidate, Al Smith's Tammany connection. In trying to clear his position more by an apology than by solid arguments, the editor of *The New Republic*, a supporter of Al Smith, discusses the question of party and purity:—

No doubt all politicians who cooperate with party organizations are open to criticism on this score by independent or socialist voters. Parties are organized and operated to win and to exercise political power, and to that end their leaders are frequently obliged to assume partial responsibility for behavior on the part of their party colleagues which in itself may be indefensible and which they would have liked to change. Socialists, independents, purists, and members of hopelessly minor parties can criticize "regular politicians" for their complicity in these doubtful practices with some force, but they should remember one mitigating condition. If they themselves exercise political power in a democracy by means of an organized party, they would act in somewhat the same way or injure their party as an organ of government. In dealing with the sins and errors of their associates, they would be forced in the interest of party welfare to moderate their zeal for purity and reform. It is only fair to add in Al Smith's case that, since he has been one of the leaders of Tammany Hall, has

not served as the silent accomplice of any corruption so flagrant and offensive as that which Herbert Hoover overlooked as the colleague in the late Mr. Harding's Cabinet of Messrs. Fall and Daugherty.

English Insight

In the 'Fall Book Section' of the same date of the journal there is under above caption a discussion of the contemporary educational ideas and thoughts of England. We read:

Three forces struggle for place in English thought: science, classicism and humanism. It is the last-named, humanism, which seems to weave the central strand. And it is this humanistic quality which patently provides the best of English thought with its finer insights. Englishmen strive to bring their ideas into relation with something solidly human. This is insight to reveal the meaning of things and events in terms of their derivation from an influence upon human nature. Thus, when Professor Findlay begins his systematic work on education he attributes the conception to his German teachers, but as he proceeds it becomes clear that he has been deeply influenced by the American emphasis upon character human nature. In fact, his chief concern in the area of values derives from his insight into human limitations and aspirations. Individuality and sociality are both given data of human nature; neither the one nor the other may be used as the sole end of education. "Fellowship increases with the passage of time side by side with our inner experience of the expanding self." And "the school, when all is said, is not an appropriate venue for a new gospel; the reformer can only ask that our children should be so educated as to remain sensitive to the intimations of adventure." In Volume II, where he compares Dewey and Tagore, he comes even nearer an insight integrated through a fine and sensitive view of human nature. "No two types (Dewey and Tagore) more remote from each other could be named, yet they are united by practical experience of child-life which bridges the chasm between East and West. Tagore and Dewey also honor science and use it, but as a means to a greater end, the end being behavior in a social and spiritual so very. For both of them the meaning and purpose of life is the one thing that matters: the life they cherish is not some future field of activity or success, for which this or that subject or method may prepare, but the life that now is, that now fulfills itself, both in individual experience and in cooperation."

A New Danger

The New Republic (October 17) informs us of a new source of noise:

A new horror has been added to the miseries of metropolitan life, but, we trust, only temporarily. Recently an aeroplane has been flying over New York City, equipped with a loud-speaking device

which amplifies the human voice—or any other noise—something like a hundred million times. From the sky, singers have songs, saxophones have bleated, and slick-tongued announcers have expatiated on the merits of somebody's cigarettes. On the first trials the words spoken were almost entirely unintelligible; the air was simply filled with vast and disagreeable sounds, coming from no identifiable spot. However, the experience would have been no pleasanter, and might have been worse, for the unhappy victims below, if the machinery had worked well. If this sort of thing doesn't come under the head of unjustifiable invasion of privacy, we should like to know what does. As advertising, it may, or may not be of some value; as a nuisance, it is a great success.

The above news forms the subject of a strong but reasonable comment by Dr. Holmes in *Unity*, October 8.

That revolt against these multiplying noises of contemporary civilization is no mere outburst of hysteria on the part of neurotic invalids, is shown by a recent statement on the subject by Professor W. A. Spooner, of Oxford, England. "Civilization," he says, "has never before been confronted by such a malignant plague." Few people realize, he continues, the havoc wrought upon our physical and nervous systems by the noise to which we are constantly being subjected. Professor Spooner especially fears the injurious effects upon the growing generations, who are being exposed to assaults which no human system was ever built to sustain; there are alarming signs that many people, including engineers and scientists, we have no doubt, have become so degenerate that they actually like noise. Which brings us to Professor Spooner's suggestion that the medical section of the League of Nations take up what is now become a world problem—"the prevention and abatement of unnecessary noise"! But why wait for the League of Nations, or wander thus so far afield? Why not organize forthwith in all cities and villages militant Anti-Noise Societies which shall see to it that this hideous matter is forthwith made a matter of regulation by the public health authorities? Most noises are unnecessary. That's the starting point! Now add to this the knowledge, amply provided by enlightened physicians, that noise is ruinous to good health, to say nothing of good manners and good morals, and the battle is won.

None of us are Epicoenous; but the prospect is simply frightful.

Presidential Campaign Values

Unity (October 15.) thinks that Political Campaigns for all their bunk, are illuminating.....

a campaign is most illuminating in its indications where politicians think the people are.

It then goes to assess the value of the campaign and concludes:

If the old-party politicians in this campaign have struck no genuine note of high idealism, if they have summoned Americans to no lofty endeavor, either in their own domestic affairs or in their relations with a world that we can greatly serve if we will, we can only reflect soberly that it is their business to appeal to us where we are and the issues that they emphasize indicate pretty clearly where they think we are. If they are right, clearly we have a long way to travel before we shall have a state of opinion that seems likely to justify any party in presenting great issues with any hope of success. Yet things are after all not quite so sordid as they have been; there are some traces of awakening life. It is a time for thoughtful men to realize that the process of popular education is of more importance in American politics at the present time than is the attempt to get quick "results" by electing this or that man with his camp followers.

Buddism in West

Messenger of the East reproduces a letter from a group of western Buddhists who call themselves 'Caucasian Buddhists', in which they say:

"It is time that western people understood that there is nothing alien or even characteristically Oriental in the Buddhist philosophy of life. There is nothing that is incompatible with the highest ideals of western civilization and much that would exert a redeeming influence upon the gross materialism of the age if it could be rightly applied. In England and in the continent of Europe there has been in recent years a re-awakening of interest in Buddhism, and many lodges have been formed and temples built among the white populations.

Much has been made locally of the fact that we who joined the Buddhist Brotherhood here in Honolulu were Caucasians. In this connection it might be well to point out that fact that Buddhism is the only great religion that is distinctively Aryan having originated in India, the starting point from which our own Indo-European branch of the Caucasian or white race spread westward into Europe. It is more directly and intimately the religion of our own race than any of the offshoots of Semitic origin that have been grafted with the paganism of the early Mediterranean tribes!

By SUKHAMAYA MITRA

Illustrated by Haripada Ray

FIRST SCENE

THIS thing Urge is a highly troublesome thing. Man's success in every matter of importance depends on this Urge; again, all failures also are traceable to this Urge. If one desires to earn fame by explaining a complex affair, one has to drag out the Urge that is at the root of it and present it to the world. On the other hand, if one wishes to hoodwink people regarding something it is necessary for the Urge behind it to be suitably camouflaged or twisted previous to its exhibition. As an example of the peculiar nature of Urge, we may look at this creation which, we are told, is the result of God's creative Urge, and, next, at the death or end of all created things, which we learn is due to God's destructive Urge. The same Urge that brings success in love leads to bankruptcy in business and the Urge that makes a man a good family man earns for him undying shame by forcing him to desert his fellows in time of battle. If we intend to give a rational interpretation of the rise of the Swaraj Party or of the fall of the Moderates we need not dive in the depths of Socio-political Urges; if, on the other hand, we feel it necessary to hush up the truth about something, we need only manipulate some Urge into a suitable shape in order to achieve that end. In fact, this Urge is at once the source of all enlightenment and the cause of all mystery; the

basis of all success as well as of all failure; true in regard to all things and false. In its contradictoriness, complexity and potency, this Urge is almost divine. We bow down to this Attributeless Urge and begin our story.

It was daybreak. I had barely had my first sip and bite of my tea and biscuit when I was startled by a sudden outburst of heavy gunfire nearby. Then followed the din of rifles and the noise made by murder-mad soldiery and their dying victims. I was scared to death and my tea went the wrong way into my lungs. Gasping and choking in a fit of cough, I somehow managed to go up to my bed, get hold of the quilt and blankets, wrap them round my body and dive under the bedstead. Then I fainted.

When I regained consciousness it was not quite dark. I wondered if it was evening. With great effort I shook my stiffened limbs into sense and rolled out from the place of safety. I saw that nothing had been touched. The tea and biscuits were standing as I had left them. There was a great silence outside. The gentle friction of brushes and brooms, against the curb, and the bumping of the springless wheels of the scavenger trucks were the only variations to an universal stillness. I humped out of the room and stood on the balcony, which was a faultless Indo-Aryan construction in ferro-concrete. I saw it was the semi-darkness that precedes

diffusing the red rays of the sun of a coming renaissance or was it the red of a "rejuvenated" passion which the setting sun of the West imbibed from grafted "monkey glands"?

There was fear in my heart and curiosity in my mind.

The latter won and I left the balcony to investigate matters on the road even if it did endanger my life. I passed down the marble stairway, along the corridor painted up after the cave frescoes of Ajanta, through the carved wooden doors, which resembled the doors of Tibetan temples, and at last reached the pavement in front of the house. The first sounds that accosted my ears were the rough friction of a broom and a har from a song of Rabindranath sung in a passionate, low, tenor voice.

We have got up early today

To meet the first flowers of the morning.

I thought, good heavens! Who could sing such a song keeping time with a sweeper's broom? What further complex was this out of the Freudian museum? Rhyming filth with flowers. What was the complex Urge that could make possible such an impossibility?

The song came nearer and nearer. The broom rubbed against the curb in faultless

Kavali. I wondered if the sweeper fellow had not, owing to bad health, sent this morning a fair substitute to perform his duties. That would effectively explain this strange juxtaposition of art and sanitation.

But when I saw the operator of the broom, the imaginary romasco that I was building up with so much effort, vanished in a moment. A well-got-up youth, in up-to-date lingo and hair-cut was plying the broom—the flowers of his imagination were defying the odours connected with his employment. I was struck dumb with astonishment. The youth carefully collected some filth on an iron tray and deposited

surprise—not awe. A faint suggestion of red in the east and the soft wet caress of the morning dew that lay on the railing round the edge of the balcony. But what was that! A blood-red banner was hanging from the flag-staff of the nearby treasury buildings, rippling coolly in the morning breeze as if in defiance of the red rising sun and throwing out a challenge to the four winds! Only yesterday the tricolour Charlie ensign of Mahatma Gandhi was crooning out messages of non-violence, dignity of labour, boycott of monster factories and what not from the self-same flag-staff, and what was this that I saw to-day! Was it

the same in the nearby wheel-barrow—all with the air of performing a religious ceremony. Then he sang.

We have got what we wanted
And that's why we sing.

I could not restrain myself any longer and said: "I say, can you hear me? Could't you get a better surrounding for the practice of Rabiindranath's songs! Is that why you are looking for 'the first flowers of the morning,' dressed up as an amateur sweeper, in the sewage of the city?"

The young man turned his head slightly towards me in an unbroken and easy sweep and said, "Comrade, the spiritual perfume that one finds in the fatigue born of honest labour is far better than anything that the rose gardens of fourteenth century *Begum Mahals* could give."

I said, "Sir, whatever a person does out of love, yields pleasure and pleasure is spiritual perfume; but what was that form of endearment and address which you just now applied to me? It did not quite enter my head."

The youth smiled softly and said, "Friend! I called you Comrade, i. e., a dear friend. All over the world wherever the son of man is labouring to earn his food and wiping the sweat of hardship off his forehead with work-hardened hands, a flower hitherto unknown is blooming—it is the flower of comradeship, it has the scent of co-operation in its soul, it is coloured with the wondrous colours of friendship and love, consisting of a million

petals, each separate and distinctive, but all adding equally to the fullest beauty and glory of its being. That is to say, that the flower is composed of the labour of countless workers in different fields of work, all sharing equally the honour of contributing a necessary part to the whole."

I was suddenly overpowered with an unknown Urge, which rapidly grew stronger and stronger in my heart. The sayings of Rousseau, Tolstoy, Marx, Kropotkin, Lenin and others began to assume shape and flit past my dazzled eyes in a crowded pageantry. The immortal ideal of equality in labour

began to draw me irresistibly to its sacrificial altar. The ideal of the meditating Buddha, which through endless centuries has been showing my legion ancestors the road to *Nirvana* through the annihilation of *Karma* or work and Salvation for universal humanity in *Nirvana*, and Union in Salvation; that Buddha suddenly lost his serenity and inaction and rushed out, as it were, with shovel, scythe and hammer to correct his past mistakes. As if man after conquering the stupor of opium was looking for newer ways of death in a mad orgy of alcohol. The frozen blood

in the veins of humanity suddenly thawed and rose in a tumultuous flood. Maddened with an enthusiasm which I little understood, I cried out, "You have well-spoken, friend, well spoken! But how could you tight such a roaring fire in the frost-coated heart of Mother India?"

The young man answered, "Don't you know. We have had a revolution in India yesterday morning. The whole of India has passed into the possession of workers in exchange of the labours performed by them. We have won everywhere. We, who have been dying a slow death tasting over centuries due to consumption of unearned incomes, we have all had to undergo a socio-surgical operation yesterday—some of us have successfully got rid of our ancient malady, yet others have been marked, but the Patient Succumbed' and passed out into the great beyond carrying with them the stigma of their own worthlessness. Had you been

sleeping all this while, Comrade, that you have not heard of these momentous happenings?"

I answered in a shy voice, "No, not exactly sleeping; but I have been in a faint." The Youth said, "Must do my eight hours a day. I have lost full ten minutes. So long then, Comrade..." Speechlessly I stood gazing at a buffalo cart. Its driver was a literary sort of a young man. It struck me that although there was some similarity between driving the pen in the thought-crowded highways of literature and driving a pair of semi-wild buffaloes in a crowded thoroughfare, there was, yet, a great difference. It was the same Urge, only differently expressed.

The driver of the buffalo-cart, as if reading my thoughts, said, "Yes comrade, the glory that is associated with the squeezing of the buffalo's toil is great. Compared to it the glory of composing an "Experiment with Truth," a "Gitanjali," a "Hamlet" or a "Ghosts", is like a candle placed by the moon. The work-Urge is superior to the art-Urge, as the flight of the honey-bee is on a higher plane than the pleasure-guided movements of the butterfly. Beware of stagnation. It will coagulate the cream of your character. Stir it continuously—the character, I mean; churn the milk of life in the churner of constant action; it is only then that the butter of salvation will be entirely yours."

I was charmed. The fellow drove buffaloes, but what dexterity with metaphors! We do want work. It is only due to activeness that the Himalayas were less glorious than the goats that roam their slopes, the hands of man excelled his stomach, the torchhead opened itself to the inroads of the eyes, bed-bugs dominated the bed and street dogs had complete freedom of the streets. It was again for activeness that diseases transcended health, sin 'merit' and limbs the soul. The whole solar system, the entire creation was emphatically exhorting men to rush, at any rate, after their own shadows, to turn endlessly on their economic axis, walk, run, print their foot-steps here, there and everywhere on the breast of time and space, conquer, make everything their own;—my head began to reel.

Here I was seated, as it were, in the hub of a great, active, eruptive, evolving, overcharching creation; passing my time entirely in Royal Auction Bridge! I bowed my head and turned homewards.

In the world of action,atonement for sins is seldom subjective; it hurls itself with pagan violence on the head of sinners as a solid external reality. I left the highways of the revolution-stricken city and went home. An inward Urge made me see everything red—even the crows perched upon the Telephone wires appeared red. In a bygone-day, the Urge of the colour festival *Holi* had turned the whole universe red in the eye of the dancing *Brayavasi* people. Once more history repeated itself and we saw the world go red under the Urge of the Russian labour-festival.

When I reached home I received a rude shock. On my doorway squatted a hatted Englishman baking his *roti* (bread) on a portable open fire *chulli* (ovoo). Seeing that I was attempting to enter the house, he asked me what I wanted. I told him that I was the owner of the house and wanted to enter my house. He asked me in a surprised tone, "And what sort of a thing is an 'Owner'?" I got annoyed and questioned him back, "Who are you that you are cooking your food on my threshold?" Before he could answer a further infliction appeared at the door. An extremely unheaven person belching noisily in memory of a freshly finished meal. I completely lost my temper this time and cried, "Who the devil are you, may I know? And what are you doing, pray, in my house?"

The fellow seemed astonished. He said, "Houso? Do houses ever belong to anybody?"

I said, "Stop your attempts at witticism. By what right are you taking such liberties in my house?"

The man laughed out. Turning to the Englishman, he enquired, "Is the man mad?"

The Englishman now explained matters to me. According to the new laws, houses and other property no longer belonged to individuals. They existed for the use of all Workers. He who worked the hardest got for his use the best dwellings. The phenomenally noshaveo and hairy fellow was a workman in the nearby mill and the Englishman was an engineer in the same place. As the former's duties entailed the lifting of heavy loads and the latter had to tax his muscles less, the engineer had been given the doorway to live in, while the hairy fellow possessed the rest of the house.

I asked the Englishman in consternation. "And what about me?"

They both asked me at once, "What do you do?"

I replied that I read, wrote and lectured. The unshaven person enthusiastically suggested, "That need not worry you. You can dust and sweep and be generally useful here. There will be no lack of food. You will also be given sleeping room."

I was gratified and was going to refuse the generous offer when the Englishman pointed out to me that it would be better for me to work; for, otherwise the State would arrange things for me in such a way as would hardly be less fatiguing for my uninitiated muscles. I, therefore, joined up.

In the morning I arrange for the breakfast of Sir Untempt. After breakfast he goes out for a drive in the motor car which belonged formerly to the Mill manager and now to the State. The engineer drives the car. I take the opportunity to go into the library that was once mine and clean up and rearrange the corner where Sir Untempt has had his morning *chillum* (pipe) enthroned on "my" rarest limited editions. I pick up and wipe carefully each separate volume like some slave mother of ancient Greece secretly caressing her children in the absence of her master. Alas, Equality! It is only for you that the Psalms of David have become the Comrades of the Nautical Almanack. Good thing David is dead or perhaps, he would have been operating the "Lino" in a newspaper office. The cave

freecoes of Ajanta are to-day the equals of the dreams in half-tone which inspire precocious school boys. O Equality, where wouldst you finally lead mankind!

Every evening on his return from the mill my master takes a short nap cuddled up comfortably on my writing table, until I call him to stampede sonorously through his dinner. The fellow can't stop his hysterical laughter when he sees the paintings of the great masters. The best music on the gramophone makes him yawn from the ceiling to the door mat. The English fellow says he will improve in taste with training. I say, "yes, but then he will no longer be able to lift the heaviest loads."

The days pass in sorrow. I wonder and worry when again the wheel of Ilmo will move downwards after reaching the apex of progress.

CONCLUSION

My friend said, "Yes, you haven't written it quite so badly. It is almost as abstract as truth. But the attitude of the 'hero' of your story towards Communism is quite different in the two scenes. How do you explain it?"

I said, "The Urge is the same in both the scenes. In the first, it is projected upon things detached from the Self and in the second it dwells entirely on the Self. Radicalism and conservatism are merely the two aspects of man's appreciation of strange realities. One records a positive and the other a negative reaction. That is the only difference." My friend said, "Bravo!"

By BENARASIDAS CHATURVEDI

The future of Indian Population in Kenya

Mr. J. B. Paodya, the proprietor of the Kenya Daily Mail of Mombasa has, at my request, prepared the following statement for publication in the Indian papers. The question raised by Mr. Pandya is an important one and deserves serious consideration at the hands of the Indian leaders as well as the Government of India:—

It is generally felt that in Kenya South African conditions are being copied and in the near future South African history will be repeated in Kenya in the form of disabilities suffered by Indians. There is still time to avert this danger. It is a fact that a large number of Indians in Kenya are intelligent, self-respecting, and patriotic, and given equal opportunities for advancement would be equal to any other immigrant race in Kenya.

It cannot be denied that the East Coast of Africa is geographically more suited as a natural outlet for millions of Indians next door, and no one can deny that if India had Dominion Status this country would have been by this time predominantly an Indian Colony. Apart from this even if equal opportunities were offered to Indians in Kenya they would have by this time far advanced as regards settlement on land. Settlement of Indians would have been greatly to the benefit of the sons of the soil since in their case it would not have been necessary to reserve any portion of land exclusively for any race. There is a great difference in Indian settlement on land as compared with that of Europeans. Indians would develop small areas with their own labour leaving the natives to develop their own land. European settlement is on a capitalist scale

and in addition to land it requires the natives to work as labourers on the plantations.

One of the first things the British Government did was to reserve, for the exclusive use of the Europeans, the best part of the country known as the Highlands in Kenya. It was not a question of race or color as regards reservation of the Highlands since side by side with European farms there are native reserves for native agriculture. It was the political inferiority of Indians in India which allowed the British Government to heap this insult on India depriving these citizens of the British Empire from having equal rights of settlement in a British Colony which was not already settled by white men.

It has not yet been seriously recognised that although today Indians are performing a good service as middlemen in trade and commerce it would be very difficult for them to maintain that position for a long period. They would be between two grinding mills namely those of poor whites and educated Africans and as rightly pointed out by Mr. R. B. Ewbank, a member of the Government of India deputation to Kenya, in his Kisumu speech, the position of Indians in Kenya will be more difficult in future and can only be maintained as at present by better education.

I would go further and say that it is doubtful if even the best education could maintain the position of Indians in this country. Where merits and abilities are not recognised and where a man is given chances in life by his color, it is difficult to prosper with education only. It is a common thing to-day that a young European coming straight from a school is put over an old and experienced Indian in private and Government service, and whatever his qualifications, an

Indian cannot aspire to have an officer's grade in Railway or Government service. Their hold on service in this country is only for few years. As poor whites and educated Africans come forward Indians will have to disappear from these services in due course. Even supposing they still maintain their present position it would not reflect creditably on general standing of Indians in the country. Their position as subordinates could hardly be a matter of pride to the Indian community in Kenya or in India.

The only line at present open to Indians and to any extent developed therefore for an independent living, is trade and it must be unfortunately acknowledged that even here signs are not encouraging. Leaders and self-respecting citizens could only come from the class or population having independent means of living and however smart and intelligent a clerk may be, as long as he is in subordinate position in service he cannot come out as the equal of members of other races. Unfortunately in Kenya a large number of business men do not know English and even after coming to Kenya their general improvement has been very slow. They have not yet realised that in business methods competition is not the last word: organisation, spirit of service, and application of modern business methods count for a great deal. On account of these conditions it is difficult for an educated man of ordinary abilities to be successful in business and in the result one finds very few educated business men in Kenya. But trade also as far as the Highlands are concerned is only temporarily in the hands of Indians. Natives are getting ready to take up trade in the reserves and will probably ultimately drive out Indians from small shop-keeping while owing to the predominant European population in the Highlands large business there would pass in European hands. Therefore, it is only a question of time when it will be very difficult for Indians to stay in the Highlands. Unless conditions change, in Lowlands also the same thing same would follow.

The only salvation, therefore, of Indians in Kenya is settlement on land in suitable areas. The following resolution was passed by the last Congress session at Nairobi in December 1927.

RESOLUTION

Whereas in the opinion of this Congress one of the most important factors of perman-

ent settlement in Kenya and Tanganyika can only be achieved by land settlement, this Congress resolves that the Government of India be requested to depute an officer to enquire into and report on,—

1. The availability of land for Indian settlement in any part of Kenya and Tanganyika.
2. The fertility and usefulness of such land.
3. A scheme of land settlement by a number of families assisted by the Government of India.
4. Other matters in general affecting permanent settlement of Indians in Kenya and Tanganyika.

The resolution speaks for itself. That there are such areas is proved by the success of the colony of Indians in the Kibos area and at Mahoroni; and there may well be very extensive areas elsewhere in the country including the Coast where Indian agriculturists could successfully establish themselves adding much to the productivity and prosperity of the country and disposing for ever the fable that is still used and believed that the Indian is only parasitic and incapable of becoming a real colonist. It would be difficult also for the most ardent exclusivist to maintain the sanctity of the Highlands were the capacity, zeal and ability of the Indian agriculturists actually demonstrated. If after careful investigation it is found that in the lowlands there are no areas suitable for Indian settlement a strong case would be made out for giving a portion of the Highlands for settlement by Indians. In the first instance, the proposal in the resolution enables the Government of India to convince the local Government and the Colonial Office that there are Indian agriculturists in the motherland who would come to Kenya and it invites a demand from India which would mean that it is the duty of the Government of Kenya to undertake this task and to encourage Indian settlement in the interests of the country as is done in Europe by the publicity office. But from past records it is established that the local Government has ignored this subject altogether. The Government of India, therefore, should direct their attention to this most important question and the Indian leaders in Kenya should also make this their main programme for constructive work for many years to come. It may be

argued that local Government being unsympathetic even the land settlement would not help and perhaps would be used as a reason for further hardships, the reply is obvious that whatever difficulties may be created the very fact that Indians can be settled on land and can become producing factor of great importance the local Government also out of necessity will have to change their attitude. The position of Indians would then be unassailable and they will have to be considered as a real force in the country.

A great political crisis for Kenya Indians is approaching. European settlers are demanding a step towards self-Government namely an elected European majority in Kenya legislative council. The present position of Indians even under Colonial Office control is bad enough, it would be worse under settlers' regime and the Kenya Indians are united in trying to frustrate the efforts of European settlers for this elected European majority.

Common Franchise is made again a principal plank in their fight. It cannot be denied that it would solve racial problems and that it would soften racial bitterness, but the very name of Common Franchise is unacceptable to Europeans in Kenya. There is no doubt that if they would examine it without prejudice they would find it to their advantage even regarding their seats in the Council.

Indians in Kenya are maintaining their fight against heavy odds but until India is strong enough to maintain her dignity as an equal partner in the British Empire not in name and loss but in practice and profit; the lot of Indians outside India cannot improve as it should. The status of Indians in India must first be improved before others who are now rolling them and their brothers could agree to recognise them as friends and equals. There is much in this argument and once the question is settled in India the Kenya Indians would then obtain what they deserve and would secure equal opportunity and equal treatment with other subjects of His Majesty.

But it does not, therefore, follow that they should wait until such a thing happens. They must carry on with all their might to establish themselves on a better footing in this country and the best way they could successfully obtain this result is by settlement on land. I hope the people and the Government of India will give greater

attention to this subject than they have hitherto done and take advantage of the invaluable opportunity now offered by the appeal made by the East African Indian National Congress. It is one of the most essential and vital problems and a factor on which every other thing depends."

Mischievous propaganda against Arya Samaj in Fiji Islands

Swnmi Bhawani Dayal Sanyasi has done an act of public service by drawing the attention of the Indian public towards the attempt that is being made by certain interested persons in Fiji to create disunion among Sanatanists and Arya Samajists there. Here is an extract from the Pacific Press of Suva, Fiji Islands:—

"We have heard a great deal about the Arya Samaj recently in the newspapers, but few seem to understand the real motive of this society. They claim to be 'Hindus' and to teach the religion of Vedas, but such statements are difficult to reconcile with known facts. The Vedas are the chief of the Holy books of the Hindus, and are so venerated that they are only allowed to be read by Brahmins; for this reason their contents are largely unknown to the majority of Hindus, and therefore it is not commonly realized how far the Arya Samaj teaching differs from the Vedas. The Hindu religion has many sects—Sikhs, Kabir-panthists, Jains—and the Arya Samaj desire to be thought one of these; but once their teaching is understood such a position is logically impossible. The Arya Samajists are really the enemies of ALL religion. It really suits them to pose as Hindus whereby more effectually to undermine the faith of the unlearned."

"To all who are not Hindus it is astonishing that the true Hindus do not denounce the flagrant attempts of these atheists to pretend that they are Hindus, but this non-resistance to their most dangerous opponents is the outcome of their doctrine of 'Ahimsa.' It might seem strange that the Arya Samajists should wish to pretend to be what they are not, but for this there is a financial reason; deprived of the support of the illiterate and ignorant on whom they impose, they would be helpless to carry on their anti-religious propaganda."

The statement contains many absurd accusations against the Arya Samaj in general and we consider it our duty to condemn it wholeheartedly. It is quite possible that the Arya Samajists in Fiji may not be the best representatives of the Samaj but that is a different thing altogether. To say that the Arya Samajists are really the enemies of all religion is to utter an absolute untruth. We shall request the Editor of the Pacific Press to be more considerate in future. There is much in the Arya Samaj that will

appeal to the Christians if it is rightly understood. Let the Editor of the Pacific Press read Lala Lajpat Rai's book on Arya Samaj published by Longman & Co., and that will give him an idea of what the Arya Samaj stands for. We hold no brief for the Arya Samaj, in fact, we do not agree with several of their principles, but none who have seen their massed activities in different fields of social work can fail to admire them for their robust faith, sturdy nationalism and wonderful spirit of sacrifice. The Arya Samaj has come to stay in Fiji and there is no use creating misunderstandings against it. We have one thing to say for our Arya Samajist friends in Fiji. Let them not behave themselves in such a way as to bring a slur on the fair name of the Samaj. The policy of wild attacks on other religions must not be imported from home. Fiji can ill-afford to be a battleground for different races and religions.

The Governor of British Guiana on Indian Immigration

Sir Gordon Guggisberg, who has been appointed Governor of British Guiana, gave an interview to a representative of the Observer before he left England, in the course of which he referred to the question of Indian immigration to that Colony. Two old schemes of indentured immigration from India, he said, have proved a failure both from the point of view of populating the country and finding labour for the sugar estates. This system has been abolished, and Sir Gordon was quite sure that any future schemes must be free from the taint of indentured labour. There are at present 125,000 Indians in Guiana of whom 68 per cent were born in the Colony. Speaking of future plans, he said:—

Any scheme should be conducted on the principle of community units, each unit comprising a hundred families, consisting of a father and mother and two or three children. These should be settled on ten acre farms, part of which can be devoted to raising quick-return crops, such as rice, ground-nuts, etc., and the rest to the culture of coffee, cocoa, fruit, and other permanent products. All land belongs to the crown, and the root-principle of land settlement should be a definite opportunity for immigrants to become owners. Each settlement should have as one of its main features a system of community service, encouraged by the formation of a

settlement school, spreading its influence in much the same manner as Hampton and Tuskegee in the Southern States of America.

The scheme put forward by the Governor seems to be a good one but the Indian public cannot consider the question of sending any emigrants to British Guiana until and unless the conditions put forward in Kunwar Maharaj Singh's report are fulfilled. That is the minimum that we expect from the Government of British Guiana before taking any serious consideration of the question. In the meanwhile, we shall ask the leaders of Indian opinion in that colony to let us know what they think of the Governor's scheme. The question concerns them primarily and we must be guided by them in taking any definite decision on this subject.

Our Agent General in South Africa

Sir K. V. Reddy has been appointed the Agent of the Government of India in South Africa in place of Right Honourable Srinivas Sastry. I have already criticised the Government of India in an interview to the Free Press. Here is what the leaders of Allahabad had to say regarding this appointment—

The Government of India could not easily have made a worse selection than that of Sir K. V. Reddy to succeed Mr. Srinivas Sastry. They have developed an extraordinary capacity for doing the wrong thing and we have no hesitation in saying that they betrayed utter unimagination and lack of appreciation of the fitness of things and of the situation in South Africa in making such a highly unsatisfactory appointment. If Mr. Sastry's great work is apit by his successor the responsibility will be wholly and solely of the Government.—

The fact is that the Government of India have developed a highly reactionary attitude to all these matters and they do not attach much importance to what the leaders of public opinion in India have to say even on such subjects on which there ought to be complete co-operation between the Government of India and the Indian public. Possibly they consider it below their dignity to consult Mahatma Gandhi and Mr. C. F. Andrews on such questions in spite of the fact that the former is the greatest authority on these problems while the latter worked on them for not less than a year and a half to bring about the happy compromise in South Africa. The appointment of Sir K. V. Reddy shows that the India Government, attaches

as little importance to this office as to that of the agents to Malaya or Ceylon.

In an interview to the Associated Press Sir K. V. Reddy is reported to have asked his critics to judge him by his action and words in South Africa and not to prejudice him. The critics of Sir Reddy, as far as we know, have no personal complaint against him, and now that the appointment has been made they should gracefully offer him their help and co-operation in the difficult work that lies before him in South Africa.

A New Appointment

We read in the papers the Secretary of State for India has sanctioned the appointment of a Joint Secretary to the Education Department to devote substantial part of his time to problems of Indians overseas. Instead of creating a separate branch for this important work, as was urged by Mr G. A. Natesan, they are only appointing a special officer. It has not yet been announced who will be the occupant of this new post. Indians overseas and those who are interested in their problems will prefer a gentleman of the type of Mr. R. B. Ewbank or Sir G. L. Corbett to any third rate Indian I. C. S. As there are Europeans who can take an Indian point of view on such questions and also Indians who are worse bureaucrats than their white colleagues, we cannot swear by Indianisation in such cases.

Indians in Canada :—

Here is an extract from a speech of Honourable Mr. G. A. Natesan delivered at Ottawa during the session of the Empire Parliamentary Association :—

Perhaps it will interest you to know that there are 1200 of my countrymen in this great Dominion. One hundred of them, distributed in different parts of the country, are enjoying to-day municipal and political freedom as well as any other Canadian, and I am very proud of it. But unfortunately in one province, British Columbia, where there are as many as 1,100 of my countrymen, they are excluded from the enjoyment of the Dominion as well as the provincial franchise. I am not making a complaint of it now. I am one of those who have been associated with the public life of my country for very many years, and in my experience in politics I have learned that the best way to advance a cause is not to look too much on the past and rake up old scores. That only does serious injury to a cause. I remember that at the Imperial Conference your Prime Minister made a statement on this subject, and this statement I should like to read.

"I desire to assure you that at the earliest favourable moment the Government will be pleased to invite the consideration of your request that the natives of India resident in British Columbia be granted Dominion Franchise on conditions identical with those which govern the exercise of that right by the Canadian citizens."

I am very happy that I have been here to listen to the statements of the Hon. Minister of Immigration. In these few words I make an appeal to Canada to see that the disabilities which these people suffer are soon removed. We have been warmed by your hospitality, and let me assure you that when we return to our country, whether you set right these disabilities or not, we shall tell the people of our land how beautiful we have found your country and how well we have enjoyed your welcome. But it would fill our hearts with pride if I and some others were able to say that these disabilities which a very small number of my countrymen are now subject to in the great Dominion of Canada will soon be removed and that the vote will be given to them.

The apologetic tone of Honourable Mr. Natesan's speech is sufficient to illustrate the low position that our country occupies in the British Empire. The history of Indians in Canada is a history of prosecutions and persecutions and inspite of what Mr. Natesan said about 'raking up old scores' the Indian public will not forget the many insults that our countrymen have had to bear at the hands of the Canadian people and the Canadian government. There was a time when there were not less than 5000 Indians in Canada. - By a deliberate policy of repression and exclusion the Canadian Government has succeeded in reducing them to 1200, and out of these 1200 have not yet been given municipal or political franchise inspite of all the Imperial conferences and Empire Parliamentary Associations.

Mr. C. F. Andrews's advice to East African Indians :—

In a speech delivered at London in a meeting of Indians presided over by Dowan Bahadur Mr. Ramchandra Rao, Mr. Andrews urged that Indian settlers in Kenya, Uganda, Tanganyika and Zanzibar should work shoulder to shoulder in safeguarding and asserting the respective rights which were identical. Undoubtedly this advice of Mr. Andrews is full of practical wisdom and farsightedness. The Africans in East Africa outnumber the immigrant population in the proportion of 60 to 1 and naturally they are the rightful owners of their land. They are slowly though surely developing race consciousness and the day is not far distant when

their voice will have to be heard and they will no longer remain the dumb driven cattle as they happen to be at present. Both from the point of view of humanitarianism and statesmanship the policy of fullest co-operation with the Africans is the only sound policy that ought to be followed by our countrymen in East Africa.

An Indian Agent in Kenya ?

The Bombay correspondant of the *Kenya Daily Mail* of Mombasa writes in one of his letters to that paper :—

"I understand on a most reliable source that the Government of Kenya have asked the Government of India for the appointment of an Indian Agent in Kenya."

Is this a fact ? Some member of the Legislative Assembly should put a question in the next meeting and get a definite reply from the Government of India. It will be positively harmful to appoint any Agent in Kenya.

The East African Indian National Congress has already expressed its strong disapproval of such a step at its last session held in the presence of Kunwar Maharaj Singh and Mr. R. B. Ewbank. So far as our representatives in the Assembly are concerned this ought to be sufficient to warn them against any support to this reactionary proposal. But unfortunately most of the members of the Assembly know little about the problems of our people in East Africa and it is necessary to keep them well-informed on these questions. The Government of India is growing quite unimaginative and careless day by day and they can do anything by taking advantage of the ignorance of the members of the Assembly. Under these circumstances it is all the more unfortunate that our countrymen in East Africa have not yet realised the importance of publicity work at home. If they have an Agent thrust on their unwilling heads by the Government of India, they themselves will be, to a certain extent, responsible for it.

LALA LAJPAT RAI

By NAGENDRANATH GUPTA

AT the Allahabad session of the Indian National Congress in 1888 I saw Lala Lajpat Rai, then a very young man, distributing copies of his "Open Letter to Sir Syed Ahmed" among the delegates. At that time we were strangers. He was a pleader at Hissar, a district in South Punjab. In 1892 he came to Lahore; I was also there and we remained friends to the end.

Public life in India in those days was very different from what it is today, though even now it is a mistake to aver that politics in India is the same thing as in other countries that have their own Government. The political bodies in India mainly concerned themselves with presenting memorials and petitions to Government, and public meetings were called to protest against or criticise particular measures. In Christmas week the Indian National Congress met every year for three days, the floodgates of oratory were opened and carefully worded resolutions were passed. And then the delegates

returned home, satisfied that they had done their duty by their country.

In the Punjab the progressive movement among the educated community had found expression in the Arya Samaj and the Dayanand Anglo-Vedic College, a combination of religious, social and educational reform. The Arya Samaj and the D. A. V. College displayed an excellent organisation. The former was based on the teachings of Swami Dayanand Saraswati and revived the ancient Vedic religion superseding the later forms of the Puranic religion. The college was named after Swami Dayanand. It neither sought nor received any grant from the Punjab Government, but the organisers of the college as well as the general body of the Arya Samajists refrained from taking an active part in any political movement. The three most prominent workers for the college were Lala Hans Raj, Pandit Guru Dutt Vidyarthi and Lala Lajpat Rai. Lala Hans Raj was Honorary Principal of the

College for over twenty-five years. He accepted no salary or remuneration of any kind and maintained himself on a small allowance given to him by his elder brother Lala Mulk Raj Bhalla. Pandit Guru Dutt, an enthusiastic worker, was cut off at the early age of twenty-five. Lala Lajpat Rai was the Honorary Secretary of the College Committee for several years and at each anniversary of the Arya Samaj his eloquent and powerful appeals brought a substantial response in the shape of donations and subscriptions to the funds of the D. A. V. College.

Lala Lajpat Rai was not content to devote all his time and energy to the Arya Samaj and the college. The call of the country had stirred him from the outset. He was a constant contributor to the *Tribune*, of which I was the editor at the time, and he wrote letters on various public questions. He was not particularly strong in English at the beginning of his public career, but by constant and diligent study and his travels in Europe and America he became one of the finest writers of English in the country and unquestionably the best writer in the Punjab. As an orator he ranked among the foremost in the country and was recognised as the ablest and most effective speaker in the Legislative Assembly. Among Urdu orators he was the greatest in India in his time.

From 1893 to 1896 Lajpat Rai and I were next door neighbours outside the Lohari Gate in Lahore and a close family friendship sprang up between us. His brother, Dalpat Rai, an M. A. of the Punjab University, was appointed the first manager of the Punjab National Bank which is now the oldest and one of the soundest Indian banking concerns in the country. Soon afterwards, however, Dalpat Rai fell a victim to tuberculosis. Lajpat Rai's father and mother were perfectly healthy and his father, Lala Radha Kishen, lived to a great age, but somehow a tubercular taint ran in the family. Later in life Lajpat Rai himself suffered from glandular swellings in the neck and one of his sons died of tuberculosis. But neither domestic bereavements, nor physical suffering, nor persistent persecution deterred him for a moment from his untiring service to the country.

The Indian National Congress met for the first time at Lahore in 1893 and that decided the attitude of the Arya Samajists in the

Punjab towards the Congress. I was present at the Allahabad Congress in 1892 when it was decided to invite the Congress to the Punjab. No prominent leaders of the Arya Samaj were present. Sardar Dyal Singh Majithia was asked by telegram whether he approved the proposal and he replied that he would abide by the decision of the Punjab delegates. He would, of course, prove a tower of strength, but all the same the Punjabis present at Allahabad felt somewhat nervous. In the Subjects Committee it was suggested that propaganda work should be carried on in the Punjab to create enthusiasm for the Congress. Raja Rampal Singh of Kalakankar, Oudh, and Pandit Madan Mohan Malaviya readily offered to tour the Punjab to rouse public opinion. But no one was in a position to anticipate the decision of the Arya Samaj to which most of the educated Hindus of the Punjab belonged. No secret could be made of the fact that Sardar Dyal Singh Majithia, who was a member of the Brahmo Samaj and gave liberal contributions to various other religions and other bodies, had held himself aloof from the Arya Samaj and no deputation from that body had ever asked the Sardar for a donation. The formal invitation to the Congress to meet at Lahore in December, 1893, was offered by a pleader from Amritsar, who happened to be the oldest Punjabi present.

On our return to Lahore we started work by putting out cautious feelers to ascertain the attitude of the leaders of the Arya Samaj. The result was both surprising and gratifying. The great majority of Mahomedans had everywhere declined to join the Congress and in the Punjab this reluctance was even more marked. On the other hand, the members of the Arya Samaj readily responded to the invitation to join the Congress. Most of the members of the Reception Committee were Arya Samajists, the Secretary was a prominent member of the Arya Samaj. Lajpat Rai was not an office-bearer, but he made a profound impression by his lectures and helped actively in the collection of funds. Dadabhai Nanjaji was the President and both as regards attendance and finance the Congress was most successful. In a few years Lajpat Rai became the leading Congressman in the Punjab.

At no time in the whole length of his public career had Lala Lajpat Rai any connection with any secret organisation or revolutionary

movement. Secrecy in any form was utterly foreign to his nature. Throughout his life he was an outspoken critic and what he opposed he did so quite openly. Queen Victoria's Diamond Jubilee was celebrated in 1897. The Punjab officials and those who were led by them wanted a statue to be erected to commemorate the event. Lala Lajpat Rai proposed the founding of an orphanage and the majority of the educated classes of Lahore agreed with him. At a public meeting called to decide the form of the memorial the officials and their supporters, finding themselves in a minority, hurriedly withdrew. The statue was afterwards voted in a packed hole-and-corner meeting. Lajpat Rai established an orphanage independently with the help of public subscriptions.

By his independence Lajpat Rai made himself obnoxious to the authorities, but there was nothing against him for which he could be made liable to the law. He was a practising lawyer of the Punjab Chief Court, all his public activities were carried on in the light of day, and his writings and speeches did not come within the purview of even the very elastic law of sedition in India. The opportunity for action against him came when Sir Denzil Ibbetson was appointed Lieutenant-Governor of the Punjab. That gentleman had the reputation of being a strong man. When he was a Deputy Commissioner in the Punjab he had refused to see an Indian Statutory Civilian because the latter had the temerity to come into the presence without taking off his shoes. Shortly before his appointment as Lieutenant-Governor he had told a Punjabi visitor, "I shall look after the Babus when I come to the Punjab—the word Babus being the generic term for the educated classes throughout India. Sir Denzil Ibbetson's term of office was a very brief one, for he died of cancer in about a year, but during that period he certainly fulfilled his undertaking. At Rawalpindi there was a demonstration of peasant-proprietors in 1907 against the Land Alienation Act or something else connected with land. There was no rowdiness and no violence, but the local authorities chose to treat it as a defiance of authority. Some of the leading lawyers of Rawalpindi, men who had never taken any part in any unlawful movement and who were no longer young, sympathised with the peasants. Lala Lajpat Rai was also present at one of the demonstrations and some heated

words passed between him and the Deputy Commissioner. Lajpat Rai returned to Lahore as soon as the popular excitement had subsided. The Rawalpindi lawyers were promptly arrested and clapped in prison. They were placed on trial before a special officer who was Sessions Judge of Delhi. This happened to be Mr. Martineau, who was as judicial-minded as he was conscientious, and after a lengthy trial he acquitted all the prisoners. Mr. Martineau afterwards became a Judge of the Punjab High Court and died at Lahore some time ago.

If Lajpat Rai had been arraigned and placed in the dock along with the Rawalpindi lawyers he would, of course, have been acquitted, but even the Deputy Commissioner and District Magistrate of Rawalpindi could not think of any charge that could be preferred against the Lahore leader. Lajpat Rai had been only a visitor to Rawalpindi and though he fully agreed with the agriculturists in their grievances there was no time and no occasion for any overt action. But besides an open, and perhaps abortive trial there are other means of taking care of the Babus, whether in Bengal or the Punjab. What is the good old Bengal Regulation III for if not to supersede the devious and uncertain ways of the law? All great and good Governments should have the power to arrest and imprison without trial. Did not the Bourbons in France, the Louises and the Capets sign *lettres de cachet*, and did not the Bastille contain prisoners against whom no charges had ever been made? Did the ukases of the Great White Tsar specify the charges on which men and women were sent to Siberia and the quicksilver mines? The Tsars and the Bourbons and the Bastilles have vanished, but the Indian Regulation is still going strong. It is said that the arrest and deportation of Lajpat Rai had the full approval of Lord Morley, then Secretary of State for India. What does that signify? The Government here has only to urge that it is unsafe to let any particular person to remain at liberty and it is inexpedient to bring him to open trial and the Secretary of State, whoever he may be, must approve the action of the Government. The correspondence on the subject of Lajpat Rai's deportation will be never published and so it will be never known whether it was a case of suspicion or vindictiveness. Only one thing is certain and that is that

legal evidence can even be produced to show that he was guilty of any offence.

At Mandalay Lajpat Rai was not detained very long. If Lord Morley agreed to his deportation he did not agree to his indefinite detention. After six months he was taken back to Lahore and set at liberty. A remarkable feature of these sequestrations is the great secrecy with which they are carried out. Lajpat Rai was arrested in the afternoon but no one knew anything more until he was taken to Mandalay; when released he was left at his home at Lahore early in the morning before people were stirring out of doors. For some days thereafter there was a constant stream of visitors to Lajpat Rai's house and messages of congratulations poured in from every part of the country.

Before his deportation Lajpat Rai was a fairly well-known man, not the action of the Government made him one of the most famous men in the country and he received an ovation wherever he appeared. I was at that time at Allahabad and it was announced that he would pay a visit to that city in the course of a lecturing tour. There was a troop of Punjab cavalry stationed near the place where I was staying. One evening I met some of the cavalry-men who told me that they would go to the railway station to receive Lala Lajpat Rai, I pointed out that they might not get leave from their officers when some of them said that they did not care whether they were punished or dismissed. They only desisted from their purpose when I explained that suspicion might fall upon Lala Lajpat Rai himself, but several of them saw him at the meetings and elsewhere. Lajpat Rai came to breakfast with me and showed me the manuscript of the account he had written of his life at Mandalay. He also told me that after the treatment he had received it would be impossible for him to resume his practice as a lawyer.

At the abortive Surat Congress of 1907 Lajpat Rai tried hard to mediate between the two factions of the Congress. That movement was approaching the parting of the ways, but the issue at Surat was mainly a personal one. There had been a growing feeling in a section of the Indian National Congress that that body should adopt a bolder line of policy, and a cleavage was just averted at the Calcutta Congress of 1906. The Maharashtra slipper that was hurled on the platform at Surat and fell near the person

of Surendranath Banerjee, who took it away and preserved it in a glass case, was really intended for Sir Pherozeshah Mehta against whom the fury of the Deccan cootageet was directed. Mr. H. W. Nevieson, who was present, gave me a graphic description of what had happened when I met him at Allahabad and Surendranath Banerjee spoke to me about it more than once.

It was supposed that a reconciliation between the two wings of the Congress was effected at the Lucknow Congress of 1916, but the truce was temporary. To say that the Congress was captured by this party, or the other is a very loose account of what really happened. It was not so much a matter of party feeling as an evolution of psychology. The struggle upon which the Congress was engaged was bound to become grimmer and sterner with the passing years. The old humdrum methods led nowhere. It required a considerable flexibility and nobility of the mind to realise the change that was coming so swiftly. Lajpat Rai had given evidence of it at the Beas Congress of 1905, over which Gokhale presided, by the passion with which he swept the Congress off its feet over the partition of Bengal and endeared himself for ever to the Bengalis. The receptivity and progressiveness of Lajpat Rai's mind were amazing. To that end he was steadily growing in intellectual stature and in the fervour of patriotism. When a nation is striving to attain the status of nationhood every form of open and honest agitation is constitutional for a people seeking a constitution, though a Government may not recognise it as such. As the National Congress in India moved forward and its demands became more and more outspoken and more resolute the older and more cautious men fell out of step and dropped behind. Then came a time when the Congress and the country fell under the spell of Mr. Gandhi's magnetic personality, the intense and lofty devotion that gave all and sought nothing. His creed of passive resistance and the withdrawal of all co-operation with the Government never went beyond the slightest of gestures so far as acceptance by the country was concerned, but it revealed potentialities of which no one had ever dreamed and it drove the Government to adopt measures of desperation. There was a time when Presidents of the National Congress and leading congressmen were made Judges of High Courts and received knight-

hoods; later on, Presidents of the Congress were honoured with a sentence of imprisonment, or internment without trial. Lajpat Rai was a stalwart of the old Congress, but he stayed on to be imprisoned and elected President of the Congress after that movement had entered on a new phase.

There can scarcely be any doubt that the Punjab patriot would not have been deported to Mandalay if Sir Denzil Ibbetson had not been Lieutenant-Governor of that province at the time just as that unfortunate province would not have known the horrors of martial law nor would the tragedy of Jallianwala Bagh have been enacted if Sir Michael O'Dwyer had not been appointed Lieutenant-Governor in an evil moment. It is impossible to exaggerate the mischief that may be done by a single man in authority within his short term of office. It all depends upon his temperament and the view he takes of passing events. Men of this type are the real enemies of British rule in India and they sow the seeds of bitterness.

Lajpat Rai was not only a tireless political worker but also one of the greatest social servants of India. Whenever there was a famine, and famines are fairly numerous in this country, he was busy organising operations of relief. He was not a wealthy man but he gave away large sums of money for various objects and finally he gave away his own house in trust for the Tilak school which he had founded in Lahore. Latterly he lived in another house which he built close to the one he handed over to the trustees of the Tilak Society. As a philanthropist he was no less distinguished than as a patriot.

During his stay in America he carried on an extensive propaganda in order to give the citizens of that Republic an idea of the true state of things in India. As was his habit throughout life everything he did in America was straightforward and above-board. He was incapable of any secret intrigue or underhand transaction. In America he was highly respected and much admired for his eloquence and single-minded devotion to his country. The leaders of the Labour Party in England knew him intimately and formed a high opinion of his ability and character. His mind was perfectly well-balanced and all his varied activities were perfectly legitimate, though it is obvious that no genuine patriot in India can be a *persona grata* with the Government. When Lajpat

Rai wanted to return to India, permission to do so was refused by the British Government. Undoubtedly the Government of India and the British Ministry must have been in agreement on this subject. Thus it happened that when martial law was proclaimed in the Punjab Lajpat Rai was away in America. Had he been in Lahore he would certainly have been one of the earliest victims.

If Lajpat Rai had enemies he had friends also in England and it was owing to the efforts of the latter that the inhibition against him was withdrawn and he was permitted to return to India. Not very long afterwards he was arrested on a charge similar to that on which Mr. C. R. Das and Pandit Motilal Nehru were convicted. The enrolment of Congress volunteers had been declared unlawful and public meetings had been prohibited in some places on pain of imprisonment. But while the Bengal and Allahabad leaders were each sentenced to six months' imprisonment Lajpat Rai was sentenced to a long term and it was only when he was seriously ill and his physicians suspected incipient tuberculosis that he was set at liberty. It was this confinement in prison that finally shattered his health, never at any time very robust.

After his return from America Lajpat Rai established an Urdu paper for which he wrote a great deal and an English weekly paper, *The People*, which he edited himself. It was an admirably written paper and, though perfectly outspoken, it never gave the Punjab Government any loop-hole for any action against it. When I met him at Lahore a few months ago he told me that he had found a young Punjabi who gave excellent promise of making a very successful journalist.

Other popular leaders in India have felt the heavy hand of the present law in this country, but not one of them had such a varied experience as the Punjab leader now gone to his rest. He was deported without trial and was never told of the charges against him; he was prevented from returning to his country from a foreign land without even being told of what he was suspected; he was sentenced to a long term of imprisonment on a trumped-up charge and finally he was assaulted and injured by a European policeman absolutely without cause a few days before his death. Some of the doctors who attended him have deliberately declared

that the injuries and the subsequent shock hastened his death.

According to conservative estimates a hundred thousand people, men and women, followed the funeral cortege, the number of mourners ever increasing as the procession wound in and out of the streets of the walled city of Lahore. It it could have been possible to defer the funeral till the next day the number would have been larger for people living at some distance from Lahore were most anxious to pay their last respects to the departed leader. The authorities displayed their vigilance by holding in readiness armoured cars and armed troops by way of precaution against any untoward incident. What act of violence did they apprehend from the heavy-hearted and the slow-footed mourners?

In an incredibly short time the news of Lajpat Rai's sudden death reached the remotest corners of the whole country and every Indian place of business was instantly closed. It was a spontaneous and respectful tribute to the memory of a man who had loved and served India with a great love and a steadfast devotion. The world had a glimpse of a nation in mourning, it heard

the heart-beats of a whole nation throbbing with pain. A nation that can unite in mourning may also unite in rejoicing and in striving for the national weal.

This great-hearted son of India passed through persecution and suffering from strength to strength, from endeavour to endeavour, and his faith in the ultimate destiny of his race and the ultimate issue of the struggle for a place in the federation of nations never flagged or faltered for a moment. Intrepid, dauntless, high-souled and full of a lofty purpose he never looked back as he moved along the onward path. The debt of nature has always to be paid but death does not mean the quenching of the spirit. Death clarifies and exalts the purpose of life and the most potent voices that influence the living are the voices of the dead. Today we stand in the shadow of the Valley of Death with hearts heavy for the departed captain but he stands in the light, a luminous figure crowning the heights and beckoning to the millions of India to march forward and win in life to the goal that he has attained in death.

November 26, 1928.

In my own extensive travels in India I found it common for Englishmen in all parts (there were of course honorable exceptions) to speak of and to treat the people of the country, no matter how intelligent or well educated or of how high character they might be, distinctly as inferiors. In travelling on the railways they were compelled to occupy inferior cars by themselves. At the stations they must either remain out of doors or crowd into little rooms frequently hardly fit for cattle. I often heard them called "niggers." Not unfrequently I witnessed positively brutal treatment of them. In a large Bombay hotel I saw an English official belabor his servant unmercifully with his thick walking-stick, for some trivial offence,—his servant, a thin looking, educated native,

seemingly quite the equal of his master in intellectual ability and infinitely his superior in all the qualities of a gentleman. I saw English merchants and bankers and English Government officials, who had treated me with the utmost courtesy, turn from me to treat their Indian servants and subordinates with harshness that was shocking. Dealing with me they were gentlemen; dealing with Indians they were anything but gentlemen. I was constantly reminded of the way in which, in the days of American slavery, masters in the South (some masters) treated their slaves. Nor is all this strange; the spirit which holds a nation in subjection against its will, is the same spirit as that which holds individuals in bondage.

J. T. Sunderland in *India in Bondage: Her Right to Freedom*.

NOTES

Lajpat Rai

The sudden and unexpected death of Lala Lajpat Rai at this critical time of our national history is an irreparable loss. Among the political leaders and workers of the country he has not left his equal.

We have to make head against powerful opponents Union in our own ranks is, therefore, essentially necessary. Of course, union at any cost, union at the sacrifice of principles, superficial union, is neither wanted, nor would be of any use. But real union is possible without sacrificing fundamental principles. Lala Lajpat Rai's personality, achievements and broad national outlook fitted him to be the reconciler and unifier of parties. Though known as a champion of the Hindu community and though he had full faith in its future he did not want a Hindu Raj. In the course of his presidential address at the Calcutta session of the Hindu Mahasabha in 1923, he said :—

"There is some apprehension in the minds of a certain section of our Muslim countrymen that the Hindus are working for a Hindu Raj. It is to be deplored that some Hindus, too, should have taken to that line of argument in retaliation to the Mohammedan cry for Muslim Raj. We know that all Mohammedans do not want a Muslim Raj and we also know as a fact that the bulk of the Hindus do not want a Hindu Raj. What the latter are striving after is a National Government founded on justice to all communities, all classes and all interests. In my judgment the cry of a Hindu Raj or a Muslim Raj is purely mischievous and ought to be discouraged. I am clear in my mind that neither a Hindu Raj nor a Muslim Raj is in the realm of possibility. The correct thing for us to do is to strive for a democratic Raj in which the Hindus, the Muslims and the other communities may participate as Indians and not as followers of any particular religion."

In his "Young India" (fourth reprint, pp. 118-9), the Lala has written : "Ram Mohun Roy, the founder of the Brahmin Samaj, was the first nation-builder of Modern India." He was himself a nation-builder of the type of Ram

Mohun Roy. By this it is not to be understood that his views on all matters and his methods of work were identical with those of Ram Mohun Roy. What we mean is that, as Ram Mohun Roy's ideal of national regeneration was comprehensive, so was the Lala's. In his scheme of national revival Ram Mohun Roy did not leave out any sphere of human life and activity. His reforming zeal did not leave untouched the religious and social life of the people. Nor was he only a religious and social reformer. Education, politics, the systems of land revenue and tenure, the industries and crafts of the people, the economic condition of the country, its judicial system, journalism, vernacular literature, agriculture improvement and many other matters engaged his earnest attention. In modern India—perhaps in the entire modern world—he was the first man to feel the need of and desire fellowship and co-operation between nations and religious communities. To the full extent of his powers the Lala, too, was a reformer in all spheres of national life, and an internationalist also.

Earnestness, sincerity, courage and perseverance marked all he said and did. It was not in his nature to do lip-service to any cause which he espoused. As a son and servant of the Motherland, he placed all his material, moral, intellectual and spiritual wealth at her service. He, a son of poor parents, kept back nothing for his own personal enjoyment and advantage. Not that he was a sannyasin in outward appearance and apparel. He was a householder, he had a family, he earned money. But he was not attached to what he earned. Even when he was young and made money by following the profession of law, year after year we used to read in the papers that at the Arya Samaj anniversary celebrations he had given away all his year's savings. With his great powers of oratory, his keen intellect, literary talents

of no mean order, extensive and varied reading, methodical and businesslike habits and great energy, he could easily have amassed wealth and become one of the class of opulent men in India. But his high heart would not allow him to make money-making and hoarding the chief or main object of life. So all his life he was an open-handed giver. It was only the other day that he and his wife gave a lakh for a consumptive's home, for which he also gave about another lakh collected by himself. It is necessary to write of Lajpat Rai the giver, because it is not usual for all patriots who make eloquent speeches and compose rousing discourses to be equally noted for giving away most of what they are able to save.

Lajpat Rai was an internationalist as well as a nationalist. He did not want an isolated existence for India. He knew and felt that that was neither impossible nor good for the country. He wanted all the co-operation and fellowship of the West which India could have without sacrificing self-respect and independence.

Solid and lasting achievements stand to the credit of the Lala in the fields of religious and social reform, in politics and in the establishment of educational and political institutions, in the foundation of banking and insurance companies and in his efforts for the relief of distress caused by earthquake, famine and flood.

He suffered much for his country, but suffered bravely and cheerfully. Persecution, even unto death, had no terrors for him. For he was a man of faith. His religion gave depth and strength and consecration to his efforts, in whatever kind of work he might be engaged. The truly religious man whose religion is not confined to the profession of a creed and to some outward observances but whose whole inner and outer life is regulated by faith in the immanence of the supreme spirit and in the moral evolution of the universe—such a man has an unshakable faith in the ultimate triumph of what is right and just and true. Therefore, in that conviction he can risk all, brave all, suffer everything in his unceasing endeavours to realise his ideal.

He was an elder brother and practical helper of the depressed classes and of those who are wickedly spoken of and treated as untouchables, long before it became the political fashion to talk of their elevation,

The foundation of orphanages, too, engaged his attention. The bringing up of orphans is fundamentally humanitarian work. But national self-respect also demands that we should take care of our orphans. No self-respecting people can leave their orphans to be brought up and denationalised by foreign or indigenous proselytizers. So far as the Hindu community is concerned, its indifference to the lot of the humbler classes and of orphans and widows has all along been a source of weakness and a cause of its decrease in numbers. Lajpat Rai understood all this and adopted remedial measures.

To prevent economic drain and to build up industries, banking and insurance business should be undertaken by Indians. That was why the Lala turned his attention to these matters.

Without full knowledge of and training in politics and economics and a band of devoted workers, public life in India must remain largely synonymous with sound and fury. To put an end to such a state of things he founded the Servants of the People Society and the Tilak School of Politics.

No nation can become and remain strong, enlightened and free unless all its members, of all ranks, are educated. Hence he had a hand in the foundation and conduct of collegiate and other institutions, including primary schools for the masses.

Without joy human life cannot be complete, nor can it be strong. Lajpat Rai, therefore, felt the need of removing the dreariness of human life in India by the cultivation of music and the drama and wrote on the subject more than once.

It was only natural that he should have begun his active career as a religious and social reformer. For religion—no mean spiritual and ethical element—purifies men, strengthens them by faith in the Power that makes for righteousness and frees them from degrading superstitions; and it is such men that go to make a strong and progressive nation. Social reform is necessary to remove many of the causes of our misery and weakness and to make our women and the humbler orders of the people useful and self-respecting members of society.

—
"Izzat"

It is not generally known that Lala Lajpat Rai contributed many of his articles

to *The Modern Review* under the pen-name of "Izzat" or "Honour". The manner of his death has been quite in keeping with this name. On the day of the arrival of the Simon Commission at Lahore, in order to show unmistakably that the Indian people did not want it but hurled back the insult of the appointment of such a commission, he led the boycott procession to the railway station—he would not ask anybody to suffer any inconvenience and take any risk which he was himself not ready to suffer and take. The result was that, though the procession was entirely peaceful and its behaviour unprovocative, he and some others, were subjected to assault by European and Indian policemen. There is not the least doubt that the physical and moral shock of this humiliating assault killed the Lala before his time. The British Imperial system is responsible for his death.

In the midst of our sorrow, it is consoling to think is that, alike in life and in death, he kept pure and intact his personal and national IZZAT.

Imperialism and Lajpat Rai

We have said that it was imperialism that killed the Lala. Let us understand a little more clearly what this means.

However hard one might seek among the politicians of Britain, one would not be able to find a man like Lajpat Rai among them. None of them has done and suffered for their country what the Lala has done and suffered for his. No British politician is moved by such fine and high idealism, none stands for so much to his countrymen as the Lala did for his. Yet what did British Imperialism appear to say and do to Lajpat Rai? In effect it was this:—

"You, Lala Lajpat Rai, may be a prince among men in your own country; millions of your people may love and respect you; you may have done heaps for them in all spheres of life; you may have meant to them much more than even your achievement; born in an independent country, you might have occupied any position you liked; you may be a man of international reputation;—yet you are nothing better than a clod of earth beneath my shoes. A two-penny sergeant or a half-pence constable need not feel any hesitation to inflict on you, the beloved and honoured of your people, the utterly unprovoked and

unmerited indignity and humiliation of lathi blows. Your people may fret and fume. But I snap my fingers at them."

The People for November 22, reproduces a photograph of the martyred hero showing two scars over the region of his heart. These scars have produced stigmata on the breast of all dutiful sons and daughters of India. These can be obliterated only by freeing India. The only worthy memorial to the Lala would be the undying resolve of all sons and daughters of India to put an end to the enslaved condition of the Motherland.

The Abolition of 'Suttee'

In a highly eulogistic notice in the *Hindustan Review* of Dr. E. J. Thompson's *Suttee* (George Allen and Unwin), we find the following sentences —

He finds that the origins of Suttee go deeper than the assurance of the wife's devotion to her husband, and deeper than the selfish aggrandizement of the male. The roots lay in the Hindu theology, in the doctrine of retribution, widowhood being considered the punishment of a sinful life which could only be redeemed on the altar fire. The uprooting of this iniquitous practice in British India, the author points out, was the work, not of the Government, but of two men, Bentinck and Dalhousie.

Not having seen the book, we cannot say whether the *Hindustan Review* has correctly summarised the views and statements of the author.

It is not necessary to consult not easily accessible works on sociology and anthropology to learn that the practice of co-burial or cremation of wives with their husbands was by no means confined to the Hindus of India. Even according to so easily available a work of reference as *Chambers's Encyclopaedia* (new edition, Vol. X, p. 793), "The rite was no doubt derived from a belief common to many races at all times of the world's history, that it was well to send wives, slaves, horses, favorite weapons, etc., along with a great man into the other world, by burying them with him, burning or slaying them at his tomb." It is, therefore, unhistorical and unscientific to blame Hindu theology alone for this horrible and wicked rite.

As for apportioning the credit for the eradication of this custom, every educated Indian is expected to have at least so much historical knowledge and regard for accuracy as to supply the omission of the name of

Raja Ram Mohun Roy. Montgomery Martin, a contemporary of the Raja, who was not at all disposed to be too modest in claiming for himself the largest possible share of the credit for the abolition of *Suttee*, writes thus:—

"The efforts which I made in India (and which before I left Calcutta were successful) for the abolition of this horrid rite, by the publication of a journal in four languages, addressed to all castes of natives, is one of the most gratifying events of my life. It is justly due to the memory of the late Ram Mohun Roy to state that to his aid in conjunction with that of the noble-minded Dwarkanath Tagore and his able and estimable cousin Prasanna Coomaz Tagore, I was materially indebted for the success of my labours in 1829"—*Eastern India*, Vol. 1, p. 497. Published in London, 1883

It will suffice to quote the opinion of only one other British author, namely, that of the Rev. Dr. Macnicol. Says he:—

"If the credit of putting an end to these horrors belongs to any man," says the late Justice Hanade, "that credit must be given to Raja Ram Mohun Roy."—Macnicol's *Ram Mohun Roy* (Christian Literature Society, Madras, 1919), p. 19.

Again:—

"Had it not been that there was at that time in Ram Mohun Roy one resolute to express the better spirit of his countrymen and in Lord William Bentinck a ruler not less resolute to take action in accordance with it, this practice, revolting as it was, might have remained for many a day still further to brutalise the people and bring dishonour on the land."—Macnicol's *Ram Mohun Roy*, p. 21.

Indians should beware of "friends" like Dr. E. J. Thompson and his enlogists.

Modernizing Mohammedanism

At the instance of Mustafa Kemal Pasha, says *The Christian Century*, a commission of the faculty of theology of the University of Constantinople has reported a general plan for bringing Mohammedanism down to date and reconciling it with the scientific conceptions and the practical demands of the modern world.

"This is conceived as a part of the nationalistic movement which is transforming Turkey from 'the sick man of Europe' to a nation with adolescent vigor. In language, morals, law, and economy, the Turkish evolution draws its inspiration from science, reason and logic. In the Turkish democracy, religion, like everything else, must enter into the new era of vitality of which it has need. Religious life must be reformed, like moral and economic life, by means of scientific procedure and by the aid of reason, so that it may move forward in line with the other social

institutions and give all the results of which it is capable.' Specially, there must be attention to comfort and hygiene in the mosques. The prayers and the portions of the Koran used in services should be in Turkish. There must be a reinterpretation of the sacred book by trained men acquainted with philosophy and modern thought, for if one does not examine the contents of that book with a scientific mentality there is no means of understanding anything therein.' In brief, a comprehensive plan must be worked out 'to render our religious ceremonies conformable to hygiene, to Turkey them, to imprint upon them a certain esthetic character and to reconcile them with philosophy: By doing these things, Turkey hopes not only to make the Mohammedan religion a factor in the renaissance of Turkey but to make Turkey the educator and guide of the more backward Moslem nations."

'Re-interpretation of the sacred book' and the other processes mentioned above really mean the death of faith in the infallibility of the Koran and of orthodoxy.

The Hindu Dharma Mandal in New York

The Alliance Weekly of New York reports the foundation of a Hindu religious association in New York City under the name of the Hindu Dharma Mandal. Its objects are described in the following announcement:—

"This society shall be called Hindu Dharma Mandal, the term Hindu including, beside orthodox Hindu, Buddhist, Jain, Sikh, Brahmo and any other forms of religion that originated from Hinduism. The objects shall be to further the religious interests and cultivate the spiritual ideals of Hinduism in the West, to bring the beliefs and practices of Hinduism in its broadest conception, before the Western public, to encourage and promote mutual contact and understanding on a spiritual basis between India and the West and to meet in particular, the spiritual needs of the Hindus residing in the West. The means to be pursued for carrying out the aforesaid object shall be religious services, rites, ceremonies, lectures, demonstrations, readings, conversaciones, and other practices of Hinduism."

In reproducing this announcement the *Literary Digest* observes that missionary enterprise is not confined to Christianity. Efforts to spread in America religious principles and ideas which have originated in India have been made in the past and are still being made. Perhaps the most sustained of these efforts are those of the disciples of Paramahansa Ramakrishna, of whom Swami Vivekananda was the first and foremost to teach in America. Of members of the Brahmo Samaj P. C. Mozoomdar, Heramba Chandra Maitra, and T. L. Vaswani have lectured in America. Rahindranath

LADY BOSE

SIR JAGADIS BOSE, F. R. S.

Tagore stands by himself in a class apart. It is not known whether Lala Lajpat Rai did any preaching work in America on behalf of the Arya Samaj. Virchand Gandhi delivered some lectures there expounding the principles of Jainism.

A Hindu Chemist in the United States

Coming from India in 1912 after his graduation from Ferguson College, Dr V. R. Kokatnur entered the University of California for one year and then went to the University of Minnesota, where he completed his education and received his M. S. and Ph. D. degrees. While he was studying at Minnesota, he became research assistant in chemistry, and remained after graduation until 1917 as research and teaching assistant.

He then went to Niagara Falls, New York, as research chemist with the Mathieson

Vaman R. Kokatnur

Alkali Works. After a year with this Company he became Assistant Chief Chemist of the Vat Dyn Group with the National Aniline and Chemical Company of Buffalo, New York. In 1921 and 1922 he did special research work with the By-products

Steel Corporation of Wierton, West Virginia, and the Dupont Company of Wilmington, Delaware. Since then he has been consulting research chemist, having his business in New York City.

His researches in vat dyn process resulted in his invention of new processes of making alizarine, indigo and phenol. During the recent war, he brought out new war gases called mustard and homologues of Chlor picrin. Other processes are for benzoic acid and derivatives, organic peroxides, calcium arsenate, and soap and glycerin recovery. An interesting invention is his special chemical process for making embroidery and lace cheaply by machine. He has applied for 15 patents covering the above-mentioned and other processes, of which 6 patents have been granted.

When the American Chemical Society met in Detroit, Michigan recently, from September 3 to 10, Dr Kokatnur read a paper containing evidences to show that Cavendish and Priestly were not the first men to discover hydrogen and oxygen, but that these gases had been known to the sages of ancient India, and then he read a second paper to show that chemistry was of Aryan and not Semitic origin. After listening to the proofs he offered, members of the convention gave the author a special vote of thanks for the originality and value of his researches and agreed that his evidences were conclusive.

Unification of Oriya-speaking Tracts

A new organization has come into existence for carrying on propaganda for the unification of the Oriya-speaking tracts and their formation into one administrative unit. Its object is legitimate and laudable. The dismemberment of Orissa has been a great calamity to this home of an ancient civilization. Its different parts should be reunited at the earliest opportunity.

Recently the new organization led a procession through the streets of Cuttack, the chief town of Orissa, carrying a picture and flags.

Dr. Chi Li

Dr. Chi Li, who visited India recently, is one of the most distinguished Chinese

Unification of Orissa Procession at Cuttack

Dr. Chi Li

scholars of the present day. He was educated in Clark and Harvard Universities and took his Ph. D. degree from the latter in Anthropology. The University of Harvard has just published his work on "The Formation of the Chinese People," which for the first time gives an exhaustive account of the racial history of China. He is at present engaged in excavating the Chalcolithic sites in the province of Shansi in China, on behalf of the Smithsonian Institution of Washington, D. C. These sites are important not only in revealing a very old civilisation, but also indicating striking similarities between the ceramics found there with those of the Indus Valley, Awan, Susa and Sumeria.

Baroda Subjects In Conference

Daibar Gopal Desai, President of the recent Baroda Subjects' Conference, referred pointedly in his address to the practically absentee character of the ruler of that state. He was not blind to the fact that the

Maharaja spent so much of his time in foreign lands because of his bad health. But is it not also true that the Gaekwad's health is what it is, because of his residence abroad for the purpose of leading a life without any serious aim?

But one need not be concerned with the causes of his absenteeism. The fact is sufficiently damaging that for years past he has not devoted as much time and attention to the affairs of his state as he ought to. He should either reside for the most part in Baroda, as Mr. Desai suggests, or abdicate in favour of some one who can really do his duty.

Mrs. Sharada Mehta, the Chairman of the Reception Committee, pointed out that taxation in Baroda is heavier than in British India.

The land assessment in Baroda is 50 p. c. higher than in British India and the incidence of income-tax is still heavier. While income below Rs. 2000 is exempt from assessment to income-tax in British India, the limit in Baroda has been laid down at Rs. 750. There is a Legislative

Darbar Gopal Desai

Mrs. Sharada Mehta

Council in the State, but its powers are so limited that in Mrs. Mehta's opinion it is wrong to call it by that name. She made no secret of the fact that there was deep discontent among Baroda subjects, and suggested that the best way to meet it was by the immediate grant of responsible government. She contended that even with 20 years' working of the Compulsory Education Act, primary education had not advanced as much as it should have. We have no doubt she was speaking from knowledge when she described the condition of the Baroda peasantry in the following words :—

"The Patidar agriculturist who was once an asset of the State has been at present reduced to a condition of penury and lifelessness. He has been buried under debts. Ten years back the indebtedness of the agriculturist of Baroda was Rs. 7 crores; to-day the figure has jumped up to Rs. 10 crores."—*The Servant of India*.

"Pattinippura"

One of the most interesting amongst old time institutions is Pattinippura. It literally means 'the House of Hunger, i. e.

the place where hunger' strike and Satyagraha are to be performed *en masse*. Sites of such houses are found at Trichur, Perumanum and at Kalati, near Calakuti. A short account of this very powerful weapon of social redress cannot but be interesting.

When a local chief becomes aggressive and insolent and trespasses upon the elementary rites of the citizens, the Brahmin leaders all assemble together in a hall especially built for the purpose, where every arrangement would seem to have been complete for a grand feast. There they sit down before leaves spread out for dinner and when they are ready to perform the Pranahnti, one from amongst the aggrieved steps up and publicly announces that so and so had given them cause for grief, then he proceeds to narrate his various acts of offence and finally calls upon the assembled guests to get those wrongs redressed. Thereupon, the Brahmins, all of them, throw down the water in their hands and rise up, swearing that they will not take their food until the wrongs are avenged; and

each one sits down before his respective leaf to fast and pray.

There are, it appears, some conditions imposed upon fasters. Details, unfortunately, are not available. But one rule seems to have been in existence, namely, that the period of fasting should never exceed seven days. If the cruel despot does not turn over a new leaf before the week is out, there is yet a higher rite proscribed. They are to get ready a statue of a man, hanged to symbolise their enemy. This is invested with life by the

man-wrought evils. For divine visitations the only remedy is prayer. P.

President Southworth

President Franklin Chester Southworth, A. M., S. T. N., L.D., of Meadville Theological School, Chicago, has come to India to take part in the Brahme Samaj Centenary celebrations as a delegate of the American Unitarian Association. After graduation he became a teacher of Greek and Latin. In 1892 he was ordained minister of the First Unitarian Church in Duluth, Minn., and in 1897

Pattinippura

performance of the ceremony known as *jyapatistah* and then supposed to be hanged; and the Brahmins all leave their homes in search of a new abode.

This final rite, it is believed, is potent and powerful enough to bring instantaneous destruction on the offender and, if tradition is to be believed, he never escaped the dreadful doom thus invoked upon him.

'Pattini' or fasting, then, is the traditional means of defence that religion has put into the hands of the weak to secure themselves from the oppression of the powerful. But this weapon is to be used only as regards

Dr. Southworth

succeeded Rev. James Villa Blake as minister of the Third Unitarian Church in Chicago. From 1899-1902 he served as Secretary of the Western Unitarian Conference. Since 1902 he has been President of Meadville Theological School and Professor of Homiletics and Practical Theology. He was married

It is with considerable reluctance that we say anything here about Mr. Hirji Morris for there is no positive proof that Mr. Nariman has written what he has about him at his instigation or with his knowledge and consent. But the truth has to be told. Rabindranath Tagore had to go personally from court to court in Kathiawar to get money from the princes. If Mr. Morris accompanied him or went afterwards as his collecting agent, he ought to consider himself blessed that that fact earned for him some influence. His success—whatever it may be—was due to that fact. For obtaining money from the Parsis also, the Poet had to repeat the same process of going from door to door. But whereas the Kathiawar princes and the Nizam have parted with their money, the generous Parsis have kept their money in their own hands, have chosen their own lecturer who is to remain incognito and whose written lectures (like the Parsi money) are not to be made over to Visva-bharati! This is a peculiarly up-to-date form of giving.

Mr. Nariman boasts, "I was frankly against the Parsis making large donations to Visva-bharati." He ought to be proud that the Parsi givers have responded by patenting a process by which not-giving is made to appear like giving.

Rabindranath Tagore did not want any money from the Parsis for selfish ends or even for the general purposes of his institution. He wanted to found a University chair for study, research and teaching in connection with the ancient history, religion and culture of the Parsis. He toiled to do for them what they had not done for themselves. He has got his reward. No wonder, he should now say, "The generous Parsis did not place in my hands the money I had collected with great trouble. I make a present of it to them, I do not want it."

In the opinion of Mr. Nariman, "an institution like Santiniketan located in India cannot have all the facilities, the paraphernalia of research, such as are commanded by older universities in Europe and America." Assuming his *ipsi dixit* to be true, his argument would apply to all similar existing new research centres in India and all that may be founded hereafter, not merely to Visva-bharati. So there can be no research in these Indian institutions! Would Mr. Nariman be surprised to learn that, as published in a previous number of this Review, Prof.

Sylvia Levi during his recent visit eulogised the research work done at Visva-bharati?

Another charge against the institution is that "it lacked the innate enthusiasm which time and not money can supply." We confess we do not understand how a thing which is *innate*, that is to say, inborn or natural, can be supplied by time. But supposing Mr. Nariman's dictum has some occult meaning, no institution need be given any pecuniary help;—all should be left to starve and gather or evolve *innate* enthusiasm in the course of centuries. A child should not be given food, because as it grows through fasting it can in the course of decades become an enthusiasmist worker—enthusiasm being its innate attribute. We do not claim any credit for this profound observation;—it is merely a corollary and paraphrase of what Mr. Nariman has said.

Another alleged defect of Santiniketan is that "it lacked savrons." Of course, it being at a distance of 99 miles from Calcutta, it has not the savrons of urban universities. The atmosphere, too, of the place is not saturated with sewer gas, dust, smoke and petrol-fumes. These are great drawbacks. But possibly there are compensating advantages too. Professor Jaganath Sarkar, who is seldom, if ever, misled by patriotic bias, writes of the ancient Hindu 'forest universities' that the teachers who resided lived in their forest homes (*tapovanas*) "lived in the world, but were not of it."

They "were not lonely recluses or celibate anchorites cut off from the society of women and the duties of the family. They formed groups of house-holders, living with their wives and children, but not pursuing wealth or fame or material advancement like the ordinary men of the world."

"Thus, the ancient Hindu university, without being rigidly isolated, was kept at a safe distance from the noisy luxurious capitals and gave the purest form of physical, intellectual and moral culture possible in any early age, ..."

"These hermitages were as effectual for the promotion of knowledge and the growth of serious literature as the cathedrals of mediæval Europe but without the unnatural monachism of the latter"

"In the calm of these sylvan retreats were developed our systems of philosophy, ethics, theology and even several branches of literature proper. Witness the vivid scenes of discussion on political science and morality in the Naimisha forest, as described in the Mahabharata, Shantiparva."

"Herein lay the true springhead of the ancient civilization of the Hindus,"—*India Through the Ages*, pp. 20-21.

It is not suggested that Santiniketan is

exactly like an ancient Hindu University. What is meant is that it can be said to lack environs if the ancient sylvan retreats, which were homes of learning, can also be said to have lacked environs. They had their own environs, so has Santiniketan. If in the former lay the true spring-head of the ancient Hindu civilization, it is not impossible for the latter to furnish modern civilization in a beneficial way.

If everywhere in India, except in the dry regions of Kashmir and Nepal and some spots in Rajputana manuscripts crumble to atoms after about eight hundred years, all research Mss. libraries, situated not only in Santiniketan but everywhere else except the above-named favoured regions, should be removed therefrom to Kashmir, etc. and to Europe and America. Mr. Nariman, it seems, in his benevolent ardour against Santiniketan, proves too much. Besides, eight hundred years is not a very short period!

Another reason why Mr. Nariman is an enemy of Santiniketan is that "It could not secure its continuance after the demise of its great founder." Without assuming that Mr. Nariman's wish is father to his thought, one may say that the best way to bring about the longed-for collapse of the institution during the life-time or after the demise of its great founder, is to indulge in carping and small-minded criticism and to refrain from helping it in any way, or, what would be more effective, to help it in the way Mr. Nariman's generous Parsis have done. And yet, Mr. Nariman may rest assured, in spite of all such malicious acts of friendliness, the expected may not happen, the unexpected may happen, and Visva Bharati may continue to be a seat of learning and culture and beneficent influence long after his and our names have been buried in oblivion.

Mr. Nariman's praise of "foreign travel and touch with the foreigners" is as much an argument against Santiniketan as against all educational institutions located in India.

Mount Everest

Everest is the name given by the British to the highest peak of the Himalayas. It is the highest peak in the world. It has been named after General Sir George Everest, not because he was its dis-

coverer, but because he was a former Surveyor-General in India who organised the Trigonometrical Survey. The peak was discovered in 1852; Sir George had retired in 1843.

An account of the discovery of Mount Everest is to be found in a lecture on "Himalayan Romances," delivered at Simla by Major Kenneth Mason, and reproduced in *The Englishman* of November 12, 1928, p. 17, from the *Journal of the Society of the Arts*. The relevant passage is extracted below from that lecture:—

"It was during the computations of the north-eastern observations that a babu rushed on one morning in 1852 into the room of Sir Andrew Waugh, the successor of Sir George Everest and exclaimed, 'Sir, I have discovered the highest mountain on the earth.' He had been working out the observations taken to the distant hills. It was Sir Andrew Waugh who proposed the name Mount Everest, and no local name has ever been found for it on either the Tibetan or the Nepalese side."

This "babu" was Babu Radhanath Sikdar, a native of Calcutta, who was a well known mathematician in his day

Satish Ranjan Das

By the death of the Hon'ble Mr. S. R. Das the country has lost a really great-souled man. He was a sound lawyer and came eventually to occupy the high offices of Advocate-General of Bengal and Law Member to the Government of India. But these offices did not furnish any correct measure of the greatness of the man. His politics being of a mildly Moderate kind, it was not generally recognised that his enthusiasm for the advancement of the cause of India was as great as that of others who were known as patriots. He was a generous giver to educational institutions and societies for social and religious reform. He supported numerous poor students. As president of the Women's Protection Society, he did much to save the honour and lives of the unfortunate victims of hooliganism and to get the wicked ruffians punished. He was an ideal friend, being some times so generous as to impoverish himself. Honest, honourable and dutiful in every relation of life, it would not be easy to find his equal in these respects. Mahatma Gandhi writes in *Young India*:

Though I had little in common with the deceased in politics, I could not but recognise his

phenomenal generosity and his open-heartedness. Many do not know how this great man beguiled himself so that no worthy cause might knock in vain at his door.

Apotheosis of "Dominion Status."

The following passage occurs in an editorial article of the *Indian Daily Mail* of November 7 last :

The late Mr. C. R. Das, in a moment of inspiration, spoke of freedom within the British Commonwealth as being spiritually a higher ideal than the goal of independence. He did not explain his meaning, but it has a very full and real meaning. It is a higher spiritual ideal to transform the conditions, however adverse, in which a people finds itself into opportunities for self-realisation and self-development, than to run away from them in the hope, which may or may not be fulfilled, of lighting upon others which would be wholly different and agreeable. The "Independence" school of thought is entirely alien to the Indian temperament, which through immemorial centuries has established a tradition for continuity. The defects of the present system of administration are patent to all observers, and the *India Daily Mail* has frequently occasion to dwell on them and to insist on their rectification. But what is not so obvious to the newer generation of politicians, is the great work of emancipation which British rule has been the means of accomplishing, consciously and unconsciously. The severance of the connection which has been so fruitful of good, notwithstanding the evils which have come in its train, is not in the best interests of the country, and the assertion of the All-India Congress Committee to the contrary will find little response in the hearts of the people of India.

The speech of Mr. C. R. Das, referred to in the extract, is not before us and we do not remember what he said. Moreover, as "he did not explain his meaning," it serves no useful purpose to drag in his name. It is the Bombay paper's interpretation which has to be considered.

Indians, whose languages, religions, culture, manners and customs, complexions, etc., are in the main different from those of the British people, cannot expect to have a greater amount of freedom than is enjoyed by the white people of the Dominions, who are of British and other European descent and whose culture, complexion, religion, manners and customs and languages are identical with or similar to those of the British people. Let us see what is the political status of the Dominions and what measure of freedom they enjoy. In the new edition of *Chambers's Encyclopædia*, article "Colony," Prof. Berriedale Keith, who is an authority on the subject, writes thus about the Dominions:

In the strict legal aspect all these are colonies; their legislation may be disallowed by the crown, their laws may be overridden by imperial acts, the head of the executive government is appointed by the king on the advice of the British Government, and appeals lie from their courts to the Judicial Committee of the Privy-council. In practice they are almost autonomous; the governors-general are appointed in accordance with the wishes of the dominions; disallowance of their acts is obsolete or nearly so; the British parliament has ceased to legislate for them save with their consent; and if they desire, the right of appeal to the Privy-council would doubtless be cancelled. Save Canada, they have a wide power of constitutional alteration, though they cannot sever their connection with the British crown. The chief sign of their condition of quasi-dependence is the fact that under international law they are not, for many purposes, treated as independent states, the governors-general and ministers cannot declare war or make peace or enter into treaties except under the authority of the king, on the advice of the British government. But these restrictions are of less importance in practice than in theory, for in all important political treaties, since the Peace Conference of 1918, the Dominions (other than Newfoundland) have separate representation and their consent is obtained before ratification, while no commercial treaty since 1880 has been made binding on them without their consent, and special treaties are negotiated for them by their own representatives acting with the authority of the British government. Further, the Dominions (except Newfoundland) are distinct members of the League of Nations, side by side with the British empire as a whole, and as such members act independently of, and sometimes in opposition to, the British empire representatives. The Dominions have not the power to declare themselves neutral in any war into which Britain enters; but they may refuse any active aid, and they obviously can claim that they should participate in framing British foreign policy, so as to obviate their being involved in war without consultation and full knowledge. Effective arrangements exist under which in matters immediately and directly affecting them, the British government does not act without Dominion concurrence, but the problem of consultation on general foreign policy is not yet solved. It is complicated by the fact that the Dominions, while able to maintain internal order, are not yet prepared to undertake proportionately the same burden of defence expenditure as is borne by the United Kingdom.

It is clear from the above passage that the Dominions are freer than India but do not enjoy as much freedom of action as independent countries like U. S. A., France, Japan, Italy, Belgium, etc., do. Even the Irish Free State, though called *Free*, is not really as free as even the small independent countries of Europe, the two Americas and Asia. Dr. Keith writes in the same article :

"The status of the Free State in Ireland is essentially that of a Dominion on the model of Canada, but that status is possessed under the terms of a formal treaty of 1921 between Great

Britain and Ireland, and the terms of that treaty provide certain powers which Great Britain can exercise in respect of defence matters, and definitely limit the right of the Irish Free State to maintain naval and military forces, matters left indefinite in the case of the Dominions."

So, whatever the spiritual meaning and implications of Dominion status may be, so far as the external, concrete, material or secular aspects of Independence and Dominion status are concerned, Independence would seem to confer greater political and civic rights on people than Dominion Status.

Our Bombay contemporary holds that "it is a higher spiritual ideal to transform the conditions, however adverse, in which a people finds itself into opportunities for self-realisation and self-development, than to run away from them in the hope, which may or may not be fulfilled, of fighting upon others which would be wholly different and agreeable."

Mr. K. Natarajan, who, we presume, is responsible for these views, is an experienced publicist having personal knowledge of the political condition of India before the Montagu-Chelmsford reforms and the Morley-Minto reforms. He will admit that the political conditions before the Morley-Minto reforms were more unfavorable than those after the same reforms, and that the conditions under the Morley-Minto reforms were more adverse than those under the present Montagu-Chelmsford reforms. Nevertheless, all Indian politicians, including Mr. Natarajan perhaps, were successively dissatisfied with the *preg*-Morley-Minto regime and then with the Morley-Minto regime, when obtained. And at present these same politicians would prefer Dominion Status to the Montagu-Chelmsford reforms. It is clear, then, that the elder statesmen of India, including Mr. Natarajan, have never in actual practice followed the "higher spiritual ideal" of transforming the adverse conditions in which they found themselves "into opportunities for self-realisation and self-development." On the contrary, they have always tried (and are still trying) to run away from those adverse conditions "in the hope, which might or might not be fulfilled, of fighting upon others which would be wholly different and agreeable."

Taking the case of individuals, if a man suffers from dislocation or fracture of some bone, say, of his left leg, he does not follow the higher spiritual ideal of transforming the adverse condition of lameness into

opportunities for self-realisation and self-development. On the contrary, he calls in a surgeon in order to be able to "run away from" lameness and walk again like other normal men. Crutches cannot be spiritualised. If a man suffers from cataract in the eyes, he does not incontinently accept that condition as a divine dispensation to enable him to spend the rest of his days in meditation. On the contrary, he first strives to get cured by an operation.

The history of the world shows that in every age and clime, every dependent country has tried to be independent, and all such countries have been successful in proportion to the earnestness, persistence and wisdom of their efforts. Examples of such struggles and successes are to be found in every quarter of the globe. Perhaps the country to be free after the longest period of dependence and disorganisation is Italy. It became united and independent in the last century after fourteen hundred years of servitude.

The ideal advocated by Mr. Natarajan may be the higher spiritual ideal, but there is no example in history of any people under alien rule following this ideal. Perhaps it has been left for a certain school of politicians in India to do pioneering work in this respect.

According to "The Indian Daily Mail," "the 'Independence' school of thought is entirely alien to the Indian temperament, which, through immemorial centuries, has established a tradition for continuity". To us this appears to be a strange reading of Indian history and the Indian temperament. Continuity may be kept up either with dependence or with independence—either with indigenous rule or with alien rule. Every distinct people of the world has treated dependence as a breach of continuity in their national tradition. There is no historical evidence that the people of India has been an exception and has tried to maintain the continuity of dependence instead of treating dependence as an abnormality and trying to establish continuity with independence by becoming free. During a certain period anterior to the Christian era, parts of the north-western region of India were included in the Persian Empire. The people of that region did not try to maintain the unbroken continuity of Persian rule; that rule ended. Greeks and Bactrian Greeks invaded and for a time ruled some of these parts. This alien rule, too, was shaken off. There were successive

waves of invasion and conquest by various foreign peoples, named Sakas, Huns, Seythians, etc. They were either driven away or absorbed, and the government of the country ceased to be foreign. Coming to times nearer our own, one finds that the Moghals did not try to keep up Pathan rule, nor did the Marathas and Sikhs try to maintain the continuity of the tradition of Moghal despotism. Mr Natarajan's reading of Indian history and temperament would have been incomprehensible to Sivaji. India has been always for independence. It has been longer a self-ruling than an enslaved country. It is the baneful hypnotism of foreigner-written Imperialistic histories of India which makes us think otherwise. India has not been more subject to foreign invasion and rule than any other part of the earth equally extensive and rich in resources.

We are not blind to the improvements which have taken place in India during the British period of its history. We are aware of the evils, too. Which preponderate we need not say. It is a tenable hypothesis that at the time when India came gradually under British rule she had not the power of initiating and carrying on the process of emancipation. But times are changed. At present emancipation is going on in eastern countries, other than India, which never came under the British yoke and never had British guardians; it is going on there far more rapidly than ever in India. It is to be hoped that it is not an unspiritual ideal for us to aspire to carry on the work of national emancipation unaided by the stimulus of British *lathis*, machine guns and bombing aeroplanes.

In spite of Mr. Natarajan's dictum to the contrary, the declaration of the goal of independence does find "response in the hearts of the people of India."

If Dominion Status be more within the range of practical politics than independence, let us by all means work for the former. But in the path of human progress in any direction—religious, moral, social, educational, political, economic, literary, artistic, scientific, or mechanical—there is no terminus visiblis to the mind's eye or imagination. Why claim finality for Dominion status alone?

"British Commonwealth" a Misnomer

It may be true that the British Dominions, self-governing colonies (meaning their

white inhabitants alone) wear no handcuffs and fetters. So far as they are concerned, the British Empire may be a Commonwealth. For the remaining inhabitants under British rule, who are the vast majority, it is an empire and nothing but an empire;—to call it a commonwealth is only an attempt to gild the chains of slavery, which does not deceive any intelligent non-white man, woman or child.

Democracy means government of the people, by the people and for the people. The population of the British Empire is 450 millions in round numbers, of whom 320 millions live in India. So, even without taking into consideration the other dependent peoples in the Empire, one can see that the majority of British subjects are governed undemocratically. Therefore, the British Empire is not a democracy or commonwealth.

In what sense is it, then, British? It is the boast of the British people that their island is governed according to British principles, which, they say, are equivalent to the principles of self-rule and democracy. But we have seen that the majority of the peoples in the British Empire are not self-ruling, are not democratically governed. Therefore, so far as this majority is concerned the British Empire is subject to "un-British rule." Hence the expression "British commonwealth" is a misnomer.

In what sense, then, is the Empire or commonwealth British?

Is it to language?

About 50 millions of people in this empire speak English as their mother-tongue. But a hundred millions speak Hindi or Hindustani. Fifty millions speak Bengali.

And there are other groups speaking other languages. So, linguistically the British Empire is not British.

Is the empire, then, British, judged by the colour of the skin of its inhabitants?

Of the 450 millions of the inhabitants of the British Empire sixty millions in round numbers may be spoken of as 'white.' The non-whites are more than six times as many. The non-white Indian people alone number 320 millions. Judged by the complexion of its inhabitants, then, the British Empire is not 'British.'

Has the religion of the British people, then, given the name 'British' to the Empire?

Of the peoples of the British Empire 220 millions are Hindu, 100 millions Muhammadan, 80 millions Christian, 12 millions

Buddhist, 12 millions Animist, etc., etc. So, from the point of view of religion, the British Empire is more un-British than British, taking the British people to be Christian.

In every respect and in all respects combined it is more an Indian than a British Empire.

For only one reason can it be properly called British, it is that the British people are masters of this group of countries. Whatever may have been the origins of this mastery, it is coming more and more to be based upon physical force. Of course, strength of mind, the power of certain moral qualities, and scientific and mechanical knowledge act in subservience to and as accessories to this physical force.

Those who believe that the British Empire or Commonwealth will for ever remain one undivided entity and that it will always deserve to be called 'British,' must also believe that superiority in physical force is the only kind of superiority that counts, that such superiority is overlasting and that the British people or the white people living therein will for ever remain supreme in physical force aided by intellectual power and scientific and mechanical knowledge. Our faith is different. We believe that the majority of the 450 millions of people living in the British Empire are destined some day to be at least equal to the British or the white or the Christian minority in organisation, in physical force, in intellectual and moral qualities, and in scientific and mechanical knowledge, all combined. We do not yet clearly see how all this will come about. But that it will happen is clear as day. The Power which makes for Righteousness and Right—by whatever name called—which during the last fourteen years has created opportunities and provided means, in ways unexpected and unimagined by them, for various small countries to be independent and free, cannot be indifferent to the fate of a country so vast and great as India. But we must will to be free, resolve to be free, dare to be free, and run all risks to be free. Then as surely as day follows night, India will see the dawn of liberty.

Professor Bose's 70th Birthday

On the occasion of the 70th birthday of Sir J. C. Bose, which will be celebrated

to-day (December 1, 1926) a poem written by itabindranath Tagore will be read. Many congratulatory letters have been received from abroad. The following are taken from the daily papers:

Sir Richard Gregory, editor of "Nature", writes: "As one of many admirers of Sir J. C. Bose is all parts of the world. I offer most cordial congratulations. It has been my privilege to know Sir Jagadis Bose for more than thirty years, when he devised compact apparatus for studying the properties of electric waves, it was then clear to me and everyone, that he was a master in conceiving and manipulating delicate apparatus for the study of physical facts and principles. His remarkable achievements in this physical field were later to be extended to physiological phenomena of plant and of animal tissues. He has found that the physiological mechanism of the plant is essentially the same as that of the animal, and he has been able to lift the veil which had previously enshrouded the analogous workings of plant and animal life. By the foundation of the Bose Research Institute, Calcutta, he has provided in India a centre of scientific investigation which has a purpose and an outlook of far-reaching consequence. In common with scientific workers everywhere who are stimulated by great achievements, I delight to convey greetings to Sir Jagadis Bose upon what he has already done, and to hope that he may be sustained and encouraged to carry on his valuable work for many years yet to come."

Sir John Farmer, Professor of Botany, Imperial College of Science, writes:

"Your splendid work you have done ensures you a lasting memorial in the Temple of Fame and Science. By your wonderful apparatus you have given a new organ to those who pursue exact methods of physiological and physical investigations. Your wonderful enthusiasm and power of overcoming difficulties are an example to us all, and have helped to give you the blessings of perpetual youth. May you long continue your work and inspire the love of science in the many students who come to your great Institute."

The eminent plant-physiologist, Prof. Ooschel of Munich University, sends the following message:

"Every biologist in the whole world has read with profound admiration your important discoveries. Your work has made a deep impression not only upon the minds of specialists, but also upon all those who are interested in the intellectual and moral progress of humanity. I also send in the name of my colleagues of the botanical laboratory and the University, our most hearty congratulations on your festival day which will be celebrated not only in India but also in Europe."

Nakhla El Motel Pasha, Minister of Agriculture, Government of Egypt, has written:

"In the name of the Egyptian Government I wish you, for the progress of science and agriculture, continued success in your investigation which have filled us with wonder. I also wish continued prosperity for the Bose Institute which you have founded and which proudly bears your name."

Bernard Shaw writes:

"I wish you all happiness and many more years of splendid service to humanity."

The old students of Sir J. C. Bose Presidency College, Bangiya Sahitya Parishad, Ram Mohun Roy Library, Greater India Society, etc. will present him with addresses.

Lady Bose is a public benefactor in her own right. But on this occasion, it would be a serious omission on our part if we did not pay our respectful tribute to her wisely devotion, self-effacement and constant care, to which not a little of the success of Sir J. C. Bose's scientific career is due.

Sir J. C. Bose's Convocation Address

Sir J. C. Bose's stimulating convocation address at the Allahabad University deserves a longer notice than we are able to give it. He told his youthful audience that his work has been his true teacher, that strokes of repeated adversity have been the requisite stimulus, and that the best traditions of the past have been an abiding inspiration. He believes that, though from ancient times India has been a home of learning, "The real golden age is not in the past but in the future."

In regard to contributions in the realm of knowledge there is no doubt that by their introspective method, some of our greatest thinkers had theoretic visions of some of the modern speculations in science. But in the advancement of positive knowledge the method of experimental verification is most essential.

We can, however, claim with full justification the existence of ancient schools pursuing exact experimental methods in their investigations.

As regards political systems, he said that "on the whole, the democracy from has been found to possess many advantages on account of which it has been adopted in most countries, both in the West and in the East."

He congratulated the Allahabad University on the honour that has already been won by its departments of Physics and Chemistry. He mentioned particularly the names of Profs. Saha and Dhar, and observed:

My living faith in India's scientific possibilities has at last been fully justified, and it has come to pass that it is not any particular seat of learning but every University throughout India, that is greatly enriching the sum total of human knowledge and the pace at which this progress is being made has been acknowledged as phenomenal.

He expressed his conviction that India should and can be more self-contained in education and advancement of knowledge, thus preventing the expenditure of millions

of rupees abroad by our students in search of higher knowledge.

The words printed below were meant for the students of Allahabad, but workers and idealists in all spheres of human life can with profit lay them to heart.

Go forward then in life's great adventure! the more difficult the task, the greater is the challenge. When you have gained the vision of a purpose to which you can and must dedicate yourself wholly then the closed doors will open and the seemingly impossible will become fully attainable.

December Gatherings in Calcutta

Great preparations are being made in this city for the political, social and other gatherings which are to take place here during the latter half of the month. Those in charge of making everything ready for the sittings of the Indian National Congress and for the Exhibition to be held under its auspices are astir. There are also to be sessions of the Indian National Social Conference, the All-India Theistic Conference, the All-Indian Women's Conference, the All-India Muslim League, and many other bodies. We wish them all success.

Indian States' Subjects' Rights.

In reply to a question put by Commander Keworth in the British House of Commons, Earl Winterton said that "he was unable to accept the claim that subjects of Indian states had a right to present their case to the [Butler] committee. He added that they could publish their views through the newspapers, public meetings and otherwise. The position would be entirely different if the Committee were a commission." It is a most exasperating dictum that the princes, many, if not most, of whom were noisome parasites, had a right to be heard, but that their subjects who fed them had none. Earl Winterton's advice as to how the latter could publish their views was gratuitous and shows the motive behind it. If evidence were given before the Committee on behalf of the states' subjects, it would have to be printed along with evidence of the princes and considered in the Report, but what appears in the papers may be totally ignored.

Enquiry into Lajpat Rai's Death

LONDON, Nov. 27.

To Labor questions in the House of Commons yesterday as to whether Earl Winterton would inquire into the circumstances of the death of Lala Lajpat Rai, the Under Secretary for India replied that as at present advised Viscount Peel did not see the need to hold a further inquiry.

He might, however, say that no evidence had been produced to show that death was due to blows received on the occasion of the demonstration on October 30. The general effect of both inquiries was to establish the fact that while the police were compelled to resort to some force owing to the pressure of the crowd from the rear and consequently cause slight injury to persons in the front ranks, among whom was Lala Lajpat Rai, there was no deliberate or unprovoked assault by the police and no person was singled out for assault.

Col. Wedgwood asked if the Punjab Government expressed regret to the Lala's family owing to his death being possibly caused by blows.

Earl Winterton said that no Government, when it had to use force, was justified in apologising to anybody, and no evidence whatever was forthcoming that death was due to the action of the police. The latter used no more force than to restrain the crowd from breaking the barricades and possibly assaulting the Simon Commission.—*Reuter*

No truth-loving Indian attaches the least importance to the two official inquiries. They were simply whitewashing affairs. Lala Lajpat Rai has left it on record that there was no desire or effort on the part of the processionists to break the barricades, that the police assault was entirely unprovoked and uncalled for and that any statements to the contrary were "contemptible lies."

That any "crowd" led by Lala Lajpat Rai could possibly think of assaulting the Simon Commission is as wild and unbelievable an invention as the informants of Earl Winterton are capable of.

Alleged Tyranny over Dhoraji Prisoners in Gondal State

In the last August number of this Review a notice of a Gujarati book contained the following sentences:

"Gondal is ruled by an enlightened ruler" "Sir Bhagwatsinghji has made Gondal an ideal state." His Highness has developed the resources of his state so as to make it a model one" etc.

This has led Mr. Manishankar Trivedi, secretary to the Indian State People's Conference, to draw our attention to certain articles in the *Sourashtra* describing the treatment of some prisoners in Gondal jails. We have no space to print all the details. An extract is given below to show the nature of the allegations.

Friends of Dhoraji reduced to skeletons; Reduction of 41 and 35 pounds in weights of Ismail Balam and Isaac respectively; Haji Ali is confined to bed: Would the grinding stones of tyranny take their lives?

New startling facts, regarding the brave friends of Dhoraji, being in the grinding stones of the tyranny of Sir Bhagwat behind the Walls of Gondal Jail, are being given.

The grinding stones of the tyranny of the jail, are going on with the same speed and squeezing life out of all the seven friends of Dhoraji. They are treated in an inhuman way as if they be guilty of some worse crime than murder. Details of this treatment have been published in these columns more than once, so figures are given here showing what effect is produced on the bodies of the friends of Dhoraji as a result of all these tortures.

MERE SKELETONS.

At present, all the seven friends being long ground in the grinding stones of Sir Bhagwat's tyranny have become mere skeletons.

The Thakor Sahab of Gondal would be well advised to make a sifting enquiry into these allegations. Failing him it would be the bounden duty of the Bombay Government to institute an inquiry.

Professor Raman on Teaching Universities

In the course of his address at the Convocation of the Andhra University this year Prof C V Raman said:—

There is a feeling abroad, which is often voiced from high places, that you have only to do away with affiliating Universities and put in their places unitary and residential and teaching Universities, and that by doing so you would straight away usher in educationally, a new heaven and a new earth. Let me warn you that this is only a half-truth and a very dangerous half-truth. It is possible to have a unitary teaching and residential University which is quite as bad as any affiliating, examining and territorial University. A residential University which propagates ignorance, communalism and religious fanaticism under the guise of education, is even worse than an affiliating University which leaves its students severely alone to learn whatever they can. Whether a University is good or bad is determined entirely by the ideas and ideals that inspire its activities. No University can be great which has not men of outstanding ability as its teachers, which does not attract the ablest and most ambitious students, and does not provide its teachers and students with opportunities for the highest and most original kind of work. A University is a Republic of Learning. It needs, of course, material resources in the shape of well-equipped laboratories and workshops, libraries, lecture-halls, hostels, residences and playgrounds. But above all it needs great men as teachers. There is no tragedy more deplorable, no waste more appalling than to have huge buildings filled lavishly with books and apparatus and equipment and spacious lecture-halls and to find within them mediocre teachers and misguided students doing an inferior type of work. A tragedy of

this kind is much commoner in India than many of you realise. The essence of University work is that it meshes with the frontiers of human knowledge. You require for it men who are explorers in the unknown territories and sailors on the uncharted seas of new knowledge.

Speaking generally, Professor Raman has in this passage stated correctly the essential requirements of an ideal University. It is not clear, however, whether he considers it the special vice of affiliating universities to leave their students *severely* alone to learn whatever they can. An affiliating university may indirectly see that its students are properly taught. And it has also been stated on good authority that it would not be difficult to point out a teaching university and the teaching side of an affiliating university which leave their students *mildly* alone to learn whatever they can.

As for "a residential university which propagates ignorance, communalism and rabelious fanaticism," if any such institution exists, it certainly deserves the professor's severe condemnation. If it exists, it can be either Aligarh or Benares. Which does he mean? It would have been also good if the professor had given concrete examples of the tragedy of "mediocre teachers and misguided students doing an inferior type of work" in "huge buildings filled lavishly with books and apparatus and equipment and spacious lecture-halls."

All-India Medical Conference

The Reception Committee of the All-India Medical Conference, of which Dr. Sir Nil Ratan Sircar has been chosen to be the Chairman, are glad to inform the public that the proposal to hold a Medical Conference in Calcutta this year during the Christmas holidays, as already notified in the Press, has met with a ready response, and many medical practitioners, in independent practice as well as in service, have signified their intention to join the Conference.

It is the duty of the medical profession to guide public opinion in shaping the policy of the Medical and Public Health administrations of a country and here in India efforts to this end have been made from time to time by the Profession through Medical Conferences, Associations, Congresses and the Press.

Having regard to the fact that various important questions affecting the Public and

the Profession have recently attained great prominence, it is desirable that a large number of medical representatives from different parts of the country should meet in conference, at this time, and formulate their definite, considered views about these and other questions and also take such steps as may be necessary to give effect to their ideas.

It appears to be essential that a permanent organisation should be at once formed representing the Profession throughout India to look after all the interests of the Profession. It is expected that the members attending the proposed Conference before they disperse will take steps to form the nucleus of such an organisation whose duty it will be to focus the views and opinions of the whole profession in India and reflect them to the Public and to the State. There is no doubt a great deal of benefit will accrue to the Profession and to the Public by mutual exchange of views and ideas.

Who Discovered Pre-historic Remains at Mohen-jo-daro

It was pointed out in the last issue of this Review how Sir Arthur Keith had managed to omit in his article in the *Referee* all mention by name of the Indian archaeologists who actually discovered the pre-historic remains at Mohen-jo-daro. Professor Rakhal-das Banerji, then a Superintendent of the Archaeological Survey, at present of the Benares Hindu University, who was the first to excavate the site and make the discoveries, has contributed a profusely illustrated article on Mohen-jo-daro to the excellent fourth anniversary number of the *Calcutta Municipal Gazette*, which begins thus:—

Writing in a recent issue of "The Referee" (London), Sir Arthur Keith has summarised the results of the excavations of Mohen-jo-daro during the last four years. Mohen-jo-daro in the Larkana district of Sindh was excavated by the present writer for the first time in December, 1922. The following year Mr. Madho Swarup Vats, of the Archaeological Survey, continued the excavation at the same place. He was followed by Mr. K. N. Dikshit, of the Archaeological Survey, in 1924-25. From the beginning of the cold season of 1925-26, Sir John Marshall took direct charge of these excavations. In his article referred to above, Sir Arthur Keith has referred to me as "a prospecting officer of the Archaeological Department," who, "six years ago, arrived on the scene," and, "under the alluvial covering of the mounds, often thirty feet in height, found mouldering bricks." The real history of the discovery is given below.

Mr. Banerji says :

"There was no mound covered with alluvium at Mohen-jodaro, as Sir Arthur Keith supposes and none of us had to go thirty feet down to find 'mouldering' bricks. Incidentally I may mention that Mohen-jodaro bricks, though 5,000 years old, are very well preserved and may be used even now."

Again :—

In his article in 'The Referee' "Sir Arthur Keith makes certain misleading statements. He says, "Several trial shafts were dug and by 1921, Sir John Marshall realised that he had gained access to a lost and buried world of humanity." Systematic excavations were carried out by him at Mohen-jodaro over extensive areas in 1921-22 and by Pandit Madho Swarup Vats in 1923-24, even before the news of the discovery reached the ears of Sir John Marshall who did not know anything of Mohen-jodaro before May, 1924, and paid his first visit to that place in January or February, 1925. It is, therefore, hardly correct to describe the excavations of 1922-23 and 1923-24 as "trial shafts."

The article should be read in its entirety for other statements of facts and exposures of falsehoods and for a description of the architectural and engineering skill possessed by the people of the Indus Valley five thousand years ago.

The Ancient Hindn State

The note printed below is taken from *New India*.

The Hindu State—Dr. Beni Prasad, who has done extensive research work in Ancient Indian History, writes :

"The Hindu State was generally alive to some vital interests of the people. It encouraged agriculture and looked after irrigation. It stepped in to save the consumer from exorbitant profiteering and allowed all classes of craftsmen to land together. It cared for the means of communication and had no small share in promoting the homogeneity of culture throughout the country. The rulers often provided for the comforts of travellers and sick people and showed unshaken generosity to the poor people. The Hindu courts favored poets and scholars and endowed academies and veritable universities, which won the enthusiastic admiration of great Chinese scholars. The Hindu State succeeded in maintaining conditions favorable to the rise of systems of philosophy which still command respect, relations which, in certain aspects, touch the sublimest heights and a literature which ranks among the great literatures of the world. Sometimes the State directly took the lead in moral and religious reform. Under Asoka and Kaushika it helped to transform the higher life of India and transmitted to the Far East a gospel which still warms and illumines its spiritual life."

Anti-Indian Moves in Ceylon

Since Mr. St. Nihal Singh wrote his article on the above subject in the present number of this Review, the moves initiated in the Ceylon Legislative Council for discriminating against Indians in that Island in respect of the franchise have been defeated. According to the account we have received, the Sinhalese members (the largest single bloc), with which these moves originated, voted solidly in favour of them with one exception. The members representing the other communities, with some exceptions, however, voted against the substantive motion and amendment directed against our people, and both were lost.

An amendment imposing a literary test upon voters, without discrimination of race or religion, was, however, carried. Many of the members, including the Sinhalese belonging to the Ceylon National Congress, who had spoken in favour of adult suffrage in and out of the Council cast their ballots in support of it and it was passed by a small majority.

This measure will have the effect of preventing a large number of Ceylon Indians from getting on to the electoral registers. Some four fifths of them are estimated to be unlettered Indians who are literate in language other than English, Sinhalese and Tamil are, moreover, to be debarred and therefore, many of the Malayalis and Telugus, though literate in their own mother-tongue, will be treated as illiterate under this test. In fairness it may be added, however, that the test imposed is no other than that which obtains now, and, therefore, no new hardship has been imposed upon our people. It was felt as an injustice and complaint was made to the Donoughmore Commission, which refer to this matter in a somewhat ambiguous manner in their report.

The measure passed will prejudicially affect the Ceylonese (including the Sinhalese) too. Some two-third of them are still unlettered in this year of the Christian era. They all will be excluded from the electoral register, whereas under the Donoughmore Commission recommendation every Ceylonese male adult and every Ceylonese woman above 30 would have been enfranchised, irrespective of literacy or property qualification. The Sinhalese who have succeeded in their design of keeping a very large number of Indians off the register have, therefore, paid

a very heavy price. Their political opponents, themselves Sinhalese, say that the Sinhalese Councillors who have thus acted are reactionaries, that they do not love their own people that by keeping the vote confined to a small clique they hope to be able to preserve their own power. This statement is too sweeping to be wholly correct. Some of the members who have acted in this undemocratic manner do not deserve to be thus stigmatised, but the cap fits the others.

Greater India Society at the Oriental Conference

The *Amrita Bazar Patrika* of November 27, has published the following item of news:—

CALCUTTA ABLY REPRESENTED (Free Press of India)

Calcutta was ably represented in the Oriental Conference. Dr. Kaikdas Nag, D. Litt. (Paris) and Dr. Sumit Kumar Chatterjee, D. Litt. (London), workers of the Greater India Society, took active parts in the conference. Special mention was made of the good work done by the Society in the Presidential address and in the addresses of the sectional presidents of the History, Archaeology and Art sections. Dr. Nag the Hon. Secretary, who has already lectured before many University groups of India (Madras, Mysore, Agra, etc.) delivered a highly interesting address under the presidency of the Hon. Mr. Manoharlal, Educational Minister. The Lahore gathering included many distinguished men e.g. Mr. Woolner, the Vice-Chancellor, Hon. Justice Tek Chand, Mr. D. R. Sanyal Deputy Director of Archaeological Survey, India and Dr. Hiranand Sastri of Bangalore.

How C. I. D. opens Letter

The *Tribute* of Lahore rendered good service to the public by publishing proofs of the activities of an agent provocateur named K. C. Banerji. A more recent feat of the same kind stands to its credit. The details will be clear from the following extract from our contemporary.

We reproduce below a letter received by Sardar Sohan Singh "Josh", a well-known worker of the "Workers and Peasants' Party, from another fellow worker, Mr. Muzaffar Ahmad. That letter was delayed in transit; and the addressee might not have noticed it, had he not got along with it an office-note showing that the C. I. D. had opened and photographed it. The subject-matter of the letter will show that even the innocent letters are p[er]used by the

Supdt. Office.
The letter has been photographed and the original returned.

(Sd.) Illegible. 10. 11. 23.

(Sd.) Arjan Singh,

The *Tribune* has published a photographic facsimile of the C. I. D. office note inadvertently left within the cover addressed to Sardar Sohan Singh which was opened by the C. I. D. men.

The Lahore Oriental Conference

The fifth All-India Oriental Conference held at Lahore on November 19, 20, 21 and 22, was a great success and presented certain remarkable features. Although special arrangements were made by the organisers for the accommodation of delegates the local residents, teachers, professors, etc., kidnapped the delegates from outside and gave them all the attention and comforts of a home. The delegates were taken round the important sites, the most remarkable being the visit to the historic region of Taxila, once the great international university of ancient India, where the Greeks and Iranians, Scythians and Chinese lived to master and transform the art and culture of the Indians. Rai Bahadur Dayaram Sahni, M. A., Deputy Director of the Archaeological Survey of India and a distinguished scholar, personally took the whole party round, explaining the different things, passing from site to site and finally taking them through the splendid museum of Taxila.

Select exhibits from Harappa and Mohenjo-daro were collected in a special gallery of the Lahore Museum, which were shown round by Dr. Sita Ram, the present curator. Punjab, the earliest seat of Vedic culture, now seems also to mark the beginnings of human civilisation along the bank of the historic *Sindhu*. The pre-Aryan chapter of our history seems no longer a mere hypothesis but an established fact compelling us to revise all our theories about the dawn of civilisation in India nay—in the entire Orient.

The address of the General President, M. M. Pandit Haraprasad Sastri, was keenly appreciated by the audience and the sectional Presidents also made a deep

impression on the distinguished gathering. Prof. Dr. S. N. Das Gupta's address on Indian Philosophy was a profound *tour de force* of exposition and in analysis, as it was brilliant in expression. Dr. S. K. Chatterjee and Mr. O. C. Gangoly also threw a flood of new light on their respective subjects—Philology and Fine Arts. The variety of topics discussed by the scholars assembled in diverse groups does credit to Indian scholarship.

An important feature—one may almost say a new departure—lay in the fact of the first enfranchisement of greater Indian studies in the domain of Indology. The General President generously appreciated the activities of the Greater India Society, which was strongly represented in the Conference. Dr. K. S. Ayangar, the President of the History and Archaeology section, devoted half of his time in discussing Greater Indian antiquities and Mr. O. C. Gangoly brought out splendidly the inseparable connection between the Arts of India and of Greater India. The Lahore Conference further arraigned a public lecture on the "Art and Archaeology of Greater India" by Dr. Kalidas Nag, the Honorary Secretary of the Society. The lecture was presided over by Mr. Manohar Lall, the Minister of Education and Industries, and representative men of the Punjab attended the Lecture. The genuine enthusiasm of the Punjab public took shape in the immediate formation of a provisional Committee to consider the ways and means of establishing a Greater India Society—Punjab section

Romain Rolland's Congratulatory Letter to
Sir J. C. Bose on his 70th Birthday

[Specially translated for *The Modern Review*]

Dear Friend,

Permit me to associate myself with those of India and of the world, celebrating your seventieth anniversary. I bring to you my fervent homage and that of your friends of France.

Others more qualified than myself will glorify the scientific genius in you. I glorify the Seer: He who by the illumination of the eye of a religious poet, had penetrated the very heart of Nature whose

palpitations are enveloped under the cover of barks and stones. Like Siegfried in the forest victorious over the dragon, discovering the secret of the language of warblers, you have drawn out of the silence of plants and stones, the key to their enigma; and you have made us listen to their ceaseless monologue—that perpetual flow of Soul, streaming through beings from the humblest to the highest—frantic and tragic songs of Life Universal whose joy and sorrow set their exultation into rhythm

It is not mere accident that makes me evoke the name of a hero of the ancient Indo-Germanic Epics. In you also I discover and acclaim that Hero of the Spirit who loyal to the virtues of true warriors proved to be the conqueror of an unknown continent of Soul. In this epoch while the intellectual elites of your country, are justly awakening the memories of *Greater India*, you have boldly annexed to the vast domain of Indian thought, a Hemisphere of Being which the intuition of your ancient sages have already recognised as their own,—those innumerable helms of the vegetable and the mineral world enrolling our Humanity, just as the world known to the Ancients was but a lost island against which dashed the dark currents of the ocean of mystery and around which deepened the misty veils of Barbarism. You came to incorporate into the Empire of Spirit, that new Universe of life which only yesterday was taken as unconscious, dead and buried in the night.

I salute you, benign Magician! Pardon this poet for having greeted you in these imageries so inadequate to express the rigorous precision of Science and her serene objectivity found in you! In future it will not be the least part of your glory, to have brought or re-brought to the spirit of the Orient the exact methods of the science of the Occident. One will see in course of this century India following your example, without sacrificing in the least her wealth of spiritual profundity and of that inner world which had endowed her with millions of thoughts, —to combine with it the intellectual weapons of Europe which will be given to India so that she may make them more perfect for mastery over Nature and for the glorification of the Atman, the Universal Spirit.

X.

Prof. Molisch on the Bose Institute

On the occasion of the recent anniversary of the Bose Institute Prof. Hans Molisch paid the following tribute to Sir J. C. Bose and his Institute:—

"I am deeply touched by the welcome that has been extended to me. It is now more than fourteen years ago that I had the honour of welcoming Sir Jagadis in my Physiological Institute in Vienna; he was again invited this year by the Rector of the University of Vienna and his marvellous results which revealed the secrets of life, aroused unbounded enthusiasm among our leading investigators in physiology and in medicine. I had since the fullest opportunity of watching the working of his marvellous instruments. By his Crescograph the growth of plants becomes visualised at a magnification of many million times, the effect of light, of heat and of different narcotics and drugs being instantly registered by the plant. This has opened out new fields of investigation of greatest importance. I have also seen his "Photosynthetic Bubbler" recording carbon-assimilation of green leaves by means of bubbles of oxygen evolved under the action of light. I have seen many startling experiments in my life, but I have never witnessed anything which held me so breathless with wonder as the marvels revealed by this extraordinarily beautiful and highly sensitive apparatus. The plant not only writes down the rate of assimilation of its gaseous food but also rings a bell at the same time. My heart beat faster at the sight which surpassed the highest reach of experimental art. I also observed the speed of impulse of excitation in the plant being recorded by the "Resonant Recorder", which automatically inscribes intervals of time as short as a thousandth part of a second. All these are even more wonderful than fairy tales, nevertheless those who see the experiments become fully convinced that they are true laboratory miracles revealing the hitherto invisible vital reactions underlying life.

"I regard it as a great opportunity to be able to come to the Bose Institute and become acquainted first-hand with the new methods of investigations which have opened out new gates of knowledge. It will be a great privi-

lege to me to be able to offer the scholars of the Institute the benefit of my experience; I shall here have also the rare opportunity of studying some of the biological problems in which I am greatly interested.

"Though the Bose Institute is held in very high esteem as an important international centre of science, yet my expectations have been very greatly surpassed by what I have actually seen. In European laboratories the advancement of physiology of plants has often been obstructed by excessive specialisation. But in Sir Jagadis we find the very rare combination of a physicist, a physiologist and an electro-physiologist: this accounts for the astounding rapidity of his numerous discoveries each one of which has evoked our deepest admiration. I believe that there exist only a few such institutions in which the highest ideal and the greatest practical service to humanity have found so perfect an expression. The rare æsthetic beauty of this Temple of Science profoundly impressed me. When walking in the experimental garden in the heart of this busy city, the quiet and peace was so great that I felt myself in the solitude of a forest where alone man can commune with the spirit of Nature. I regard it as a great fortune that I should have come to know the Founder of this wonderful Institute, who has taught the dumb to speak and made the inarticulate world of plants write down the secrets of their inner life."

MISS KATHERINE MAYO'S "MOTHER INDIA" WEIGHED IN THE BALANCE, WHAT IS THE VERDICT ?

By DR J T SUNDERLAND

MISS Mayo's book has now been long enough before the public to settle in a general way the question of its worth. What are the most important testimonies and judgments that have been given to the world by the most competent scholars, critics and judges, regarding its truthfulness as a picture of India, and therefore its value ?

What follows is a partial answer.

I. BOOKS ANSWERING MISS MAYO

At least seven or eight books in reply to "Mother India" have been written by competent persons, mostly by Indian scholars. Special attention is invited to the following four.

1. "A Son of Mother India Answers." By Dhan Gopal Mukerji, a well known Indian author. New York. E. P. Dutton.

2. "Father India: A Reply to Miss Mayo." By S. C. Ranga Iyer, Member of the Indian Legislative Assembly. London. Selwyn and Blount.

3. "Miss Mayo's Mother India: A Rejoinder." By K. Natarajan, Editor of *The Indian Social Reformer*. Madras, India. G. A. Natesan.

4. "Unhappy India." By the late Lajpat Rai, Editor of *The People* and former President of the Indian National Congress. Calcutta. The Banna Publishing Co.

All these books are interesting, carefully written and excellent. They answer Miss Mayo from different standpoints. The first three are small or of moderate size. The last is larger (500 pages), and it replies to "Mother India" with a thoroughness and completeness (and also with an authority) which leave little or nothing further to be desired.

II. PERIODICALS ANSWERING MISS MAYO

Nearly every monthly, weekly and daily in India has replied to "Mother India." There have also been many replies in England and America, some of them of importance. Two of much value and easily obtainable in libraries may be mentioned here.

1. "Is India Dying? A Reply to Mother India." By Rev. Alden H. Clark. In *The Atlantic Monthly* of February, 1927. Mr. Clark is an American, a graduate of Amherst College and has been a missionary in India seventeen years.

II. "The Degradation of Mother India." "India's British Rule." By J. G.

Cornelius, an Indian scholar, formerly Professor of Philosophy in Lucknow University. In *Current History*, December, 1927.

It is to be hoped that everybody who has read Miss Mayo's volume will take the trouble to look up and read one or both these articles, as well as one or more of the above-mentioned books.

III. THE MOST IMPORTANT MISSIONARY BODY IN INDIA ANSWERS MISS MAYO

Soon after the appearance of "Mother India" the following public statement was issued by the Executive Committee of the National Christian Council of India, Burmah and Ceylon, which is the highest and most authoritative Christian organization in the country,—its chairman being the Metropolitan Bishop of India.

THE STATEMENT

"It has never been denied either by foreign missionaries or by Indians that grave social evils exist in India, and it is a matter of common knowledge that strenuous and organized efforts are being made by groups of Indian reformers to get rid of them. We representing a body of men and women who are in close touch with the people and are conversant with their everyday life unhesitatingly assert that the picture of India which emerges from Miss Mayo's book is untrue to the facts and unjust to the people of India. The sweeping generalizations that are deduced from the incidents which came to the notice of the author, are entirely untrue as a description of India as a whole. We have faith in India's and India's future. We have faith that India will obtain deliverance from these evils; and we earnestly desire that East and West should co-operate to this end in a spirit of love and understanding."

IV. EMINENT AMERICAN MISSIONARIES IN INDIA ANSWER MISS MAYO

The following statement regarding "Mother India," signed by seven prominent American missionaries, was published in *The Christian Century*, Chicago, February 2, 1928.

THE STATEMENT

"As Americans, we wish to express our sense of deep regret that a country-woman of ours should, after a brief stay in India, write so unfairly and offensively of this country. It is clearly apparent that Miss Mayo saw only a part of India and did not see that part in the proper perspective. In many things her accuracy as an observer will not bear scrutiny, and the many highly exaggerated conclusions give a false picture of India as a whole. Generalizations that may be taken for facts by readers in America and England are too often the statements of personal opinion based upon prejudice and partial

examination. A very offensive book could be written as well of America or of any other Western nation, and then we, of the West, would rightly protest against such unfair representation. Human sin and social evil exist in every land and writers who generalize would do well to keep that in mind. As Americans who have lived in India for a number of years and have moved with all classes of people, we have no hesitation in protesting vigorously against the unfairness of Miss Mayo's book. We wish to pay our tribute of love and respect to the people of India from whom we, of the West, may learn many valuable lessons. We wish to express our sense of humiliation that an American should write with such unfairness and apparent prejudice in presenting India."

Fred B. Fisher, Bishop, Methodist Episcopal Church, Calcutta.
Alden H. Clark, Missionary, American Congregational Mission, Ahmednagar.
Alice B. Van Doren, Secretary, National Christian Council of India, Poona.
John J. De Boer, Principal, Voorhees College, Vellore.
Mason Olcott, President, American Arcot Mission, Vellore.
D. F. McClelland, General Secretary, Y. M. C. A., Madras.
E Stanley Jones, Missionary, Sitapur, U. P.

V. A NOTABLE GROUP OF INDIANS IN LONDON DENOUNCE "MOTHER INDIA."

At all times there are considerable numbers of distinguished Indians, officials and others, in London. When the popular excitement over Miss Mayo's book had reached its height, the most widely known and influential of these issued the following public declaration:

"Our attention has been drawn to the recent publication entitled "Mother India," by an American tourist, Miss Katherine Mayo, who paid a visit to India during the cold weather of 1925-26. It has never been our lot to read a book which indulges in such a wholesale, indiscriminate vilification of Indian civilization and Indian character."

"We concede that like other cold weather tourists Miss Mayo was entitled to form and express her own opinions. But when a traveller who spends not more than a few months in our country uses the material gleaned from hospital cases, culled from criminal trial reports, and deduced from her own observation of isolated happenings, and seeks to fortify herself with quotations divorced from context and then proceeds on such slender basis to formulate a general indictment against the character and culture of a great country like India, possessed of an ancient civilization, it is time that we protested."

"She depicts the entire nation of 320 million people as physical degenerates, moral perverts and unashed liars. If an Indian could have the temerity to pass a similar judgment on any nation of the West, after but a few months' residence in any country in Europe or America, and to indict the West in people, their civilization and character on the basis of such sensational and utterly inadequate evidence as Miss Mayo employs, he would rightly be condemned as unworthy of serious attention."

"We would not have felt called upon to take any public notice of a book of this character but when we find that the publication is receiving the serious attention of the British press to the obvious detriment of India, at this juncture we think it our duty to warn the British public."

This protest was signed by the following distinguished Indians: Sir A. C. Chatterjee, High Commissioner for India; Sir Tej Bahadur Sapru, ex-Member of the Viceroy's Executive Council; Sir Chimanlal Setalvad, ex-Member of the Executive Council of the Governor of Bombay; Mr Sachchidananda Sinha, ex-Member of the Executive Council of the Governor of Bihar and Orissa; Sir M. M. Bhowanagare; Mr. Lube, Barrister-at-Law, practicing before His Majesty's Privy Council; Mr. Kamat, Member of the Royal Commission for Agriculture, and all the Indian Members of the Council of the Secretary of State for India, namely, Sir Mohamed Rafique, Mr S N Mullick and Dr. Paranjpye.

It is difficult to see how any testimony could be more weighty or more trustworthy than one signed by these eminent men.

VI. In a Notable Public Meeting in London, Englishmen and English-women Denounce "Mother India."

A great meeting of protest against Miss Mayo's book was held in Mortimer Hall, London, on November 29, 1927, with Lady Emily Lutyens in the chair. The speakers included Lady Cynthia Mosley, Colonel Wedgwood, M. P., Miss Ellen Wilkinson M. P., and several eminent Indian scholars and public leaders. The meeting was crowded. The meeting (with only two dissenting votes) passed strong resolutions deploring the cruel injustice of Miss Mayo's book, and declaring the true remedy for India's social evils to be complete Home Rule, like that of Canada. Among the speakers strongly supporting these resolutions were daughters of two former Viceroys of India.

VII. An American Professor is Ashamed of Miss Mayo.

Professor Franklin Edgerton of Yale University on returning home from a protracted stay in India writes to Professor S. K. Iyengar as follows (reported in *The Hindu* of Madras, April 26, 1928):

"I am trying to do what I can to repay my great debt to you and to the many Indian friends who helped to make my stay in your interesting country so pleasant and profitable, by doing my best to present to the American people a sympathetic picture of India's great culture. I hope you and others in India will believe that there are some of

us in America who know how to appraise justly Miss Mayo's scurrilous book. We are deeply ashamed to acknowledge her as our fellow countrywoman, and we neglect no chance to deny the truth of the picture of India which she draws."

VIII. AN EMINENT AMERICAN CLERGYMAN GIVES ADVICE TO MISS MAYO

The Reverend Samuel McCrea Cavert writes in the Federal Council Bulletin of December, 1927, giving some advice to the author of "Mother India." He says:

"We would like to suggest to Miss Mayo that she write one more book this time about America. We outline for her the following chapter headings:

"The Only Land where Lynching Occurs"
"The Land of Marital Scandal—One Divorce to Every Seven Marriages"

"The Land of the Crime Wave—Armored Motors Necessary to Transport Pay-rolls"

"The Land of Industrial Strife—Incessant Strikes and Lock-outs"

"Child Laborers—A Million and a half No Older Than Thirteen—in the Richest Land in the World"

All the facts in this new book might be impeccably correct, but would it be a picture of America?"

IX. WELL-KNOWN INDIVIDUAL ENGLISHMEN ANSWER "MOTHER INDIA."

Notwithstanding the facts that Miss Mayo wrote her book to bolster up British rule, and that the imperialists and "Bourbons" of Great Britain hailed its appearance with joy, there is another side. As a matter of fact, some of the severest denunciations of the volume from any source, have come from Englishmen—Englishmen who know India much better than Miss Mayo does and who dare to speak out. A few of these are the following:

1. Mr Wilfred Wellock M. P. writes in *The People*, (Lahore) of December 1, 1927:

"Mother India" is the most nauseating book I have ever read, and it will do incalculable harm to India by its influence on those whose knowledge of India is second hand."

2. Mr. J. A. Spender, the eminent London publicist, declares:

"It is no more possible to draw an indictment against 300 millions of people in the East than in the West, and those who try to do it should bear in mind that the East finds almost as many unmeaning and repulsive practices in the West as the West does in the East." Mr. Spender adds that before we begin to judge, we should bring into account the cumulative testimony of thousands of Europeans who have lived among Indians and have borne witness to their many and great virtues."

* *New York Times*, August 17, 1927.

3. *Mr. S. K. Radcliffe* (In *The New Republic*, New York, September 21, 1927):

"I lived for five years in India, occupying a position which gave me opportunities for meeting Indians of different kinds. I had many Indian friends. I saw the inside of Indian houses. I observed the laboring Indians in cities and villages. As I call up the memory of these people and scenes, and set the reality of my recollection alongside the appalling picture which Miss Mayo has drawn, I am filled with bewilderment and regret. The vast multitude of India's common people makes upon every Westerner a wonderful impression of goodness, endurance and dignity. Often the Indian woman has a hard time. But I see her, as she comes up every morning from her ceremonial bath in the river, walking noiselessly with a troop of her fellows, a figure unsurpassed in the world for beauty, and serenity, and grace.

"Many of Miss Mayo's facts cannot be challenged, and yet the picture as she draws it is profoundly untrue. It is a libel on a unique civilization and a people of extraordinary virtue, patience and spiritual quality."

4. *Mr. Patrick Lovatt*, the brilliant editor of *Capital*, the European weekly of Calcutta, writing under his well-known pseudonym "Ditcher," pens the following biting criticism:

"In the first place Miss Mayo's book confirms the opinion of the greatest of living essayists, that a best seller is not necessarily a book of any value; in the second place the intellectual dishonesty of the American author is appalling; and in the last place, her ghoulish propensity of frequenting hospitals to discover inhuman cruelties to inflict a whole people, borders on stark pornography. The book is devoid of literary merit. It is the crudest form of American journalism. It has sold like hot cakes partly because of its morbid sensationalism, but mostly because it was an unscrupulous propaganda against the claim of India for Home Rule, published at the psychological moment."

5. *Dr. James H. Cousins*, Irish poet and author, who has had long residence and educational experience in India, writes in a prefatory note to an Essay on "The Path to Peace":†

"The whole edifice of falsehood erroneously labelled 'Mother India' rises naturally from a foundation of race prejudice. Miss Mayo's profession of friendship to India is a thin apology for her attempt to make a case for India's continued retention in a state of political bondage.

"The fact that there are glaring evils in India needed no American for its demonstration. Indians have long been working for their removal with as much zeal as reformers in America have been working to eliminate America's 6,000 murders per annum, or as reformers in England have been trying to remove the cancer of England's venereal diseases. I know all that can be catalogued of human depravity in India, for I have worked for

twenty years in humanitarian causes in the country. But I cannot prostitute my intelligence to the irrational conclusion that because there are social evils in India, therefore the Indian people should be kept in political bondage."

6. *Major D. Graham Rile*, a Labor candidate for the British Parliament, who has much personal knowledge of India, writes in *The New Leader*, London August 19, 1927:

"Some years ago Miss Katherine Mayo visited the Philippines and wrote a book about her visit. It was called 'The Isles of Fear,' and was a defence of American Imperialism. She has now, after her visit to India, done a like service to British Imperialism, in her 'Mother India.' No wonder the book is regarded as a godsend by all British reactionaries.

"She is interested in Indian society only when it is unhealthy. To give an idea of marriage in India she has recourse to the hospitals and to the reports of medical authorities, although in the nature of things it is only exceptional cases that come under their notice. One would think from Miss Mayo's book that there is hardly a person in India who is not suffering from venereal disease—a suggestion which, Sir John Maynard writes, would be contradicted by any medical practitioner who had worked in India. To write as she does that women of child-bearing age cannot safely venture, without special protection, within reach of Indian men, is to my knowledge a gross and unbounded slander.

"If Miss Mayo came to Britain and visited the hospitals she could paint as dark a picture of British life. And what about America? What idea of American civilization and morals could be derived from that American product, the 'movies'? It is extremely ironical that at a moment when Miss Mayo's book is giving us this appalling picture of Indian civilization, the Government of India has found it necessary to introduce legislation to deal with the importation of American cinema films, owing to their demoralizing influence on the Indian people.

"On political matters Miss Mayo is as unbalanced, as on social matters. She had visited the Indian Legislatures and tells us that sitting through sessions, Central or Provincial, an outsider comes to feel like one observing a roomful of small and rather mischievous children who by accident have got hold of a magnificent watch. They fight and scuffle to thrust their fingers into it, to pull off a wheel or two, to play with the mainspring, to pick out the jewels. I have myself seen the Indian Legislatures at work, and am bound to say that they compare very favorably either with our Local Councils in England, or with our Imperial Parliament itself. The Honourable Mr. V. J. Patel, President of the Indian Legislative Assembly, has just concluded a visit to England. Much of his time has been spent in the House of Commons, and his amazement was intense at the lack of order he found there compared with that of the Indian Assembly over which he so ably presides."

7. *Mr. Edward Thompson*, an English scholar and writer of note, the author of two books on Tagore, who has much knowledge of India, writes in the London *Nation* of June 30, 1928:

* "Father India," by C. S. Ranga Iyer, pp. 189.

† Published by Ganesh & Co. Madras.

"Mr. Arnold Bennett has been quoted as declaring that Miss Mayo's book is unrepregnable, it is so well documented. Now, the truth is, Miss Mayo's book, whose strong point is supposed to be documentation, is *not* well documented. For example, she brings forth 'evidence' that Tagore supports child-marriage. The fact is Tagore has denounced child-marriage all his life. But her quotation is so apparently genuine that I thought she had caught him in a moment of non-sense or vexation. But Tagore in the *Manchester Guardian* has blown her 'evidence' to pieces. Gandhi, in the same paper, has blown to pieces her 'evidence' as to what he (Gandhi) had said.

"Her book starts with a howler, her imposing statement that the coddled Kali's 'spiritual domination of the world began 5,000 years ago, and should last nearly 432 thousand years to come.' This, like so much of her information came from some ignoramus. Her history is the shoddiest second-hand stuff, picked up in table chatter, she is unfair to every field of Indian effort, she scatters statements that are palpable nonsense, she is maudlin about the Prince of Wales; she is mean in her account of what Mr. Gandhi has called a sacred episode. I hope every person who has read 'Mother India' will read Mr. Lajpat Rai's reply."

8. *Mrs. Annie Besant* writes with indignation of "Mother India." She says

"Miss Mayo has published a wicked book, slandering the whole of the Indian people. I have spent in India the greater part of my time since 1893, living as an Indian, welcomed in their homes as though I were one of their own people, and I have never come across the horrors she describes. The writer seems to have merely sought for filth. Does she imagine that if her presentation were an accurate picture of Hindu civilization that Hinduism could have produced a civilization in India dating from thousands of years before the Christian era? It would have been smothered in its own putrefaction."

Mrs. Besant tells us that she herself has been asked and urged to write books like this of Miss Mayo, about both England and America,—the assurance being given her that there would be a great popular demand for them. She knows both countries well, having lived more than half her life in England and having spent much more time in America than Miss Mayo has in India. By portraying all the evils in the two countries and little or none of the good could make quite as sensational and black pictures of both as Miss Mayo has drawn of India. What a temptation! How the books would sell! What a fortune the writer could acquire! Did Mrs. Besant consent? She declared that no money could induce her even to entertain the thought for a moment of writing anything so untrue, so unfair, so cruelly unjust about any nation or people on earth.

X. A GENERAL SUMMARY

In conclusion: If we attempt, as we very well may, to form an epitome or condensed digest or summary of the judgments of all the most intelligent and unbiassed and therefore most competent scholars and others—Indian, British and American—who have read "Mother India" and given to the public their verdicts regarding it, what do we find the result to be? We find it to be a striking, an almost universal, agreement on the following points, that is, in declaring the following judgments

1 That not a little of Miss Mayo's boasted 'documentation' is unreliable;

2 That many of her so-called facts are not facts at all;

3 That some of her facts given as true to-day are twenty-five or thirty years old, and although true formerly are not true now;

4 That Abbe Dubois, her most trusted authority, quoted by her more than any other, wrote a hundred years ago; and moreover, that his writings on the India of that time have been found by scholars to be distinctly less trustworthy than has often been claimed;

5 That in her reports of conversations and interviews with eminent Indians (Rabindranath Tagore, Mahatma Gandhi and others) Miss Mayo frequently misquotes and misrepresents them;

6 That from one or two or a very few isolated facts she is accustomed all through her volume to make sweeping and utterly unwarranted generalizations—generalizations which often do great injustice to the Indian people.

7. That the book is misleadingly named. The title "Mother India" causes readers to expect to find in its pages a spirit of kindness, appreciation and sympathy toward India. Instead of that, they find everywhere haughty and cynical criticism. Since the book is so evidently written for the purpose of reporting to the world whatever of evil, ugliness and filth the author can find in the hospitals, prisons, police courts, houses of prostitution and slums of India, in order to be honest it should bear some such title as "A Western Woman's Slumming Tour Through India;" or (as suggested by Mahatma Gandhi) "A Report on India's Drains and Sewers." Then it would not deceive.

8. That Miss Mayo almost wholly ignores the real India, the India of history, the India

of great art, great literature, great philosophers, great religions, great industries, great men in every department of life and achievement, the India which for three thousand years was one of the leading and illustrious nations of the world. She is so absorbed with looking at the little, the mean, the low, the filthy, that she either cannot or will not see the high, the pure, the noble, the great. The whole spirit of her value is one of race antagonism, of arrogant assumption of the superiority of the white race over the brown and the yellow, of hate and distrust, of contempt and fear of Asia and all Asiatics. This was clearly manifest in her earlier book on the Philippines—"The Isles of Fear." It is quite as marked in her "Mother India."

9. That every chapter of the book shows the author to be an extreme imperialist, a despiser of democracy, a believer that strong nations have a right to conquer, rule and exploit those that are not able to defend themselves by arms, and therefore that Britain has a right to hold India in bondage.

The most conspicuous and outrageous slander uttered by Miss Mayo, the one that stings the Indian people most sharply and that they most resent, is her declaration—dwelt upon with fervor and seemingly with realish, and reiterated in one form or another throughout half her chapters that the basis of practically all India's miseries, sufferings, misfortunes and evils, is her excessive, abnormal and rotten sex-life.

Her reviewers meet this slander in three ways:

1. By pointing out that Miss Mayo has no real ground whatever for her declaration. She offers no real proof. She simply finds what she looks for. Her statements are based upon unverified hearsays, and on a few isolated, abnormal cases discovered in hospitals and police courts, magnified into a sweeping generalization covering all India.

2. By assertions, on the basis of their own large knowledge, in most cases so much

larger than her own, and by testimonies from the most trustworthy authorities, that nothing of the kind is true.

And 3. By a terribly telling *tu quoque* argument or rejoinder. Mr. Lajpat Rai, Mr. Ranga Iyer and others ask Miss Mayo why she comes to India to seek out and blazon to the world sex-irregularities, sex-excesses, sex-crimes and sex-diseases, when, if she will open her eyes, she can find quite as bad or worse in America and in every prominent nation in Europe. And they fortify their statements by citing overwhelming arrays of testimonies from the highest authorities both in America and Europe. If she feels that she has a mission to expose and reform sex-conditions anywhere, why does she not first undertake the job at home, in the West, where it appears to be most needed, before going to the East, where there seems reason to believe that the need is distinctly less?

The aim of Miss Mayo's whole book, from beginning to end, is to do two things, namely, first to paint the blackest possible picture of India's social and other evils, (exaggerating at every point), and secondly, to convince her readers that these evils prove the inability of the Indian people to rule themselves and the necessity of the continuance of British rule. But her reviewers show that her argument is a *non sequitur*; it proves the *very opposite* of what she claims. If even one-half or one-quarter of the shocking things which she affirms, are true, after the British, with all power in their hands, have ruled India for more than a century and a half, such a fact is the most *damning possible indictment of British rule*. Instead of showing that the British should govern India longer, it shows that their government has been an *utter failure*, and that there is no hope for India to get rid of her social and other evils except by *getting rid of her foreign incompetent government*, and securing a government of her own.

DOGMAS OF INDIAN PHILOSOPHY*

By PROF. S. N. DAS GUPTA

THE study of Indian Philosophy in modern times may be regarded as having a starting from Raja Ram

Mohun Roy. He was a religious and social reformer and in his attempts to purify the current popular forms of Hinduism he turned his eyes to the Upanisads. He pointed out that the

* Presidential address at the Philosophy section of the Lahore Oriental Conference, 1923.

Upanisads reveal a religion of the worship of one God, "Brahman", and in his interpretations of the Vedanta doctrine he brought out the fundamental ideas of the Upanisads, and he made them a corner-stone of his religion of Brahmoism. He also initiated a programme of social reform which he regarded as being a corollary of the Upanishadic faith. But though a great thinker and scholar, his interest was chiefly religious. Later on a few other Indians, Christians such as Banerjee, Gouray and others, also studied Indian Philosophy with the object of refuting Indian thought in favour of Christianity. In the meanwhile studies of Indian Philosophy were taken up by some European Sanskrit scholars such as Colebrook, Cowell, Wilson, Duff, Davies, Lalantine, Venis, Hall, Max Muller and others. Many of these scholars published numerous articles on Indian Philosophy and translated some important philosophical texts, and Max Muller's six systems of Indian Philosophy is probably the first attempt to give a brief survey of the general philosophical position of the six important systems of Philosophy. In the meanwhile Sanskrit manuscripts were being collected in several important cultural centres of India and of Europe, and Sanskrit philosophical texts were being edited and published by the Asiatic Society of Bengal, the *Pandit* Journal of Benares, the Bombay Government Publication Department, in the Chowkhamba Sanskrit Press series, the Vizianagaram Sanskrit Publication series and later on in Mysore, Travancore, Baroda, Nirnayasagar Press, the Venkateswar Press in Bombay, the Panini Office of Allahabad, the Madhavilas Book Depot of Kumbakonam, by Jivananda Vidyasagar and many others in Calcutta and in other places. The European scholars were also not idle, and the Pali Text Book Society had been gradually publishing the old Pali Texts of Buddhism and important studies of early Buddhism and we have now almost the entire Tripitaka, which were wholly lost from India, published magnificently in Roman characters. Many important Mahayana Buddhist texts were published by the Pali Text Series of Calcutta under the editorship of Rai Sarat Chandra Das Bahadur and Dr. Vidyabhusan. Knowledge of Tibetan began to spread, both in this country and in Europe and this led to the publication of a number of Buddhist

texts which were lost in this country but were preserved in Tibetan translations. Many European scholars began to discover through their knowledge of Chinese that a large number of Buddhist texts which were lost in India in their Sanskrit originals were preserved in their Chinese translations. Texts and studies were being published from several cultural centres of England, France, Germany, Italy and Russia and in the present day we have such great scholars as Thomas, Keith, Jacobi, Stecherbatsky, Suali, Levi, not to speak of many other eminent writers, who, have done excellent work in the field of Indian Philosophy either by way of translations or by the publication of texts or studies. On the side of the publication of texts, however, India has done very much more, as may naturally be expected, than any of the Western countries. In India also much work has been done in the way of translation of Sanskrit texts into vernaculars or into English such as the translations by Dr. Gangadhar Jha, Mr. Srish Chandra Basu, Pramatha Nath Tarkabhusan, and many others. Several important manuscripts on different systems of thought have also been edited in recent times.

One great difficulty that lies in the way of the study of Indian Philosophy is to be found in the fact that all the old living traditions of Indian Philosophy are now lost almost for centuries so that a study of Indian Philosophy, whether in the Panditic circles or in the Anglicised circles, is bound largely to be philological. The problems which were of vital importance to Indian Philosophy from age to age, in the solution of which they cheerfully spent all their lives, have in our present outlook and civilisation lost their value and significance. The Anglicised people who are now by far the most important in their influence are only nominally connecting themselves with the traditional faiths, but the problems of religion and philosophy which were so much valued by their ancestors, have ceased to have any charm with them. The scholars in the Panditic circles also are only carrying on their work in a stereotyped fashion not for the intrinsic interest of philosophy and religion but merely as a learned occupation or for a living. The influence of Western education on the other hand has instilled into us newer ideals of nationalism, politics

and patriotism; and newer goals and newer interests of philosophy, life, social relations, social values and religious values are now appearing before us which are submerging as it were all the older, cultural and philosophical tendencies of the country.

The best people of the country are being gradually intimately associated with the Western Philosophy, literature, thought, culture and ideals. They do not know very much of their older ideals nor are they in sympathy with them. A changed economical condition and the rising of the standard of life have increased the hard struggle for existence; and as it is gradually being found that the claims of worldly life, worldly happiness, worldly prosperity, the civilization of the masses, honour, prestige and the like, are very much more important than the older goals of emancipation and self-abnegation, it is gradually being felt that the older methods of life will no longer do for us. Modern ways of life have their superiority over the ancient ways. For it is by the former only that all kinds of material success can be attained. There is the ancient thought that spirituality consisted in the destruction of desires, in the final realisation of a passionless self, of a pure consciousness for which all worldly prosperity has to be sacrificed. The dominant thought of the West is trying to discourage all these as silly fancies and is loudly proclaiming the need for a change in the ideal. This world is practically the only world with which we are concerned, we can only improve our material facilities and mental faculties individually or jointly, and we can make life easy and comfortable, more healthy and more progressive for the whole humanity. Our ideal, therefore, should be one of scientific progress for the material good of humanity as a whole. Religion is not an end in itself but is only a means to our own well-being as members of the society. We are not anxious now for catering to the needs of an abstract perfection but for the discovery of the needs of living practically a happy and contented life of intellectual and social progress. We now perceive that only those people, who are striving their utmost for this normal and practical well-being of worldly life in those lines, that are really thriving and growing powerful, whereas those who will shut their eyes to these will gradually become feebler and feebler and may be wholly exterminated. The Western spirit has thus naturally

possessed us and we have been almost entirely cut asunder from the bonds of our old traditional life and culture, of philosophy and religion. Even the Panditic people who are still with difficulty sticking to the old views, seldom get any vital sap from their loyalty to the past, for in doing so they are themselves torn asunder from the general progressive and dominant nature of life and from the rest of the cultural humanity. In the days of yore when the older ideals of India prevailed, it was not merely the ideal of the faith of a particular section of the people but of the Indian people as a whole and of Indian culture wheresoever it radiated. Even in other countries not within the zone of influence of Indian culture the spirit of supremacy of religion and the supremacy of the after-life, was felt almost universally. The Indian ideal therefore was then in consonance with the general tone of the world-ideal as a whole.

We have now, however, a new epoch of culture, progress and ideals in which the entire civilised world is participating. Whether we will or not, we are being directed into the whirlpools of our unknown destinies of continual movement and continual change of this new age. We are thus naturally torn away from the spirit that dominated the philosophy and culture of India. It is no doubt true that here and there new thinkers are criticising the methods of this new age, but whatever may be the value of these criticisms it is difficult to find any tendency in them to lapse back into the idea of progress in the spirit of ancient Indian thought.

If we could completely transform ourselves by the newly introduced European culture our problems of life would be very much simplified. But howsoever we may be modified by Western thought we can never forget our traditional past and howsoever the foot-prints may have been obliterated, we are still intimately connected with it, and we can never wholly take ourselves away from the grip of the great ideals of our fore-fathers. We are thus in a very difficult situation; we cannot identify ourselves with our fore-fathers, nor are our problems of life the same as theirs; we can not also identify ourselves with our Western brethren nor can we look at life wholly from their point of view. Westernisation has also been effected in very different degrees and intensity, not only amongst the different

sections and communities of people but often also in the same family. It is a common fact that in the very same family some members are very strongly intoxicated with the Western view of life, whereas there are others who are as strongly loyal to the traditional faiths. Thus we cannot bind our faith to our traditional past nor can we heartily welcome the Western outlook of life. If the religious and moral problems of our fore-fathers are not of our own we cannot also wholly believe ourselves to be like the Westerners having the same view of life as they have. We are thus in a state of transition where both the Indian and Western ideals are fighting for supremacy and we do not know which to choose and where to stand. Nothing is more unsuitable for the creation and development of new thought than such an unsettled state of things. The Ancients believed in the Shastrie ways of life and the various problems that arose out of them, but we have moved far away from then and even those of us who have been brought up in the Panditic atmosphere, cannot be said to be strictly loyal to the older ideals.

The bed-rock of old Indian culture and civilisation which formed the basis of our philosophy is fast slipping off our feet. The rush of waters is not however equally deep everywhere, but it is fast increasing. It may be waist-deep in some places, it may be shoulder-deep in others, but yet there are places where it is already passing over our heads. It would be a day-dream to suppose that we can ever arrest this torrential flow of inundating waters from the western seas. The new science of the West, with its daily increasing inventions of machineries and crafts of over-increasing material power and advantages, is fast demolishing the barriers and insulations of time and space and of natural obstructions. The steam engines, aeroplanes, telegraphs, wirelasses and the like are fast removing all distances in land, sea and water. Through trade and commerce the machineries of advantage and articles of luxury in all departments of life are invading our country with an ever-increasing rapidity and are making them a necessity of life, with us. The newspapers are broadcasting the bigger and smaller events for the whole world and as we swallow them with our tea, we fill in our mind with foreign materials of interest and build

a mental constitution which is not so much Indian as cosmopolitan. Western thoughts, wisdom, ways and out-look of life, aspirations and interests are being shipped through their printed pages and fast assimilated by the youths of the country. Can we arrest this mighty inundation? Can we now turn to the old yogic ideal of contentment with nothing, or restrict our needs to the bare necessities of life, and drive out the present civilisation, which is always tending to increase our material wants? Can we remain contented with being only a religious and spiritual people, and cease taking interest in politics, or in the development of our industries? Can we, in brief, go back to the past? Such a supposition seems to me to be an impossible and wild dream, which only an idealist can weave in his wildest fancy. The torrents that are coming are not merely a passing inundation. They indicate a rise of water which has come to stay and increase. If we try to hold fast to our old bed-rock and turn a deaf ear to the roaring rush we are bound to be drowned and suffocated. The very instinct of life would prevent us from taking any such foolish step, and any advice that would urge us to do it is too impractical to be followed. We would rather be washed away, or clutch at a floating raft, and save ourselves than hold fast to the old bed-rock beneath the waters. Our real chance of life, therefore, is neither to hold fast to the submerged rock, nor to allow ourselves to be washed away, but to build an edifice of our own, high and secure enough to withstand the ravages of all inundations. We want to avail ourselves of all that come floating to us and enjoy them at our home. Let the waters of the Western sea come and break themselves on the walls of our fortress with their foaming billows. Our only safety is thus to be with the sea and yet above it.

Philosophy with me is not mere Logic or Metaphysics, but the entire epitome of life. For me it stands as the collective and integrated whole of all that we think, all that we feel and all that we prize as high and great. Philosophy that sticks merely to verbal arguments, and metaphysical dilemmas, and is not distinct with the reality of life, is no true philosophy, but a mere mockery of it. Philosophy is the formula of the entire spiritual existence of man, where by "spiritual" one understands all

Even these works are nothing but brief sketches of different systems of philosophy without any eye to their mutual interconnection, or their historical or rational development. They do not take any notice of the literature of the systems, nor do they separate the different schools that sprang up within each system or the earlier parts from later accretions. The materials collected regarding the various systems of thought are not also often based upon a comprehensive study of the literature of the subjects, but are often directly borrowed from important compendiums. Even the best Pandits of our age follow the old traditional method, and are almost always profoundly ignorant of Buddhism and Jainism, the two great systems of thought which moulded in such an important manner the development of all Hindu philosophical thought in mediaeval times, and with few exceptions, they seldom publish anything which may be said to embody the results of their study and mature thinking. Their eminence, therefore, may be said to lie only in the fact that they are masters of the philosophical style and the technical language of the literature of the particular schools of thought, of which they are adherents, or which they have studied. But this much-vaunted Panditic learning is also fast disappearing, and as far as I can judge from my personal experience of Bengal Pandits among whom I have grown up, I can say that among the younger or the middle-aged generation, one can hardly find one out of dozens of title-holder, who understands the texts, or has studied the literature of the subject. The fact that the Pandits are almost always unacquainted with any of the Western languages is another great handicap with them, as they are thereby excluded from profiting by the results of the learned researches and translations from foreign sources and also from romansued editions of Sanskrit and Pali texts, by Western scholars. The great handicap with anglicised scholars is often their inadequate knowledge of Sanskrit. The short time that they can spare for Sanskrit often renders it impossible for them to master the abstruse style and technique of Indian philosophical literature. Still, it is with them alone that our future hope of Indian philosophy lies.

If we want to construct the future philosophy on the basis of our own, we must at least thoroughly study our philosophy and know how and where it differs from

the philosophy of the West and on which particular points and aspects it has its agreements. But before any such agreements or differences may be noted, before we can understand the spirit of our philosophy, in connection with the spirit of Western philosophy, it is the great necessity of our age to make a complete study of our achievements in philosophy as faithfully as we can, in consonance with the spirit with which it was carried on and the atmosphere that it breathed. There has of late been a tendency among some Indian scholars to interpret Indian philosophy on the models of the West. Technical philosophical terms have often been carelessly used to represent Indian concepts. Many of our scholars have breathed a sigh of relief if they could by their manipulations, discover a Hegel in Sankara, or a Hume in Buddha. Much as I would like to see particular systems of Indian thought compared or contrasted with other Western systems of thought, I should very much disapprove of the idea of forcing an interpretation of Indian philosophy through the inspiration of Western thought, for purposes of fruitless identification. If similarities are to be noticed, the reviewer of philosophy must also know his system thoroughly well to appreciate the differences. A philosopher who is inspired by Western philosophy and aims at proving that Indian philosophy is only like another revised edition of Western philosophy profoundly misses his part as an interpreter of Indian thought. In a lecture at the Fifth International Congress at Naples the present writer had an opportunity of pointing out that Indian philosophy anticipates in a very large measure most of what is known as European thought. In illustrating this statement, the present writer analysed the principal features of Benedetto Croce's philosophy and showed how the most essential doctrines of this philosophy had been anticipated in the philosophy of Dharmakīrti and Dharmottara. If one goes through the elaborate commentary literature of the different systems of Indian philosophy, one is astonished to notice, how many of those philosophical and epistemological views, which pass as productions of modern philosophy, have already been worked out centuries ago by the thinkers of India. In the interests of comparative philosophy, it is indeed useful to bring out these anticipations of Western philosophy by Indian thought.* But before that can be done, it is

* M.M. Prof. S. Kuppuswami Sastri in a short

necessary that the entire philosophical and religious literature of India should be explored and the materials discovered should be properly and faithfully collected and systematised in the proper Indian setting in which they appear. The task of faithful collection and right understanding must precede that of comparison. Not every student of philosophy can be a scholar of Sanskrit who can rightly interpret Indian thought, by studying the original texts; it is therefore the clear duty of Sanskritists who understand philosophy to bring out all the materials of Indian philosophy from their inaccessible Sanskritic homes to our easy approaches of modern languages, Indian or Western. Indian philosophy ought not to remain any longer a special monopoly of a few expert Sanskritists; it ought to lay bare its treasures to all who can think, and it is in this way alone that our older philosophies can be made to work with us as a living force. The old ideal of reserving all higher knowledge for a few experts and qualified persons must have to be abandoned. The time when people took to Indian philosophy out of religious motives has almost passed away. If even now Indian philosophy is kept as a proud possession of a few expert Sanskritists, it may as well be buried in the moth-eaten pages of palm leaves and the whole world would move on without even noticing that it has missed it. Yet it is this philosophy which may be regarded as the highest achievement of the

Brahminic civilisation of India of which we are justly proud, and on the bed-rock of which we want to rebuild our future national culture. It is true no doubt that there may be parts of it which may be regarded as decayed and dead, but it is also certainly true that there are other elements in it which are universal and deathless. It is these which, while they would link us with our past, will yet allow us to continue our onward growth of progress and to assimilate all that is good, whatever may be the sources from which we receive them.

If we try to rise above all details of philosophical dogmas, views, opinions and disputes, and try to discover some of the fundamental results of Indian philosophical culture, a number of important propositions is seen to emerge. Indian philosophy has sprung forth out of ethical, eschatological and religious needs, and with rare exceptions has always been dominated or restricted by these considerations. The Upanisads reveal two different strands of eschatological ideas, firstly, the doctrine of Devayana and Pitriyana (the views that the wise man at death passed away through the ethereal regions above and never returned back to earth, while the man of deeds, after an upward course, was again showered down to live its prescribed life on earth) and the doctrine of re-birth. Throughout the entire course of the history of Indian philosophy, no one except the Carvakas raised any dissenting voice against this theory of re-birth. We do not know how this doctrine originally crept into Indian thought, but once it was there, it was accepted almost universally without a discussion. The few arguments that are sometimes adduced in its support (e. g., in the Nyaya Sutra and the Caraka-Saṃhitā) are trivial in their nature and may be regarded as offered in support of a faith and not as determining philosophical conclusions. The doctrine of re-birth is therefore a dogma of Indian philosophy. The Hindus believed in it; the Jātakas represent Buddha as remembering his past lives, but the Carvakas denied it. It was a philosophical dogma or creed, which might safely be regarded as unproved. We next come to the theory of Karma. This also can be traced to the Upanisads, and it is not improbable that it originated from a belief in the magical efficacy of sacrificial deeds. It is supposed to explain the inequalities of this life by the unknown actions of the past lives, but it refuses to explain any question regarding

reference that he has made to my "A History of Indian Philosophy" says: "This learned Professor of Bengali endeavours in this work to give an account of the evolution of philosophical thought, strictly in accordance with the original sources in Sanskrit and seems to hold the view that there is hardly any need for an exposition of the doctrines of Indian philosophy, for the reason that they appear to him to be essentially the same as found in European Philosophy". *The New Era*, Dec., 1928; Madras. This is, however, a gross misrepresentation of my views. Indian philosophy anticipates many problems and discussions of European philosophy; but in its history, structure, aims, ideals and concrete development as a whole, it widely differs from European philosophy. And it is exactly for this reason that I urge that Indian philosophy must first be faithfully interpreted and it is only after it has been faithfully interpreted that an attempt at a constructive comparison or construction should be made. It is because Indian philosophy is not European philosophy that the former cannot safely be reconstructed in the light of the latter. And it is only when a faithful exposition has revealed the real similarities, that these can be compared. It is essential that M. M. Kupperman and Sastri should make such a gross blunder.

original inequalities of circumstances and advantages by a clever dodge that there is no beginning in the series of lives. The difficulties of the theory of Karma are further realised in other directions also. If the fruits of the Karmas of the past cannot be avoided, how can, then, any one attain emancipation which must necessarily mean cessation of Karma? In reply to such a question, other dogmas regarding the fruition of Karma are introduced, all of which may be regarded as mythical. It is also held that when true knowledge is attained, or when desires are extinguished, the bonds of Karma are burnt up. So far as I can remember, I suppose, no attempt has been made, anywhere in Indian philosophy, to prove any of these propositions regarding the operation of the laws of Karma in a serious and systematic manner. The law of Karma therefore, involves a number of unattested propositions, which have never been proved to be true, nor are capable of being proved so. This is, therefore, the second set of unproved dogmas of Indian philosophy, which has been almost universally acknowledged as true, not as a philosophical conclusion, but as an article of faith. It is only the Carvakas who dared protest against it but no one ever cared to listen to them.

We next come to the doctrine of Mukti, Moksa, Apavarga or Nihreyasa and Nirvana. The Upanisads are full of the sages' experience of an ultimate state of bliss, which is indescribable and undefinable and from which there is no return. The taste of this great realisation seems to be the most attractive and arresting feature of the Upanisads. But it is doubtful whether the Upanisads conceived it as a supra-conscious psychical experience, or as a final state of realisation that put a stop to the cycle of rebirth. The former seems more probable. But all the systems of Hindu philosophy took it to mean the affirmation of an ultimate freedom of the self from mind and all that is mental and physical. Opinions differ in different systems of Hindu philosophy regarding the exact nature of this state, i. e., whether this is an inert state, or a state of pure thoughtless intelligence, or a state of intelligence which is also supreme bliss. But whatsoever may be the value of these differences, there is this general agreement that all systems of Hindu thought have before them the ultimate goal of the absolute, perfect and final freedom of the soul from

mind, and all that is mental and physical, and the ultimate cessation of the cycles of rebirth. It is not the place here to enter into any elaborate discussion regarding the exact concept and meaning of Nirvana in the different schools of Buddhism, but whatever that may be, there is no doubt that Nirvana means some kind of quiescence of finality, and the cessation of all desires, experience and the cycle of Karma. The Jainas also believed in the ultimate finality and the state of liberation of the souls in Moksa. But it does not seem that though this belief in a final and ultimate achievement, extinction or liberation was universal in all systems of Indian thought except the Carvakas no attempt seems to have been made anywhere in Indian philosophy to prove the reality of this state. In this case direct testimony from personal experience could not be available, for, he who attained salvation could not be expected to return back to normal life to record his experience. But in this case also another fiction was introduced and it was supposed that even after the attainment of the final liberation, one may with the help of another pure mind communicate his experiences for the benefit and instruction of other seekers after Moksa. This theory also has not been proved as a philosophical proposition anywhere. The doctrine of Mukti may, therefore, be regarded as another unproved dogma of Indian philosophy. The theory of rebirth, the theory of Karma and the theory of Mukti may thus be regarded as the three most important dogmas through which Indian philosophy has been made subservient to ethics and religion. The influence which these dogmas have over the moral and religious well-being of the Indian people cannot be over-estimated. Not all Indians are believers in God, not all of them believe in prayers, divine grace, or devotion as the best mode of approach to God, but all of them believe in these articles of faith. They have thus held together the entire religio-moral fabric of the Hindu-Buddhist-Jaina culture. Though they are but dogmas, yet they have fertilised Indian philosophy with life, and made its growth possible. For, Indian philosophy did not start from a sense of scientific curiosity or a spirit of scientific enquiry into the nature of truth, but from a practical religious need in the quest of the attainment of the highest spiritual good. It cannot, however, be denied that when philosophy began to grow, these

dogmas did not in any way seriously handicap its free development. But the association of these dogmas has left their permanent stamp on the genius and character of Indian philosophy in the belief that a philosophy that does not ennoble man is but an empty vapouring. Science in its theoretic aspect seeks to investigate into the nature of truth with no other motive than the discovery of new laws, new principles and new relations. But on its practical aspect it is concerned to see, how it can best employ its new discoveries to the alleviation of human sufferings and the attainment of new advantages for human well-being. Philosophy also is not merely a mental science of arguments and discussions, regarding the nature of reality and our modes of knowing it, but it must have a practical side as well. Whatever may be the result of our researches our interest in a permanent well-being of our spiritual nature never lessens its sway. This spiritual well-being was conceived in India as self-control, or control or desires on the negative side, and the philosophic wisdom which directly revealed our spiritual nature as being above all desires and cravings on the positive side. The logic which sought to connect this moral or religious dogma with philosophy, demanded that this ascent on the spiritual scale must lead us somewhere, must end somewhere and have a finality. It was probably owing to such kinds of consideration that it was conceived that there was a deep chasm between our psychological nature and our true spiritual nature. Having made this chasm, Indian philosophy has always found it extremely difficult to explain the intimate connection between the two that is revealed in common experience. Philosophers have sought to explain it through the phenomenon of error, which is sometimes made to behave psychologically and at other times ontologically. There is a lot of confusion in this concept of error or ignorance and the philosopher capable of explaining it is content with leaving it untouched as the flourish of the irrational in experience. A necessary consequence of such a view is that ultimate spiritual attainment must mean the disruption of psychological experience. The moral conflict of the invasion of desires and their control and the strife for the ultimate spiritual attainment is the misery of all psychological experience which must abrogate itself in favour of the rise of spiritual enlighten-

ment. Superior self-control is universally believed to be near to spiritual enlightenment, but opinions differ as to whether the true knowledge of this spiritual reality being entirely different from every thing else leads to the final cessation of psychological experience or mind, or whether the control of desires ultimately produces it, or whether they do it conjointly. No philosophical arguments seem to have been adduced in favour of this bold proposition that the psychological and the spiritual lie entirely asunder and that the former is only related to the latter by a thin film of illusion or ignorance which has made it living and actual, and that the ultimate goal of all our moral and religious endeavours is to split asunder this thin film either by the complete disruption of the psychological stuff, or by negating it through true knowledge. This is then another important dogma which has been produced through the logical tendency of setting a final limit to spiritual perfection. In the West, however, the nature of the spiritual perfection is kept delightfully vague and seldom defined with logical precision, and in consequence of that, philosophy is not inconveniently saddled with an unchangeable theory of mind and spirit. That philosophy should be concerned on its practical side, through a better understanding of our own inner nature and our relations with the world and our fellow-beings, need not be contested. But whether spiritual advancement must have to be conceived as culminating in some kind of absolutism, may be open to doubt. Had philosophy started in this country out of a spirit of rationalisation and scientific enquiry, arising out of our intercourse with our fellow-beings, it would have remained content with setting a practical limit to spiritual advancement. But philosophy started in India, out of a grave subjective anxiety for attaining our highest, and the validity of such a quest was attested and backed by the supra-conscious spiritual experience, epistemological discourses and dialectical discussions, and all that we call philosophy began to grow and accumulate through the centuries of their development, but they never contested the original dogmas which justified their practical significance. It is a fundamental characteristic of Indian philosophy, that it not only tries to take its stand on reasoned and rational discourses, but it also wishes to profit by the results of the mystic and supra-conscious experiences.

of the sages. Indeed, one is often astonished to see in it a deep vein of anti-logical ideals, values and experiences that hold and support its logical frame. The experiences of the Yogins and the rapturous utterances of the Upanisads are incontestable. Philosophy, in its logical venture, has no right to come to conclusions which are contradicted by intuitional experiences. Mere logical consistency cannot guarantee truth, nor can it hold up a schema which will be acceptable to us and which would satisfy the complex demands of our nature. But Indian philosophy not only admitted the claims of this supra-conscious experience in philosophy, but also accorded a superior validity to it. In one sense, it had its superior claims in this that it could only dawn as the result of superior self-control. But its superiority cannot be logically proved, and hence any proposition that affirms it, can only be taken as a dogma. In this connection, it is not out of place to refer to another dogma, that found currency with all systems of Hindu philosophy, viz, the dogma of the incontestable validity of scriptural authority. In some systems it is held that though the validity of the scriptures is incontestable, yet they are to be interpreted in such a way that they may not contradict the testimony of perception and inference. Other systems hold more extreme views and urge that since scriptural testimony has a superior validity, even the testimony of perception and inference should have to be modified in accordance with the testimony of the scriptures. Sankara urges that since no finality can be arrived at by logical reasons, which behave differently in different hands, one must always depend on the scriptures for the final ascertainment of truth.

These are thus some of the important dogmas that have largely modified the direction of the purely philosophical and logical part of Indian philosophy. From behind these dogmas, one great truth emerges, viz, that philosophy owes its origin to the deep-seated human longing after some transcendent finality, and that philosophy must be expected to satisfy this longing by ennobling and elevating humanity to its high, moral and spiritual destiny. This ultimate optimism may in some sense be regarded as a bed-rock of Indian philosophical culture. All these dogmas have sprung out of the necessity of this optimistic nature of the Indian temperament. But how far these dogmas may be regarded as indispensable corollaries is open to doubt. In India the Mukti theory was also challenged by the devotional ideal of the Vaisnavas and the older colourless ideal state of perfection involving the disruption of mind was replaced by an ideal of pure devotional enjoyment of the Vaisnavas and the altruistic goal of the Mahayana Buddhists. The time has now come when keeping a steady eye on our fundamental optimism, we should examine how far the old accepted dogmas need hold their sway over us. Philosophy cannot dispense with dogmas altogether, any more than science can dispense with unproved hypothesis. But if philosophy is to have any life, the older dogmas have to be criticised, modified, or dispensed with in the light of our new knowledge, and change of outlook. Philosophy which remains forever enaged within its old bars, may well be taken as dead. It is, therefore, the imperative duty of Indian philosophy to rejuvenate and revitalise itself by a critical reformation of the fundamental postulates that have so long been guiding its destiny.

SIDELIGHTS ON THE SIMON COMMISSION

By NAGENDRANATH GUPTA

COMING events cast their shadows before and the event which will be the ultimate outcome of the Royal Commission presided over by Sir John Simon is casting a very sinister shadow before it. The Commission has been conceived and constituted

in contemptuous disregard of the claims of India and yet desperate devices have been resorted to in order to lend colour to an impression that the Commission is accepted and approved by Indian public opinion.

If there had been the slightest intention

Egypt her demand for her rightful place among the nations of the world will become irresistible. Meanwhile, the declaration of 'a boycott' against the Simon Commission brought into prominent play the exhibition and use of the force upon which the Government always relies for the suppression of peaceful but unwelcome demonstrations. On the day the members of the Simon Commission first landed in India a *hartal* was observed in many cities in India, including Calcutta. On that day the police, particularly European policemen, wantonly assaulted many inoffensive and peaceful people on the streets and even trespassed into private houses and assaulted the inmates. A *hartal* is purely an Indian institution and to be complete a city must present the appearance of a city of the dead. The streets and markets must be deserted, all places of business must be closed, and the inhabitants of the city should remain indoors. This is not done nowadays and people are found loitering in the streets. This gives the police an opportunity to chase the crowds and lay about their batons and *lathis*. A real *hartal* would find the police chasing their own shadows in the streets.

The use of black flags, uncomplimentary mottoes, the marching in procession, the shouts expressive of disapprobation, is the European form of a boycott, and this has also come in evidence in connection with the Simon Commission. The processions are perfectly orderly and peaceful and the fact that they are led by well-known men incapable of violence is a guarantee of the peaceful character of these demonstrations. But that did not prevent the police from assaulting Lala Lajpat Rai and several other leading persons, some of whom are members of the Punjab Legislative Council, at Lahore, or Pandit Jawaharlal Nehru and several others at Lucknow. The inquiry into the conduct of the police was entrusted to an officer before whom the injured persons refused to appear, so that the report is merely the version of the police. At Lucknow there was no inquiry at all. In every instance, the processionists were unarmed and did not carry even a walking stick; the police are always armed and are spoiling to maintain law and order by the free use of their weapons. In these circumstances, it is a very large demand on human credulity to ask the public to believe that the provocation comes from the unarmed populace.

The explosion of a bomb on a railway train on the Great Indian Peninsular Railway has started a theory that the bomb was intended to wreck the special train conveying the Royal Commissioners. This has yet to be proved, while the fact is undeniable that at Lahore a bomb was thrown on two occasions on the last day of the Ramhla and several persons were killed and injured but the highly efficient and much belauded police have failed to find any clue to the bomb-throwers. Lala Lajpat Rai and others were assaulted at a considerable distance from the Lahore railway station, and on the first day that Pandit Jawaharlal and several others were assaulted at Lucknow the members of the Commission had not even arrived in that city. Yet the assaults are in a manner justified on the ground that the police had bombs on the brain.

Receptions are arranged for the Commissioners wherever they go. No one takes any exception to the official reception, but can anyone call the presence of a dozen hangers-on of the Government a public reception? If it is contended that there is a large body of opinion in favour of the Royal Commission and its local entourage, why are not counter-demonstrations got up to neutralise the effect of the boycott processions? It would be a sight for the gods to see the Rajas and the Nawabs and the faithful henchmen of officials parading the streets with golden banners and flags bearing such charming legends as "Long live the Simon Commission" "Confusion to the boycotters!"

It would have been superfluous to point out that the country, though it is unreservedly opposed to the Commission, has no personal feeling against Sir John Simon if he had kept his personality, like Caesar's wife, above suspicion. When thousands of voices shout, "Go back, Simon!" it is evident they would have done the same if any other man had been appointed president of the Commission. In spite of Sir John Simon's great ability he has not been able to maintain an attitude of complete detachment. It should not be his concern to make out that the Commission is carrying the country with it in its inquiry. He is not responsible for the composition of the Commission; he knows that the Central Indian Legislature has no statutory part in the Commission, and the men who are content to play second fiddle do not represent the Indian Legislative Assembly; the nominees from the Provincial Councils are of no

account. But Sir John Simon has been fussing and gushing over them till his other name has become Sir Blarney Gushington. It may be that the Chairman of the Royal Commission, with the cold mind of popular disfavour beating against him, is anxious for a little sympathy, but he overlooks the fact that he lays himself open to suspicion by his effusive tokens of goodwill towards the recruits from the Councils, who form no part of the real Commission.

In more ways than one this Commission has been an eye-opener. India has no real representation upon it; the evidence that is being led before it has no connection with the true national party of India; the official evidence may be easily discounted as of no practical value to the future of the country. The Indian members of Executive Councils and ministers have so far been chosen from that particular section of the community which avoids friction and always pulls with the Government. They have not been able to exercise any appreciable influence upon the policy of the Government, and their evidence, though recorded in camera, can scarcely be distinguishable from that of the European officials of Government. So little is the confidence inspired by the Commission that the rapidly growing party which stands for Indian nationalism has held aloof from it. There can be no substantial achievement by any Commission without the co-operation of this party, but the very constitution of this Commission precludes all possibility of such co-operation. It must not be supposed for a moment that any reforms, real or

shadowy, have ever been conceded at the initiative of the Government here or the Ministry in England. The pressure has always come from India itself and it must become more imperative and more difficult of resistance with the progress of time. Did it ever occur to Sir John Simon and his colleagues that while the European officials appearing before them were stoutly opposed to the transfer of law and order, which means the police, to ministers, the representatives of law and order were busy assaulting the men to whose efforts the country owes even the semblance of reforms? The India of the future does not belong to the complacent individuals who sit with the Royal Commissioners and meet them at the railway stations and garden parties, but those who stay away and are the targets of police truncheons and *lathis*. Sir John Simon and his British colleagues have been going about the country a great deal, seeing villages and historical monuments. Have they ever thought of paying a visit to the session of the Indian National Congress in Calcutta and taking a stroll round Deshbandhu Nagar? That would give them some idea of the growing national organisation in India. That would enable them to realise that the real issue lies between the forces focussed at the Congress and the might of England, and the real struggle is a moral and not a physical one. It is a conflict of wills and all history bears testimony to the unchallengeable fact that the national will of a people demanding its rights must prevail in the end.

and the royal household was specified which amount was to be paid monthly from the Public Treasury "whether the whole of the amount is or is not collected from the Khalah lands." The collections from the assigned territory improved materially, but no revision was made of the fixed minimum royal stipend to correspond to the increased revenue of the Crownlands. Repeated representations to the local Government on the subject having failed, the aggrieved Mughal sovereign finally decided to depute an Agent to England to urge his claims personally at the head-quarters.

Rammohun Roy was chosen for the task, and the King invested him with the title of *Rajah*, in consideration of the respectability attached to the office of his envoy (*Elehi*). Rammohun thought it wise to get the bestowal of this title approved by the Paramount Power, which, however, would neither recognize his appointment as envoy from the Delhi King to the Court of Great Britain, nor acquiesce in the King's grant of a title to him.

Anxious to secure an early passage to England, Rammohun became afraid lest the Indian Government should refuse him a passport. So, he cunningly disarmed official hostility by representing to the Governor-General that, on various considerations, he had decided to proceed to England as a *private individual*, divesting himself of all public character. Rammohun, then aged about 56, sailed from Calcutta on 15th November 1830 by the *Albion*, bound for Liverpool, and reached England on the 8th April following.

The mission from the King of Delhi was the foremost thought of his mind. Although he had left Calcutta as a private individual, he avowed himself in England as the accredited Agent of the King of Delhi. He carried with him a letter from his master to His Majesty, George the Fourth, which he had composed in English and Persian.* But before presenting this letter, Rammohun made an appeal to the Court of Directors and submitted to them a printed pamphlet on the Delhi King's claims, which he had prepared for greater facility of perusal and information regarding the circumstances of the case.

On 25th June 1831 he addressed the

following letter to the Chairman and the Deputy Chairman of the East India Company, informing them of his object in visiting England :—

"I have the honour to acquaint you that one of the principal objects of my visiting England is to lay before the British authorities, if found necessary, a representation with which I am charged from His Majesty the King of Delhi, and more especially a letter from His Majesty to the King of England, which letter it will be my duty to take an early opportunity of presenting in the event of the appeal which I am induced in the first instance to make to the Hon'ble Court of Directors not being attended with success.

I would beg to state on the present occasion that I possess full and unlimited powers from His Majesty to negotiate and agree to a final settlement of what the King considers to be his fair and equitable claims on the Hon'ble East India Company. The circumstances connected with the appeal are stated in a pamphlet printed for greater facility of perusal and reference, a copy of which I now beg to submit herewith and I may add that with the exception of one copy that I have placed in the hands of the Secretary of the Hon'ble Court and another submitted to my confidential friend Mr. Brown Roberts no other copy to the best of my belief, has gone out of my possession.

I mention this fact because I am anxious to bring the whole matter quietly and unostentatiously before the Hon'ble Court of Directors, with confident expectation that they will early take the whole of His Majesty's case into consideration and at once do His Majesty that justice to which His Majesty considers himself fully entitled.

The whole revenues of the Crownlands which, under the agreement of 1805, the King deemed expressly conceded to him, have been not only in a great part withheld, but in fact deemed His Majesty's allowances have been limited far below what was expressly guaranteed by the Treaty sanctioned by the Hon'ble Court of Directors and the British Parliament, and it is impossible His Majesty can find means out of the limited income fixed for him to support that moderate scale of dignity which is due to the representative of the powerful, but nevertheless illustrious House of Taimur, and to maintain the numerous members of the different branches of that House.

As from the printed statement you will perceive that this claim regarding His Majesty's stipend was brought before and decided upon by Lord Amherst's Government, the present local Government of India could not reverse the decision passed by their predecessors.

"It is my duty therefore to press upon the immediate attention of the Hon'ble Court the extreme anxiety which I feel faithfully to execute the trust reposed in me by His Majesty.

"I am prepared to satisfy them that the ample powers which I possess are sufficient to bring the matter to a final conclusion. I am confident from the well-known character of the Hon'ble Court that they will not withhold their sanction from what shall, upon a full and deliberate consideration of the whole of the circumstances, appear to be just, reasonable and equitable towards His Majesty the King of Delhi."

* This document is printed in my *Rammohun Roy's Mission to England*, pp. 51-65.

Majesty's Government being actuated by justice has listened to the appeal. Therefore, whatsoever is done as a matter of justice, by the express authority of your Board, not contingent on the local authority which has already prejudged the case, will be satisfactory to me.

"Any just man feels desirous to be informed whether the powers intrusted to his servants, particularly those in a remote country, have been properly exercised, and to prove that when any injustice has been done by them he is anxious to afford redress—a course which is calculated to discourage future injustice. But with regard to the Court of Directors I am sorry to find that in my humble opinion the case is quite the reverse. In the meantime I am here so situated as to be responsible not only to the King of Delhi but to the whole body of my countrymen for my exertions in his behalf and for their welfare.

In order to obviate the excuses of the Directors that the King of Delhi should have first referred the case to the local Government and that I was unaccredited, I wrote the accompanying letter to them, a copy of which I beg to submit to your consideration." (11 October, 1831). *

This was followed by another letter to

* Rammohun Roy to the Right Honble Charles Grant, etc etc., dated 48 Bedford Square, 11th October, 1831.

the Board in support of the statement which Rammohun had made regarding the territory assigned to the Delhi Royal family for their maintenance.—

"For further illustration of my statement that the assignment of territory to His Majesty (the King of Delhi) was embodied at the time in the Regulations of Government (in India) which stand in the place of Acts of Parliament in this country, I have the pleasure to send you the accompanying volume of the Regulations of the local Government containing the articles referred to, marked with pencil and beg your attention to them.

"If convenient, you will have the goodness to bring them to the notice of the Head of your Department and oblige."

P. S. As to the quotation I beg to refer you to page 3 of the Brief Statement consisting of 4 pages and to pages 9 and 10, Par. 5 & 6 of the printed Pamphlet on the subject.

Reg XL 1804 Sec 4
Reg VI 1805 Sec 3
Reg X 1807 Sec 1"†

† Rammohun Roy to Hyde Villiers, Esq. (Secretary Board of Control), dated 48 Bedford Square Octr 21st 1831

THE ANNAMALAI UNIVERSITY

(Chidambaram, South India)

By V. SRINIVASAN

ONE more University Act has been placed on the statute books of India, and next July will begin to function the Annamalai University in the Presidency of Madras.

For the first time in the history of India, is the name of a University associated with the name of an individual and rightly so, for the University is a *fait accompli* due to the generosity of Sir S. R. Mm. Annamalai Chettiar who in addition to making over to the University his present college at Chidambaram worth over 15 lakhs has offered an endowment fund of 20 lakhs—the biggest single benefaction for education in this country. The Ministry of Education in Madras must be congratulated on its placing on a statutory basis its initial grant of twenty-seven lakhs to the capital fund and seven and a half lakhs to the building and

equipment fund, besides an annual recurring grant of one and a half lakhs.

CHARACTERISTICS OF THE UNIVERSITY

The University is to be a *unitary, teaching and strictly residential* one "in which teaching, study, research and an active social life will be pursued in an atmosphere congenial to their growth along sound lines and in which the training given to students would be of primary importance and the examinations which test this training of only subsidiary importance."

Regarding the subjects to be studied in the University, in addition to the usual faculties of Arts and Science, there are to be a faculty of oriental studies for the study of Tamil, Sanskrit, Indian History and subjects particularly connected with and a Faculty of Technology, provisic

made for professional studies also. It is to be highly regretted that the Legislative Council of Madras should have thrown out the suggestion that 'commerce' should be included as one of the branches of learning to be studied in the University. And the irony is all the greater since the University is the outcome of the generous heart and purse of a great banker and merchant-prince. It must not also be forgotten that the 'Faculty of Technology' was added to the other faculties, in the last stages of the Bill in the Legislature and accepted by the Government in a half-hearted manner. If, as was stated by the Finance member of the Government of Madras, the University is essentially one 'for the development of pure humanities and professional studies,' there is every danger of this University manufacturing the same type of graduates as the parent University of Madras but for (a) the contemplated specialisation in oriental studies and (b) the residential and teaching character of the University.

The former is sought to be emphasised by giving representation in the Senate of the University to (a) the teachers of the existing Sanskrit colleges in the Tamil area (b) the teachers of the existing Tamil colleges in the Tamil area (c) the premier academy of Tamil—The Madura Tamil Sangam (d) the premier Adi-Dravida Cultural Association—Sri Naadanar Kalvi Khazhagam and (e) the premier Muslim Educational Association of South India.

The latter is clearly emphasised by the provision that the jurisdiction of the University will not extend beyond a radius of 10 miles from the convocation hall (though this will not apply to institutions imparting instruction in agriculture and other technical studies), and the other provisions regarding residence of students and teachers, &c. The seat of the University is such that it has every facility to develop into a University town. Chidambaram, at whose extensive outskirts the existing college is and the future University is to be housed, is a small municipality with a population of just over twenty-two thousand, occupying the fortieth place among the Municipalities of the Madras Presidency, and so not possessing the disadvantages of the crowded life of the great college centres in South India.

BENEFICIARIES AND RELIGIOUS INSTRUCTION

The University is to be *non-denominational*. "Membership of the University is not to be

denied to any person, student or teacher on the sole ground of sex, race, creed or class" (clause 5). The exception made to this, "except where in respect of any particular benefaction accepted by the University such test is made a condition thereof" is rather unhappy. As a great educationist pointed out during the discussion of the Bill, "the encouragement of benefactions founded on religious tests is an anomaly and an anachronism." It is rather strange that while the Act includes such a clause, the provision in the original bill "that nothing in this section shall be deemed to prevent religious instruction being given in the manner prescribed by the statutes to those not unwilling to receive it" should be removed in the Act. All cannot agree, with the Minister of Excise in Madras, in thinking that the provision was redundant as there was nothing in the Act to prevent religious education being given. The authorities must see that the education imparted does not tend to be 'soulless'—the present system of education in India in general has justly been described as 'soulless'—and the only way of doing it would be to provide religious instruction in as many religions as possible with the due safeguard of a conscience clause. It is not quite safe to leave, in a residential university, religious teaching to private bodies out of class hours. The undenominational character of the university will not be taken away by such a provision. It is one thing to impose a religious test for enjoying or taking advantage of some privilege and another thing to impart religious instruction to those of its alumni willing to receive it.

MEDIUM OF INSTRUCTION

This University, situated as it is in the Tamil country, would naturally draw students from only Tamil Districts and it would have been in consonance with modern tendencies if those responsible for the Act had added a provision that the medium of instruction of all non-language subjects would be wholly Tamil within a prescribed period of years.

THE OFFICERS OF THE UNIVERSITY

They are (1) The Chancellor (who is the Governor of Madras), (2) The Pro-Chancellor (who is the 'Founder'—Sir S.R. Mm. Annamalai Chettiar, or, after his death, a member of his family), (3) The Vice-chancellor (to be nominated by the Governor-Chancellor from a panel of three names suggested by the

founder—a very reactionary procedure, the Senate's right to elect the executive head of the University being taken away from it), (4) The Registrar (to be nominated by a Board of Selection including the founder) (5) The Deans (elected by the faculties from the heads of the department of studies).

THE AUTHORITIES OF THE UNIVERSITY

(a) *The Senate.*

There are to be thirty-one ex-officio members, eight members nominated by the Chancellor (of whom three shall represent backward and minority communities), four nominated by the Founder, twelve elected by the graduates of the new University, and for a period of ten years by the graduates of the Madras University in the Tamil area, four elected by the academic council to represent the interests of the teachers of the University, one elected by the district board and municipalities of the District of South Arcot (where the university is located), five elected to represent cultural associations in the Tamil country (See paragraph above). The two chief chambers of commerce are given one representative each—why we do not understand, especially as commerce has not been included as one of the subjects of study. It is equally not clear why the Madras Landholders' Association should be allowed to return one member to the Senate, while no representation is given to the teachers in secondary schools in the district of the Tamil area or the accredited association of teachers in South India, the South Indian Teachers' Association. The elective element ought to be larger.

The Senate is the supreme governing body of the University, and its resolutions, the annual report, the annual accounts and the financial estimates shall be binding on the Syndicate.

(b) *The Syndicate* consists of the Vice-Chancellor, the Director of Public Instruction, Madras, the Deans, two members nominated by the founder, two members nominated by the Chancellor, two members elected by the Senate and, one member elected by the academic council. It is the administrative body charged with the work of seeing that the affairs of the University are carried on properly.

(c) *The Academic Council* will be roughly sixty strong (consisting mostly of professors and readers of the university—of whom ten shall be elected by the university teachers other than Professors or Readers (of whom at least five shall be among themselves)—to provide for the representation of expert teachers outside their own circle). The Senate sends five

members to this council. This body advises the Syndicate on all academic matters and makes regulations in respect of courses of study, discipline, etc.

(d) *The Faculties* } The constitution is
(e) *The Boards of* } left to be prescribed
 Studies. } by statutes.

(f) *The Finance Committee* will consist of (1) The Secretary to the Madras Government in the Department of Finance, (2) the Vice-Chancellor, (3) one member elected by the Senate, (4) the Founder. This committee will scrutinize the financial estimates prepared by the Syndicate. The estimates as modified by the committee will be placed before the Senate. But any reduction in the income or alteration of expenditure is to be placed before this committee for its re-consideration, and if this committee does not agree with the Senate the matter is to be placed before the Chancellor for final decision. Though the Act limits the life of this committee to ten years and though it is argued that thereby the University will "obtain expert financial guidance and avoid unnecessary and improper expenditure on schemes which afterwards prove to be failures," the establishment of this committee is striking a blow at the supremacy of the Senate. There is no need for this safeguard, especially as the Syndicate will consist, among others, of the Director of Public Instruction and four members nominated by the Governor, who may, if the Governor so desires, be financial experts.

AUTHORITY OF THE UNIVERSITY

A spirit of distrust in the New University pervades not only the provision for the Finance Committee but also clause 6 of the Act where it is said that the University "may with the previous sanction of the Governor-General-in-Council recognise examinations of other Universities or bodies as suitable for admission to this University." This clause takes away the autonomous character of the University, and may act prejudicially to the cause of learning and cultural unity. For example, a student of the Cairo University desirous of taking up a course in South Indian Saiva Philosophy in this University might be denied admission here, because the relations between the Governments of India and Egypt might not be cordial! Similarly with students of other 'unofficial' seats of learning, like the Gurukula at Hardwar, National

University founded by Mahatma Gandhi, and Visvabharati.

THE FOUNDER'S EXTRAORDINARY POWERS

While all honour is due to the founder Sir S. R. Mm. Annamalai Chettiar for his giving the wherewithal of the New University and none would grudge him the Pro-Chancellorship of the University, power of nominating members to the Senate and the Syndicate and right to sit in the Board for selection of teachers and in the Finance Committee, it is not desirable that he should be empowered, as is done in the Act, to call for papers from the Vice-chancellor and demand re-consideration of subjects by the authorities. Equally undesirable is the power given to him to nominate a panel of three men for the Vice-chancellorship. Sir Annamalai, every one knows, would never misuse his powers. But the same cannot be said with certainty of his descendants; the exercise of

such powers may cause friction in actual working.

CONCLUSION

A teaching and residential University is a new experiment in South India, and on its success will depend the foundation of more Universities of the type, not only in the Tamil Land but also in the Andhra and Kerala countries. Great responsibility, therefore, devolves on those entrusted with its administration and specially the teachers of the University, who should be 'first-rate' men and women. It is the fervent prayer of all that the new University may be so administered as to say, in the words of the late Sir Asutosh Mookerjee, "to their men of letters, 'you must be leaders of men' as to their men of science, 'you must be men of affairs too'", and be a standing monument to the generosity and public spirit of Sir Annamalai.

MY REMINISCENCES OF LALA LAJPAT RAI

By MAJOR B. D. BASU, I.M.S. (Retired)

LALA Lajpat Rai did not by birth belong to the Punjab proper, that is, the land watered by the five rivers over which Maharaja Ranjit Singh ruled and which was annexed by the "Scotch-laird of the Cock Pen" a decade after the death of "the great Lion of the Punjab." Perhaps he would not have come to fame had there been any college nearer his home than Lahore. The part of the province from which he hailed was nearer Delhi than Lahore. Up till 1877 there was a college in the capital of the Moghuls, which was claimed as his "Alma Mater" by the Kashmiri Pandit Mohan Lal, who attained some notoriety for being a tool in the hands of McNaughten, Conolly and other unscrupulous Europeans for performing the dirty work of Occidental diplomacy in Kabul in the early forties of the last century; by Mir Samat Ali, well-known for his work on "The Sikhs and the Afghans" published some eighty years ago on the eve of the Punjab Wars; and by Master Ramchandra, who distinguished himself by his well-known

mathematical work on "Maxima and Minima." In the year when Her Majesty Queen Victoria assumed the title of the "Empress of India" and which event was celebrated with great pomp at Delhi, that city witnessed the abolition of its well-known college. So the Province of the Punjab, as then constituted, had only one college left at Lahore at that time for the higher education of several millions of its inhabitants.

Lajpat Rai, after passing his entrance examination, came to Lahore and joined the Lahore Government College early in 1881. His father, Munshi Radha Kishen, was an admirer, if not an actual follower, of (Sir) Syed Ahmad Khan of Aligarh, who was laudingly called "Natore-i" by orthodox Mussalmans;—the Syed's faith bore some resemblance to that of the "Brahmo Samaj", of which Pandit Shiv Narain Agnihotri, now known as Deva Guru, was then the most prominent leader in the Punjab. Lajpat Rai was a very frequent visitor to the Pandit's house, where he made the acquaintance

in India. Lala Lajpat Rai imitated his style of speech and attained great success as an orator.

The last time I saw Lala Lajpat Rai he told me that every second man he came

across in the Punjab was a spy in the pay of the Government and he narrated how through the exertions of a well-known Punjabi he had been deported.

TRAVELS IN ITALY

By Dr. SUDHINDRA BOSE

Lecturer in Political Science, State University of Iowa

A traveller in Italy stumbles constantly upon old tombs, crumbling ruins, and decayed relics of the dead past. Italy simply overflows with ancient history. And sometimes this history brings to mind painful memories of oppression, cruelty, and revolting debaucheries. In that beautiful island, Capri, where you go in raptures over the delicate brickwork and white marble mosaic in the palace of the Emperor Tiberius, Capriates will tell you how Tiberius amused himself by hurling the victims of his pleasures, over the precipitous rock into the sea. Such fiendish cruelties! The stories of Caligula, Nero, Commodus and Elagabalus are too well-known to be rehearsed. Even in the Colosseum, where you are impressed by its vastness and its massive construction, you are tortured by the thought that Romans had thirty thousand Jews torn away from their homes in Jerusalem to build the Colosseum in Rome and that the very architect who designed the edifice was slaughtered at this place. The butcheries which went on in the Colosseum, century after century, it is distressing to recount. Indeed, the term Roman history is to my mind almost interchangeable with tyranny, murder, imperialism, and lust for blood. I may be mistaken; but this is only a traveller's tale.

In referring to the unhappy features of the Roman civilization, one does not need to minimize the contributions of Italy to European art, architecture, literature, and jurisprudence. This is not the place to discuss the Roman law or Roman art. I am at this moment more interested in live human beings than in antique tomes or in inanimate objects of art.

The modern Italians are an interesting

people. They are polite and courteous to strangers within their gates. On arriving at Florence one night, we could not find any coolies in the station to carry our baggage. We were, to use an American expression, "up against it". A Florentine, who was with us in the same compartment, saw our predicament. He helped to get out our heavy suit cases, searched out a coolie, and directed him to take us to a motor car stand. We appreciated this courtesy greatly.

Educated Italians know French and can speak broken English; but usually they do not condescend to speak either. They are too nationalistic to use a foreign tongue. If you know Italian, you will find that your Italian fellow-passengers are willing to enter into conversation with you and on leaving, they will invariably wish you pleasant journey (*Buon Viaggio*). This sort of courtesy is not confined to Italy alone. It is characteristic of all the civilized countries of Europe, excluding England. I recall how on our way from Lucerne to Basel two German-speaking Swiss girls, who met us on the train, prettily took leave of us. They shook hands with us cordially, and kept on repeating that we might meet again (*Auf wiedersehen*).

Let no one infer from this that Italians are a race of angels. Very far from it. We have had our share of Italian imposture and thuggery. We have been cheated, overcharged, and given short change more than once. It however, pleased my humour to see that even when the Italians deal their victims a stab on the back, they do it most amiably and do it with a broad sun-flower smile. Indeed, the Italians can be artistic even in their brigandage.

The guide at Pozzuoli Sol Farata, who had shown us over the Little Vesuvius, asked for a tip after we had paid him the prescribed tariff. "Give me a tip", he implored, "and I will drink to your health." But the carriage man who drove us from Pozzuoli Sol Farata to the railroad station was more romantic. After he was paid the stipulated fare, he turned to my lady with a bow and begged for a large tip "so that I may drink to your beautiful eyes, signora."

Tipping is one of the degrading extortionate practices of Europe which all self-respecting men must resent; but we had to submit to them just the same. The most brazen instance of this kind occurred to us in Paris. We went to *Theatre Michodiere*, off the famous Avenue de l'Opera, and were conducted to our seats by an usher. After we were seated, we found the usher standing by with her hand stretched out. Asked what was the trouble, she said she wanted "recompense for the service."

"We have already paid a high price for the tickets. Now you speak of service. Mon Dieu! What service?"

The French mademoiselle flew off the handle. "Ah, the service of showing your places", she remarked with the national shrug and grimace on the largest scale we have ever seen.

Wishing to avoid an argument, we put a coin in her hand. Still she stood by, talking and gesticulating and begging for a larger tip. Then when a bigger amount was paid she grabbed it quickly, and sailed away with her nose in the air without even saying "thanks". I was, well, dumbfounded. When I met people like this I am apt to cry out with the witty Frenchman who remarked: "I love all mankind except those I know personally."

An Indian is not a common sight in Italy. We Indians were frequently stared at and we often heard, "Guardi Indiani" (Look! Indians). The Italians know little about India and apparently care less. In a widely circulating weekly magazine we saw a front-page short story, which was supposed to be a true portrayal of Indian love. The story was gorgeously embellished by a large coloured picture in which a Hindu widow, rich and young, was represented as being burnt on her husband's funeral pyre!

The two cities which I enjoyed most in Italy were Naples and Venice. My balcony at Naples overlooked the bay, and I could

see from there the crescent beach and the shimmering blue waters of the sea. At one horn of the bay is the black Castel dell'Ovo (Egg Castle, so named because of its oval shape) and further back in the dreamy distance is the Vesuvius languidly sending up its grayish smoke. It is a charming scene around the bay which has so often been painted and sung by artists and poets. Naples is the city of smiling seas, blue skies, and shining sun. *Vedi Napoli e poi Mori* (See Naples and die) sums up in an Italian proverb the enthusiasm of the Italians for Naples.

To me the most entrancing experience in Naples was to walk its streets and mingle with the crowd. It has not that rush and hurry manifest in an American crowd. Italians are easy-going; they take things slowly.

Italy abounds in restaurants and wineshops. You can get there almost anything you want to eat and drink, provided you have one thing in ample purse. Italy, like France, is a paradise for epicures. Many of the costly hotels and cafes are no doubt maintained for rich foreigners, who have more money than brains. But judging by the frequency of straw-bound *faschi* bottles which the native Italians carry from numerous wineshops, one feels that they are a very thirsty lot.

The main streets in every large town are broad, clean, and asphalt-paved. They are flanked by beautiful buildings with their balconies and windows bedecked by boxes of gay flowers. There is a big playing fountain in every square, and you are seldom out of the sound of falling water. This is especially true of Rome. It is a pleasure to walk through the majestic streets and vast piazzas of Italy where you can see Italian life at its gayest and best.

The alleys of the Italian towns, which are the haunts of the poor, are not so attractive. There you find a different world, full of foul odours, poultry, goats, vermin, and ragged natives eating macaroni and cheese with their fingers. Here, too, commerce is dramatic and boisterous. Fruit vendors, fishermen, chestnut-roasters and peddlers of knickknacks carry on a furious traffic. What bothered me most in dealing with the traffickers is in not knowing exactly what price to offer for their wares. Once a peddler demanded twelve lire for a picture book, which he ultimately sold me for only five. The Italian fondness for sharp bargaining is

extremely baffling to one accustomed to "one fixed price" in the United States. Nevertheless, I like the little Italian streets with their many-balconed walls. They are picturesque and team with the motleyest life.

The pedestrians in the boulevards are well dressed. The Italian girls, noted for their languorous black eyes and sensuous lips, have a flare for fine clothes. They are powdered and rouged, and wear as short skirts as do American girls, and smoke as coquettishly as do the English or the French. Yet the Italian girls are not having a very good luck, "if you know what I mean." Since the late War for Democracy, there are two or three marriageable girls to every man in Italy. The present Fascist government, anxious to have women bear and rear loyal Fascists, has imposed a bachelor tax and is granting a bonus to heads of families with many children. Even these measures have not tended to enliven the dull Italian marriage market, and the "bachelor" girls with all their pulchritude can still be described as "ladies in waiting."

If there is one trait which is universally characteristic of the Italians, it is their love for music. I was impressed by the immenso crowds which nightly throng the public squares to hear bands and orchestras. Men bring along their families and sit for hours listening to music. I had never seen such a passion for music anywhere else in the world.

It is customary to speak of Florence as "the fairest city of the earth." Its palaces, churches, and art galleries which have been enriched by the works of Giotto, Ghiberti, Donatello, Michel Angelo, Botticelli, Andrea del Sarto, and Fra Angelico, deserve all the praise and admiration which have been lavished upon them. A visitor is also thrilled to recall that here, in this "City of Flowers," he is treading the soil trod by Dante, Boccaccio, Petrarch, Savonarola, and Galileo. Florence is a lovely city. But to me, Venice, "The Queen of the Adriatic," is the most enchanting place in Italy. The Church of St. Mark, the Grand Canal, the Rialto Bridge, the Church of Santa Maria della Salute, the Doge's Palace, and the Bridge of Sighs connecting the Doge's Palace with the political prisons and dungeons, I shall never forget. I was always glad I entered Venice in a moon-light night, and that first gondola ride in the Venetian canals seemed to intro-

duce me to an ineffable dreamland. The little winding streets and the innumerable canals with their painted gondolas—what a witchery they weave! I only wished to God that the ugly steamers, which now serve as street cars, were all wrecked and sent to the bottom of the sea. They are so hopelessly out of place in the picture. Venice has an incomparable magic all its own. "From one end of the Grand Canal to the other," says a handbook on Venice, "palaces, houses, public buildings and churches rise up out of the water, every building having a history, legend or romance attached to it, while in the numerous museums for which Venice is noted there are superb collections of masterpieces of the best Italian painters." Venice is delightful. Some of the most pleasant moments of my life in Europe had been there. If there is a spot anywhere in the world, outside the land of my birth, to which I can invite my soul it is the immortal Venice.

Sometimes it is a question in my mind if the native Italians appreciate and enjoy their beauty spots as much as do the foreigners. Let me give an instance. One fine morning while on our way to the Rialto, we fell in with a Venetian woman.

"I am tired of Venice," said the wrinkled up little woman. "The canal water smells so bad!"

"Aren't you a Venetian?"

"I was born here, but I am sure of one thing; I am not going to let myself die here."

"Why not?"

"I want to die on firm land where my body will remain put in the grave. When the water rises in the canal, the body may be washed away in the sea. Wouldn't that be dreadful?"

The woman was visibly pale with fear. Even the charms of Venice could not shake her free from the thoughts of the day of Resurrection. Then she remarked once more: "The stink of the canal water is something awful." And to snit her words to action, she held her nose with her fingers.

Italy must be reckoned among the most priest-ridden superstitious countries of Europe. Proofs of this fact came to my notice time and time again. In the Cathedral of San Januario, Naples, we were told that the blood of the ancient Saint Januario is still preserved in a jar. This blood, if one can credit what one is told, performs a miracle:

it liquifies each year on the twentieth of September. The Neapolitans believe that when the blood of the Saint melts it means prosperity and when it does not, it implies adversity for Naples.

In St. Sebastian Church, Rome, you are shown a marble slab on which Christ was supposed to have stood when he met Peter fleeing from Rome. The deep prints of feet on the hard stone are actually believed to be those of Christ! When I come across evidence of such a stupid superstition, I cannot help thinking the words of the late William Archer: "Christianity is a religion of ignorance and darkness."

At the Vatican there is an immense bronzo statue of Saint Peter. All Catholics entering the Vatican make it a point to kiss the toes of Peter because he claims to have the keys of Heaven. The result of this incessant kissing business has told disastrously on Peter's toes, which are now all but worn out! As I stood near the statue, I saw an endless stream of women, children, and old-womanish old men stop before the image of Peter and mumble prayers. I noticed a baby being held up to suck the stub of Peter's big toe. Peter is the most successful saint to my knowledge; but, oh! why punish an innocent child to lick his toes? Is there no law in Europe against cruelty to children?

Ninety-five per cent of the Italians regard the Roman Catholic church as divinely inspired, and the Pope as their divinely authorized teacher. The church imposes on the people's ignorance a blanket authority which they dare not question. To challenge the church or the "infallible" pontiff is to defy the will of God. His Holiness the Pope, who asserts to be the successor of Peter, informs his worshippers that he has the power to send their souls to "the burning pit," and they do not see that he has no more power to send them there than a mouse-coloured mule.

Catholics hold that they have the truth. So they have—up to a certain point. But the truth cannot be the monopoly of any one sect. The truth is too majestic and too big for that. Ignoring this fact, the Catholic priests play upon primitive emotions and conscious ignorance of their flock.

While the priests rule by assumptions, Mussolini, the chief of Fascism, rules by secret societies. There is no freedom of speech and opinion in Italy. If you do not like Mussolini, you must either keep your mouth shut or get out of the country. There

is no possibility of an anti-Fascist to speak out his mind. He lives in an atmosphere of suspicion and silence. Nobody knows when one may be arrested and thrown in jail. Prisons are full to overflowing. Moreover, Mussolini has established dreaded Siberias in the Mediterranean. There is intentional ignorance everywhere among Mussolini's countrymen. They are too afraid to find out the truth, which is difficult and dangerous. The long-suffering people are thoroughly cowed down. Thomas Jefferson, the author of the American Declaration of Independence, was right when he said that every priest-ridden country without exception has lost its liberty.

Signor Benito Mussolini wears laurel leaves round his head and takes Napoleonic attitudes, and his admirers have told me that all is superlatively well with Italy. That I doubt. Beneath the appearance of prosperity there is a great deal of suffering. And it is the workers, who suffer most under "the new order." Some of the labouring men we met told us that unemployment is widespread, that wages are low and are constantly undergoing further cuts. "You must make these sacrifices for your country," they have been warned, "and keep quiet."

The Fascist regime is one of repression. Censorship, ignorance, suspicion, and political abuses have made the people afraid even to think about liberty. Long before we landed in Italy, we had an instance of the moral cowardice which now prevails in Italy.

In the Italian boat we went from India to Italy, we had as one of the passengers, Dr. Zacharias, editor of the Catholic *Weekly* (Bombay). Dr. Zacharias had consented to give a talk on "India To-day". The notices of the lecture were posted on the bulletin boards, and all other arrangements completed. Then an hour before the meeting, the Captain who was a Fascist sent word that no lecture would be permitted on board the ship which may be considered in any way political.

The Italian government is despotic, aggressive, imperialistic, and militaristic. Count Keyserling in his new book, *Europe*, speaks of the Fascists as being more primitive, more near to the savage than their predecessors. Liberalism, it seems to me, may be unsuited to the Italian temperament; but that does not prove the failure of liberalism in the rest of the world. Indeed, the world is beginning to realize what a menace Fascist Italy is.

The Italian situation bristles with dangers.

Yet there has been many an obscene tribute of applause to Mussolini. He may have mastered his fellow-countrymen, but economic realities are about to master him. The much advertised prosperity of Italy is a padded legend, a mocking fiction. My respect does

not go out to Il Duce. The Italian currency but for American credits would pancake in value. So long as Dictator Mussolini can obtain American financial support, he is safe. Nevertheless, things cannot endure like this. Where is Italy headed for?

ENGLAND TO CHOOSE

By B. B. M.

1. India is of the Indians. It is their country. They have the first and inalienable right to fashion their future in the way they feel just and correct. England can guide but only by friendly advice. She cannot either force her ideas or thwart the Indian even when the former feels that the latter is wrong in pursuing his own ideas. India has a right to muddle and profit even by failure. What right has England to interfere? As a friend an Englishman can certainly be hastened to, but only when the attitude is unmistakable and the heart beats true.

2. England and India must make up their mind as to what their mutual relationship should be. The position should be clearly and unequivocally grasped. I, as an Indian, fully and sincerely believe that India's legitimate goal is a "Free and Independent India" in friendly alliance with Great Britain, if the latter agrees to such alliance. Both the countries stand to gain immensely by such combination. Both of them stand to suffer by disruption. If, however, disruption comes, England, with her limited natural resources, with her vulnerable position in international politics in Europe, with hoards of enemies about which she has created all round the world, will be in a far greater danger than India. India's position on all these points is infinitely better. It is England and not India that will have to face more certain ruin if England and India have to fall out and end this connection by a bitter struggle. Government by compulsion for long being impossible, it is to the interest of England to work and work hard for goodwill. "Free India" in alliance with Great Britain may be compromised for India as an equal partner in the British Commonwealth, provided it is really

so and not a make-believe. It must be a tentative stage—the future of which only the future can determine. If India can really find a place of absolute equality, I am sure she will only be too glad to accept and cement the position; but the Empire so long had meant to her "helotry" within and abroad. She is determined to scrap the halter.

3. Mutual recrimination leads nowhere and if friendship is to be the goal, it must be eschewed. The pedestal of superiority must be pulled down—if England is to be India's friend, she must be prepared to serve and not to dictate. It is certain that sensitive, responsive and generous India can be more than a friend in return. If there be any truth in the religion, in the culture, in the civilisation, in the political and administrative systems which she claims to be superior, England should be prepared to let them demonstrate their value in free and open competition of comradeship and equality and not in jealously guarded, vigorously preserved ring-fences of privileged authorities under the eye of a prejudiced and interested jury. There is too much of self-importance, too much of the air of superiority, too much of aloofness, too great a bumpiness and too great a tendency to look for needless in some one else's eyes ignoring the notes in one's own in his dealings with Indians to make the Englishman a lovable and an attractive friend. If India is to grow—and grow she must—she cannot be in that perpetual inferiority complex which the entire administrative machinery puts her to. Love and sympathy can win, hatred and threats never. Is England so much behind in her intellectual and moral evolution as not to comprehend this?

The Englishman hardly realises the extent

of bitterness that exists today against him and which is growing by leaps and bounds. Let the Englishman overhear any random group of elderly, or middle-aged or young people anywhere. It is a mistake to suppose that the attitude is confined to a minority of literate classes. Even if it were so, it would be dangerous enough, for, the literate classes were expected to be the firmest links in Indo-British connection. What will result when literacy spreads? I would wish the Englishmen to manage to overhear the talks of their servants, the talks of any group of common people in the village when the Government or the Englishman is the subject matter of the conversation. Has Barfolt no lesson to teach? Is even the Presidency College incident without its significance? Is the Englishman sure that he is living in an atmosphere of friendship and goodwill? If more direct demonstration and mathematical accuracy be desired, let an Englishman and an Indian stand as candidates for election by the people for the headship of a District or for once let the Governorship of Bengal be thrown open to election and let the best Englishman stand as a rival candidate to an Indian on adult suffrage or universal suffrage. Bitterness when it grows hardly contents itself with an attitude of passivity. It seeks expression in deeds. Any pretext, any opportunity brings the issue to a head. The ground is being prepared by the desperate strain of modern life and by the effect of modern economic forces. Is the policy of drift moral or even prudent? The administration is powerless. The *sine quo non* of efficient administration must be knowledge and love. The Englishman has neither the one nor the other and the Indians know it. The Indian is thoroughly convinced today—and every Indian can cite numerous instances of one's personal experience in support of his conviction—that an Englishman is an out and out anti-Indian—the intensity of antipathy varying in degree with individuals. There may be exceptions but exceptions do not count.

4. India is too self-conscious to be hood-winked, too anxious for serving the best interests of her people to be put off by platitudes and make-believes, she has got too great a faith in her destiny now to be repressed. It is for England to make up her mind. Would she assist bitterness to be aggravated till she develops India to be her greatest enemy in the East or would she

allow India to look to her as her greatest friend in the world?

The choice is England's. India has made her choice. She must be free—aided by England if she will but in spite of England if she will not. It is England which is on trial—on her statesmen rests the decision which will determine the future of England no less or possibly much more than that of India.

5. India realises her difficulties—difficulties not all of her own creation nor inherent in her constitution. An accident and an unnatural political catalysm have worked havoc in her evolution. What should have been left to be determined by a free play of nature has been piloted. That freedom has been cribbed, cabined, twisted, stultified and uprooted. The administration, the civilisation and the political form thrust on her brought in not fulfilment but destruction, largely if not wholly. They put the man in a state of perpetual inaction and subordination. They dwarfed his stature. They robbed him of his self-respect. They converted a nation hoary with civilisation to a race of crand boys. One of the finest temples of God has been desecrated. India today lies dissected ruthlessly and long denied a free play of her natural powers. Her powers as a result are almost paralysed. It is true that forces are at work to rouse her for a long and strenuous struggle—the current of these forces is running deep and swift. But a bloody struggle may be too exhausting for her and she can ill spare that blood. She would be well-advised to have the helping hand of a friend. She must, however, be assured that it is a friend's hand. She was cheated long. She is naturally extremely suspicious. India has seen too much of one expression of the Englishman's character to hope that he might have another and a truer one. It is again for England to prove it—to undo the mischief that the Englishman has done in India. But England must thoroughly search her own heart and reassure herself that she comes as a watchful friend to see India in her resurrection and to offer the offerings of a friend. If she feels that she is not strong enough for that—if she dreads that the venom of imperialism lies too deep to be avoided—it is better for her, more moral and more prudent, that she completely withdraws herself. India is prepared for chaos and anarchy, for even chaos and anarchy mean life; and this order, this peace is sepulchral silence.

not death-like but certain death. If she has to choose only between the two she will choose the former.

6. Lastly, England will be very much mistaken in the present circumstances to trust to doles. Doles do not impress. They do not elevate; they do not inspire. They do not inspire that emotion for an ideal, that enthusiasm for a fuller life which is essential to stir up the best in man and the best must be stirred up if the situation is to be saved. What is needed is a just recognition of her just right. Doles will end in wranglings. They will embitter—they will intensify and not pacify the anti-British feelings. Try doles—it will be one of the surest ways to make a bitter India.

Sophistry and insincerity not merely are not good as principles but they are not good even as policies. They deceive none but those who resort to them. India is of the Indians—it is their country. It is for them to determine her evolution in any way they choose. No cant, no talks can alter the situation. The man or the nation who attempts to cheat the reality of this truth cheats itself or himself and will rue, and rue bitterly, the attempt. To disarm a race and shut up every chance of acquiring any experience and then to call it incapable of self-defence is cowardice. To shut out the children of the soil from every but the most subordinate position in the administration of the country and then say that they have developed no capacity for administration is dishonesty. To shut up a person who loves his country and call upon individuals to love the King is stupidity. To deny responsibility and then to call people irresponsible is meanness. To adopt every device that develops Communalism and Parochialism and stirs up the worst passions of individuals and of groups and then to assume an attitude of injured innocence disappointed at the lack of solidarity is worse than Machiavellism. These are not the ways of friendship or of love. They are not the methods of justice and fair play. England must have to be sincerely at grips with truth. Would she dare? Let her choose.

7. "India must be bled", so spoke a whilom Premier of Great Britain. "To make promises to the ear and break them to the heart" was what an Ex-Viceroy found to have been the policy of England towards India. Sir W. Joynson-Hicks of the British Cabinet, with a frankness for which he

deserves credit, scotched the conception that anything but the interests of Lancashire determined Great Britain's Indian policy, while the ethics of human conduct was laid down by the present Secretary of State for India in his Rectorial speech, "The motive of self-interest was, is, and must always be the main spring of human action." Now this is the psychology of the powers that be which controls India's destiny. Turn to India and see the effect,—the lowest percentage of literacy in the world, the highest death-rate, the poorest country yet of one of the largest natural resources—call them the effects of efficiency and altruism, but the world will judge!

Now, what is the remedy? India opposed by England will find her task difficult. India unaided by England will find progress slow. England without India will find her work in India almost impossible—and outside India her position reduced. India and England together will make progress that will astonish humanity.

Could India forget the past in the idealism of the future? It is a challenge to her age-long teachings for tolerance to let bygones be bygones. Would India accept the challenge? Possibly she would.

Could England forget her past, break through this intolerable miasma of noxious exhalations of the politician's breath and make a stirring surrender to her best ideals? It is a challenge to her courage, her culture and to her righteousness. Would England dare to accept it? It is for her to decide. She could have a friend or a foe, love or hatred, sincere goodwill or unending bitterness for the mere asking. The choice is England's. Let her choose.

The Dominion is certainly lost. Regain it if England will by love, lose it if she wants by the sword. Let her remember her own poet,

"The despot's fate is the same today
That it was in the days gone-by,
Against all wrong and injustice done
A rigid account is set;
For the God who reigned in Babylon
Is the God who is reigning yet.

If anything has to be in abundance it must be love and not hatred. Kindness, justice and adherence to truth are as sure to foster the one as rudeness, injustice and falsehood will ensure the other. It is not whether a Kingdom of Earth is to be eschewed for a Kingdom of Heaven that England is being called upon to decide. It

is between a kingdom of hell, full of hatred, bitterness, injustice, unfairness, sophistry and falsehood and a fairer kingdom of goodwill and friendship, of mutual well-being and of equal justice, of frankness and of truth that she is required to make a choice

Would she dare to tell the tempter, "Get thee behind me, Satan" or would she welcome his hand? It is a decision that will determine England's fate and India's future. The choice is pre-eminently England's to-day. Let her choose

THE GARDEN CREEPER

By SAMYUKTA DEVI

(12)

IT was Sunday. In the afternoon, while everybody else was resting, Jyoti and Mukti sat on two packing boxes in the kitchen verandah, tasting home-made preserves and talking away for all they were worth. The sun shone hot on the rest of the verandah; only in this corner, by the side of a gunny screen, was there a bit of shade. Even here the heat was intolerable. For reasons known only to themselves, the two friends had chosen this place to gossip in, leaving all the cool, secluded rooms of the house, where electric fans would have kept the heat out.

Mukti carried an exercise book, full of corrections in red ink and a Rowe's Hints. She kept one finger inserted in the book, to mark a certain place. Their tongues were busy, tasting the preserves and pickles, and talking.

In childhood these two had been great friends. But now that they had grown up and Mukti had been away so long in the boarding school, they had become a bit estranged. They had seen very little of each other all these years. Jyoti went to see her sometimes, but there was very little opportunity for long talks. But now Mukti had become quite free. So to-day she sat talking on and on, as if to make up for lost time. They stood on no ceremony with each other, having been almost brought up together.

Mukti had finished her Test Examination, about two weeks ago, and the results were not out yet. So she felt quite at ease and not at all anxious about her studies. Shiveswar had told her not to drop her studies altogether, and, as a mark of filial obedience, Mukti went about carrying a book all the

time, though she seldom opened it. Her grandmother had sent her to give some preserves to Jyoti and Mukti had sat down to make good use of the opportunity.

"I say," said Mukti, "don't your professors ever ask you any questions? Ours pester us to death."

"Ask questions, indeed!" said Jyoti, with a superior air. "They would never dare. We all look too wise for it."

Mukti struck at his hand with her book. "Oh indeed?" she said. "So you are out, fishing for compliments again? But however long you try you won't succeed. I won't tell you what the girls said that day in the Botanical Gardens. Why don't you talk about your college? Who stands first in your class?"

Jyoti brought his lips close to Mukti's ear and whispered, "Don't you know? That perfect Adams, your ideal young man Dhuren. But I am sorry to say, there are only four subjects in which he is interested, viz. Chemistry, Physics, Cycling and Boxing. Then there are Night Schools for working-men to claim his spare attention. He is nothing but a savage, that chap. He should have been born a century ago."

"But I don't think he is wrong at all," said Mukti. "Do you mean to say, that in order to be modern, one should quote Ibsen and Maeterlinck all the time and gaze at the stars, instead of towards good old mother earth?"

"Oh, I am sorry," said Jyoti, "I didn't know your views about him. Friday happens to be your birthday, does not it? Why don't you invite your hero and get better acquainted?"

"Don't be silly," scolded Mukti. "Why should I invite a person, I don't know at

all? If you want to treat him, do it at some hotel."

Mukti's grandmother had been busy scraping coconuts in the kitchen, all these while. From that place she could easily overhear the edifying conversation of her grand-daughter and Jyoti. She did not like it much. The girl was grown up and should not be allowed to mix so freely with that boy. But she did not want another quarrel with her son. So she had decided to be more diplomatic this time. Since the boy had settled here for good, she did not want to rake up that old contention again. The old bearer Krishna had left long ago. None of the old servants, who know about Jyoti's advent here and his poor parentage, happened to be working in the house still. So the boy could be easily passed off as some distant relative or something like that. He looked a gentleman all right, though he might not be a high-caste Brahmin. But that was of no account, as nobody was going to take him for a son-in-law. Mokshada Devi had given it out to her friends that Jyoti was the orphan son of a poor relation. As Shiveswar was a very kind man, he had practically adopted the boy. She herself kept her distance carefully, but her old antagonism and aversion had vanished. So Jyoti felt much wroth at home now.

The mention of Mukti's birthday suddenly made the old lady very much conscious that Mukti was no longer a child. Why, she must be quite sixteen. Bless her, it seemed only the other day that her mother left her a wailing infant, and closed her eyes for ever. Since then, Mukti had grown up in her grandmother's arms. But she must be given in marriage now. Her father paid no attention whatever to family affairs. But he must be made to do so.

"Where is your father, Mukti?" asked the old lady, suddenly appearing on the verandah.

Mukti was busy quarrelling with Jyoti. Jyoti was trying to prove that Mukti was really very eager to invite Dhiren to her birthday party, and she was indignantly denying this allegation. Her grandmother's question did not find a ready listener. "I don't know," said she, and went on talking to Jyoti.

Mokshada knew very well that Mukti did know and was not at all anxious to know her father was just then. But she

wanted to put a stop to their conversation, so again she interrupted with, "But you have got to know. Go and find him. I want him on important business."

So Mukti had to get up, reluctantly and go in search of her father. Jyoti picked up her exercise book and departed for his own room.

Shiveswar was unearthed at last, from amidst a pile of books and papers, and he accompanied Mukti to his mother. Mukti went and stood leaning against her grandmother's shoulder like a little girl. As Shiveswar took his seat, his mother patted Mukti's hair, saying, "Look at the child. She is shooting up like a young tree. She is actually as tall as I am."

Shiveswar smiled, "At sixteen you too must have been quite as tall," he said.

"My case was different," his mother said. "It would not have mattered if I had been as tall as a maypole. But your daughter is unmarried."

Mukti laughed and ran to her father. He embraced her with one hand and said, "Still, she cannot remain a dwarf for that reason. At sixteen a girl should look sixteen, whether married or unmarried."

"Don't talk nonsense," said his mother exasperated. "A girl should not be allowed to reach the age of sixteen, unmarried."

"Well, mother," said Shiveswar, "since she was born sixteen years ago, she must be sixteen, whether we allow it or not. But what did you want me for?"

"For talking over these things," said Mokshada. "I want you to think about Mukti's marriage. She is getting too old. I have one or two bridegrooms in mind. One is the nephew of Hari Gosain, you know. He has passed the M. A. They are rather orthodox people. But the family is quite good. Why don't you look them up some time? If you don't like him, there is another boy, you will certainly like him. He is a son of the house of our local Zamindar. He is named Dhiren, is very handsome. He is quite modern, does not care anything about caste, religion or orthodoxy. He does not put on the sacred thread even. You will like him. He studies in one of the colleges here and will soon be a graduate."

Which Dhiren was it? Mukti wondered and ran away. "I shall see about it," Shiveswar told his mother, and went off to his work.

Mokshada felt very little confidence in

Mukti turned away with the flowers. But bearing footsteps behind her, Mukti thought he had come back to say something afresh. She felt sure it was none of her friends, because they would never dream of coming in so silently. The room would have resounded with laughter and the sound of talking by this time. So, feeling sure that it was Jyoti, she turned round with bantering words on her lips. But instead of Jyoti, she found Dhiren.

Mukti blushed scarlet. They had been talking too much about Dhiren these few days, and Jyoti had made many insinuations. And perhaps grandmother, too, had been talking about this very Dhiren that day, when she discussed Mukti's marriage with Shiveswar.

Anyway, it would never do to run away like a silly school girl, now that she stood face to face with him. So with the best grace, she could, Mukti advanced to welcome him. Dhiren had noticed her previous discomfiture and wondered what had caused it. Mukti was not an orthodox Hindu damsel who fainted at the sight of outsiders. She was surely quite accustomed to meet and talk with men who were not related to her. So what made her blush? And how pretty she looked, thought Dhiren.

He was not at all accustomed to the society of ladies, as his friend Jyoti was. His books were his only friends. So he felt very awkward, being thrown before this young lady. And he too blushed, if a young man could blush.

But he had to say something, to explain his evidently unexpected presence. So he took out a letter from his pocket, and said, "I have come to see grandmother, she has invited me to tea this evening."

Mukti was surprised. This was a new move on the part of her grandmother. However, she welcomed the guest, saying, "It's very kind of you to come. Grandmother is in her room, let's go there."

Mukti advanced and Dhiren followed her meekly. He was feeling even more awkward than before, and fervently praying for the appearance of Jyoti. He did not know what to say to this charming girl. She must be thinking him an awful ass.

But he never knew what she thought of him and in a minute they stood before Mokshada's room. The old lady was busy arranging the sweets and fruits on different plates and the sound of footsteps and the

fragrance of flowers and high-class perfume made her aware that Mukti was coming. She thought the girl was alone and so spoke out her thoughts aloud. "Hallo, bride", she exclaimed jestingly, "Have your guests arrived. I have written to the bridegroom—"

Mukti felt hot all over with embarrassment. She understood that her grandmother was unaware of Dhiren's presence. So she interrupted her from the outside, exclaiming, "Grandma, here is some one to see you."

The old lady came out and, seeing Dhiren, cried out with pleasure, "Come in, my dear boy, come in. You are no outsider. Why do you feel so shy? To-day happens to be Mukti's birthday. So we have invited a few friends to celebrate it."

As Dhiren did not know Mukti at all, he did not see why he should be invited to her birthday party. He wondered, too, who the bridegroom, of whom Mokshada was talking, could be. He sat down in the seat, indicated by Mokshada, and began to answer her questions. Mukti ran to inform Jyoti. "Go and see, your Dhiren has come."

Jyoti looked up, surprised, "Who invited him?" he asked. "You, I suppose?"

"What a clever boy you are," said Mukti laughing. "Who else could it be? Don't you know that I am a great admirer of his?"

(13)

It was the end of February, but the heat was already intense. Mukti sat in her room, abusing the weather to her heart's content. All the doors and windows were closed and an electric fan whirled over her head. But still she felt very hot. The temperature outside was nothing compared to that of her temper and this made her still more impatient.

The reason was not far to seek. This morning as Jyoti was going to his college, Mukti had asked him to come back a bit early. On being asked the reason, she had said that she wanted to go to the cinema and had already asked her father to lend her his car for the evening.

But the ungallant boor had positively refused. "Don't pester me all the time," he cried. "Do you think I have nothing else to do, except dance attendance on you? I have got another engagement."

Mukti walked out in offended dignity. How dared he speak like that? Since Mukti came home, Jyoti had taken her out in the evening barely four times. Of these, too,

twice he had done, so of his own accord. Not only had not Mukti asked him but she had positively refused to go at first and Jyoti had to coax her a good deal. And now he dared to accense her! As if Mukti could not do without his company. Most of the days of her life had been passed without that companionship, so she could afford to do without it for the rest of her days. She was not a weak-minded silly girl, and she was above asking favours from anybody. Jyoti, on the other hand, was always thrusting his company on her.

All these thoughts helped to harden Mukti's heart as she entered her bedroom. But as she sat down with a book, tears filled her eyes again.

Though this family did not boast of many members, still it took a very long time to finish the breakfast. Everyone ate when he or she pleased. Jyoti had to attend college so he breakfasted at nine. The rice and curries would come to him fresh from the oven, burning hot. He managed to swallow them with the aid of water and depart. Shiveswar breakfasted so late that the meal might have been called his dinner. Mokshada being a widow, took her one meal as late as possible. As for Mukti, she always tried to do without breakfast, but always had to swallow it and a quantity of scolding besides.

So when Mukti heard footsteps outside, she knew that her grandmother was coming to ask about that detested meal. She wiped her eyes and began to study hard.

As Mokshada entered, Mukti cried out sharply, "Cannot you rest without disturbing my studies?"

"If I don't disturb you," her grandmother said with a laugh, "You will starve to death within a week."

Mukti began to weep to the amazement of her grandmother. "You all come and disturb my studies", she sobbed, "and father comes and scolds me for being inattentive. Go away, I won't take any breakfast."

"What a cry-baby you are," said her grandmother. "What did I say, that you go on like this? I wonder how you lived in a boarding house so long."

She coaxed down Mukti somehow. But even after breakfast, her temper showed no sign of calming down. She took down all her books from the shelves and scattered them all around her. She went on changing one book for another every five minutes and seemed wholly immersed in her studies.

At short intervals she would get up and peer through the shutters down on the road below. The sun still glared angrily in the heavens. She waited impatiently for the evening.

Evening came in due time and Mukti got up and opened her windows wide. A cool soothing breeze blew in. She stood enjoying it by the side of the window.

The Oriva gardener came out, after enjoying his ridday sleep. He tied his towel tightly round his waist and taking up the watering can began to water the plants. Mukti knew from this that it must be quite four o'clock, otherwise the Oriva would not have moved an inch out of his room.

Suddenly a tinkling sound smote her ears. Mukti turned sharply towards the gate. Yes, there he was. The great Jyotirmoy Roy was coming in. Mukti moved away quickly, else the vain fool would think that she had been standing there waiting for a glimpse of him. Surely, young men were the vainest and at the same time the silliest creatures on earth.

Jyoti carried in his cycle and put it in its place. Then he sprang up the stairs in a minute, and throwing down his books, rushed to Mukti's room.

But the door was inhospitably closed. He rapped on it sharply, crying out, "Mukti, get ready quick. I have told the driver to get the car. I will be ready within five minutes. Since it takes you two hours to dress up, why don't you begin in time?"

An ominous silence greeted him. He waited for a minute or two, then called again, "I say, Mukti!"

A very calm and serene voice, from within, asked, "Do you want anything?"

"That's good," he cried in anger. "Didn't you say, you wanted to go for a drive?"

The door opened and out came Mukti, with a book in her hand. "But it was not settled, was it? Father has gone out long ago. Who is to take me now?"

Jyoti had come cycling in this furious heat, and his temper, too had got rather hot. "Then, if you wanted to go with your father," he said angrily, "you need not have given me so much trouble. I came all this way, in this blistering sun. Gosh don't know how to keep their words."

Mukti lost control of her temper completely. She threw away the book and caught hold of the door in her excitement. "And you are very good, you men," she cried. "You know how to keep your words. How dare

you say, that I gave you trouble? When I went to you in the morning, did not you refuse positively to go out in the evening? Who asked you to come? I am not going out. Go away."

The door was shut with a furious bang. Jyoti felt too angry to speak, and went off to his room.

The sun began to look like a huge disc of fire and at last set in a sea of shimmering blue. Mukti sat in her room with her back to the door. She was beginning to feel ashamed of herself. Poor Jyoti had come as soon as he could in this heat, and she had treated him so roughly. It was very heartless of her. But Jyoti had started all this trouble. He need not have been so rude in the morning. She felt tempted, in the intensity of her repentance, to go and call Jyoti, and then offended dignity would come and stand in the way. Since the fault was Jyoti's, he ought to come first.

Fato was kind and Mukti had her wish. Mukti had left the door open and Jyoti came in with silent footsteps. He took her by the shoulders and shook her playfully. "Now get up, Miss Spitfire," he cried. "It is very

late, as it is. But we shall be in time for the 6-30 show."

Mukti was ready enough to capitulate, still she made a last show of resistance. "You need not make so great a sacrifice for me," she said. "Go and mind your own business. You may rest assured, that I won't trouble you for a single moment again."

The words were dignified no doubt, but the tears in the eyes of the fair speaker and the pretty pout of her red lips, impaired their dignity somehow.

Jyoti came in front and held up her face with both hands. "Come on, there's a dear," he said. "I admit that the fault is mine. Put on that deep blue sari, you wore the other day. Some of my classmates are going to the show to-day. I want to show them that a modern educated girl can also be very pretty."

Mukti had to get up now, the temptation being irresistible. She opened her wardrobe in search of the sari in question. Jyoti went out with a smile of success on his lips.

(To be Continued.)

OLD COINS AND HOW THEY HELP HISTORY

By N. K. BHATTASALI

BARTER was the order of the good old days. You have a number of kine and I have a quantity of paddy. I want a cow and you are in want of paddy. We both agree to resort to a simple plan. A quantity of paddy is considered to be equivalent to a cow. I take your cow and let you have the quantity of paddy. The transaction is settled to our mutual satisfaction.

This good old rule and simple plan could not however, last long. Man began to progress in civilisation. Society formed and states arose. Commerce spread and overstepped the limits of village transactions. Things began to be exchanged, which grew at a distance from the common medium of exchange. The precious metals, by their rarity and their property of resisting

corrosion and wear and tear came in handy, and thus arose the system of coinage.

In the beginning, in India, coinage appears entirely to have been the concern of merchant guilds. These guilds issued flat bits of silver more often rectangular than round of the average weight of 32 *ratīs* or 56 grains and stamped with various symbols like the sun, the moon, a tree, an animal, a *stupa*, etc. These passed as currencies throughout the length and breadth of India. A number of them have been found in Bengal. There are some samples of these coins in the Dacca museum, two of which were found in the Burdwan district.

These coins remained the currency of India for many centuries and they

sively in Eastern India—and that, also, in meagre numbers—testify to the limited extent of their power and territories.

In the third place, old coins faithfully record the religion of the reigning sovereign, and hence, also of the period, to a considerable extent. One side of the pre-Muhammadan coins, as already noted, is stamped with the figure of a god or a goddess. This is almost always the case with the gold coins of the pre-Muhammadan dynasties. Kanishka's successive veneration for the Iranian and the Brahmanic gods and his final adoption of Buddhism is known from the coins, which faithfully depict his changing religious moods. The adoption of the Brahmanical religion by some Greeks is not only proved by the record on the famous pillar of Besnagar, but the coins of some of the potentates of Greek origin also faithfully portray the fact. The whole history of the religious beliefs of the Gupta Emperors can be reconstructed from a study of their coins. It is a delight to behold the beautiful miniatures of Kumara (Karttikeya) on the coins of Kumara Gupta.

There are many other ways in which coins are of help in reconstructing lost history. The abundance of the gold coins of Samudra-Gupta, Chandra-Gupta II, and Kumara-Gupta faithfully reflect the great prosperity of the Gupta Empire during these three glorious reigns. The decrease in the number of gold coins and of coins in general of their successors faithfully reflect the decay of the Gupta Empire. The debasement of some of the gold coins of Skanda-Gupta tells us with mute eloquence that the glorious Gupta Empire had fallen on evil days.

The rapid decay of the Gupta power and influence is faithfully portrayed in the paucity of the coins of Skanda-Gupta's successors. This paucity is so marked that Budha-Gupta, who is known from inscriptions to have been still ruling over the major parts of the Gupta Empire, is represented by only two silver coins! As already noted, the coins unmistakably show that the Guptas were, during their last days, compelled to fall back on the eastern part of their once-vast territories and the appearance at this time of coins of kings who did not belong to the Gupta line show that the ancient line of Samudra-Gupta has ceased to reign.

I shall now give you some concrete instances how it has been possible to solve

problems of history and reconstruct lost chronology with the help of coins.

In 1908, a copper-plate grant was discovered at the village of Ghugrahati, under the Kotahpara police station of the Faridpur district.

It purported to be executed in the reign of one Samachara Deva, who was designated as *Maharajadhiraja*. The script of the plate showed that it was a very early one, much earlier than the oldest plate of the Palas. The form of the inscription was different from those of later plates and Mr. R. D. Banerjee who first published a rough reading of the plate had no hesitation in declaring it to be a forgery. Dr Bloch, at that time Superintendent of the Archaeological Survey also upheld this opinion and ridiculed the idea of a king bearing such a name as Samachara. In 1910, however, Mr Pargiter published three other plates of a similar nature, but executed in the reigns of two more hitherto unknown Maharajadhirajas. The idea of the strangeness of the draft can no longer be maintained and Mr Banerjee was constrained to pronounce all these four plates as forgeries. Mr Pargiter replied with an able article defending the genuineness of all these four plates and published a revised reading of the Ghugrahati plate, and so this controversy went on.

Some years afterwards, five more plates of similar draft and dated in the reigns of Gupta Emperors like Kumara-Gupta and Budha Gupta were discovered from Dinajpur and their publication by Prof. Radhagovinda Basak gave a death-blow to Mr. Banerjee's theory of forgery. Even then, Mr. Banerjee gave no indication that he was now convinced of the unsoundness of his theory. In the *Dacca Review* for 1920, I published a revised reading of the Ghugrahati plate and solved most of the problems left unsolved by Mr. Pargiter. But it was a couple of gold coins that came in handy for the final blow.

One of these coins was found more than half-a-century ago at Mahammadpur in the Jessore district, about 30 miles north-west of Ghugrahati. It is not known where the other coin was found. Both of them are now in the Indian Museum. Ever since they were found, scholars have been trying to read the legends on them, but never with conclusive success. Dr. Vincent A Smith in his *Catalogue of Coins in the Indian Museum*, published in 1903, described both these coins as "uncertain." He read the name of

the king on one of the coins as *Yamadha* but correctly surmised that the form of the letters showed that the coin belonged to the close of the sixth century A. D. Mr. Allen, in his Catalogue of Gupta coins in the British Museum dealt with these two coins again. He agreed with Dr. Smith as regards the age of the coins, but he also could not propose a definite reading for the King's name. He suggested *Sahacha*, *Sama-cha*, or *Yamacha* on one coin and *Yamacha* on the other. Once again the coins came in for discussion, and this time through Mr. R. D. Banerjee himself. He read the king's names on both the coins as *Yama*.

Now, if one looks at the plate of *Samachara Deva* and notes carefully how his name is written on it and then examines the two coins he will have no difficulty in seeing that the king's name on the plate as well as on the coins is the same—i.e. *Samachara*, with a slight interchange in the method of making the superscript *a* (t). You will wonder why this simple coincidence did not strike any scholar before; I can only say that such is the case,—that the course of true research, like another famous course, 'did never run smooth!' When in my article in the *Dacca Review*, I pointed out that these two coins must be ascribed to *Samachara Deva* of the *Ghugrabati* plate, and they furnish us with proofs, hitherto wanting, of his existence and reign and of the genuineness of the *Ghugrabati* plate, all scholars, without a single dissentient accepted the identification. Mr. Banerjee also now agrees that these two coins are of *Samachara Deva*, that he lived and reigned; but, as you will find from the latest edition of his *History of Bengal*, he still contends that the coins may be genuine but the *Ghugrabati* plate is still a forgery!

I shall give you another example from nearer home and show how old coins can be useful even in unfolding the past history of a locality with which many of you are undoubtedly familiar. I refer to *Sabhar*, a place about 15 miles west of the city of *Dacca*. *Sabhar* contains many old ruins including the site of a small fort and a palace, which are associated with the memory of one *Harishchandra*. Much has been written on *Sabhar*, which will be found in the old numbers of the *Pratibha* and the *Dacca Review*. These are mostly concerned with topography and legendary history. *Babu Bijay Chandra Ray* wrote in the *Pratibha* after a

careful inspection of the ruins that they appeared to him to be much older than the *Sena* ruins at *Rampal* in the *Parganas* of *Vikrampur* in the *Dacca* district. The absence of stone in any form in the ruins of *Sabhar* and the presence of terracotta stamped with the figures of the *Buddha* and the *Bodhisattvas* gave indication of a fairly early age for these ruins. But no definite date could be ascribed to them in the absence of reliable evidence. The publication by myself of a *Mathi*-inscription of *Mahendra*, son of *Harishchandra*, from a manuscript copy of the same preserved in the house of the late *Kaviraj Amritananda Gupta* of *Matha* gave an impetus to the discussion. But no satisfactory conclusion could be arrived at regarding the date of the inscription, even if it were taken to be genuine.

The coins found at *Sabhar*, became then our only source for determining the date of the ruins. In the ruins of *Sabhar* are countless found coins in base gold, which imitate the *Gupta* gold coins in technique but which are of very inferior execution. Some of these coins are known to have been found along with the gold coins of *Samachara* and *Sasanka* whose dates are known to be respectively the end of the 6th century A. D. and the first quarter of the 7th century A. D. Without entering into minute discussions, which I have published in my article in the *Dacca Review* and in a recent number of the *Numismatic Supplement* to the *Journal of the Asiatic Society of Bengal*, it can, I believe, be easily comprehended that the ruins at *Sabhar* must date from about 600 A. D., on the testimony of the find of these coins. The *Dacca Museum* obtained eight coins of this class, from *Sabhar* and once you realise how difficult it is to obtain these coins, you will admit that it is a very considerable number to turn up from a limited area. If some old men of *Sabhar* are to be believed, these coins were found in plenty in the ruins of *Sabhar* and melted down.

I shall now give you some instances from the *Muhammadian* period of *Indian History*. It is generally believed that the meagreness of contemporary sources of history disappears as soon as we land on the *Muhammadian* period and thenceforth we stand in no more need of assistance from coins. It is to a great extent true, as far as the *Mughal* period of *Indian History* is concerned. But the history of the rule of the *Sultans of Delhi* was for the first time placed

list of the kings of Bengal, but to place him in his exact position in history.

In 1912, however, a number of coins were found stamped in Bengali characters and giving the name of the king as Danujamarddana Deva. Some coins of Danujamarddana were found even much earlier than 1912, but they had failed to attract any notice. The find placed in my hands by the Collector of Dacca also contained three coins of Danujamarddana. Who was this Danujamarddana whose coins showed the dates of 1339 and 1340 Saka and were minted at the mints of Chittagong, Sonargaon and Pandua, and thus, showed him to be the undisputed master of Bengal in those years? It may be mentioned that the years 1339 Saka and 1340 Saka are roughly equivalent to the Hijri years 819 and 820. Brisk writings appeared in the Bengali journals and Mr. Banerjee also wrote an article on them in the Annual Report of the Archaeological Survey of India 1911-12. All the writers took Danujamarddana to be a successful rival of Raja Ganesha.

The history of this period is full of strange events and is recorded in the Riyaz-us-Salat in detail. We have no reason to doubt the accuracy of the general outline of the record in the Riyaz. It says that soon after the death of Bayazid Shah, Raja Ganesha became king and occupied the whole of Bengal. At that time there was a powerful saint at Pandua whose name was Nurkutab Alam. When he found that a Hindu had seized the Mussalman throne of Bengal, he invited Ibrahim Shah of Jampur to invade Bengal. Ibrahim Shah marched upon Bengal and thus threatened Ganesha went to Sheikh Nurkutab Alam and besought his favour. The Sheikh consented to request Ibrahim Shah to return if Ganesha

turned a Muhammadan. Ganesha allowed his son to turn a Muhammadan and placed him on the throne of Bengal under the name of Jalaluddin Muhammad Shah. Ibrahim Shah, however, died shortly afterwards. Ganesha, thereupon, reconverted his son, and resumed the throne himself. On the death of Ganesha, however, his son Jadu again turned a Muhammadan and succeeded to his father's throne under his previous title of Jalaluddin Muhammad Shah.

If we now turn to the coins, we will find the following record :—

- 817 H. A number of coins of Bayazid Shah
- 817 H. A few coins of Firoz Shah
- 818 H. A large number of coins of Jalaluddin Muhammad Shah
- 819 H. Only one Coin of Jalaluddin.
- 819 H. Some Coins of Danujamarddana.
- 820 H. Some Coins of Danujamarddana
- 821 H. Some Coins of one Mahendra Deva.
- 821 H. A large number of coins of Jalaluddin Muhammad Shah, and onwards.

It is not the place to go into details, which I have given elsewhere.* when we remember that there is no place for Raja Ganesha in the chronology of Bengal before 817 A. H. and that his period of reign must lie on either side of 818 A. H. when Jalaluddin's coins first appear, it becomes clear to us that we have at last found the coins of Raja Ganesha who was king of Bengal in 1339 and 1340 Saka and minted coins under the imposing name of Danujamarddana Deva.

* Vide—my "Coins and Chronology of the Early Independent Sultans of Bengal",—Heffer and Sons. Cambridge.

the ideal of national independence, but it must not be forgotten that for the larger issue of Asian independence through the policy of elimination of European encroachment in the Far East, Japan could not have adopted any other policy, under the then existing circumstances, than to annex Korea. By the Russo-Japanese War, Japan checked the Russian march towards Korea and Manchuria; and to preserve this gain she had to take over Korea under her rule. Japan and Korea should come to an understanding on the basis of co-operation and freedom for the Korean people, so that there will be the reign of harmony between Korea and Japan, to work out the programme of Asian Independence.

Japan entered the World War on behalf of Great Britain, not only to fulfil her obligations under the Anglo-Japanese Alliance but also because Germany did not want to renounce Shantung without fighting. So far as I can understand, Japan's foreign policy in the Far East can be summed up as "elimination of the European Powers by any means, and consolidation of Asian Powers through Japanese strength and leadership". During the World War, Japan eliminated Germany from the Pacific and Chinese soil. Japan took the leadership in conquering Shantung, because the Japanese diplomats know well that if Japan did not occupy Shantung, then Great Britain, during the course of the World War, would have occupied Shantung by using Indian and Australian forces; and in that case she (Great Britain) would have made Shantung a British "preserve" as has been done with Palestine. There is no doubt that Japan used harsh methods towards China; but as Japan has already returned Shantung to China, Chinese statesmen should be considerate to Japan.

Much has been written on the question of the Japanese Twenty-one Demands. It is generally asserted that the real motive of Japan's demands was to reduce China to slavery. The western scholars who pose to be pro-Chinese against Japan forget that it was the western nations who imposed extra-territoriality and subjected China to eternal humiliation. They also forget that Japan, in face of the opposition of China, Great Britain, the United States of America and other Powers could never make China her vassal. These scholars always talk about the Twenty-one Demands, but often forget

that the most objectionable Group V was abandoned by Japan. Presenting the Twenty-one Demands was a bad policy, so far as Japan is concerned, and Japan has paid a heavy price for this bungling diplomacy. To me it is clear that the real motive at back of the Twenty-one Demands lies in Group IV of the Demands, according to which Japan and China were to co-operate and see that no Chinese territory, seaport or islands be sold, leased or ceded to any Power. Thus the real motive was to have a legal sanction that there will be no further European encroachment on China. This motive becomes more clearly apparent in Japan's efforts to secure a military agreement between China and Japan for mutual security. Japan's policy towards China has not been faultless, neither was China's policy towards Japan above criticism. But the mistakes of the past should be a lesson to both the nations, in formulating their foreign policy on the basis of Sino-Japanese friendship, to further the cause of Asian independence.

Whatever might have been the motive of some of the Japanese statesmen on isolated occasions, Japanese diplomacy under Viscount Komura, on his return from the United States, after the signing of the Treaty of Portsmouth, took a distinct turn in the form of "Japan's destiny is in Asia, and while she must not antagonise Western Powers and seek their co-operation, her ultimate safety lies in co-operation with the rest of the Orient." This policy of Komura might have been ignored by some Japanese opportunist statesmen, but on the whole it has received whole-hearted support from far-sighted statesmen. Since the abrogation of the Anglo-Japanese Alliance, after the Washington Conference, the above *Komura Doctrine of Japanese statesmanship* has received full recognition. It might be said that the *Komura Doctrine* is the corner stone of Japanese diplomacy since the Washington Conference.

It is evident that, since the Washington Conference, Japan has definitely adopted a pro-Chinese policy in every vital question. In the League of Nations, Japan has consistently supported China's claim, in such matters as China's right to have a seat in the Council of the League and in the Opium Conference etc. Japan has exhibited her willingness in every possible way, to aid China to secure her full autonomy and to

preservation than the Mahabodhi temple. These are the Siva temple at Konch near Tikari in the Gaya district and the ruined Buddhist temple excavated and partly destroyed by the late Mr. A. M. Broadly, I C S, at Bargaon or Nalanda in the Patna district. The Bargaon temple has not been re-excavated yet when most of the remaining grounds have been explored. As at Bodhgaya so at Konch the *motifs* employed show that the temple can not be earlier than the 8th century A. D. According to an inscription discovered on the doorjamb of the Nalanda temple it was re-built in the 11th year of the reign of Mahipala I of Bengal i.e. towards the close of the 16th century A. D.

The only authority in favour of the proposed assignment of the Mahabodhi temple to the Gupta period is the statement of the Chinese authority that "Near the Bodhi tree was the Mahabodhi Vihara, built by a king of Ceylon".* But such inscriptions on fragments of sculpture which mention Ceyloneses belong to the Gupta period and are absolutely different in style, both of art and architecture from those employed in the present temple. The Ceylonesse Vihara must have become ruined in the 8th century or slightly before that date and the present temple erected during the domination of the Palas of Bengal. Many people believe that the present Mahabodhi temple was standing when Yuan Chwang visited the place in the earlier part of the 7th century A. D. as the height and dimensions agree with those given by him†. It is impossible even to imagine on grounds stated above that the present Mahabodhi temple was built before the 8th century A. D.

I must turn to a class of writers whose writings are now obsolete like those of Fergusson or those who play on Indian popular sentiments only and can never adduce any proof for their theories or statements e.g. Mr. E. B. Havell. Writing so late as 1917, Mr. E. B. Havell proves his total ignorance of Gupta temples and their architecture. He contributed a very short note on "The Gupta style of architecture and the origin of the Sikhara" to the Bhandarkar

Commemoration volume. It is almost impossible to find out from this note what Mr. Havell considers to be the Gupta style proper in architecture. He refers the reader to his book on "The Ancient and Mediaeval Architecture of India," where his stock-in-trade consists of his usual meaningless diatribes against Cunningham or Fergusson. He states "If anything can be safely ascribed about the temples which the Guptas built and of those which are characteristic of the period it is that they would be dedicated to Vishnu, the Ishta Deva of the Gupta dynasty." But no structure actually built by any emperor of the Imperial Gupta dynasty has been discovered as yet. So one must proceed with

Doorway of the lower sanctum Early Gupta Temple at Nachna Kuthara Ajaygarh State

such data as can be ascribed on epigraphic grounds to belong to the Gupta period and not on stylistic or sentimental grounds. But here Mr. Havell's equipment fell short of his needs and therefore he ends his statement with another diatribe. "But in General Cunningham's analysis of the characteristics of the 'Gupta style,' the first and principal item is 'flat roofs without spires of any kind,' i.e. the instances cited are Siva temples." Further comment is needless.* It never occurred to him that temples dedicated to Siva and Vishnu have never been different in style

* Takakusu J.-Tung quoting *Chavannes, Memoirs* pp. 84; P. XXXII and Note 2

† Coomaraswami *History of Art in India and Indonesia*, p. 81. Havell thinks that the Mahabodhi temple was built in the 1st century B. C.—*A Study of Indo-Lycan civilisation* p. 100.

The Early Gupta Temple at Nachna-Kuthara, Ajaygadh State (Facade)

case of both of these structures. In both cases the flat-roof of the sanctum indicates that there was no *Sikhara*. The earlier temple at Nachna-Kuthara proves by the existence of the upper chamber that there was no *Sikhara* intended to be built over this shrine. These temples prove that the origin of these *Sikharas* or spire, in Indian temple architecture is much later than the period of the domination of the early Gupta emperors in Northern India. From the style as well as mason's marks the temple of Siva at Bhumra is the earlier of these two temples. The remains of this temple were excavated by the writer in 1920-21. The entire shrine is 35 feet square. In front of this square area was the plinth of the *Mandapa* or Porch measuring 29 ft. 10 in. by 13 ft. There is a flight of steps in front of this Porch on each side of which were discovered the plinths of two small shrines measuring 8 ft. 2 in. by 7 ft. 8 in. In the centre of the square portion of the plinth is the sanctum or *Ganbha-griha* 15 ft. 6 in. square, built of finely dressed red sand-stone without any mortar and roofed with long flat slabs. The rest of the space in the square area

which enclosed the sanctum was a covered path of circum-ambulation as can be proved from the analogy of the similar chamber at Nachna-Kuthara, which is lighted by one or two pierced stone-windows on each side. The earlier temple at Nachna-Kuthara is practically of the same size as that at Bhumra. The sanctum in this case measures 15 ft. — 6 in. on the outside and 8 ft. inside. The large chamber or the path of circum-ambulation here is 33 ft. square on the outside and 16 ft. in the interior. The *Mandapa* in the Nachna-Kuthara temple measures 26 ft. by 12 ft. The steps at Nachna-Kuthara measure 18 ft. by 10 ft. while those at Bhumra are 11 ft. — 3 in. by 8 ft. — 3 in. The masonry in the case of both temples is exactly similar. The difference between these two temples lies in the extremely artistic decorations of the Bhumra temple compared with which that at Nachna-Kuthara was much simpler. While the chambers of circum-ambulations and the Porch of the Bhumra temple are in ruins, the entire structure in the earlier temple at Nachna-Kuthara is in a comparatively better state of preservation. There is another point

The great temple of Mundesvari, Bhabna Sub-Division district Arrah or Shahabad Front and side

of difference between these two temples. While there is no sign of any structure over the sanctum at Dhunna there is a square flat-roofed chamber over that in the earlier temple at Nachna-Kuthara. In this respect the latter resembles the so-called temple of Lad-Khan at Aihole. Coomaraswamy places this temple without sufficient reason in *circa* 150 A. D. Beyond the resemblance with the earlier temple at Nachna-Kuthara in having a small square cell above the sanctum and a covered path of circum-ambulation around the former lighted by long pierced screens of stones there is no other reason to place the date of the erection of this temple earlier than the time of Kuttayana I of Badami i. e. the first half of the 6th century A. D.

The only Gupta type of temple was, therefore, a flat-roofed shrine with a covered path for circum-ambulation, having an open porch in front decorated with pure Gupta motifs. It is not possible for us to determine how this type came to be copied in the 6th century A. D. at Badami, but the design survived in the Malabar country up to the 15th century. On the Malabar Coast, in the modern districts of South Kanara and North Kanara a square shrine surrounded by one or more covered paths of circum-ambulation have been discovered in large number. In the case of all of these temples there is no *Sikhara* but the excessive

rainfall of the locality demanded that the roofs should not be flat. Hence the roofs of the *Sancta* as well as the single or double path of circum-ambulation are made of stone slabs but sloping like those of modern tiled huts. This particular type of temple begins at Mudabihli* near Mangalore in the South Kanara district of the Madras Presidency and ends at Getsoppa and Bhatkal in the North Kanara district of the Madras Presidency. This type of temples resemble the Early Gupta type in many particulars; e. g., the want of a *Sikhara*, one or more covered paths of circum-ambulation, a small open porch in the centre of the facade and want of ornamentation in the exterior. These temples in the North and South Kanara districts are Hindu and Jaina. The Jain temples are called *Bastis* and some of them are very big establishments. The general decline of Jainism along the Malabar Coast has caused the desertion of many of these *Bastis* but due to the munificence of the Vijayanagar emperors and the chiefs of Sunda the majority of Hindu temples are in good condition. I shall take only one example, the great Jain *Basti* at Bhatkal, which was described by me for the first time. In this case the roof of the sanctum, path of circum-ambulation and porch are sloping and constructed of long slabs of stones laid on

* Loc. cit. pl. XXX.

stone beams on the overlapping principle. The exterior is severely bare and the interior covered with a wonderful type of South Indian decorative *motif*, which is quite distinct from the Hampi or Vijayanagara type. Standing close to the temple is a stone lamp-post almost as high as the roof of the sanctum. The sloping stone slab roofs decreased gradually in height, the roof of the sanctum is the highest, next to it comes that of the first path of circum-ambulation, then comes the second path, the roof of which is still lower, lowest of all is the roof of the porch. The temples of the north and the south Kanara districts are built on piles and there is room under each and every one of them for the passage of the flood water. It is impossible at the present day to find out how the early Gupta Temple type travelled as far as Kanara and lingered there till the 15th or the 16th century A.D. Some links have been left between the temples of Bhumra and Nachina-Kuthara and those in the two Kanara districts in certain eleventh and twelfth century temples at Khajuraho in the Chhatarpur State of the Bundekhand Political Agency of Central India and at Aihole and Pattadakal in the Bijapur District of the Bombay Presidency, where in spite of the addition of the *Sikhara* roofs has been left for circum-ambulation outside the sanctum or the *Garbha-griha* which is roofed over. At Khajuraho the path is very narrow where it exists but non-existent in other cases. In temple no. 9 at Aihole, two temples at Mahakutesvara etc., there is a covered path of circum-ambulation in existence along with the early low *Sikhara*.

Of the two Early Gupta temples, that at Nachina-Kuthara is in a better state of preservation and from the analogy of this we can guess that the path of the circum-

ambulation at Bhumra also was devoid of much ornamentation. But this very great number of ornamental sculptures discovered at Bhumra during the excavations prove that its Porch was much more finely and elaborately decorated. The *Mandapa* or the porch possessed one elaborate gate decorated with numerous devices. Four fragments of this gate were recovered. In these we see a round band, shaped like a pila-ster, with the rough bark of the date-palm on it, the remaining two bearing that exqui-

Stone window of the great temple of Mundesvari, district Arrah

site and fine arabesque for which Early Gupta art is always remarkable.¹ There were miniature dwarfs turning somersault at the

1. *Memoirs of the Archaeological Survey of India* No. 16. The Temple of Siva at Bhumra, Pl. IV.

base of each pilaster. The roof of the interior of the porch was supported by graceful tapering pillars embedded in foliated vases, the shafts of some of which were plain and ¹ fluted. Against the plain ashlar masonry of the sanctum and the inner wall of the chamber of circum-ambulation were numerous pilasters with plain or octagonal shafts but ornamented with square bosses containing some of the finest arabesque medallions ever discovered in India, as well as *Kirtimukhas*.²

Joshi Sankar Narayan Devasthan, Bhatkal, North Kanara District, Bombay

But the zenith of artistic excellence is reached in the case of the ornate slabs of the roof, many of which were recovered in a wonderful state of preservation. Such are ; the mass of arabesque foliage with miniature *Amorini* clinging to the stem, a giant creeper with huge corrugated leaves and small lotuses in the interspaces and last of all, a huge slab bearing on it huge waves breaking crests.³

In addition to these there are other narrower slabs bearing fine arabesque work which looks absolutely mediocre compared to the three described above and some bearing geometrical patterns.⁴

The porch was probably open on three

sides and the interior of its lower part was composed of series of panels containing dwarfs and ornaments alternately.⁵

The exterior of the porch was decorated along the surface of the cornice with a row of indescribably fine Chaitya-windows, containing a round medallion with figures of Hindu god. These Chaitya-windows are of two classes (a) according to size and (b) according to ornamentations. Larger and smaller Chaitya-windows were, probably, placed alternately. The larger Chaitya-windows bear along the sides of the medallions, either (i) arabesque or (ii) two small lotuses.⁶ In the medallions of these Chaitya-windows, we find Ganesa, Brahma, Yama, Kuvera, Kartikeya, Siva dancing, Surya, Mahishasur, Siva seated on a bull and Kama. In one or two cases the smaller Chaitya windows contain figures of dancing Amorini. On analogy it appears that these Chaitya-windows, styled Mahayana and Hinayana sun-windows by Havell and other writers of his class solely by intuitive power,⁷ were placed alternately according to size. The position occupied by these Chaitya-windows on the cornice of a building may be judged from similar ornaments

on the facade of the so-called Dharmaraja's Rath at Mamallapuram.⁸ Similar Chaitya-windows have been discovered in the early Gupta temple at Nachua-Kuthara⁹ and in the later Gupta temple at Deogadh.

Towards the close of the 6th century A. D., a protuberance arose on the top of the flat roof of the sancta of Gupta temples. This is noticeable in Northern as well as in Western India. The earliest example of this protuberance is to be found in the later Gupta temple at Deogadh which is the

4. *Ibid.* Pl. VIII.

earliest temple with a *Sikhara* in India.¹ The photograph published by Cunningham in 1875 shows the remains of this protruberance, decorated with Chaitya-windows, and other distinctly Gupta decorative motifs. Other temples of the same period are those discovered by the present writer at Sankargadh in the Nagod State. A comparison of the gateway of this temple with that of the Deogadh shrine will convince any one that both must belong to the same period.² Injudicious repairs by the Indian Archaeological Department specially those carried out during the last ten years have changed the shape of the *Sikhara* of the Deogadh temple beyond all recognition. The plan published by Cunningham³ proves that there was some sort of covered path of circumambulation around this temple also.

In the case of other Gupta temples such as those at Sanchi, Bodhgaya and Tigowa. The size proves that they were auxiliary and not principal shrines, hence came the small sanctum with a flat roof with the plain porch on a few pillars in front. Recent discoveries have proved that the Bodhgaya Gupta temple, to the right of the passage as one gets out of the doorway⁴ of the great temple is perhaps the identical one built by the Ceylouse. In the case of the temple at Tigowa the use of animals on the capitals of pillars and pilasters in the verandah or Porch proves that it can not be relegated to the Gupta period.⁵ The Sanchi temple is decidedly an auxiliary shrine⁶ and both the Gupta temple at this place and at

Bodhgaya are Buddhist shrines or temples the type of which had just lost its originality, because at this stage both Buddhist and Jain temples were beginning to become unified with Hindu temples.

Carved stone door frame, temple of Siva at Bhumra

The original idea of this protruberance on the top of the sanctum must have been to enable people to distinguish it from the rest of the building. Both the temples at Deogadh and Sankargadh show a slight curvature at the corners of the *Sikhara*, which became so pronounced in later temples of Orissa. So far the *Sikhara* is not tall and its height, above the point where the side-walls end is exactly one and a half of the length of the base-line. Unaccountably the same proportion is to be observed in the brick temple at Surpur in the Central Provinces which does not belong to the 6th century as Coomaraswamy supposes but to the eighth according to the Surpur inscription of the Somavamsi kings.⁷

Windows of pierced stone light the interior and even the bottoms of the jambs of such window-frames bear the figures of the river goddesses Ganga and Jumna. Fragments of bas-reliefs exhibit the general decadence of post-Gupta plastic art.

The function of the architects of the Gupta

period was to produce a particular temple type and to bequeath it to their successors the model of a shrine with a spire which became idealised in Northern and Western India and which managed to impress its form and outline to Hindu architects in Java and the Indian Archipelago.

THE RELIGION OF HUMANISM*

Old religions are effete and cannot solve the problems of the modern age. Eighteen ministers of the liberal churches of America have, in *'Humanist Sermons'*, explained their attitude towards old religions and formulated what they consider to be the best religion for the age.

There are eighteen sermons in the book and also a preface which is written by the editor. The sermons are on the following subjects—

(1) Religion: A survey and forecast. (2) Humanism and History. (3) The Faith of Humanism. (4) Theism and Humanism. (5) Christianity and Humanism. (6) Modernism and Humanism. (7) Unitarianism and Humanism. (8) The Universe of Humanism. (9) The Architecture of Humanism. (10) Change and Decay in Religion. (11) The Spiritual Value of the Ethical Life. (12) The Unity of the Spiritual Life. (13) Humanism and Inner Life. (14) The Unshared Life. (15) Humanism and God within. (16) Just being Human. (17) Humanism—Religion in the Making. (18) The Humanistic Religious Ideal.

The writers are not atheists and the sermons are written from a scientific, but non-theistic, standpoint. They are clearly, powerfully, and brilliantly written and should be carefully studied.

SERMONS

We give below a summary of the Humanistic religion. In the preface the editor has given a summary of the Religion of Humanism. It has been stated both negatively and positively. (1) "Negatively stated, Humanism is not Materialism. Materialism is the doctrine that the happenings of nature are to be explained in terms of the locomotion of material." It is properly contrasted with Animism. It is mechanistic, not spiritistic. Humanism holds the organic, not the mechanistic view of life. (2) Humanism is not Positivism. Positivism as a religion is an artificial system which substitutes the 'worship of Humanity' for the 'worship of God', the 'immortality of influence' for the 'immortality of the soul'. Humanism on the other hand, holds that the "Humanity" of Positivism is an abstraction having no concrete

counterpart in objective reality and most 'influence' is from being immaterial is highly transitory. To Humanism 'worship' means reverential attitude towards all that is wonderful in persons and throughout all of life a wistful hopeful expectant attitude of mind not abject homage to either Humanity or God. (3) Humanism is not rationalism. Reason is Rationalism's God. Humanism finds neither absolute Reason nor 'reason' as a faculty of the mind. But it finds intelligence as a function of organism in various stages of development. Humanism's dependence is on intelligence enriched by the experience of the years. Rationalism is dogmatic. Humanism is experimental. (4) Humanism is not Atheism. Atheism is properly a denial of God. It is not properly used as a denial of a personal transcendent God. It is not properly used to describe monistic and immanent views of God. If and when the Humanists deny the existence of a personal transcendent God they are not Atheists any more than was Spinoza or Emerson. But as a matter of fact the Humanist attitude towards the idea of God is not that of denial at all, it is that of inquiry. The Humanist is questful, but if the quest be found fruitless he will still have his basic religion intact viz. the human effort to live an abundant life.

While the foregoing theories as such are not to be identified with Humanism as such, it should nevertheless be clearly understood that a Humanist might hold more or less tentatively any one of these theories, just as he might so hold any one of many theological theories." (pp. vi-vii)

"Positively stated" (1) Humanism is the conviction that human life is of supreme worth, and consequently must be treated, as an end, not as a means. This is the basal article of the faith of Humanism. From this basic conviction several significant consequences follow.

(2) Man is not to be treated as a means 'to the glory of God.' According to orthodox theologies, the glory of God is primary, man is secondary. The result is that today in most religious circles man is thought of as only an instrument in the hands of God. Humanism, on the other hand, holds to man's nature and essential worth.

(3) Man is not to be treated as a means to cosmic ends. Whatever purposes, if any, the cosmos is working out, man is not to be regarded as a means for their realization. If the cosmos moves toward some far off distant event, it is to be hoped that man's self-realization, man's expansion, man's enrichment

* *Humanist Sermons. Edited by Curtis W. Reese. Published by the Open Court Publishing Company, Chicago. pp. XVIII+262, 8vo. Price 2.50 dollars.*

man and his God or gods. Culture of different men is different. All men are not on the same level of culture. Religion will necessarily differ according to culture. Every man will try to express his relation to his God or gods in his own way. A child's God is always anthropomorphic, his God is a magnified man; but his father's God may be super-personal. The father may exorcise but he cannot thrust his own religion on his child. It is psychologically impossible. When we find different religions in the same family, can we expect one ideal and one religion throughout the world? When we find a person worshipping in a particular way, we should try to enter into the spirit of the worshipper and to think his thoughts with his mind. It may be we shall then be able to understand him and sympathise with him. The proper attitude is that of sympathy. In this respect the missionary religions are the greatest sinners. They have created many oppositional paths for other religions. Hinduism, Buddhism, Jodhism, are all terms of reproach. It should be pointed out that a man cannot worship a tree as tree or a stone as stone. There comes first the idea of God or gods or spirits having certain attributes. Then comes the idea of a medium through which they are supposed to act. The idea may be very crude but it is not worship of sticks, stones or idols. Had that been the case, even then that would not have

been sin or vice or crime. We are to tolerate even the so-called image-worship and every form of worship. In religious matters, we are to give full liberty and show unlimited toleration. The only limit that is to be set is that it may not cause practical inconvenience to other people.

TARUS

Truth is not monopoly of a particular religion. We are to accept truths from all sources. By 'all sources' we mean not only religious scriptures but also the sources which religions men call 'profane'. It includes Philosophy, Science and Humanities and all other sources.

There are some of the principles which cultured men will eventually accept and act upon. Humanism has rightly interpreted the active side of religion and we accept it. But that active side has been over-emphasized. Humanism has been born in a country which is always at war. Men there are ever restless and are madly in pursuit of they know not what. So it is but natural that Humanism should be expressed in terms of work and activity. But man is not simply a machine of activities. He has other aspects as well. Introspection and moments of calm contemplation are as much necessary as work and activity.

Madhus Chandra Ghosh

MY PART

(From the Bengali of Rabindranath Tagore)

By NAGENDRANATH GUPTA

The flowers that the evening sun
offered at thy feet,
I washed with my tears.

At parting the rays of the pale sun
Recorded the Tale of the day's travel
In letters of gold;
I set it to tune on the preface
That the song was my own.

Mounted on the golden chariot of light
Descended the night;
Filling with its darkness
I held out my heart.

Under the speechless sea in words that are lost
In the large silence that fills the Universe,
The current of my voice mingles
In silent tumult.

धातना वा भरे द्रव्यः

मोक्षयो मन्त्रव्यो

निदिश्यासिपद्यः t

It means:—"Verily the Self is to be seen, is to be heard, is to be thought on, is to be meditated on." There in the text we find four verbs from which may be formed four nouns, *Darsana* (seeing), *Śāraṇa* (hearing), *Manana* (thinking) and *Nididhyāsana* (meditating deeply). In later times the last three have been considered as means of religious growth. But the classical Upanishads know nothing of it.

(6)

In this connection he writes in a footnote—

"Udayana in his *Kuṣumajāḥ* 1.3, refers to them under the names of *āgama* or scripture, *anumāna* or inference and *dhyāna* or meditation" (1.230)

A mistake has been committed here. What Udayana himself says is that logical discussions (न्यायनर्त, *nyāya-carcā*) may be called the contemplation (मनन, *Manana*) of God and this is worship (उपासना) when it follows 'hearing' (श्रुत) "1.3

To support his position Udayana quotes two passages,—one from *Bṛihad. Up* (श्रीदव्यो मन्त्रव्यः) and another from *Smṛiti* in which occur the three words—*āgama*, *anumāna* and *dhyāna*. This *Smṛiti* passage is attributed by our author to Udayana.

(7)

Referring to Brahman of the Upanishads he writes:—
"He is said to be the supreme person (*Puruṣottama*)" 1.233.

Nowhere in the Vedic literature (including the classical Upanishads) is Brahman called *Puruṣottama*.

(8)

In one place he writes: "Only the love of the Eternal is supreme love, which is its own reward, for God is love" 1.214.

The reference is to the word '*Kāmōyatana*' कामयतन *Bṛh. Up.* in. 9. 11.

The word '*Kāmōyatana*' means one whose abode (*āyatana*, वादन) is desire (*kāma*, वन). It refers not to Brahman but to an entity whose presiding deity (deity) is women (*strīyā*)

(9)

Our author says that Kathopanishad quotes from the *Bhagavadgītā* (1.142).

Why not say that it is the Gita that quotes from the Kathopanishad and it is not the Upanishad that quotes from the Gita?

(10)

In one place the author writes:—"Contradictory doctrines of the nature of self are held by Buddha and Śaṅkara, Kapila and Paṇḍitā, who all trace their views to the Upanishads" (1.162) (Rites ours).

Buddha never traced his views to the Upanishads.

(11)

In one place he writes:—

"In the manner of Buddha, Bhāradvāja protests against both worldly life and asceticism" (p. 1.216)

The reference is to 'Mundaka Upanishad.' In this Upanishad a list is given of four human teachers, viz. (1) Atharvā, (2) his disciple Angira, (3) his disciple Bhāradvāja, (4) his disciple Angirasa who expounded the Upanishad to Saṁnaka.

Where is the special importance of Bhāradvāja? Moreover, there is no protesting "against both worldly life and asceticism" in this Upanishad.

(12)

In one place the author writes:—

"We cannot render a full report of the ineffable. Bṛhva, when asked by king Vāśhaki to explain the nature of Brahman kept silent, and when the king repeated his request, the sage broke out into the answer—

"I tell it to you but you do not understand it. I am ātma, thus ātman is peaceful, quiet" (1.174)

The reference is not given. Deussen has given the story in his *Philosophy of the Upanishads* (pp. 156-157)

The author has not quoted from this book. But Deussen delivered an address in 1893 before the Bombay Branch of the Royal Asiatic Society. It was printed and reprinted in *Bombay* and also forms an appendix to his *Elan*, 'Is of Metaphysics' (pp. 319-337) From this book we quote the relevant portion.—

The wise Bṛhva, when asked by the king Vāśhaki to explain the Brahman kept silence. And when the king repeated his request, the sage broke out into the answer, "I tell you, but you don't understand it. *Shānto 'yam ātma*, thus ātma is silence" (p. 327).

Deussen does not say whence he has taken the story. It is given in Śaṅkara's commentary on *Brahma Sūtras*, in. 2.17. Deussen seems to have borrowed the story from Śaṅkara and Dr. Radhakrishnan has quoted it almost verbatim from Deussen but without acknowledgment.

(13)

Our author quotes the following passage (1.174):

"The gods are in Indra; Indra is Father God, the Father God is in Brahman, but in what is Brahman?"

The reference that he gives is *Bṛh. Up.* in. 6.1. It is not a translation of the text but is a summary. But even that summary is wrong. The original text means:—

"The worlds of gods are woven in the world of Indra; the worlds of Indra are woven in the world of Prajāpati, the worlds of Prajāpati are woven in the world of Brahman. But in what are the worlds of Brahman woven?"

In the text we have 'the worlds of Indra' and not Indra; 'the worlds of Prajāpati' and not Prajāpati; 'the worlds of Brahman' and not Brahman. The translation of Prajāpati by Father God is unmeaning and misleading. The original meaning of the word is Lord (*pati*) of creatures (*prajā*).

(14)

In one place (1.343) he writes without any comment:—

MALAYALAM

RAJANI-RANGAM (PART I). By F. T. Raman Bhattathiri. The Mangalodayam Press, Trichur. Price 1s. 8.

This little book contains five short 'love' (?) stories which first appeared in the columns of the *Pasupatam*, a monthly organ of the progressive Nambudiri youths residing at Trichur. They are written with the ultimate object of creating an opinion among the Nambudiris in favour of bringing about certain reforms in the present unhappy system of marriage prevalent in their community. We hope that every Nambudiri would read this book and hasten to make a fresh search of his heart.

Well-printed and neatly got up.

MATRU-BHUMI (OVAM NUMBER). The Matru-Bhumi Printing and Publishing Co. Ltd. Calcut. pp. 126. Price Re. 1.

This attractively got-up annual number of the *Matru-Bhumi* contains twenty-eight learned articles besides a number of portraits including those of Raja Rammohun Rai, Narayana Gramswami Ramananda Chatterjee and Motilal. Among the contributors, the names of R. S. Swami Pillai, Attoor Krishna Pisharoti, Vallathol Kunoodan and Uloor are worth to be mentioned. Of the contributions mention must be made of the *Ancient Crematoriums of Kerala* (illustrated), *Song of Liberty*, *Child Marriage*, *Our Duty To-day* and *Narayana Guru*.

The price of one rupee charged for this Annual is only moderate.

P. ARJUN AGRAH

TAMIL

1. **VEDANTABOHA SAMANTHANAM** By Ramasamy Sarma. pp. 54. Price Re 1

A collection of devotional songs sung in praise of several leading deities and the author.

2. **PATROL SISTRA** Published by Sarma Brothers Typers, Madra. p. 49. Price Four annas, 1927.

A very useful book for a beginner in scout-craft.

3. **SRI MANAHINI RAMANA CHANTHAM** Published by Sri Ramaniya Venu Book Depot Thiruvannamalai. pp. 44. Price 5 As. 1928.

An appreciative life of Ramana Swamikal by a brother Sanyasin, and his poems.

4. **MANI NITHI SATHAGAM OF RAMAPPA UDAYALAI** Published by Sri Sadhu Jitna Sarguru Book Depot, Parktown, Madras. pp. 67. Price 1s. 8, 1928.

The printing and the get-up of the book maintains no doubt, the tradition of the publishers. The publication is ill-suited to the times when the Brahmin-Non-Brahmin feelings are strong and occasions are not wanting when the original Manu-smriti is burned in public meetings.

5. **MY MASTER BY SWAMI VIVARANANDA** Translated by R. Narayanasamy Iyer and Published by Sri Sadhu Jitna Sarguru Book Depot, Parktown, Madras. pp. 57. Price 1s. 5 Third Edition.

A good translation of the famous speech of Swamiji on the inspiring life of Ramakrishna Paramahansa.

6. **PATH TO PERFECTION** Published by Sri Ramakrishna Mutt, Myslapore, Madras. 1927. Pp. 19. Price 2 As.

A very good translation of the lecture by Ramakrishna Swamiji. The fleeting pleasures of the world and the lasting pleasures of Heaven are dwelt upon at length and the constant introspection and regulation of one's conduct and life are advocated to attain the latter.

R. G. N. PILLAI.

GUJARATI

GAJENDRA MAHATMA, compiled by Prof. R. K. Yanki M. A. of Sanshodhan College, Bhabnagar, printed at the Bhagabat Sanhya Electric Printing Press Gondal. Photos. Price Rs. 2-0-0 (1928).

In the death of Prof. Gajendra G. Buch a sad tragedy has happened. He died very young at the age of twenty-four thus a very promising life was cut off. These campus as our compiler calls them, are various pieces of his literary work, verse, prose, letters and magazine articles, written by the deceased during the short span of life vouchsafed to him. They bear in them the promise of deep culture and much thoughtfulness. Even in their embryonic state one comes across flashes of genuine wit and wise literary studies. His writings throughout breathe a spirit of love for our literature and our country. We mourn with his friends his untimely death and fully appreciate the great loss our province has sustained thereby. He died poor, and it is our duty to assist his family by purchasing this book in large numbers.

1. **RASKATI** (2) **RASKATI IN SARIGAM** (musical scale of Ras King) by Mrs. Santi Chuntal Barfiwala, printed at the Chardar Printing Press, Anand, and the New Printing Press, Bombay. pp. 210. 19. 8 and 157. Paper cover with a photo of Kavi Nanalal. Price Re 1-4-0 and Rs. 2-0-0 (1925).

Ras or Gardas are songs sung by little girls as well as grown up women in Gujarat; it is an institution peculiar to the province, it is a pretty sight to see them going round and round with rhythmic clapping of hands and singing songs to its accompaniment as well as to that of other music. Of late many writers have written such Ras, the most popular writer being Kavi Nanalal. Mrs. Shanti has with the acumen peculiar to her sex, selected the best songs in her collection, and produced a compilation, which is one of the best of its kind. With great thoughtfulness she has in the other work published the musical scale of the songs selected and thus put her work on a scientific basis. She has been fortunate enough to get two writers of renowned ability to help her.—Kavi Nanalal with a learned and scholarly introduction to the *King* and Mr. N. B. Devata, well known for his knowledge of music, with one to the *Sarigam*. We sincerely congratulate Mrs. Shanti on the out-turn of her abilities, which till now lay dormant, but which contains promise in them of still more valuable work.

ANAND KAVI, By Ramantlal Nanalal Shah, printed at the Sayani Vyas, Press, Baroda. Paper cover, illustrated pp. 80. Price Re 0-5-0 (1926).

been a poet. Most of these verses attributed to Panini are in the fanciful vein but some are distinctly erotic in theme. Here is a description of the evening.

So close hath the moon, flushed with the glow of passion, seized the face of night, lovely with the twinkle of stars, that in her love she hath not noticed that her mantle of darkness had slipped off to her feet in the East.

When the West united with the Sun her face was ruddy; the face of the East was dark. There is no woman who is not jealous.

If Asvaghosa, the earliest known writer in the Kavya-style whose works have come down to us, does not directly utilise the motive of love in his quasi-religious poems, the anonymous hetero-drama which was discovered in Central Asia along with Asvaghosa's dramatic fragment and which apparently belongs to the same period, figures a courtesan and a rogue as chief characters and could not have been meant entirely for purposes of religious edification. The episode of Nanda and Sundari, however, especially in the fourth canto of Asvaghosa's well known poem, is in the best style of ornate classical poetry in its description of the love of the young couple. But the ascetic in Asvaghosa gets the upper hand of the poet, and he never misses the opportunity of echoing the old denunciation of woman as the source of all evil.

Passionate women cause intoxication, women without passion cause fear. Since they bring only fear and trouble, why should one resort to them?

He raises his voice of warning that

In the words of women there is honey

In their hearts, there is deadly poison

Repeating this half-verse in his *Śṛṅgārāṭhaka*, Bhartṛihari wittily suggests a practical application at which Asvaghosa himself would perhaps have frowned with disgust:

Hence doth one drink from these lips

And strike at that heart with the fist!

Even if love-poems are not profuse in the earliest specimens of classical Sanskrit literature, it must not be supposed that the passionate element in human nature had in the meantime failed to find an adequate expression. Love had not yet come to its own in the Kunstpoesie, in the polished and artificial Kavya-poetry, but in folk-literature, the tradition of which is to a great extent preserved in Prakrit, it must have formed an absorbing theme. Much of this popular literature which must have developed very early, appears to have been lost; but, as

we have already pointed out, we can surmise its vogue from the way in which the erotic Pali *gāthā*, called the *Question of Sakka*, found its way delightfully into the sacred text of the Dīgha-Nikāya, as well as from the undoubted leavening it must have supplied to the tales of the epic and its erotic passages. The impassioned secular hymns of the *Rigveda*, which we have already quoted in our last article and which are indeed out of place in the context in which they occur, probably formed the starting point as well as the prototype of this popular emotional literature, and a tradition of such poetry must have survived through long centuries as a strong under-current, only occasionally coming to the surface in the more conventional literature. It is perhaps for this reason that the earliest love-poetry of the classical period is to be found not so much in Sanskrit as in Prakrit; and one of the largest collections of such early erotic lyrics, going under the name of *Hala*, belongs to Prakrit literature. This Prakrit poetry is doubtless as conventional as the Sanskrit and is not folk-literature in its true sense; but it is clear that while these early Prakrit verses, popular among the masses, have love as their principal theme, the earlier Sanskrit poems give little scope to it. Even admitting that the Prakrit lyric is not the prototype of the later Sanskrit lyric, the presumption is still strong that the erotic element which had diffused itself in popular literature must have survived in Prakrit poetry and that later on it invaded the courtly literature written in Sanskrit, ultimately becoming its almost universal theme.

In order to appreciate this so-called classical poetry it is necessary to realise the conditions under which it was produced and the environment in which it flourished. In this connexion attention must be drawn, in the first place, to the evolution of a multitude of lyric metres in this literature, which are recorded freely in the earliest known systematic work on Prosody attributed to Pīṅgala. The epic poets, naturally less sensitive to the effects of the rhythmic form, preferred metres in which long series of stanzas could be written with ease; but the necessity of metrical variation in lyric poetry, which had love for its principal theme, accounts for the large number of lyric metres evolved in this period. It is somewhat remarkable that the names given to some of these metres are epithets of fair maidens. Vidyun-mālā, "chain

Here is a pretty picture of the anxious wife who is expecting her husband back from abroad every moment:

The wife of the wayfarer gazes on the path by which her beloved would come, so far as the eyes can reach, until, as the darkness of night falls and confuses the paths, discouraged and sorrowful, she takes one step to return to her home, but swiftly turns again her head to gaze, lest even at that very moment he might have come back.

It must not be supposed that these few specimens, imperfectly rendered in an alien tongue, exhaust all that is fine in this century of love-stanzas. Almost every poem in this collection has a charm of its own. The verses have all the perfection of miniature word-pictures, of which Sanskrit is pre-eminently capable. All of them treat of love in its varied aspects, often youthful and unpassioned love, in which the senses and the spirit meet, with all the emotions of longing, hope, jealousy, anger, disappointment, despair, reconciliation and fruition. They are marked by a spirit of closeness to life and common realities which is not often seen in the laboured Sanskrit court-epics, as well as by a simplicity and directness, a complete harmony of sound and sense and a freedom from mere rhetoric

which makes a strong appeal to modern taste and interest. But on their surface the light of jewelled fancy plays and makes beautiful even the pains and pangs which are inseparable from the joys of love. It is true that there is much of sentimentality rather than true sentiment in the verses in which the poet weeps, rather weakly, over the sorrows of his temporary separation. Occasionally a deeper note is struck, but very seldom we have the sense of that irrevocable loss which alone evokes true pathos. It is not love tossed on the stormy seas of manhood and womanhood, nor is it that mighty passion, serious, infinite and divine, which leads to a richer and wider life. But, as we have already pointed out, Sanskrit lyric poets delight in depicting the playful moods of love, its aspect of *lila* in which even sorrow becomes a luxury. They speak to us, no doubt in tones of unmistakable seriousness; but when they touch a deeper chord, the note of sorrow is seldom poignant but is rendered pleasing by a truly poetic enjoyment of its tender and pathetic implications. In this both the theory and practice of Sanskrit poetry agree.

THE FOREIGN MEDICAL BUREAUCRACY AND THE DUTIES OF THE MEDICAL PROFESSION IN INDIA.

By DR. SIR NILRATAN SIRCAR M.A., M.D., D.S.I.

This is an age of congresses and conferences, in other words, of social deliberation, as a means to social action. But in India throughout the ages a conference or Parisat has meant something more than this. Even the Vidyas (sciences), including the Ayurveda itself, appear to have originated in conferences, parisats and sangams, assembled in some forest retreat or some ancient seat of learning. Indeed, the medical *asthas* contain records of some of these assemblies where sages gathered from all parts of India from Balkh to Benares, from Taxila to Koshala under the presidency of Bhagavan Atreya, the reputed founder of the Charaka School of Medicine.

But never was a conference more necessary to medical men than at the present moment, when so many grave and momentous problems, on which hang the issues of life and death for our people, demand an anxious consideration. The Reception Committee have already drawn your attention to some of the more prominent questions bearing on the position of the medical profession in India in relation to the state, to the organisation of scientific research and study, to public health and sanitary administration and to medical ethics. The foremost of these is undoubtedly that of public health and sanitation, a problem which has been often discussed in recent years in India and abroad from an angle of vision other than what may claim to be national and Indian. These movements—foreign as they were in inception—represented the pressure of world opinion acting on the medical and hygienic situation in this country. Some of the “missions” are of momentous significance, but their usefulness would have been greatly increased if they had brought home to the Indian administration its gnevous failure to deal with the mass of preventible death and sickness in the country by an intensive plan of campaign. The statistics of preventible mortality and sickness in India were indeed dismal and even more so was the provision in the medical and sanitation budgets as against the mortality figures (and this in spite of the strenuous efforts of the

well-meaning but helpless ministers in the provinces). All this would have constituted an outstanding reproach to any civilised administration professing a high standard of efficiency. The facts were shocking to the International conscience and some relief was necessary. That was provided by placing the ignorant and ill-conditioned Indian in the dock at the bar of civilized humanity. The picture was drawn in lurid colours, presenting a fifth of the human race as in bondage to evil customs and unnatural practices, and as a standing “incubator” to the rest of the world. Some of our foreign mentors charged India with the guilt of spreading plagues and pestilences which are the scourge of mankind, forgetting that in the history of epidemics, from syphilis (*Feianga Roga*) in the sixteenth century to Influenza in the twentieth, the “coloured” peoples of the East have often been decimated by diseases of foreign importation—forgetting also that in all contacts of “civilised” with “backward and primitive” peoples the former have been the carriers not only of the germs of vice but also of the germs of that social malaise which through an insidious decline of fertility has carried off most of the primitive stocks from the face of the earth. Again the social hygienists condemned the majority of Indians as carrying the poison of venereal diseases in their veins, forgetting their own statistics in this respect.

As for Leprosy, that universal scourge of mankind, of which there is seeming evidence even in prehistoric relics, though fortunately it has disappeared in many western countries, there is a grim humour in charging India on this score in utter forgetfulness of the fact that India has been instrumental in saving mankind from this fell disease or at any rate in procuring substantial relief; for, the much-vaunted recent advances in its treatment actually derived their inspiration and were but a scientific extension of the indigenous Indian practices based on Indian medical treatises.

In fact, all the evidence goes to show that the social and economic disturbances

knows nothing of this species of the "unprofitable stewards."

It is futile to expect a vigorous growth of the faculty of scientific research under the cold shado of alien authority that has only a sneer of indifference, if not of jealousy, for genuine merit in the aspiring subordinate. The natural apprehension seems to be that a meritorious Indian in subordinate capacity, if encouraged, may raise his head too high by perseverance and devotion to scientific work.

But in India we labour under a double disadvantage. The medical bureaucracy is not only alien, but it is also recruited primarily for the military as opposed to the civil administration. And this makes any expansion in the organisation of medical and sanitary services to the country, any reforms in the constitution of the bureaucratic Medical Service exceedingly difficult, if not hopeless. To perpetuate and strengthen this anomalous and injurious system in spite of the unannuous protest of the profession and the people's representatives in the legislatures constitutes a grievous wrong. The ostensible grounds viz. the provision of a war reserve and also of European medical attendance to European Civil officers and then families, cannot bear examination even for a moment. The military department should find a reserve and the civil branch should be made free from the encroachments of the military medical officers. Vacancies in the educational and scientific posts should be filled up by selection, whereas for general medical and sanitary administration there should be separate services recruited by open competition in India. As for the needs of the European civil officers and their families, there is no difficulty in the cities where there is no dearth of European medical practitioners. As regards the mofussil, an Indian Government may be excused for not agreeing to sacrifice the vital and material interests of medical administration as well as those of national medical talent for the sake of gratifying a sentimental, however natural, of a "microscopic minority." It is indispensable that all the civil medical services at least should be Indianised. If we want an intensive campaign against the death-dealing agencies that are rampant in the land, if we want a zealous, whole-hearted indefatigable prosecution of a national policy working for the eradication of preventible diseases and suffering, the medical and sanitary administration must be handed over to the sons of the soil, who will

have the effective will as well as the intimate knowledge and warm interest that are a *sine qua non*.

But vested interests are opposing tooth and nail any reform in this direction and for an ounce of concession they demand a ton of additional privilege. And often the privilege begins apace, though the concession, like wisdom, lingers, and may even fail to appear as in the case of some chairs in a Medical College which were promised liberation from the grip of the Military Service.

If an over-centralised administration in alien hands is a material handicap, the proposed Central Council of Medical Registration is likely to aggravate the situation still further by depriving the Provincial Councils and Universities and Medical Councils of their freedom of action and then power of local variation and adaptation. Such a council is bound under existing conditions to draw the chains of central authority tighter still. As in every other sphere of legislation, an increase in centralisation before the transfer of responsibility to the people must necessarily delay that transfer.

The objections to the contemplated Bill are manifold. Enormous powers are to be given to the Central Council—powers of inspection, of regulation and of discipline which will curtail the freedom of local development, of initiation and variation, which are of the utmost importance in a vast and diversified sub-continent with provinces as big and populous as the United Kingdom, not all in the same stage of growth. But the powers of the proposed council will be comprehensive, the constitution narrow and unrepresentative and its composition predominantly bureaucratic; for it will have a nominated president, nominated members forming more than two-fifths of its entire strength, in strange contrast with the British Medical Council, and the regulations will be subject to the approval of the Governor-General—all this ensuring full Governmental control. Neither the academic and scientific elements nor the independent professional element will be adequately represented and the diverse interests of the services, of the students and of the independent profession will be left to the care of an unrepresentative chamber. Besides the position of the provincial authorities will be most anomalous and unreal and hardly compatible with any scheme of provincial autonomy.

Abating the Garbage Nuisance

How to take refuse away from the door, in the speediest, most inconspicuous way; how to haul it without annoying the passer-by; how to get rid

Down By The River—Before Incinerator Days
The old garbage dump in the outskirts of Charleston, West Virginia—a hideous spot like those still disfiguring many of our otherwise beautiful cities

of it without creating nuisance, and how to achieve all of this cheaply—that is the problem.

Long ago, the disposal plant at Fomth, near Nuremberg, Germany, for instance, and that at Rotterdam, embowered themselves in fruit trees and flowers, and visitors to the plants picked roses and strawberries in the garden.

Ashes from burnt garbage often contain a high percentage of potash, valuable as fertilizer.

Charleston, boasts a plant, though small in its seventy-ton capacity, that yields neither odour nor smoke, and is so attractive that the town considers it a show spot. "The ladies" were largely instrumental in bringing this plant to Charleston. Most of it

After The Incinerator was Installed
The same spot as shown above as it appears now that Charleston has an incinerator plant for the disposal of its garbage

is built below the level of the road. Rubbish and garbage together are dropped down an inclined plane into the bin, the bottom of which is the top of a hot-air chamber. The vapors and fumes produced by the warming refuse in the bin are drawn into the furnace so forcibly by blast blowers that no odours escape. Here they produce heat so intense that solid materials, even metals, are soon reduced to ashes. Working only two eight-hour shifts six days a week, the plant can produce a temperature of 1,700 to 1,900 degrees in the combustion chamber. Animal carcasses, dumped separately from the garbage, are consumed in a fraction of the ordinarily taken for cremation.

Martyrs Of Science

"Gas Kills Noted Surgeon." Buried in the news columns a few months ago, appeared that heading, with a brief announcement of the death, in Manchester, England, of Dr. Sidney Rawson Wilson, distinguished surgeon and anaesthetist.

"For years Doctor Wilson had experimented with anaesthetics to develop one which would prolong that 'border' state in which a patient, though losing all feeling, still retains consciousness. Success seemed at hand. The only way thoroughly to test his results was to experiment on himself. He adjusted the gas-mask over his face—and died."

"Many experimenters have tried the effects of poisons on themselves. In tests conducted by Dr. Linn J. Boyd to determine how much of the poisons of insects the human body can absorb without serious suffering, fifty students in the New York Homeopathic Medical College volunteered to take daily doses in capsules of poisons of spiders, bees, and other insects, over a period of six months. Fortunately the results were not disastrous, and a valuable contribution was made to medical knowledge."

"No single act of heroism during the great war surpassed that of Miss Mary Davies, Welsh

Sleep-starved For Science
In the bed is Dr. N. F. Fisher of the University
of Chicago, asleep after staying awake five days
and four nights to study the effects of prote-
cted sleeplessness. The assistant is learning
every detail of his physical condition by
use of the appropriate instruments

given in my thesis in two or three places. *Prameyakamalamārtaṇḍa* is a pretty stiff book. Unfortunately there is no English translation of it as yet. The author has not followed the book closely in his book. In my thesis I closely followed the book, and gave the translation of many important Sanskrit passages. In passages (28-40) I quoted only one Sanskrit sentence which has appeared in Prof. Radhakrishnan's book. All the above passages (1-40) have been also boldly taken from the chapter on *Perception of Cognition* in my thesis which he examined in 1944. It passes one's imagination how he could smuggle into his book one complete chapter of my thesis. This is indeed a magnificent monument of his highly specialised knowledge! Shall I now cut out the whole chapter from my book on the extra-ordinary consideration that it has already appeared in the bulky volume of the ponderous scholar of international repute?

INDIAN PERIODICALS

The Message of Sriniketan

Lofty in its high spirituality and sound in the grasp of reality is the thought with which the Poet Rabindra Nath Tagore illuminates his "Notes and Comments" in *The Vista-Bharati Quarterly*. The "message of Sriniketan," where agricultural experiments are in progress, may be gathered from the excerpts:

The task that lies before us to-day is to make whole the broken-up communal life, to harmonise the divergence between village and town, between the classes and the masses, between pride of power and spirit of comradeship. Those who rely on revolution, seek to curtail truth in order to make it easy. When they are after enjoyment, they shun renunciation; when they incline to renunciation, they would banish enjoyment from the land and subdue man's mind by cramping it. What we, of Visva-bharati, say is, that the nature of man is but deprived if truth be not offered to him in its wholeness, and from such deprivation comes his disease and his despair.

The very factory of which I was complaining, though it has been the instrument of much wrong doing, is not a thing of which we can say we would be rid. The machine is also an organ of our vital force,—it is man's very own. If we have caused our hands to commit robbery, the remedy does not lie in cutting them off,—they must be purged of their sin. To try to improve ourselves by crippling ourselves is a counsel of cowardice. All the powers of man seek development and expansion,—we have not the right to ignore any of them. From the earliest times man has sought to make tools. No sooner has he discovered any new secret of Nature than he has tried to capture it with the help of some machine and make it his own, whereby his civilisation has entered on each successive stage.

The day man first drew out the fertility of the soil by making the plough, a screen was lifted off the path of his life's progress,—a lifting that not only revealed the store-room of his food, but also let the light into many an obscure chamber of his mind. When he first devised the spinning wheel and the loom, they not only enabled him to cover his body, but also roused that sense of beauty which was to extend its domain over so much of his life. For it, to-day, man's body is clothed, so is his mind, and the Kingdom of Man that he is busy creating, depends largely for its material on this clothing, which serves both as covering and language,—for it has given man's mind a new means of self-expression.

Science has given man immense power. The golden age will return when it is used in the service of humanity. The call of that supreme age is already heard. Man must be able to-day to

say to it: May this power of yours never grow less; may it be victorious in works and in righteousness! Man's power is divine power: to repudiate it is blasphemy.

This latest manifestation of man's power must be brought into the heart of our villages. It is because we have omitted to do so that our water-courses and pools have run dry; malaria and disease, want, and sin, and crime stalk the land; a cowardly resignation overwhelms us. Whichever way we turn, there is the picture of defeat, of the penury due to the depression of defeat. Everywhere our countrymen are crying: *we have failed, we have failed, we have failed*. From our dried-up hollows, our fruitless fields, our never-ceasing funeral pyres, rises the wail: *We have failed, we have failed, we have failed*. If but we can gain the science that gives power to this age, we may yet win, we may yet live.

The cry has been raised in our country: *We shall have nothing to do with Western Science,—it is Satana*. This we of Sriniketan, must refuse to say. Because its power is killing us, we shall not say that we prefer powerlessness. We must know that in order to combat power, power is needed; without it, destruction cannot be stayed off, but will come all the faster. Truth kills us only when we refuse to accept it.

Wherever truth is discovered, anywhere, by any scientist, holds good irrespective of hemisphere or nationality. May this truth help to unite us.

In point of fact, wherever science has been truly acknowledged and cultivated it has given men the means of union. The strife into which men have been led by its misuse is not of science but of man's nature. The untruth, the weakness that is in man has been responsible for this misuse. That is why the verse of the Upanishad ends thus: *May He unite us and our powers in right understanding*.

So no buddhyā subhaya samyunnaktn.

A Poem from Mrs. Naidu

A poem from Mrs. Sarojini Naidu is a rare thing now-a-days much to the regret of Indians and Englishmen alike, *Shama'a* however presents one:

CHILD FANCIES

To Pralad Rajam

When I put in the earth, Poppy seed
Poppy seed

I wonder are you cold, Are you lonely, do you need
A little glow-worm spark

Near your cradle in the dark
Till you fall asleep and dream yourself a flower

Poppy seed?
When dewy sunbeams call Dragonfly
Dragonfly

German philosophy and literature. In literature India has left many traces :

A glance at the works of our German classical writers shows how amazing was the influence of Indian ideas on the great men from the very first when they became acquainted with them. Already Herder (1771-1813), the prominent poet and philosopher who lived as a divine in Weimar, showed a great and so to say loving interest for India : in his "Thoughts on the Philosophy of the History of Mankind" (1784-1791) and other writings of his he speaks of his admiration for the "tender Indian philosophy," which cannot but ennoble mankind ; he describes the Hindus, on account of their ethical teachings, as the most gentle people on the earth, who, as he says in consideration of their doctrine of "ahimsa," will not offend a living creature, he praises their frugality, their loathing of drunkenness. In his "Scattered leaves he speaks more than once of the Indian Wisdom, he mentions the transmigration of souls and in his "Talks on the Conversion of the Hindus by our European Christians" he allows an Indian to defend his religious ideas and praises their humanity, although he himself was a Protestant theologian.

A great interest for Indian ideas we also see in Herder's friend Goethe, the greatest of all German poets. Well known are his inspired verses on the Shakuntala, where he says (I am giving a proof translation) :

Wilt thou unite in one name heaven and earth,
Then I name you, Shakuntala, you, and all is said !

That this impression conceived at the first reading—the distinct dates from the year 1791—was not evanescent is proved by the following letter addressed to the French Sanskrit scholar Chezy, to whom Goethe wrote 40 years later, on the 9th October, 1830. He says : "The first time when my notice was drawn to this unfathomable work, it aroused in me such an enthusiasm, it attracted me in such a way that I could not be quiet until I studied it profoundly and felt myself drawn to the impossible, undertaken to gain it for the German stage in some way...I grasp only now the inexpressible impression which this work formerly made on me."

Schiller also has expressed the opinion that the whole Greek antiquity has produced nothing equal to the beautiful womanliness and the tender love that comes near to the Shakuntala in any way. Of other Indian poems Goethe, as can be gathered from his letters, has especially admired the Meghaduta and the Gitagovinda. The impulses coming from India gave a good deal of stimulation to Goethe's own poetical works. Indian subjects were treated in his poems "Der Gott und die Bajadere" (1797) and the "Pariah-trilogy." The Indian drama has influenced his "Faust" technically, as his Prologue on the Theatre shows.

Goethe himself did not know Sanskrit. Still it attracted him so much that he made attempts in writing in Devanagari letters, which one can still see in the Goethe-Archive.

In Indian thought they found their ideal of the absolute union of poetry and philosophy realised. The first to be mentioned here are the three brothers Schlegel. One of them, Karl August, who has made no name in literature, visited India and died young in Madras in 1789. Another, Friedrich

(1772-1829) is the first German, who endeavoured to really study Indian literature and its problem. The result of his study was his epoch-making treatise "Ueber die Sprache und Weisheit der Indier. Ein Beitrag zur Begründung der Alterthums-kunde". (On the language and wisdom of the Indians. A contribution to the foundation of antiquity), which appeared in 1808.

Friedrich Schlegel was the first man in Germany who declared that a regular history of the literature of the world is only possible, if the Asiatic nations get their due place in it. But still more than Friedrich Schlegel, who soon ceased to take an interest in India, his elder brother August Wilhelm Schlegel (1767-1815) influenced the study of Sanskrit. As he had formerly distinguished himself as the translator of Shakespeare, Calderon, Dante, and Petrarca and as a poet of ballads and satires, he in his later years took up in 1811, the study of Sanskrit. His standard editions of the Bhagavad-gita, the "Hitopadesa," and the "Ramayana" (unfinished) with critical commentaries and translations in classical Latin were the first works of this kind in Germany, printed in Devanagari letters and show that this romantic poet was equally gifted as a first-class philologist. At the same time Franz Bopp (1791-1867) devoted his time to linguistics.

Bopp became the founder of the Indo-German science of languages, which was cultivated for a long time by the Indologists together with Sanskrit philology and had a most useful influence on it in many ways. We see here that India has also greatly stimulated German science in the domain of linguistics. The thanks which comparative philology owes to India, is expressed by the fact that a number of Indian *termini technici* are still in use employed in comparative grammars. Indian philology as founded by Schlegel and Bopp has enjoyed a cultivation since their time as is found in no other European country. The number of Sanskrit scholars and professors is greater in Germany than in any occidental country. This is significant in so far as the Germans are swayed only by ideal, not by practical reasons, as they have no political ambitions to follow. They share Heinrich Heine's opinion, who says in a note to his "Buch der Lieder" (Book of Songs) : "Portuguese, Dutchmen, and Englishmen have brought home from India the treasures in their big ships, we were only lookers-on. But the spiritual treasures of India shall not escape us." The work of Schlegel and Bopp has been continued by Lassen, Weber, Roth, Boethlinck, Max Mueller, Buehler, Kielhorn, Oldenberg and numerous other eminent scholars.

The accomplished poet Friedrich Rückert (1788-1866) has won immortal fame by his congenial and absolutely perfect translations from the Sanskrit. He has bestowed his attention on the Vedas, the Epics and Puranas and also above all to the learned poetry. Of all the versions of Indian originals the best known is perhaps that of the "Nala and Damayanti" episode from the Mahabharata, but his art of translation is best proved by his translation of the "Gitagovinda." Here he has succeeded in giving a true version of the original text but also in recreating the rhythm and the plays on words and rhymes in perfect imitation till no wish is left unsatisfied. As a poetic interpreter of Indian poetry Rückert is still supreme in Germany, and the attempts of others to

"Whereas also the failure of any nation to adopt humane conditions of labour is an obstacle in the way of other nations which desire to improve the conditions in their own countries.

"The High Contracting Parties, moved by sentiments of justice and humanity as well as by the desire to secure the permanent peace of the world, agree to the following :

The following nine sections embodying the methods and principles of the organisation may be rightly regarded as Labour's charter.

"First.—The guiding principle above enunciated that labour should not be regarded merely as a commodity or article of commerce.

"Second.—The right of association for all lawful purposes by the employed as well as by the employers.

"Third.—The payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country.

"Fourth.—The adoption of an eight hours day or a forty-eight hours week as the standard to be aimed at where it has not already been attained.

"Fifth.—The adoption of a weekly rest of at least twenty-four hours which should include Sunday whenever practicable.

"Sixth.—The abolition of child labour and the imposition of such limitations on the labour of young persons as shall permit the continuation of their education and assure their physical development.

"Seventh.—The principle that men and women should receive equal remuneration for work of equal value.

"Eighth.—The standard set by law in each country with respect to the conditions of labour should have due regard to the equitable economic treatment of all workers lawfully resident therein.

"Nine.—Each State should make provision for a system of inspection in which women should take part in order to ensure the enforcement of the laws and regulations for the protection of the employed."

Commenting editorially on the opening of the branch of the Organisation in India by Dr. P. P. Pillay of the I. L. O., the same journal for December says :

India is now passing through a serious crisis of economic as well as of political unrest. Long-drawn-out strikes, started with ill-defined reasons, and lock-outs which are frequently the results of hasty managerial judgments indicate the strained relations between labour and capital. The insidious entrance of disruptive revolutionary ideas into the labour world is already more or less deflecting Trade Unionism from its legitimate paths ; and Moscow has no use for Geneva. But to all thinkers and workers, anxious not for publicity and limelight, but for solid and substantial constructive work, the establishment of the Indian branch of the I. L. O. will come as a sign of good augury.

It is not generally realised that the great success that has attended the work of Geneva is largely due to the careful and meticulous preliminary study that has been devoted to questions taken up for consideration at the various Conferences. All this mass of information is now thrown open

to India through the portals of the Indian branch of the I. L. O. ; and economic and social investigators in India cannot do better than put themselves in touch with the new Delhi Office of the I. L. O. and avail themselves of the information already collected at Geneva before they try to formulate their conclusions. In return, all bodies interested in the study of Indian industrial and labour conditions will be performing an extremely useful service in keeping the Indian branch informed of their activities and in communicating to it the results of their special investigations, so that Geneva may keep itself au courant with the day-to-day developments in Indian economic and social life. We therefore advise the Unions to lose no time in getting into touch with Dr. Pillay who is to be heartily congratulated on his appointment which carries with it great opportunities and great responsibilities.

The Club and Factory Theatres of Russia

Mr. Harindra Nath Chattopadhyaya, the poet, gives an account of the club and factory theatres that he visited in Russia in a special article for *The Indian Labour Review* (December). We learn :

There are twenty-three factory theatres in Leningrad—and perhaps many more by now—for theatres full of a superb quality are growing up all over the Russia of to-day and are becoming as common almost as mushrooms. In addition to all these there are over two hundred clubs with worker—actor, dramatic, musical and other circles.

The factory theatres have for its board of critics an organising committee, representatives of the biggest factory theatres. The repertory consists of classical plays as well as plays of the workers, theatres, Ostrovsky, Tolstoy, Dostoevsky, Shakespeare, Goldoni, Synge, Toller and Upton Sinclair—but it must be remembered that only such classic plays are enacted which present the possibility of showing the utterly pathetic humour of the life of the bourgeois, or which contain the message of the revolution for the masses of the world.

The peasant theatres are numerous. In Nishni Novgorod alone there are about a 1,000—in Kostroma alone about eight hundred—the peasants are fast working out a theatre of their own. Probably they will not be free from the touch of religious mysticism—in which they resemble our own Indian peasants. We have such a great deal to learn from this movement. In India there are innumerable village theatres already in existence. If only we could gradually convert them into platforms for the expression of the people in new and vital way. This can only be brought about by the displacement of played out religious and mythological themes by themes that deal with the terrible problems which face them at every turn in 'daily life'—themes such as, hunger, cholera, plague, fire, flood, famine, snake-bite, uncleanness, foul tanks, child-birth.

Art always runs a danger in the company of propaganda. But, Indian theatres know little of art and less of propaganda.

will displace blind competition. Woman would be an equal partner with man and her services as a mother will be better appreciated by the general public. A literate woman will be able to demand her dues and less liable to be seduced into prostitution by profiteers of vice who are far more numerous than vigilance workers.

Vedic Principles of the Constitution of a State

Thus Pandit Chamupati concludes his well documented article on the above subject in *The Vedic Magazine*.

This kind of constitution of which the fundamentals seem to have been laid down in the Vedas, has in an applied and developed form, continued to be in vogue up to comparatively very recent times in the history of India. Mahatma Buddha organised his Saangha on democratic principles in imitation professedly of the system of administration in vogue in the states of those days. In ancient inscriptions of which copies have been obtained and collections of these made in the epigraphical records of India we come across not only cursory and occasional hints as regards the existence of *Sabhas* but sometimes also a detailed description of the qualifications of voters and candidates and the process of election followed. Greek writers, too, who came to India, and made personal observation of the working of the administrative systems of this country, mention states that were being governed on republican and democratic lines.

Democracy therefore, is nothing foreign to the genius of the Indian people. The framers of the draft constitution which the All-Parties Conference has just approved have done well in keeping before them the constitutions of self-governing countries of modern days. It would not have been amiss on their part to have studied side by side with these the ancient constitutional practices of India. Two very important peculiarities of the Vedic constitution of a state are (1) that the place of a king in it is that simply of the highest member of the assembly, and (2) that every village and town has complete autonomy in its local management, and thus internally free, it forms an organic part of the body politic of the whole country.

Reforms for Women

Sir T. B. Saprú in a well-balanced plea for 'The Emancipation of Women' in *Stri-Dharma* for October suggests the following reforms to ameliorate their conditions :

(a) Every local legislature should be asked to undertake the obligation for the establishment of Girls Schools and Colleges in every province and to set apart more ample funds than has hitherto been done.

(b) If the legislators are found to be conservative to legislate with regard to the marriage of girls, the educated youth of the country should form themselves into a league and refuse to be married to girls below a certain age.

(c) Educated girls should be encouraged to follow independent professions, as far as they can.

(d) In all matters affecting social reform, we should take care to see that a certain number of women are always included in our representative bodies.

(e) Sex disqualifications, so far as representation in local bodies and legislatures is concerned, should be absolutely removed.

(f) Our personal laws should be modified so as to give the woman a stronger legal position than she occupies to-day. It is, to my mind, absurd that we should allow the inferior position which the Hindu Law assigns to her in the matter of property rights to continue indefinitely. It is a perpetual source of litigation and I have, in actual practice found that even where the law gives her some definite position, the woman is victimised by unscrupulous male relatives and hangers-on. This is probably due more to her want of capacity to protect her own interests, than to any other cause. This can, however, partly be remedied by better education, but it seems to me that a radical cure can only be supplied by a fundamental change of our law.

These suggestions of mine are by no means exhaustive. I fully believe that if India is ever to attain freedom in the political sphere, we must be prepared first to liberate in the fullest measure our women and do justice to them.

Low Rate of Widow Marriage in Britain

The *Stri Dharma* of November informs us in its 'Notes and Comments' :

That marriage is more popular than even in Britain and that there are more boy and girl weddings are two facts revealed in a mass of statistics regarding increase in population and decrease in birth-rate contained in the second part of the annual return of the Registrar-General. The marriage rate of 15.7 per thousand in 1927 is the highest in five years representing an increase of 28,500 weddings.

The growth of the "get married early" habit is evidenced by the fact that 58,000 bridal couples were under 21 while of the remainder most of the brides were under 23 and most of the bridegrooms under 21. 34 brides were aged only 15, while 12 bridegrooms were only 16.

97 per cent. of the wedding were between bachelors and spinsters. Only 33 unmarried men took widows as wives. The birthrate is the lowest ever recorded and show a decrease of 40,000.

The New Germany—War Dangers

Apparently the Berlin Correspondent of *Welfare* (Nov. 26) who takes stock of the 'Latent War Dangers' the New Germany faces speaks with confidence and knows much more than he speaks. Some of these dangers may be seen from the following extracts.

The German delegation to the present Assembly and Council Meeting of the League of Nations is intent on two main problems: the hastening of the evacuation of the Rhineland and the hastening of

resolution, proposed by an English woman seconded by a French-woman and supported by women of many countries:

"That this League welcome the support of Indian women for Peace movements as expressed by the resolutions of women's Day in Madras and by the Delhi Women's League, and it supports the demand of women in India for Self-Government."

School discipline and Medium of Instruction

Mr. M. R. Jayakara's presidential address at the Bombay Presidency Secondary Teacher's Conference, published by *The Progress of Education* (November), is full of liberal ideas and thoughtful suggestions. The speaker comments on the question of discipline:

Speaking of regularity and discipline, you will permit me to sound a note of caution that these two virtues must not be allowed to become a tyrannical fad. In a country situated like India, the main question is to how to spread education. I hold the view—and I am sure a large number of people interested in Indian education share it—that nothing should be allowed, even in the name of discipline and method, to interfere with the spread of education as wide as possible. When education has spread and has become universal, the time may arrive when the field has to be weeded and the plant pruned. But until then, it is strongly felt a many quarters, that we must not make a shibboleth of discipline and method. It is better that the largest number of Indian students should obtain even a defective education than no education at all, which is often the manner in which the choice is presented to the poor Indian student. In a matter like this it is perhaps inevitable that an Indian and an Englishman connected with education would see differently. We are not dealing with a country which has no background in this matter or which has to be reclaimed out of illiteracy and ignorance. We are dealing with a people who have shown tremendous capacity for well-directed and well-diffused education in the past, but who owing to modern conditions have to change their methods and avenues so as to bring about the best results. The one problem before India to-day is universal education cheaply obtained, and the Department would do well to bear in mind that nothing should be allowed to interfere with this growth.

Rapidity is of the essence of our experiment. Let this not be forgotten.

Industrial Research

The Mysore Economic Journal (November) publishes Sir William Bragg's presidential address at the Glasgow Meeting of the British Academy on 'Craftsmanship and Science.' The eminent physicist remarks on the work carried on in the industrial research laboratories:

A new class of worker is growing up among us consisting of the men engaged in research associations and industrial research laboratories throughout the country. We must place a high value on their service, for they are actually and personally bringing back with them into craftsmanship the scientific knowledge which is one of its essentials. They bring the interest and the outlook of scientific inquiry into touch with both employer and employed, and I cannot but think that they may be to some extent the flux that will make them run together. For they can speak with the employer as men also trained in University and College, exchanging thought with ease and accuracy. And, at the same time, they are fellow-workers with those in the shops and can bring back there some of the interest and enthusiasm which springs from the understanding of purposes and methods.

Personal Contact

It is to be remembered always that personal contact has, on the whole, thanks to the better qualities in human nature, a marvellous effect in smoothing out differences. I do not think it is unduly optimistic to welcome the growth of this new type of industrial worker because it can, being in personal intercourse with both capital and labour, supply to each a new outlook on their whole enterprise, especially as that outlook is naturally illuminating and suggestive. For, after all, this is but going back to first conditions.

The Rewards of Research

The present number of industrial research workers is relatively small; it seems likely to increase, however, in proportion to the extent to which the province of science is better understood. The better understanding I think of is manifesting in the first place in industry itself. I am sure that here it is happily on the increase. There is also a broader view to be taken. There is a public estimation of the value of any calling which affects the numbers and the quality of those who respond.

India has a small band of research scholars who work under numerous disabilities. But the number of industrial research workers are smaller still; and though there may be willing students for it, they have hardly any scope, most of the industries being under foreign control or under the control of unsympathetic and unimaginative industrialists who do not yet know the immense value of such works.

Germany would be absorbed in an aggrandized Prussia, between whom and Austria there would be formed a Central European alliance, against which a world coalition would presently grow up. A war of annihilation between the alliance and the coalition would follow, with the result that the Habsburg and the Hohenzollern thrones would fall and Prussia would be absorbed in a German republic.

World War Foreshadowed in 1909

To the uninitiated the swift catastrophe of the twelve days of July and August, 1914, appeared like the sudden descent of an avalanche on a smiling and peaceful valley. But statesmen and publicists of Europe not only knew that a trial of strength between the Triple Alliance and the Triple Entente was coming, but accurately foresaw the occasion which would lead to it. Of them, Mr. Wickham Steed, the former editor of the *Times* was one. He writes in the *Current History*:

This was plain to discerning eyes by the end of 1909. Professor (now President) Masaryk and others besides me then saw it. In November, 1912, when the Serbians defeated the Turks in the first Balkan war the truth was visible to all save the public. Had the Turks been victorious, as the Austro-Hungarian General Staff expected them to be, the Habsburg Monarchy might have gained a further breathing space. But the Serbian victories stated the issue so patently that, before the end of November, 1912, I wrote from Vienna to warn the editor of the London *Times* that, if the Austro-Hungarian fleet should bombard the Serbian forces which against Austro-Hungarian injunctions, had crossed the Albanian mountains and reached the Adriatic shore at Durazzo, England would have to land an army in Belgium within ten days.

No special knowledge was needed to prompt this warning. An Austro-Hungarian attack upon the Serbians would have brought about Russian intervention on behalf of Serbia. Germany would have supported Austria-Hungary, and—as M. Clemenceau had informed King Edward at Marienbad in 1908—Germany, trusting to the slowness of Russian mobilization, would have rushed through Belgium into France. Great Britain, seeing the Germans in Belgium, would have been bound by her treaty obligations to defend Belgian neutrality. This I foreshadowed in November, 1912, as the obvious development of an Austro-Serbian conflict. An armed collision was then averted, and was averted again and again during 1913. But the underlying situation changed so little that in January, 1914, I restated publicly in London the reasons why the peace of Europe would be at the mercy of any serious quarrel between Vienna and Belgrade. Six months later the quarrel came over the Sarajevo assassinations, and the European equation worked itself out to its inevitable result.

War Guilt

Continuing, Mr. Wickham Steed arrives almost to the same conclusion about the res-

pensibility for the World War as Dr. Gooch, Mr. Lowes Dickinson and many other thoughtful historians had already done, that the causes of the catastrophe of 1914 were not to be sought in the conduct of this particular state or that, but in the general international situation and the international anarchy which prevailed in the family of nations in pre-war days.

How far Vienna and how far Berlin was to blame for thus upsetting the old order in Europe it is hard to decide. The more the blind rage of Austria-Hungary against Serbia and the vacillations of Germany are studied in the light of the German and Austrian documents, the clearer does the conclusion emerge that their conduct was not so much deliberately criminal as governed by a fatal concatenation of circumstances acting upon incompetent men. The real answer to the "war guilt" question may be given by some supreme dramatist who will gather into one compelling tragedy the threads in which destiny crumpled the rulers and the peoples of Europe.

Dr. John Dewey's Impressions of Soviet Russia

Dr. John K. Dewey, the famous American philosopher and educationist is giving his impressions of life in Soviet Russia in a series of articles in the *New Republic*. After pointing out the difficulty of getting reliable information about Russia without a prolonged stay, wide contacts, and a knowledge of the language, and emphasizing the fact of change and flux in that country, (Russia, it was put to Dr. Dewey, lives in all its internal problems and policies from hand to mouth) Dr. Dewey gives two of his impressions which would remove some of the current misconceptions which prevail even in educated circles about life in Russia. Of the security of life in Soviet Russia, Dr. Dewey says:

But there are other preconceptions—most of which I am happy to say I do not share—which seem after a visit even more absurd. One of them is indicated by the question so often asked both before and after the visit: How did the party dare to go to Russia?—as if life there were indecent, disorderly and in secure. One hesitates to speak of this notion to an intelligent public, but I have found it so widely current that I am sure that testimony to the orderly and safe character of life in Russia would be met with incredulity by much more than half of the European as well as the American public. In spite of secret police, inquisitions, arrests and deportations of *Nepmen* and *Kulaks*, exiling of party opponents—including divergent elements in the party—life for the masses goes on with regularity, safety and decorum. If I wished to be invidious, I could mention other countries in Eastern Europe in which it is much more annoying to travel. There is no country in

But perhaps we have presumed too much; perhaps in our enthusiasm for generalizing—that last inhumanity of speaking your mind—we have gone a little too far. As Al Smith says, what are the facts? After making a careful survey of all the news items from the more important universities for the current year, we have selected the following as a significant instance.

A couple of weeks ago, in a university town not a hundred miles from New York, the citizens were registering for the presidential election. It has been the custom there for many years to allow the undergraduates to register as well, as a great many of them, not being able to return to their homes on Election Day, would otherwise lose their right to vote. This year, for some Republican or Democratic reason, the local board of registration refused to allow undergraduates to register, alleging that they were not legal residents of the town, and so had no right to vote there. When news of this action got around the campus, there was general indignation, and that evening some of the more serious-minded spirits collected and began a parade of protest. The procession, which soon numbered several hundreds, set out up the main street of the town. Across this street, at a decent interval, were displayed the campaign banners of the Republican and the Democratic parties. The paraders, with great seriousness and good humour, demolished the Republican emblem, and then, with praiseworthy impartiality and equal seriousness, the Democratic. The university authorities soon got wind of the affair, and sympathizing with the undergraduates' grievance and recognizing the high motives that lay behind their demonstration, attempted to persuade the protestors to come back to the campus and hold a mass meeting; offering the college auditorium for the purpose. All their attempts, however, were in vain. The crowd continued to surge back and forth up the main street, blocking the traffic and now and then attempting, in a friendly way, to upset passing motor cars, and making an unsuccessful try at demolishing the jail, but doing on the whole little or no damage. Finally, however, even high seriousness must go to bed, so they did.

drinks virtue from him he is often confused, retiring, awkward. All he does is of a piece. He writes a letter; the simple sentences are like his songs, showing, as Mr. Newman has said, the same "welling over of joy into sadness or of sadness into joy" and beyond this the same perfection of sweetness. The reciprocating wholeness of his nature, by turns receptive and expressive, keeps him to the end a child. He balances experience and creation like a child at play escaping ten years longer than most men that return of the mind upon itself which heralds maturity; and when he dies at thirty-one he has still barely completed the first stage of his journey and dies, as a child dies, of love. He has trusted the world more than it can be trusted, giving everything, expecting nothing in return, and getting so little that his strength is undermined and the way clear for disaster. Nothing in his work suggests exhausted faculties; his last is his most significant year. Indeed, the tragedy of his death is precisely this; that it cut him off on the threshold of manhood and of manhood's incalculable enrichments. His calamities, had he survived them, would have given him the one thing he still needed, a *point de repere*, a self-reliance in vision, such as came to Beethoven through his deafness. And the goal was near. Out of the world's rejection of him, signified by his poverty, out of the sickness, the bitterness of degradation which poverty had brought in its train, there was dawning upon his mind that sense of the separateness, the otherness, of the world from which spring irony, philosophy, and self-consciousness, the man's deliberate measuring and knitting of his power against indifferent fate. We feel decision rising in him as the last months go by; he recognized that his reputation is in his own hands, that for his work's sake he must concern himself for a livelihood. He has discovered even the defects of his musicianship, and in the grip of his last illness goes to a master. Then, feeling the approach of death, he fights convulsively and in the anguish of the struggle reveals his full knowledge of his stature and his claim; "Put me in my room," he cries to his brother Ferdinand, "don't leave me in this corner under the eath," and, on receiving his brother's assurance, "It is not true. No. Beethoven is not lying here."

parade uniform—a fantastic official dress which in the main he adapted from that worn by his princely predecessor, Vilim of Wied, Albania's pre-war king whose rule lasted so short a time. This under went a number of transformations before it was standardized. Ahmet Zogu first experimented with a white militia uniform, white trousers, and white riding boots. For the first two he presently substituted red trousers and black boots. Later he added a black cloak faced with red. One must admit that though he presents in his uniform somewhat the appearance of a musical comedy hero, it is, nevertheless, very coming and has a tremendous effect upon the masses.

There is no doubt that he regards Napoleon Bonaparte as a model for his own career, keeping a Napoleonic biography constantly on his writing desk and reading it assiduously. His dream of being king, as was predicted, is drawing near fulfilment. He distributes orders, offices, favours—not to mention an occasional warrant for execution—and has created a corps of officers which is loyal and courageous, but which imitates its war lord by going about in gold-braided uniforms which rival King Solomon in all his glory.

But in spite of all this, a gesture from his patron and protector, Mussolini, would be enough to end all of Ahmet's power before his ambitious dreams reach their fulfilment.

Co-operation of Labour and Capital

1928 was a year of peace moves in industry. Both Trade Unions and Employers seem to have realised that industrial warfare was leading nowhere. In England it was Lord Melchett (formerly Sir Alfred Mond) who invited a joint conference of the leading employers and the representatives of the Trades Union Congress to find out a formula which would lead to a better understanding between the employers and the employed. The interim report of this conference has been approved by the Trades Union Congress which met in September, 1928 in spite of the opposition of the Labour extremists. It appears that a similar tendency is also operating in America, and that there, too, employers and the employed are drawing together for the sake of industrial efficiency and economic prosperity of the community as a whole. We read the following in the *Monthly Labour Review* of the United States Bureau of Labor Statistics:

There are still elements in the organised labour movement which look with misgivings and suspicion upon any co-operation of labour with capital, on the theory that the two are unalterably opposed to one another fundamentally and cannot possibly have any interest in common. In general, however, it may be said that during the past decade a radical change has taken place in the attitude of, at least, the leaders of organised labour. While

still militant in the sense that it will yield no portion of the advantages already gained, labour prefers peace to warfare in its relations with employers. This change of attitude is due partly to enlightened self-interest, to a very practical realization of the cost of strikes—not only in dollars and cents but in other tangible benefits—and partly to wider vision on the part of the leaders. Whereas formerly only the interests of the men were taken into account by the unions, now the interests of the industry are considered. A few unions are leading the way in practical accomplishments in co-operation with the management for the good of all concerned, and the idea is gradually gaining a more or less general acceptance, even though a still reluctant one in some quarters.

The idea of enlisting the co-operation of the workers on a general scale first appeared during the war, when the universal and whole-hearted efforts of everyone were necessary in the production of war materials. Shop committees were established in a great many plants, though in many of these the trade-union was not a factor, non-union as well as union plants having adopted the idea. The value of the voluntary co-operation of the employees and of their good-will received widespread recognition.

Much of this spirit disappeared after the cessation of the war, due partly to the industrial depression, partly to the reaction from the wartime tension, and partly to the wave of anti-union and open-shop activities that swept over the country. In some cases, however, co-operative efforts continued, while what is probably the best-known of all co-operative schemes, the so-called "I. & O. plan," was inaugurated after the close of the war. It had been conceived much earlier but it was felt that war conditions might militate against the success of the plan and the putting into actual practice was therefore postponed.

The new spirit has manifested itself in different ways and along various lines. To-day there are instances in which unions and management are co-operating to improve the operating efficiency of the plant or the industry; to introduce new methods or machinery or to improve the old ones; to reduce operating cost by eliminating wastes, introducing economies, etc.; to improve the quality of work produced; to bring up the total production; to raise the general level of sanitation and safety in the plant; and to increase the skill and efficiency of the workers. In these and other ways employers and workers are demonstrating what can be done when the welfare of the industry is the first concern.

It is not true, of course, that all that is being accomplished through co-operative effort is done for purely altruistic reasons. Each party expects to benefit by the co-operative arrangement. The employer expects greater returns through the increased economy of production, the greater output, the reduction of amount of imperfect work etc. The union expects by demonstrating the increased value of the services rendered by its members, to gain for them increases in wage rates. But the great accomplishment of union-management co-operation is the change of mental attitude thus brought about and the fact that the results are secured by mutual effort instead of by antagonism, through peace instead of war.

By BENARSIDAS CHATURVEDI

An important problem

Here are a few extracts from a letter of an American friend of mine regarding the immigration laws in the United States of America.

"I am writing to you concerning the 'Asiatic Exclusion Act' of the United States of America. I have been in touch with individuals and organisations in the United States who are recognising the injustice of the present immigration law with its offensive racial discriminations, and are prepared to work for its repeal.

"The particular question which I wish to raise for their information, is just what Indian sentiment is in regard to American immigration. Do the Indians desire and seek for an open door in America with the privilege of unrestricted immigration; or would they be content for the present to accept the same quota basis which European nations are now enjoying? In other words is the offence of the American exclusion merely one against the honour of the Indian people, or is it one of more practical import? I have felt that the Indian resentment has been over the matter of being treated as an inferior race, and that they are not actually demanding the privilege of entering the United States in large numbers.

"Indian Labour has never created any problem as has been the case with some other nations. If she were to accept the limitations of the present law as applied to European nations, my understanding is that she would be permitted to send one hundred immigrants each year, which is very probably more than she ever sent in the days of unrestricted immigration.

I presume that you will agree with me that American labour may be justified in demanding some restriction of immigration

in order to protect themselves against unscrupulous capitalists who would otherwise continuously introduce cheap labour in such numbers as to frustrate all efforts on the part of labour to organise effectively for the securing of proper working conditions, hours, wages, etc. I need not inform you that racial prejudice is unfortunately a fact in America. Perhaps much of this prejudice has an economic basis. Much as we deprecate this attitude of racial antagonism, we must face the facts. It will probably be impossible to gain anything more for the present than to have India recognised as an equal among the Nations, by placing her on the same quota basis as the others.

"I should like to get an expression from you as to whether you feel that Indian public opinion would recognise that a really worth while victory would be scored in such a gain. You may be able to strengthen the hands of those who are fighting the battle by such a statement. Of course if you feel that Indian sentiment would be unappreciative of such a move, it is your duty to frankly say so. What we want is international understanding and good will and this can never be built upon mereality."

The question raised by the writer of this letter is an important one and requires careful consideration at our hands. We recognise the sincerity of the writer and agree with him that we must do all that we can to bring about better understanding between the people of India and those of U. S. A. As regards the details of the solution put forward by our friend we cannot express any opinion off-hand. We shall refer to the question again next month.

Mr. Sastri's work in South Africa

Mr. Sastri is returning to the Motherland

after a strenuous work of more than a year and a half in South Africa. Here is what Mahatma Gandhi has written about him in the columns of the *Young India* :—

"And as he (Mr. Sastri) wanted no fame for himself (few men would be found skver than Sjt. Sastri of fame), he turned his popularity to the advancement of the cause he has represented with such singular ability and success. During his all too brief stay in South Africa he has immensely raised the status of our countrymen in that part of the world. Let us hope that they will, by their exemplary conduct, show themselves worthy of him.

"But Sastri's contribution to the solution of the difficult and delicate problem of South Africa does not rest merely upon what was after all an accident. We know nothing except through the results of the inner working of the ambassador's office in which he had to exhaust all his art of a diplomacy that comes from a conviction of the correctness of one's cause and that spurns to do or countenance anything wrong, mean or crooked. But we do know how unsparing he has been in the use on behalf of his cause of the gifts of eloquence, scholarship, both English and Sanskrit and great and varied learning with which nature has lavishly endowed him. He has been delivering to large and select audiences of Europeans lectures on Indian philosophy and culture which have stirred European imagination and softened the hard crust of prejudice which has hitherto prevented the general body of Europeans from seeing anything good in the Indian. These lectures are perhaps his greatest and the most permanent contribution to the Indian cause in South Africa."

Mr. Sastri will be arriving in India in the middle of February and we earnestly hope that he will be given a hearty reception by all sections of the Indian people. One request we shall make to Mr. Sastri, if it may not be considered impertinent on our part and, it is that he should have nothing to do with party politics in India.

It is Greater India that needs the services of this great man. May he live long and serve the motherland for many more years to come.

Departure of Sir K. V. Reddy to South Africa

Sir K. V. Reddy will leave the shores of India in the first week of this month to succeed Mr. Sastri in South Africa. We were

opposed to his appointment simply on the ground that a better selection could have been made but now that he has been appointed we shall request our people in South Africa to render him all possible assistance in the difficult work that awaits him there. Our people in East Africa also should give him a cordial reception. We are very sorry, indeed, to learn that the Indian Association of Nairobi passed a resolution of protest against Sir K. V. Reddy's appointment. This is really ungraceful. Let us wait and see his work and if we cannot render him any assistance we must not do anything to weaken his hands.

The East African Problem

A crisis is fast approaching in East Africa. With the publication of Hilton Young Commission's Report our struggle in East Africa will assume a new phase and there is every danger of our position being weakened as a consequence of the short-sighted policy of the Conservative Government in England, in giving more power to the Delamere party in Kenya. It is therefore very necessary to keep a close watch on the march of events in those parts of Africa. It will be a great thing indeed if some of our leaders could go to Kenya and study the situation on the spot. There is Mr. J. B. Pandya's offer of a free passage. Is it really impossible to get three or four of our leaders to proceed to East Africa in a month or two? If the Motherland cannot lend the services of four of her able sons just for three months at this critical time in the history of our people in East Africa it will be really unfortunate.

Mr Andrews' visit to the West Indies :—

We are glad to learn that Mr Andrews will soon proceed to West Indies to study the condition of our people in British Guiana, Trinidad, Surinam and Jamaica. These four colonies have been very much neglected by us and we ought to be grateful to Mr Andrews for this visit.

No Indian, not excluding even Mahatmajee, has done so much for our people in the different colonies as Mr C. F. Andrews and we hope he will be received by our colonial friends as a great Indian.

He is the one Englishman in India who has succeeded in completely identifying himself with our aims and ambitions.

NOTES

Urgent Need of Self examination

The period which marks the close of one year and the beginning of another should be devoted, in part at least, to self-examination. This is true both for individuals and groups. The groups may be as small as the smallest family, association, guild, caste or class, or as large as nations, peoples, races—nay, all mankind. For individuals, as well as small groups and large, the questions to ask are: Have we during the past year risen to greater heights, or sunk to lower depths? Have we marched forwards or retreated backwards? Have we approximated more to the *biotic creation* or has the spirit in us won the battle? Internally and externally, have we become freer or more enslaved?

The Indian College at Montpelier

We read in the *Mysore Economic Journal*—

Students and graduates of the Indian Universities have long been finding advantage from further courses of study in the West, and this in ever-increasing numbers. British Universities naturally receive the greater part of this influx, but many Indian students are also being attracted to French and German Universities. Experience is proving that those most profit by the resources of the West who come as graduates, or at best fairly well prepared, and who also acquaint themselves with at least one other leading European language, and this, when possible, by a period of residence in a Continental University city. The difficulty of acquisition of an additional language is soon compensated by the widening outlooks which it gives as well as by the increased resources of culture, both general and professional which it opens.

Montpelier, on the border of the Mediterranean is the centre of a region of great natural beauty and historic interest, and it has the one adequately equipped University within the sunny Mediterranean climate which has long been widely attractive to students of all nations on account of the eminence of its departments of Science, Medicine, Letters, Law, Philosophy and Education, and also of its Schools of Agriculture, Music and Art. A

rapid and thorough course of preparation and training in the French language and literature is provided for foreign students. Last year there were about 3000 students representing about 50 different nationalities.

The French universities do not provide any hostels for students. So during the last four years Prof. Patrick Geddes has been actively engaged in the organization of a group of halls of residence for students of the many nationalities represented there.

His long experience in the provision of collegiate hostels in Edinburgh, London and elsewhere, and also in general University Planning in India and Palestine as well as in Europe has enabled him to set considerable beginnings in operation. He has founded the *Collegium des Etudiants de l'Inde*—so called in memory of the old and intimate association of Scotland and France last open to all students—at present serving as a starting point for others—Indian, American etc. Through his varied experience of ten years planning in many provinces and states in India and with appreciative interests and wide contacts accordingly this Indian College scheme has here become a leading one.

NEW BUILDINGS REQUIRED

The limited accommodation at present available in the Scots College Building is no longer sufficient while enquires from Indian students continue to come in. Hence there is now an urgent need of a separate building for which plans and estimates have been made. This will occupy a pleasing site and a commanding view which the extensive college gardens and in the immediate neighbourhood of the two existing residential buildings and of the proposed American College. It is planned to accommodate 25 students with common rooms and library and there is space for extension when need rises.

The designing, building and furnishing of the Indian College will be carried on under the direct supervision of Professor Geddes, late head of the Department of Sociology and Civic in the Graduate School of the University of Bombay with the co-operation of Mr. E.B. Havell formerly Director of Art School of Madras, and later of Calcutta. They will also continue to act as Directors and Advisers of Studies without fees or salaries as hitherto, and in continued co-operation with the Montpelier professors especially interested in India.

It is estimated that the full amount need-

ed for the Scots College will be two lakhs of rupees. Towards this amount donations and subscriptions are now being received by Dr. G. G. Advani, Secretary of the Indian College, C/o. Thos Cook & Son, Hornby Road, Bombay.

The Presidential Procession in Calcutta

For once, it gives us pleasure to bear testimony to the correct behaviour of the Calcutta Police. Pandit Motilal Nehru, the President of the 43rd session of the Indian

National Congress, arrived in Calcutta on the 21st of last month. The authorities of the East Indian Railway refused to afford any facilities for a proper reception of the President on the Howrah railway station platform, and only a small number of persons were admitted. Outside, an immense crowd awaited to give the President a rousing welcome. From the Howrah bridge down Harrison Road, along College Street, Wellesley Street, Corporation Street, Park Street, Lower Circular Road, and on to Park Street and Desbandhu Nagar, which may be well called the Congress city, there was a dense mass

Pandit Motilal Nehru

Arrival of the President in Calcutta
—A view of the procession showing the President's carriage.

of surging humanity, while every window and house-top along the processional route were thronged by the citizenesses of Calcutta. Several impressive demonstrations of very large proportions have been seen in this great city and this one was in keeping with them. The mere sight of this huge serpentine stream of humanity coiling and twisting around itself, could not have failed to impress any one who has lived to witness the growth of the Indian National Congress during the forty-three years of its existence. The foot-paths and the roads were blocked by solid masses of men, and several lakhs of people must have participated in the procession. There were very few policemen to be seen, and the police force was rightly employed in controlling the traffic at the points of intersection where other streets crossed the route of procession. The policeman seen here and there along the route never attempted to interfere with or hustle the crowd and generally made themselves as small as possible. When the procession reached Park Circus a European policeman was seen flourishing a stick to wave back the crowd. He was promptly summoned by a police

officer and was ordered to leave the people alone and not to molest any one. Law and order was maintained intact, because no policeman attempted to violate it. Neither the Congress volunteers nor any one else had much to do. The enthusiastic crowds were perfectly orderly and everywhere made way for the procession without any difficulty.

The moral of this imposing demonstration is writ large for any one to read. It so happens that the Viceroy of India, the Nizam of Hyderabad and several other Princes of India are at present in Calcutta but the city did not erect triumphal arches nor assemble in its hundreds of thousands for any such exalted personage. The spontaneous and striking honour that we have witnessed is reserved for the first citizen of India, who fills the office of the President of the Indian National Congress for the term of a year.

N. G.

The Saunders Murder

On the 17th December last a European police officer named Saunders was shot dead

India, could thus condone and even glorify such hoodlunism.

A WORD TO THE POLICE

For ourselves we keep an open mind as to whether the crime was political or not, and we must warn the Punjab police against being carried away by the usual police prejudices. That may possibly help the real culprits to escape while innocent people are made to suffer. If its political prejudices serve as a false scent for it in the present case, it may for ever be known as a body of most incompetent fellows.

Reprisals will not crush the political life. They will not end the indignation felt at the *lathi* blows that hastened Lalaj's death. Dyer in Jallianwala succeeded not in killing political life, but in fertilizing the soil for it with martyrs' blood.

Dr. R. C. Majumdar in Europe and Indonesia

At the meeting held in the Calcutta Mahabodhi Hall under the auspices of the Greater India Society to give a reception to Prof. Rames Chandra Majumdar on his return from his study-tours in Europe and Indonesia, the professor recounted his experiences abroad.

When in England, he represented the Greater India Society in the Orientalists' Conference at Oxford, and at the meeting of the Societe Asiaticque at Paris he read on behalf of Greater India Society a tribute of deep respect to the memory of the late lamented savant Mon. Emile Senart.

Dr. Majumdar also visited the Kern Institute of Leyden as associate of the Greater India Society and was very well received by Professor Dr. Vogel and Professor Krom, leading authorities on Indian cultural relations with Indonesia.

Backed by their introductions, he went to Java, and after visiting the remarkable monuments of Borobudur and Prambanan etc. he crossed over to the island of Bali where he studied the living relics of Hinduism, and finally landed in Indo-China. The French Archaeologists there, gave him every facility to visit the splendid temple-runs of Angkor and Dr. Majumdar entered Bangkok to study the relics of Hindu culture in Siam as deposited in its museum and also in the famous Vajrayana library, which was under the able direction of Mon. Georges Cordes.

He found that scholars everywhere were eager to help the Greater India movement started in India and expressed the desire that Indian scholars should visit these centres systematically with a view to reconstructing the forgotten chapter of our glorious past history.

Bengal Government Non-cooperates

The Calcutta Exhibition, organized under the auspices of the Indian National Congress, is not a mere show. There is much to learn from it. One visit, however prolonged, will not suffice for deriving all the possible

advantage from it. Many visits should be paid. Among the most interesting and informing of the classes of exhibits to be found there are those of the health section. This section and some others ought to be turned into a permanent exhibition. The British Government in India pretends to be deeply concerned for the health of the people of India. Its servants and friends are past masters in the art of propaganda. They would have the world believe that if India is the unhealthiest country in the world and if its death-rate is appalling, it is not they but the people who are responsible for it. Their attitude towards the Calcutta Exhibition is an illuminating commentary on their professions. We are credibly informed that all Bengal officials concerned have been instructed not to send any exhibits to the health section of the Exhibition. There is also a reference to this fact in the address delivered by Dr. Sir Nidranat Sutar as Chairman of the All-India Medical Conference.

Village Uplift and the Agricultural Commission

At a recent meeting of the East India Association in London the subject of village uplift was discussed. Lord Lintithgow was one of the speakers and as such eulogised his own conclusions as chairman of the Royal Commission on Agriculture as "very sound and very important."

It was greatly to be hoped that the public in Britain would not forget the heavy responsibility they had to bear towards India.

Earl Winterton said that the enthusiasm for village uplift should not blind them to the basis on which success must rest. Finance was the most important thing. The Government might provide half but somebody must come forward to provide the other half.

Britishers are famous for their self-righteousness. It is quite in keeping with that character that, though Lord Lintithgow spoke as he did at the London meeting, his Commission did not visit the Agriculture and Rural Reconstruction section of Visabharati at Sriniketan, Surul, where important work for village uplift has been going on for years. Instead a questionnaire was sent to Rabindranath Tagore. As regards Earl Winterton's statement that somebody must provide the other half, perhaps he does not know that Tagore's work of rural reconstruction is being carried on almost entirely by a *very* American money, British being counted *very* them.

the hope of not forgetting the heavy responsibility they had to bear towards India. And the half that "Government *might* provide" would also come from the pockets, not of Britons, but of Indians.

It will be said, no doubt, that the Viceroy went to visit Sriniketan and Santiniketan of his own accord and greatly enjoyed the visit. It is also reported that "he said that he came here as to a place of pilgrimage and felt at once the peace and tranquility of the atmosphere of the Asram." But Lords Linthgow and Winterton referred to pounds and pence, not to peace, if we understand them aright. So, let them see that an adequate amount of *India's Money* is spent on the improvement of India's Villages—British charity we neither expect nor want.

Japanese Imperial Rescript

The Imperial Rescript, announcing the assumption of the throne of Japan by the new emperor, contains the following passage:—

It is Our resolve to endeavour to promote, within, the education of Our people and their moral and material betterment so that there may be harmony and contentment among them and power and prosperity for the whole nation, and to cultivate, without, friendly relations with all nations, thus to contribute to the maintenance of the world peace and the advancement of the welfare of humanity. We call upon you, Our beloved subjects, to be of one mind and, sinking selfish aims for the public service to work with one accord, in helping us to attain these our aspirations in order that We may in some measure add to the illustrious traditions to which We have succeeded and that We may with good conscience face the Heavenly Spirits of Our Ancestors.

It is to be noted that, among the things promised to be done for the Japanese people, the first place is given to the promotion of education. How different is the attitude of the alien British Government in India!

to be on deputation, as Constructional Engineer Water Works Extension.

(ii) That during the period Mr. Bhattacharyya continues to be on deputation in the Water Works Extension, Mr. Q. A. Rahaman be appointed provisionally as District Engineer in the grade of Rs. 500-25-750 plus a motor-car allowance of Rs. 100 with quarters at 10 per cent. of his salary or a house-allowance of Rs. 150 per month till quarters can be provided.

(iii) That Mr. Rahaman be appointed permanently as District Engineer in the vacancy occurring if he gives satisfaction while acting as such.

There were two amendments by professor S. C. Ghose and Mr. Sachindra Nath Mookerjee respectively that the resolution of the Finance Committee appointing Mr. Rahaman be revised on the ground that Mr. A. K. Sen, who had been officiating in the post for the last one year, should be appointed. Both the amendments were lost.

The fun of appointing one man as District Engineer (apparently permanently, because another man has been appointed provisionally) and then resolving that the man appointed provisionally to be appointed permanently if he gives satisfaction, is not quite enjoyable. Whether he gives satisfaction or not, there is every likelihood of his being appointed permanently. Then what would become of Mr. Birendranath Bhattacharya, who has been appointed to the same post, *not* provisionally? Would he remain hanging in the air, like a Trishanku of the Kah Yuga? For, obviously he cannot continue to be on deputation indefinitely.

And why was Mr. A. K. Sen, the officiating incumbent, passed over? He is a fully qualified man and gave complete satisfaction to the Chief Engineer, the Chief Executive Officer, the Finance, Estates and General Purposes Committee, etc. The District III Standing Committee passed the following resolution unanimously on the 12th January, 1928. —

but to begin to act, to build up self-governing swaraj and then there is some hope of your gaining Swaraj. Swaraj will be granted to you when it becomes dangerous to refuse it. I am asking you to do something practical before the year 1929 passes away.

Twenty years ago Rabindranath Tagore preached constructive non-co-operation and asked his countrymen to build up a self-governing swaraj. But his has been a cry in the wilderness.

After Sj. Sen Gupta had been supported by Mr. Yakub Hassan, Sj. Srinivas Iyengar read out a statement on behalf of the Independence League dissociating its members and all those who are for Independence from the Convention resolution on Dominion Status. Mr. Iyengar in the course of his statement said:

"We are confident that the Subjects Committee and the Congress will fully accept the Independence point of view. Having regard to the composition of this Convention,.....we have decided not to take any part in the framing of the constitution in so far as it commits us to the acceptance of Dominion Status. We shall neither move amendments nor vote on it."

The statement was signed by Sj. Subhas Chandra Bose, Pt. Jawaharlal Nehru, Mr. Sarat Chandra Bose, Sj Satya Ranjan Bakshi, Sj. Kiron Sankar Roy, Sj. Sivaprasad Gupta, Messrs. Satyamurti, Jannadas Mehta and others.

Mr. Daud on behalf of the Trade Union Congress, Mr. Satyamurti on behalf of the South Indian Mahajana Sabha and South India States Subjects Conference, Sj. Tara Chanda Lalwani of Karachi, and Swami Govindananda on behalf of the Swadhin Bharat Sangha made statements in the course of which they declared complete independence to be the goal of Indian national aspirations.

All these bodies therefore took no part in the voting on Sj. Sen Gupta's resolution.

The dominion status resolution was passed *non con* in the Convention.

Dr. Ansari's Presidential Address at the Convention

Dr. M. A. Ansari's opening address at the convention was commendably brief, considerate, sensible and to the point. He began by saying:—

We have assembled in this national Convention to take a final decision on behalf of the whole country in regard to India's constitution for the immediate future as drawn up by the Nehru

Committee. We have all had sufficient opportunity to consider it carefully, and I am glad to say that the country has, on the whole, used the opportunity in a manner which is gratifying to every well-wisher of India, and especially to the members of the Committee.

I do not suggest that the country found the draft to be perfect in every respect. It is not so, and it does not claim to be the last word on the Indian constitution for all time. As the distinguished authors themselves have pointed out, the proposed constitution is nothing more but it is also nothing less than the greatest common factor of agreement among the well recognized political parties of India, and it is to be viewed not as a remote stage of our evolution but as the next immediate step.

On the question of India's political goal he observed:—

Criticisms was to be expected. We are all aware of the controversy that has raged in the country round the question of Dominion status as recommended by the Committee. We have also had, I am afraid, little more than enough of the discussions regarding the rights of minorities. Such instances can be multiplied to show that there is no unanimous acceptance of all the individual recommendations of the Nehru Committee as separate and entirely unrelated entities. But—and this is what I want to stress as earnestly as I can—there are very few people in the country who are opposed because they disagree with an article here or an article there to the constitution as a whole as the next immediate step. This is enough and the authors themselves did not expect anything more. Indeed in my humble view, this is the whole justification of the draft constitution.

Looking at the matter from this point of view I am not surprised that there should have been throughout the country, able criticism and equally able defence of the goal which the Nehru Committee seeks to achieve in the name of all parties, moderate and extremist alike. At one stage there was, I confess, a danger of the controversy taking rather a serious turn. But this danger was promptly warded off, thanks to the patriotism and statesmanship of the leaders of the differing schools of thought. This was to be expected, because the Nehru Committee draft, although it deals, as it must have dealt by virtue of the very *raison d'être* of the Committee with the minimum, it has not deprived anybody of persons from working for the maximum. That is why I at any rate, as a member of the Indian National Congress owing allegiance to its goal of complete national independence, am prepared to give my support to the recommendations. I welcome the minimum in the first place because my own ideal is not thereby lowered and, secondly, by doing so I am helping to secure united backing for sanctions that may be devised in order that India may win her freedom. I appeal to Congressmen who believe in independence to consider the question in this perspective. By accepting the draft we do not lose anything but we gain much.

On the communal problem the President gave expression to his views in the following words:—

The recommendations regarding the communal

the title of responsible politicians. Those in Great Britain who sympathise most warmly with the ideal of India attaining at the earliest possible moment the status of any of the other great Dominions of the Crown will find the ground cut from under their feet if British opinion ever becomes convinced, as some apparently are now endeavouring to convince it, that so-called Dominion Status was only valued by India as a stepping-stone to a complete severance of her connection with the British Commonwealth.

The people of India have long ceased to accept British professions of friendship as well as of trusteeship at their face value. They know who are true friends and who false. So the Viceroy's attempt to pose as a true friend of India was perfectly futile.

In spite of the predatory activities of the British and other kinds of imperialism, there are happily still more than fifty odd independent states left in the world. It cannot be that the Viceroy sincerely believes that Britain and other independent states are sinking lower and lower in the treacherous sands of perfect freedom and that, on the other hand, India is travelling securely towards salvation along the *pucca* high road of servitude to the British. Perhaps Lord Irwin would have us believe that India is *sui generis*, and so, though independence may be good for others, to her it would be a perfect slough of despond. We are of a different opinion.

Is it in India alone that some persons think that dominion status may lead on to independence? Is it not one of the implications of dominion status that the countries which enjoy it have the right to secede from the British Empire if they choose to do so? Has not Hertzog, the Boer premier of South Africa, declared openly that South Africa has that right? Has there not been similar talk in Canada?

Lord Irwin and men of that ilk will not understand, unless it be when it is too late that it is partly because of Britain's refusal to let India have rule that there is such an insistent demand for independence. His lordship prates dominion status only because the desire for independence is becoming increasingly difficult to repress. It has been always the British way to try to rally the "moderates" when there are energetic "extremists" in the field.

Lord Irwin on the Simon Commission Boycott

In the course of the same speech Lord Irwin said:—

I am sure that all sober-minded citizens of

Twin Coconut Plant Planted by Sir Jagadis Ch. Bose and Professor Mohschi

India must have witnessed with regret and will condemn the continued attempts to conduct unmannerly and offensive demonstrations against the Commission and their Indian colleagues. I can understand the attitude of those who, following the hitherto established tradition of boycott, prefer to hold themselves rigidly aloof from the Commission's investigation. I have often expressed my view that such a policy is mistaken and short-sighted and ill-designed to convince Parliament of the justice of India's claims, but to substitute for this policy of abstention the procedure of noisy and dangerous public demonstrations against the chosen representatives of Parliament and their colleagues is to exchange what might have been a dignified protest of responsible persons for the methods of disorderly disturbances of a mob.

Officials of the Government at whose head Lord Irwin stands have been making strenu-

in times when the Aryan immigrant in India had developed his best institutions in the free and pure latitudes in which he lived in Vedic times. That period may be regarded as the best in Indian history when the sentiments of the Indian people had not received the adulteration from foreign sources which they acquired in subsequent times. The Vedas have many charms, but the best of them is that they reveal the Aryan mind in the best of its attributes. The student of the Vedic period finds scattered from place to place evidence that women occupied a very elevated place in the society of those days. This is not the place for going into the details of this question, but speaking briefly, it does appear that women then enjoyed very great freedom in matters in which they suffer from many disabilities now. Even marriage does not appear to have been compulsory in those days, and women could remain unmarried, either for the whole of their life or at least upto a very late age devoting their time to learning and philanthropy.

Then came the long process of women's descent in the social scale British understanding, or rather misunderstanding and ignorance, of Hindu law, assisted by orthodox Hindu bias, has led to Hindu women losing some rights which they enjoyed in ancient times.

The Englishman was not accustomed until the eighties to regard women in his own country as independently capable of acquiring or holding property. English women got this right at a very late stage. With this bias in his mind, it is not surprising that the English judge at Westminster in interpreting ancient Indian texts written in a language which he did not understand and of the context of which too he was personally ignorant adopted a position inclining more towards limited female rights than towards absolute ones.

Hindu law, has a very large resilience and power of adaptability. So the large number of anomalies in Hindu law can be set right. But,

To depend upon judicial interpretations for doing this work would take centuries. It is necessary, therefore, that legislation should take a hand in this work of reform. It is most urgently needed to-day in improving the position of the widow in a Hindu joint family.

Again, there is no reason why all over India the daughter should not take her father's estate absolutely as she does in Bombay.

"Women claim that the marriageable age of girls should be raised to at least 16." They have also a grievance in that the age of consent is very low. "Coming to the choice of the husband, women demand that they should have a much larger circle to choose from." "In short their demand is that they should have a right to marry according to choice, irrespective of the narrow limitations of caste."

Similarly, women demand that the present-day

law relating to divorce, re-marriage and maintenance, which in their opinion are foolish, irrational and one-sided, should also be altered in accordance with the requirements of modern society. In many places the cry has gone up for the right to apply for a divorce under certain conditions not inconsistent with Hindu scriptures. They are aware that marriage is a sacrament. If marriage is a religious sacrament, it can only be performed once. Sacraments are not intended to be repeated as often as a well-tiled purse can desire. A sacrament is usually bilateral. Women contend that men have broken through their obligations. They urge that if a man can marry as many times as he likes, why cannot a woman separate herself from such a person? It is difficult to give a rational answer to this question. Many years ago, women secured the right to remarry after the death of the husband. Reliance was then placed on texts which mention death as only one of the circumstances in which remarriage was allowed in ancient India. Women now claim that, if in ancient India, remarriage could take place in such cases, (e.g. owing to the husband's impotence, disappearance incurable disease), there is no reason why at least a divorce should not be permitted now. There is no doubt that the present-day law is deplorable in many ways. For instance, it allows the right to ask for a dissolution of marriage to a husband who has changed his religion. His wife in his old faith, however, cannot do so. This may seem strange, but it is one of the anomalies of present-day legislation. It is, therefore, natural that women should resent this one-sidedness of the marriage law and require a reform.

Mr. Javakar then passed on to the need of rescue of minor girls, of Homes for them and of Children's Protection Acts in every province, referred to the importance of abolishing of woman labour in mines and factories and concluded by speaking on physical culture for women as follows.—

I would suggest another topic on which, propaganda can be usefully carried on, viz., physical culture of women. It was reported in the Press a few years that girls in England, in the course of a year had increased their height by one-fourth to half-inch. This is the result of a slow, patient endeavour at body-building. The need of such an effort is nowhere greater than in India, where early marriages are frequent and birth regulation is unknown.

Maharani Mayurbhanj on Women's Progress

In welcoming the delegates to the All-India Women's Social Conference, Srimati Suruchi Devi, the Dowager Maharani of Mayurbhanj, said,—

It is true we must move with the spirit of progress but whatever triumphs we want to achieve must be in tune with the traditions and ideals of Indian history and civilization. As India cannot be India without its Himalayas and its Indus and Ganges, so the present generation can never be true to the soil without those distinctive features

Ho then tore to shreds the justification of the British exploitation of India recently attempted by Sir George Godfrey of the Bengal Chamber of Commerce.

Pandit Motilal has not acquitted "ourselves of all blame for our present plight."

The strength or weakness of a nation depends upon the strength or weakness of the tie which keeps its component parts together. In our case this tie has not for centuries been very strong and with the march of the new order of things has lost much of what binding force it ever had. There is no overlooking the fact that we are divided into a number of large and small communities, more or less disorganised and demoralised. The Government is undoubtedly responsible for the prevailing ignorance and poverty among the masses and in a very large measure for the growing hostility among the classes. But it certainly is not to blame for the evils of our own social system, which has relegated millions of our people as good as ourselves, to the category of untouchables and depressed classes, and has put our women under restrictions which deprive them not only of many natural rights but also of the opportunity to render national service. Nor is the Government solely accountable for all the communal differences which have contributed a dark chapter to the recent history of our own times.

His reply to the question, "what place, if any, religion, as practised and understood to-day, should occupy in our public life?" is that, as "religion has been degraded and politics has sunk into the mire", "complete divorce of one from the other is the only remedy." In giving this answer, he has not taken into consideration "the higher conception of religion," the spiritual and ethical principles it stands for, but has taken it "to signify bigotry and fanaticism, intolerance and narrow mindedness, selfishness and the negation of many of the qualities which go to build a healthy society." In the sense in which he has understood religion, the sooner there is a divorce of it from politics the better. But that essential part of religion which has built up and sustains society cannot be separated from politics, without degrading the latter and making it a power for evil.

Referring to the disruptive forces which have been at work among us for more than two decades and which have produced many divisions, the Pandit said:

We would do well to profit by the lesson of the past lest the inexorable fate which has been pursuing us for the last 20 years or more overtake us again. It is close upon our heels already in the early of socialism and will devour both complete independence and dominion status if you let it approach nearer.

The warning was clearly needed. Those

of our public workers who are importing the bitterness and rancour of the strife of labour against capital in Western lands should think over the situation. Western laborites have not helped and will not help us to become politically free, but would only use our labourers to wreak vengeance on their own capitalists. Our capitalists should also take heed.

Proceeding to answer his second question, "what is our destination?" the Pandit said:—

My answer straight and simple is, FREEDOM in substance, and not merely in form, by whatever name you call it. I am for complete independence—as complete as it can be—but I am not against full Dominion Status—as full as any dominion possesses it to-day—provided I get it before it loses all attraction. I am for severance of British connection as it subsists with us to-day but am not against it as it exists with the Dominions.

Let me explain. National freedom unrestricted and unqualified is the natural craving of the human soul. I do not believe that there is a single Indian, be he or she a member of a party or groups, or one completely detached from all parties and groups who does not love freedom or will not have it. Differences arise only when the question is raised whether it is possible to have and to keep freedom and it is then that we find opinion sharply divided.

What matters to me is that dominion status involves a very considerable measure of freedom bordering on complete independence and is any day preferable to complete dependence. I am therefore not against an exchange of our abject dependence with whatever measure of freedom there is in full dominion status if such exchange is offered. But I cannot make dominion status my goal as it has to come from another party over whom I have no control. The only way I can acquire such control is by working in right earnest for complete independence. I say 'in right earnest' because I know mere bluff will not take me far, it is only when complete independence is in sight that the party in power will be inclined to negotiate for something less. Empty bluff will not carry us to that stage. Solid work and ungrudging sacrifice alone will do it. When that work is done, and sacrifice made, the party having the whip hand will dictate. Whether it is to be dominion status or complete independence will depend upon whether the conditions then prevailing are similar to those of Ireland or to those of the United States of America at the time when each came into what she now has. Meanwhile, there is nothing before us but a protracted life-and-death struggle on the one side, and continued repression, relieved by an occasional dose of undiluted oppression on the other. It follows therefore that whatever the ultimate goal, we must be prepared to traverse the same thorny path to reach it. If we are not so prepared, independence will ever be an idle dream, and dominion status an ever receding will-o'-the-wisp.

The speaker then proceeded to elaborate his answer and support it with extracts from the speeches and writings of Mahatma Gandhi

Mahatma Gandhi

SILENT PATHWAY
By Jadupati Basu

Prabasi Press, Calcutta

all the utter frankness and sincerity, which I have always experienced when meeting those who truly represent the Punjab. There is a directness which might almost be called bluntness, such as belongs to a brave and independent people who have not lost their sense of independence. Once and only once I saw this spirit crushed. That was in 1919, after the Martial Law. It was a cruel sight which I long to forget. But never could one think even for a moment of Lala Lajpat Rai's spirit being crushed. I saw him again at the height of the non-co-operation movement. His body was suffering from illness, but his spirit was almost jubilant as he faced a long imprisonment. He presented in those days something of the picture of Wordsworth's "Happy Warrior" and I could never think of him afterwards but in such a light.

Along with this blunt sincerity there was fearlessness personified. He was not called the 'Lion of the Punjab' for nothing. He well deserved his title. If at times there was an obstinacy, which was the other side of bluntness in his character, this very quality of obstinacy served him in good turn when he had to stick to his point and not give way for any man.

was his power of forgetting an injury as soon as ever it was done. He never bore a grudge a single minute longer than could be helped. Even when he was deported and imprisoned and exiled and treated with all kinds of repressive measures by a Government, which could not realize his generous temper, on each and every occasion he came back without a single thought of racial bitterness. His heart was too large to bear any bitterness in it, and he went to work again the moment he was set free as though nothing at all had happened. Repeatedly I noticed this, and it was an amazing thing to me that he could endure all he went through with such serenity of spirit.

There were English and American friends to whom he was profoundly attached. They in their turn were deeply attached to him. I have met them in London, and I shall meet them soon in New York. All those, I feel certain, will miss him with a deep sense of loss and with the knowledge that one whom they could trust and love most has been taken from them. It is indeed a severe blow to England and America as well as to India that Lala Lajpat Rai has been taken from us all by death.

II.

Let me say one word about Lalaji's absolute sincerity of purpose. The game of politics is even at its best as well as at its worst a somewhat dirty game. Very few people who engage in it can keep their hands clean. Lala Lajpat Rai used to write letters to me in quite recent years groaning at the evil fate which bound him to the hard task of serving his country in the Legislative Assembly and taking part in all the disputes and divisions which obsess Indian political life. It was a cruel torment to him; and in one letter he told me that he must soon retire from it, because he found that it was too depressing for him. Nevertheless he stuck to it right to the end and went on serving his country in this manner even when others had retired.

During the last years, whenever I went to Delhi or Simla, I would stay with him and we would have long talks together. Often I have sat for long hours in his room doing my own work on "opium" or "emigration" or "South Africa," while he has been dictating to his patient secretary page after page of notes for some parliamentary speech, or

LAJPAT RAI, THE "LION OF THE PUNJAB"*

AN APPRECIATION

By J. T. SUNDERLAND

Mr. Chairman, Ladies and Gentlemen :

I suppose the reason of the honor being extended to me of an invitation to attend this meeting and to speak, was my known long acquaintance with Mr. Lajpat Rai, both in his own country and in America, and especially my close association with him for several years in work for India during his residence in New York from 1914 to 1919.

I think it is not extravagant to say that Lajpat Rai was a great man. He would have been regarded as great if he had been born and lived his life in England, or America or any country. He was great in more directions than one ; for he was a many-sided man. It may almost be said that he was three or four, or five men in one. He had travelled, observed and studied in many countries—in Europe, Asia and America. Thus his knowledge was world-wide and his thinking on a world scale. As a result of his extended visit in the Far East he wrote a book on Japan. He made three visits to America, the last time remaining here five years.

His home was in Lahore, the most important city of North-Western India, the capital of the Punjab province.

By profession he was a lawyer, carrying on active practice most of his life, and rising to a high place, nearly at the top, in the distinguished bar of his country.

While a lawyer, he was also an eminent Educator. He, with others, himself leading, founded in his native city, the Dyananda Anglo-Vedic College, one of the best institutions of higher learning in India, of which for years he was the Vice-President and Honorary Secretary. All his public life he worked earnestly for the promotion of education, in his city, his province and the nation. In

his travels in Europe and America he was a diligent student of educational systems and methods, the results of which he published in a book on education, which has had a wide circulation in India. An interesting part of his educational service to his country was the founding of the Tilak School of Politics in Lahore.

He was an eminent social reformer. Among all the social reforms needing to be promoted in India—the abolition of child marriage, of purda, the better treatment of Hindu widows, the education of girls, the elevation of the depressed classes, the so-called "untouchables," and others—among them all there was not one in which he did not take an active interest or which he did not assist as far as he was able. My own first personal acquaintance with him was formed at a great Convention in India which had been called to consider the sad case of the untouchables and plan means for their betterment. He presided at the Convention, and delivered a powerful address in furtherance of the object for which the gathering had been called.

Lajpat Rai was an eminent religious, as well as social reformer. The two most important religious reform movements in India to-day are the Brahmo Samaj and the Arya Samaj. Of the latter he was a distinguished member and leader. The Arya Samaj movement is broadly and intelligently theistic, rejects idolatry, caste, and child marriage, is active in the promotion of education both for girls and young women and for boys and young men, is earnest in social reforms, and is warmly in sympathy with science.

The movement is about fifty years old, is spreading rapidly and now has organized societies existing in nearly every city and town of importance in North-Western, Northern and Central India. Lajpat Rai was not only a prominent supporter of the Arya Samaj, but he was its historian. The standard history of the movement, in the English language,

* An address delivered before the Civic Club, New York, November 20, 1922, at a Memorial Meeting in honor of Mr. Rai, at which there were also addresses by Professor Kirchwey of Columbia University, Mr. B. W. Huchel, the New York publisher, the Honorable Dudley Field Malone, Madam Sarojini Naidu of India, and others.

and far more materialistic civilization in its place ; if you were domineered over by men who worshipped money and power and who were unable even to understand the higher intellectual, moral and spiritual ideals of your nation and race ? Under such conditions what would you want ?”

Most of you know that Lajpat Rai was twice imprisoned by the British Government of India on account of his political activities. The first time was in 1907, and the second in 1921, after his return to India from America. According to all recognized standards of honor and justice, both imprisonments were dishonorable and unjust on the part of the Government. Of his first imprisonment he wrote and published a full account. He was arrested without a warrant, he was refused a trial or any defence, he was not even permitted to know the charge preferred against him, and under those conditions he was hurried away secretly to a prison in Burma. When he was arrested and imprisoned in 1921 it was under conditions similar.

Think of a civilized Government treating any man, much less a great and honored public leader, like that. He learned later, not from the Government but otherwise, that the charge against him in 1907 was sedition. But why was he not told of its nature, and allowed defence. As a fact, there was no ground for the charge. After his release from the Burma prison he brought suit against two newspapers, one in India and one in London, that had charged him with sedition, and in spite of all the efforts of Government officials and others to prove him guilty, he won his case against both papers, and thus absolutely cleared himself.

The truth is, there was not a man in India who was less a seditionist than he. It is true that he fought the Government whenever and wherever he believed it wrong. Especially did he fight with all his might for freedom for India. But his fighting was always open, honorable, by methods of argument, and face to face with the Government that he condemned. He never plotted : he never worked in secret : he never countenanced violence in any form. So deeply did the Indian people themselves feel the degradation and wrong of their bondage, that individuals and groups, here and there, advocated revolution by force, and there was some violence and some bomb-throwing. But all this Lajpat Rai opposed. He said, "Let us battle

with all our souls for the freedom and nationhood which are our right ; but let us do it by reason, by moral appeal, and not by force and blood ; by civilized means and not by methods of barbarism." And as I have said, battle he did. He faced the British officials everywhere, and the advocates of foreign domination of India everywhere, with a courage that never quailed, with arguments that they could not answer, and with a force of moral appeal that was simply tremendous.

Nor was his fight for his country's freedom confined to India. When he went to England, as he did several times, he advocated his country's cause as unflinchingly there as at home. Once he was sent by the Indian National Congress as a member of a special delegation to lay India's case for self-rule before the British Parliament. Burke and Pitt and Fox did not plead more courageously, nor hardly more eloquently, the right of the American Colonies to freedom in 1776, than did Lajpat Rai the right of his own great historic nation to shape her own career in the world. British tyranny never had a mightier foe since Patrick Henry and Samuel Adams, the Americans, than it had for forty years in Lajpat Rai, the great son of India.

A further word should be said about Mr. Rai's work in America. He came at the beginning of the Great War, as an exile. He came because he knew he could not safely remain in India. Although he had proved in the British courts of law that his imprisonment in Burma was without any ground of justice and that he was not a seditionist, yet he knew he was constantly suspected and watched, and that on obtaining the least shadow of an excuse the Government would arrest and imprison him again. His only security therefore was in exile. Even in America he was constantly spied upon by British detectives. At one time a dictograph was secretly placed in a room where he was to hold a meeting with some other friends of India. But it revealed nothing. While he was out-spoken everywhere in advocacy of India's right to freedom and in condemnation of the injustice which kept her in bondage, as has been said, all his utterances and all his deeds were open and honorable.

During his five years in America, which were spent mostly in New York, besides writing the three books already mentioned he wrote pamphlets of importance and many

be sure that *conspicuous* on that *shining* roll will appear the name of the *eminent* educator, the *earnest* philanthropist, the *able* statesman, the *true* patriot, the *man* of prophetic vision, the *man* of heroic soul, the lover of India and the lover of all humanity, in whose memory and in whose honor we have met here to-night.

In a very true sense Lajpat Rai may be called the Mazzini of India. Also in a true sense he may be called the Sun Yat Sen of India; although of course in both cases with a difference. What those two great men did for Italy and China, India sorely needed to have done for her. Lajpat Rai took up the task. He was as patriotic as either. He felt as deeply as did either the degradation, the humiliation, the wrong of his country's subjection to a foreign power; and with as great ardor and with as absolute consecration as shown by either he devoted his life to a struggle the aim of which was

to free his country from her bondage, and gain for her, once more, a place among the great nations of the world. Like Mazzini and Sun Yat Sen he experienced exile. Like both he was imprisoned. It is a question whether either Mazzini or Sen suffered more for his country than did Lajpat Rai for his beloved Motherland.

In India they called Lajpat Rai the "Lion of the Panjab." The name was given him with good reason. The lion is thought of as the King of the animal world. Lajpat Rai was a King among men. Wherever he went, in any company, men felt his strength, his inherent superiority.

Edwin Markham said of Abraham Lincoln that when he fell it was as tho "fall of a great oak in the forest, leaving a lonesome place against the sky." Lajpat Rai was a mighty oak. By his fall he leaves a lonesome place, yes a sadly and tragically lonesome place in India's sky.

RAMMOHUN ROY'S POLITICAL MISSION TO ENGLAND

(Based on Unpublished State Records)

By BRAJENDRANATH BANERJI

II.

which I trust you will perceive does not arise from any inconsistency on the part of

My dear Sir,
Yours most faithfully
Rammohun Roy."

The memorial to His Majesty's Government, referred to above, is quoted below in extenso —

"The case of His Majesty the King of Delhi now under your review is one which involves such high considerations of national character as well as of public justice, that I persuade myself you will not only excuse my anxiety on the subject, but feel desirous to have the matter fully examined under every point of view, before you come to a final decision. I should, therefore, think myself wanting in my solemn duty if I omitted to bring to your notice the following important additional considerations.

"2. The Natives of India have long

hold a rank suitable to the service in which he was engaged. The local Government, however, refused to recognize my rank as well as my nomination, although it had pledged itself to do so by its own regulation laid down in the Resolution passed on the 9th Article of the King's 'Additional Requests' in 1827, which is as follows :—

'The British Government does not recognize the right of the throne of Delhi to confer honorary distinctions on any but the Royal Servants.'

"9. This right of conferring honorary distinctions was exercised by the Royal House of Taimur as the acknowledged head of the Mughal Empire, and very frequently in favour of many even of the Company's own servants and their residents at that Court, who derived from it the titles which they have from time to time borne. It was by the above rule to be narrowed and cut down to the right of bestowing titles on those only who are in His Majesty's own employ. But the local Government, not satisfied with this extreme limitation, proceeded suddenly to deny this last remnant of Royal dignity—in equal disregard of justice of its own pledge, and of the feelings of the Royal personage subjected to the unmerited insult; as well as in direct violation of the assurances given by the Marquis Wellesley in his letter of the 12th April 1804 to the King of Delhi, expressed in the following terms :—

'Your Majesty may be assured that every demonstration of respect and every degree of attention which contribute to the ease and comfort of Your Majesty and the Royal Family will be manifested on the part of the British Government.'

"10. These various obstructions and the direct breach of their own engagements, rules and regulations on the part of the local Government can only be ascribed to their anxious solicitude to prevent an appeal to England; from a well-founded apprehension that their treatment of the King of Delhi would not meet with the approval of a high-minded nation. Because, if otherwise, they could have had no anxiety about the consequences of any agitation of the question, but might rather be desirous of an opportunity to prove to the public and their superiors in England the propriety of their conduct towards the King of Delhi.

"11. I beg now to direct your attention to the course of procedure adopted by the Hon'ble East India Company on the subject. On my first arrival in England, to avoid

the necessity of any public discussion or difference with the Hon'ble Company, I first brought the subject to its notice privately, and then officially, to afford the Directors an opportunity of coming to an amicable adjustment. Instead, however, of manifesting that love of justice which breathes through the Acts of Parliament and other public documents regarding India—a feeling which would have rendered them anxious to correct every error that may have been committed by their servants, and to redress every grievance that may be complained of by the Natives of India so as to inspire them with confidence in the justice and protection of the British Government—the Court have refused to take any efficient step either to correct their servants or to further the ends of justice. They propose instead thereof, to remit the case back to Bengal, undisguisedly because they think that if they were to give redress in this instance, others who may have suffered injury from their servants would be encouraged to hope for justice and to seek redress in a similar manner.

"12. I, therefore, feel myself under the necessity of submitting the appeal of the King of Delhi to His Britannic Majesty, for the consideration of the highest authority through your Board.

"13. After an attentive perusal of the official documents communicated to your Board, His Britannic Majesty's Government being satisfied of the authenticity of my nomination and of the King's right to confer on me as his servant such title as His Majesty might deem proper, received the Appeal submitted to it by me in that capacity according to the established usage of the British Cabinet in listening to Appeals from India, and presented me to the British Sovereign as a subject of His Majesty's remote dominions and charged with a mission from a personage who, though of the highest rank, is still dependent on the British Crown. From this fair and equitable treatment, and from the gracious reception I experienced even from the highest quarter, I was confirmed in the gratifying assurance that the Natives of India, both high and low, are considered as under His Majesty's Royal protection.

"14. I regret to find that the policy of the East India Company and its servants is calculated to deprive us of this consolatory prospect, and I cannot but express my surprise at the boldness of the Court of Directors

in even questioning the prerogative of the Crown which has ever been the acknowledged fountain of honour I did not conceive it possible for any public body, composed of British subjects, however high and powerful, to attempt to disallow an honour conferred by the British Sovereign, whether by original grant or subsequent recognition, since even crowned heads on terms of amity with this country, would feel bound in common courtesy, to recognize an honour publicly announced to have been conferred by our gracious Sovereign on any of his own subjects. In disregarding this rule the Court of Directors have gone far beyond their servants in India, who only violated their pledge to a fallen Monarchy. But the Directors disregard the respect and allegiance due to their own Sovereign, though the actual head of a mighty empire.

"15 Were my own feelings alone consulted in this matter, I beg to add that I would not occupy your time or my own for one moment in noticing the circumstance, but when it affects the dignity of illustrious personages to whom I owe homage and fealty I shall not be deterred from asserting their rights by considerations of personal delicacy.

"16 The proposal by the Court of Directors of remitting the settlement of the case to the local authorities in Bengal, is merely an expedient to gain time and defeat the ends of justice by withdrawing the case from the consideration of the authorities in this country, where they feel that no excuse for withholding justice can be set up which would be at all satisfactory to the British public. It must be quite superfluous to make any remark on the inadmissibility of a proposal to refer an appeal against their servants to these very servants themselves who have already, as above shown, manifested so strong a feeling on the subject and thrown every obstacle in the way of justice.

"17. If this course of proceeding be defended on the principle that this system of denying justice has worked well hitherto, I beg to say that whatever might have been the case while the Natives of India were entirely ignorant of the nature of the Government (the popular notion being that the Company was a venerable old lady who sent out her favourite sons successively to take charge of the country) such a system of stalling enquiry cannot, I presume, work at all in these days, when so many of the Natives are perfectly capable of appreciating

the character of the local Government as well as the nature of the British constitution, and the relation subsisting between them, and while they are on terms of close and cordial intercourse with numerous European Civil and Military Officers and British and Foreign Traders with whom there must be a mutual interchange of sentiments, feeling and intelligence.

"18 The proceedings of the local Government in this case with the nature of the reasons assigned for their justification especially the little respect shewn to National faith or even to their own pledges, are strongly characteristic of persons exercising Sovereign power in a country where there is little or no expression of public opinion permitted on the acts of Government. And while placed at so vast a distance they are not much affected by the consideration that in England there is a Superior Government, a Public and a Parliament to whose voice not only they but the Court of Directors, themselves are amenable. And if the Court of Directors can prevail on your Board and His Majesty's Ministers, to refrain from receiving Appeals against their servants or from adjudicating and determining cases of this kind which brought forward, then I have only to add that the Natives of India are virtually excluded from the benefits of the British constitution of the Board of Control—the Cabinet and Parliament itself. And they must entirely relinquish every hope of obtaining justice or redress against any local injustice and oppression.

"19 This case does not, I presume, involve any legal or other intricacy or require any deep investigation. It is a plain question of national faith, that is to say, whether or not a solemn contract be considered binding under the following circumstances—

It was regularly made by an authorized Public functionary (the Marquis Wellesley who is still alive), it was fully sanctioned by all the public authorities and embodied in the Regulations of the Government as a part of the Statutes of that part of the realm—a volume of which I have put into the hands of the Secretary of your Honble Board where, as well as among the Records of Parliament, that volume may be found—that the revenues of a certain district expressly named and described should be appropriated to the support of the Royal Family of Delhi.

the class-less society which "will banish", as Engels has it, "the whole state-machine to a place which will then be the proper place for it—the museum of antiquities, side by side with the spinning-wheel and the bronze axe."

Stalin, in his recently published book,* which is important for all who are interested in an authoritative, clear, straightforward, direct and detailed expression of the Bolshevik mind, says that the Bolsheviks have evolved a distinct 'style' in public activities, whose two constituents are "revolutionary zeal, inspired by the Russian spirit," and—linked with it—"businesslike practicality inspired by the American spirit." Again, "revolutionary zeal is the antidote to laziness, routinism, conservatism, apathy of thought, slavish adherence to tradition and to the beliefs of our forefathers." It counteracts the American spirit which is apt to degenerate, in the words of Lenin, into "narrow practicalism" and "brainless commercialism"; and the American spirit, in its turn, counteracts 'revolutionary fantasia' (the degenerate form of revolutionary zeal) which is content to vent itself in revolutionary talk and paper-plans and decrees which, it is imagined, will "change everything." Now the trouble with Trotsky is that he outdoes the Bolshevik both in the ardour of his revolutionary zeal and in the crudeness of his realism in method. The distinctiveness of his personality—or as otherwise phrased, his personal vanity—prevents him from conforming to the rigid requirements of the Bolshevik party-discipline, which he is so loud in upholding in theory and practice—where others are concerned. His fantastic sense of importance, often makes him perfectly insensible to the realities of a given situation. A very amusing instance of this is to be found in an instance which is recorded of his life as an exile in Siberia. It was the practice of Trotsky and his wife to retire, in the evenings, to the attic of their hut, to do a little quiet reading. It was also the practice of the petty Czarist official, commissioned to keep an eye on him, to visit him at this time of the day, by lifting a trap-door in the floor, shoving his head and neck through, and assuring himself that Trotsky was there. This procedure always exasperated Trotsky's prisoned majesty, and one day he savagely lunged out with his foot at the

disappearing head of the official, who had had his 'peep,' and thundered at him "Never come back, you"—a preposterous thing to do, for a man in Trotsky's position! The fun of it is that the man actually stopped these evening visits, preferring to square his official conscience by other means, rather than face Trotsky's annihilating imperiousness. Lenin was the only man who could check the lambent play of this fiery personality and utilize the great gifts of this man, within the iron-frame of the Party. This explains the secret of the continuous fall, after Lenin's death, of the People's Commissary for War and the victorious darling of the Red Army on fourteen fronts. That fall began as early as 1924 when the Leningrad Provincial Committee demanded unsuccessfully his expulsion from the Communist Party—a proposal turned down by the Central Committee which contented itself by removing him from his position as People's Commissary for War. The fatal year, however, was 1927, in which he was expelled in rapid succession from the Executive Committee of the Communist International, from the Central Committee of the Communist Party and from the All-Union Communist Party. His enemies made better use than he, of a letter which Lenin wrote during his last days, with instructions that it should be read after his death in the next party-congress. In it, among other things, he had said that Trotsky was 'not a Bolshevik,' and that Stalin was "too rough" and advocated his removal from the General Secretaryship of the Central Committee. True, this also gave Trotsky a handle against his chief opponent Stalin who is to-day the most outstanding figure in Soviet Russia, but Stalin had made his position impregnable by the fact that he had twice sent in his resignation after Lenin's death, which was unanimously rejected on both occasions.

Trotsky and the opposition charge Stalin and the majority with weakening the Bolshevik spirit at home; by diluting the Dictatorship of the Proletariat; and by their slackness in allowing the richer peasants, called Kulaks (literally sharks) to thrive unduly under the concessions allowed them by NEP (the New Economic Policy inaugurated by Lenin in 1921). In foreign affairs, they blame the government for the set back to Communism in China and England, and the general running down of the Communist clock in Western Europe. Stalin meets

* Leninism by Stalin (Geo. Allen & Unwin Ltd).

and peasants, in alliance with the backward elements of the masses and the middle-classes; thus giving to the peasant an importance which, to the orthodox Marxist, was quite shocking. Trotsky, though nominally won over to Leninism, breaks out again and again into clamorous insistence on coercing the peasants by raising forced loans of grain, etc. He has, in his zeal for the American spirit, no use for the peasant, not seeing with the eyes of the modern poet who sings of the land-serf:—

But as the turf divides,

I see in the slow progress of his strides
Over the toppled elods and falling flowers,
The timeless, surly patience of the serf,
That moves the nearest to the naked earth,
And ploughs down palaces and thrones
and towers.

The man who *did* see this, with the eyes of an inspired realism which clasps hands with the highest idealism on the mountain-tops of human thought, was not Trotsky but Lenin, the incomparably greater man. Trotsky has no use for the peasant, but Russia, unfortunately for him, is a land of peasants. They supported the revolution because they wanted to be rid of a tyranny and a corrupt landlordism, and to become masters of the fields themselves tilled in the sweat of their brow. But once they had thrown over the ancient tyranny they were not going to give up their lands for any Socialist state in the world, and the Soviet authorities, a mere handful of men, could do nothing against their stubborn determination, their numbers, and their power of endurance tempered by centuries of oppression. They were not going to feed the proletariat of the towns for the worthless paper-money which was all that the Bolshevik could give them at one time. Their unbending opposition compelled the Bolsheviks to see that if they wanted to establish a Socialist republic eventually, it must be a republic of workers and peasants for an indefinite time to come. Lenin, whose master-mind allowed no 'principles' to stand in his way, had grasped the situation in all its detail, way back in 1918, though he was prevented by the party until 1921 from sounding his masterly retreat, which not only saved Russia from the deepest depths of economic disintegration but saved the only Socialist republic from its death in the cradle. As the pace at which things are moving under the New Economic Policy of 1921, is one of the important

matters of difference between Trotsky and Stalin, let us pause and take a rapid survey of the economic condition of Russia before and after 1921.

Until the year 1895, Russia was the happy hunting-ground of English and French capitalists. Then followed a fairly rapid process of industrial development which was arrested by the war, which by removing six million peasants from the land and harnessing her nascent industries to the task of turning out war-supplies brought the country to the brink of economic ruin and starvation. The corrupt and inefficient administration of the Tsar made the deficit on the Budget amount to 76 per cent. of the expenditure in 1916, and in the winter of 1916-17 brought on a severe food crisis in the towns due to the breakdown of the Transport System. The Donetz coal region (which produces 71 per cent. of Russia's coal supply) and Baku were lost to the Germans. Fuel shortage brought on a shortage of raw materials, of metal and engineering products and a more complete breakdown of transport. The disorganisation caused by workers' control and the active hostility of the technicians and engineers forced the State to take over control of industries before it was really in a position to do so, and against its wishes. From 1918 to 1920 the country was in a state of civil war, and 'war communism' ruthlessly controlled the broken-down resources of the unfortunate country. All the forces of capitalism within the country, in England, in France, in America and in the whelping little puppy-states under their thumb, conspired to rob Russia of the "breathing space" which was all that the Bolsheviks asked for to re-organise the country from the wanton damage done to it by the criminal heartlessness of the last years of a heartless regime. The situation was rendered all the more critical by the refusal of the peasants to feed the town proletariat, which could not, because of the industrial *debacle*, manufacture the things needed by the peasant in return for his grain.

Now the Bolsheviks, in the first flush of victory, had thought that they could socialise industry at once, forgetting how far Russia stood in economic organisation from that advanced stage of capitalism in which according to Marx, a country is 'ripe' to pass, by means of a proletarian revolution, into socialism. Lenin soon saw this error, and showed

the Proletariat. Writing a 'Postface' in 1922 to the new edition of his *Programme of Peace*, he says, "We have not yet succeeded in building up a Socialist state, *indeed we have not even begun doing so yet*"* and further on "a steady rise of socialist economy in Russia will not be possible until after the victory of the proletariat in the leading countries"—which victory, Trotsky dogmatically asserts, will take place in ten years or so at the outside. It is essential, says he, to get the other countries to launch a proletarian revolution, for "in the absence of *direct state-support*† on the part of the European proletariat, the Russian working-class will not be able to keep itself in power and to transform its temporary rule into a stable socialist dictatorship. No doubt as to the truth of this is possible."

Stalin has no difficulty in showing that all this is rank heresy, by contrasting it with Lenin's views. Lenin in 1922, said in his pamphlet 'Co-operation':—

"In actual fact, all the means of large-scale production are in the hands of the State, and the powers of the State are in the hands of the proletariat; there is the alliance of this same proletariat with the many millions of middle and poor peasants; there is the assured leadership of these peasants by the proletariat. *Have we not already, here and now, all the means requisite for the establishment of a fully socialised society?* Of course we have not yet established a socialist society; but *we have all the means requisite for its establishment*" And again "out of the Russia of the N. E. P. shall arise a socialist Russia." So, whereas Trotsky thinks that the steady rise of socialist economy is not possible without direct State-support from the other European countries turned Socialist, Lenin relies on Russian effort alone and thinks that although a proletarian victory in other lands will considerably help Russia and put it out of the grave and constant dangers of foreign invasion, all the means requisite for the establishment of socialism are already there in N. E. P.; in the joint dictatorship of urban and country workers (whose alliance is called the 'Smychka' or leash by which dogs are held); in co-operatives; in electri-

fication. Trotsky speaks only of the 'hostile collision' of the urban and rural workers.

What truth is there in Trotsky's charge that progress towards socialisation is too slow? Stalin gives figures to prove the steady and substantial economic recovery of Russia under progressive State-control, a fact which is attested by Mr. Maurice Dobb, lecturer in economics, Cambridge University, in his coldly impartial and well-documented book 'Russian Economic Development,' which has been treated very respectfully by the capitalist press of England. After the terrible breakdown of Russia, of which some idea has been given in this article, we find that "Russian production is above the pre-war level in spite of shorter hours and higher wages, whilst that of Great Britain, with a lower standard of life (than the pre-war standard—J. J. V.) for her workers, remains below pre-war." Industrial production in Russia is about 10 per cent above and agricultural production about 8 per cent above pre-war level, although a very high proportion of retail trade is still in the private hands, 95.9 per cent of large-scale industries, as well as all foreign trade, shipping and banking are State-owned. Internal wholesale trade is 91.9 per cent State-controlled, State and Co-operative and retail trade is 64.5 per cent. Mr. Dobb states that Russia is 'saving 8 per cent of her national income i.e. using 8 per cent of it to increase her capital equipment. But the main point is that the workers are in power and that the capitalistic elements of economy are jealously kept down by the State until they can be finally eliminated altogether.

In the foreign field, says Stalin, Trotsky again ignores Lenin's view that "Irregularity in economic and political development is an *invariable law* of capitalism. It is, therefore, possible for socialism to triumph at the outset in a small number of capitalist countries, nay even in one alone." That is, capitalism is doomed, but there will be in the general movement of decay, local advances, which, says Stalin, Trotsky mistakes for a consolidation of the general capitalistic position. The contradictions inherent in capitalism; the international trade-jealousies, the financial oppressions, by the 'spoilors,' of the 'spoiled' (the two camps in which capitalism has divided the world) are, says Stalin, weakening and breaking up capitalism, whereas Soviet Russia is growing stronger. Trotsky fails to realise, he says, (1) the

* Italicised by me.

† & §§ Italicised mine—J.J.V.

It depicts a Russian prisoner of war trapped in the intricacies of the military machine, who is crushed to death not because he was guilty of any crime, but to demonstrate the glory of the Juggernaut of militarism. Another anti-War story which has had even greater success is *The Adventures of the Good Soldier Schwejk*. This work—produced in dramatic form by the Piscator Theatre of Berlin this year—is a tale of a modern Don Quixote, a hone-headed soldier whose hone-headedness reflects the silly faces of officers, army doctors and chaplains, high and low officials, generals, Kaisers, and so on up and down the line, not to forget the “skits” to which these gentlemen devote more attention than to their so-called military duties.

Although anti-War novels were not published in the first years after the War, anti-War feeling was nevertheless expressing itself in magazine articles, poems, satires and dramatic sketches. That more was not done at the time is explained by the fact that all the young literary personalities of the country who were strong and wished to express something new adopted more direct forms of protest than fiction. Nearly all of the younger group of German writers can point with pride to a period in their lives when they were swayed by lofty ideals, by the vision of what they believed was a paradise to be regained.

Yet as soon as the real outbreak came, as soon as what they had been dreaming of manifested itself on the streets and on the barricades, a split in this young group occurred: some took a definite stand with the masses around Luxemburg and Liebknecht; others, vacillating with the times, were offering a strange array of mixed drinks to the literary public; and a third was reflecting in literature that trend in politics that was to lead the German nation into the “respect of the world.”

In those days, idealism and romanticism, as well as a feeling that world history is not made without great moral faith, rallied a group of young idealist writers around the inspiring personalities of the two great revolutionary leaders, Luxemburg and Liebknecht. Although many of these young writers did not understand the politics of these leaders, yet they believed in their ideals,—a conflict that was reflected in their writings. Rosa Luxemburg herself, in her letters from prison, as well as in the articles she contributed at the time, proved to be one of

the greatest stylists of the German language. When history is one day written in a more impartial spirit, her name will not only live in the hearts of the workers for whose liberty she fought, but also in the annals of German literature.

In the face of the starving and dying millions, the more sincere and vital authors were unable to believe that the creation of literature has a value in itself, so they left their desks and their studies for more real and brutal things. A large section of the flaming youth of this period ended their lives on the barricades and the battle fields of the class war, or suffered for years in the prisons and jails of the masters of the new Republic. Few were so fortunate as to leave their prison cells as famous as Erich Muhsam, known to every explorer of Munich Bohemia before the War, or as did Ernst Toller, who from his Bavarian fortress wrote several well-known dramas of revolt, some of which have been presented in America. The creative capacities of many of the most promising young revolutionary writers were annihilated during this period. Years of brutal treatment in prison, of spiritual despair caused by the conflict between high ideals and the world they had faced, had a devastating effect upon young literary talent.

During this period Expressionism was at its very height, particularly among the group which vacillated with the times. How miserably many of these failed to understand the ideals they thought they were fighting for is shown in a poem by one of their leaders which begins:

“*And du hast Brüste, Proletariernmadchen!*
(You also have breasts, proletarian maiden!)
This poet and those like him, were apparently just extending their field of erotic activities from the West End to the East Side. They were soon to learn, however, that the revolution was not merely a new erotic adventure. Those who had just drifted with the current of events soon found themselves in a deadly conflict between the emotions that were, the realities of their make-up and the movements of the day of which they believed themselves a part. Everything was in flux. There were no definite roads to follow; old guide-posts had been torn down and new ones were not being erected. Later, when new roads were laid and new guide-posts lettered, these people, without any orientation of their own, merely followed as directed. Some of them

reality. Joseph Roth gives vent to this tendency. He represents a generation which happened to return from the War, and whose attitude is summed up in his own words:

"We forgive nothing, we forget... We do not revolt, we do not accuse, we do not defend; we expect nothing, dread nothing... If scepticism did not infer participation, I would say we are sceptics. But we participate in nothing."

The demand for reality contributed to the success of Emil Ludwig's biographies, of which the best known have been translated into almost all other languages. Ludwig is the outstanding representative of German democracy which adores America and everything American. His capacity for draining the "human interest stuff" out of faded and dusty documents of history appears a literary equivalent of American business efficiency which is guiding the German Republic on its way to normalcy.

Standardization and the extreme dullness

and mediocrity connected with new industrialism called forth on the other hand a wave of eroticism. The tender secrets of the heart were shifted below the waist-line. Nobody who just takes a casual glance at the book and magazine stalls can help but be aware of this.

The new censorship law that was intended to stay the tide of rising "immorality" in literature, was used chiefly, as radical writers point out, as a weapon not against licentious literature, but against social and political criticism.

All in all, no great writers who were not known before the War have been developed since the birth of the Republic. But we may venture to predict that if the present Republic is going to last, it is bound to develop an art and a literature of its own that will mirror its achievements as community accomplishments, and implant the general feeling that the golden age of the few is the paradise of all.

A NEW TYPE OF VISHNU FROM NORTH BENGAL

By NANI GOPAL MAJUMDAR, M.A.

IN the fine collection of sculptures presented by Kumar Sarat Kumar Ray, M. A., of Digbapatiya to the Rajshahi Museum in 1926 there is one which is of particular interest. It comes from Kalandapur in Bogra District (Museum No. 661; size 32 by 15½ inches). A preliminary account of it has been published by me in the *Annual Report of the Varendra Research Society for 1925-26*, p. 3 of 'Note on Additions.' A detailed account will, I hope, interest scholars.

As will appear from the accompanying illustration (Fig. 1), the sculpture represents a deity wearing a long garland reaching to the knees with four hands bearing respectively *sankha* ('conch'), *chakra* ('discus'), *gada* ('mace') and *padma* ('lotus'). He can therefore be no other than Vishnu. Regarding some of his attributes a few remarks are necessary. The image in the lower right hand evidently represents a lotus-bird. The discus is placed vertically on a lotus, the stalk of which is held by the figure in his upper right hand.

In his upper left hand is another lotus-stalk and the mace is laid horizontally on the lotus. Ordinarily, these attributes do not surmount lotuses, but are held directly by the hands, the 'mace' represented as a thick long staff being held in a vertical position. In the present case, however, being placed horizontally on the lotus the mace has been represented as a ferule with thick ends. The corrugated amalaka pattern at the two ends form the distinctive feature of the symbol for mace. The identity of this attribute will be clear by comparison with a similar image in Rajshahi Museum as noted hereafter. For mace and discus placed on lotus attention may be drawn to two Vishnu images from near Sagar-dighi in Murshidabad District, Bengal, illustrated in the *Handbook to the Sculptures in the Museum of the Bangiya Sahitya Parishad* (Calcutta, 1929), Pls. XXIV and XXV; also R. D. Banerji, *Banglar Itihas*, vol. I, plates 26 and 27.

The deity in Fig. 1 has four male attendants.

A NEW TYPE OF VISHNU

1 New Vishnu Image from Bahadurpur
(Bogra District)

3 Back of mutilated Vishnu
Image from Mili-Santosh
(Dinajpur District)

2 Mutilated Vishnu Image from Mili-Santosh
(Dinajpur District)

4 Fragment of Dancing Siva Image
from Bahadurpur
(Dinajpur District)

Of them the one that stands next to him on the right carries (above the shoulder) a discus on lotus and the one that stands next to him on the left, a conch similarly resting on lotus. They are to be identified as Ayudhapurusas. Singular Ayudhapurusas appear as attendants of Vishnu instead of his

wives Lakshmi and Sarasvati, in the two images from near Sagar-dighi.

What adds considerably to the interest of the sculpture are two small figures, namely a two-armed male figure seated in meditation above Vishnu's head and a six-armed dancing

male figure below Vishnu's lotus seat. Seated figure occurring in the same composition with Vishnu is a novelty in Bengal sculpture, although it is not rare in the sculptural remains of other provinces. For instance there is quite a number of Vishnu images in the Mathura Museum, in all of which a couple of seated figures appear above the head of Vishnu. They have been identified by Dr Vogel as Brahma and Siva, and the images have been described as representations of the Hindu trinity (*Catalogue of the Arch. Museum at Mathura*, pp. 94, 98, 99, 102 etc and cf. a seated figure above the head of a Vishnavi image, *Ibid*, Pl. XVII, No D, 6). It is very probable that the present sculpture from North Bengal, which has a seated figure above Vishnu's head and a dancing figure below his lotus-seat, represents the same conception, the seated figure at the top representing the god Brahma and the dancing figure at the bottom the god Siva. Usually Vishnu occupies a position between his two divine consorts, and this sculpture is quite in accord with this convention.

This view finds a strange confirmation in a similar sculpture (Museum No. 302) which was brought to the Rajshahi Museum from Mahi-Santosh in Dinajpur District, some 20 miles west of Kalandarpur in 1916 (Fig. 2). This sculpture is sadly mutilated. The middle portion representing the trunk of Vishnu and the upper triangular portion of the back slab are cut away, evidently to adapt the slab for use in a Mahammadan structure, as the Arabesque ornamentation on its back clearly shows (Fig. 3). The upper portion, which in all probability contained a seated figure as in the Kalandarpur image is cut away, but the dancing figure

at the bottom remains intact showing that the two sculptures depict the same subject, namely the trinity of Brahma, Vishnu and Siva. In the Mahi-Santosh image Vishnu is attended by Lakshmi, Sarasvati and Garuda, and holds the mace, which is a tall one, in a vertical position (see Fig. 2). The dancing figure in the Mahi-Santosh sculpture has four hands, while that in the Kalandarpur one has six. But each, it should be noted, holds a bow and arrow, as found in the representations of Siva in his *Samharamurti* or 'attitude of destruction' (Cf. Tripurantakamurti in *Elements of Hindu Iconography*, vol. II, part I, p. 168 et. seq.) This destructive attitude would be in perfect harmony with the Trimurti conception, for Brahma is supposed to be the Creator, Vishnu, the Preserver and Siva, the Destroyer of the world. That the dancing figure represents Siva is deducible also from the fact that in both the sculptures the two uppermost arms of the deity on the right and the left are lifted over the head and touch each other. This is exactly how the two uppermost arms of a deity are treated in sculpture from Vikramapur, Dacca District (Fig. 4, Rajshahi Museum, No. 75) about whose identity as the Dancing Siva there is no doubt.

Both the Vishnu images mentioned above bear donative inscriptions in Proto-Bengali characters of about the 12th century A.D. That on the Kalandarpur image mentions probably the name of a donor *Sadhaka-Lalasingha*. The inscription on the broken image from Mahi-Santosh which contains the names of two donors runs thus: *Om danapati Divo Om danapati Bmho*, i.e. 'the donor Divo (Diva) and the donor Budho (Budha)'

STERLING LOAN AND EMERGENCY CURRENCY

By B. RAMACHANDRA RAU

RISE in the Bank rate to seven per cent, decline of the cash balances of the Imperial Bank, the issue of Emergency Currency up to nine crores of rupees, against *huddies*, *ad hoc* securities and sterling securities, and the outflow of silver rupees into circulation in connection with crop

movements need not be referred to in detail. Further developments may point out that the twelve crore limit of emergency currency would not suffice in the near future. Stringent conditions are appearing in the money-market and the money rates would have risen higher in the absence of the

So long as the rupee holdings in the P. C. Reserve are sufficient, convertibility of the P. currency need not be feared. Some portion of the buried stock of gold jewellery deposited as collateral for loans can be transferred to the Controller of Currency for the time being and emergency currency to a limited extent can be issued. In case the borrower claims back the gold jewel or bullion a certificate of deposit can be given by the Imperial Bank for the short time that would elapse between the date of claim and the return of the same by the Controller of Currency back into the hands of the Imperial Bank. But if no physical transfer of gold assets take place, as is at present the case in the matter of hundies that are only but never sent endorsed by the Imperial Bank to the Controller's office, some such happy stratagem has to be hit upon to save the country from being saddled with permanent obligations for a very long time in order to secure seasonal elasticity of currency in the busy season.

The only honest and desirable way of meeting seasonal expansion is to create the Central Bank of Issue and empower it to issue emergency currency without unduly

raising the bank rate. The evolutionary trend of international and foreign banking is in this direction. India must continue to learn the desirable things of the West and adapt them to suit her own domestic conditions. Till this reform is secured, which would automatically bring in its train the complete amalgamation of the reserves, the temporary use of a limited portion of the G. S. Reserve would not be so unscientific as that of issuing *ad hoc* securities as the basis of emergency currency. Separate standing of both the reserves—the Gold Standard Reserve and the Paper Currency Reserve—can be kept up if it is liked, and as overlapping is more often the case, why should not the Government acting as the currency authority utilize the G. S. Reserve to help the P. C. Reserve, specially during the emergency season?

"All roads lead to Rome" says the well-known adage. If banking currency and financial reforms are to be secured, they can never be secured without a Central Bank of Issue spreading out light in these and many other different directions.

PUNDIT GOPABANDHU DAS, OF ORISSA

A RECOLLECTION

By C. F. ANDREWS

WHEN the news came to me in London that Pundit Gopabandhu Das had died owing to a recurrence of the terrible typhoid fever which had already made him enfeebled, it was to me one of the greatest shocks I have had in recent years. It was quite sudden and unexpected, for I fully hoped that he had recovered from the fever and would be struggling back to health again. But it seems that his enfeebled constitution was obliged to give way at the last and the end quickly came.

What the loss will mean to Orissa I can only dimly picture and imagine. There was no one in that country who was so deeply loved by the poor people as he was. And there was no one who had so utterly

sacrificed his life for the poor. His nature was by temperament ascetic, and during the whole time that I was closely with him, from the day when I first met him at the Students' Conference in Bihar to the day when I bade him farewell at Balasore, his whole life as I watched it was so bare of any ordinary comforts and so pure in its devotional character, that I often wondered how his frail body could bear the strain of his ardent and self-sacrificing spirit.

Once I lived with him for some days at Puri and watched the whole course of his life day by day. He never allowed himself any rest from his laborious duties, and his whole heart and soul were given to the work he was doing for his country. His food was

from his fellow men, and he was devoted to the work of removing from the untouchables in his own country the cruel shame and stigma which had been laid upon them by his own fellow countrymen. To me personally his memory remains as that of a man of God. He helped me more than I can possibly say by his own profound sense of the Unseen. To be with him and to share his companionship was to feel oneself near to God; and it was always one of my greatest joys in Orissa to be in his company

and to talk with him about spiritual things.

The poor people of Orissa are indeed tried in the furnace of affliction. Not only have they suffered from the calamities of flood and famine, but they have had also to suffer the loss, by death, of the one who loved them and sacrificed his life for their sake. Our prayer will go up to God, that He will raise up in place of Gopabandhu a younger leader who shall be in turn the friend and saviour of the poor.

TREATMENT OF LOVE IN CLASSICAL SANSKRIT POETRY

By SUSHIL KUMAR DE

THE same traits as we noticed in Amaru's *Sataka* are also to be found in the later centuries of love-poems, among which that of Bhartrihari must be singled out not only for its poetic excellence, but also for the interest which attaches to the legends that have gathered round the mysterious personality of the author. As in the *Sataka* of Amaru, so in these miniature poems of Bhartrihari, are embalmed in swift succession hundreds of sunny memories and hopes, flying thoughts and dancing feelings, brooding tenderness and darkening sorrow; and the same light of fancy plays over them imparting to them warmth and colour, life and beauty. In intensity, in range and in delicacy of expression the poems of Bhartrihari are perhaps inferior to those of Amaru, but there is a great deal of genuine emotion and honest utterance which lend to them a peculiar charm. In his care-free mood the youthful poet wrote

When we see not our beloved, our one longing is for sight; when seen, our one desire is the joy of embrace; embraced, our one prayer is that our two bodies may be made one.

But the poet who wrote this century of passionate verses is said to have also written two other centuries of poems on resignation and wise conduct; and if we are to put any faith in the testimony of I-tsing Bhartrihari vacillated no less than seven times between

the comparative charms of the monastery and the world. So we are told in the work itself:

Either the beautiful woman, or the cave
of the mountains!

Either youth, or the forest!
An abode either on the sacred banks of the
Ganges or in the delightful embrace
of a young woman!

Sentiments like these are scattered throughout the poem. That he was a man who went through the crosses and sorrows of love as well as its joys is apparent from the warning he gives to those who thoughtlessly render themselves liable to love:

I am telling the truth without any bias that in the seven worlds this is a fact that there is nothing more delightful than a young woman and nothing which is a greater source of sorrow to man.

It is not love without any thought of the morrow which he depicts, love which would consider the world well lost; for, the poet says:

The path across the ocean of life would not be long, were not that women, those mighty unforgivable streams, hinder the passage.

and he cannot but regard love as a bondage, albeit a sweet bondage:

Smiles, sentiment, bashfulness, timidity, half-averted and half-turned glances, side-long looks, loving words, jealousy, quarrel and playfulness: all these are the ways by which women bind us.

If Amaru describes the emotions of love and the relation of lovers for their own sake

Closely connected with these poems are those which are based directly on the study of the science of Erotics. The *rajsika upachara* or *rajsika kala*, elaborated by Vatsyavana and Bharata for the benefit of the man about town and the courtesan, has much in it that may be regarded as pornography; but works like the *Kuttini-mala* of Damodaragupta, the *Samaya-matrika* of Kshemendra or monologue-plays like the *Dhurla-vita-samvada* of Isvaradatta, based as they are ostensibly on such study, cannot be too lightly rejected. The first work, whose title "Advice of a Procuress" sufficiently indicates its theme of instructing a young courtesan Malati in the art of winning love and gold, is indeed an elegant work of considerable interest, in which are set forth with graceful touches of wit and humour delicate problems in the doctrine of love. The first verse appropriately invokes the god of love:

Victorious is that mind-born god, the bee who kisses the lotus-face of Itah, whose abode is the glance shot from the corner of the eyes of amorous maidens

Here is a fine hyperbole which describes love-at-first-sight by relating the effect as appearing even before its cause :

Malati's heart was conquered first by the arrow of the love-god, and then, 'O loved of women, by thee coming within the range of her vision (verse 96).

The industrious Kshemendra tries his best in his *Samaya-matrika*, or the "Original Book of Convention" for the hetaera to imitate Damodaragupta; but his work, in spite of its bald realism, has very little elegance or poetry. The *Dhurla-vita-samvada* is however, more interesting in many ways. The nominal "hero" of this monologue-play, a clever and experienced rake (*rita*), finding the rainy season too depressing, comes out to spend the day in some amusement. He cannot afford dice and drinking—even his clothes have been reduced to one garment—so he wends his way towards the hetaera's street, meeting various kinds of people and ultimately reaching the house of the roguish couple Visvalaka and -Swanda, where he passes the day in discussing certain knotty problems of Erotics put to him by the former, the title of the work "Dialogue

between a Rogue and a Rake" thus appropriately describing its content. Some of the interesting topics discussed are: "If money alone attracts a courtesan, why do theorists speak of her as being good, bad or indifferent?" "How to propitiate an offended woman" and so forth. It is also characteristic that the *Vita* should combat with some heat the injunction of the moralists that one should avoid the company of woman, and end with an eloquent discourse on the joys of a rake's life, which in his opinion cannot be compared to the traditional delights of the moralist's heaven. This work, if not very poetical or elegant, gives us an amusing epitome of the aesthetic and other laws which govern the life of the man about town.

In these works, as well as in Sanskrit love-poetry generally, the woman is usually described to be as fully ardent as the man; and as an interesting result of the comparative freedom which women in general enjoyed we find that women wooed men as often as men wooed women. Apart from the pictures of passionate heroines which we get in the poems themselves, we have some verses ascribed to women-poets like Vijjā (or Vijjaka), Sila-bhattarika or Vikatanitamba which are sometimes more ardent and free in expression than those written by men-poets.

Bhavakadevi expresses a fine and pathetic sentiment in the one verse which is found in her name in the Anthologies :

So then this body of ours became, first, one and undivided; thereafter neither wert thou the beloved, nor was I, bereft of all hope, thy darling. And now, thou art the lord, and we are only thy wife. What else? Thus heart of mine had been hard as adamant—now I am reaping the fruits thereof.

It is indeed a pathetic touch in this as well as in many other verses in the Anthologies which show woman at her best ready for comradeship and love but man blind to it. A similar note is struck by another woman-poet Marula :

"Why art thou so thin?" "My limbs are such by nature?" "Why dost thou look so dark in the face?" "I had to cook for the elders in the house." "I hope thou dost remember me?" "No, no, no, I don't"—so saying the poor girl, weeping and all a-tremble, fell on my breast.

Another poetess, Indulekha, describes by means of a pretty poetical fancy the affliction of the maiden whose lover has gone abroad :

Some say—"It drops into the ocean", others

dost thou not fear to go alone?" "Is not love with his feathered arrows my companion?"

Very pretty is the picture of the newly married timid maiden, who is distracted between love and embarrassment.

If she sleeps, she cannot gaze at the face of her beloved, if she does not sleep, her beloved would embarrass her by taking her by the hand. Distracted by such thoughts, the fair lady can neither sleep nor keep awake.

The outraged maiden pretends to be angry, but her lover sees through it.

Thou dost not come to the couch, nor cast thy gaze, nor speak your wanted sweet words, as if thou art angry with thy attendants. O thou fair one whose fairness rivals the inmost petals of the *ketake*-flower, this hiding of thine anger towards me would have been all right, had not thy companion smiled secretly with her face averted.

The hapless lover laments that the night of reunion had been as brief as the nights of separation had been long.

When formerly I suffered the sorrow of severance from my beloved O night, in thee a hundred days passed away. Now when late but hardly gave me reunion, thou shameless one, hast departed in the day itself.

The sorrow of the parted lover is too hard to bear :

The mango-shoots here, smoke with swarms of bees, here the Asoka glows with bursting buds of flower, here the branches of the *Kinsuka* are coal-coloured with their dark shoots, alas, where can I rest my weary eyes? Everywhere fate is cruel to me.

Even finer specimens than these will readily occur to any reader of Sanskrit poetry, but these will indicate the themes which are most favoured and the manner in which they are handled.

But the theorists do not stop with a general classification of the types of the hero and the heroine. They are endowed with a generous set of special excellences. In the case of the heroine we have first of all a mention of the physical characteristics connected with the emotion of love, *vijā*, *bhāra* or first indication of the emotion in a nature previously exempt, *hara* or gestures indicating the awakening of the emotion, and *hara* or the decided manifestation of the feeling. Then we have seven inherent qualities *e.g.* brilliance of youth, beauty and passion, the touch of loveliness given by love, sweetness, courage, meekness, radiance and self-control. All her gestures, moods and different shades of emotion, *e.g.* giggling, titillation, hysterical fluster of delight,

involuntary expression of affection, self-suppression through bashfulness, affected repulse of endearments, as well as the deepest and tenderest display of sentiments are minutely analysed and classified. To this is added a detailed description and illustration of the modes in which the different types of heroine display their emotion, the analysis ranging from the maidenly modest behaviour of the *Mugdha* to the shameless boldness of the more experienced heroine.

These attempts indicate considerable power of analysis and subtle insight, but generally speaking, the analysis is more of the form than of the spirit, based on what we should consider accidents rather than essentials. At the same time, marked as it is by the artificiality of scholastic formalism, it is not made purely from a speculative point of view, and there is much in it which is based upon direct experience and observation of facts. The analysis itself is interesting, but what is regrettable is that later poets should accept them as unalterable conventions. This technical analysis and the authority of the theorists inevitably led to the growth of artificiality in love-poetry. Nevertheless, hedged in as they were by fixed rules and rigid conventions, it is remarkable that the poets could still produce fine poetic pictures out of their very limited and stereotyped material, and their verses succeed in encompassing poetically the various stages and aspects of love from its first awakening to its last stage of perfection or dissolution. The blooming of the Asoka at the touch of the lady's feet, the first appearance of the mango-blossom and the swarming of bees as the symbol of springtime and meeting of lovers, the comparison of the lady's face to the moon or of her voice to the note of the Indian cuckoo are poetical conventions which are repeated uninterruptedly in Sanskrit love-poetry, but the following stanzas will indicate how these are often utilized for charming effects. To *Ramāna* and *Somāna*, who are acknowledged by *Kālidāsa* himself as great poets, but of whom nothing else has survived, the following verse, describing the fatal effect of springtime on the separated lover, is ascribed in the *Anthologies* :

Had he been ill, he would have been emaciated ; wounded, he would have bled ; bitten, he would have fawned with the venom. No sign of these is here : how then has the unhappy traveller met with his death ? Ah, I see. When the bees

more businesslike fashion and to pay for it wages which would make possible a bare but honest livelihood.

A few remarks may here be made on the subject of rural uplift, which has recently come into prominence. What Mr. Brayne could achieve in Gurgaon at an expense of about one and a half lacs of borrowed money, any Indian Officer worth anything or an energetic servant of India could do, provided he received the encouragement and support of the State in the fullest possible measure. The facts are however otherwise. The Government is so much interested in manufacturing 'loyalty' and suppressing the growing virus of Swaraj, that it has but little time to bother its head about stamping out corruption in the lower ranks of officialdom and in making the lot of the villager better and happier. A decade of concentrated work on rural uplift will revolutionize the social and economic conditions of the country, provided the existing official organization were used in an intensive campaign of helping the villager to improve his home and village, his agriculture and income and enabling him to stand on his own legs as a self-respecting human being. Self-respect is, however, the last thing which an alien bureaucracy would like to see develop in a subject people; and hence slavery may be illegal and depressed classes equal in the eyes of the law as others, forced labour continues to exist and the existing schools are virtually closed to

the members of the depressed community. Pious resolutions or *communiqués* to push on the work of village uplift are useless.

Let the work of a district officer be judged by the work he does to improve the lot of villagers under him, and there will be lightning improvement in the spheres of agriculture and sanitation. The cult of Swadeshi and Khaddar must be an integral part of every scheme of rural amelioration; but the moment an Indian officer showed any interest in it, he would be branded as 'disloyal', for 'loyalty' is at present equivalent to everything which is opposed to the interests of India. The result is despair and paralysis. An Indian officer is at present neither fish nor fowl. Were he not between the devil and the deep sea, he would be able to transform the face of the countryside within five years, if he had only the freedom and the opportunity and the support of the Government to devote himself to raise the level of life of the people in his district. Being only human he finds that the best way to get on lies in spheres other than in faithfully interpreting the wishes of his countrymen or even in working out energetically schemes for their welfare. 'Loyalty' or reactionary obscurantism pays more than competence or sheer capacity. Oh! the path of progress for a subject-race is devious and lies through dark alleys and trackless jungles.

JAISALMER AND ITS ANCIENT AND MODERN BUILDINGS.

By N. C. DUTTA

JAISALMER is one of the premier States in Rajputana. It covers an area of 16,062 square miles. It has not to pay any tribute to the Imperial Government.

The Bhati rulers of Jaisalmer claim direct descent from Maharaj Shri Krishna, whose power was paramount in India during Dwapar Yuga. Meghadamber being one of the most venerable heirlooms of the Chandra-bansiya Rajput clans of India, is still in possession of the illustrious house of Jaisalmer. Tradition depicts that this holy Meghadamber

Chhatra (umbrella) was held over Shri Krishna Maharaj on ceremonial occasions during his reign in Dwaraka. It is also a tradition that the said Meghadamber had been presented by the God Indra Deva to Maharaj Shri Krishna on the auspicious occasion of his marriage. The ruler of Jaisalmer is, therefore, styled "*Chhatrala Yadava Pati*," the "canopied Lord of the Yadavas." The house has also the proud title of "*Uttar Bhar Kinnar Bhati*," i. e., Bhatias, the mighty portals of the North

Melita Nathmahal's Haveli

Tradition has it that this tree fulfils all the desire of human beings if very faithfully and earnestly craved. Another small temple of the God Shiva, though it lies in a very bad condition, is worth mentioning. It is supposed to be the oldest temple still existing in that part of Jaisalmer. The four-headed graceful and noble image of God Shiva is weather-worn owing to being left fully exposed, lodged in a primitive type of single chamber Hindu temple, supported on columns and covered by stone slabs on stone architraves, forming a pyramid-shaped "Sikhur" or roof.

Ludrova was a large city having twelve gates, but is now desolate. The major portion of the capital is perhaps under shifting sands and if excavated some rare finds of architectural and archaeological importance may come out at some places under the sands and in the river Kaknai, on the bank of which the capital stood.

It is beyond the scope of the present article to describe the really important workmanship of the hill-fort of Jaisalmer. Colonel James Todd, Mr. Marsden, Captain Baileau and other European and Indian Archaeologists and historians have given detailed descriptions of the huge and beautiful castle of Jaisalmer. It is erected on an isolated peak, triangular in shape, about 250 feet in height. The hillock on which the fort of Jaisalmer is situated, and which is about 959 feet above sea-level, is very curious, enclosing a rocky plain of about 20 miles radius, which provides several places to accumulate rain-water for drinking and cultivation purposes and thereby converting it into a place of real beauty in the heart of an Indian desert. From the bastions of the citadel and the topmost part of the palaces in the fort a magnificent and

Sirch Deodhi Gate in Mandir Palace

the north and east facing the town at the foot of the hillock and Gadsisar tank beyond it, is relieved by richly ornamented Gokhras (projecting balcony windows), which are magnificent and exquisite specimens of the indigenous style of Jaisalmer architecture. Below these rooms are "Naya" or "Rang Mahal" (coloured chamber). The interior of this chamber is fully decorated by fine specimens of fresco paintings and the glass works. The paintings represent scenes of "Gangour" festival (a festival regularly observed here on "Chaitra Sukla Chaturthi" each year when the image of Gouri Mata, the Goddess Gouri, is taken to the Gad-sisar tank and brought back the same evening with a gorgeous State procession), pig-sticking and hunting, views of Jaipur, Udaipur, etc.

The facade of another adjoining building, named "Gaj Vilas," built in the beginning of the 19th century A. D. is very intelligently designed and carefully constructed. Its pro-

jecting verandahs facing the Chowta with a row and range of Bunglies (Chhatris) supported on nicely carved brackets, and the gracefully made Raoti (sky and wind pavilion) with Bengal type of Chhina cornice, no doubt heighten the beauty and richness of the building. A deeply carved Gokhra (projecting window) with Jharokhas on both sides of Gaj Vilas palace facing the interior courtyard, is one of the finest and peculiar specimens of Hindu architecture that Jaisalmer can boast of. There is another fine palace building in the fort, named "*Moti Mahal*" palace built about the middle of the 18th century A. D., which is connected with other palaces by a very high bridge, allowing a road to pass under it. A small garden with stone-laid paths and fountains in the centre, facing the Moti Mahal and "Sava Nivas" (audience chamber), constitutes the glory of the palace. The interior of the main Moti Mahal is very richly and finely

Fort and Palace—Jaisalmer

porch of excellent finish of the temple of Shri Paresinathji Tirthankar is here given. Just over the Chhujas at both corners in the friezes of the said porch are two figures of elephants. The carving and perforated works in the architraves, Kangura parapet and specially the Sukhar or dome over the porch, are so elegant, graceful and suited to the purpose that all lovers of true art are naturally attracted, the very moment they pass near the porch. This portion of the porch and some interior works approach the Hindu and Buddhist style of architecture while all other works in the temple are generally of Jain type. The greatest attraction of these temples is the *Toran* that stands on a pair of decorated columns in front of the entrance porch of Shri Paresinathji Tirthankar's temple. The columns are ornamented with lotus, animals, *Makaras*, and adorned with sculptures which seem almost instinct with life and motion. There is wonderful grace in these sculptures, representing different gods and *aparas*.

It is a great shock to the writer to see that some beautiful stone carvings are spoiled by oil-painting in the interior of Jain temples in the fort and in Ludmva. The natural colour of the grey limestone with which these temples are built is so uniform and graceful that it requires no artificial colouring and I wonder why the members of the Jaisalmer Jain Committee prefer oil-colouring on such wonderful carving works, incurring unnecessary expenses. Further north-west are temples of Shri Laxminathji and Shri Mahaderni.

The objects of interest in Jaisalmer are not entirely confined to religious buildings and palaces in the fort. There are several residential buildings in the city built by the *Sethtas* (rich merchants) and other men of position. The fine carving work of beautiful and artistic designs with true uniformity and symmetry in the facades of these buildings is worth seeing.

The major portion of the city is situated on the north of the hill-fort and is surrounded

Jawahur-Vilas Palace

shrine are beautifully carved, containing innumerable figures of both human beings and animals. Over the roof of this particular cell or shrine, is built a highly decorated Sikhhar or spire—a ribbed pointed dome, having a bulging outline and possessing figures of lion and elephant at some particular places. The Sikhhar is always crowned by an *Amlaka*, *Ghagar*, or *Mahapadma*—the most sacred symbol of the Hindus, Buddhists and Jains. Above the Mahapadma or *Amlaka* is the water-pot (*kalas*), containing a lotus bud—a most appropriate symbol of the creative element and of life. There is a porch, *Bhoga Mandap*, in front of this cell and in front of this porch is the Nat Mandap, octagonal in shape, that usually displays some characteristic details and is decorated with themes of Jain and Hindu Mythology. Profuse ornaments covering every part of the pillar, arch, lintel or bracket in shape of foliage, flowers, birds, and human figures with very typical poses display fine workman-

ship and specially on the ceiling of the Nat-Mandap dome, from the centre of which hang graceful full-blown lotus-shaped pendants. The columns of the porch are surmounted by bracket capitals and over these are attic or dwarf columns which support the architraves of the dome and the struts, supporting the gallery. Between the bracket capitals and under the struts are placed beautifully ornamented Toran-shaped figure, forming a kind of pierced arch. The surrounding courtyard is enclosed by a double colonnade of smaller pillars, finely carved and with ornamented ceilings, behind which stands a range of cells each containing the cross-legged seated "Tirthankar". This is the general description of most of the Jain temples in the fort. A very important and rare collection of manuscripts is preserved in the "Jaina Bhandar".

In front of the temple entrance gate is the porch supported on fully decorated columns. A photograph of a particular

Jain Temples—Jaisalmer

by a Scherpaana (city wall) or encumvellation, encompassing a space of nearly three miles and a half, having at present four gates and two wickets. Almost all the buildings in the fort and the city are constructed of yellow and grey limestone. The stone is obtained at a place just outside the north gate of the city. It is practically adapted for all sorts of structural work, both ornamental and otherwise. The fine and close grain and even texture, as well as the sound nature of the stone, make it especially suitable for fine carving and it is much used for decorative purposes. The speciality of this place is yellow marble, which takes good polish and is more valuable than Italian and Makrana marble.

One most important factor of the town is the "Mandir Palace," situated on the west side of the town of Jaisalmer, commanding a splendid view of the west, having picturesque scenery of the "Ishal Garden House," and school and "Public Library" that are under construction. The present ruler of Jaisalmer resides in the Mandir Palace, where there are temples of Shri Guridharji

Maharaj and other gods. Several very recent extensions have been made in the Mandir Palace. Different important gates, gracefully and elaborately carved, giving entrances to the main palaces, are constructed according to the design and under the supervision of the writer. And the new palace building, there, is the most beautiful piece of work of original and novel style. It is designated after the name of His Highness Maharajadhiraj Shri Mahatawarji Sir Jawahir Singhji Sahib Bahadur, K. C. S. I., the present illustrious ruler of Jaisalmer and hence termed "Jawahir Vilas." He takes a keen interest in the welfare of his subjects and is a sincere lover and great patron of Indian Art and Indian Architecture.

Further west, adjoining the huge fortified wall of the city, is the "Badal Vilas tower"—a royal summer tower, to enjoy and watch the rains. It is a Sat-manjil (seven-storied) building, very nicely finished. In the heart of the outside compound of the Mandir Palace, is a very beautiful fresh water well, about 275 feet deep. It is very strongly built. On two sides of it there

THE QUEEN WHO RULED ALL THAT WORLD

Goya's masterpiece—the Family of Carlo IV, who sat on the throne of Spain in Napoleonic days.

Court, first as the painter of the Chamber, then as first painter of King Charles IV.

The painter, who lived with his subjects, seized them in the mobility of their life. The critic went hand in hand with the observer. While he painted, he judged. Some one has well compared him to Saint-Simon.

His principal gifts were displayed in his masterpiece, 'The Family of Charles IV.' In the center, the Queen, the one who ruled all that world, tall, fat, an evil, sulky, petulant look, a mixture of shrewdness and lasciviousness; a little to one side, the King, with his air of a good fellow, in whose flabbiness one still glimpses the imprint of his great ancestor, Louis XIV.

"Then followed [for Goya] times of sorrow. The deafness which had been ensnaring him for years finally enclosed him within a circle of silence. The invasion [of Napoleon] came and with it the years of his darkest solitude. He painted and etched only to curse and to rave. His mocking changed to curses. The restoration, with Ferdinand VII, dealt the final blow to our painter. A widower and, broken in spirit, he, too, followed the path of exile and died there in 1828."

PROF. RADHAKRISHNAN'S 'REPLY

The Editor,

The Modern Review.

Sir,

Ever since I came to Calcutta in March, 1921, my writings have been criticized adversely in the pages of your *Review* on several occasions, the first being, as far as I remember, in the issue of April 1921, only three weeks after I had joined my post in the University, and the latest in the current number. I have been accused of faulty English, ignorance of Bengali, lack of Sanskrit learning, imperfect acquaintance with Western philosophy and careless and inadequate references. I did not feel called upon even once to reply to these criticisms; for I respect the rights of reviewers to hold any opinion they please regarding works which are public property. Even when the critics adopt the attitude implied by the maxim, "would that my enemy wrote a book," I feel it is not for us to complain. Besides, perhaps it ought to be a matter of satisfaction to me that my writings, of whose shortcomings none is more deeply convinced than myself, have actually stimulated so much criticism and comment in your pages, even

though my books on *Indian Philosophy* were not received by you for review according to your own statement in a recent issue.

It is, however, an altogether different thing when statements are made not merely challenging one's intelligence and scholarship but questioning one's honour and character. You will pardon me if I depart from my general habit and break my silence for once in view of the extraordinary allegations made by Mr. Jadunath Sinha and published so prominently in the January, 1929 number of your *Review*.

I am afraid I must be working in this matter under certain disadvantages. Mr. Sinha's thesis is not available for me. He got back the thesis from the University office immediately after the report was sent and it is not therefore available for verification at present. *The Meerut College Magazine*, in which parts of it are published, is not to be had in the local libraries to which I have access. I have to proceed, therefore, on the data supplied by him in his article.

I-7. In the exposition of the Samkhya-Yoga theory of self-consciousness, I have

(Vizianagram Sanskrit series), though the argument last adduced from it occurs on p.97. Mr. Sinha complains that "only that Sanskrit passage which I quoted from *Nyaya-kandali* in passage (10) has found its place in the book of the author and no other passage has attracted his notice." May I point out that the book is used throughout my third chapter and Sanskrit quotations from it are found not only in the context referred to, but in other places as well ; I may give two instances here :

190 n 2. Asaririnam atmanam na visaya-
vabodhah.

Nyaya-kandali, p. 57.

222 n 6 Bhutanam anabhidrohasamkalpah.
Ibid., p. 275.

I hope Mr. Sinha will not say that all the Sanskrit quotations I have given in my book are contained in the unpublished part of his thesis. At this rate all that I have ever written might be contained in the unpublished writings of any other person.

When I state the source of *Nyaya-kandali* and when my account of a particular passage in it differs, on Mr. Sinha's own admission, from his 'original' translation taken almost *verbatim* from Dr. Jha's version, which I mention in the bibliography at the end of the third chapter, I do not see where exactly my "unacknowledged borrowing" from Mr. Sinha's translation comes in.

We come last to *Prameyakamalamartanda*, where the charge is repeated that my account of Prabhacandra's criticism is based on parts of Mr. Sinha's unpublished thesis. There is not one passage in my version which may be regarded as identical with Mr. Sinha's. He is aware of this and so writes : "None of his sentences like mine is a literal translation of a Sanskrit passage from *Prameyakamalamartanda*." "The author has not followed the book closely in his book." "In my thesis I closely followed the book and gave the translation of many important Sanskrit passages." "This is the gist of" "a beautiful summary of a corresponding passage" or "a beautiful specimen of paraphrasing and summarizing." He has taken the pains to invert the order of arguments in two or three places." I do not know whether the sentences in Mr. Sinha's account are taken from the same context or different ones but whatever it may be, when he admits that the phraseology is different, the development of the argument is different and that

my account is a brief *resume* while Mr. Sinha's is a literal translation, it is difficult to know why he believes that my account is based not so much on the text as on his extracts from it. When two or more writers are using the same texts, there is bound to be similarity in significance and much agreement in phraseology, if the writers are faithful to the sources. I need not tell Mr. Sinha that the translations of, say, the Upanishads by Max Muller, Hume, Mead etc. resemble one another not only in matter but in form and it would be foolish certainly to rush from this resemblance to a charge of plagiarism. I am unable to understand Mr. Sinha's accusations, even assuming that these extracts were found in that part of his unpublished thesis which I looked into, in exactly the same form five years back as they are said to be to-day. There are other contexts in my book where *Prameyakamalamartanda* is used and I hope it will not be said that those also are due to Mr. Sinha.

If everybody who uses a few extracts from the texts believes that every other person who follows him is indebted to him in a special sense, then the difficulty of writing on Indian Philosophy, great as it is, will become practically insurmountable. It was certainly easy for me to have loaded my book with Sanskrit texts and made a display of all the apparatus of learning. If instead of giving chapter and verse for my expositions and criticisms I had actually reproduced the original texts in the footnotes or in an Appendix, Mr. Sinha would not have thought that I was indebted to him for my account. And such a plan would perhaps have added to my reputation as a scholar but it would certainly have taken away from the value of my book to the reader. Rightly or wrongly I still feel that pouring one's note-books into the printed text would fatigue the reader and make it less effective than it would be if all the reading and the thinking were fused into an intelligible narrative.

It occurs to me that it is a perilous enterprise to lecture to students on a subject about which you propose to publish a work later. During the time my second volume was in preparation, I had often lectured to the classes on many of the topics discussed in it including the Samkhya theory of self-consciousness and the Mimamsa theory of knowledge. It is not at all impossible that some of the material contained in it might have found currency before the publication of the work.

Mukti and cried: "Well Mukti, you are a very good pupil of Mrs. Ghose, the leader of our society. As you have not been properly introduced, you did not think fit to speak a word to the poor boy."

"Don't talk like an idiot," said Mukti, now in a temper. "Why did you insist on his coming with us? Haven't you got a grain of sense? Couldn't you see that he did not at all want to come? I can guess what he will tell his friends."

Jyoti began holding forth on the subject of feminine narrow-mindedness and love of formality. Mukti retaliated by giving her candid opinion about masculine idiocy and conceit. When at last they reached home, they had not finished even then.

Mrs. Ghose had decided to send Chapala and one of the boys home in Mukti's car. Mukti's father was too silly for words. Still as Mrs. Ghose was there, she must try to preserve social conventions. It would never do to allow a young girl to go alone with a boy. But the good lady was mortified to find that the Ganguli's car had vanished with its two occupants before she could carry out her plans. She became extremely angry, as she had to pay for two taxis.

The short spring was nearly at an end. It was becoming too hot in the metropolis and Shiveswar was feeling more and more unwell. He was advised to go for a change to the hills. Mukti and her father were trying to decide between the rival attractions of Simla and Darjeeling.

Jyoti's examinations were over and so were Mukti's. Both of them were doubtful about the results, as their preparations had been none too good, due to their being together. Each was determined to cast the whole blame on the other, if he or she happened to get plucked.

Suddenly, Shiveswar made up his mind. "We start for Darjeeling, my dear," he announced to Mukti, at the tea-table. "If mother agrees to go, we shall take her along too. Otherwise, she will spend the two months in her father's house."

"And what about Jyoti?" asked Mukti, with a laugh. "Is he going to be left alone in the house?"

"No, indeed," replied Shiveswar, "he is to take a longer trip than either of us. First a sea-voyage, then two or three years in England."

Both Jyoti and Mukti jumped up at this news. Shiveswar had to finish his tea alone,

his companions being too excited to care about it.

"So then, I need not think about the results at all," said Jyoti, as soon as he got out of the dining room. "As I am going to England, it does not matter a bit whether I pass or fail."

"You need not get stuck up so soon," said Mukti. "Even a degree, obtained here, will count. Otherwise they will set you to learn the alphabet there."

Everyone was excited at the news of Jyoti's going abroad. Preparations began and Jyoti spent most of his time outside. He was busy getting his outfit ready and making his table manners perfect. Shiveswar was busy arranging for his berth and writing to his friends in London. Mukti had nothing to get busy over, yet she seemed the busiest of all. She said she was having some warm dresses made for her coming trip to Darjeeling.

Jyoti had almost ceased to speak to Mukti—he had no time to spare. Even if he spoke, it was in English, because he was trying to become fluent in that language.

So poor Mukti had to pass the time as best as she could. She could not fully understand why she felt so fearfully sick at heart. She got angry and thought of returning to the boarding house; only it had closed for the vacation now. The time hung heavy in her hands and there was no friend or companion. Within the week, Jyoti would be gone. He had finished all his arrangements, and had only to get on board. He had more leisure now and hovered round. Mukti frequently in the hope of making amends for past neglect. But it was Mukti's turn now to get busy over dresses and ignore her friend altogether. So whenever Jyoti was seen approaching, Mukti would become wholly engrossed in pieces of velvet, Kashmere and lady's serge. Jyoti would lose his temper and go away after a few minutes.

There were only two days more. Jyoti came out of his room in the evening, very smartly dressed, and was about to pass down the stairs. Mukti happened to be standing near, with a piece of sewing in her hand.

"You look quite a dandy," she remarked, "where may Your Highness be going?"

"They are giving me a farewell party at Dhiren's mess this evening," Jyoti replied.

"Farewell party!" said Mukti turning up her pretty nose. "You seem to have become a mighty important personage!"

"I am not important to you, I know that

in his own. "Good-bye, Mukti" he said. As father and daughter left the steamer, he ran inside his cabin and did not come out again.

All night Mukti lay awake, thinking and thinking. Had the steamer actually started or not? Towards the small hours of the morning, she fell asleep and did not awake till the sun was high up in the heavens.

(15)

Shiveswar's house in Bhowanipore stood in the midst of a garden of good size. During the vacation, Jyoti and Mukti had made good use of it. The garden had resounded with their merriment. In the morning they strolled about, plucking flowers; in the hot noon, they would find out a shaded nook, either under the huge Neem tree, or under the flowering Gold-mohur, where there was a wooden seat. They would begin literary discussion with a great show of wisdom and knowledge. They read a good deal, though there was little discrimination in their choice. Classics and moderns enjoyed their favour in equal degree. English and continental authors reposed side by side with Bengali poets and novelists on their shelves. Whenever they saw some new book advertised, they went and got it at once.

The blossoms of the Mango, Neem and Sirish would spread a fragrant and beautiful carpet for the reception of these two friends. They would get some book, go and sit down and then talk and talk. Sometimes one would read and the other would listen. If it was Jyoti's turn to read, he would set about it seriously and diligently. But if it happened to be Mukti's turn, she would read for a few minutes, then begin talking about some wholly irrelevant subject. She could never keep her attention concentrated on one subject for any length of time. Jyoti would try to call her to order, but would soon give up the attempt as fruitless, and join in her conversation. The book would slide down from their laps, and find a resting-place amongst the fallen leaves and blossoms.

They would talk on every subject under the sun. Jyoti's college and Mukti's school, the cinema, the monthly magazines, the latest novel and drama and every one of their friends and acquaintances, were discussed and criticised with merciless candour. The noon would merge into evening before they would finish, grope for the neglected books and get up. They would laugh at the fate

of the books, but next day, again they would come to the very same spots, with the very same books again, and consign them to the very same fate.

In the evening, they would generally go out together for a drive. Shiveswar would sometimes accompany them and sometimes not. They would order the driver to put on full speed and enjoy the wind whistling past their ears. They would traverse Bhowanipore, Ballygunge and sometimes even Barrackpore.

So this morning, when Mukti got up, she found her heart strangely empty. It seemed to her as if some demon had blasted all the joy and smile of her life. She would never laugh again, she would never feel happiness bubbling within herself again. Only sorrow and tears were left for the future. With the close of last night, had closed the happy chapter of her life. That portion was dead, it would not come to life ever again. A new period was about to begin, but Mukti dreaded to face it.

She tried to console herself with the thought that there was no occasion for so much sorrow and despair. But in vain. The tears would gather in her eyes and splash down her cheeks.

Mukti took herself to task severely. What has happened? Nothing much. Jyoti had gone abroad to continue his studies, he would return after two or three years. It was unlikely that his heart would change completely, during that period. So why worry so much?

But her heart refused to be comforted. Jyoti was gone to England. It was so far, so far away. Mukti would not see his face, she would not hear his voice. Could she even think of him as clearly as she used to? Jyoti had gone, and taken Mukti's smiles with him.

Poor Mukti sat on her bed, thinking and weeping. She tried to smile, she could not. She tried to recall some funny incident which would make her laugh, but she could only recall the scene inside the cabin and Jyoti's face at the time of farewell. She tried to drive them away, but they persisted, in spite of her efforts.

Grandmother called from downstairs, "Mukti, my dear, come down. You are very late. Don't sleep any more." As if Mukti could sleep or had been sleeping! These old ladies! She had not slept a wink, but had been thinking of a certain steamer carrying

So when Shiveswar came and said, "Mother, I hope you are going with us?" she replied, "Yes, child, where else shall I go? Where you are, there is my home."

Shiveswar was a bit surprised at this answer; still he felt satisfied on the whole and went to buy blankets, shawls and vegetable shoes for her.

Mukti worked enthusiastically, and got everything ready much before time. She was impatient to start, Calcutta had become quite unbearable to her.

The looked-for day arrived at last. The luggage were piled up mountain-high in a hackney carriage and sent to the station in charge of the Hindustani durwan, while Shiveswar drove on there later, with his mother and daughter.

Mukti did not like the small compartment of the train at all. It had a corridor running along the entire length, along which passengers passed and re-passed continually. Mukti was accustomed to the large compartments of the E. I. Railway, and she liked them. "What a nasty hole," she said, turning up her nose, "I don't know how I shall stay in it for such a long time."

"You have not seen the worst yet," laughed her father. "You will have to get into positive toy trains after this."

Next morning at Siliguri Mukti found her father's predictions confirmed. On one side of the platform stood the big train of the plains, on the other side stood a very small train, which could only be fit for dolls. Mukti laughed and laughed. How could people travel in it? Where could they sit and where were they to keep their numerous luggage? She seemed at her wit's end. But the guard soon relieved her by taking away most of their luggage and stowing these away in the brake van. Mokshada did not want to let her own special trunk go, but the *Sahib* would not listen to her.

The train started. The compartments had

no doors or windows, it had only curtains. Mukti sat in one of them, eager for her first glimpse of the Himalayas.

As they went up and up, the trees, rivers and everything else belonging to the plains grew smaller and smaller, losing the look of reality and taking on the look of a toyland. New wonders awaited them at every turn. Mukti drew his father's attention to everything she found exciting. There was a gushing mountain stream, there a glorious fern, and there again a bank of clouds rolling up to envelop them in its misty embrace. At last, they reached Darjeeling.

There was a dense fog. The whole town, the deep *khuds*, the huge walls of mountain, nothing could be seen. Mukti did not feel as cold as she had anticipated, but her young body thrilled with pleasure at the touch of the fleecy clouds on her face and hair. She was amazed at everything she saw. There were no male porters. The short and sturdy hill-women took up the heaviest loads quite easily. They put the load on their back and fastened it with a strap of cane to their forehead and then began to climb up the roads. Dirty Bhootias, with glowing rosy cheeks, stood before them, shouting, "Mem-sahib, do you want a rickshaw? Mem-sahib, do you want a dandi?" Rickshaws and dandis were the only conveyances here in those days. Mukti did not like them much. The rickshaw looked like a wheelbarrow to her, and the dandi even worse. She refused to get in, she preferred to walk.

It came on to rain, when they were half way up. The fog was too dense to allow anything to be seen, but they felt the rain drenching them through and through. Mukti felt pleased at everything she saw and felt and reached her new home very soon. She changed and had her breakfast. Then suddenly she fell to shivering. She knew now that she had really reached Darjeeling.

(To be continued)

PEACE OR WAR?

By MAJOR B. D. BASU, I. M. S. (Retired)

WHAT has contributed most to the advancement of humanity? Peace or war? It is a question which has been often asked, but is difficult to answer satisfactorily. Of course, those who worship

the god Mars have no hesitation in declaring with Heraclitus: "War is the father of everything"; or, with Empedocles: "War is the mother of all good things."

The great European war of 1914-1918

and Kauravas were arrayed against one another, the warrior Arjuna refused to fight. The author of the Bhagavad Gita—"the Song Celestial", puts in his mouth arguments used by pacifists of our time. The Lord Shri Krishna answered all his objections and after all succeeded in inducing him to fight.

In the Mahabharata it is also mentioned that in warfare the fighters on both sides attain to Heaven if they fall on the field of battle.

Views not differing from the above are to be met with in the religious scriptures of some other creeds—especially of Islam.

According to the French psychologist, M. Ribot, this fighting instinct has been beneficial to human society. He writes:—

"This instinct, common to all primitive races, has not been without its use in the progress of humanity, if as we may believe, it has assured the triumph of the stronger and more intellectual races over those less generously endowed. But these warlike instincts, preserved and accumulated by heredity, have become the cause of destruction, carnage and ruin. After having served to create social life, they are no longer of any use but to destroy it; after having made certain the triumph of civilization, they then only work for its destruction. Even when these instincts are not bringing two nations to blows, they are manifested in ordinary life, in certain individuals, by a quarrelsome and combative humour which often leads to vengeance, the duel, and murder."

Writes another psychologist of note:—

"These important social effects of the pugnacious instinct seem to be forcibly illustrated by a comparison of the peoples of Europe with those of India and of China... In neither of these areas has there been a similar perennial conflict of societies. In both of them, the mass of the people has been subjected for long ages to the rule of dominant castes. The bulk of the people are deficient in the pugnacious instinct, they are patient and long suffering, have no taste for war, and in China especially, they despise the military virtues.... Among these peoples Buddhism, the religion of peace, found a congenial home, and its precepts have governed the practice of great masses of men in a very real manner, which contrasts strongly with the formal acceptance and practical neglect of the peaceful precepts of their religion that has always characterized the Christian peoples of western Europe."—Mr. McDougall's *Social Psychology*, 2nd edition, pp. 291 and 292.

As said before, in the present circumstances of society, war has become a necessity. Society tries to be static. But there can be no progress if it remains in that condition. It must be dynamic. It is war which makes it so, since it brings about revolution, which is rapid evolution. It contributes also to the preservation of the higher type of humanity by infusion of

new blood into the veins of the conquered.

One of the objections of Arjuna against fighting was that after the death of the warriors, their women-folk would go astray, thus producing a progeny of mixed peoples or half-castes. Shri Krishna did not say anything against it, because this is the natural sequence of war.

Professor Giddings in his "Principles of Sociology" writes:—

"The first effect of conquest is secondary civilization and a more varied demotic composition."

"The secondary civilization in the evolution of tribal societies is one that brings aggregations of racially related groups into such contact with populations of a different race or sub-race, that social and demotic amalgamation are inevitable. The evidences are inexhaustible that the great historical peoples were created by the superposition of races or sub-races."

"Ancient and modern examples from every part of the world show not only that groups of the same stock that become socially integrated accept intermarriage as one of the implied consequences, but also that conquering tribes seldom exterminate the conquered. The women especially are saved, and as slaves, concubines, or wives bear children of mixed blood. Now large a proportion of the total population of a State may have had this origin in ancient times is indicated in the command to the Israelites on the eve of the battle with the Midianites: 'Now therefore kill every male among the little ones, and kill every woman that hath known man by lying with him. But all the women children that have not known man by lying with him, keep alive for yourselves,' and by the subsequent record that the prey over and above the booty which the men of war took, included thirty and two thousand persons in all, of the women that had not known man by lying with him."†

The Muhammadan conquest of Christian countries bordering the Mediterranean Sea, was effected by the confiscation of women. Writes Draper, in his "Conflict between Religion and Science" (pp. 100-101), that

"It was the institution of polygamy, based upon the confiscation of the women in the vanquished countries, that secured for ever the Mohammedan rule. The children of these unions glories in their descent from their conquering fathers. No better proof can be given of the efficacy of this policy than that which is furnished by North Africa. The irresistible effect of polygamy in consolidating the new order of things was very striking. In little more than a generation, the Khalif was informed by his officers that the tribute must cease, all the children born in that region were Mohammedans, and all spoke Arabic."

Close inter-breeding is not good for

* Numbers XXVI, 17, 18.

† Ibid, 32—35

man or any living creature. Writes Giddings in the work referred to above:

'There is also reason to believe that without some intermingling of unlike elements and occasional inter-breeding, the line of descent would end through physiological degeneration.

Cultures of no less than twenty different species of infusoria, made with extreme care by E. Mupas, of Algeria, were maintained during periods of time varying in different cases from two weeks to between four and five months. He found that after from fifty to one hundred generations had been produced by fission there was clear evidence of a physiological decline, which seemed to indicate the approaching extinction of the culture. He withdrew some of the infusoria from the culture and allowed them to mix with others of a different origin. With these they conjugated, and their full vigour seemed restored. If on the other hand, they conjugated among themselves observation showed that decline was so far advanced that the culture was doomed. The evidence that close inter-breeding is injurious to animals and to men is familiar and is generally accepted as conclusive' (*Principles of Sociology*, pp 95-96)

War by putting a stop to this close inter-breeding for some time proves beneficial to the human race

'Necessity is the mother of inventions.' Some of the most useful inventions have come into existence during wars. The preparation of sugar from the beet root and the manufacture of margarine are the most notable instances to mention.

War is the best teacher of conservation the world has known. It abolishes luxury and shows the necessity of plain living and high thinking.

In the present stage of society, war becomes a necessity. It is an evil, but it is a necessary evil. We find peace brings tyranny and oppression on a subject race. It creates luxury and voluptuousness. Hence deterioration takes place†

* Gardner, "Weismann and Mupas on the Origin of Death." Biological Lectures delivered at the Marine Biological Laboratory of Woods' Hole 1890, p. 121.

† Civilization consists of certain means or instruments (material and intellectual) for human well-being, and these means or instruments are capable of being inherited in the legal or social not in the biological sense of inheritance. Civilization is not evil in itself, but because its products are unequally distributed and so unequally used. Again, the mere fact of social inheritance whilst aiding enormously the advance of humanity is attended in it the possibility of danger. It implies to a very great extent a cessation of natural selection. Thus, what is in many respects a highly civilized race may become more and more physically enfeebled, till it falls a prey to internal

The modern Christian nations, though professing to be humane in war, do not observe it as a rule in actual warfare. The outspokenness of some of the German military men and philosophers is much to be commended. Thus one General V Hartmann writes —

It is a gratuitous illusion to suppose that modern war does not demand far more brutality, far more violence and an action far more general than was formerly the case.

The enemy State must not be spared the want and wretchedness of war these are particularly useful in shattering its energy and subduing its will.

The philosopher F. Nietzsche writes —

That the lambs should fear a grudge against the great birds of prey is in no way surprising but that is no reason why we should blame the great birds of prey for picking up the lambs. To demand of strength that it should not be a will for overcoming for overthrowing, for mastery a thirst for enemies for struggles and triumphs, is as absurd as to demand of weakness that it should manifest itself as strength.

Again, in another place, he says —

We believe that (man's) Will to Life had to be intensified into unconditional Will to Power, we hold that hardness, violence, slavery, danger in the street and in the heart, secrecy, stoicism, arts of temptation and devilry of all kinds, that everything evil, terrible, tyrannical, wild-beast-like and serpent-like in man contributes to the elevation of the species just as much as its opposite — and in saying this we do not even say enough.

Another German author writes —

Whoever enters upon a war in future will do well to look only to his own interests and pay no heed to any so-called international law. He will do well to act without consideration and without scruple. In the days of old, conquered peoples were completely annihilated. To-day this is physically impracticable but one can imagine conditions which should approach very closely to total destruction.

The Germans are a philosophical race and hence it seems they are not proficient in the art of duplicity which goes by the name of 'occidental diplomacy'. The author of 'European Morals' has said that

A disinterested love of truth can hardly co-exist with a strong political spirit. The object of the politician is expediency that of the philosopher search after truth.

The German philosophers and writers

degeneration, and to the attack of some rudely equipped but vigorous barbarian invaders. Peace is generally accounted a blessing and is usually lauded by those who preach the return to nature, but peace means a cessation of natural selection and consequent decay in the average physique." Ritchie's *Natural Rights* 1 p. 39-40

quoted above have spoken the naked truth as to how wars are, and ought to be, conducted by Christian nations. It is, therefore, that their outspokenness is to be commended.

That no humanity is shown to their enemies by any Christian people was admitted by General Dyer in his evidence before the Hunter Committee. That gallant Christian General felt no scruple in massacring several hundreds of non-Christian and unarmed men of all ages in cold blood and did not give them any aid; for, in his words, "that was not his job; they were treated like rebels and enemies."

No nation excels the Hindus in the exhibition of humanity to their enemies in war. The Mahabharata especially deals with the manner in which the fallen foe should be treated and magnanimity to be shown to the vanquished and conquered peoples. Bhishma said that a king should never slay a larger proportion of the enemy's army than necessary. He advised moderation in war. That Bhishma's advice was practised by the Hindus is borne testimony to by Megasthenes and other foreign travellers to India.

But wars in the future will be more cruel and inhuman than they have been in the past. In *Causes of International War* published in the Swarthmore International Handbooks, Mr. G. Lowes Dickinson writes that "modern war makes no distinctions of civilian or soldier, age or sex" (p. 73). In a foot-note on the same page, it is stated that

"It is generally agreed that air-raids on cities will be a principal feature of the next war. And air-raids do not select for slaughter soldiers or male adults."

He says that

"The next war (inevitable of course) is to open with attacks not against the enemy's army, but against the civil population, in order to compel it to accept the will of the attacker. Chivalry, mercy, a fair fight, all the apparatus of romance which still does duty among school boys, and is still served up, on occasion, in literature, or the cinema, or the press, all this the modern soldier knows to be non-sense.... He knows that victory will be to the most unscrupulous, the most pitiless, and the most ingenious."

Hence, thoughtful men of all Christian countries of the West in whom the instinct of Humanity has not become extinct, are proposing schemes to put a stop to all wars in the future. This is the genesis of the League of Nations.

But nothing will put a stop to war unless there is a "change of heart." The causes

which are responsible for wars should, as far as possible, be removed.

There should be "the will to peace." It has been also suggested that

"If every great Power will look at the problems from the point of view of humanity, they are soluble." (*Round Table*, No. 20, p. 792.)

Professor Forster writes in the *Hilbert Journal* for October 1916 (p. 35) that

"Humanity has reached a point at which mutual completion, co-operation, education, of the nations is essential. No nation can solve its own problems without the aid of the traditions of foreign nations. France needs Germany, and Germany France. Germany needs the spirit of the Slavs, and the Slavs need that of Germany. England needs Germany, and Germany England. The individual nations are no less necessary to one another for their spiritual completion than are the two sexes. Without such higher companionship both nations and souls must be ruined by their own one-sidedness."

But it seems that the colourless peoples do not require the aid of the coloured peoples for their "higher companionship." Hence their perpetual wars on the latter and against which no Christian nation raises even its little finger in protest. Writes Mr. Dickinson in the work already laid under contribution above:

"The raw materials lie very largely in Africa and Asia. The cheap labour is on the spot, once the natives have been turned off the land and prevented from living in any other way than by working at a nominal wage for white masters. The markets are where the natives are, if a demand can be created. Driven by these impulses, the principal European states, especially since the eighties of the last century, have been annexing enormous tracts in Africa and Asia. The consequences of this policy to the native populations belong to another discussion." (p. 50.)

"Native populations, driven off the land and sufficiently taxed, may be compelled to give their labour at very low rates. They may possibly even be induced to 'demand' European manufactured goods, and to abandon their own handicrafts. We should expect, therefore, to find that schemes of expansion are favoured not only by soldiers and imperialistic politicians, but by business interests." (p. 78.)

"The trouble of course, is that this expansion cannot take place without war. It implies, first war upon the natives. For however cunningly they may have been deceived into the grant of concessions, the time comes when the mask must be thrown off, and it must be made plain to them that they are to lose their lands, to abandon their traditional way of life and to become workers in a semi-servile condition under white masters.... These native wars, after all, do not cost much, except to the natives, and if that were all it might plausibly be maintained that empire pays. Unfortunately, all states are playing the same game...." (p. 79)

Because the exploitation, enslavement and extermination of non-Christian coloured peoples by the colourless Christian nations pays them co-religionists, therefore, 'war upon the natives' are looked upon as processes of civilization.

Mr Dickinson has devoted a chapter to "Remedies", in which he has given sound advice as to how to put down wars. He says very rightly:

'If ever there were a people who might fairly be accused of making a idol for world dominion that people is the British. Now let it be clearly understood, the continued expansion of the British Empire is incompatible with the peace of the world. For it can only be expanded at the cost of other Empires that is by war. If a League of Nations is to be a reality the ideal of Empire must disappear, and its place be taken by the opposite ideal—the peaceful co-operation of all states and nations in the interests of a common world-civilization.' (P 102)

He concludes that chapter by saying that the workers for peace

"must treat war as a problem not an axiom, a catastrophe not a glory, a disease to diagnose not an achievement to idealise. The way is laborious and difficult. But there is no other." (P 103)

Institutions exist in all Christian lands for giving instructions in the science and art of war. But there are no seminars for showing the way to maintain peace. Mr George Young, in *Diplomacy Old and New*, published in the *Swarthmore International Handbook*, writes:

We have military schools of every sort for the study of the art of war-making and of the science of war in foreign relations. We gladly pay large sums for such education of military experts as an insurance against defeat in war and an investment in victory. Even our universities have schools of military science and history. But we have made no educational provision whatever for the study of the art and science of peace. We have established no educational insurance against war itself. (P 96.)

There are men in every Christian State in the West who have vested interests in war—there are soldiers, sailors, and manufacturers of armament and other military accessories. It is their whose interest is to promote war. But it is the interest of the taxpayers to maintain peace. So in future as democracy gets established, people will think more of peace than of war for war degrades Humanity.

HIS EXCELLENCY'S SPECIAL

By RABINDRA NATH MAITRA

IT was noon-tide in January. Squatting in the courtyard with his bare back to the sun, Benu Sardar, the village Choudidar or watchman, was just beginning to start his midday meal with a heap of pancakes in a stone platter before him. His wife Biraj stood in front of him—her coloured apron-towel, wet and wrung, was placed over her head and shoulders and slightly pulled forward like a not too low wimple, and in her hand she had a wooden bowl of cakes. Just then came a call. "Friend Sardar, do come out once."

Benu was about to rise when he heard the voice of the Duffadar (for it was his superior officer calling), but Biraj cried out at once—"Do eat the mouthful you were just going to take."

"I shan't have enough if I took a couple of them, my dear Biraj, just wait here, I'll be back in a minute."

Benu washed his hand, rose and came out.

After about ten minutes Benu came back and said in tones of resignation, "Biraj it is not in my luck to eat any more pancakes made by you. Now, give me my turban. I'll have to go out again immediately."

"What burnt-faced fellow has got his face scorched again at this time of midday, that you must go?" said Biraj.

"You are a misdeed darling! now, don't talk loud. The *Lal Sahib's* train will be passing, and we must go on guard duty. Now, give me my turban. Do wait a bit, Brother Duffadar! I'll just tie my turban round my head and join you," Benu said, looking towards the street door.

The reply came from outside—"Hurry up please, Friend Sardar! Twelve clear miles, we shall have to tramp, you know!"

When he had fixed his turban, Benu stood

in front of her husband with two of the pancakes in her hand, and in pleading tones said, "On my head, do gulp down only these two and wash them down with a good drink of water from the *loti*. You remember, the other day too I had prepared some, but you could not eat, you went away to watch over some deadbody somewhere. And to-day—"

"I shan't be able to walk if I ate them now, Biraj. As soon as we pass the train in the evening, I shall be back within the first watch of the night. You keep some water heating on the oven; and go and keep the cakes well-covered." While he said this he cast a hungry look on the pile of cakes, and then took his staff in his hand,—and out went Benu the watchman.

So she could not sit beside her husband and serve him with this most favourite dish of his for which he had been longing for many a day, although she had tried to do it on numerous occasions. Biraj gathered up the cakes and put them away carefully, and wiped her eyes with her towel.

Benu in this way could somehow get over the obstacle in the home, but on the road another obstacle presented itself. His seven year old boy Monai was shaking his fishing rod beside a puddle, shallow and dark with overshadowing trees, and was trying to catch small fry. Every day at noon this was a regular pastime of his. Benu was walking very lightly to avoid his sight, but he did not succeed in escaping little Monai. He had seen his father's blue turban from a distance, but as he had feared that his father would go away by some other way he did not show any fidgeting in his manner. As soon as Benu came close enough with careful steps, Monai throw away his rod, and at once bound he was up on the middle of the road, and caught hold of the edge of his father's tunic tightly in his fist, and said, "Where are you going, daddy?" Benu felt himself in an awkward situation. If he said the truth his son would cry to go with him. He thought a bit and said, "I am going to the Kalitala common."

The only place in the world of which Monai was afraid was this Kalitala common, where they held the annual village festival. Through some inexplicable line of argument the idea had got into his child's brain that the Kalitala field was the camping ground of all the ghosts and spirits of the world. So when he heard the name of that place he

moved back one step through fear, and said earnestly—"You must come back before it is evening, father, do you hear?"

Seeing his child's frightened look Benu said, "Yes, Monai, I shall be back before evening; you go home." Then he was going to stretch both his hands to lift his boy up as high as his chest, wishing to kiss him, when the *Duffadar* cried out from behind, "Friend Sardar, pray don't stand on the road and be late, the sun is already on the downward path."

So seeing no other way poor Benu leaned his head and gave a hasty kiss upon his son's cheek, and said, "Go home, Monai, your mother is waiting for you with the cakes." When he heard about the cakes he picked up his fishing rod and without a word took the way home; and after going a little distance he put his face out from behind a rattan bush at the turning of the lane and advised his father for the second time to be very sure about returning home by evening.

[2]

The very short-lighted hours of the close of a winter's day were finished long ago. At every forty cubits a watchman was waiting for His Excellency's Special, standing with his staff on his shoulder and shivering with cold in the keen air of the open land—they were called watchmen, but each of them was after all a human being. The time for the train to pass was evening, but the first watch of the night was over, and yet no train came. Benu became impatient. With the eye of imagination he could see that by that time Biraj had nicely piled up the pancakes on the stone platter and had lighted the lamp and was waiting for him. Benu asked, "Brother *Duffadar*, what about the train?"

The *Duffadar* himself was getting angry, he said "I have come just to carry out orders of their lordships, our masters; they told us from the police outpost that the train would pass in the evening, and now it is first watch of the night; and I have not brought my rag quilt either!" The *Duffadar* took his turban off from his head and wrapped it round his body like a shawl. The cold was gradually becoming more and more cruel.

As a matter of fact, the departure of the train was delayed by some five hours, but the news did not reach the *Choukidars* of the village.

The *Rangoli* pictures exhibited at the last Sri Maha Mandal Exhibition, Bombay, by Lalavati M. Desai, the talented wife of Mr. Mangaldas Desai, Bar-at-law, evoked much appreciation, and she was awarded two gold and one silver medal for her drawings. Her embroidery in silk was an exquisite piece of art and looked more like a painting than a figure in silk-threads. *Rangoli* has hitherto confined itself to pure decorative motifs, and the introduction of human studies in these examples is a new departure. We reproduce here three speci-

mens of Mrs. Desai's work exhibited recently. The vehicle is powdered chalk of different colours, and the floor serves the purpose of canvas. It will be seen that Mrs. Desai takes her models from Halder and Chughtai. Though executed in large size in coloured powder on the floor, they looked like paintings. Our plates do not quite truly represent the real work, as pictures on floor do not present true perspective to the photographic camera. They will, however, give our readers some idea of the high merit of the original.

It is a happy sign of the times, that a certain section of India's womanhood has realized the importance of making the lives of their sisters happier, more hopeful and more useful. A large number of *Mahila Samitis* (or Women's Associations) have sprung up, not only in the different districts of Bengal, but in other provinces also, under the auspices of the Suroj Nalini Dutt Memorial Association located in Calcutta.

Radharani Sanyal, Secretary, Rajshahi
Mahila Samiti

Kunita Mahila Samiti

They appeal mainly to our middle-class women, and aim at general education, the encouragement of cottage industries, the manufacture of handicrafts, the teaching of midwifery, etc., as well as the performance of social work of a useful kind. Lectures on useful subjects are delivered from time to

THE YUGOSLAVIAN CRISIS

By N. N. GHOSH, M. A., L. T.

A constitutional crisis of first class political importance has arisen in Yugoslavia. King Alexander has suspended the constitution, dissolved the chamber (Narodna Skupstina) and assumed the executive and legislative powers in that country. (Renter,

Belgrade, January 6) These powers will be henceforth functioned by a Prime Minister appointed by and responsible to the King. The Premier chosen is General Peter Liskovitz, commander of the royal guard. It will not be a matter of surprise if this military man,

INDIAN PERIODICALS

Calcutta's Place in Modern India

In *The Calcutta Municipal Gazette* (Christmas Number which ought from its contents to be called the Congress Number) Mr Bipin Chandra Pal in an illuminating paper 'Calcutta and the Cultural Evolution of Modern India,' discusses the place of Calcutta in the life of Modern India. Mr Pal prefaces his paper with the famous observation of Mr Gokhale, 'What Bengal thinks, to-day all India thinks to-morrow' and remarks that the position of Calcutta is due to 'the peculiar genius of the Bengalee people and the inspiration of the Bengalee leaders of thought of the last century.' Mr Pal is, however, modest and reasonable in his claims.

In claiming, however, a distinct character and type for the Bengalee mind and thought no pretension to superiority over the mind and thought of the other Indian provinces is set up. As Bengal has its distinctive cultural type so have also the other Indian provinces. The contributions of the other Indian provinces to the cultural revival and evolution of Modern India are therefore not ignored in claiming a place for Calcutta and Bengal in this great work of Indian reconstruction. At the same time the dominating factor in this revival and evolution has been our contact with modern European thought and culture. This also cannot be denied. And it is here that we discover the worth and significance of Calcutta's contribution to our present national evolution.

English education and British administration brought about certain developments in Bengal that were not produced by these agencies in the other Indian provinces. The psychology of this phenomenon has not as yet been carefully considered and its cultural value properly assessed. The message of modern European culture has been essentially a message of Freedom and Humanity. And hence by the strange fascination of this message to the Bengalee mind on account of its original instinct and genius of this very Freedom and Humanity. This is why the Bengalee came in conflict with modern European thought and culture threw himself into this new light for Freedom and Humanity with an abandon not seen in the other Indian provinces. And Bengal's loyalty to the new ideals of modern thought and culture helped her to a position of leadership in the cultural evolution of India during the last hundred years and more. Other provinces developed more wide and accurate scholarship, some developed their inherited genius of practical statesmanship but the idealism and the central thought-force of modern cultural evolution of India received their greatest

contribution and strength from the leaders of Bengalee thought and culture. And Calcutta culturally has meant Bengal for the last 150 years of British rule in this country in the same way and in the same sense as London means Great Britain or Paris means France.

The leaders of thought and the course of the different thought movements beginning from Raja Rammohun Roy and ending with the Renaissance of Indian Art of the Bengal School are then surveyed by the writer. Calcutta, it is a fact, is Bengal so far as our intellectual life goes though Calcutta always draws on the provinces to the purpose.

Christian Message and Non-Christian Religions

Dr George Howells considers the above topic in *The Singapore College Magazine* in the light of the finding of the Jerusalem Conference and is of opinion that a new turn in Christian Missions is indicated by them. The writer notes at least three distinct points in his support.

(1) We have to recognize that increasingly it is coming to be realized in Christian circles that there is justification for the term A Testament of Religions and that we must approach non-Christian systems in the humble spirit of fellow-journeys, rather than with the one desire to refute and overthrow. On our part says the Report of the Jerusalem Conference we would repudiate any symptoms of a religious imperialism that would desire to impose beliefs and practices on others in order to manage their souls in their supposed interests. We obey a God who respects our wills and we desire to respect those of others.

(2) From the standpoint of the Jerusalem Conference it needs to be noted that ambassadors of Christ need to be more concerned with bearing with them the Christian life than even bearing the Christian message. The first volume of the Jerusalem report is entitled The Christian Life and Message in relation to non-Christian systems. This emphasis on life is surely rightly placed.

(3) To approach more closely the subject of our discussion, Christian thinkers of to-day are in increasing numbers gladly and ungrudgingly recognizing the spiritual values in other systems, and the following passage in the Jerusalem report is particularly significant in that direction. We recognize as part of the one Truth that sense of the majesty of God and the consequent reverence in worship, which are conspicuous in Islam, the deep

After giving a rapid but informative survey of the first epoch, Mr. Kavi observes:

In course of time want of study compelled them to seek new paths current in different countries which greatly differed from the methods of the great sages. Thus a sort of gulf was created between theory and practice of music. As time went on the gulf became wider and wider. The musical authors from the 10th century onwards as far as we examined, profess to reconcile theory and practice and invent new forms of *Vina* to introduce new methods. This went on till the 17th century. About the 16th century when the kingdoms of the *Chautukyas*, *Bhallalas*, *Kalatis*, the *Reddis* and the *Velamas*, who one and all maintained musical courts and patronized histrionics passed away, the greatness of Vijayanagar especially Krishnaraya's reign entirely altered the old system of music in every branch namely *raga*, *tala*, *prabandha* etc. They were the pioneers to introduce the 72 *melakaritas* and to increase frets on the *Vinas*. Since then the modern music especially of Karnata kind received its full development at the hands of Raghunatha Naik of Tanjore and his son Vijayaraghava in 17th century and Muddalagiri of Madura and Rayaragbunatha of Pudukotah subsequently. The impetus given by those courts resulted in the forthcoming of great scholars famous for vocal singing and for playing on *Vina* and flute.

Before this change was effected from about 1550 A. D. the ancient methods and the instruments survived.

Mr. Kavi seems not to have devoted so much attention to the Northern Indian style of music, which through various influences had a very high development though not on pure old lines as Dakshini music.

and saying—no more rationing can be permitted. The Bombay Legislative Council should have something to say on that decision. The Madras Government has thrown overboard a pious resolution passed some time ago that Government should introduce Prohibition in 20 years and the only possible explanation is—the financial difficulty. In this connection it is significant to remember that in the United States of America one million pounds Excise Revenue was lost in the first year of the dry law. Yet the Treasury received two hundred and fifty millions more revenue than in the previous year.

Sanskrit and Science in Secondary Schools of Bengal

The Teachers' Journal, in discussing the New Syllabus approved of by the Government for coming into force from January 1, 1931 in the Secondary Schools of Bengal, writes:

In the Draft Syllabus issued by the Government last year Sanskrit was shown to be an optional subject but in the final Syllabus issued now it has been declared to be a compulsory subject. If the Ministry of Education has, in the mean time, decided to retain Sanskrit as a compulsory subject turning down the resolution of the Senate on this subject it ought to have informed the University its decision before publicly announcing the same in the Calcutta Gazette. We believe by this action scant respect has been shown to the Senate of the Calcutta University. There is a large volume of opinion in the country demanding the retention of classical language as a compulsory subject and an equally large body opposing its compulsory place in the curriculum. Government itself has shown its indecision of mind on the matter by keeping Sanskrit optional in the present Revised Syllabus for the girl candidates in the Matriculation. Decision on such an important matter should not have been announced from the back door as it has been done in the present instance.

Then again Science has been made an optional subject and grouped with Drawing. We deplore very much the decision of the government making Science an optional subject. All talk talks for the modernization of the Syllabus have thus ended in a fiasco. The Ministry of Education may congratulate itself on its fine achievement but all thoughtful loving the good of the country at heart will pass a different verdict.

Science should be made compulsory, but Sanskrit has been rightly placed on the compulsory subject list.

Keshub Chandra Sen and Religious Harmony

In *Welfare* January 12, Sir Nilatan Sircar thus begins an illuminating study on Keshub Chandra Sen and his contribution towards harmonising of religions:

The world's prophets like the world's scriptures

for fuel, and the still worse tragedy of bringing into the world children regardless of considerations for their own health much less for leisure. A lady superintendent of women's work was appointed, the system of co-education was introduced in rural schools, parents were induced to send girls to school along with boys. And a school of domestic economy was started to train up school mistresses. The school mistresses and others trained in this school of domestic economy were imparted instruction in other aspects of rural life besides education and have turned out to be counter-parts of village guides, for attending to village uplift work among women.

Indian Life in Malaya

In response to a request for a message Mr. Abdoolcader M. L. C., the Indian representative there, writes to *The Indian* (Singapore):

I do not think I can give a better "message" to my compatriots than to ask them to live up to the ancient traditions of Hindustan. As worthy sons of a worthy land, they have come here as if by divine pre-ordination. They have, therefore, certain moral obligations to discharge to this place. In the past they have worthily discharged those obligations; they have contributed their quota towards the social and economic labours of the colony. I have no doubt that they will continue to exert their efforts towards yet further achievements; but my request to them now is to lead a more co-ordinated and consolidated life. They should strengthen their positions here by laying foundations deep and wide; they should have permanent stakes in the country; in short they should identify themselves with the interests of the colony.

Some idea about 'Indian Life in Malaya' may be gathered from the following account of V. Sivaraman in the same journal—

The life led by the Indian immigrant in Malaya is really much better than what it would have been in India. His earnings are more and, as a result he enjoys life better. The prosperity is all on the superficial side, and if one really cares to analyze it, the demoralizing tendency behind cannot escape notice and emphasis.

The thousands of labourers, mostly of the lower classes, who are recruited from India, are scattered here throughout the whole peninsula, on the various estates. All credit is due to the Labour Department, for it takes scrupulous care to see that these labourers are provided with suitable housing accommodation, good water supply, and adequate medical relief. The planters are required to provide work at least for 20 days in the month. The minimum wages per day is 50 cents the equivalent in Indian coinage being roughly 13 annas. The labourer, if he is thrifty, and contented to lead the life that he would have to if he remained in India, can really put by something; and can remit from Rs. 7 to Rs. 15, to his relatives in India.

The life led by their more respectable brethren

in the towns, is not far removed from theirs. After being drunk, while these people sleep in the streets, their brethren sleep inside houses, that is all. In this class of people may be included the Indian washerman, barber, hawk, petty-trader, artisan etc.

The ordinary Indian clerk is paid here much better than he would be in India. He dresses himself more neatly, he puts on a much better appearance, and enjoys many luxuries of life. Being a little more educated than their brethren, the labourers, these clerks look upon themselves as leaders of the Indian public opinion. They form themselves into clubs, and associations, go to those places in the evenings, read papers, play tennis and enjoy a game of cards or billiards. Though this is the outside life of the clubs, the atmosphere within is found to be full of petty quarrels and jealousies. There are at least two rival parties in almost every association. There is hardly any house of a kerani (clerk) here that does not consume either brandy or beer.

India should not suffer us to wither away here without ideals of life.

Fodder Problem

M. G. Rama Rao suggests a fodder enquiry in *The Journal of the Mysore Agricultural and Experimental Union*. The lines indicated by the writer are:

(1) Bringing together all the facts known about the famines in Mysore with a view to locate the areas which are prone to famine conditions, the manner in which the situation was dealt with, the expenditure involved and the results.

(2) Preparation of detailed meteorological maps to show the areas having the same amount of rainfall and similar weather conditions.

(3) A grass and herbage survey of areas in the State.

(4) A survey of edible forest leaves and fruits.

(5) Introduction of drought-resisting fodder-plants from foreign lands and testing them in typical localities.

(6) Forest Nurseries and Seed Depots to supply seeds and plants useful for fodder.

(7) Opening of plantations of edible forest trees in the dry tracts of the State. (Every village may have its *gomat* lands planted. This may be entrusted to the Village Panchayats.)

(8) Opening up slo-pits and stocking fodder in compressed bales in reserved forests.

(9) Examination of the feeding values of various plants and fodders under investigation.

The recommendations apply to the conditions of all British Indian Provinces as well.

Spirit of a National School

Mr. T. L. Vaswani, in drawing attention to Sogoli Eanna—a National School—of the Irish patriot Padric Pearse, writes in *The Scholar* in his inspiring style:

quoted in *The Times* of 29th November: "Our real problem in India is not political. It is social. How, then, can we think that our work is to build a political miracle of freedom upon the quicksand of social slavery?"

Malaria Control in Bengal

The following appeared in a recent issue of *The Lancet*:

Birnagar or Ula, credited with being the place whence spread the disastrous malaria epidemic of 1856, is one of those half derelict towns so frequent in the upper Gangetic delta, with a population of 2,300 in place of 40,000 of 70 years ago before malaria, speaking without metaphor, laid it waste. Five years ago some inhabitants, stung by the position, formed a local public health society, whose keen honorary secretary has just issued one of his periodical reports (Malaria Control at Birnagar, 1927. By Krishnasekhar Bose). Funds are supplied by considerable private subscriptions, by a substantial grant from the Bengal Government, and by a large gift of quinine from its Director of Public Health. The anti-malarial measures used have been the oiling of anopheline breeding places and a wide administration of quinine. The difficulties encountered in this private enterprise have been those familiar when such campaigns have been attempted in India by Government officers. There has been some stubborn opposition to oiling, two and a half out of eight and a half miles of water edge in the small area actually covered having had to be left unprotected. These untreated tanks have bred larvae profusely, and it is significant that while the municipal authority has contributed generously to the funds of the society, the municipal tank is not one of those which the society has been permitted to oil. Some of the observations made have a wide applicability. The washing of muddy water into tanks, was followed by destruction of all larvae, breeding recommencing immediately as it settled and cleared. While, apart from this, mosquitoes bred continuously they did not torment human beings during dry weather, but as soon as rain fell entered houses and bit, while the malaria-rate rose after the usual interval. It is believed that in dry weather the insects remained inactive in the all-embracing jungle, and that this is also the explanation of the immediate but temporary influx of mosquitoes into houses when neighbouring jungle is felled. Such clearance has been begun with sale of wood and cultivation of land, but permission for further clearance is being withheld by owners. It is felt that the determination of the mosquito species most implicated locally in transmitting malaria requires more expert knowledge than is available on the spot, but it is, after all, improbable that the ungrudging co-operation of the Bengal Malaria Research Laboratory, already afforded in identifying larvae, will not be extended to the dissection of mosquitoes locally collected, a subject particularly appropria. It is believed, too, that the local campaign should be merged in a wider one to be undertaken, the writer

suggests, by the District Board. If certain indications in the report are read aright it is questionable whether anything will replace adequately an enthusiastic local patriotism.

Should Married Women Work for Money

The Literary Digest summarizes a discussion that has been going on in the British Press regarding this very interesting and controversial question:

"A man ought to be doing your work and supporting you out of it," said an old lady reprovingly to a young married woman in London, who was earning a salary of her own. We can imagine the old lady's look—and the look, too, that she got in return! "You mean," retorted the young woman, "that he would get my salary, and give me a very small fraction of it back, if he were generous, for working in the home." These remarks are quoted in the London *Daily Express* by an English writer of fiction, May Edginton, who in a debate as to whether married women should work, declares that the question is not merely whether they should work, but rather whether they should do paid work, because "every generation of women has been allowed to work for nothing or for very little pay, freely and without criticism." It is declared that the strictly logical and just answer to this question is that married women have a right to work even if they are well paid. They may wish to work in office, shop, bank, or surgery, and their husbands and families may find it pleasant and beneficial that they do so. Modern woman, we are told, can usually look back and see behind her among the older generation quite a number of financially unhappy marriages, or marriages where the wife's money, when she had inherited any, has been lost in foolish business ventures by the husband, or marriages which have resulted in unequipped widows being left stranded and unprovided for.

In total disagreement with May Edginton is another English woman writer of fiction, Ethel Mannin, who holds that the married woman who works for pay is an enemy of society. She charges that married women have not the right to earn the money to help make the home more comfortable and give the children a better education. Miss Mannin gives as a reason for this argument the statement that none of us who avail ourselves of the advantages of civilized society has the right to obtain luxuries even of the smallest kind at the expense of the necessities of life of some other member of society.

Bernard Shaw Interviewed

When Bernard Shaw went to Geneva, he was continually surrounded by journalists seeking an interview. But, we are told by a contributor to the *Living Age*, having once refused the Nobel Prize, he puts an extremely high price on an interview. Under no circumstances will he give a lecture. But the International Students' Union was fortunate enough to capture him through an

the new Constitution for India which has been widely accepted as the national demand, to exclude religion from their concern and apply themselves to the task of establishing a secular state. One group among the young political leaders, with Pandit Jawaharlal Nehru as their spokesman, have definitely set before themselves as one of their aims, 'to free India from the grip of religion.'

British Cabinet Split on the Eve of the Great War

Professor Sidney B. Fay, the well-known American historian, and author of the latest book on the origins of the World War, summarizing for the *Current History* the recently published memorandum of Lord Morley on the circumstances which led to Great Britain's entry into the war observes:

In all the literature of the World War origins, no memoir perhaps is more profoundly moving than the memorandum of Lord Morley, entitled "On the Eve of the Catastrophe." For brevity, sincerity, nobility of thought and expression and stern determination to follow the dictates of his own conscience rather than the dictates of office or public opinion, it has hardly a parallel. It records the mental anguish of a great soul forced by his own vision to part company with old friends whom he loved and revered. More than that, it reveals to the world what a few men have long known, but which none have publicly described in any detail—the seriousness of the split in the British Cabinet which was caused by Sir Edward Grey's long-standing "conversations" and moral obligations to Franco and which was preliminary to Great Britain's entrance into the war.

After which he proceeds to give a summary of the memorandum. When Grey and Asquith began to press the question of British attitude in the event of a war between Franco and Germany, in which the neutrality of Belgium might be threatened, the Cabinet split into two camps, Asquith, Grey, Churchill and Haldane on the one hand, and Lord Morley, John Burns, Lloyd George, Sir John Simon on the other.

Of his own conflicting emotions on this day Lord Morley writes:

"Two hours rumination at the club. Felt acutely what Mr. Gladstone had often told me, that a public man can have no graver responsibility than quitting a Cabinet on public grounds * * * involving relations for good or ill with other people, and possibly affecting besides all else the whole machinery of domestic government. * * *

The significance of the French Entente had been rather disingenuously played with both before the Cabinet and Parliament. * * * The Prime Minister and Grey had both of them assured the House of Commons that we had no engagements unknown to the country. Yet here we were confronted by engagements that were vast, indeed, because indefinite and indefinable. * * * Then the famous letter to Cambon of November, 1912, which we had extorted from Grey—what a singularly thin and deceptive document it was turning out to be!

I could not but be penetrated by the precipitancy of it all. What grounds for expecting that the ruinous waste and havoc of war would be repaid by peace on better terms than were already within reach of reason and persistent patience? When we counted our gains, what would they amount to, when reckoned against the ferocious hatred that would burn with inextinguishable fire, for a whole generation at least between two great communities better fitted to understand one another than any other pair in Europe? This moral devastation is a worse incident of war even than human carnage and all the other curses with which war lashes its victims and dupes. * * *

Grey after too long delay, had wisely and manfully posed the issue of the hour for his colleagues when he declared that we must now decide between intervention and neutrality, and that for neutrality he was not the man. Nor am I the man, I said to myself, to sit in the Council of War into which Campbell-Bannerman's Cabinet is to be transformed."

Then came the Cabinet meeting at 6-30 P. M. Grey reported his conversation with Campbell. Burns said he must go. As they got up from their chairs, Morley said to Asquith that he feared he, too, must go; but he consented to sleep on it. At midnight came a note from Asquith imploring him to think twice and thrice "before you take a step which impoverishes the Government, and leaves me stranded and almost alone." Mental anguish again held Morley by the throat. He paced his library and his garden, and then got into a motor to drive to Whitehall, but as he drove, all his doubts cleared away, and he sent the Prime Minister his final resignation.

"The old liberalism had done its work, and the time had come for openly changing imperial landmarks and extinguishing beacons that needed new luminants."

Roots of Imperialism

A contributor to the *New Republic* discusses Imperialism from the point of view of food production and population:

Analysis of the food-and-population problem

means a wider diffusion of prosperity. It makes thousands of wage-earners the recipients also of annual or monthly dividends. It enables them, through purchases of the partial-payment plan, to save and to accumulate for the inevitable rainy day.

"It is, perhaps, the best bulwark that we could erect in America against Communism and Bolshevism."

The Future of Oxford and Cambridge

M. Andre Maurois, the well known French writer speculates on the future of Oxford and Cambridge in the centenary number of the *Spectator*. After noting the opinion of some Englishmen who consider that the wonderful loveliness of these universities is a superfluous luxury and that the formation of an aristocracy, which is the real function of Oxford and Cambridge, has ceased to be necessary in a society which, whether we wish it or not, is becoming more and more democratic, comes to the conclusion that the hour of Oxford and Cambridge has not yet come, and for three reasons:

(a) It is not certain that the educational methods of Oxford and Cambridge do not turn out (even from the technical point of view) individuals as well adapted to modern conditions as do more modern methods. Some of the greatest discoveries in modern physics were made at the Cavendish Laboratory. A man like the Master of Trinity is deeply attached to the traditions of the University, but this does not prevent him from being one of the greatest of European scholars. Oxford and Cambridge have produced, and still produce, great economists and great statesmen. Possibly the future Labour Prime Minister is at the moment a Fellow of All Souls. Mr. Keynes is a Fellow of King's College; that does not prevent him from being a remarkable financial expert. Certainly it is permissible to argue that it is not the public school and University system which create Englishmen of genius, but rather that geniuses remain themselves in spite of such systems. But I do not think this would be true. The unusual excellence of English scientists during the nineteenth century is too striking for its origin not to be in the English educational system. It is possible that minds that are little specialized and allowed to develop in an unorthodox way retain more of their freedom and freshness. The average level of culture is higher in Continental Universities than at Oxford or

Cambridge, but culture of the highest quality is perhaps commoner in England. Now modern society cannot get on without a creative aristocracy of intellect. (b) Koyserling is absolutely right when he says that the aim of education in England is to form a ruling class, but I do not think this type of man, remarkable of his qualities of character rather than for his specialized knowledge, is less necessary to-day than formerly. I have yet to meet any man with the quality of leadership strongly developed in him who is in search of employment. The supply of rulers does not exceed the demand. If it be true that the Dominions prefer to choose their leaders from their own countrymen, it should be added that many persons of substance in the Dominions send their sons to Oxford or to Cambridge. Rhodes Scholarship will doubtless do much to confirm this custom. Even if the business world dominates more and more the social, even if the qualities required to direct a large industry become more necessary than those required for a Governor-General of Canada or a Viceroy of India, that is no reason to condemn the "ruling class." For nothing goes to show that this type is not very well adapted to industrial or commercial life. In all big businesses the head is a ruler rather than a technician. He must have about him many different experts, but to co-ordinate their work a man is required who is above all remarkable for qualities of character, of prudence, of courage, of fair play—that is to say for all the characteristics developed by the traditional education of the senior Universities. (c) There is no reason why a democracy (even a Socialist democracy) should be hostile to the old Universities. A son of a miner or textile worker may win a scholarship in them. Further, it is excellent that the wealth of these venerable institutions should enable scholars and wise men to live without financial cares or dependence on Governmental favour. The beauty of setting and the pride of those who dwell there in long and noble traditions, free them from envy and vexatious desires and provide them with the leisure to pursue an entirely disinterested culture.

What more can a man wish for than to live in one of these lovely Gothic colleges? What fortune could give him a more beautiful house, a pleasanter life, a more respected name? And it is good for a nation's spiritual and mental health that there should be in it a certain number of minds that are impartial and disinterested. A French writer, M. Julien Benda complains in *La Trahison des Clercs* of the betrayal of the modern world by intellectuals—in other words of the lack of independence so often induced by education. The reason for *la trahison des clercs* is not far to seek; it simply is that one must succeed in order to survive. Oxford and Cambridge assure to England a certain number of minds qui ne trahiront pas.

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sinhali, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

SOVIET RUSSIA: By Jawaharlal Nehru, Allahabad Law Journal Press, Rs. 3.

From the mass of propagandist literature and contradictory reports, it is very difficult for the ordinary reader to find out what the exact state of affairs in Soviet Russia is, not to speak of demagoguing about the success or failure of Bolshevism. And certainly "Soviet Russia" by Mr. Jawaharlal Nehru is not the book one should turn to either for a critical estimate of probably the greatest conscious practical application of a social philosophy that the world has ever seen, or for an accurate account from personal knowledge of what that application has entailed either in happiness or in misery. For it cannot be expected that such a study can be made from a brief visit that Mr. Nehru, accompanied by his wife and sister, paid to Moscow on the occasion of his tenth anniversary celebration in 1927. Indeed, to be fair to Mr. Nehru, he does not purport to do anything of the kind; and he has very aptly described his book as "random sketches and impressions."

The chapters on the theory of Bolshevism are rather summaries or paraphrases of the books obtainable in the market—the list of books given by Mr. Nehru is by the way, comprehensive and up-to-date and ought to be sufficient for the ordinary reader who wants to know something of the subject. Mr. Nehru is very favourably impressed by the practice of Bolshevism as manifested in the reforms introduced by the Soviet government—reforms in prison government, criminal law, education, agriculture, maternity benefits, marriage law and the like. But need one be a Bolshevik in order to be kind to the convicts in jail (even to the extent of providing them with radio sets), to abolish capital punishment (not of those who are opposed to Bolshevism, for in the opinion of the Bolsheviks they are anti-social!), to give some sort of education to the people, to

give pregnant women respite for four months in the year or to say that marriages must be registered?

The one great doctrine upon which Bolshevism takes its stand and about which Mr. Nehru is discreetly silent is the doctrine of the abolition of private ownership. We are left in the dark about what has happened to that doctrine in Soviet Russia. And one is inclined to question whether the happiness and the prosperity that Mr. Nehru saw was the result of Bolshevism pure and simple or of the new economic policy inaugurated under the dictatorship of Stalin, so recently denounced by Trotsky.

C.

THE LIFE OF SPACE: By Maurice Maeterlinck, Translated by Bernard Mall, George Allen and Unwin, 6s. net.

It was by one of those inexplicable freaks of popular fancy that, about a decade ago, one of the most abstruse problems of higher mathematics became the topic of conversation in fashionable drawing-rooms, and the name of Einstein became a mind aside, it may be said that the theory of relativity has brought about a fundamental change in human thought, and it would be strange if such a theory had not its effect upon philosophy. And in consequence we find that almost all the modern philosophers have got to say something or other about relativity. The fundamental change lies in the changed conception of Time and Space. And in this book, M. Maeterlinck accepting the conception of Time and Space as propounded by Einstein and discussion that would amply repay perusal.

M. Maeterlinck begins the enquiry by saying that "the problem of the fourth dimension is not that affects our actual life; it is a problem of the regions of our everyday life," and that although the

are not one, but are manifold according to the differences in our personality. The knowledge about this personal truth can never be solely through reason, but must be mostly through sympathy; to know it perfectly is the same as to be intimately related to it.

The personal relationship, in order to be real, has to seek out its own special path and find its idiomatic expression in the medium of its own language. But, generally speaking, in the name of religion our minds are moulded according to the one uniform sectarian standard prevalent in our own community. Therefore, with the exception of those who have rare spiritual gifts, the generality of men, without their knowing it, are godless. They are pious, but not religious; they have not the courage of faith, but the habit of conformity. Let me repeat here what I have said elsewhere, that "religion, like poetry is not a mere idea, but it is expression. The self-expression of God is in the endless variedness in creation, and our attitude towards the Infinite Being must also in its expression have a variedness of individuality, ceaseless and unending. Those sects which jealously build their boundaries with too rigid creeds excluding all spontaneous movement of the living spirit may keep hoarded their theology, but they kill religion.

When religion is in the complete possession of the sect and is made smooth to the level of the monotonous average, it becomes correct and comfortable, but loses the living modulations of art. For art is the expression of the universal through the individual, and religion in its outer aspect is the art of the human soul.

Religion is the expression of human aspirations seeking the fundamental unity of truth in the divine person of God. Whereas sectarianism uses religion itself to create disunion among men, sharpening its sword for the killing of brothers as a part of the ritual of the Father's worship. Sectarianism is the dangerous form of worldliness that claims exclusive right to spiritual illumination within its own narrow enclosure, and in the name of God refuses recognition to God himself where He is for all.

The history of man is the history of the building up of a human universe, as has been proved by the fact that everything great in human activity inevitably belongs to all humanity. And we may be sure that all our religious experiences and expressions are building up from the depth of the ages one great continent of religions on which man's soul is to win its prosperity through the universal commerce of spiritual life.

The Farm-house—by Ethelbert White

without employment. The number of petty shop-keepers is also on the increase, and though it is true that most of the trade of the country is in the hands of the Indians, nevertheless they are poor and unhappy owing to such keen competition among themselves as would leave no margin of profits for themselves, and in some cases they are forced into bankruptcy. This clearly suggests that neither clerks and artisans nor petty merchants are required in Tanganyika. The country wants capitalists who can take themselves to agriculture and farming, which are the real sources of its wealth."

Mr. Andrews' Trip to the West India

Mr. C. F. Andrews writes from Geneva:—

"I cannot tell you how anxiously I am looking forward to my visit to Trinidad and British Guiana. As you know, it is practically the only part of the world where Indians are residing to which I have not already gone and in which I am not already known. I feel also that it is a hopeful part of the world if the right solution can be found for the difficulties that are there. I have placed the whole stress upon the necessity of a convenient and frequent steamer service which should carry intermediate passengers, each family having a small cabin for themselves and not being obliged to sleep and lie on the open deck. Such steamers, if they came by way of Natal and Mauritius to Madras and Calcutta, could do a great deal to link all these groups of Indian people together and there might be quite a frequent coming and going of men and women and families which would keep India in touch with her own Indian colonies overseas and keep Indians overseas in touch with the motherland itself."

Mr. Andrews has hit upon the right point and if his suggestion is carried out, there can be no doubt that it will establish closer relations between India and her children in the West Indies.

Continuing Mr. Andrews says:—

"I am going to stay in America for a short time in order to study, very carefully indeed, the Negro problem before going forward to British Guiana. As you know, I am profoundly interested not only in Indians abroad, but also in Africans, and though America in certain respects, such as lynching, has treated the Negro most cruelly, yet in one respect America does deserve credit for the facilities of education which have been offered to the Negro population. I want to see how high the African Negro can rise in the educational scale."

We shall wait with considerable interest to read the experiences and conclusions of Mr. Andrews regarding his trip to America and the West Indies.

News from Trinidad

Reverend C. D. Lalla writes:

"My deeply lamented brother Parmanand Pandit died some time ago and about half a dozen equally distinguished leaders—Baba Lal Singh, Ajodhya Pandit, Babu, Roodoo Singh, Kazi Abdul Aziz, Baba Ram Prasad Singh and others have this year preceded me to their sphere of eternal rest and rewards. I feel most lonely without these veteran colleagues, who were all engaged with me in the national cause of overseas East Indians. Although departed, they have left the younger generations a memory of becoming inspiration and exemplary service, which will ever lead and guide them to a life of equal distinction and usefulness."

I have just heard from Sadhuji Andrews, who has planned to come to us in February 1929, while on his way to British Guiana, where he will study the colonization problems. He hopes to stay at our home for a week, meeting our prominent people and studying local conditions at close range on the spot. Can you and Mrs. Naidu also join him?"

The Late Pandit Parmanand

Here is a brief life-sketch of Pandit Parmanand whose death is announced by Rev. Lalla in his letter quoted above.

Pandit Parmanand was born at Nainjipoor, Agra, India, in the year 1861. His father was a Brahmin, and as such he was highly respected and revered by his followers and friends. The son having been born in such an influential home, the question of his education and subsequent training for the priesthood occupied at an early date the attention of his parents. Consequently, at the age of five years he was placed in the care of his uncle, a person who was thoroughly versed in Hindi and was also regarded as an excellent teacher. Completing his primary course under his uncle, he entered the Balher (?) Public School, an institution then established for the training of high-caste Hindu children for the Pandits' profession. Here the lad made great progress in all the different branches of study, and especially distinguished himself in Astrology.

His parents were desirous that their boy should receive the best education then obtainable and then send him to Benares, a place long-renowned for sacred literature in the whole of India. He was admitted as a special student, in one of the institutions, being much more advanced intellectually than the ordinary students then under training. In course of time he graduated from this school with conspicuous ability as a full-fledged Pandit, excelling particularly in Astrology and Sanskrit.

His first work in public was to give a lecture on religious knowledge before an audience comprising some of the learned Pandits in India. He and at the conclusion of the lecture was highly commended by every section of the assembly. In keeping with the custom of the land, he travelled extensively in India, visiting the sacred rivers, cities, and shrines, thus considerably adding to his knowledge from the world around him.

He left his native land and came to

Bhartiya-Mitra Mandli, Lautoka (Fiji) Standing:—Svt. Yarnunadas, Svt. Madhoji, Svt. Corraim,
Svt. Rani Samujh, Svt. Mushi Prasad (secretary) Sitting:—Svt. Raman, Doctor Gopal,
Barrister Shivabhai Patel, Svt. Hiralal Seth, Svt. Kottunnam Pillu, Sayad Dildar Ali Shah

how it has disturbed the peace of our friends in the distant islands of the Pacific. It is fortunate that our colonial friends understand the gravity of the situation and they have begun to guard themselves against this wave of communalism. We congratulate our friends in Lautoka (Fiji) for establishing a non-communal Indian Club known as Bhartiya-Mitra-Mandli. It has among its members, Aiyasamajists, Sanatanists, Mahamadanans and Christians. Svt. Hiralal Seth is the organizer of this club and it is conducting a girls' school in the town. A photograph of the members of the club is reproduced here.

1928 The Conference was opened by Right Honourable V. S. Srinivasa Sastri who delivered a impassioned speech for the betterment of the condition of the Indian workers in the Union. Mr. Sorabjee Rustomjee was the President of the Reception Committee. For want of space we have to leave out the proceedings of this Conference, but we shall refer to them in our notes next month.

S

Indian Workers' Congress in South Africa

The first Conference of the Indian workers in South Africa was held under the presidency of Advocate Albert Christopher at the Town Hall in Durban on 1st December,

Dharekwar Swami Vyasaji Singh

Advocate Albert Christoph

NOTES

Mrs. Sarojini Naidu in America

In her card of New Year greetings to *The Modern Review*, sent from Quebec, Sarojini Naidu writes: "I am receiving very splendid receptions and response everywhere in U. S. A. and Canada." The kind of impression produced by her presence and speeches in America may be gathered from the eulogistic remarks of *Unity* of Chicago, which observes that "the presence in America of Mme. Naidu, of India, the friend and colleague of Mahatma Gandhi, is an occasion of profound congratulation. Her noble person should be seen and her eloquent speech heard in every corner of the land." "In herself," it continues,

she is one of the great women of the world. She radiates a power of intellect and spirit which marks her immediately as one of the supreme leaders of our time. But it is as an Indian, a representative of her stricken, yet unconquerable country, that she is chiefly important, and would we are sure, be recognized and heeded. Among her own countrymen she is honoured as

Mrs. Sarojini Naidu

one of their greatest poets, a singer of the songs of a people for liberty and peace. She is also trusted and followed as a statesman who in 1923-26 was raised to the highest national office in her land as President of the All-India Congress of that year. Nobly born, highly cultured, utterly consecrated, endowed with supreme gifts of intellect and will, she stands in the forefront of India's life as defender of her people's rights and champion of their larger destiny. To America she has now come to bear witness to that which about India, so badly maligned and, therefore, misunderstood, and to plead her cause before the tribunal of an instructed and awakened public opinion. *Unity* salutes Mme. Naidu with humble admiration. It welcomes her to this country which needs only to be taught in order to be won. We have known in these United States the struggle for liberty. We possess the high tradition of blood and treasure bounteously spent for release from tyranny. In our midst we may have grown callous, and in our prosperity selfish. But the heart of the nation still beats true to its ideals. We know of no one better equipped to reach that heart by power of thought and speech than Mme. Naidu. America will leap to her when she finds audiences.

A photograph of Mrs. Naidu, taken in America, is reproduced in this issue.

Keating Morse of N. Y. City, 1921; came to U. S., 1916, naturalized citizen 1911; mem. Am. Soc. Curtis Willford Reese

Dr. Curtis W. Reese of America, President of Lombard College, whose "Humanist Sermons" was reviewed in the last issue of *The Modern Review* by Babu Mahes Chandra Ghosh, has come to India as one of the delegates of the American Unitarian Association to the centenary celebration of the Brahmo Samaj. He studied at Mars Hill College and in 1910 received the degree of Th. G. at the Southern Baptist Theological Seminary in Louisville, Ky. Further study was at Ewing College, Ewing, Ill., which gave him his Ph. B. in 1911. His first church

Dr. Curtis Willford Reese

Unitarian church, in Alton, Ill., in 1913. In 1915 he went to the church in Des Moines, Iowa, where he remained until Sept. 1, 1919, when he became secretary of the Western Unitarian Conference, with headquarters in Chicago, a position which he now holds. He is dean of Abraham Lincoln Center, Chicago, and has always been active in social work. At Des Moines he arbitrated two railroad strikes and was father of the Iowa State Housing law. In Alton he was active in ridding the community of gaming houses and brothels. Dr. Reese was given the honorary degree of D. D. by Meadville Theological School, Chicago in 1927. He is a director of the American Unitarian Association, Meadville Theological School and Unity Publishing Company, the last two of Chicago. He is also executive chairman and leading spirit in the National Federation of Religious Liberals. Dr. Reese is chairman of the Unitarian General Conference for 1929, which will probably meet in Chicago this year. This is an important commission from his denomination.

King Solomon's Descendant

Ras Tafari, King of Abyssinia

was the First Baptist church in Tiffin, O. Later he became a Unitarian and went to the

quarters that we immediately returned the cards with a thousand thanks.

Thus does it come about that our knowledge of Calcutta Congress affairs is derived from hearsay and from what little we have been able to read about it. If we are not mistaken, one of Gandhiji's charges against it is that many of the delegates were self-appointed. But our impression is that the identical remark was made about some other recent sessions of the Congress. Another charge is that delegates' tickets were bought and sold. We remember to have read in the papers that there were hired delegates at the Nagpur Congress and that at the session of the Congress held in a city in North India not very far from Benares many students of the Hindu University were persuaded to be present as delegates, their delegation fees, passage money, etc., being paid by some one else. So far as their representative capacity is concerned, there is nothing to choose between those non-elected men who buy their own tickets and similar persons whose tickets are purchased for them by others who control their votes. But in other respects, certainly hired delegates are worse than those who sit as delegates by paying for their seats themselves.

As for honesty, sense of honour, etc., which Gandhiji is said to have missed in the conduct of some prominent people connected with the recent Congress, there does not appear to have been a great revolution in these respects since the days of the canonized Mr. C. R. Das, if rumour and newspaper criticisms are to be believed. There may or may not have been some change for the worse. The reason why Mr. Gandhi was not critical when Mr. C. R. Das was alive but is critical now, seems to be that the Mahatma was then blind or kept his eyes closed but has since regained or resumed their use.

But perhaps it cannot be denied that considerable numbers of the delegates—perhaps the majority, were elected by others and paid their own expenses. And it cannot also be denied that the majority of the self-appointed and other-elected delegates voted in a certain way. This way may not have been pleasing to Gandhiji, but even self-appointed delegates are certainly not worse citizens than the hired delegates of previous sessions.

Standing Committee of Press Conference

At the first session of the All-India Press Conference, held in Calcutta last month, a standing committee of ten members was appointed to formulate in consultation with existing associations of journalists, and editors, proprietors and conductors of newspapers throughout the country, a scheme for the improvement of the status and conditions of service of journalists and for the establishment of an all-India organization to safeguard their interests. It is to be hoped that all parties concerned will cordially co-operate with the standing committee to enable it to draw up a practicable scheme.

The Meaning of Seditious

The British-made Indian law of sedition cannot be accepted by Indians as just and proper, particularly at times when it stands in the way of their expressing their views freely in order to promote the cause of liberty. The law as it stands is meant to perpetuate the present political condition of India with which Indians are not satisfied.

But assuming that the law as it is what it ought to be, there arises the question of its interpretation. In dismissing the appeal in the *Forward* seditious case, Mr. Justice Gregory made certain observations in the course of his judgement which cannot be considered acceptable. We mean those which refer to the police and the civil service. The other parts of the judgement we are unable to discuss, as we have not read the article in *Forward* for which its editor and printer were prosecuted.

Regarding the police, his lordship observed:—

The fact moreover is that it is not always easy to dissociate the Government from the police which represents one of the chief agencies of Government and as representing law and order, the most important agency. The term Government is in itself an abstraction, but Governments can only work through human agencies. To the man in the street and more particularly to the villager, (and it may be supposed that a paper like *Forward* has a circulation in the mofussil), the term Government is vague. But the policeman or the *paharwalla*, as he is sometimes called, is no abstraction, but rather the outward and visible emblem of Government and is in the public mind often associated with the Government. Indeed, he may be said to represent Government in a concrete form.

India and the Indian States, are ill-calculated to meet the wants or advance the interests of the people as a whole and, if they are to be beneficial in future, they must undergo a rapid and a radical change.

He criticized the British Government for having done nothing yet to prepare India for the grant of dominion status.

The peoples' standpoint at present is one of undisguised distrust and impatience; distrust because the British Government is seeking to make all manner of excuses for initiating a real start, and impatience because every year's delay in introducing self-government is so much loss to the people, so much of a distinct set-back in the country's attempt to fall in line with progressive nations. As that outspoken but thoroughly disinterested journal, the *Pioneer*, wrote a few days ago: 'Few honest observers of modern India can deny that the present policy of the India Office and Delhi is to deny real opportunity for self-realization, self-development and self-fulfilment.'

Reforms in instalments at the present stage have no meaning. It is like expecting a human body, to develop limb by limb—one limb at a time! Being an organic whole, their growth should be nursed in an altogether different way; the prescription of stages will mean prolonging the agony of reforms for years.

A divided India, as a permanent arrangement, is wholly unthinkable and is fraught with consequences too serious to contemplate.

Incidentally the remark may be allowed that the *Pioneer* is not a thoroughly disinterested journal.

He concluded his address by saying:—

Gentlemen, some ten or eleven years ago, at the time of the Montagu-Chelmsford Reforms, I was associated with a Committee of Princes and Ministers of Indian States in the discussion of problems affecting the status of Indian States and it was then that I suggested, I believe for the first time, a Federal Constitution for all India. Much water has flowed under bridges since then and opinion now is, I am glad to see, moving in that direction. I have spoken out somewhat plainly because, first, I make no distinction between the States as such and the subjects forming it; secondly, it is in the interests of the Princes themselves, as Ruling Chiefs, to take a larger and a more far-seeing view of their own future; and thirdly, in any constitution that may be evolved for India, the States cannot but come in as an integral part of it. These reforms are suggested after careful deliberation, over years of anxious thought, and if, in what I have stated in this address, I have at times spoken with some emphasis, it is because it is concerned entirely in the permanent interests of both Princes and People. In the last resort, believe me, the strength of a Prince is the strength of his People.

I have at one time or another done some service, small or large, to seven or eight Indian States and have had the advantage of meeting most of the principal Rulers of the States in my time.

I had the privilege of knowing, and on one or two occasions of personally corresponding with,

the late distinguished Maharaja of Travancore. There are a number of good, able and accomplished men among the Rulers to-day who can hold their own in any assembly in the world.

If I speak frankly of the Princes as a body and about their future to-day, I do so with a definite purpose. The world after the War has a new vision of governmental functions. You may conceal modern ideas from the more ignorant subjects for a time but you cannot prevent their infiltration from all of them for all the time. The autocratic form of government is fast getting out of date; safety lies in open dealing and publicity. The Princes should modernize their States, train the talents of their peoples, pour knowledge and skill into them, and raise them, and themselves, up with them.

At the same time, there is a corresponding duty imposed on the subjects of Indian States. They, on their part, should remember that they are not to be content with offering mere criticism and that nothing will be gained by antagonizing their Rulers; rather, they should make their Rulers feel their identity with them and with their future fortunes. Also, the more enlightened among the States people should offer their services and co-operation to the Princes to help in moulding the thoughts and shaping the destinies of their States in conformity with accepted canons of national efficiency.

The Simon Commission in Calcutta

On the 21st December, 1928, the members of the Simon Commission arrived in Calcutta two hours after the arrival of Pandit Motilal Nehru, President of the 43rd Indian National Congress. The Simon Commission was passing through Calcutta on its way to Assam. There was no proposal on that occasion to boycott the Commissioners. There was no propaganda in that direction and no *hartal* was proclaimed. The immense crowd that had assembled to welcome the President of the Congress had not dispersed when the Royal Commissioners arrived at Howrah, and the Anglo-Indian press, with characteristic veracity, announced with bold headlines that the members of the Commission were greeted by large crowds in respectful silence. We should not be surprised if this intelligence was cabled out to England. Three weeks later, on the 12th of last month, the Commission returned officially to Calcutta to record evidence. On this occasion the Congress Committee decided to boycott the Commission, and vigorous propaganda was carried out to ensure the success of the boycott. On the way down to Calcutta the special train conveying the Commissioners was met at the railway stations by crowds bearing black flags and repeating the now familiar cries directing the Commission to

of many other regions can make and understand speeches on political subjects than Bengalis.

Monopoly of Patriotism

In a letter to the last issue of *Welfare* Mr. Ashananda Nag describes some types of snobbery not noted by Thackeray. One of these he names patriotic snobbery. In proof of its existence he instances the case of those Swarajists who believe that they alone are patriotic. A further proof is to be found in a speech delivered by Mr. Subhas Chandra Bose and reported in *Forward*, dated January 29 last. We notice it merely because of the position he occupies. The occasion was a meeting of the people of Barisal residing in Calcutta, held to congratulate S. Satya Ranjan Baksi, editor of *Forward* and *Banglar Katha*, on his conviction for sedition. At this meeting Mr. Subhas Bose bestowed high praise on Mr. Baksi. To this there can be no objection. Nobody should grudge Mr. Baksi the high praise he deserves. But Mr. Subhas Bose laid himself open to criticism when he proceeded to observe:—

As an editor another trait of Satya Babu's character is his true Congress mentality. In fact judged from this standpoint he occupies a unique position. The so-called nationalist newspapers of Bengal in fact move against the Congress and even against the country. To speak the truth, they appear to be anti-nationalists.

What is objectionable in this passage is Mr. Bose's description of "the so-called nationalist newspapers of Bengal." It is not true that all Bengal newspapers other than *Forward* and *Banglar Katha* (and perhaps other Swarajist papers) "move against the country" and are anti-nationalistic. One or more than one may be distinctly "anti-Congress," others criticize the Congress only when necessary. Mahatma Gandhi has ranged himself among such critics. Is he, too, "anti-country" and "anti-nationalist"?

Congress is not sacrosanct.

Perhaps the papers against which Mr. Subhas Chandra Bose has hurled his unwise, shop-keeping, pontifical and self-righteous anathema will survive the verbal blow.

"Prof. Radhakrishnan's Reply"

In this note I do not intend to say anything on the subject-matter of the contro-

versy between Prof. Radhakrishnan and Prof. Jadunath Sinha. I am not competent to do so, and they are both able to take care of themselves. I desire mainly to make a few remarks on Prof. Radhakrishnan's references to *The Modern Review* and its editor, in order to enable him to formulate clearly and courageously his charge against my journal and myself with full knowledge of facts instead of indulging in insinuations.

He has referred to the fact that occasional adverse criticism of his writings has found place in *The Modern Review* since his coming to Calcutta. That a writer of distinction should be subject to criticism is only natural. That he has been subjected to criticism since his coming to Calcutta may be due to the fact that he and his writings were not much known in these parts before his advent here and that some of his best known works were published after he became connected with the Calcutta University.

It is to be noted that the adverse criticisms referred to by the Professor were not the work of the editor of this *Review*; he only published them.

The impression, moreover, that the Professor has been only adversely criticized in this *Review* is not accurate. He has also been praised. To mention only one instance, his lectures in England were highly praised in this *Review* by Sir John Woodroffe.

I have to add for the information of Prof. Radhakrishnan and my readers that I have sometimes refrained from publishing things which would have gone entirely or to a great extent against him. I will mention a few instances. Some years ago I received the Professor's *Philosophy of Rabiindranath Tagore* for review from his publishers. I sent it through a mutual friend to a gentleman who has read both the Bengali and English works of Tagore. After some time had passed I sent him a reminder for a review of the book through the same friend. I was told in reply that he had read and marked many passages in the book and would require thirty pages of my monthly in small print for the review of the book. On my pleading for more mercy, he agreed to be satisfied with ten pages of small print. After this I did not send him any more reminders. It may be added that I gathered that the review would not have been wholly mellifluous.

In more recent times I received a long review of Prof. Radhakrishnan's *Indian Philosophy*, vol. ii, from Pandit Umesa Misra

Bala Hissar and Kabul from the Ba-Maru Mountain

Govindadas Jhā, the Poet of Mithila

BY NAGENDRANATH GUPTA

AMONG the Vaishnava poets whose exquisite lyrics are the chief literary heritage of the age of Chaitanya in Bengal there are several whose identity has been lost. All that is known is that some of them lived before Chaitanya others were his contemporaries, but the majority of them appeared after the prophet or avatar of Nādia. Roughly computed, all these lyrical songs or *padas* as they are called, occupy a period of about two to two hundred and fifty years. There were no printing-presses in those days and even the manufacture of hand-made paper is of recent origin. The older manuscripts were all written on palm-leaves in indelible ink, of which the secret is now forgotten.

All these songs were regarded as sacred by the Vaishnavas of Bengal and were sung at religious gatherings. The name of the composer was mentioned in the final verse but that did not convey the identity of the poet, specially when more than one poet bore the same name. The original manuscripts of the numerous poets cannot be traced. Those that were in existence when the poems were first printed by the cheap printing presses of Bat-tala in Calcutta were anthologies, or collections of verses composed by various authors. Of these the largest and most important is *Padakalpataru*, compiled

by Vaishnavadas, himself a poet, and containing more than three thousand poems. The poems of Vidyapati and Chandidas were included in this collection but were published separately afterwards though no attempt has been made to bring out separate editions of the other poets. Their writings are scattered throughout the different collections of Vaishnava poems.

Next to Vidyapati and Chandidas the most famous poet of this period was Govindadas. There were several poets of that name, but the greatest among them is distinguished by the epithet of Kaviṛaj Govindadas. Now, the word Kaviṛaj means a king among poets as well as a physician. In Bengal the Ayurvedic physicians belong to a particular caste called Vaidya which also means a physician, and the word Kaviṛaj has been assumed to indicate the poet's caste, just as the word *bahu* or *Bahu* indicates a Brahmin in the case of Chandidas. Kaviṛaj Govindadas himself uses no word in any of his poems to indicate his caste, though another Govindadas designates himself Ghosh, implying that he was a Kayastha by caste. The supposition that the foremost poet of all who bore the name of Govindadas was a Vaidya by caste and that he was a native of Sikkhanda in the Burdwan district is entirely erroneous. Kaviṛaj or Kaviṛajha Govindadas was a native

Champatipati or Champati. This refers to either Champannagar in Bhagalpur or Champann, to the north of Mithila, forming part of that kingdom at that time. It would be quite natural for a poet of Mithila to render homage to the divinity of Rama and the kings of Mithila in his poems, but both would be unlikely in the case of a Vaishnava poet of Bengal.

Since it was never suspected that this poet was a native of Mithila no attempt was ever made to distinguish between his writings and those of other Bengali poets bearing the same name. There are certain difficulties that have to be noted. There is no Maithil grammar written by any Maithil scholar, and no grammar compiled by any foreign linguist can be wholly reliable. Readers and scholars in Bengal derive their knowledge of the Maithil language solely from the corrupted versions of the poems of Vidyapati and Govindadas, and it is difficult for them to discriminate between the pure Maithil of Vidyapati and Govindadas, and their Bengali imitators. Otherwise, it could be easily demonstrated that no Bengali poet bearing the name of Govindadas was ever able to equal or even approach the Maithil poet in the mellifluous smoothness of rhyme, or the dazzling witchery of words. The Maithil poet did not write a single poem about Chaitanya; more than one Govindadas of Bengal has written about him, but these poems or songs cannot be compared with the glowing and melodious descriptions of Krishna and Radha by the Maithil poet.

To make this clear let us take a poem on Chaitanya by a Bengali poet named Govindadas :—

तपत काञ्चन कान्ति कलेवर

उन्नत भाङ्ग भङ्गी ।

करिवर-कर जिनि बाङ्गुर छबलनी,

विहि से गङ्गल बङ्गुरङ्गी ॥

× × ×

आपाद मस्तक पूष पुलकित

प्रेमे छल छल आखि ।

आवन गुण सनि आपहि रोयत

हेरि काँदये पडुपाखी ॥

चन्द चन्द्रिका कुमुद मङ्गिका

जिनिया मधुर मुदु हास ।

मधुर वचने अमिता सिन्धवने

निद्धनि मोहिन्ददास ॥

"(Gaur's) complexion is like bright gold and his stature is lofty. His rounded arm is more graceful than the trunk of an elephant, and was made by skilful Brahma. Joy fills him (with his hair standing on end) from head to foot and divine love fills his eyes with tears. He cries when he hears his own praise, and the beasts and the birds weep with him. His smile is more beautiful than the moonlight and scented white flowers, and his sweet words sprinkle nectar. May all evil pass from him to Govindadas !"

The language of this poem is an imitation of Maithil but it is not accurate. Some of the words, such as भाङ्ग and बाङ्गुर retain the Bengali form; in Maithil they would be भाङ्क and बाङ्क. No Bengali imitator of Vidyapati and Govindadas succeeded in writing Maithil verses wholly free from errors. To the careful student who has learned the Maithil language it is easy to distinguish between real and imitated Maithil verses. It has to be remembered that Maithil was not taught as a language and there was no Maithil grammar. The Bengali poets who composed their verses in that language learned it from the poems of Vidyapati and Govindadas and slight errors were inevitable. There was no Maithil prose and notes and comments on Maithil verses were written in Sanskrit. In the *Padakalpataru* the few remarks are in Sanskrit. In another collection called *Padasamudra* compiled by Radha Mohan Thakur, a Bengali Vaishnava poet of distinction, who wrote in Maithil, Bengali, and Sanskrit, there are copious comments and explanations in Sanskrit. No Bengali poet ever succeeded in mastering completely the Maithil language.

Let us next turn to some poems of the Maithil poet Govindadas on Krishna and Radha —

आउ बिपिने थावल कान,

मुरति मुरत कुसुमयान,

जनु जलपर रुचिर अङ्ग,

भङ्गी नखर सोहिनी ।

ईषत हसित वयन चन्द,

तस्पो नयन आनन्द चन्द,

विन्य अशेर मुरलि खुरलि

त्रिभुवन मनमोहिनी ॥

दूर रह गुरुजन गौरव लाज ।

गोविन्ददास कह पड़ल अफाज ॥

"Thou beholdest the flowering *ladamba* with a sigh and thy face frequently rests on thy palm. Sometimes thou stretchest thy limbs and thy hair stands on end on thy person as a sign of delight. O fair one, do not tell me otherwise for I know thou hast met Krishna. In vain thou hidest thy feelings for they cannot be concealed; thy face expresses all the pain of the heart. Thou keepest carefully back the tears from thy eyes and speakest half words with a broken voice. Thou art repeatedly going into the courtyard and out on the road on some pretext or other. The respect for the older members of the family and the sense of shame have disappeared. Govindadas says there is trouble."

While Radha is gathering flowers Krishna addresses her in the following beautiful lines which combine a tone of raillery with subtle flattery:—

कानने कुसुम लोइसि कांइ गोरि ।

कुसुमहि निरमित सब तनु तोरि ॥

आनन हेम सरोरुह भास ।

सौरभे साम भमर मिलु पास ॥

नयन जुगल नील उत्पल जोर ।

सहज सहावन भयनक थोर ॥

अवरु तिल फुल छललित नास ।

परिमल जितल अमरतह वास ॥

बांधुलि मिलित अथर जौं हास ।

दसनहि कुन्द कुसुम परकास ॥

सय तनु फूल चम्पक गोर ।

पानिक तल भल कमल उजोर ॥

गोविन्ददास थत ए अनुमान ।

पूजह पशुपति निज तनु दान ॥

"O fair one who art thou plucking flowers from the garden? Thy white person is made up of flowers. Thy face has the beauty of a golden lotus and its fragrance has attracted the black bee (Krishna). Thy eyes are a pair of blue lotus and appear in their native beauty near thy ears. Thy well-shaped nose is like a wonderful *tit* (sesamum) flower and its fragrance (of the breath) has conquered that of the heavenly flower (*parijat*). Thy smiling lips are like the red *bandhuli* flower and thy teeth appear like *kunda* flowers. All thy limbs are fair like the full-blown *champa* flower. Thy palms are bright red like the *land-lotus*. Therefore Govindadas thinks thou shouldst offer thy own person for the worship of *Pasupati* (Siva, also meaning Krishna who was a shepherd, or lord of animals)."

On a certain dark night it was raining

heavily, there were flashes of lightning and ominous peals of thunder. Radha's companion attempted to dissuade her from keeping the love tryst with Krishna in such weather, pointing out the many dangers and the risk to her life. Radha's reply is pitched on a note of extraordinary devotion and exaltation:—

सजनि मनु परिलख कह दूर ।

कैसे हृदय करि पन्थ हेत हरि

छमरि छमरि मन भूर ॥

कुल मरिजाद कषाट उद्भाटल

ताहि कि काटक बाधा ।

निज मरिजाद सिन्धु सम बैरल

ताहि कि तटिनि अगमा ॥

कोटि कुसुम शर बरिखण जल पर

ताहि कि जलद जल लागि ।

प्रेम दहन दह जाक हृदय सह

ताहि कि पजरक थारि ॥

जल पदतल निज जीवन सोपल

ताहि कि तनु अनुरोध ।

गोविन्ददास कह पनि पनि अभिसर

सहचरि पावल बोध ॥

"My friend, put an end to my test. When I remember with what a heavy heart I am watching the path for my coming I am filled with grief. I have opened wide the (strong) door of family honour, compared with it what is a wooden door (of the house)? I have swum across my own honour which is deep as the sea; compared with it is the river (*Jamuna*) unfathomable? How can the rain affect one on whom fall millions of the flowery arrows (of Cupid)? To one whose heart can bear the burning of Love's fire what is the fire of the thunderbolt? From him at whose feet I have offered my life shall I withhold my person? Govindadas says, praise be to thee, fair one, proceed to thy assignation, the companion has been satisfied."

In order to overcome her natural timidity Radha rehearsed at home the dangers of the forest path that led to the trysting place:—

कटक गाड़ि कमल सन पदतल

मञ्जीर चोरहि कोपि ।

गागरि वारि वारि कै स्थिल

चलतहि अङ्गुलि चापि ॥

साधव सुय अभिसारक लागि ।

जे सरोवर पहु निति निति माह ।
 हम भरि सखिल होइ तथि माह ॥
 जे दरपने पहु निज मुख चाह ।
 महु अङ्ग जोति होइ तथि माह ॥
 जे बीजने पहु बीजय गात ।
 महु अङ्ग ताहि होइ महु यात ॥
 जेह पहु भरमह जलधर साम ।
 महु अङ्ग गगन होइ तउ दाम ॥
 गोविन्ददास कह काचन गोरि ।
 से मरकत तनु तोहि किछु दोरि ॥

"Wherever his sun-red feet pass may my body become the ground under his feet! May I be the full water of the pond in which my lord bathes every day! May my body become the light in the mirror in which my lord sees his face! May my body be the gentle breeze in the fan with which my lord fans himself! Where my lord moves like a dark cloud may my body be the sky over him! Govindadas says, O thou golden beauty, why should he with the emerald limbs leave thee? (Just as an emerald has invariably a gold setting so is Krishna inseparable from Radha)."

These gleanings from the writings of the poet Govindadas Jha of Mithila may be concluded with a prayer in his musical verse :—

भजहु रे मन नन्दनन्दन
 अमय चरनाखिन्द रे ।
 दुलभ मातुष जनम सखरङ्गे तरह
 इ भव सिन्धु रे ॥
 शीत आतप वात बरिखन दिन
 जामिनि जागि रे ।
 विफल सेवल कृपन दुखजन
 चपल छल लव सागि रे ॥
 इ धन जन पुत्र परिजन
 इये कि अद्ध परतीत रे ।
 कमल दल जल जीवन टलमल
 भजहु हरि पद नित रे ॥
 भजन कीर्तन स्मरण बन्दन
 पाद सेवन दास्य रे ।
 पूजन ध्यान आत्म निवेदन
 गोविन्ददास अभिलास रे ॥

"O my mind, worship the son of Nanda (Krishna) whose lotus-feet confer immunity from fear. It is

a rare privilege to be born as a man, cross the sea of this life in the company of holy men. In winter and summer, rain and storm I have kept awake at nights and vainly served misers and wicked men for the sake of a drop of fleeting happiness. This wealth and youth, sons and relations, what reliance can be placed upon them? Life is uncertain as the water on a lotus-leaf, worship always the feet of Hari. Hearing and repeating, remembering and saluting, tending Hari's feet and serving him Govindadas desires to worship and hold communion with and offer himself to the Lord."

The poems of the Maithil poets Vidyapati Thakur and Govindadas Jha occupy a unique place in literature. Belonging to Mithila they have become part of the poetical literature of Bengal.* Other poets in Mithila wrote like them, but their writings have never been published. Even Vidyapati and Govindadas would have been forgotten but for their admirers in Bengal. On account of the intellectual bond that existed at that time between Bengal and Mithila the writings of these two poets were copied and taken to Bengal and were greatly admired by the numerous followers of Chaitanya, who was regarded as an avatar of Vishnu and Krishna. It has been stated that these writings were extensively imitated in Bengal, though these imitations never attained the perfection of the Maithil masters. In spite of such poets of undeniable genius the Maithil language never became a literary language. Maithil characters have never been cast in type, and there are no printed prose or poetical works in Maithil. In Bengal the poems of Vidyapati and Govindadas are printed in Bengali type. Out of Bengal Vidyapati's poems have recently been printed in the Devnagari character, but these also have been chiefly obtained from Bengali texts. Govindadas Jha is unknown out of Bengal and manuscript copies of his poems are obtained with difficulty in Mithila. Both Govindadas and Vidyapati have been adopted by Bengal as her own poets and both are held in high admiration. It is true that we in Bengal have now forgotten the Maithil language, and errors have crept in both in the text and the different recensions. Still Kaviraj Govindadas is a great name in Vaishnava poetry and his matchless rhyme enchants the reader. Still the marvellous music of his poems remains and their melody still haunts the memory. The early Vaishnava poets, saints and collectors of Bengal, who brought these immortal poems from Mithila, are entitled to the lasting gratitude of all students and lovers of literature.

The First Buddhist Council, from a wall-painting in a temple at Qyzil

life of a hermit. Five hundred merchants have lost their way owing to a heavy storm raised by a wicked Raksas. They cry for help to all the gods. The Bodhisattva hears them by means of his heavenly ear, and at once offers himself to be their leader. He wraps pieces of cloth round his hands, steepes them in oil, sets them on fire, and serves the caravan as a living torch-light. The picture shows the Bodhisattva with his raised, burning hands. It is not possible to identify the legend to which the scene of fig. 16 belongs. We can only see the Bodhisattva holding a cup in his left, and a spoon in his right hand, with which he feeds some person, crouching before him. Fig. 17 is identified by Dr. Waldschmidt with a scene

from the Sarvandaraja-Jataka (Bodhisattva-Avadana-Kalpalata, Nr. 55): King Sarvadaraja ("All-Giver") has resigned his kingdom to the enemy and retired into the forest as an hermit. Here some Brahmin comes to him abegging; and in order to secure to this Brahmin the reward promised by the enemy for his head, the Bodhisattva (King Sarvadaraja) allows the Brahmin to surrender him to his enemy. The representation, however, is so fragmentary that I am not sure that this is really the scene pictured in it. But there can be no doubt that in fig. 18 the Vyaghrī-jataka (Jatakamala Nr. 1) is represented: We see the Bodhisattva throwing himself down the precipice, in order to feed the hungry tigress who is about to devour her whelps, and

below we see him again lying in the rock-cave, and the tiger-s (which indeed, as Dr Waldschmidt remarks, looks more like a jackal) tearing his breast.

These paintings show how popular such legends of self-sacrifice were in Central Asia, as they were in all the other Buddhist countries from Ceylon to China, Japan, and

won. For the position of Englishmen in India is such that the capacity of the Indian people for waging a non-violent war by itself would in all probability create a situation

which would make it unnecessary to launch out on the war. This is the verdict not only of Mahatma Gandhi, but also of common sense.

Cabinet Government

By NARESH CHANDRA ROY, M. A.

THE Cabinet system of Government is the foremost contribution of English politics to the World progress. It was not deliberately created out of nothing by a conference of constitutional architects. It was not 'made' at all, but has grown, like the other factors of the English Constitution, slowly and gradually out of the political circumstances of the country. Like all natural products, its evolution has not been straight, it has been chequered. Its course really has been meandering. Originating in the abnormal circumstances of the Hanoverian Succession, it was nursed and developed by Walpole and his Whig followers. Its growth was further stimulated by the indifference and incapacity of the first two Georges. During the regime of the Great Commoner it struck its roots all the more deeply in the soil of the country. Then came the days of the reaction. George III, with his ideal of the "patriot king," now came to the throne not only to reign but also to govern. And for twenty years, he was successful in setting back the hands of the clock. By corruption and bribery he 'managed' the House of Commons and played the despot to his heart's content. He gloated in this role till the American Revolution cut short this ambitious career and put younger Pitt, the son of that 'trumpet of sedition,' at the helm of affairs. George III, now found his master in this young man of twenty-four and had to entrust his political conscience to this callow youth. Of course, his mind was not at rest. He was feeling ill at ease. For some time at least he was successful in imposing upon Pitt his agent, Lord Thurlow. This Lord Chancellor was to remain a discordant element in the cabinet. His real function was to act as a spy of the king. The authority of the Prime Minister was not

fully established in the cabinet till his exclusion from its deliberations.

The system of administration thus evolved came to be based upon certain definite principles which are to-day universally associated with the Parliamentary form of Government. The legislature under this arrangement was to be vested with powers of control and supervision over the executive. The ministers were to be responsible to the popular House of the Parliament for their action. Their existence was to depend upon the goodwill and confidence of this chamber. In case this confidence was withdrawn and the majority went against the executive, the ministers must resign. This responsibility of the ministers was not only individual and several, it was joint and collective as well. If a vote of censure was passed by the House upon the activity of a certain department, not only the political head of that particular branch of Government was to resign but the whole ministry was now to be "out".

The Cabinet thus was to be a corporate body. It was to have one policy and one mind. There might be, as there must be, differences of opinion between minister and minister. But these differences were to be threshed out and set at rest in course of deliberations in the Cabinet itself. From the Parliament and the outside public, these differences and the squabbles must be kept secret. When the ministers were to approach the legislature or the general public with a proposed line of action, they must present a united front. They must be a solid phalanx and a united team. After attempts at give and take, compromise and conciliation, if any of the ministers still remained unconvinced and irreconcilable, he must go out of the Cabinet and make room for some one else.

THE Cabinet system of Government is the foremost contribution of English politics to the World progress. It was not deliberately created out of nothing by a conference of constitutional architects. It was not 'made' at all, but has grown, like the other factors of the English Constitution, slowly and gradually out of the political circumstances of the country. Like all natural products, its evolution has not been straight, it has been chequered. Its course really has been meandering. Originating in the abnormal circumstances of the Hanoverian Succession, it was nursed and developed by Walpole and his Whig followers. Its growth was further stimulated by the indifference and incapacity of the first two Georges. During the regime of the Great Commoner it struck its roots all the more deeply in the soil of the country. Then came the days of the reaction. George III, with his ideal of the "patriot king," now came to the throne not only to reign but also to govern. And for twenty years, he was successful in setting back the hands of the clock. By corruption and bribery he 'managed' the House of Commons and played the despot to his heart's content. He gloated in this role till the American Revolution cut short this ambitious career and put younger Pitt, the son of that 'trumpet of sedition,' at the helm of affairs. George III, now found his master in this young man of twenty-four and had to entrust his political conscience to this callow youth. Of course, his mind was not at rest. He was feeling ill at ease. For some time at least he was successful in imposing upon Pitt his agent, Lord Thurlow. This Lord Chancellor was to remain a discordant element in the cabinet. His real function was to act as a spy of the king. The authority of the Prime Minister was not

fully established in the cabinet till his exclusion from its deliberations.

The system of administration thus evolved came to be based upon certain definite principles which are to-day universally associated with the Parliamentary form of Government. The legislature under this arrangement was to be vested with powers of control and supervision over the executive. The ministers were to be responsible to the popular House of the Parliament for their action. Their existence was to depend upon the goodwill and confidence of this chamber. In case this confidence was withdrawn and the majority went against the executive, the ministers must resign. This responsibility of the ministers was not only individual and several, it was joint and collective as well. If a vote of censure was passed by the House upon the activity of a certain department, not only the political head of that particular branch of Government was to resign but the whole ministry was now to be "out".

The Cabinet thus was to be a corporate body. It was to have one policy and one mind. There might be, as there must be, differences of opinion between minister and minister. But these differences were to be threshed out and set at rest in course of deliberations in the Cabinet itself. From the Parliament and the outside public, these differences and the squabbles must be kept secret. When the ministers were to approach the legislature or the general public with a proposed line of action, they must present a united front. They must be a solid phalanx and a united team. After attempts at give and take, compromise and conciliation, if any of the ministers still remained unconvinced and irreconcilable, he must go out of the Cabinet and make room for some one else.

been so long under the iron heels of despotism and their society was saturated with autocratic and absolutist ideas. For generations, the people had been nurtured in despotic traditions and, however enthusiastic they might have been for reform, they were not in a position to take naturally and easily to democratic institutions. Their statesmen, however, took a fancy to the working constitution of England which provided for Parliamentary control over the executive authority. They were so very enamoured of this responsible form of Government that they took no notice of the different historical backgrounds of these countries, but introduced with only slight modifications this British-made system of government into their own countries. The British plant was uprooted from its natural and congenial surroundings and placed in environments not only uncongenial but actually smothering.

Outwardly the Cabinet Government of France has been endowed with all the essential features of the English responsible government. The constitution provides that the ministers shall be collectively responsible to the Parliament for the general policy of the government and individually for their personal acts. The Prime Minister is appointed as such by decree of the President of the Republic. As in England it is the Prime Minister who appoints his colleagues and may remove them if he likes. Now although all the external features of the English Cabinet Government have been imported into France, the spirit of the English system is wholly lacking in the atmosphere of Paris. Political opinions do not flow in France only along two clear-cut channels as in England. Public life has been organized not on the English model but has been sub-divided into a number of petty groups. No single group could ever expect to obtain a majority in the Chamber. All Governments have, therefore, to be based upon a coalition of some of these groups. But this coalition cannot but be a loose and temporary union which breaks down at the slightest conflict of interests and clash of ideals. The Cabinet which comes to consist of members with varied ideals and diverse interests, can never aspire to the cohesion and solidarity of the British Ministry. The authority of the Prime Minister over his colleagues can never be fully established. In fact, he has to remain engaged more in soothing the ruffled feelings

in the cabinet than in devising measures of discipline. Instead of being an organic whole, the cabinet becomes in France a loose bundle. The cabinet thus is a divided house. Nor does it exercise much initiative. In truth depending upon the fitful support of their followers, the ministers occupy the position less of a leader, more of a protégé. The individual deputies become all powerful and influential. They put pressure upon the ministers and get things done in their own way. This backstairs influence of the deputies counts so much in French administration to-day, that the existing form of government has been ingeniously described by a writer as "deputanism". Initiative, authority and driving force which are the first and foremost attributes of the executive are altogether lacking in the French cabinet system.

Similarly miserable was the administrative situation of Italy during the pre-Fascist days. Here also, the principle of ministerial responsibility was introduced in environments altogether uncongenial and unsuitable. Public life was chaotic, and unorganized, the deputies selfish and corrupt, public opinion weak and uninfluential. In these circumstances, the ministers could not be the accredited leaders of a parliamentary majority. They were never sure of consistent and unselfish support from any of the members. Cliques were formed and dissolved in the chamber. Every ministry was expected to purchase their support at the highest price. Naturally the executive could not make itself as vigorous as it should have been. Its strength was sapped, its authority undermined. The administration itself was collapsing till it was turned down altogether by a *coup d'état*. Fascist autocracy was the only reply to a mockery of responsible government.

A strong executive is the first characteristic of good government. It is, in fact, the bed-rock upon which the welfare of the people is based. Once the general policy is laid down by the legislature, it is for the executive to apply and carry it out, unhampered and unhindered. The swift decision, the rapid movement and the bold coup-qualities always associated with an efficient executive—can never be brought out into clear relief if outsiders would poke their nose into administrative affairs and impede the steps of the executive ministers. They must have a free hand in the matter.

responsibility has been to some extent followed. Lord Willingdon, the first Governor of the Presidency, under the new regime, initiated this tradition and it has been in vogue ever since. After a general election, a leading member of the Legislative Council is appointed by the Governor the Chief Minister and the rest of the ministry-making is left to him. It is for him now to select the colleagues and form the ministry. Of course, the authority of the first minister is yet very limited and circumscribed. The Governor still overshadows and very often overpowers him. The Joint Parliamentary Committee recommended that in the transferred departments, the Governor should act only as an adviser to the ministers. He should guide their policy, criticize their actions and warn them against pitfalls and dangers. But if after hearing his viewpoint and listening to his warning, they persist in their line of action, they should be allowed to go on and take the responsibility on that score. This recommendation of the Joint Committee, however, has been given the go-by and to-day the Governor is no mere friend, philosopher and guide to the ministers. He thinks himself responsible as much for the working of the reserved half of the Government as for the running of the transferred departments. Naturally the Governor and the ministers, under these circumstances, pull the string from opposite directions. The result is inaction and very often a deadlock. Instead of adding to the efficiency of administration and the vigour of government, the present system is only making way for inefficiency and inanity.

In Madras, as we have seen, the Governor has, to some extent, abjured his statutory rights and tried to accommodate himself to the opinions of the Joint Committee. He has conceded the claim of the first minister to select his own colleagues. He has also conceded the claims of the ministers to be jointly and collectively responsible for the working of their different departments and thus form a corporate body and not simply a bundle of isolated figures. In other provinces, however, the Governors have not budged an inch from their statutory moorings. All the ministers are appointed at the initiative of the Governor himself. They are individually responsible for their policy and action both to the Governor and the Legislative Council. No pretension to collective responsibility has been allowed to grow. After the first general

elections during the reformed regime, the two ministers of U. P. were individually and separately selected by the Governor himself. The two ministers, of course, came to an understanding with each other, in spite of the Governor, and were resolved to stand or fall together. And fall they did at the same time. But the principle of joint responsibility which the Governor never accepted, died also with their resignation. Their successors were appointed individually by the Governor and looked upon themselves as only severally responsible for their respective portfolios. Similar is the experience of Bengal as well. The late Sir Surendra Nath Banerji has laid down in his reminiscences that after the general elections of 1920, he was called by Lord Ronaldshay, the Governor, and was consulted some way about the selection of his Hindu colleague. As regards the Mahomedan minister to be appointed nothing serious passed between them. And it was only from a morning paper, that Sir Surendra Nath came to know that Nawab Nawab Ali Chowdhury had been appointed a minister. Thus the ministers were appointed severally and individually by the Governor himself, the portfolios were distributed by him as well and the ministers remained only individually accountable for the working of their departments. No pretension to cabinet solidarity came to be made and no collective partnership under one popular leader was attempted.

Thus one of the main principles of the modern system of responsible government that the chief minister should choose his own colleagues has been rejected altogether in the great majority of the Indian Provinces. The ministers are expected, hence, to work their respective departments in their own way. The cohesive bonds that would tie them together and turn them into a single group with one policy and one mind are simply out of the question. Unity, steadfastness, initiative are the qualities associated with the British Cabinet. It is because of these characteristics that the English executive is efficient. But these are the attributes in which the Indian executive will be altogether lacking if the present practice develops into a tradition. Unless, in fact, all the ministers are brought together under the leadership and control of one and unless they constitute a united corporate body, they would not be able to check the irresponsible pretensions of the Governor on

responsibility has been to some extent followed. Lord Willingdon, the first Governor of the Presidency, under the new regime, initiated this tradition and it has been in vogue ever since. After a general election, a leading member of the Legislative Council is appointed by the Governor the Chief Minister and the rest of the ministry-making is left to him. He should guide their policy, criticize their actions and warn them against pitfalls and dangers. But if after hearing his viewpoint and listening to his warning, they persist in their line of action, they should be allowed to go on and take the responsibility on that score. This recommendation of the Joint Committee, however, has been given the go-by and to-day the Governor is no mere friend, philosopher and guide to the ministers. He thinks himself responsible as much for the working of the reserved half of the Government as for the running of the transferred departments. Naturally the Governor and the ministers, under these circumstances, pull the string from opposite directions. The result is inaction and very often a deadlock. Instead of adding to the efficiency of administration and the vigour of government, the present system is only making way for inefficiency and inanity.

In Madras, as we have seen, the Governor has, to some extent, abjured his statutory rights and tried to accommodate himself to the opinions of the Joint Committee. He has conceded the claim of the first minister to select his own colleagues. He has also conceded the claims of the ministers to be jointly and collectively responsible for the working of their different departments and thus form a corporate body and not simply a bundle of isolated figures. In other provinces, however, the Governors have not budged an inch from their statutory moorings. All the ministers are appointed at the initiative of the Governor himself. They are individually responsible for their policy and action both to the Governor and the Legislative Council. No pretension to collective responsibility has been allowed to grow. After the first general

elections during the reformed regime, the two ministers of U. P. were individually and separately selected by the Governor himself. The two ministers, of course, came to an understanding with each other, in spite of the Governor, and were resolved to stand or fall together. And fall they did at the same time. But the principle of joint responsibility which the Governor never accepted, died also with their resignation. Their successors were appointed individually by the Governor and looked upon themselves as only severally responsible for their respective portfolios. Similar is the experience of Bengal as well. The late Sir Surendra Nath Banerji has laid down in his reminiscences that after the general elections of 1920, he was called by Lord Ronaldshay, the Governor, and was consulted some way about the selection of his Hindu colleague. As regards the Mahomedan minister to be appointed nothing serious passed between them. And it was only from a morning paper, that Sir Surendra Nath came to know that Nawab Nawab Ali Chowdhury had been appointed a minister. Thus the ministers were appointed severally and individually by the Governor himself, the portfolios were distributed by him as well and the ministers remained only individually accountable for the working of their departments. No pretension to cabinet solidarity came to be made and no collective partnership under one popular leader was attempted.

Thus one of the main principles of the modern system of responsible government that the chief minister should choose his own colleagues has been rejected altogether in the great majority of the Indian Provinces. The ministers are expected, hence, to work their respective departments in their own way. The cohesive bonds that would tie them together and turn them into a single group with one policy and one mind are simply out of the question. Unity, steadfastness, initiative are the qualities associated with the British Cabinet. It is because of these characteristics that the English executive is efficient. But these are the attributes in which the Indian executive will be altogether lacking if the present practice develops into a tradition. Unless, in fact, all the ministers are brought together under the leadership and control of one and unless they constitute a united corporate body, they would not be able to check the irresponsible pretensions of the Governor on

Where the city of the faithfulest of friends

Where the city of the cleanliest of the sexes ^{stands}

Where the city of the healthiest of fathers ^{stands}

There the great city stands.

In By the Road Side, he gives in a few words a picture of the Modern's ideal of manhood:

Fair, able, beautiful, content, and loving
Complete in body and dilate in spirit
Be thou my God.

The supremacy over every circumstance of the spirit of the Modern Man, his incredible potentialities and eligibilities—these are Whitman's high themes, as they were, to the end the subject of his wonder and amaze. These, as already suggested, he expressed in terms of his own land. Celebrating himself, a representative person, he was in the same sense celebrating 19th century America, the America of Lincoln and Green. And it is this 19th century America which gave birth to the Modern Man.

Another significant note of modernity in Whitman's poetry is his utterance of the Modern Man's political ideas. While voicing forth the national spirit of the Modern Man, he has also expressed his belief that nationalism is not the highest goal, that there is something better beyond, which is internationalism. It is in the latter case

that Whitman proved himself wonderfully modern, because it is only very recently, in this first quarter of the twentieth century that a suspicion has arisen in the mind of the Modern Man about the efficacy of nationalism as a cure for social and political evils. Whitman may, in this respect, be rightly said to be a prophet of Modernity. In 'Tears of the Modern,' he voices forth the Modern Man's longings for international brotherhood and peace.

I see tremendous entrances and exits, new combinations, the solidity of races.

I see that force advancing with irresistible powers in the world's stage.

(Have the old forces, the old wars, played their part?)

Are the acts suitable to them closed?)

Thus, while poets like Arnold and Clough are perplexed at the complexities of modern life and disheartened, Whitman finds harmony in them and is reassured. Where they see only a weary tangle between materialism and spirituality, science and religion, and so on, Whitman discovers a complex but systematic development. To quote his own language, "The diverse shall be no less diverse, but they shall flow and unite—they unite now." Whitman is thus a poet of the Modern in the truest sense of the term and will remain so for a long time to come.

Tragic end of a Mogul Celebrity

By RAM SINGH SAKSENA

"He hath not lived that lives not after death"

AMONG the many great luminaries of Akbar's court who have left a shining memory for all time in the annals of Indian History, was one bright gem—named Shaikh Abul Fazl.

Born on January 14, 1551, Abul Fazl was the second son of Shaikh Mubarak, the learned Sufi theologian, who first induced Akbar to play the role of a prophet along with that of the mighty potentate. Faizi—the prince of poets' and the elder brother of Abul Fazl—was chiefly

given to literary pursuits and did not care for ambitious career in the state. Abul Fazl, on the other hand, already considered a prodigy in learning and having a precocious mental development, combined, according to Vincent A. Smith, extraordinary ability and capacity for work with the servility of an ambitious courtier, in this resembling Francis Bacon.

In 1571 having caught the royal fancy by his commentary on *Koran* he entered the Mogul court and went on ascending the official ladder till he attained the lofty and

lucrative dignity of a commander of 4,000. He occupied the position of the Secretary of State which in fact rivalled the power accorded to a *Vizier* of the Realm.

Apart from this social prominence and courtly dignity which he made his way to easily and with good care, he wielded an inner influence over Akbar by virtue of the proximity of ideas between him and his master. He was a true son of his father as regards his preaching of universal toleration and spiritual headship of the state with which he donned the emperor *Dur-i-Nahi*—the elastic religion propounded by Akbar, was partly the outgrowth of his mind and was matured into a concrete shape with his consultation. He was one of the few intimates in whose company the wearied soul of the emperor drew real solace. He was aptly termed by the Jesuit missionaries at court as 'the King's Jonathon'.

The literary excellence of Abul Fazl's writing is made manifest in his *Akbar-nama* and *Ain-i-Akbari*, both monuments raised to the glory of his sovereign.

Ain-i-Akbari is a digest of masses of administrative, cultural, geographical and economic facts showing the author's capacity for historical research and statistical work. But owing to the florid pomposity of style and diction, simple facts are wreathed in a cloud of rhetoric which tire the reader out with impatience. Moreover, his accounts of the time and surroundings, and his admiration for his idol, the Emperor Akbar generally smack of insincerity and flattery fatal to a historical treatise and are for the most part 'one-sided panegyrics'.

In this detail he suffered from the usual drawbacks of Eastern biographers and historians and is to be handled with the rest. What distinguished him was his amazing grasp of material and its rendering in choice Persian adorned with felicitous phrases. He was the next man of letters worthy of note since Amir Khusroe in the Mohammadan times.

Being at the zenith of his career and a confidant of the emperor, Abul Fazl aroused jealousy and hatred in the heart of Prince Salim—the heir-apparent who had caused much bitterness to Akbar in his closing years through his upstart and rebellious conduct. Salim had already grown

impatient of Akbar's long reign of forty years and sought by the help of his evil counsellors to set himself up as an independent chief. Akbar, out of his paternal levity, did not take any serious steps against his unruly son except frequent reproaches and admonition conveyed through envoys. But all threats and counsel fell flat on Salim who struck coins in his own name at Allahabad and usurped the title of the 'King'.

Abul Fazl was engaged at this time in imperial interests in the Deccan, and Akbar sent for him to derive some help and advice from his faithful counsellor in this predicament.

Tomb of Abul Fazl Antri, Gwalior State
Lent by Archaeological Dept., Gwalior State

Salim knew full well of Abul Fazl's unsympathetic and stern disposition towards him and feared the conjunction of Abul Fazl with his royal father lest the former by just advice might harden the heart of the latter and turn him to resort to imperial force with which Salim could ill-reckon, or might cause him to be disinherited, thus nonplussing his succession to the throne of the Moguls.

So in order to avoid this supposed ruinous happening, Salim thought upon a cruel device and attempted, by means fair or foul, to prevent Abul Fazl's ever reaching Agra and administering any ministrations to the Emperor.

Unmoulded of Akbar's wrath or grief, Salim secretly asked Bir Singh Deo, a *Gahwar* Rajput the predatory chief of Bundelkhand in Central India who was a rebel at the time, to waylay and murder Abul Fazl journeying towards the capital from the Deccan. Bir Singh Deo closed with the offer and lay

* For further details, see *Akbar* by V. A. Smith pp. 394-396.

in ambush with his mail-clad force waiting for the unhappy man's arrival in the dense forest and the hilly tract of his retreat. Abul Fazl meanwhile proceeding post-haste disregarded every caution and rejected many a word of advice given by his devoted adherents and marched on with a thin escort braving every danger.

A mendicant on the way unequivocally warned him to change his route or to add to his numbers for a large band of armed men were to pounce upon him the next day. But fatality dogged the footsteps of the doomed man and no note of warning availed with his rash demeanour. Shortly after he was attacked by the Bundela advance-guard which was repulsed by his party, but this only precipitated his encounter with a larger force. It was a matter of odds and Abul Fazl's retinue, with however great a valour and combating skill, could not get the better of an enemy far outstripping it in numbers. The Shaikh fought like a lion, but was transfixed with a Rajput lance and lay helpless before a marauder's hand. Bir Singh after showing him some mock-humility ordered him to be decapitated, and sent his head to Salim at Allahabad where it met with an ignominious insult. His lifeless trunk, however, was casually and unostentatiously interred in a modest unassuming grave at Antri* (now an out-of-the-way village) lying in the Gwalior State.

The report of this dastardly murder reached the emperor's ears in good time and the grief of Akbar at his friend's sad end knew no bounds. He simply writhed in agony for days together and raved like a maniac saying that if Salim wanted the throne he should have killed him and spared his dear friend.

This heinous and diabolical act ended the exemplary career of this great man in A. C. 1602 and a brilliant court light was extinguished suddenly.

Despite the overwhelming grief with which the emperor was caught at so sudden

and tragic an end of his able friend and minister—the brightest jewel of his Navaratna Durbar—it is still a matter for conjecture, and on which no investigator has hitherto thrown any light, as to why this great emperor did not raise a suitable monument to Abul Fazl's memory especially when so many structures* were raised to mark even the most trivial episodes by him. In fact, Akbar committed a great error, conscious or otherwise, in not leaving a mark to the memory of his trusted and devoted friends such as Raja Birbal, Raja Todarmal, Raja Bhagwan Das or the great Abul Fazl—all of whom have proved no less faithful in sacrificing themselves at the feet of the living idol.

Abul Fazl's aged bones lay interred till recently under a shapeless heap of mud and rubble not a stone telling that he lay there, except the local tradition which called it the tomb of Shaikh Fazalla, to guide the department of Archaeology Gwalior Government to undertake its conservation.

The illustration reproduced shows a lonely and simple sepulchre, which is but a poor monument to the memory of so illustrious a personage. But however small and insignificant the tomb it will not fail to commemorate the talented royal victim and will continue to harp the pathos of the following verse of *Makhfi* † on the ears of the visitors :—

*Alas ! where we, the poor, do lie
No nightingale for love does cry.
No lamp illumines our gloomy night
No moth attracts the flickering light. §*

Verily in these lines lies the consolation of a wrecked life !

* Hiran Minar, the throne pillar, may the very building of Fatehpur Sikri (near Agra) rightly called "the freak of an irresponsible autocrat," Smith, *Akbar*, p. 144.

† Said to be the non-do-plume of Zeb-un-nisa, the daughter of Aurangzeb and a great poetess of her day.

§ The couplet purports to the effect that no wonderer haunts the poor tomb or cares to offer a wreath on or burn a light beside the tomb. And the absence of a wreath or light screens the tomb even from the wail of the nightingale or the buzzing of the moths.

* Antri is a railway station on the Bombay-Delhi main line of the G. I. P. Railway and lies 20 miles south of Gwalior by metalled road.

scourges in India that take the heaviest toll: rinderpest, hæmorrhagic septicæmia, foot and mouth diseases, tuberculosis and parasitic infestations. As rinderpest is the most dreadful of all, let us consider this as an example. There is no lack of scientific knowledge about this disease, thanks to the Imperial Institute of Veterinary Research at Muktesar in Naini Tal. The experience of Egypt and South Africa are there to help us. Nearer at home, the Mysore State has already shown us how much can be done by hastily improvised and trained staff. The rapid strides of the Veterinary Department in the Punjab should be an object-lesson and incentive to individual and corporate effort in other parts of India. Methods of inoculation should be popularized to win over the sentimental objections to use cow's blood. Inoculations should be done on a voluntary basis. Initially it must be allowed free otherwise the cost will be a deterrent to extensive use. In the process of time, public opinion is bound to gather round the serum simultaneous method and it will be time then to insist on compulsory immunization. This will need a lot of tact, judgment and initiative. India has some great advantages for combating rinderpest. Suitable cattle for the production of materials for inoculations are available in the hill-bulls of Naini Tal and the sera can be produced very cheap. The Institute at Muktesar has made a profit of over five lacs recently after having met all the expenses of production. Achievements have been great no doubt, but the possibilities are greater. We have it on the authority of the Royal Commission on Agriculture that in no sphere has scientific research conferred

greater benefits on agriculture than by the means of controlling live-stock disease and it may be added that India has no reason to be dissatisfied with the contributions which its scientific workers have made to world knowledge during the last thirty years.

The recently brought-out "Goat Virus" method does offer a very strong hope that in the course of a few years, at any rate, it may substantially increase our powers of control of rinderpest. Experience now is very insufficient and a definite assertion is not justifiable.

I suggest that a more expanded and better organized live-stock department will mean a substantial increase in the wealth of the cultivator as also a corresponding increase of the resources of the State will be achieved. It is a matter of paramount importance that the cattle wealth be first protected from the menace of these virulent scourges before any real progress in the improvement of rural India or agriculture for that matter, can be effected.

The Rt. Hon'ble L. S. Amery, the Secretary of State for Colonies in London, said not long ago, "There is no science which has a greater importance for the Outer Empire to-day or indeed in a large measure for the old country itself, than your science of animal health—Veterinary Science and there is no wider field for its activity than is offered by the many diverse problems of the British Empire." That statement, coming as it does from a responsible minister, is full of significance and substantiates my contention that live-stock work is far more important and is capable of far greater development than any other branch of agriculture.

Some Impressions of Educational System in the U.S.S.R.

By M. LAKSHMI, M. A., L. T.

THE news reporters have tried their best to spread stories about the poverty and misery of the population of Russia under the Soviet regime. The dirt and filth of the trains, the complaints and grievances of the dispossessed nobility are all exaggerated beyond the possibility of belief and without any consideration for human intelligence. Yet in no part of the world has education

made so much progress, been so much thought of as a constructive force; it is no exaggeration at all to point out that under the Soviet system, children and mothers are better, men and women are treated fairly and their work judged by the same standards.

People invariably tell you, that if you go to Russia you see what the Russians want you to see. The writer's experiences

methods are issued for universal use, they are not accepted blindly but are expected to be adapted to suit the bias of the school, industrial or agricultural.

The prime object is general cultural development of children and their work. The programme of studies, therefore, is based on the surrounding life of the locality. The study of any subject is essentially practical and based on actual observation. The method followed in the teaching of any subject is the "Complex System" in which definite attempts are made to co-ordinate the various subjects taught in schools. The school subjects are usually grouped round a central idea which forms the connecting link between life, locality and subject taught. Thus the school is brought into direct contact with outside influences, with everything that is of interest in life. Individual work, competition by means of rewards and punishments and marks are discountenanced; wherever I had reasons to ask whether children were punished, the invariable answer from the teachers was "For what?" If anything anti-social happens, the children are the best judges, and they mete out justice according to their light. Group work is always encouraged and insisted upon, because to have collective life in perfect harmony with nature, children must be taught by giving them opportunities to share the fruits of labour by sharing the toils as well. The ultimate result is expected to be the natural obliteration of artificial class-distinctions and development of social and political camaraderie. Every child is taught from its infancy, in the factory circle that collective life means collective responsibility as well. Consequently the child's responsibility towards the State and Society begins as soon as it realizes itself.

Children under fifteen belong to Pioneer Organizations, who besides working for the club and school carry out an intelligent programme of public work for the liquidation of illiteracy and mortality. At the time of the October revolution, the percentage of literacy was only sixteen. To-day the percentage has amounted to fifty-four and this astounding progress is due to the co-operation of the

children and students of the Soviet Republic. In all the schools whether primary, secondary or party, the social aim of knowledge is emphasized; knowledge is not and should not be used for selfish aggrandizement but for collective use. Twice a year during the holidays 120,000 free railway tickets are issued to students and teachers with which they can travel anywhere in Russia. During the summer months, these Pioneer workers go to the villages with two objects in view; to spread the idea of education, and to teach the villagers conditions of a healthy life. Usually reading-rooms are opened where the children read to the villagers, teach them to take an interest in the affairs of Russia and the world. The opening up of children's homes and play-grounds is another significant feature of holiday programme.

Russia fully believes that a nation does not live on its past but on its children, and the motto in many of the children's homes I visited bears this message "We are a million young, strong and daring; we will lead you." This growing band of hopefuls is brought up in a philosophy of life which expounds and believes only in daring and doing things. The new Russia does not believe in spiritual influences or supernatural agencies shaping the destinies of man. Social evils are studied and understood not as consequences of divine manipulations or as the pardonable vagaries of a so-called Law-giver but as mal-adjustments in economic life. Such mal-adjustments are best remedied by righting the wrongs by honest human effort—we are a part of nature and the vast forces in nature give us control and power over our surroundings; education must enable the individual to harness this power or force for the use of his fellow-beings. Labour, co-operative, collective labour is that which offers the best aid. This philosophy has worked wonders even among the supposed superstitious people like the pre-revolutionary Russians; it has dignified labour as the only thing worth living for; a consideration of its achievement has actually hastened the movement towards the fulfilment of the ideals of the new Republic.

8-9. Mr. Sinha here again brings together two sentences from two different pages of his version and gets two of my consecutive sentences and argues that he is stating in them his "own" exposition. I need not labour the point about 9 as Mr. Sinha himself gives part of the Sanskrit text used. As for 8, the sentence reads: "If substantiality constitutes the object of consciousness, then the self can never be the subject or knower; for the self is as much a substance as a jar." The passage from *Nyāyamañjarī* here quoted is this: "Dravyādisvarūpe grāhye na jñātari grāhakatā sādhitā syāt, ānavartinopi dravyādūpasya ghaṭādūtyatvaṁ" (p. 430). Thus it is clear that the views of the texts are claimed by Mr. Sinha to be his "own."

Passages 10-53 are unpublished and I do not propose to deal with them in any detail.

54-57. These deal with the Naiyāyika's criticism of the Advaita view based on *Nyāyamañjarī*, p. 432 and Mr. Sinha does not claim them as his "own interpretation" or "own exposition." There are significant differences in the two versions.

58-67. The text dealt with is *Sāstradīpikā* and my version differs materially.

62. Here Mr. Sinha claims that it is his "own exposition" of the distinction between *Vācaspati* and *Vijñānabhikṣu* regarding the self's knowledge of an object. The distinction is a very familiar one (see *Dāśgūpta: Indian Philosophy*, p. 260.) My rendering of *Vijñānabhikṣu's* theory of mutual reflection (*parasparapratiṭimba*) reads: "The mental modification which takes in the reflection of the self and assumes its form is reflected back on the self and it is through this reflection that the self knows the object." It is based on *Yogavārtha* I.4 "Buddher viśayākāravṛttinān puruṣo yānpratiṭimbanī tāny eva puruṣasya vṛttayah. Yathā ca citi buddheḥ pratiṭimbam evaṁ buddhāv api citi pratiṭimbam evikaryam anyathā caitanyasya bhānūnapapattēh." Mr. Sinha gives the passage dealing with this topic, omits certain words from it and retains others which happen to be similar to mine and then complains that I have borrowed from him. My version is not identical with his but the use of the words 'modification' for *vṛtti* and 'reflection' for *pratiṭimba* makes him believe that his "own exposition" is adopted by me without acknowledgment. No argument is possible.

63-70. These deal with the *Nyāyavaiśeṣika* theory of dreams. In seven consecutive sentences, I refer to the chief varieties of opinion on the subject including those of *Kaṇāda*, *Prasastapāda*, *Siddhārtha* and *Udayana*. Mr. Sinha brings from five different pages a number of sentences where he is stating the views of the identical writers. My sentences are different from his but they happen to deal with the views of the classical writers. His complaint seems to be that I should not have stated them without my acknowledgments to him

because he has also in different words dealt with the views of the same writers.

I do not want to weary you or your readers. In these two letters I have shown that Mr. Sinha tries to make out a case in different ways that I have borrowed his "ideas" and his "language."

1. In the two letters, there is not a single idea which can be regarded as Mr. Sinha's "own." He uses textual renderings and declares often that they are his "own interpretations" which no one familiar with these studies will grant.

2. He uses translations made by others, claims them as his own and then complains that I have taken my versions from his account.

3. He brings together textual matter from different contexts in his thesis and collects from different places in my book the corresponding passages and from the partial resemblance inevitable on account of the identity of the texts considered suggests that the resemblance is due to "unacknowledged borrowing."

4. Even with regard to the textual matter, his attempt seems to be a literal translation while mine is an exposition of the thought and throughout the passages there are striking differences and significant indications to show that I had an eye on the texts all through.

The charge reduces itself to this that I have used some of the classical texts on which he has based his account. I can only say that it will be difficult to deal with the *Sāṅkhya-Yoga* system without using *Vācaspati* and *Vijñānabhikṣu*, the *Mīmāṃsā* theory without using *Pārthasaradhi*, and *Siddhānta* and the *Vaiśeṣika* doctrine without using *Prasastapāda* and *Siddhārtha*. Any one who knows anything of Indian Philosophy will understand how these books are the indispensable classics and no one can write on these topics without using them.

It is impossible to write on Advaita Vedānta without using *Samkara's* commentary on the *Vedānta Sūtra* and if we place side by side parallel passages from *Thibaut* and *Doussen* where *Samkara* is quoted, we shall have enough copy for any journal in India for nearly a year. But from the resemblance in matter and form we cannot draw any conclusion of plagiarism.

Mr. Sinha has passed judgments on my alleged mistakes of fact and of interpretation. This is not the place or the occasion to deal with them. Of course I do not claim that my account is perfect or free from errors!

With apologies for troubling you,

I am,

Very truly yours,

S. RADHAKRISHNAN

Calcutta, 12-2-29.

is nothing in the slums to compete with the lure of strong drink and the fierce excitement of gambling.

"In our great cities there is an almost complete divorce from nature. Think, for instance, of the East End of London, some five miles long by three miles broad, densely populated, with its interminable stretch of mean streets, with few large open spaces, and with the country far away.

Railings for hedgerows, lamps for trees.

For hills the tenements jump."

"Such is the scenery in which thousands of our boys and girls grow up and which very many of them will see practically every day of their lives until they die.

"In London especially, with its enormous distances, the inhabitants are veritably in prison. It is a sad reflection that so many thousands in our great city are deprived of that education of the spirit which comes from the contemplation of nature. They do not see the procession of the seasons, seed time and harvest, the revelation of the orderly unfolding methods of God." (*The Facts of Poverty*, by H. A. Moss, pp. 19-21).

The same author says again that

"Men have sinned monstrously in building those huge cities from which God seems to be shut out. Stupidity and selfishness have made our cities; wisdom and unselfishness must transform them." (*Ibid.*, pp. 27-28).

It is these facts to which should be attributed in England the movement for "Back to the Land". It will do good to the natives of England to take more to agriculture than they have hitherto done.

On the other hand, the importance of the town for the education of political rights and civic duties of a people must be borne in mind. Prof. Ross writes:—

"The towns which arose in the Middle Ages to meet the economic needs of an expanding population gave rise to fresh social and political developments. The feudal manor stood for constraint; the town for freedom ('my air makes free'). Outside the town the workers were serfs and labour was despised; inside labour was respected and the worker had pride in his work. Outside, fighting and working were distinct occupations; inside, one wrought or fought as occasion required. Outside was caste; inside, men were in free and fluid relations. Moreover, town life develops a social mind more impressive and plastic than that of the open country. Outworn traditions and narrow local sentiments meet and cancel one another. The shutters of the intellect are taken down. The mind becomes supple and alert. Freed from the net of kin ties and class fealty the individual appears. The town is therefore a hot bed, where seed-ideas quickly germinate. It places itself at the head of the social procession and sets the pace for the country-dwellers.

"Less traditional than the country, the city appraises men according to some present fact—their achievement or their wealth, rather than according to their ancestry. It is plutocratic or democratic in temper, whereas the country-side believes devoutly in family. In the city, people consume, as it were, in one another's presence, and hence their expenditure conforms to the canon of Conspicuous Waste more than does that of the country-folk. In towns the multiplication of merely conventional wants intensifies competition, whets egotism, and restricts the size of the family." (*Loc. cit.*, p. 330).

But the author just quoted above, has referred to the cities as being sinks of gifted stocks as follows:—

"Now there are various things which may change for the worse the hereditary fibre of a people. One is the cityward flow. The glittering cities lure the brightest youth from the fields and tempt them to strain for the prizes of success. But in the city they marry later, die sooner, and leave fewer children than the dull cousins that stayed on the farm. Invariably, until about a century ago, cities were consumers of men, their deaths always exceeding their births, so that nothing kept them up but the endless inflow from the country. The fact that the urban population can reproduce itself to-day should not lead us to forget how for centuries cities were blast furnaces where the talented rose and became incandescent, to be sure, but were, nevertheless, incinerated without having duly reproduced themselves." (*Loc. cit.*, pp. 515-516.)

City life does not favour heart-culture. But the present civilization based on industry cannot do without cities. They are necessary evils. However, cheap means of transit may be expected to afford facilities to many to live in the country and come to the city for purposes of business only.

The country must play a greater part in the uplift of humanity than the town. This was well understood by the sages of ancient India and hence they enjoined on all to pass the last stage of life in the forest, in communion with God and Nature.

Prof. Giddings writes

"The country produces population, energy and original ideas—the raw materials of social life,—as it produces food and the raw materials of manufactures. Genius is rarely born in the town. The world's great faiths have germinated in the desert, or among mountain heights. Its great policies have been suggested by unsophisticated men. It owes its great discoveries and immortal creations to those who have lived with nature and simple folk." (*Principles of Sociology*, pp. 346-347.)

THE PACT AND ANGLO-AMERICAN RELATIONS

The outstanding fact of western politics at the present day is the failure of England and America to come to an amicable agreement as to their own naval requirements and the reduction in the light of an agreement of their naval armaments. The programme for the construction of 71 ships which was sponsored by the Naval Affairs Committee of the House of Representatives last year has now been reduced to a proposal for the construction of 16 more ships. If the naval programme announced by the British Government is not increased, the American programme, if carried out, will outstrip the British total of 10,000 ton cruisers by ten cruisers of this class. The acceptance of the proposal by the Senate will involve America in a competitive armament race with Great Britain and perhaps with an Anglo-French alliance. *The World To-morrow* of New York (December, 1928) understands that as a bargain for the ratification of the Kellogg treaty, important church groups and peace organizations as also Senator Borah have decided not to fight the Cruiser Bill so that it has every chance of being carried through. "It is argued," says the journal, "that after we have once secured this treaty, then lovers of peace can compel limitation of armament more and more every year, but they must first get the treaty passed." This is, obviously, very superficial reasoning; for the threat of this programme

will surely complete the Anglo-French naval understanding which the press and people of England now deplore and would thus make naval limitation more difficult in future. It would also take away any moral value that may be sought to be gained by a subsequent ratification of the pact.

THE PLACE OF THE PACT IN HISTORY

Is the Pact going to be a driving force in the history of the West or is it going to be one of the curiosities of history? The question seems to be premature. One strong argument in favour of the Pact is that it has got solid popular support in many European countries and also in America. The whole negotiation about the Pact was done in public, as in every stage of the proceedings the correspondence among the Governments was made known to each other and to the public at once. The Pact of Paris differs in this respect from many other such scraps of paper. It may be regarded as the crystallization of one strong current of public opinion in favour of organizing peace in Europe. According to Dr. Gilbert Murray of America it marks "the longest step forward into the noble movement to lift civilization above the barbarism and cruelty of international war began." Many will hesitate to accept this view as the whole truth, but at the same time we should not deem or ridicule the Pact, as is frequently done in our country. The Pact shows that "the will to peace, the habit of thinking in terms of peace" is increasing in Europe.

Mothers and Children at one of the Child Welfare centres in Calcutta

palities would perhaps be able to give more attention to the health and welfare of children and their mothers.

Mrs. CHANDA BAI is the eldest daughter of Mr. Naraindas, ex-M.L.A., and the daughter-in-law of Mr. Chandra Kumar Jain, a distinguished zamindar of Arrah. She lost her husband shortly after her marriage. A strong inclina-

Sumati Sumti Mitra

Among the devoted workers for the nation may be mentioned the name of SUMATI SUMTI MITRA. After graduating from the Calcutta University she acted as an Inspector of Schools in Bengal for some time. She threw up this post as a result of the Non-co-operation movement launched by Mahatma Gandhi. Her name is closely associated with various social works undertaken both in Bengal and in the United Provinces. Her activities in advancing education and promoting the diffusion of knowledge among India's woman-kind are well-known. It is with pleasure, we learn, that she has recently been elected a Municipal Commissioner at Lucknow. It is to be hoped that, if Indian ladies come forward and occupy such positions, the Munici-

Mrs. Chanda Bai

tion to the pursuit of knowledge was noticed in her very early, and despite the strict *purdah* system prevalent in Bihar she has made great advance in self-education. She possesses a sound knowledge of Sanskrit and has gained proficiency in Jaina philosophy. To promote the education of her sex, this learned lady has produced a number of Hindi books, of which the following deserve to be mentioned: *Upadesha-ratnamala*, *Saubhagya-ratnamala*, *Nibandha-ratnamala*, *Mahila-onka-chakra-artitua*. Chanda Bai has been editing *Jaina Mahatadarsha*, a monthly

magazine for the last seven years with conspicuous ability.

Born and brought up in affluence, though she was, Chanda Bai leads a very simple and unostentatious life. The noblest monument erected by her at Dharampur, near Arah at a great cost, is the 'Sri Jani-bali-Vishrama', where Jain women young and old, are taught. Chanda Bai herself shares in the work of teaching and delivers from time to time, useful and instructive lectures to the students.

Mrs. Saraswati Bai Ovalkar

Mrs. SARASWATI BAI OVALKAR is a Mahatasha lady of Thana. She is a skilful artist in embroidery and specimens of her work on khadda were exhibited in the Congress held recently in Calcutta.

Y. V. Ranganayaki Ammal

The Government of Madras has appointed Y. V. RANGANAYAKI AMMAL as a member of the District Educational Council West Godavari.

Mrs. C. SIVAKESAVI is the first lady to be nominated a member of the District Board Vizagapatam.

The Third All-India Women's Conference on Educational Reform was held at Patna recently and Mrs. LALIT KUMARI SARKAR of Mandi State presided over its deliberations. We reproduce here extracts from her presidential address.

Meeting in the city of Patna, it is impossible not to feel inspired by the memories of ancient

Mrs. C. Sanjiva Rao

Rani Lohit Kumari Saheta

Pataliputra, associated with the great traditions of Asoka and Chandragupta who reigned at this capital and under whose benign sway India saw some of the most glorious days of her history. India's daughters were not "cabin'd, cribb'd, confin'd" in those spacious days of the past, but

ALL-INDIA WOMEN'S CONFERENCE --- A group photograph of President and members of the Standing Committee of the All-India Women's Conference.
 1st row sitting: Mrs. Nehru, Mrs. V. K. Son, Mrs. Sardesai Choudhary, Mrs. Madan Lal Dasgupta, H. H. Dowager Rani of Mandi (President), Mrs. Faridkot, Mrs. Bhaskar, Mrs. B. C. Mukerji, Mrs. Pyrami.
 2nd row standing: Mrs. Shukla, Mrs. Bhaskaranna, Miss Sillanth, Mrs. Miles Irving, Mrs. Behadurji, Miss Lazarus, Mrs. Nayana, Mrs. Ramaswami Chatterjee, Mrs. Copeland, Mrs. Khemchand, Mrs. Mukerji, Mrs. Herliker.

The members of the Reception and Executive Committees of the All-India Women's Conference

they marched onward hand in hand with men in the spirit of true comradeship and were known to have distinguished themselves in many spheres of national activity. They were not hampered in the *zenana*; they were not burdened with the cares of family life even when they had not passed childhood; there were no limits set to their intellectual ambitions and they enjoyed a measure of social freedom which is in refreshing contrast to the fate of their descendants to-day.

It is a feeling of intense depression that comes over any one who has occasion to examine the present extent of the literacy of women in India, the wiping off of which is one of the important aims of our organization. Nothing can be a matter of sadder reflection to us than the fact that, according to the latest official statistics only about twenty-one out of every thousand women in India are literate while in the advanced civilized countries of to-day not only in Western lands but also in Japan practically every woman is literate.

The highest culture and enlightenment should be the birthright of women as well as of men.

Women benefit by the highest education as much as men and it is a narrow view indeed which seeks to fit woman only for the needs of motherhood and domestic life, though it is not argued on parallel lines that man's education

should be ordered so as to make him primarily a good father and a good husband.

As has been recognized on all hands the question of the educational progress of the women of India is bound up intimately with the improvement of our social conditions. The best of our educational programmes must come to naught and all our resolutions at conferences must be futile, if women cannot come out of the *prideh* and have the benefits of God's light and air if little girls continue to be hustled into marriage even before they have reached their teens and laid the foundations of the most rudimentary education. If women are to be handicapped as at present by disabilities of various kinds preventing them from reaching the full heights of knowledge and experience of which they are capable.

It is true that the justice of the equality of opportunities for both sexes was enunciated in no uncertain language and its recognition enforced in all directions in this country. This great principle was acknowledged in no indefinite terms by our great ancestors.

The recognition of this fundamental equality, the removal of our numerous social disabilities and above all unrelenting attention on our part to the cause of our educational advancement—these should lead to a new era of development in our history without which our beloved motherland can never hope to take her rightful place among the civilized nations of the world.

rulers reigned over portions of Sumatra, Java, the Malay Peninsula, and numerous islands in the Archipelago. It was recognized by the Chinese pilgrim I-tsing as a great centre of Sanskrit learning.

As late as the 11th century A.D. the mighty Hindu-Buddhist kingdom of Majapahit (its Sanskrit name was *Bhwa-tikta*) held sway over the whole Archipelago and considerable portions of the Malay Peninsula. Its highly efficient navy kept order in the innumerable islands lying between Australia to the east and the Philippine Islands to the north.

Sanskrit inscriptions found in Champa (Annam), Kamboja (Cambodia), Borneo, Java, Sumatra, Bali, the Malay Peninsula, etc., provide the material for reconstructing the history of Greater India. French scholars in Indo-China and Dutch archaeologists in Java have done wonderful work in discovering and editing these inscriptions. We in India know very little about this spread of Indian cultural and political influence abroad—because there has been written very little on this subject in English.

CAMBODIA

In the middle of the 6th century A.D. Kamboja (Cambodia) overthrew Fu-nan, the suzerain state and soon became a powerful kingdom under a succession of warlike princes. About five hundred inscriptions, many of them quite long and in faultless Sanskrit, provide us with ample material for the reconstruction of the cultural (and to a substantial extent also the political) history of this great Hinduized State from the 6th to the 14th century A.D.

To the east of Cambodia was situated another Hindu kingdom Champa, which had a more chequered career as it had to fight continuously against Chinese and Annamite invaders. About 150 inscriptions (which can be supplemented by Chinese and Annamite chronicles) give us a fairly connected account of this interesting realm. It is solely to the French archaeologists that we owe the discovery of the Hindu period of Indo-China.

As regards Java, Sumatra, Bali, etc., the number of inscriptions in Sanskrit and Kavi (the old literary language of Java) is not large, but there are two important Kavi chronicles which deal with the 13th and 14th centuries—the most glorious period of Javanese history. The narratives of the Arab merchants of the 9th and 10th centuries also throw an interesting side-light on contemporary conditions in these islands. The Dutch archaeologists have done most valuable work not only in collecting the material for the history of the splendid shrines and monuments of that lovely island.

the most wonderful structure in the world, the like of which Greece or Rome had never built. Everything here (at Angkor Vat) is on a grand scale. The moat which surrounds the temple is about 700 ft. in width. The stone wall enclosing the shrine is $\frac{1}{2}$ rd of a mile east to west and half a mile north to south. The temple itself rises in terraces (there are three terraces) and is surmounted by very lofty towers. The inner walls are adorned with reliefs depicting scenes from the Ramayana, Mahabharata, Harivamsa, etc.

BOROBODUR

In Java, scenes from the life of Buddha decorate the walls of Borobudur—which is a whole hill carved into a Buddhist stupa. In the temple of Prambanan in Central Java the first five cantos of the Ramayana are carved very artistically on the stone walls. Java cannot boast of such magnificent temples as Cambodia; but Javanese sculpture is decidedly superior to that of Cambodia. There are few images in the world which can surpass in beauty some of the Buddhist sculptures found in Java.

India, as Dr. Chatterji justly points out, should be taking her share in the matter of reconstructing the history of Greater India.

German Thought of To-day

In his instructive address, published in *Calcutta Review* for February, Prof. Helmuth von Glasenapp sets forth the different modes of Modern German thought materialistic, idealistic, religious or even mystical like that of Steiner and the occultists, and concludes thus from the two things he finds in the prevailing movements of thought:

Firstly: how strongly the interest for philosophical and religious questions is felt in Germany and with what earnestness they are studied; and secondly: how great the divergence is among the many endeavours that are to solve the problems of life.

Is this divergence a sign of overflowing productivity of thought or is this a sign of decay? From the standpoint of a firmly fixed dogmatism all differences from one teaching, which is regarded as the only right way, are to be displaced as aberrations. We do not believe, however, that the uniformity of thought, as it has been realized during the Middle Ages or as it is aimed at, in an opposite direction, to-day in Russia, is the salvation of mankind, but have the opinion that every one has a claim to build up his own ideas of the world. Who shares this opinion, will see just in the divergence of religious and philosophical views a sign of the creative energy of thought. Hegel declared liberty to be the essence of thought, and one of the philosophers who was in his early time a follower of his, Karl Marx, has expressed the same idea in a somewhat flowery language, when he says: "You admire the wonderful variety, and the inexhaustible abundance of nature, you do not demand that the rose has the odour of the violet, but the richest of all, thought, is only to exist in one way."

History tells us that at all times endeavours have been made to solve the great enigmas of life in many various ways. If Socrates or Plato came back to the world now, they would find everything altered, but in philosophy they would find the same contrasts as in their own time. This is not strange. For thoughts on life rely on the character reality, and the characters of men have not altered all these thousands of years. In all times in which personality is allowed to unfold itself freely, a divergence of systems will spring up. And that is good so. For this multifariousness will prevent the levelling of thought, the permanent strife of the different explanations of the world gains new movement of itself. Out of the understanding of the necessary variety of thought tolerance rises like a ripe fruit. Tolerance which firm in its own belief leaves other opinions the same right and admits the inexhaustibility of thought that seeks always to solve the riddles of life in new ways. Especially in this country which was a home of philosophy already at a time when culture had not yet dawned in Northern Europe and which is proud of always having been a home of tolerance to philosophical and religious views of every description, this many-sidedness of thought will appeal to the very heart, as it is the result of the free development of individuality.

and violence, which are the very negation of socialism. There are also serious defects in the Bolshevik idea of a socialist or Communist state. To work to plant these things upon us by violence because they, the Communists are convinced they will be good for us is just about as a noble and as logical as it would be for Mussalmans to plan and work to bring India under a Pan-Islamic dictatorship on the ground that the Mussalmans were convinced such a transformation would be for the good of India and the world generally.

National Health

The Athletic India (January) which we welcome as a new periodical that will successfully answer as it promises to a great and useful purpose, writes editorially:

The building up of a high standard of national health is important to every country. Such a standardization is of prime necessity in India where infant mortality and the spread of tuberculosis among the youth of both sexes are eating into the vitals of the Indian nation. Unless a change in the outlook of national health is brought about a complete emasculation of the whole of India will soon become inevitable.

We admit that outstanding individual athletes set a very high ideal of athletic attainment, but unfortunately they do not form the index of a nation's health. We believe that it is better to have a large group of healthy and strong people in a country than a few outstanding champion athletes. *Athletic India* will work for the greatest good of the greatest number rather than for any special class or community.

Happiness is the ideal of the entire human race and though we do not believe that physical culture alone can help us to attain that ideal, it is at least a large factor in the building up of a healthy enthusiasm for life and making us optimistic. As a means to the attainment of this end the physical health of an individual or a group of individuals is certainly important. In keeping with our theme it will be best to make our education a combination of aesthetic and athletic culture—a culture which blossomed fully in the hey day of ancient Greek life.

The Eastern System of Medicine

Mr Rushbrook Williams pleads in *The Feudatory and Zamindari India* (January) on the basis of his own experience of the success of the Bhopinder Tibbi College, Patiala, for extension after necessary adaptation of the eastern system of medicine in India as it meets the present conditions more effectively.

The practitioners who are trained in the indigenous systems of medicine are often astonishingly successful in gaining the confidence of the masses of the population in a very short time. Most people who have experience of medical administration

The Crisis in the Trade Union Movement

'Red' menace to the Indian Trade Union movement as revealed at the Jharna session of the Trade Union Congress forms the subject of editorial comments in *The Indian Labour Review* (January). Two methods, definite and decisive, suggest themselves to the editor.

One is to convene mass meetings of workers at strategic centres in the country to be addressed say, by Gandhi, who might be induced to explain a policy previously agreed upon by responsible Trade Unionists; the other is first to call a Conference of all those in the movement who stand for constructive Trade Unionism, decide there upon a plan of drastic action and then appeal to the workers along these lines. We use the term "drastic" advisedly for it is now clear that no half measures will or can meet the case. We ourselves are decidedly in favour of the latter method (we know many others are also) if no other reason than that the Trade Union Congress must be its own arbiter. It means, of course, a clean break-way—that or being absorbed into or going right over to the Bolsheviks.

The editor admits that the occasion of 'purging' may be exploited both by the capitalists and the Government, but still Trade Unionists have to move in the matter. The crux of the matter between the Left and Right (or Centre?) is put by the writer thus:

There are many things in the Great Russian Experiment that are admirable and desirable, but not the Russian way, not at the price of hatred

and the artistic vigour of the period was evident throughout India. The causes of such a universal art-movement should be sought partly in the spiritual and moral forces of reviving Hinduism in the wealth of India and her abundance of building material, and in the existence of separate castes of artists and architects who clung conscientiously to their ancestral professions, as well as in the political strength, religious zeal, and love of decoration and display of the Muslem rulers. True to the genius of his race, whether in China, Persia or India, Akbar tried to utilize and assimilate the art traditions of the conquered peoples. His open mind and selective genius adopted whatever was best in the line Arts of his time. A blending of the building styles and decorative modes that obtained among his friends and subjects was the synthetic counterpart of his eclectic policy in religion.

The artistic remains of the great Emperor are rightly characterized as the mirror of history :

It is easy to see how Akbar's architecture bears the impress of the feelings and fashions of the age—an age of luxurious leisure, an atmosphere of sensuousness and sensuality. We have seen how in its details also the art of the age reflects the general conditions of the times. Akbar in the styles of building and modes of ornamentation we notice a dexterous combination of the Indian and Saracen elements on which is engrafted whatever is actually more or effective in the building and its decorative arts of other countries. Thus we have that strangely beautiful medley of buildings of all styles and plans, destined for all sorts of purposes, which has long been the wonder and delight of artists and architects of all countries. The general purpose of the design was Indian to counteract the heat and glare of the fierce tropical sun. Everywhere we have enclosed courts with their cool white fountains, shrubs and gay flowers tall trees flanking their silver fountains, speckled with bright flowers or laden with golden fruit and dark velvet banks of varied foliage cooling the eyes and quelling the heat—a relief from the silver sheen of the white marble charged with the accented lines of the Indian sun. Ladies of rank personated their elaborate toidets by the sparkling fountains, and their husbands sought rest and repose in the gardens of the seraglio. Nor was such splendour reserved for the Indian Poppo or the imperial city of Agra. On their environs we find relics of huge buildings with extensive grounds enclosed, where were housed the nobles of rank, a number of whom with all their stately equipage attended on the Emperor's person at the public processions and the ceremonies of the court. The palace of Barab at Samangrah for instance is one of the innumerable remains of the kind in the neighbourhood of Agra. The architectural effect is marvellous. Of the best among the buildings we may use the words of Victor Hugo. "Everywhere was maintenance refined and stupendous, it was not the mere diminutive of palaces, it was the most gigantic of jewel-cases."

Akbar's eclecticism in religion is illustrated by the borrowings from various religious styles—Hindu, Jain, Buddhist and Christian. His love of variety and delight in things new are evidenced by in

the resemblance of parts of his work to the English, Persian, Chinese, and Japanese styles. Akbar's inventiveness is illustrated by his introduction of various coloured stones encrusted in marble in place of coloured tiles. We can see an illustration even of Hindu superstition in the structure. It is a well-known fact that the Indian artisan believes to this day that the gods cannot bear the sight of a unfinished building brought to completion. The artist leaves off before, giving the finishing touch lest some sad calamity should befall him in the completion of the building. This is the reason why a portion of the border is left unfinished in a carved panel in the Turkish Sultan's house for similar reasons too. The wall of Pathan-Baki remains unfinished. We are told that the Shukh warned Akbar that his imperial glory would begin to wane if the city were encompassed by walls on all sides. The Sangra Bai tower is therefore an irregular pentagon.

Greater India—Some Landmarks in its History

Dr B R Chatterji takes in the *Meerut College Magazine* a birds-eye-view of Greater India

A SANSKRIT INSCRIPTION

The earliest sources of information about the spread of Indian culture in Indo-China and the Malay Archipelago (Java, Sumatra, Bali, Borneo, etc.) are the Chinese Imperial Chronicles. From the accounts of Chinese envoys to these regions we learn that in the 1st century A.D. a Brahman of the name of Kuandinya founded a powerful kingdom (called Funan by the Chinese) in Central Indo-China. This is corroborated by a Sanskrit inscription from Champa (now known as Annam) of the 5th century A.D. relating to the foundation of Bhavapura—the capital of that kingdom (Funan). It seems that the Brahman Kuandinya married a native (Indo-Chinese) princess and founded a dynasty which later traditions linked up with the lunar dynasty of India.

Gradually other states thoroughly imbued with Indian culture were established in Indo-China. Among them may be mentioned Kamboja (now known as Cambodia and which was originally a vassal state of Funan), Champa (the present Annam), Dvaravati (in south Siam), Hamsavati (Pegu in Burma), Amarapura (Pegu in Burma) etc.

IN BORNEO AND SUMATRA

In the Archipelago centres of Indian influence rose early in Borneo—where a Sanskrit inscription of the 4th century A.D. describes the performance of a Vedic sacrifice by a king of the name of Mulavarman. West Java—where King Purnavarmas constructed canals and posed as Vishnu Bali where Hinduism still survives and Sumatra—known in early times as Suvarnadwipa (the Isle of Gold). Later on, Central Java and finally East Java became the seats of powerful "Indianized" kingdoms.

The empire of the Shailendra monarchs of Shrivijaya (in S.E. Sumatra) was for centuries the most powerful maritime state between China and India. In the 8th century A.D. the Shrivijaya

in India know well the difficulties which have to be overcome if wholesale inoculation is necessary. Although, as I have said, the State Medical Department of Patiala enjoys to an unusual degree, the confidence of the people, there are still certain localities where the population does not take readily to such innovations as hydropneumococcal injections. But I have found that the influence of the trained *hakim* is often effective in persuading the population to undergo the ordeal *en masse*, when the exhortation of the Western trained doctor, even when supported by the moral influence of the local executive authority, has yielded comparatively poor results. So much is this the case, that in public emergencies such as the large melas, which are held in His Highness's territories every year, it has become a regular thing for the Director of Medical Services to indent upon the assistance which can be rendered to him by his Unani confreres. Accordingly, one sees the spectacle, which must be unusual, even if it is not unique, of the Western-trained State-employed physicians labouring side by side with the graduates of the Unani College; and combining with the utmost harmony for the task of relieving suffering humanity. All of which brings me to the point from which I started this short disquisition. The combination of certain of the elements of Eastern and Western practice seems to result, in the present state of India's development, in the production of a practitioner more widely trusted by the people in general than any doctor trained purely in the Western system. It seems to me, therefore, that the steps now being taken in India to place the indigenous system upon a sounder basis to discourage quackery, and to recognize official Unani and Ayurvedic diplomas conferred by properly regulated and controlled institutions, is something far more than a mere desire to vindicate Nationalist *amour propre* against Westernized medical practice. It seems to afford a prospect of a time when it will be possible to find in the majority of the Indian villages private practitioners who, having undergone an inexpensive and comparatively simple form of training, combining certain of the elements of Eastern and Western practice, are amply equipped for the discharge of any duty which is likely to come their way. As is well-known, one of the greatest difficulties in promoting the health of the Indian masses arises from the fact that there is nothing in India corresponding to the English country doctor. And until we can introduce the invaluable element into the structure of our national machinery for public health in India, it seems almost impossible to bring even the simplest medical relief to the doors of the vast mass of the people.

significant that the Board of Education in England should have appointed a Committee to consider the quantity of school text-books, and the conclusions reached by the Committee must be of considerable interest to India also. The complaint is that in elementary schools only third-rate stuff is provided for the reading of children. It is urged that no standards of truth and beauty are being set up. Schools are not using all that is noblest in literature to help pupils to distinguish what is beautiful, true or helpful from what is third-rate, "sloppy and sentimental or inane." The description would apply with even greater truth to text-books in use in Indian schools, the majority of which are written by people devoid of any literary talent and rely more or less on the official positions of their authors for their introduction and use in schools. An enquiry of the same kind in India would reveal conditions which would astonish those who have any sense of literary appreciation.

It is now for us in Bengal at least to wake up to the problem. Our text-books for schools are badly written, badly edited, badly printed, and violate every rule of enlightened pedagogy. More light should be focussed on this rather neglected matter.

Indian States and National Solidarity

Prof. K. T. Shah discusses in *The New Era* (February) the much debated question which is exercising the minds of all politicians and political thinkers. Says the writer:

The *sine qua non*, however, of a satisfactory understanding between the Indian Princes and the leaders of the nationalist sentiment in India, is the necessity for the Princes always to remember that they are where they are, because they represent considerable numbers of human beings. The Princes, if they mean to attain to a satisfactory solution, must sink their own personal aspect of the question into the only acceptable aspect of an understanding between two peoples through their respective representatives. There must be made a distinction between the claims of the Princes personally, and of their States as states, representing thousands or even millions of human beings. The demand of Sir M. Visvesvaraya, a President of the States' Peoples' Conference, for a speedy introduction of the principle of responsibility in the State Governments is by no means an isolated or ill-considered suggestion. The unhesitating support of the Indian States' people would be had to any understanding and solution that may be arrived at, if only the rulers of these States would remember that they are living now in the twentieth century, when the days of absolute personal rule are no more and that their greatest strength and safety lies in an alliance first with their own people and next with the people of British India.

A regrouping of the States, suggests the Professor, combination of the smaller neighbours and assimilation of existing principalities

with cultural affinities will make administration and government easy.

For my own part, I cannot persuade myself that there is any room to-day in India for the Princes to form by themselves a distinct caste, or order, or estate of the realm, with separate personal privileges and immunities. Much less is such a concession possible for the minor Princes and smaller feudatories. All that we can concede to-day with any hope of some permanence, is the recognition of the several States, or their standard combinations, as equal partners in the national life and government, and, as such, their proportionate representation in all our federal or national institutions. In these the smaller Princes and feudatories may find a place and a voice not utterly out of proportion to their real importance, and for that reason alone, if for nothing else, the suggestion made above needs to be examined simultaneously as regards the States and the British Indian provinces.

The States, thinks the writer, can easily be assimilated in the federal polity if they are considered as *States*, not *Princes*, and the problem of defining the respective spheres of the Central Government and constituent parts is not so difficult.

Other federations, notably the German Reich, have had similar problems of their own and have succeeded in solving them by analogous methods. The German Council of State, metamorphosis of the old Bundesrath, is not quite a Second Chamber of the national Legislature. Its legislative powers are limited to veto advice and pertinent warnings but, being composed of the representatives of the constituent governments in the Reich, it speaks with unique authority on all those matters which concern the members of the Reich severally. It can hold up legislation and even propose laws which must be placed before the Reichstag by the Reich ministers, even if the latter themselves are not in sympathy with the proposals of the Federal Council. If a similar body were established in India, and if its members were recruited from the governors and chief ministers of the several states and provinces, to each, if moreover representatives of certain special interests, or even communities, common to British India and the States, were also added to this body, and its authority enhanced by the presence in it of the principal federal Ministers, without prejudice to the latter's place in the chief

federal legislative body,—the utility and serviceability of such a body would become extreme.

Educated and Uneducated Women

It is gratifying to learn from an "Indian lady" in *The Indian Ladies' Magazine* (January) that education does not create any barrier among the educated and uneducated women as it does among men.

The men (our friends) do wrong to draw a dividing line between educated and uneducated women as if they belonged to different species. Perhaps educated men feel themselves different from the masses, it is a hopeful augury that women do not feel that. A wish for economic independence and a desire that the inevitable sufferings of life must be borne by individual volition are signs of the spirit of the age and many uneducated women share these ideas with their educated sisters. There is a strong bond of sympathy between educated and uneducated women in spite of the differences of their opinions on social and political questions. The superstitious, prejudiced and narrow outlook of the uneducated women are so natural that one feels that, though they have to be changed, they need not be condemned. The educated woman feels in herself such a capacity for superstition and prejudice and narrowness that she knows herself ill fitted to stand on a pedestal and judge her fellow creatures. We cannot help inventing new superstitions of our own when our loved ones are ill. We are in danger of erecting class barriers in place of the caste ones we have thrown down and we know we really do not care about the causes for which we hold committee meetings, as we care for those—well—those we really care about. And we ask for so much for ourselves—as much as we can get. After all, education is not something that makes us entirely different from other women. We do not deserve the praise that has been heaped upon us, nor the blame that is cast at us for not coming up to expectations. Education, into better opportunities in our way of being useful and independent in Modern India, it has also added to our needs and desires and thus multiplied the possibilities of disappointments. It has given us some new ideals and it has given us the courage to say of our hostile critics, "They say—let them say."

FORUM PERIODICALS

Lessing

Gotthold Ephraim Lessing, the great German critic and man of letters was born in 1729, exactly two hundred years ago. *The Times Literary Supplement* celebrates his two-hundredth birthday with one of its deservedly famous leading articles. Lessing was, for most of his life, a struggling and ill-paid journeyman of letters. But he made, says the *Times Literary Supplement*:

One serious attempt to advance his mundane fortunes. In 1760, during the Seven Years' War, he became Secretary to General Tauentzien, the military governor of Breslau, one of whose duties was to restore his master Frederick's finances in the good old way by calling in the sound Saxon money and issuing a debased coinage in its stead. Such profitable operations being full of picking, Lessing had his chance, and took it, though not so well as the morality of the day demanded. But having money and being unused to it, he felt that it burned his pockets. Part he spent in collecting a magnificent library (which was sensible), part in playing (say for high stakes (which he said was hygienic). Two hours he kept were in themselves deplorable; and they were vexatious to the good baker with whom he lodged. The baker took an odd revenge. He made a now mould for his gingerbread cakes, and had it carved with a caricature of Lessing dressed as a night-watchman, and his name in full—Gotthold Ephraim Lessing—below the effigy. Long after his death the gingerbread Lessing was still being eaten by the small boys of Breslau.

So runs the story; and it is symbolic. Not many men of letters have lent themselves to a gingerbread revenge, or achieved so queer an immortality. But in Lessing there was something, of which gingerbread pictures, clay-pipe figurheads or Toby jugs could, not inappropriately, be made. He was solid. Between him and common reality there was a force of mutual attraction like gravity. He reminds one, in some essentials, of Dr. Johnson. He might have refuted Berkeley by kicking a stone; and the sweat that ran down his face while he sat at the faro table has a sort of kinship with the knotted veins of Johnson's forehead when he sat down to one of his voracious meals. They had their feet not of clay, but on it; they were great men of letters, but we remember them as great men.

That is, if we remember Lessing at all. Even the "Laokoon" seems to be out of fashion nowadays and to have become demoded like the piece of statuary from which it arose. We suspect

that Mr. Babbitt's "New Laokoon" is more familiar to the present generation than Lessing's old one. His discoveries have become commonplace, his boundaries are landmarks. So also have Aristotle's; to whom, nevertheless, we pay lip homage. But not to Lessing. Yet he was, of all the critics since Aristotle, the most truly Aristotelian; if Aristotle deserves our homage, as he surely does, so does Lessing—and in one sense even more than Aristotle himself, for he first showed the world how to see Aristotle as a master of method, not as a mine of maxims. Since it is not an easy lesson to learn, we need not wonder that criticism has not greatly profited by his example. To use Aristotle's method, one needs to be almost an Aristotle—and Lessing nearly was.

He was, in short, a very great critic. Probably the greatest literary critic we have had in Europe—not in virtue of the "Laokoon," though that is possibly his masterpiece, but in virtue of his qualities which are to be discovered everywhere in his work.

And as regards his immediate task,

The dilettante professors who composed cultivated Germany when Lessing entered the arena had to be smitten lip and thigh if a genuine German culture was to have room to grow. Lessing the journalist made fun of them, Lessing the scholar confuted them; and though a professorship was his only hope of security, he refused to join their ranks. The sheer strength of the man who thus practically single-handed cleared the path for German literature was prodigious. He created a public and imposed himself upon it; instead of the professor of a university, he made himself the teacher of Germany. "What would you?" he replied to his friends who remonstrated with him for turning back to translation, when the outbreak of the Seven Years' War brought him once more to hardship. "My writings are the productions of a man who is an author partly by inclination, partly by force. I cannot study at my own expense, so I try to do so at the expense of the public." In this spirit, and by this method, Lessing pursued his task. He conducted his search for truth at the expense, and in the eyes of the public.

The Tomb of Sun Yat Sen

A mountain has been chosen as the last resting-place of Sun Yat Sen, China's regenerator. As *The Literary Digest* says:

"Here Lies Sun Yat Sen"—Such is the line, it is said, that might be graved on the tomb of

Ancient Afghanistan

By BRAJENDRA NATH BANERJEE

AFGHANS, THEIR ORIGIN ; ANCIENT INDIAN
CULTURE IN AFGHANISTAN

A LONG the entire north-western frontier of India, on the way to Kashmir and Afghanistan, are valleys which, with their surrounding hills, form the homes of numerous tribes of various origin, and speaking different languages. Right in the north in the Hindu-kush and the western Himalayas live the Darads and Kafirs, whose language belongs to the Aryan family ; in the west are found the Tapirs whose dialect is Persian, while the land to the north of the Tapirs

include all the territories comprised in the Afghanistan of to-day. *Afghanistan* originally meant merely 'the land of the Afghans,' a more limited area than at present, and included within its limits some districts now independent and some subject to British rule. The country was then but a conglomeration of various districts ; there was 'no political unity in the real sense of the term, and its component parts were not bound together by any identity of race or language. It was only in the middle of the 18th century, when the Afghans established themselves as an independent nation under a king chosen from their own people, that the country was welded into political unity and came to be known politically by its present appellation--
AFGHANISTAN

A Durrani Nobleman

There was a time when the smoke of Vedic sacrifices rose to the sky on the banks of the Gomah, and the Takht-i-Sulaiman range echoed to the Vedic hymns chanted by the Rishis. The Aryans of the Rig-Veda inhabited a territory which included portions of S. E. Afghanistan (Roh), the N.-W. Frontier Province, and the Punjab.* In the 4th century B. C. when Alexander the Great invaded India, Aryan civilization was flourishing in Afghanistan, Seistan and Baluchistan. After his death the Maurya Empire of Magadha reached up to Herat. Many centuries later saw the establishment of the 'Tutka-Shahi' kingdom at Kabul proper, where Hindu (or Buddhist) kings ruled, while the Hindu-Shahi dynasty had the town of Und or Ohind, on the upper Indus above Attock, as their head-quarters. These Shahi kings were probably descended from the Kushan Emperor Kanishka. Muslim historians tell us that in the 10th century A.D. many of the people of Afghanistan were Zoroastrian (fire-worshippers), Buddhist or heathen in their beliefs.† In the plains of Jalalabad and Peshawar and in the vicinity of Kabul can still be found traces of Buddhist buildings. At Bamian, nestled beneath the snowy

* Rayson's *Ancient India*, pp. 37-40.

† *Encyclopaedia of Islam*, p. 162.

Prior to the 11th century the Afghans were an obscure and savage mountain race. The Turkish rulers of Ghazni had to wage occasional wars against these people, who were then found occupying the Sulaiman mountains (1023). Later they embraced Islam, but the new creed failed to bring about any moral transformation in their character and

Turko-Iranian type is now generally accepted.* But the Afghans believe themselves to be the children of Israel (*Ben-i-Israel*). Burnes records that in reply to his enquiries regarding the descent of the Afghans from the Jews, Dost Muhammad, then the Amir of Kabul, said,—‘Why, we marry a brother’s wife, and give a daughter no inheritance;—are we not, therefore, of the children of Israel?’†

EXTENSION OF THE AFGHAN POWER OVER HINDUSTAN

Amir Sabuk-tegin (a Turk), the second sovereign of the Ghaznavi dynasty, was the first Muslim king to enlist Afghans as soldiers. His son, the famous conqueror Mahmud, had also an Afghan contingent in his army when he invaded Tukharistan. This is the first mention of the Afghans—then an obscure mountain race—in written history. They were in no higher condition two centuries later when the Ghori power rose to eminence. When Muhammad Ghori defeated Rai Pithora, the Chauhan ruler of Ajmir and Delhi, in the field of Tarain (1192), there were Afghans fighting on both sides, and this fact probably indicates that the Afghan people had not yet been completely converted to Islam.

The history of India during the next two centuries makes little or no mention of highly placed Afghans, and we only find one or two *sardars* of this race enjoying fiefs in Bihar or in the Deccan. With the rise to power of the Slave Kings at Delhi, many Afghans began to join the Indian army. Minhaj-i Siraj’s *Tabaqat-i-Nasiri* records that Sultan Balban employed 3,000 brave Afghans (1260), in putting down the wild predators, Mewatis, who infested the neighbourhood of Delhi, in the direction of modern Alwar. At the time of Taimur’s invasion of India (1399), the Afghans—with the exception of a few soldiers of fortune—still lived as a race of hill-robbers. The shock of Taimur’s invasion shattered the fabric of the Delhi monarchy. This was an opportunity for the Afghans, and one of their leaders—Daulat Khan Lodi, the governor of the Doab—quickly gained power and fame for his race. In the 15th century many of the Lodis are seen holding important posts. Daulat Khan himself rose to be one of the most important

An Afghan warrior

speech, their tribal organization and their profession of brigandage remaining unchanged. It was probably in the 15th century that the Afghans, after long wanderings from their original home, settled about Kabul.

There is a good deal of controversy over the origin of the name *Afghan*, and the descent of the Afghan people. The races inhabiting Afghanistan—though considerable intermixture has taken place—may be classed under the following heads:—1. Afghans, 2. Persians, 3. Turkish and Mongolian, 4. Aryans of the Hindu-kush. The theory established by Longworth Dames that the Afghan race belongs in the main to the

road between India and Kabul open, bribery was a better and cheaper instrument than coercion. The depredations of the hillmen—Afridis, Shinwaris, Yusufzais and Khataks—were, therefore, overlooked and their right to levy toll on the traffic and traders between India and Kabul practically admitted. But even liberal political pensions failed to buy their obedience. Thus, we hear of the risings of the Yusufzais of Peshawar and the Afridis of the Khyber, the long-drawn fights that ensued, and the ignominious defeats which the

Yusufzai

Mughal commanders had sometimes to bear.

In the 18th century the Mughal power grew very feeble; Delhi could hardly maintain its control over Kabul, and slackness in administration became everywhere manifest. At this psychological moment Nadir Shah, the warrior-king of Persia, struck the blow. He recovered Kandahar and took Kabul. With the whole of Afghanistan in his hands, as a convenient starting-point, he invaded India (1739) and the Delhi King Muhammad Shah made peace with the victor by relinquishing his rights to all parts of Afghanistan.

Nadir Shah pursued a policy of conciliation towards the Afghan tribes in general, and specially favoured the Abdalis and their young chief Ahmad Shah, who belonged to the Saddozai section of that clan. When Nadir was assassinated by the Persians and Khizil-bashes (1747), Ahmad Shah was chosen by the Afghan chiefs as their leader and seated on the throne of Nadir. He made Kandahar his capital and took the title of *Durr-i-Dauran* (Pearl of the Age), and his tribe—the Abdalis—have since then been known as Durranis.

The break-up of the Mughal empire in the 18th century, combined with the invasions of Nadir and Ahmad Shah, gave a further stimulus to Afghan settlement in the Ganges valley, some of their adventurers rose to great power, such as the Ruhela chief Hafiz Rahmat Khan and the Bangash Nawabs of Farrukhabad.

Ahmad Shah extended his sway far beyond the Indus and subjugated the greater part of the Panjab. He invaded India several times and occupied Delhi more than once. The crushing defeat which he inflicted on the Marathas on the historic field of Panipat in 1761 was a turning-point in Indian history.

Thus it will be seen that the Afghans never succeeded in establishing an independent rule in their own country until the middle of the 18th century, and they remained always subject to some powerful ruler of the day—the Turks, the Timuris, the Mughal Emperors of India, or the Safawi kings of Persia. It was about 1750 that their political supremacy at home was assumed and they became a ruling race dominating a large population, and then the name of *Afghanistan* was extended to the whole country.

LITERATURE

Pushto or Afghani is the language of the Afghans. The existing literature in Pushto

tribe has its nominal chief, who happens to be the head of a particular family (the *Khan-khel*) vested with the hereditary right of providing such a chief. But in practice the chief has but little power, as in every business he is bound to consult and follow the decision of the headmen of the different sections of the tribe.

Speaking of their social organization and character the historian of Auranzeb justly remarks:

Ghilzi in summer dress

In all their history they have failed to establish any large and compact State, or even any enduring confederacy of tribes. The promise of a career of plunder has held together these born warriors for a time, but they have always separated on the death of the successful leader. The Afghans have never sent any large military force outside except as the mercenaries of some great conqueror, and in their homes they have united only under the stress of a common danger, such as an invasion of their entire country. They have never formed a nation, but always clans. Within the clans even the strict discipline of the Rajput tribal system is wanting. The Rafter or *Shadai* obeys his chieftain as a demi-god. But the *Yusufzai* or *Afridi* follows his chieftain only while it is his interest or pleasure to do so.

"Weak as the Afghans are for conducting distant or long campaigns on a large or organized scale, they are weaker still in diplomacy and internal administration. An ambitious man among them gathers together a number of families and makes himself chief for the time being; another man does the same thing, and, if more successful in rapine, supplants the former. These ever-forming over-dissolving groups of families are the only effective forces of an Afghan clan for offence or defence, the nominal chieftain merely governs on the sufferance of his followers. This lack of a common head makes it impossible for an Afghan clan to enter into any treaty obligation for the whole body even if they know the sacredness of pledged word,—for they have no machinery for ensuring respect for such undertakings from all their members. The family and not the clan is the true unit of Afghan society....

"The plains of Peshawar and the narrow valleys embosomed among the rugged hills, yielded too scanty a sustenance for their fast-growing numbers; and the peaceful gains of agriculture were too poor and slow a reward in comparison with the plunder of their more indolent, neighbours and of the rich traders passing within easy reach of them. Every year this prolific race multiplied, and the growing population, more numerous than ants or locusts, and ignorant or contemptuous of peaceful industries, pined for some outlet for their martial instincts. A leader sprang up, pretending sanctity or princely descent, organized a band of young men by feeding them for some time at his own cost, and then swooped down upon the fields of rival clans or the imperial territory below, and he avowed his expenses and rewarded his retainers by plunder. The gang held together so long as the stream of booty did not fail; but when it ran dry or the least inequality in its division was suspected, these natural democrats turned their arms against one another and the league broke up. But the dissolution of a powerful band in this way gave no enduring peace to the plains."

While they profess to be Musalmans, the Afghans in many respects do not follow the injunctions of the *Quran*. They do not hesitate to practise usury, nor do they scruple to wage war against co-religionists. The idea of tribal organization very imperfectly influences their national characteristic of individualism.

But the Afghans are not without good qualities. They are as democratic as the Arabs, and frank and affable—especially when they have any object to gain. These valiant and hardy men are born warriors, but though audacious in attack, they are easily discouraged by failure. Inured to bloodshed from childhood, the battle field is but a play-ground in their eyes, death has no terror for them, and highway robbery is their hereditary profession. They combine the cunning of

Mount Etna's Rivers Of Molten Lava

One of Mt. Etna's worst eruptions began in the first week in November, sending down rivers of fuming semi-liquid volcanic matter that left several thriving Sicilian cities virtually buried. It is now sending a stream of fiery liquid toward Giardini a city of 25,000. These molten rivers

They are also cutting off the water supply from these cities. Slowly but inexorably the lava advances. One house after another yields to its terrific thrust. The air in the town [of Mascali] is as hot as a furnace. Where Mascali, a city of 10,000 people, flourished yesterday, there is to-day a molten waste. Only a few heaps of charred wreckage remain. High up on the slope the

Mount Etna's lava engulfing a house

are cutting communications, isolating the whole zone from the outside world, and snapping power lines, plunging the entire region in darkness.

Ruth Law's 'Handwriting' on the Night Sky of Chicago

The history of flying women is more than 100 years old for it was in 1819 that Mme. Blanchard was killed while experimenting with a balloon.

The first international airplane meet, at Belmont Park in 1919, had one woman contestant, Mlle. Helene Dutrieu. The French Government made

her a Chevalier of the Legion of Honour for her daring flights. The first woman flyers were French.

Fraulin Thea Raschke—One of Germany's foremost Pilots

Miss Shigeno Kabe—the Japanese Air-woman

try her father next. She knew very well, that he would rather stay in his warm bed. But one must suffer a bit of inconvenience for the sake of enjoying beautiful scenery.

She knew that if she called, Shiveswar would never refuse to get up. Though a reformer of the extremist school, he had not been able to remove a picture, portraying some goddess or other, which Mukti had hung up in his office room. He had forbidden his wife to paint her feet red with lac, but he could not forbid his daughter and he had even gone so far as to purchase a pair of ear-rings for his daughter, though he regarded all ornaments as signs of barbarism. So in a matter which did not touch his convictions at all, it was apparent that he would never refuse to humour his daughter.

Mukti would enter his bed-room and stroke his forehead saying, "Father, be quick, or you will miss the glorious sunrise and the wonderful play of colours on the Kanchanjangha."

Shiveswar would get up in a hurry, and putting on a thick dressing gown, would accompany his daughter to the verandah.

One day Mukti took a fancy to the Bloomfield Tea Estate and wanted to visit it. She went to her father with her request, who at once agreed to accompany her. Mukti went off gladly and began to make preparations for to-morrow's excursion. Among other things, she packed a very good lunch basket, to take along with themselves.

Mukti could hardly sleep for excitement and she got up while it was still dark. She went and woke up Shiveswar too. Shiveswar had been feeling rather unwell for the last few days, and one of his legs ached, making him very uncomfortable. So when Mukti called him, he put out his head from beneath his blankets, with the intention of telling her that he was too unwell to go. He found Mukti standing by his bedside, completely dressed for going out. She had a gray silk *sari* on and had put on an overcoat to keep out the cold. She had her lunch basket in her hand too. Shiveswar had not the heart to spoil all her preparation. So he got up painfully from his bed saying, "All right darling, I shall be ready within five minutes."

When at last they set out, they found themselves the sole occupants of the road. The mountain peaks could be dimly seen, raising their black heads above the sea of white mist that stretched all around them. As they neared the path that ran winding

down to Bloomfield, it began to clear up. The path was bordered by a dense jungle of undergrowth, among which beautiful ferns could be discerned. Their glowing colours, golden, silver and green, their leaves of various shapes so enchanted Mukti, that she ran along in front collecting them and left her father far behind. Shiveswar walked as fast as he could, because he did not want to let Mukti go alone, but he was no match for his daughter.

Mukti's face had become red with exertion, and she was getting quite out of breath. She had collected a load of ferns by that time and said, "Father, we have come downhill quite a good bit. Don't you see the tea gardens and the coolies' houses quite clearly? Let's sit down here and have something. Then we shall try to climb up again."

Shiveswar flung himself down on the grass, saying, "I am ready enough to sit down, but it is doubtful whether I shall be able to get up again. I am feeling extremely unwell and the pain in my leg has increased a good deal. A rickshaw or dandi would have been a great help."

Mukti felt her heart sinking at her father's words. Not a single being was in sight who could help them. The sky had clouded over, and threatened a shower every minute. She did not know what to do. She forgot all about her own hunger and fatigue.

She thought for some minutes, then said, "Father, you sit and rest here for a bit. I shall walk up to the main road and see if I can get anyone to help us. I may secure a rickshaw possibly."

Shiveswar did not like it much. "Where will you go alone?" he asked. "Let me rest some time, then I shall try to walk up slowly."

"No, father," said Mukti, determined now. "The rain may come down any moment. It won't do to sit idle."

She began to climb up, not waiting for her father's reply. The way seemed to have increased tenfold, since she came down. One could hardly run uphill, still she walked as fast as she could. After more than an hour she reached the Cart Road and sat down on a stone to recover her breath. Having rested, she got up and walked towards the town in search of help.

Fortunately for her, she did not have to go far. At a bend of the road, she found a certain young man sitting by the side of a mountain stream, collecting pebbles. Some he thrust within his pocket, others, which

Dhiren grew red with embarrassment. He backed hastily, saying, "I beg your pardon. I did not see you. The fog is so thick, that one can hardly see one's own hands and feet. I must have made you very late for breakfast."

He really had, and Mukti was feeling none too pleased with him. But it was easier to rail against an absent Dhiren, than to scold him when he stood in front of her. So she had to smile and say, "No, not at all. The cook has but just finished. We take it as late as this, every day."

Shiveswar received Dhiren very cordially. They sat down to have their breakfast together, and Mukti began to serve them, according to orthodox custom. Mokshada stood supervising and talking to the guest.

Dhiren was never famous for eating sparingly, his reputation in Calcutta had been quite of an opposite nature. But to-day, he could eat nothing at all. In Calcutta, the cook served them, so they could give their undivided attention to the meal. But here poor Dhiren did not know whether to satisfy his eyes or his palate. A beautiful arm, wearing gold bracelets, constantly flashed before his eyes, distracting his attention wholly from the daintily prepared dishes.

Mokshada had observed his want of appetite. "You are not taking anything at all, my dear boy," she said. "But I cannot blame you, the cooking done by that Pahari is not fit to be eaten. Take some of this fish curry, it was prepared by Mukti."

Mukti served Dhiren and observed with a laugh, "Now grandma, you have placed Dhiren Babu in a difficult position. He will have to eat this fish curry; but it is even worse than the dishes prepared by the cook."

Dhiren was indeed in a difficult position, but in a sense different from what Mukti meant. He wanted very much to praise Mukti's cooking, but did not know how to do it. He was afraid to say anything, after what she had said. He was totally unaccustomed to make pretty speeches to ladies. So simply saying, "This is very good," he bent down over his plate, and ate as if his life was at stake.

Shiveswar laughed. "Are you fishing for compliments, my dear?" he asked Mukti.

She protested loudly against such an allegation. Dhiren ate on, never lifting his head from his plate, and calling himself all the bad names he knew. "What an utter ass, I am," he thought. "I cannot even speak

decently. Mukti must be taking me for an uncivilized boor."

After the meal was over they came and sat down in the drawing-room. "What's the programme now, little mother?" Shiveswar asked Mukti. "Any music, or do you want to talk?"

Before Mukti could reply, her grandmother said, "Talk indeed! Fine subjects you talk on! It makes me drowsy to listen to you. Mukti, why don't you give them a song? You are singing all day, when there is nobody to listen."

Mukti had not the slightest intention of singing before Dhiren, so she felt extremely annoyed at the old lady's suggestion. The young man put on such serious airs! As if everybody and everything were beneath his notice. He must be a very stern critic. "Dhiren Babu would not like any singing now, so soon after his breakfast," she said. "Grandma, you talk to him about your village. He comes from the same place, does not he? Father and I shall constitute a very good audience."

Dhiren had found his tongue at last. "But I should like very much to listen to you," he said. "I am extremely fond of music, and Jyoti told me that you sing very well."

Mukti had no way of escape left. So she went and sat down before the piano, saying, "Jyoti knows a fat lot about it, does not he?"

She took some time to choose the song. Then she sang, and as soon as she had finished, she jumped up lest they should ask her to sing again.

Dhireo too, got up, saying, "I am afraid, I must leave now. I have to go to the Sanitarium, where one of my uncles has put up."

Mukti could not resist the temptation of teasing him a bit. "Oh, that's nothing but an excuse," she said. "You are running away to escape my music. Do you think I cannot see through your words?"

Shiveswar shouted with laughter. Dhiren blushed to the root of his hair, and stammered, "Certainly not. Please don't think that Miss Ganguli. I really have got an appointment," with that he nearly ran out of the room.

Mokshada went out to have her one meal. Mukti stood for a while, gazing out of the window. Then coming back to the middle of the room, she suddenly exclaimed "Look father, Dhiren Babu has left some roses here."

whole world—one recalls the trampling down of the Boers—but has always been completely successful. Amanullah's abdication is a new success for this policy. . . . His eagerness for reforms may have caused some internal unrest, but another cause must be sought for a revolt of such magnitude. Great Britain always works unscrupulously and invisibly at the start, makes skilful use of every difficulty in the land concerned, until it sees the moment ripe to take arms "in defence" of its "menaced" territory, and ultimately annexes the weakling. . . . Some day, perhaps, a thunder-bolt will be launched from the yet independent lands, the "spheres of influence," and the "protectorates" and strike the British world Empire on its vital nerve.

The Nationalist *Lokalseiger* says:—"Perhaps the flame was fanned from abroad; the British Government has always looked with a jaundiced eye upon Kabul, and feared that Amanullah's example might strengthen the longing for freedom among other princes and peoples now under Great Britain's thumb. Great Britain needs weak and yielding neighbours in India."

Other newspapers take a somewhat similar line.

The *Manchester Guardian* of January 16th gives the view of the French press to the effect that King Amanullah is 'a victim of British vengeance.'

In Paris papers, it says:—

The Afghan ex-King is represented as the victim of a long prepared and patient British vengeance, not only for the defeat that he inflicted upon British arms after the end of the Great War, but also for his unforgivable fault in having anything to do with the secular Russian rivals on the northern gateways of India.

In many papers the legend takes utterly fantastic forms. According to the semi-official "Temps" it was ex-king Amanullah's fixed determination "to make Afghanistan a sovereign and absolutely independent state" that brought him into conflict with Great Britain, which, it says, "always had exercised traditionally a sort of tutelage and strict control over the foreign relations of Afghanistan."

WARNING TO THE NEW KING

"There are," it adds, "reasons to suppose that Amanullah's ardour in desiring to imitate Mustafa Kemal, and the complacency he had for Russian policy, combined with his distrust of the British Indian Government at Delhi, caused the British some uneasiness." Amanullah's successor, the "Temps" concludes, will do well to remember that it is equally dangerous to constitute a menace, direct or indirect, to British security, as it is to affront the fanaticism of Islam tradition.

Nor, again, do "Pertinax," of the "Echo de Paris," or M. Jacques Rivillie, in the "Liberté," ignore the supposed role of the redoubtable "Lawrence of Arabia." Discussing the origin of the revolt of Amanullah's subjects, M. Jacques Rivillie writes: "Nations are never left alone in this world. Many revolutions have been aided or excited from abroad. Can we exclude the famous Colonel Lawrence, the Warwick, the king-maker of the East, from the events at Kabul? Some

say, yes, others no. But it must not be forgotten that only a few years ago Amanullah inflicted a most cruel defeat on British arms, and that unwisely he afterwards turned to Moscow."

Until King Amanullah abdicated in favour of Inayatullah, who was in turn overthrown by the bandit rebel leader Bacha-i-Sakao, who has assumed the title of King Habibullah Gazi, British papers were rather very cautious about making any comment which might go against King Amanullah. Just as soon as it became sure that Amanullah had to flee for his life and he had no chance to remain the ruler of Afghanistan, some important British leaders have begun to comment adversely about Amanullah as a man. In this connection one must not overlook the most significant article entitled "Truth About Amanullah," published in the *Daily Mail* (Paris edition) of January 20, 1929 and the *Sunday Express* (London) of the same date.

We quote the text of it, as published in the *Daily Mail*:—

THE TRUTH ABOUT AMANULLAH Afghan Ex-King Unmasked

INTRIGUE FOR ATTACK ON INDIA
FULL DISCLOSURE OF PLOT AFTER TEN YEARS
AMIR'S IR OUTBREAK AS PART OF PLAN

Remarkable revelations of how the fugitive ex-king Amanullah of Afghanistan, who a year ago was warmly welcomed in England, plotted early in 1919 to invade India and overthrow British rule are made below by Sir Michael O'Dwyer, the distinguished authority on India.

Sir Michael, then Lieutenant-Governor of the Punjab, discloses for the first time the full story behind the using at Amritsar, which, after Europeans had been brutally murdered, the late General Dyer drastically suppressed, only to lose his command as a concession to the demands of Indian extremists.

As part of the conspiracy, Amanullah was concentrating troops on the North-West Frontier, ready for an invasion, but, with the Indian rising promptly quelled, he found himself faced, not with a rebellious province, but with an army, predominantly Punjabis, of 200,000 men. "An ignoble peace treaty," comments Sir Michael, "was then concluded with Amanullah."

"TREASONER OF ATTAKE"

By SIR MICHAEL ODWYER,

Lieutenant-Governor of the Punjab, 1913-19

A year ago all London united to give a right royal reception to the Afghan King Amanullah and his beautiful Queen Sourya.

To-day, as the result of his attempt to hustle the East, Amanullah has lost his crown, and he and his Queen have had to seek safety in flight. How are the mighty fallen!

The throne of Afghanistan has always been notoriously unstable. Every succession, except that of Amanullah's father, our trusted ally, the Amir Habibullah, has been attended by civil war and bloodshed: and Habibullah himself was

murdered at Jelalabad ten years ago because he remained true to his treaty with us.

Throughout the War he steadfastly resisted the overtures of the Germans and Turkish Missionaries in Kabul and the strong anti-British factions among his own people urging him to throw in his lot with our enemies and invade India.

UNREVEALED PLOT

The conspiracy behind his murder has never been unravelled. Suspicion fell at first on Nasrullah, the murdered Amir's fanatical brother, who at once proclaimed himself Amir at Jelalabad and perhaps with less reason, on Amanullah, the third son who, with the help of the army, proclaimed himself Amir, and in a few days established his position.

Nasrullah made his submission without a struggle, was thrown into prison and died it is said, by strangulation some years ago. Inayatullah, the eldest son of Habibullah and the rightful heir, having no military backing accepted the situation. It is to Amanullah's credit that Inayatullah's life was spared. He was thrown into captivity but was released before Amanullah's visit to Europe last year. The downfall of Amanullah gave him the throne but after three days he, like his brother, was forced to abdicate when the rebels under Bacha-i-Sakao took Kabul.

CAUSES OF DOWNFALL

Sympathetically with the fallen Amanullah and his queen—whose grace and charm won so many admirers here (while her fondness for Western fashions and manners shocked orthodox Muslims in Afghanistan)—must not blind us to the three outstanding facts in Amanullah's ten years reign which were the main causes of his downfall.

1. He usurped the throne by force, excluding his elder brother.

2. To direct attention from his doubtful title and secure the adhesion of the fanatical anti-British section among the Afghans within two months of his accession he made, in April 1919, a most treacherous attack on British India then at its weakest owing to the absence of the best part of the British Indian Army.

3. After he had consolidated his position and shaken off British control of the foreign relations of Afghanistan, Amanullah wrought his own ruin by reckless and ill-judged attempts to upset the customs and religion of conservative and fanatical tribesmen, most of whom never paid more than a nominal allegiance to Kabul.

OSCURITY CHAPTERS OF HISTORY

Amanullah's invasion of British India in 1919 is an obscure chapter of history on which some light may be thrown by the writer of this article, who was then Lieutenant-Governor of the Punjab, the province which would have to bear the brunt of an Afghan invasion.

In the spring of 1919, just after the Armistice, all the revolutionary and anti-British elements in India had combined to make a final effort to overthrow British rule, which they believed to have been shaken to its foundations by the terrific sacrifices of the Great War.

The pro-Turkish element among the Muslims led by the brothers Ali combined with the revolutionary Hindu section led by Gandhi, the Extremist (All three were later sentenced for sedition). Their object was to create wholesale

disorder and rebellion in Northern India or prepare the way for an Afghan invasion.

GANDHI'S CRUSADE

Gandhi started his crusade of "Passive Resistance" which led to open intimidation, defiance of authority and general riots and murders of European and Indian officials in Bombay, Delhi, the Punjab and Peshawar.

As the result of plans laid by the conspirators all the railway lines leading from Delhi to Peshawar were tampered with, trains derailed, telegraphic and telephonic communications cut, while persistent, and in some cases successful, attempts were made to seduce the Indian troops from their loyalty.

The most serious outbreak was in the Punjab. It began on April 10, when every European in Amritsar whom the frenzied mob could get hold of was brutally murdered. For some days the great cities of Lahore and Amritsar were in the hands of rebellious mobs.

The Government of India proclaimed a state of "open rebellion" in these districts, declared martial law and directed the local authorities to repress the disorders by all means however drastic.

CONCENTRATING TROOPS

At this stage it came to our knowledge that the Amir Amanullah was concentrating large masses of troops towards the North-Western Frontier with a view to taking advantage of our difficulties and adding one more to the many successful Afghan invasions of India.

The Indian conspirators had early in April sent emissaries to Peshawar, to the frontier tribes, and to Afghanistan to ask for outside help in overthrowing British rule.

Amanullah and some of the tribes readily lent themselves to the conspiracy. Suspecting this, we in the Punjab had to make every effort to suppress the local rebellion before the Afghan and tribal invasion could materialize.

GENERAL DYER'S ACTION

And we were successful. The "drastic action" taken by General Dyer at Amritsar on April 15 paralyzed the rebels though the situation remained critical for another month.

Amanullah still believing that he would find Northern India in rebellion and ready for him, persevered with his plans. He sent tens of thousands of proclamations into India which were direct incitements to rebel and made violent attacks on the British in Kabul.

The Afghan and tribal attacks on these vital points, the Khubar, Kurram, and Quetta, began at the end of April.

But meantime order had been restored in the Punjab, and instead of a rebellious province ready to welcome the Afghan liberator, Amanullah found himself confronted by an army, predominantly Punjabi, of over 200,000 men.

In a few weeks the Afghans were driven back. Jelalabad was threatened, Kabul bombed by a British Handley Page, and the Amir was humbly suing for peace.

It is worth recalling to the short memories of the British public that the man who dealt the severest blow to the invader by defeating the Afghan Commander-in-chief Nadir Khan, at

Thall, was the same General Dyer who had smashed the Punjab rebellion a month before at Amritsar. Dyer's reward was the loss of his command, of his military career, and indirectly of his life, for he never rallied from the disgrace inflicted on him to conciliate the Indian extremists.

IGNOBLE PEACE TREATY

In August 1919 the war-weary British Government concluded with Amanullah an ignoble peace treaty, conceding practically all the Afghan demands and enabling them to boast all over Asia that they had won the war. This early success appears to have gone to Amanullah's head and to have stimulated the overweening conceit and self-confidence which have now, brought about his sudden and dramatic downfall.

A reign begun by gross usurpation, strengthened temporarily by a treacherous attack on an ally, and culminating in reckless interference with the religion and customs of wild intractable tribes, who abhor the idea of westernization, was foredoomed.

From the above article, on the authority of no less a person than Sir Michael O'Dwyer, the British Government for the past ten years regarded king Amanullah as an enemy of Great Britain. One might, therefore, find it hard to understand why the British Government, entertained him and his wife so lavishly. Perhaps it was an effort to win over an avowed enemy through lavish entertainment.

It was announced that during king Amanullah's stay in London, British statesmen made propositions for an offensive and defensive alliance, so that Afghanistan would prefer to ally itself with Britain and would not throw in its lot with Soviet Russia. But the Afghan king did not respond favourably to this offer: on the contrary, he cemented

an understanding with Turkey and Persia for mutual defence. This action was regarded as hostile to Great Britain, because these three Powers were parties to neutrality treaties with the Government of Soviet Russia.

Though history does not always repeat itself, past history often gives rise to even unfounded rumours. Some time ago Lord Ronaldshay in one of his books disclosed the real causes of the Burmese War by which King Thibau was deposed and made prisoner and brought to India. The former Governor of Bengal wrote that the unfortunate Burmese king was actively engaged in concluding an offensive and defensive alliance with France, which was then a rival of Great Britain in South-Eastern Asia. British authorities then picked up a quarrel with Thibau, under the pretence of his ill-treating British merchants etc. and dethroned him to frustrate the project of a Franco-Burmese Alliance which might have been dangerous to British supremacy in India. In the past when an Afghan ruler sided with Russia against Great Britain, Lord Lytton, the then Governor-General of India invaded Afghanistan to frustrate the possible Afghan-Russian combination against Great Britain in India. During the Governor-Generalship of Lord Curzon the British Government sanctioned an expedition to Tibet, because the Tashi Lama and others were intriguing with Russia against Britain. For details, the reader may turn to Dr. Taraknath Das's articles in *The Modern Review* on British expansion in Tibet and on Anglo-French rivalry in South-Eastern Asia.

who knows that the material absorbed by such examiners will ever be detected by their real authors? And even if they are detected, how can they prove the fact? Examiners are not expected to take every precaution so that their theses may not be exploited by their examiners. It was by mere chance that parts of my theses had been published before the publication of Dr. Radhakrishnan's work.

It was, indeed, never thought likely that an examiner of a thesis would assimilate the work of an examinee. Probably such a thing never happened before. This is really a contingency of an entirely novel character. The authorities of the Calcutta University could never dream of it. So they did not provide for it. But when there is the least suspicion about it, the University is in duty bound to take necessary steps to preclude such a possibility.

I was really surprised to find that Dr. Radhakrishnan especially borrowed from those parts of my theses which were submitted to the Calcutta University in 1922 and 1923, though he paid particular attention to the latter (*Pale* my letters published in the *Modern Review*, January and February, 1929). He also examined the part of my thesis submitted in 1923, but he did not trace it very much into his service. His own statement explains this differential treatment. He actually sent the MS. of his second volume to the publishers in 1924, as far as he remembers, though he sent them the final proofs much later, and signed the Preface in December 1926. (*The Modern Review*, February, 1929, p. 213).

Dr. Radhakrishnan says, "I have not seen the whole of Mr. Sinha's thesis." (*Ibid.*, p. 210). The Calcutta University Calendar (1924) will testify to the fact that he was on the Board of Examiners for Freuchand, Roychand Student-ships in literary subjects in 1922 and necessarily examined my thesis on a philosophical subject in the same year. Dr. Radhakrishnan's report on *Indian Psychology of Perception*, Vol II, by Mr. Jadunath Sinha, dated the 28th January, 1924, and the Minutes of the Syndicate dated the 2nd February 1924, will show that he examined my thesis submitted to the Calcutta University in 1923. Dr. Radhakrishnan says in the above report, "This section brings together a large mass of information. It will be better if the author assimilates the materials gathered, rethinks them and attempts a fresh presentation of the subject." One is tempted to read a meaning into this suggestion. I have shown in my letters that Dr. Radhakrishnan has taken numerous passages from my chapters on *Perception*, of the *Self* (published in the *Mercur College Magazine*, January, 1924), and *Dreams* (published in the *Mercur College Magazine*, January, 1926), which were submitted to the Calcutta University in 1922, and he has also incorporated in his book the complete chapter on *Perception of Cognition*, and many paragraphs from the chapters on *Perceptions of Space* and *Perception of Jñāna* which were submitted in 1923. Thus, when many unassimilated materials of my theses submitted in 1923 have already found their way into his book, I should certainly be advised by him to attempt a fresh presentation of the subject. However, it was a blessing for me that he sent his MS. to his publishers probably in 1924. Otherwise, if he went on paying

unnecessary attention to the subsequent parts of my theses also at the same rate, there would have been no necessity for publishing my book at all.

The dominant note of Dr. Radhakrishnan's reply is that the similarity between the parallel passages given in my first letter is on the whole, too slight to prove anything. There is, indeed, a striking similarity between certain passages, but it is due in his opinion to the fact that they are faithful translations of the same texts. He wants to emphasize this point when he says: "Apparently he has brought together the textual matter where resemblances are bound to be striking" (*The Modern Review*, February, 1929, p. 209). In actual phraseology there is some agreement due to the identity of the texts considered (*Ibid.*, p. 210). When two or more writers are using the same texts, there is bound to be similarity in significance, and much agreement in phraseology, if the writers are faithful to the sources (*Ibid.*, p. 212). "I need not tell Mr. Sinha that the translations of say, the Upanishads by Max Müller, Hume, Mead etc. resemble one another not only in matter but in form, and it would be foolish certainly to rush from this resemblance to a charge of plagiarism" (*Ibid.*, p. 212). Thus he emphatically says that two independent translations of the same texts are bound to resemble each other not only in matter but also in form (*Ibid.*, p. 212).

On this point I beg to differ from the learned Professor. I submit that faithful translations of the same passage by different persons are very likely, if not bound, to differ in form. For instance, the difference between Rama Prasad's English translation of Vyāsa Bhāṣya and Vācaspati's gloss and that of Woods is quite striking. I am thankful to Dr. Radhakrishnan that he also practically admits this truth, and emphatically asserts it by implication when he points out that my translation of certain passages (Nos. 4-9) from *Abhyakhandali* is almost a verbatim reproduction of Dr. Ganganath Jha's version (*Ibid.*, p. 211). But if two independent translations of the same passage must resemble each other in language how does he feel sure that my version is not independent of Dr. Jha's? Thus he contradicts himself when he opines at the same breath that two independent translations of the same passage are bound to resemble each other and also that they can never resemble each other in language. What I mean is that Dr. Radhakrishnan adopts one principle in judging of the resemblances between his versions and mine and adopts the opposite principle in judging of the resemblances between my versions and Dr. Ganganath Jha's. In his own case in order to rebut the charge of plagiarism, he says independent and faithful translations of the same texts must resemble one another. In my case, however, he holds that as my versions resemble those of Dr. Jha, the resemblances cannot be due to faithful translation done by us independently of each other, but are due to the fact that I have adopted Dr. Jha's versions. May I ask, which of his two principles is correct?

Dr. Radhakrishnan says, "I do not try to give the exact translations but only expound the significance of the texts" (*Ibid.*, p. 209). If so, there can never be any similarity between my version and his. If one gives exact translations of the texts, and the other tries to expound their

significance without giving their exact translations, how can there be any close similarity between the two versions, say, in the parallel passages (Nos. 2, 4, 5, and 7) in the *Modern Review*, January, 1929 (pp. 100-101)? There can never be a close similarity in form between the translation and the interpretation of the same text.

But he clearly recognizes that interpretations and criticisms of different authors are bound to differ, when he says, "The value of a philosophical work depends not so much on the extracts we use as on the interpretative exposition and critical evaluation where the individuality of the writers comes out" (*The Modern Review*, February, 1929, p. 213). In my letters published in the *Modern Review* (January and February, 1929) I have shown how he has freely borrowed not only my translations but also my interpretations, whether they are right or wrong. I shall indicate below how my *wrong* interpretation of Vasuvaspati's view has been borrowed by him.

He has not only made a futile attempt to explain away the striking similarities between the parallel passages by urging that both of them are based on the same texts, but he has also thrown out a few indirect hints and insinuations. He says, "In our unfortunate land self-praise is subtly sought by the dispraise of others. I hope our younger men at least will grow out of this weakness." (*The Modern Review*, February, 1929, p. 213). It is indeed true that, not only in our unfortunate land, but all over the world, self-praise is sought by some by the dispraise of others. All men, young and old, should outgrow this weakness. But this is comparatively a trifling thing. It pales into insignificance when compared with the moral perversity involved in the violation of a sacred trust by a cultured and honourable man, if and when there is any. I sincerely pray, all scholars, young and old, may outgrow this perversity. The world has yet to be convinced whether a young man wants to advertise himself at the cost of an old, veteran scholar, or to expose an academic fraud of a most serious type, for the sake of truth, justice, and academic purity.

Moreover, self-praise is a folly characteristic of youth and age alike. And even those who preach the futility of it may not be free from it. Dr. Radhakrishnan says, "During the time my second volume was in preparation, I had often lectured to the classes on many of the topics discussed in it, including the *Samkhya theory of Self-consciousness* and the *Mimamsa theory of Knowledge*. It is not at all impossible that some of the material contained in it might have found currency before the publication of the work." (*Ibid.*, p. 212). Let me point out, in this connection, that I took my M. A. degree from the Calcutta University as early as 1917, when he was far away from Calcutta and was scarcely known to anybody in Bengal. I had the proud privilege of being a pupil of a great man of encyclopaedic learning to whom I owe all my inspiration in Indian philosophy. It was Dr. (now Sir) Brajendranath Seal who suggested to me the subject of my research, indicated the lines of work in detail, and gave me exhaustive information about the references. It was under his able guidance that I carried on research in Indian philosophy, and was awarded a Fremcham

Roychand Studentship by the Calcutta University in 1922 on presentation of a thesis on "Indian Psychology of Perception." Even from Mysore, in the midst of his multifarious duties, he expressed his desire to go through my manuscript before its publication, in compliance with my request. And it is in the light of his fresh suggestions and his "Syllabus of Indian Philosophy" that I have been recasting my whole thesis for publication.

Dr. Radhakrishnan may flatter himself that his fruitful and suggestive ideas are eagerly accepted as gospel truth by all. But with due deference to his knowledge of Western philosophy, I humbly submit, there are many who fail to find any source of inspiration in his volumes on *Indian Philosophy*. I do not know how many research students he has turned out up till now. I do not know how many writers on Indian philosophy have been inspired by his lecture-notes or his works on Indian philosophy. At any rate, his knowledge of Indian philosophy was not known to the world till 1923, when his first volume on *Indian Philosophy* was published, and I had already been awarded a Fremcham Roychand Studentship in 1922. Moreover, I have been far away from Calcutta for the last nine years, ever since I resigned my post at Ripon College in 1919, long before Dr. Radhakrishnan joined his post in the Calcutta University in 1921. I have never had the good fortune of listening to his learned lectures or talks on Indian or Western philosophy. Still, in the absence of any other plea, if he wants to convince the public that some one already engaged in research under the guidance of a great expert was eager to receive his invaluable ideas from a great distance, though he had absolutely no connection with him, and knew nothing about his knowledge of Indian philosophy, he certainly indulges in the height of self-glorification.

Dr. Radhakrishnan especially mentions his lectures on the *Samkhya theory of Self-consciousness* and the *Mimamsa theory of Knowledge* (*Ibid.*, p. 212), because the *printed* passages of my thesis given in my first letter deal with these topics. He cannot possibly explain away the great similarity between his versions and mine in these passages. And however devoutly he might wish these *printed* passages were blotted out of print, they will continue as unassailable proofs of his achievement. He is too painfully conscious of it. So, he invents the plea of his special lectures on these topics, which unerringly found their way into my thesis! In my second letter I have given more extracts from the *published* portion of my thesis. Will he now add to the number of special lectures he delivered in the Calcutta University? I shall expose the utter hollowiness of this plea by showing below that he has borrowed *verbatim* more than half of his *interpretative exposition* of the *Mimamsa theory of the Self* from Dr. G. Thibaut's work published in 1907, Dr. Gangadhar Jha's work published in 1911, and a portion of my thesis published in 1924.

Even supposing I showed no originality at all in my expositions and interpretations, but simply reproduced Dr. Radhakrishnan's ideas and language *verbatim* in my thesis, why did he recommend me at all for a Fremcham Roychand Studentship? Or, if at least in some parts of my thesis I had

Durand Chiefs in Armour

passed off his ideas and even his very 'sentences' repeatedly uttered in his lectures as my own, why did he not point it out in any of his reports to the Calcutta University, especially, when he himself was writing on the very same topics for his second volume? Why did he not accuse me of plagiarism then? Why did he leave room for his being accused of plagiarism by me later on?

Besides, throughout his reply he has tried to show that the similarity between the parallel passages is due to the fact that both the versions are based on the same texts, so that they are independent of each other and he has not borrowed his version from my thesis. If his versions are independent of mine, it ought conversely to be self-evident that my versions are independent of his. But in a concluding paragraph of his reply (February *M. R.*, pp. 212-13) he turns round and insinuates that my versions are borrowed from

his lecture-notes. If that is his real conviction, why has he taken infinite pains to explain away the similarity between his versions and mine by calling into aid all the apparatus of learning he possesses? Thus, here, again, he contradicts himself, and is inconsistent. But perhaps the wise Doctor holds with Emerson, of course in a Pickwickian sense, that consistency is the bugbear of fools.

The reader will be interested to know that Dr Radhakrishnan's lecture-notes had been used not only by me, but also by eminent scholars like Dr G. Thibaut and Dr Ganganath Jha long before the lectures were actually delivered by him in the Calcutta University.¹¹ Will they be accused of 'prospective' plagiarism by Dr Radhakrishnan? Did these lectures float to them, up-stream on the surface of the River of Time? A few samples of their plagiarism are appended below.

PARALLEL PASSAGES

Extracts from Dr G. Thibaut's English Translation of *Vivaranaprameya-samgraha* (*Indian Thought*, October, 1907)

1. The Self is an object of cognition, since it is directly perceived, as a jar is.

2. That the Self is both the object of knowledge and the knowing subject, implies no contradiction, for we distinguish in the Self a substantial (*dravya*) element which is the object of cognition and a conscious (*bodha*) element which is the subject of cognition.

3. This view, the Prābhākara rejoins, is untenable.

4. For what you call the substantial element in the Self is non-intelligent and hence cannot be a Self at all.

5. There thus remains the conscious element only, and if you view this as an object of cognition, you cannot rid your view of the two contradictions stated.

6. Nor can it be said that that conscious element is capable of undergoing a change so as to have simultaneously the character of object and of subject of knowledge for it is not made up of parts (p. 357).

If 7. There is no direct recognition of a permanent identical Self.

8. The latter being proved indirectly only by the fact of the recognition of the permanent objects of thought. (p. 405)

[This is not a translation of any Sanskrit passage in *Vivaranaprameya-samgraha*. It is Dr. Thibaut's own exposition of the Prābhākara theory.]

Extracts from Dr. Radhakrishnan's *Indian Philosophy*, Vol II (1927)

1. The self is an object of cognition, since it is directly perceived as the jar is.

2. The self is both the object and the subject of knowledge, and this is no contradiction, since we distinguish in the self a substantial (*dravya*) element which is the object of cognition, and an element of consciousness (*bodha*), which is the subject of cognition.

3. The followers of Prābhākara object to this view.

4. If the substantive element of the self is non-intelligent then it is not self at all.

5. What remains is the conscious element only and it cannot serve as both subject and object.

6. It is partless, and therefore incapable of undergoing changes so as to have simultaneously the character of both subject and object. (p. 413)

[Here Dr Radhakrishnan neither refers to *Vivaranaprameya-samgraha* (V S S, p. 64) nor to Dr Thibaut's English translation of it from which it has been borrowed almost *verbatim*. He has not even mentioned the latter in the bibliography after the sixth chapter in which the above passages occur or anywhere else. He has quoted one passage from it on p. 587 and another on p. 589, put them within quotation marks and duly acknowledged their source. But, I hope, that will not be cited by the author as the authority for this long extract also.]

II 7. There is no direct knowledge of a permanent identical self.

8. The latter is proved indirectly from the fact of the recognition of permanent objects of thought. (pp. 409-410)

[This is Dr Radhakrishnan's 'original' exposition which is almost a *verbatim* reproduction of Dr Thibaut's. But he has given no reference here.]

Extracts from Dr. Ganganath Jha's *The Prabhākara School of Pūrva mīmāṃsā* (1911).

III. 9. Just as the activities of my body are due to the effort of my Soul, so the activities of that other body are due to the effort of another soul (p. 82).

10. Just as the sun, though one only, yet, when reflected in different substances, becomes endowed with distinct properties, so the Soul also, though one only, yet as ensouling different bodies, becomes endowed with diverse qualities;—the analogy in this case is not quite correct; as the qualities that appear different are only those that belong to the reflecting medium and not to the sun (p. 83).

11. If the analogy were true, the diverse qualities appearing in connection with the Souls would belong to the bodies ensouled, and not to the Soul (p. 83).

12. Pleasure, pain, &c., are qualities of the Soul, and not of the body (p. 83).

[The first sentence in this extract occurs on p. 82. And the last three occur in one long sentence on p. 83.]

IV. 13. "The Soul is something entirely distinct from the body, the sense-organs and buddhi; it becomes manifest in all cognitions; it is eternal (p. 74).

14. Prabhākara denies that the Soul is of the size of the atom, or of that of the body it ensouls (p. 81).

15. Though the Soul is omnipresent, it cannot experience what is going on in another body; because, a particular Soul can experience only that which goes on in the body—brought about by the past karma of that Soul (p. 81).

16. The Soul is many, one in each body (p. 74).

17. The Soul, in its liberated state, continues to exist as a mere *esse* 'sat' (p. 81).

18. It is not brought into existence by any cause; hence the Soul is imperishable (p. 81).

[This is Dr. Jha's critical exposition of the Prabhākara theory of the Self.]

V. 19. Even though he admits that the Universe is made of constituent parts, and as such it must have a beginning and an end, yet he finds no reason for believing that the Universe, as a whole, had a beginning, or would come to an end (p. 85).

20. The bodies of all men and animals are found to be produced by the functioning of the parents, and not by a supervening agency (p. 85).

Extracts from Dr. S. Radhakrishnan's *Indian Philosophy, Vol. II.* (1927.)

III. 9. As my actions are due to my soul, other activities are traced to other souls...

10. The analogy that as the one sun, reflected in different substances, becomes endowed with distinct properties, the one soul reflected in different bodies becomes endowed with different qualities, will not hold, since the qualities that appear different belong to the reflecting medium and not the sun.

11. If the analogy were true, the diverse qualities appearing in connection with the souls would belong to the bodies and not the soul.

12. But pleasure, pain, etc. are qualities of the soul and not of the body.

[This long extract occurs on p. 409.]

IV. 13. It is entirely distinct from the body, senses and understanding, is unmanifest in all cognitions, and is eternal.

14. Prabhākara denies that the soul is of the size of an atom or of the body which it informs.

15. Though it is omnipresent, it cannot experience what is going on in another body, since it can experience only that which goes on in the bodily organism brought about by the past karma of the soul.

16. There are many souls, one in each body.

17. In its liberated state the soul continues to exist as a mere *esse* (sat)

18. It is imperishable, since it is not brought into existence by any cause (pp. 410-411.)

[This is Dr. Radhakrishnan's own 'original' interpretation of the Prabhākara theory of the Self. He delivered a special course of lectures on the Mīmāṃsā theory of knowledge, while his second volume was in preparation. (*Modern Review*, February, 1929, p. 212). He has devoted about six pages to his section on the Mīmāṃsā conception of the Self. I have shown in my three articles that more than three pages of this section has been bodily taken from my thesis published in 1924, Dr. Jha's work published in 1911, and Dr. Thibaut's book published in 1907. So, one may reasonably doubt the originality of the remaining three pages also.]

V. 19. While Prabhākara admits that the universe has constituent parts which have a beginning and an end, he holds that the universe as a whole has neither beginning nor end.

20. We do not see the interference of any divine being in the production of the bodies of men and animals, which owe their existence to their parents.

21. Nor can the action bringing about the creation be held to be in the atoms, which operate under the Will of God; because in all our experience, we never come across any such supervision,—as all supervision is found to be done by the Soul over that body which it ensouls (pp. 86-87)

22. The atoms cannot be said to be such a body of God (p. 87)

23. Even if we grant such a 'body' for God, the activity of the body must be due to an effort put forth by him (p. 87)

24. Nor could the wish be eternal, as, in that case, the activity of the atoms would be eternal (p. 87)

25. Nor is there any force in the argument that our *Dharma-Adharma* must have for a supervisor a being possessed of intelligence higher than our own. Because the *Dharma-Adharma* must belong to the same intelligent being (p. 85-86)

26. Any being, however intelligent, can never have any knowledge of the *Dharma-Adharma* of any other being (p. 86)

27. God could not perceive *Dharma* by his senses; nor could he perceive it by his mind alone, as the mind by itself cannot perceive things outside the body (p. 86)

28. This supervision cannot be of the nature of conjunction, because *Dharma* and *Adharma* being qualities are not capable of conjunction which is possible for substances only (p. 86)

29. Nor could it be in the form of *Samavāya* or inference; as the *Dharma-Adharma* inhering in other souls could not inhere in God (p. 86)

[This is Dr Jha's own interpretation of the Prābhākara's attitude towards God.]

21. We cannot say that the atoms act under the will of God, since in our experience each soul acts on the body which belongs to it.

22. But atoms are not the body of God

23. Even if we grant a bodily organism to God, the activity of the latter must be due to the effort of God.

24. If the effort is eternal, the atoms would be incessantly active

25. Nor can we say that there is a divine supervisor of *dharma* and *adharma* since they belong to intelligent individuals

26. One being however great, cannot know the *dharma* and the *adharma* of another

27. God cannot perceive the imperceptible *dharma* of others through his senses or by his mind since it is outside his body ...

28. The control is not a case of conjunction (*samyogak*) since *dharma* and *adharma* are qualities and conjunction is possible only for substances

29. It is not a case of *samavāya*, since *dharma* and *adharma* inhere in other souls and cannot inhere in God (pp. 424-426)

[All that Dr Radhakrishnan has written about the Prābhākara's attitude towards God is contained in the above extract. And it has been taken in toto from Dr Jha's interpretation in *The Prābhākara School* (pp. 85-87). Will Dr Radhakrishnan say "Apparently he has brought together the textual matter where resemblances are found to be striking leaving out the comments for which alone even the best of us can claim originality if any?" (*Modern Review*, February, 1929 p. 209) Here he has 'paraphrased' and summarized certain passages of Dr Jha, and inverted their order in two or three places. Thus, when there is some difference in phraseology and in the development of the argument, will he claim originality for his version? (*Modern Review* February, p. 212) Does originality consist in fusing a number of sentences gathered from different sources into an intelligible narrative? If so, I am afraid, all that he has ever written might be contained not only in the unpublished writings, but also in the published works of many other persons.)

VI. 30. This atomic substance must reside in the body ensouled by the cognising soul, as none other could contain the substratum of the immaterial cause of the cognition of which that soul is the material cause. The action of this atomic substance in the body—tending to bring about the contact—is due to its coming into contact with the soul which (in every act of cognition) puts forth an effort towards the cognition (p. 35)

VI. 30. The atomic substance which resides in the body ensouled by the cognising self is *manas* and none other could contain the substratum of the immaterial cause of the cognition of which the self is the material cause. The action of the atomic substance in the body which helps to bring about the contact is due to its contact with the self, which, in every act of cognition puts forth an effort towards it. (In small type, p. 379)

Here, Dr. Radhakrishnan's version is a specimen of his *specialised* knowledge of Indian philosophy. For he writes in the preface, "To help the general reader, the more technical and textual discussions are printed in small type." (*Indian Philosophy*, Vol II, p. 8). But will the great doctor be very much surprised, when told that even this highly technical interpretation, for which he claims originality, was anticipated by Dr. Gangauath Jha as early as 1911? Or will he say, "When two or more writers are using the same texts, there is bound to be similarity in significance and much agreement in phraseology, if the writers are faithful to the source," and "it would be foolish certainly to rush from this resemblance to a charge of plagiarism?" (*The Modern Review*, February, 1929, p. 212). In fact, all the above passages (Nos. 9-30) are Dr. Radhakrishnan's original interpretation and critical evaluation of the Prabhākara doctrine, in which, perhaps, his individuality as a writer has completely come out.

Dr. Radhakrishnan has, indeed, referred to Dr. Gangauath Jha's *The Prabhākara School of Pūrva Mīmāṃsā* on p. 386, p. 397, and p. 405. But that cannot be the authority for these passages on other pages. He has mentioned Dr. Jha's work also under 'References' on p. 129. But that does not justify him in boldly incorporating numerous passages from it in his book without acknowledgment. If his usual method is to adopt not only standard translations, but also critical interpretations where available, make slight changes in them here and there, if necessary, and pass them off as his own, he should distinctly mention it in the preface of his books, so that his readers may value him at his proper worth.

Dr. Radhakrishnan has introduced a great deal of technical matter into his reply to mystify the unsophisticated reader. So I am compelled to enter into some technical discussion to show the utter futility of his arguments.

Passages (Nos. 1-7) in my version dealing with the Sāṃkhya theory of Self-consciousness were published in the *Meerut College Magazine* in January, 1924. Dr. Radhakrishnan's version is almost a *verbatim* reproduction of mine. So, he expounds the deep, inner, philosophical significance of the slight changes he has made in his version. He invents the philosophy of *key words*. "Obviously the key words," he says, "are *puruṣa*, *satva*, *pratibimba*, and *pariṇāma*. I use the word '*puruṣa*' itself in the English rendering, as the word '*self*' is ambiguous and may stand for either the *puruṣa* or the *jīva* (ego), while Mr. Sinha uses '*self*' for *puruṣa*." (*Modern Review*, February, 1929, p. 209). He has generally used the word '*puruṣa*' throughout his treatment of the Sāṃkhya System. But in the above passages (Nos. 1-7) borrowed from my thesis he uses his key word '*puruṣa*' three only, and imitates me in using the ambiguous word '*self*' as many as thirteen times, though he knows quite well that the latter may stand either for the *puruṣa* or the *jīva* (ego). Here he indiscriminately uses '*puruṣa*' and '*self*' in the same sense. So, *puruṣa* is not his key word.

Dr. Radhakrishnan says "For *sattva* Mr. Sinha uses '*mind*' and I use '*buddhi*' itself." (*Ibid.*, p. 209). He may point out here that I have never used '*mind*' for '*sattva*'. I have used '*intelligence*'-stuff for '*sattva*' and '*mind*' for '*buddhi*'. And he has

generally used '*pure essence*' for '*sattva*', or retained the Sanskrit word. Only in one sentence (4) he uses '*buddhi*' for '*buddhisattva*' once. Thus his statement is incorrect. If '*buddhi*' is identical with '*buddhi-sattva*', why does he use "the *sattva* nature of *buddhi*" (2), "*buddhi* in its *sattva* nature" (3), and "the *pure* nature of *buddhi*" (4)? Thus, though he himself has used these words, he does not understand even now the subtle distinction between '*buddhi*' and '*buddhisattva*'. Though in the above passages (Nos. 1-7) borrowed from my thesis he is faithful to his key word '*buddhi*', for that is the only change he has made in some of them (2 and 3), he uses the word '*internal organ*' for '*buddhi*' on the same page in his book several times. Thus, '*buddhi*' is not his key word. Again, for '*buddhi*' I have always used '*mental function*', '*mental mode*' or '*mental modification*', and he also imitates me in using the same words, though he never uses '*mind*' for '*buddhi*'. And elsewhere on the same page in his book he uses '*modification of the internal organ*' for '*mental modification*' as many as seven times. But he never uses this expression in the above passages (1-7) borrowed from my thesis. So, his plea of key words completely breaks down.

Let me consider the passages in detail in my version.

1. This sentence is not a translation of any Sanskrit text. It is my own interpretation of the Sāṃkhya-Pāṇinīya doctrine of self-consciousness. Dr. Radhakrishnan has borrowed his version almost *verbatim* from mine. Only for '*self*' he has used '*puruṣa*', and for '*mind*', '*buddhi*'. So, they are bound to be his key words! He is conscious of it. So, he hunts out a mutilated sentence from Keṛṭi which conveys the same idea. "When the spirit reflects itself in the inner organ, it brings its reflex, and therefore its self, to conscious knowledge" (*The Sāṃkhya System*, p. 107.) With this sentence his version has not the remotest similarity.

2. This sentence is not at all a translation of any Sanskrit passage. It is my interpretation of the text—*buddhisattvagatapurīṣapratibimbāmbanū puruṣāmbanām* (*Taittirīyaśāstra*, III, 35) in the light of *Manjirāśāstra* and *Bhagavān*. *Manjirāśāstra* says, *Ānātmāśratvaśyatvenātmānātra-pratibimbāgnāhāt puruṣānām*. (III, 35). *Bhagavān* also conveys the same idea (III, 35). Still Dr. Radhakrishnan wants to prove that this sentence is a mere translation of a Sanskrit passage, and claims originality for his version only by substituting '*buddhisattva*' for '*pure intelligence*'-stuff of the mind in my version. Can he find out a single sentence in *Taittirīyaśāstra*, of which it is a translation? Moreover, he has taken infinite pains to hunt out the English equivalents of '*samyama*' from different books, though the word does not occur at all in the above passage in *Taittirīyaśāstra*, of which he wants to prove that it is a translation. Besides, he says, "If I depended on the translations, I do not see why Mr. Sinha thinks that I should have rejected the standard ones in favour of his unpublished attempts, when, as a matter of fact, we have English translations of Vyāsa and Vācaspati in both the *Harvard Oriental Series* and the *Sacred Books of the Hindus Series*, which I have mentioned under 'References' on p. 373." (*Ibid.*, p. 249.) Let me show that Dr. Radhakrishnan's version is a *verbatim* reproduction of mine, and not

of that of Rama Prasada or Woods by reproducing all the versions below :

(i) "The *sattva* of the thinking substance depends upon the Self to the extent that it depends on the image of the Self as entered into the *Sattva* of the thinking substance." (Wood's translation, p 261).

(ii) "What looks like the objective appearance of the Purusa, and becomes as such an object of knowledge, is the reflection of the Purusa into the essence of the Will-to-be" (Rama Prasada's translation, p 229).

(iii) Vacaspati-mitra holds that the self can know itself, only when attention is entirely withdrawn from the mental function in which the self is reflected and wholly concentrated on the reflection of the self in the pure intelligence-stuff of the mind." (My interpretation.)

(iv) "According to Vacaspati, the self can know itself only when attention is entirely withdrawn from the mental function in which the self is reflected, and is wholly concentrated on the reflection of the self in the *sattva* nature of buddhi" (Dr. Radhakrishnan's interpretation).

3. This sentence brings out the significance of the text in *Taittiriya Upanishad* (*buddhiṣattvamātau tena jñāyamaṇa samākṣīpapurusaḥpratyakṣam puruṣa-chāyāpanama caitanyamātau* III 35) in so far as it throws light on Vacaspati's view as to the nature of the *subject self* and the *object self*. Neither Woods nor Rama Prasada brings out this significance in his English translation of it. (Vide Rama Prasada's translation pp 229-230 Woods translation p 261).

My interpretation of Vacaspati's view given in my thesis and published in the *Meerut College Magazine* was entirely wrong. Vacaspati agrees with Vyāsa in holding that the *pure self* or the self in its pure essence is the *subject of self-apprehension* and the *empirical self* or the reflection of the self in buddhi is the *object of self-apprehension*. He makes it quite clear when he says, *Citā prakāśyate na jñeyā cāh Puruṣapratyaksakṣīma katham cāśmṛtiyam prakāśayet* (III 34) *Imparāśmīnaprakāśo jñānam prakāśayati* (III 35). He makes it more emphatic when he explains the scriptural text quoted by Vyāsa (*vyākṛtānāṃ tena cīdānāṁ*) by saying *Na tena cāśmṛtiḥ* (III 35). Bhogaraja, Ramananda Yati, and Nāṭaka also are of the same opinion. I have corrected this mistake in my final manuscript. But unfortunately Dr. Radhakrishnan did not get it at the time of examining my thesis, so, he was compelled to perpetuate my mistake in his book though he made a verbal alteration in the sentence.

4. This sentence brings out the significance of the Sanskrit text (*na ca puruṣapratyaksena buddhiḥ sūtratmanā puruṣa āśritya, puruṣa eva pratyakṣam sūtratmadānāṃ jñāyati*) Vyāsa-kṛtya (III 35). By adding the clause "as the mind is unconscious" to its translation. Otherwise, the sentence by itself would not convey its meaning clearly. I always try to bring out the significance of a text having a bearing on the subject-matter. So, here in order to bring out the significance of the text I have not only cited not only Vyāsa and Vāṇanabhuksa in the language of Dr. Radhakrishnan but also Vyāsa and Vacaspati whose characteristic passage I have quoted in the previous paragraph. In fact, all commentators have given the same interpretation

on this point. Can Dr. Radhakrishnan give any other? All the versions of this passage are given below.

(i) "The Purusa is not known by that notion of itself which is the self-same as the objective Buddha. The Purusa only sees that notion of self by himself" (Rama Prasada's translation, p 228).

(ii) "The Self is not seen by that presented idea of the Self whose essence is the *sattva* of the thinking-substance. It is the Self which sees the presented idea which depends upon its own self." (Woods' translation, p 263).

(iii) "The self cannot be known by the intelligence-stuff of the mind in which the self is reflected. It is the self which knows itself through its reflection in the pure intelligence-stuff of the mind." (My version).

(iv) "The self cannot be known by the buddhi in which it is reflected, but it is the self which knows itself through its reflection in the pure nature of buddhi" (Dr. Radhakrishnan's version).

Does not Dr. Radhakrishnan reject the standard English translations of Rama Prasada and Woods in favour of my unpublished attempts? When he knows full well that there is not the least similarity between his version and those of Rama Prasada and Woods, why does he quote their names to bring greater discredit upon himself?

5-7. In these passages I expound the view of Vāṇanabhuksa. Dr. Radhakrishnan has reproduced them almost *verbatim*. He explains the difference between my version and his in his reply. I have raised the objection of *Karmakarsivrodha* and answered it in my version. He has excluded it from my version and thus made it entirely his own. I may point out here that there is no English translation of *Yogārtha*. So, Dr. Radhakrishnan has taken the greatest care according to his usual method, to bring out the sense of the text without anybody's help (*Modern Review* February 1929, p 209). But if his language happens to be almost a *verbatim* reproduction of mine he cannot help it. He is conscious of it. So he says in actual phraseology there is some agreement due to the identity of the texts considered but the differences throughout my renderings are striking enough to indicate to the careful reader that they are based on the texts (*Ibid.*, p 210). Certainly here the similarity is most striking but it will require the keen insight of a great thinker to find out the difference!

Thus with regard to the above passages (1-7), he is not indebted to Keith, Rama Prasada, and Woods, whose names he has quoted, but to me only.

8. This entire paragraph is "my own interpretation of Kumāra and Prabhākara's doctrines of the perception of the self. It is not a mere translation of a Sanskrit passage." (*Modern Review*, January 1929, p 102). But Dr. Radhakrishnan objects to it. He says, "Dr. Sinha urges that he is giving in his own interpretation, while half the passage is devoted to a quotation from *Sāstradipikā* and its translation." (*Modern Review*, February 1929, p 210).

Let me point out that barring the Sanskrit quotation, there are five sentences in this paragraph. Only one of them is a translation of the Sanskrit passage. But this also is not an exact translation. It brings out its significance by adding the following

sentence to the translation: "But along with this object-consciousness there is sometimes another distinct consciousness, viz., self-consciousness"; and it has been quoted *verbatim* by Dr. Radhakrishnan. I have not translated the word "*anyapleka*," and he also has left it out. How is it that he has brought out the *significance* of the Sanskrit text which I have quoted and he has used in exactly the same way, by adding the same sentence, and leaving out the same word, and using the same language?

The other sentences in this paragraph are not at all translations of Sanskrit texts. Can Dr. Radhakrishnan hunt out any passage in *Sāstradīpikā* or any other book, of which they are translations? In the first two sentences I have given my own exposition of the Bhāṭṭa Mīmāṃsaka theory of the perception of the self, and in the last two I have given my own interpretation of the Bhāṭṭa theory as distinguished from the Prabhākara theory. So, the whole paragraph is my own interpretation which has been reproduced almost *verbatim* by Dr. Radhakrishnan. He has made only two changes. First, he has not referred to the Prabhākara doctrine. Secondly, he has substituted the words "the followers of Kumārila" for the words "the Bhāṭṭa Mīmāṃsaka" used by me, and to explain the deep significance of this verbal change he has delivered a learned lecture on the distinction between Kumārila's view and that of his followers, which he might as well reserve for his research students. The Bhāṭṭas and the Prabhākaras are the two well-known schools of Mīmāṃsaka. Kumārila Bhāṭṭa is the founder of the former, and Prabhākara of the latter. Strictly speaking, the followers of Kumārila Bhāṭṭa are the Bhāṭṭas, and those of Prabhākara are the Prabhākaras. But generally the words "Bhāṭṭas" and "Prabhākaras" are indifferently used in the sense of "Kumārila and his followers", and "Prabhākara and his followers" respectively. On this point I refer Dr. Radhakrishnan to Dr. Ganganath Jha's *The Prabhākara School of Purva Mīmāṃsā* (pp. 22, 38, 40, 45, 66 etc.) with which he has shown his unusually intimate acquaintance. He says, "Mr. Sinha holds that it is the view of 'Bhāṭṭa Mīmāṃsaka' which is his designation for Kumārila" (*Ibid.*, p. 210). Here I have quoted a text from *Sāstradīpikā* of Pāṭha-sārathimūrti, a follower of Kumārila, but still the great doctor knows for certain that by 'Bhāṭṭa Mīmāṃsaka' I mean Kumārila!

In fact, Dr. Radhakrishnan cannot possibly offer any explanation of his almost *verbatim* reproduction of this entire paragraph from my thesis. So, first, he says that half of it is a quotation and its translation. Secondly, he gives the deep significance of his paraphrasing the word 'Bhāṭṭa Mīmāṃsaka'. Thirdly, he picks up the last sentence, and says, "That self-consciousness marks a higher degree of conscious life than the mere consciousness of the object is a criticism with which even a beginner in epistemology is familiar and I have referred to it in more than one place." (*Ibid.*, p. 210). Here he admits that at least the last sentence is an *interpretation*, and he has reproduced my language almost *verbatim*. But he accounts for it by saying that this commonplace criticism is known even to a beginner in epistemology. I admit that not only this criticism but also what is involved in the previous sentence, and my exposition of the Bhāṭṭa doctrine in the first two sentences are known to

every student of Indian philosophy. But I wonder how all these sentences in my thesis containing my exposition, interpretation, and criticism could find their way into Dr. Radhakrishnan's work in exactly the same form!

In this connection Dr. Radhakrishnan points out that my reference to *Sāstradīpikā* (ch. 3, 5), p. 182 is wrong. He says, "It is found on p. 349 and not p. 182". The Chowkhamba edition of *Sāstradīpikā* to which reference is made, has only 174 pages and page 182 of it is non-existent" (*Ibid.*, p. 210). I am thankful to him for his correction. But let me point out that there are two editions of *Sāstradīpikā* published by the publishers of the Chowkhamba Sanskrit Series, one with *Yuktienchhaprāṇāṇī* and the other with *Prakāśa*. I am informed by the publishers of the Chowkhamba Sanskrit Series that the former belongs to this Series, while the latter does not, though it has been published by them. The former has only 174 pages, while the latter, 622 pages. I have always referred to the latter edition in my thesis. The Sanskrit text I have quoted does occur on p. 482 of this edition, though a similar passage occurs on p. 349 of the other edition. There is a difference in the readings of this text in the two editions.

Evidently, Dr. Radhakrishnan is not aware of the existence of *Sāstradīpikā* with *Prakāśa* which contains 622 pages. He has always referred to the Chowkhamba edition of *Sāstradīpikā* which contains only 174 pages, in his *Indian Philosophy*, Vol. II. But, then, how does he refer to the other edition of *Sāstradīpikā* (pp. 487-490) on p. 482 of the above work? I have shown in my second letter (*Modern Review*, February, 1929, p. 219) that he has borrowed that part of his exposition from my thesis along with its reference, published in the *Meerut College Magazine*, January, 1924.

Next, I consider the unpublished part of my thesis.

1-3. These arguments I took from *Tarkabhāṣā* and referred to it in my thesis. Dr. Radhakrishnan has borrowed them almost *verbatim* from my thesis, but has not referred them to *Tarkabhāṣā*. He admits that they are not to be found in *Nyāyalandālī*, and they do occur in *Tarkabhāṣā*. He suggests that he has intentionally not referred to *Tarkabhāṣā*, for "the views set forth in 1, 2 and 3 are not materially different from those of 7, 8 and 9 from *Nyāyalandālī*, the earlier work." (*Ibid.*, p. 211). But, first, if the former are not materially different from the latter, why does he give them at all? Secondly, it would require a rare metaphysical acumen to discover how the first argument

from *Tarkabhāṣā* is involved in any of the arguments from *Nyāyalandālī*? Thirdly, the convention has yet to be established that the arguments taken from a later work, if they are involved in those of an earlier work, must be referred to the latter and not to the former. All scholars should take note of this new rule of giving references laid down by the great author.

4-11. As to the arguments from *Nyāyalandālī*, Dr. Radhakrishnan points out that the passages (4-9) in my version are almost a *verbatim* reproduction of Dr. Ganganath Jha's English translation of this work. (*Ibid.*, p. 211).

In the first place, Dr. Radhakrishnan here contradicts himself as I have already shown. To

explain away the striking similarity between my version and his in all other places he has repeatedly said that faithful translations of the same passage must resemble each other not only in matter but also in form. But now he says just the reverse. Here he points out that because my translation is similar to that of Dr Ganganath Jha, mine is almost a *verbatim* reproduction of the latter. Thus he sets up two contradictory standards for judging the originality of English translations of the same texts. If he feels sure that my version with regard to these passages is borrowed almost *verbatim* from Dr Jha's, why does he not feel equally sure that his version is borrowed almost *verbatim* from mine with regard to the other passages which are translations of the same texts?

In the second place, with regard to these passages (4-9) only, he has given parallel passages from some other work, on which he says both his version and mine are based. He has not been able to give parallel passages with regard to others. Still there is a striking similarity between his version and mine in those passages. This clearly shows that his version is borrowed from mine with regard to those passages.

In the third place with regard to the arguments from *Nyāyalandāli*, he admits that his version is almost a *verbatim* reproduction of Dr Jha's translation and he has acknowledged his indebtedness to him by mentioning his work in the bibliography on p 247. But he should have referred these passages not to *Nyāyalandāli*, but to Dr Jha's English translation of it from which these were borrowed. In order to avoid being misunderstood he explains his usual method of translating Sanskrit texts. He says, 'Let me explain at once that in all these passages which are not in quotation marks I do not try to give the exact translations but only expound the significance of the texts referring the interested reader to the sources. My usual method is that when I give the translations I adopt the standard ones where available, making slight changes here and there where I think necessary and where there are no authoritative translations, I take the greatest care to bring out the sense of the texts' (*Ibid* p 269). If he adopts standard translations where available, makes slight changes in them here and there, if necessary and still does not refer these passages to the works from which they are taken, he cannot avoid being accused of plagiarism. He has yet to learn how to acknowledge authorities for using published and unpublished works in writing his books.

In the fourth place my translations in passages (4-9) are based on Dr Ganganath Jha's. I do not want to imitate Dr Radhakrishnan in spinning out a philosophy by of the changes I have made in my version. But I insist that Dr Radhakrishnan's version is based on mine, while mine is based on Dr Jha's. Let me make it clear first, by giving the three versions of passage No 7.

(i) Though, 'as a matter of fact the object has an existence extending over all three periods of time, past present and future, yet when it is cognised it is cognised as belonging to the present' (Dr Jha's version p 211).

(ii) 'It may be argued that an object has existence extending over the past, the present and

the future, but when it is cognised, it is cognised as belonging to the present.' (My version)

(iii) It may be argued that an object has existence extending over the past, present and the future and when it is cognised it is cognised as belonging to the present' (Dr Radhakrishnan's version)

This clearly shows that Dr Radhakrishnan did not care to consult Dr Jha's translation, but reproduced my version almost *verbatim*.

Secondly, if he borrowed all the passages (4-11) in *Nyāyalandāli* from Dr Jha's translation, why does his version in passage No 10, for instance differ from Dr Jha's and closely resemble mine? The three versions are given below.

10 (i) One who holds that cognition is inferable from the knowledge that we have of objects, should be met by the following arguments. Does the knowledge of objects' inhere in the self or in the object? It could not be regarded as inhering in the object, as it has been shown that consciousness cannot belong to objects. If it be regarded as inhering in the self, then what cognition is there besides this which would be inferred from that knowledge? (Dr Jha's version, pp 214-215)

(ii) It may be argued that cognition is inferred from the cognition of objects' (*nyāyasaṃvedanānumeyam jñānam*). If so does the cognition of objects' (*nyāyasaṃvedana*) inhere in the self, or in the object? It cannot inhere in the object, as it is unconscious. If it inheres in the self, then what other cognition is there which is inferred from the cognition of objects? (My version.)

(iii) If it is argued that the cognition is inferred from the cognition of objects (*nyāyasaṃvedanānumeyam jñānam*) we may ask whether the cognition inheres in the self or the object. It cannot reside in the object, which is unconscious. If it is in the self what is the cognition which is inferred from the cognition of objects? (Dr Radhakrishnan's version)

This clearly shows that Dr Radhakrishnan gives here almost a *verbatim* reproduction of my version and not of Dr Ganganath Jha's. So with regard to this passage at least he is not absolved from the charge of plagiarism.

Thirdly in passage No 10 he has imitated me in quoting the same Sanskrit text, though there are many other important sentences in *Nyāyalandāli* deserving quotation. And this Sanskrit text quoted by me and Dr Radhakrishnan both does not occur in Dr Jha's English translation of *Nyāyalandāli*.

Fourthly he has imitated me in his selection of arguments from *Nyāyalandāli* against the inferability of cognitions. In my thesis I have not given the argument involved in the following sentence.

Langbāhūti na tūcādarthamātram jñānamānāsanūmānakatvat (p 95). Dr Radhakrishnan also has excluded this argument from his version.

Lastly, he has imitated me in giving the same wrong reference. He says, 'Srihara's commentary on VI 56, which deals with this topic actually runs from p 96 to p 98 in Divyānand's edition (V S S) though the argument last adduced from it occurs on p 97' (*Ibid*, pp 211-212). Thus he admits that the last argument adduced from

Nyāyakandali does occur on p. 97. Should he give the reference of the arguments actually adduced by him from a book, or of the other arguments as well with which he is not at all concerned? Besides, the last part of *Nyāyakandali* under the same sūtra deals with the doctrine of *Srasamādana* which is entirely different from the doctrines of *Jñātātānūmayatā* and *Vṛṣaya-samāredānūmayatā*, which are discussed on pp. 96-97, while the discussion on the former runs from p. 97 to p. 93. So, Dr. Radhakrishnan's reference is wrong. And this wrong reference he has borrowed from my thesis.

Any one of the above similarities between his version and mine in regard to the passages from *Nyāyakandali* might be accidental. But I wonder how like me he has borrowed his translations of some sentences from Dr. Ganganath Jha's version, translated other passages independently in the same language, excluded the same arguments of Sridhara from his version, quoted the same Sanskrit sentence, and given the same wrong reference!

12-10. With regard to the parallel passages from *Prameyā-kamalāmṛtāṇḍa*, Dr. Radhakrishnan says, "There is not one passage in my version which may be regarded as identical with Mr. Sinha's" (*Ibid.*, p. 212). I cannot understand how he says this in the face of a striking similarity between his version and mine in as many as fourteen passages (12, 13, 16, 17, 18, 22, 23, 21, 25, 26, 27, 28, 29 and 30). He has quoted the same Sanskrit words within brackets (12, 15, 16, 18, 24, 25, 28, 35 and 36). He has quoted the same Sanskrit texts (26 and 29). He has given the same exposition of the Nyāya-Vaiśeṣika view as distinguished from the Bhāṭṭa Mīmāṃsaka, the Jains, the Buddhist Idealists, and the Vedantists (28). How can he explain similarities in so many

points? There is no English translation of *Prameyā-kamalāmṛtāṇḍa*, which might be used by both of us. Now, then, does he expound the significance of Sanskrit texts in a language similar to mine? If he has paraphrased a few words, summarized a few passages, inverted the order of arguments given in my thesis in two or three places retaining my language, and reproduced almost verbatim as many as fourteen passages together with the same quotations, does it prove that he has made them his own? There is nothing strange in it. He has done the very same thing when he has bodily incorporated numerous passages from many other standard books, say, from Dr. Ganganath Jha's *The Prābhākara School of Pūrva Mīmāṃsa*.

Lastly, I fail to understand how he has drawn his materials from the very same sources about a few topics as I have done in my thesis, though there are many other important works which deal with the same topics. I fail to understand how there is a striking similarity between his version and mine in so many sentences, paragraphs, and pages dealing with the same topics. If the striking similarity between his version and mine is, what he would have us believe, due to the fact that both of them are based on the same texts, why do we not find a striking similarity in the writings of Goeh, Deussen, Prof. Ramade and Dr. Belvalkar who deal with the philosophy of the Upanishads? Why do we not find a striking similarity in the writings of Dr. Das Gupta and Dr. Radhakrishnan who deal with the same topics and draw most of their materials from the same sources in their works on Indian Philosophy? I do not know how long Dr. Radhakrishnan will fail to understand my accusations.

Meerut College, Meerut

JADENATH SINHA

Perhaps there is nothing so dangerous or so evil in its effects, as irresponsible power. That is what Great Britain exercises in connection with India—absolute power, with no one to call her to account. I do not think any nation is able to endure such an ordeal any better than is Britain, but it is an ordeal to which neither rulers of nations nor individuals in private life should ever be subjected. The risks are too great. The wrongs and tyrannies inseparable from it are too serious. England avoids it in connection with her own rulers, by making them strictly responsible to the English people. The rulers of Canada are strictly responsible to the Canadian people. Every free nation safeguards alike its people and its rulers by making its rulers answerable in everything to those whom they govern. But here is the anomaly of British rule in India—Britain rules India but does not acknowledge any degree whatever of political responsibility to the people of India. Whatever freedom or political privileges they enjoy are purely "favors", which she in her "kindness" "graciously grants" to them; she does not for a moment admit that any political freedom or political power belongs to them of right—is their just possession, which they may rightly demand of Great Britain and which she has no right to withhold. Her will is the supreme law; and India must submit in everything.

ENGLISH

VISVA-BHARATI SANTINIKETAN Price Re 1 To be had at the Visva-Bharati Office, Santiniketan

This is a souvenir of the institution located at Santiniketan. It contains a brief description of the place and of the educational facilities provided in the different departments of the Institution, with 29 illustrations. The letterpress has been neatly printed, and the illustrations, too, except two or three, have been well executed.

A CENTURY OF SERVICE By Professor Upendra-nath Bhattacharya. Price As 6 pp 109 To be had of the Secretary, Punjab Brahmo Samaj Lahore

It is a survey of the services rendered by the Brahmo Samaj during the first hundred years (1828-1928) of its existence. It gives an idea of the religion of the Brahmo Samaj and passes on to describe the social and philanthropic work done by the Samaj. The author devotes the concluding chapter to discourses on the basis of national reconstruction and the renaissance in India. It is a readable and instructive brochure.

THE MERIT COLLEGE CHRONICLE By P. G. Meen College Merrut, U P

As its name implies, this book is a brief history of Merit College. It was primarily intended to be a collection of college views. It describes the various activities of the college, and includes among other things a college 'Who's Who.' The portraits and views are well printed and are not a little interesting.

A BRYGALI PHONETIC READER By Sush Kumar Chatterjee M. A. (Calcutta), D.Litt (London) Khanna Professor of Indian Linguistics and Phonetics and Lecturer in English and Comparative Philology in the University of Calcutta Author of *The Origin and Development of the Bengali Language* and *Bengali Self-taught* London University of London Press, 10 and 11 Warwick Lane, E. C. 4, 1928, Cloth, pp 131, 3s

This book seeks to represent as accurately as possible, the pronunciation of that form of the

Bengali language which is employed by the best Bengali authors when writing in the colloquial style, and that is practically the speech of the educated classes in Calcutta. The texts are all taken from standard authors. The pronunciation is that of the author. It may be taken as being typical of the educated pronunciation of Calcutta which is the recognized standard for Bengal. The book contains values of the Phonetic Symbols, the Bengali Phonemes, formation of the Bengali Sounds, Details regarding the Bengali Sounds and their formation, The Sound Attributes (Length Stress Intonation) Colloquial Bengali Skeleton Grammar, Texts and Translations, Vocabulary. The work has been carefully and accurately done. Those who want to learn how Bengali is spoken and pronounced by cultured Bengalis will obtain much help from this book.

R C

SCPTICAL ESSAYS By Bertrand Russell, published by George Allen and Unwin Ltd. Cloth, 8s 6d pp 251 Art Canvas gilt with dust jacket, Price 1s 6d net

Bertrand Russell requires no introduction as a thinker and writer of great ability and fame. His *Sceptical Essays*, therefore, would attract the readers' attention by his reputation and a lengthy review would not serve any useful purpose. At least a reviewer may well think that there was no sufficient ground for thinking he would do any good to readers by attempting to pull Russell's scepticism out of his book and place it before everybody in a nut shell. Rather, there is ample ground for holding that the thing is an impossibility. Russell's scepticism like his faith is highly complicated and can be grasped, if at all, only by a close perusal of his essays.

His essays are an attack, some times satirical and generally subtle, on the habits, customs, valuations and way of thinking of modern men. In this he is by no means a pioneer, but the method adopted by him as well as his keen analysis of human irrationality in many fields,

show great originality. People, for example, have a habit of thinking that whatever they believe in are backed consciously or unconsciously by reason and whatever they desire are born in their mind of irrational urges. "The exact opposite of this would be nearer the truth: the great mass of beliefs by which we are supported in our daily life is merely the bodying forth of desire, corrected here and there at isolated points, by the rude shock of fact." These few lines are characteristic of Russell. He can put the essence of an entire text-book in a few words. The above give us the gist of modern psycho-analysis.

How would the average pretentious "Pragmatist" like the following bit? "A pragmatist on a jury in a murder case," says Mr. Russell, "will weigh the evidence exactly as any other man will, whereas if he adopted his professed criterion he ought to consider whom among the population it would be most profitable to hang. That man would be, by definition, guilty of the murder, since belief in his guilt would be more useful, and therefore more 'true' than belief in the guilt of any one else." Men as a rule cannot be rational, thinks Mr. Russell, for "education, the Press, politics, religion—in a word, all the great forces in the world—are at present on the side of irrationality; they are in the hands of men who flatter King Demos in order to lead him astray."

Mr. Bertrand Russell's essays take up one by one the various dangerous unreasons traditionally sitting heavy on human progress. He is not altogether drastic in his worship of reason; but he expects men at least, not to indulge in things which are proved evils, nor extol to the skies ideas and institutions which have nothing definitely good about them and to adopt whatever the best experts have proved to be of value to man's well-being.

A study of Russell's *Sceptical Essays* will be thorough cure for the modern diseases of over-enthusiasm, over-confidence and well-fed *Laissez-faire*.

LIVING INDIA. By Saral Zimand, with an introduction by "A. E." Published by Messrs. Longmans, Green & Co. Ltd., Demy 8vo. pp. XVI+250 and twenty-five halftone plates, cloth gilt, price 10s. 6d. net.

There is now over-production in the field of books on India, thanks to the fashion set by the authoress of "Mother India." Practically every class of writers have come into the field with their supply of information or ignorance to deify or defile India and her civilization. Fiery patriots of the stamp of the late Lala Lajpat Rai, opportunist politicians, dreamy-eyed "interpreters" of India, one-eyed ex-officials and ex-missionaries, dispassionate students of Indian thought and life, indifferent "copy" writers all have come forward to shed light on the Indian situation, to guide the reading world to a true valuation of Indian history, culture and present-day politics. Very few, alas, have given us any new information, a new view point, a real enough picture of India. But Mr. Saral Zimand is undoubtedly one of those few who have studied India with sufficient detachment to avoid becoming a propagandist for this or that side, at the same time, with a rare sympathy that has lent clearness to his vision and depth to his outlook.

The introduction by "A. E." adds a special

interest to the book. "My own interest in India began forty years ago," says "A. E." "when I read the Upanishads, the Bhagavadgita, the Buddhist Suttas and other sacred books. But my reverence for the noble imagination in the Upanishads or the wisdom of the Bhagavadgita has never led me to assume that India could be denied from its sacred literature, or that its life could possibly be as idealistic or mystic as the thoughts of its greatest sages. "I was prepared," continues "A. E.", "rather to find that the nation which had the loftiest spiritual imagination must have states of spiritual degradation balancing its highest vision, and this I think might be inferred from that Brahmanical psychology which opposes the Lokas to the Talas, the spiritual states of our being to the sensual states, and from which I infer that with every ascent to spirit a new abyss opens which is the dark opposite of the heaven into which the soul has climbed." Thus, we believe, is a good long distance analysis of the fundamental forces which give shape to Indian habits, customs, desires and institutions. Consciously or unconsciously the author of *Living India* also holds a similar view on India. "A. E." later on in his introduction says, "I have no doubt that out of the ferment in India will come a new renaissance." The author also seems to believe in the possibility of such a renaissance, but may be, renaissance will not come in all fields at once.

The author builds up his picture of India on a basis of correct history. He has not learnt his Indian history from a guide book or an official propaganda text-book. He is a close student of Indian history. A few samples of his interpretation of Indian history will convince one of the truth of this statement. Describing the battle of Plassey, he says, "the success of the battle depended on whether the Indian in the service of the Satrap of Bengal, with whom Clive had closed a secret treaty, would play his part and betray the prince" (p. 20). Coming to the doings of the Hon'ble John Company, he says, the Company made treaties and often broke them, sometimes even forged them. "It cheated and robbed, murdered and oppressed, and the people groaned under its domination" (p. 83). Under the Crown educated Indians "discovered that no matter how marked their intellectual attainments, they could not expect to be treated on the same basis with the white race" (p. 47). The Dyarchical system, says the author, "gives Europeans and other minorities a representation out of all proportion to their number" (p. 38). He is not merely a student of facts. He tries to see deeper. "If one seeks to understand the Indian resentment, one finds a long accumulation of grievances, racial, economic and political" (p. 184). His views on matters connected with Indian history are also characteristic of his scholarly equilibrium. He condemns strongly the British appreciation of Dyer's Amritsar massacre represented by the \$120,000 "fund and endorses a French view that "Amritsar was the equivalent of Louvain" (p. 212). What does he learn from his study of Indian history and what prophecy does he make about India's future history? We read, "On the type of constitution which the Parliament of 1930 decides to grant, on the imagination of British statesmanship, greatly depends whether India will, within the next generation, be incorporated as a loyal member of

The autobiography of the Maharshi is a classic among Bengali religious books. Considered only as a literary production, too, it is entitled to rank as a classic. Mr. Satischandra Chakrabarti has edited the book with great care. His appendices betoken great industry and regard for accuracy, and evince a reverentially critical spirit. He has rendered signal service to the cause of liberal religion, as well as to that of the literature of Bengal, by bringing out this edition.

MARATHI

CHANDRAKANT, VOL. II.—A Gujarati treatise on Vedant in the form of a narrative by the late Ichharani S. Desai. Translated into Marathi by S. R. Babarekar. Publisher: Gujarathi Printing Press. Pages 744. Price Rs. 5.

The first volume of this rather bulky but interesting work was favourably noticed in the December (1928) issue of this periodical. The writer has in this volume followed up the subject in its heavier portions, leading to the coveted goal of the Vedantists, viz., the realization of the Brahma through love and the wiping off of the necessity of re-birth. The two volumes together form a valuable addition to the Vedantic stock of Marathi literature.

HYDERABAD AND INDIAN STATES. By Raghendra Sharma. Published by the Author. Pages 430. Price Rs. Three. To be had of the Arya Bhushan Press, Poona.

The premier state of Hyderabad (Deccan) has won a large measure of odium through the criticism of its administration in the press, but judging from the materials supplied in this book supported by facts and figures quoted from the official reports of the State, the criticism does not seem to be unjustified. The administrative system of the State, appears to be rotten to the core and unless a radical change is introduced, it cannot satisfactorily meet with the requirements of its subjects. What these requirements are is clearly specified in a general way in the resolutions passed at the State Peoples' Conferences, a full report of which is also given in the book. In fact, the author, who is a sincere and earnest worker and has made considerable sacrifices, being rewarded with exile by the Hyderabad Government for his enthusiasm in the public cause, has spared no pains to make clear the intricate problem of the Indian States in general and the Hyderabad State in particular, and if Indian Princes would only care to ponder over the contents of the book and try to redress the grievances of their subjects, it will not be long before they find a way to bring happiness and contentedness to their people, provided a will is there to bring about the much-coveted consummation.

TAMIL

MAYA MAYO OR A WHIP TO MISS MAYO. By V. Ramasamy Iyengar. Published by Vasan Book Depot, 244, Mint St., Madras 1928. pp. 103. Rs. 2.

A mild and effective criticism of Miss Mayo's 'Mother India.' Her damaging exaggerations and generalizations of India's weaknesses, are discussed at length side by side with the forces that are either working or ought to work for the removal of such of the connected evils as exist, and as a result, either the actual conditions are beautifully portrayed or an earnest appeal made to the reader to do his best for the regeneration of the country. One who gets this may have no need for 'Mother India' or its translation to know its contents and this ought to be in the hands of every lover of the country.

BRAMA-GNANOPADESAM BY A QUEEN. By Sri Sadhu Ka. Vadi Velu Chettiar. Published by Sri Sadhu Ratna Saguru Book Depot, 4-34, Nainappa Naick St., Parktown, Madras.

This is a prose rendering of the stories of Sighithavan and Kanan of Gnanavasittam, not likely to be appreciated by lay readers.

ROJA DEVI OR THE EIGHTEEN YEARS TREASURE. By Lalugudi S. Kandasami. Published by L. S. K. Swami Iyer, 116-130, Chittoor Road, Gudiyattam. pp. 250. Price Re. 1-8.

This drama is verbose like a novel; the plot is ill-conceived and badly worked; and the several characters speak and act in the same strain and adopt ingenious devices to introduce themselves to others, making themselves disgusting to readers.

R. G. N. PILLAI

MALAYALAM

TUNCHAT ERZUTTACCHAN. By Vidvan K. Sanlayan Erzuttacchan. Published by V. T. Raman Bhattachari, Mangalodayam Press, Trichur, pp. 102. Price as. 12.

A praiseworthy attempt at giving a brief, yet connected, narration of the life and work of Tunchat Erzuttacchan, the father of Malayalam literature.

SRI YESU KRISTU. By K. John. Mayyanad. Published by the author at Perumattura, Travancore. pp. 32. Price as. 6.

This is part I of the life of "Jesus the Christ, the son of God," translated from the English rendering of the French book, 'La Vie de N. S. Jésus Christ.'

Written in good and chaste language.

SIVAJI. By M. K. Veera Raghava Iyer, M.A., L.T., Head Master, Government Training School, Cannanore. Published by Mr. S. Ramaswami Iyer, B.A., Big Bazaar, Calicut, pp. 102. Price as. 8.

A short interesting historical play, complete in nine acts, written for his students in the Training School, Cannanore, to be staged.

TATTVAJÑAN NA NIBANDHO (Essays on Tattvajñan). By Manubhai Chandra Vidyajñan and Pandya, M.A., B.Sc., LL.B., Solicitor, High Court, Bombay. Printed at the News Printing Press, Bombay. pp.

By BENARSIDAS CHATURVEDI

Golden Jubilee of Indian Settlement in Fiji

In May 1929 fifty years will have passed when the Indians first went to Fiji as labourers. They were sent under indenture and the memory of that hated system is naturally painful. At first sight it looks rather odd that we should be celebrating the Jubilee of our being sent under indenture

Mr. C. F. Andrews

to celebrate this Jubilee does not rest at all on the indenture system. That wretched system is gone and is gone for ever, never to be revived again. The first item in our programme for Golden Jubilee should be burning of the effigy of indenture slavery in every village in Fiji where Indians are living. Small pamphlets in Hindi, Urdu, Gujarati and Tamil giving the history of indenture system and its abolition may be distributed all over the islands. But when we put this item first we must take care that we do not excite any racial feeling against any particular race. We must also remember that the man who has worked hardest for the abolition of this slavery is an Englishman—Mr. C. F. Andrews and in every meeting in Fiji we ought to pass a resolution of thanks for Mr. Andrews. We must not forget the services of Mahatma Gandhi, Mr. Gokhale, Lord Hardinge, Miss Dudley, Rev. J. W. Burton and the late Mr. W. W. Pearson, one of the noblest souls that ever lived on this earth. I hope the Europeans in Fiji will have no objection to join in this demonstration, for most of them should realize that indenture system was bad to the Indians and Europeans alike, as it meant the degradation of both the people. Next item in our programme should be the establishment of Fiji Indian National Congress. The time has come when Indians ought to give their responsible opinion on political questions. No religious or social organization, whether it be the Arya Samaj or the Reform League, has any right to speak authoritatively on the political problems of Indians in Fiji and therefore we require a political organization. Why our people in Fiji fight shy of politics, I fail to understand. Indians are to be given representation on the

slavery! But if we look into the matter carefully we shall surely see that the idea

Legislative Council of Fiji and they ought to take part in politics

The third item in our programme should be that of education. In fact it deserves to be put first. An educational conference of Arya-samajists, Christian missionaries, Sanatanists and Mohammedans may be of some use at this juncture. A big effort must be made to remove illiteracy from among the Indians of Fiji. Foundation of a decent good library at Suva and smaller ones in distant districts may be another feature of our programme. A Sarva-Dharma-Sammelan—a conference of all religions in Fiji—may also be held. In a place like Fiji, that is inhabited by so many different races and religions, we must emphasize the points of unity instead of pointing out the differences.

The whole programme should be carried out by Indians in a spirit of brotherliness among themselves and tolerance towards other races—the Fijians and the Europeans. The Europeans of Fiji ought to realize that the Indian has come to stay in Fiji and a policy of distrust will only hamper the progress of the colony as a whole. Uneducated people can be led to terrible disaster by narrow-minded fanatics of the type of Vashistha Mun and the only way to save Fiji from ruin is to help the Indians to become able citizens of that beautiful colony.

One thing more I have to add. A Committee consisting of influential people of different communities—Hindus, Mohammedans and Christians—should be formed immediately to carry out this programme of work.

The Indian Question in East Africa

The following letter was sent to Pandit Mohlal Yehru, Pandit Madan Mohan Malaviya and Mr Hirdaya Nath Kunzon, members of the Legislative Assembly.

I learn from the papers that Sir Mahomed Habibullah has invited the Party leaders to the meeting of the Emigration Committee to be held on Monday next to discuss the Hilton Young Commission Report. As a worker in the cause of Indians Overseas I put the following suggestions for your consideration—

1. The Hilton Young Commission Report concerns the future of our people in East African territories, Kenya, Uganda, Tanganyika and Zanzibar and now that a very important decision is to be taken by the British Parliament about the problems of these colonies the Government of India ought not to commit themselves to any definite

line of policy until and unless they hear what our people in those territories have to say on these questions.

2. The Government of India should therefore at once wire to the Secretary East African Indian Congress Nairobi (Kenya) for their opinion on this report for the guidance of the Government.

3. There is a possibility of an Indian Deputation coming from East Africa to put their case before the Indian public and the Indian Government. In fact the Government of India should invite such a deputation.

The action that may be taken by the British Parliament over this Report will affect not only the future of our people in those colonies but will also have a direct bearing on the future emigration policy of India. Therefore it is all the more necessary for our leaders to be very cautious in this connection.

Hoping that these suggestions will receive serious consideration at your hands.

The decision of the Emigration Committee on this subject will be read with interest by our readers.

EMIGRATION COMMITTEE

KENYA INDIANS AND THE HILTON YOUNG REPORT

New Delhi Feb 24

The Emigration Committee met this evening at 4.30. Besides Sir Phoenix Bethwa almost all members were present. The Rt Hon Sastri was also present. Before proceeding with discussion on the Hilton Young Commission report Mr Sastri was requested to inform the Committee what the Indian residents in Kenya, Uganda and Tanganyika thought of the Hilton Young Commission Report.

Mr Sastri is understood to have said that though he had met a few of the Indian residents in those places he could not say what was the general opinion that prevailed among the residents in those places regarding the report. Mr Sastri suggested that the opinion of the Indian residents in Kenya, Uganda and Tanganyika could be obtained as early as possible and after it had been obtained the Emigration Committee could sit and discuss the report. The Committee approved of his suggestion and it is understood, has taken steps to get by cable the opinion of the Indian residents in those places before the eleventh of March when the Emigration Committee will meet again.—Free Press

It is satisfactory to note that the Indian Government have wired to East Africa to ascertain the opinion of our people there but they have given very little time. A conference of leaders of East Africa Indians is essential and such a conference cannot be held within a fortnight in East Africa, where people are living at very distant places. At least a month ought to have been given.

Indians in Central America

Mehta Jaumun writes from Balboa in Panama.—

Panama is 20,000 miles away from India by sea route, some 45 days' voyage. It is inhabited by various races, and the natives of all the countries

are to be found here. The common language is Spanish but English is also understood. There are some 1,000 Indians in this zone chiefly belonging to Gujarat, Sindh and the Punjab provinces. They are living in Panama, Colon and Christal and working as shop-keepers, cloth vendors, hawkers, motor-drivers and labourers. Most of them are well off and several are in a prosperous condition, earning daily from 2½ dollars to twenty dollars or more. The average expenses here are 20 dollars per month and so they can save a good deal of money. Indians are enjoying a happy and comfortable life breathing the air of independence. They are eager and desirous to see Mother India free and independent. They have no liking for the Nehru report and wish to see India absolutely independent like America. They don't like to hear religious lectures and are of opinion that India should get freedom not only from political bondage but also from the slavery of the Pandits and the Mullahs, slavery of castes and creeds, of sects and religions.

A Warning

A number of people posing themselves as religious reformers are going out from India every year to the colonies. Some of them belong to reactionary societies in India, which are opposed to all social reform while others are fanatics of the worst type. Their only aim is to get a good deal of money in subscriptions for building temples or for Gita Prachar etc. Our colonial friends should be very careful in dealing with these people. Half a dozen of them will prove more dangerous to Indians overseas than any number of anti-Indian Europeans.

The Field for Social Service among the Indians in Fiji

We are grateful to Rev. A. W. McMillan for the following note on social service in Fiji, which he has written at our request.

The problem of the Indian in Fiji is chiefly a problem of youth. The older immigrants often return to their motherland, and they are more conservative and fixed in their ideas than the keen, progressive Fiji-born Indians. Official figures for 1925 show the birth-rate to be 337 per mille whilst the death-rate is as low as 73 per thousand, and the total increase in the Indian population last year was 2,653, or three times that of the Fijians. These tens of thousands of splendid, healthy young Indians are in need of guidance. Many of them have not known the benefits of wise discipline and some have grown up familiar with the sordid details of crime and of low moral standards. They are ignorant of many social and religious restraints. There is,

therefore, need for the development of movements such as that of the Boy Scouts. Fiji enjoys much more ease and leisure than is known to the toiling masses of India, and leisure if it is not to prove mischievous, needs to be suitably enjoyed and employed. Games, athletics, music, healthy drama, hobbies, and the right type of constructive wholesome reading are all desirable for a people with a deal of spare time.

Rev. A. W. McMillan

[More Schools and Hospitals]

There are evidences to show that the Fiji Government is giving increasing attention to the educational and medical needs of the community. For the first time Indian students will now be sent to New Zealand with scholarships available for 6 years at the rate of about £100 p.a., a privilege that has not yet been offered to European boys and girls. As a direct result of the Education Commission which sat in July and August both primary and secondary education are to receive attention. So also two new hospitals which will provide free medical aid for Indians are foreshadowed in the coming year's estimates.

Care of Mothers and Babies

But the climate is healthy and the real need is in the direction of the proper teaching of big girls and young mothers in

The Citadel and Bazaar
Kandahar

NOTES

Hope and National Survival

Many uncivilized peoples have been deliberately exterminated. Others, though not deliberately exterminated, have greatly decreased in numbers or entirely disappeared from the face of the earth owing to contact with various baneful factors of civilized life, such as contagious diseases, alcoholism, etc. Some uncivilized peoples have become extinct or almost extinct, because in the presence of more organized, numerous, civilized and resourceful peoples, they felt depressed, lost joy and zest in life and became despondent.

Want of hope can kill not only uncivilized peoples, but civilized peoples also. For all peoples such conditions of life are necessary as would allow them and encourage them to grow to their full stature, and thus keep the fire of hope ever burning in their hearts.

However gifted a people may be, if they do not possess full political freedom they cannot prove to themselves and to others what they are capable of;—for, in all directions they find barriers set up against full advancement. It is true, in spite of such obstacles Indians have distinguished themselves in literature, art, science, industry, spiritual endeavour, and the like. In statesmanship, too, they have displayed their ability, according to the scope available. But the number of persons who have distinguished themselves in various spheres of life has not been as large as India's vast population would lead one to expect.

Whatever ethical view one may hold of war, in the present stage of human civilization it has been found necessary for national autonomy and survival. That shows that a nation which wishes to be or remain fully free must have men able to fight in the ranks and also men who are able to perform the duties of commanders-in-chief and leaders

of lower rank. This twofold condition India has been precluded from fulfilling in modern times. Hence, Indians might be misled to believe that owing to some inherent defect India cannot possibly fulfil the condition which it has been prevented from fulfilling in recent times. This would be a depressing and hope-killing belief. If from faith in *ahimsa* (non-killing) to its fullest extent, India were to forgo even the right of armed self-assertion or self-defence, still the suspicion would lurk or find entrance into the hearts of her children that they had professed *ahimsa* because they were incapable of *himsa* (killing); for real *ahimsa* is only for those who have the power and courage to kill but freely choose not to kill, from moral and spiritual considerations.

Indian Mussahmans may derive some hope and encouragement from the fact that there are still some independent Muhammadan countries which continue to produce great military leaders and statesmen. This source of hope is denied to the Hindus. For India is at present practically the only Hindu country, and, if Nepal be left out of consideration, as it is perhaps not fully independent, there is no part of the globe where Hindus live in perfect freedom and which continues to produce great military commanders and statesmen.

The Hindus have perforce, therefore, to turn for hope and cheer to the past, which may be as inspiring as the present.

These thoughts flitted across our minds on reading the concluding paragraphs of the third edition of Professor Jadunath Sarkar's *Shivaji* recently published. Says he :

Shivaji was the first to challenge Bijapur and Delhi and thus teach his countrymen that it was possible for them to be independent leaders in war. Then he founded a State and taught his people that they were capable of administering a kingdom in all its departments. He has proved by his example that the Hindu race can build a nation, found a State, defeat enemies; they can conduct their own

them. He had Mubammandan friends in boyhood and youth. Some of them are dead and with others he has lost touch owing to distance and other causes

Bill against Deferred Rebates

Mr. Sarabhai Haj's Bill for the abolition of deferred rebates has been referred to a select committee. If passed into law, it would give a great stimulus to Indian shipping enterprise, which is greatly needed.

Almost all the shipping companies doing business in India are British. Their usual practice is to issue a circular to shippers to the effect that, if at the end of a certain period they have not shipped goods by any vessels other than those owned by the companies in question, the shippers would be credited with 10 per cent of the total freights paid on their shipments during that period, and that this amount would be paid to them if at the end of a further period they have continued to confine their shipments to the vessels of the aforesaid companies. The amounts so payable are known as deferred rebates. Though shippers are not bound to patronize any particular company, as soon as they cease to send goods by the vessels of these British companies, they incur financial loss by being deprived of the rebates and may be subjected to other disadvantages also.

The deferred rebate system has been condemned by the Royal Commission on Shipping. Among other reasons for their condemnation of it, they observe that a number of shipping companies combine to secure a monopoly of a proportion of the shipping trade. They effect their object by undercutting their competitors, if any, in freights until they have driven them away.

British Cant of Equal Treatment

All jackals cry alike—so runs a Bengali adage. So all British commercial magnates, whether in Britain or in India, are making exactly the same demand of equal treatment and denouncing what they call "racial discrimination." We neither say nor suggest that they are jackals. For it is too well known that they are lions. A proverb is only a proverb.

Sir William Currie, one member of this lionine race who does his life-work at "home," is reported to have said at the annual meeting

of the British Chamber of Shipping that British shipping and commerce in India do not ask for any privileges, what they want is the same treatment as the British afford to Indian commerce. Similarly Sir George Godfrey said in the course of his presidential address at the annual meeting of the Bengal Chamber of Commerce—

What happens in Great Britain? Henry Ford with American money may build a motor car factory in Manchester a Selfridge may open a huge emporium in Oxford Street or a Lafayette from Paris may choose to compete in Regent Street—and so also a Chatterjee or Bose might build a cotton mill in Lancashire, or a jute mill in Dundee with Indian money none of them will be under any disability as compared with their neighbours.

This self-righteous pose of British men of business is both sickening and funny. After Indian shipping and India's indigenous industries have been well-nigh ruined and the Indian people have consequently become impoverished, weakened, depressed and generally incapable of enterprise, and after British shipping, industries and commerce have flourished at the expense of those of India and have reached a position unassailable, or at least very difficult to assail, by Indians, the very righteous, very fawn-muzzled, very just and very impartial British capitalists hold forth on the virtue of equal treatment and say that they want nothing more than equal treatment! If Indians were powerful and wicked enough to obtain political supremacy in Great Britain by recourse to the same methods as the British adopted in India and if they made the same kind of use of their ill-gotten political supremacy to be also economically paramount in Britain a Chatterjee or a Bose, if equally Pecksniffian with some British capitalists, could also have waxed eloquent on their freedom from racial bias and their insistence on equal treatment for all.

It is not that Indian merchants, traders, etc., were placed at a disadvantage only in times past during British rule. Even at present they do not enjoy the same facilities as their British competitors. The railway rates for goods manufactured by Indian factories and for those manufactured in Britain and imported into India and the rates for raw materials exported abroad for British and other manufacturers, if examined carefully, would reveal subtle discriminatory methods. The British and other European banks do not give the same facilities to Indian and European men of business, other conditions

being the same. In the mining business, too, there are subtle means of discrimination. In the purchase of stores of all descriptions Government does not extend patronage to Indian and British manufacturers impartially.

Bengal Budget for 1929-30

The Bengal Budget for 1929-30 is as unsatisfactory as that for previous years.

The details reveal many unsatisfactory features. For example, the total expenditure exceeds the total receipts by more than eighty-eight lakhs; the balances are drawn upon heavily to meet deficits; the police grant is higher than last year's by 16 lakhs but the education grant is higher by only four and a half lakhs; and so on.

But the most unsatisfactory feature is the fact that the Government of India has again left the Bengal Government with an utterly inadequate sum of money for a province which is the most populous in India.

Glaring Financial Injustice to Bengal

That too little money is left to Bengal is not due to any such reason as that Bengal is not a good revenue-yielding province. On the contrary, it is a fact that in times past, Britain extended her empire in India with the revenues of Bengal. And even at present, Bengal finances the Central Government to a much larger extent than any other province of India. Speaking at the dinner of the Mining and Geological Institute on the 18th January last, His Excellency the Governor of Bengal said:—

Something like 15 per cent. of the total revenue of the Central Government comes through Bengal, and at the same time she finds herself with scarcely any money to run her own administration.

Some persons are under the impression that it is after the Weston Award that Bengal began to be treated with injustice. That is not so. All along Bengal has been compelled to contribute to the Central Government a much larger portion of the revenues collected here than any other province, and too little has been left for her teeming population. Owing to the financial arrangement and method of account-keeping between the Central and Provincial Governments having changed, there is no easy means of comparison between past and

recent years. But for each particular year, it will be evident from the tables given below at random that Bengal has been all along left with too little money for her administrative purposes, having been despoiled by the Central Government of much larger sums than any other province. Before giving those tables, from the volumes of the *Statesman's Year Book* which are at our elbow, let us remind the reader that, according to the census of 1921, the following provinces of India had the population mentioned against their name:

Province	Population
Assam	7,606,230
Bengal	46,695,536
Bihar & Orissa	34,002,189
Bombay	19,348,219
Burma	13,169,099
C. P. & Berar	13,912,760
Madras	42,318,985
N.-W. F. Province	2,251,340
Punjab	20,685,024
Agra-Oudh	45,375,787

We will now give the revenue and expenditure of each Government. The first year for which a table will be given is 1909, when Bengal, Bihar, Orissa and Chota Nagpur formed one province and Eastern Bengal and Assam another.

Revenue and Expenditure in 1909.

Province	Revenue	Expenditure
C. P. & Berar	3,16,71,693	2,87,50,465
Burma	8,38,53,835	5,09,47,116
E. B. & Assam	4,66,63,299	3,02,54,089
Bengal	18,14,00,971	8,31,52,331
U. P.	10,60,89,249	7,57,51,010
Punjab	6,06,58,871	4,07,26,071
N.-W. F. Pr.	16,26,673	91,75,476
Madras	13,67,12,231	6,68,60,353
Bombay	15,61,83,199	7,15,17,725

Revenue and Expenditure in 1911-12:—

C. P. & Berar	3,77,04,569	3,33,01,513
Burma	8,99,63,994	5,57,62,620
E. B. & Assam	5,02,39,628	4,21,73,618
Bengal	20,61,81,771	7,88,08,312
U. P.	11,09,25,952	7,70,20,815
Punjab	7,69,37,300	3,15,28,015
N.-W. F. Pr.	16,14,120	1,03,86,177
Madras	14,83,11,191	7,98,73,233
Bombay	16,78,62,877	8,91,28,389

Revenue and Expenditure in 1912-13:—

C. P. & Berar	4,08,61,321	3,89,88,686
Burma	9,81,16,290	6,53,85,108
Assam	1,69,31,652	1,81,67,161
Bengal	17,83,88,102	8,08,76,031

Madras	33,073,702 acres
Bombay	28,140,610 "
Bengal	23,959,400 "
U. P.	34,301,170 "
Punjab	21,788,478 "
Bihar & Orissa	24,782,200 "
C. P. & Berar	23,132,125 "

Therefore, it is not merely on account of the Permanent Settlement that Bengal yields less land revenue than many other provinces.

Sufferers from "Isolated Independence"

The following countries in the world suffer at present from the disastrous effects of isolated independence and are drafting petitions for being included within the British Empire :

Albania	Bolivia
Andorra	Chile
Austria	Ecuador
Belgium	Peru
Bulgaria	Venezuela
Czechoslovakia	China
Denmark	Japan
Estonia	Najd and Hejaz
Finland	Persia
Germany	Siam
Greece	Tibet
Hungary	Abyssinia
Italy	Liberia
Latvia	Mexico
Lithuania	Costa Rica
Netherlands	Guatemala
Norway	Honduras
Poland	Nicaragua
Portugal	Salvador
Rumania	Dominican Republic
Spain	Argentina
Sweden	Brazil
Switzerland	Colombia
Turkey	Paraguay
Yugoslavia	Uruguay
Cuba	Yemen
Haiti	

This list is not exhaustive.

Of these countries only China possesses a larger population than India. Many of them possess smaller populations than many of our districts and than our cities of Bombay and Calcutta.

Partiality for Bengal

Government is determined to make Bengal dutiful. If Bengal wants universal primary

education, it must pay for it; for there is no money in the Bengal treasury. If the Central Government appropriates four crores of rupees every year derived from Bengal's monopoly of jute, which crop is produced in Bengal by Bengali peasants, that is because Bengal was created to be fleeced.

Bengal Women's Education Conference

At the recent sessions of the Bengal Women's Education Conference the imperative necessity of an improved system of women's education was urged by many speakers. Lady Bose presided at the first session. The meetings were largely attended by women educationists from the city and mofussil districts. In furtherance of the cultural side of school life, games, handicrafts, music, etc., were discussed on the second day. An exhibition of handiwork done in schools was on view. Miss N. B. Nayak, an Inspectress in Orissa, urged among other things the need for the co-operation of the educated women of the community in visiting the homes. This was also recommended in a paper by Mrs. Jn. Do of Bankura, who suggested the organization of Samitis for the purpose.

Mrs. P. K. Mazumdar of Dajeeing condemned the present Maticulation syllabus and urged the necessity of a more suitable type of education for girls. She was supported by Mrs. Kumudini Basu, who emphasized the need for teaching arts and crafts in schools and homes.

Miss Shome spoke of the need for more money for the improvement of Primary Schools.

Miss Verulkar and Miss Roy asked for more friendly co-operation from the Inspectresses. This was supported by Mrs. Latika Basu.

Intercepted Greetings from America

On the day of the inauguration of radio communication between America and India during last Christmas week, Mrs. Sarojini Naidu and some prominent citizens of America sent messages to the people of India by that means. If these messages had not been intercepted by our benign Government, they would have reached Calcutta when Indians were assembled here from all parts of the country to deliberate on its political, economic and social problems. We have received a batch of papers containing these messages. There is nothing blood-curdling in them.

Institution of Devadasis Abolished in Madras

In spite of strenuous and wicked interested opposition, Dr. Mrs. Muthulakshmi Reddy,

Deputy President of the Madras Legislative Council, has succeeded in getting her Bill for the abolition of the institution of Devadasis passed into law. Thus the shameful fact of some temples being also like houses of ill-fame will soon be non-existent in the Madras Presidency. The Indian State of Mysore was the first to do away with 'the dedication of girls to gods.' That was done some two decades ago. A similar Act is needed for Bombay. What this dedication means is explained in a pamphlet published by the Naik Maratha Mandal of Bombay, in which it is said:

In some parts of Bombay and Madras Presidencies and in a few native states in the southern part of the country there prevails a very crude notion in the uncultured minds of some ignorant and superstitious persons that their objects of worship require services of women in the shape of singing, dancing and other sundry duties, which are supposed to propitiate them and so they employ them to do such services. As married women are either not prepared or cannot conveniently be employed to do such services, unmarried girls are dedicated for this purpose. There are certain castes which alone dedicate their girls to temple services. Once such girls are dedicated to these services they must remain unmarried throughout their lives. In order to ensure that such girls are made to undergo a kind of fictitious marriage ceremony after which none will marry them, as the notion is that girls who undergo this ceremony are dedicated to their objects of worship and are to be regarded as their wives or maid-servants. Now the castes which dedicate their girls to gods invariably carry on the most nefarious trade of prostitution and this custom of dedication of girls to gods has been responsible for bringing into existence and perpetuating these castes of hereditary prostitutes. So naturally young unmarried girls who are dedicated to gods carry on the most immoral trade of prostitution. These castes have now been crystallized like other castes which have been differentiated on account of different kinds of trades and vocations they have been following. All other castes, either high or low, look down upon the castes in which this custom of dedicating girls to gods prevails, and even the so-called lowest castes will never be induced to dedicate their girls to gods and allow them to carry on the most infamous trade of prostitution. For the sham ceremony of dedication does not at all deter either the elders or their girls from beginning their ancestral trade of prostitution as soon as such girls attain puberty. In their hearts there does not lurk even the faintest idea of the sacredness of their position as dedicated women, and they never harbour for a moment any fear of the wrath of their gods for their most immoral pursuit. In short, such dedication has come to mean initiation into prostitution. None, therefore, need asseverate even the slightest idea of sacredness with such dedication.

The belief in many gods is due to ignorance, but is not necessarily immoral. The dedication of girls to their service was not

in its origin immoral. Their calling should have been ethically on the same level as that of the priests of the gods. But owing to causes which cannot be dwelt upon here, Devadasis came to lead immoral lives. That the British Government is partly responsible for the continuance of this evil custom will appear from the following extract from the above-mentioned pamphlet:

Those poor, ignorant and superstitious families which have fallen victims to this custom depend almost entirely on the gains they make. Certain lands and other allowances have been granted to such families as a recompense for setting apart their girls for the services of gods. If they cease to dedicate their girls to gods for temple services their means are forfeited. When the Inam Commission was appointed by our British Government in the sixties of the last century the *sanads*, which were issued by preceding rulers in the names of the dedicated women were allowed to be enjoyed by them in consideration of the temple services they were called upon to render. Thus Government is indirectly responsible for continuing the custom.

This custom never existed in the major portion of India, being confined to some parts of the Madras and Bombay Presidencies.

The Hindu Child Marriage Bill

In moving that his Bill to regulate marriages of children among Hindus be taken into consideration, Rai Sahib Harbilas Sarada made a well-reasoned and impassioned speech. It contains an analysis of the amount of public support and opposition it has received. Observing justly that "marriage affects the life of a woman more vitally and in a much fuller manner than that of a man," he first asks, what is the attitude of women towards this Bill? The answer is —

Hundreds of ladies' meetings have been held in the country district and provincial ladies' conferences have taken place. Ladies' associations and sabhas representing different communities have met and passed resolutions on this Bill. Three All-India Ladies' Conferences in different parts of the country have met, discussed and passed resolutions in the matter. But do you find a single instance of such a public meeting of women protesting against the Bill? With a unanimity which is remarkable, almost astonishing, women all over the country have demanded that this Bill be passed and passed without delay. Even the Raptana Provincial Ladies' Conference, composed in a preponderating degree of Marathi women, which met on the 19th November 1928, emphatically demanded the immediate passing

* In Mrs. Nathulakshmi Reddy's Bill provision has been made against such forfeiture. *Ed. M. R.*

of this Bill. We thus find that half the number of people affected by marriage, and that half, considering the interests at stake, the more important, and as is justly said, the better half, whole-heartedly supports the Bill.

For the rest,

By far the major part of the opinion consulted by Government also welcomes and supports this Bill. Counting the printed opinions circulated by Government, we find that, leaving out of account the report of a Local Government saying that 39 persons were consulted and the majority were against the Bill, leaving also out of account the report of another Local Government that all the officials and non-officials consulted were in favour of the Bill without giving numbers, and taking into account the printed opinions which include 10 out of the 39 mentioned above, and also all reports where numbers for and against are given, and leaving out Madras, opinions from which province are separately analyzed, we find that, out of a total of 167 opinions recorded, 128 are in favour of the Bill. Of the opinions received, only 18 are for lowering the marriageable age of girls to twelve, and of these 18, two do not insist on such lowering. Five ask for thirteen, while three ask for sixteen, and one for eighteen, while the Madras Legislative Council unanimously demand sixteen for girls. As for boys, four people want sixteen (two of these being Europeans) and one wants fifteen.

Whatever the fate of the Bill, there is no room for pessimism. Boys are now married at a higher age than before, even among the illiterate classes. Among the educated classes the same is the case with girls. The illiterate classes are bound to follow suit. Social reformers have thus already succeeded in their efforts to some extent. For complete success only time and perseverance are required.

Age of Marriage Bill in England

The existing law in England allows a girl to marry at 12 and a boy at 14. During the last 12 years there have been in that country 318 marriages at 13, 28 at 14, and 3 at 12. Compared with the number of marriages at these ages in India, these numbers are extremely small. But child marriages were undoubtedly more prevalent in England in times past, when, too, however, England was free and independent and nobody disputed her right to political liberty because of the existence of that injurious custom. Her freedom has enabled England to gradually get rid of it. And now a Bill has been introduced in the House of Lords making 16 the lowest age for a valid marriage. This will deal a death-blow to the custom. There has not been and will

not be any opposition to this Bill in England. In the case of India, there has been some opposition from some Indians, and also from the British Government, though official and non-official Britishers have argued that we are unfit for self-rule because of some retrograde social customs. In this respect, the Governments of many Indian states have been more enlightened and progressive. And it is probable that if the Government of India had been a national Government, it, too, would not have opposed social reform.

Lord Buckmaster admitted in his speech in support of the Age of Marriage Bill in the House of Lords that so far as the law is concerned the situation in England is identical with that in India. He also said that in one respect the situation in India was better than that in England. Perhaps he meant that child marriages in India are in most cases like betrothals, because the parties do not begin to live as man and wife immediately after the performance of nuptial rites. But this should not make us self-complacent in the least.

The Railway Budget

The railway budget estimates for the year 1929-30 anticipate total receipts amounting to 107½ crores and a total expenditure of a little more than 96 crores. This works out at a net gain of more than 11 crores of rupees—of course from the commercial lines; the strategic lines do not pay. However, as on the whole the railways are not a losing concern, and as it is the third class passenger traffic which is most lucrative, the third class carriages and waiting-rooms should receive immediate and adequate attention. Hitherto there has been criminal neglect of the requirements of third class passengers as regards sanitation and comforts. Not that the third class passengers themselves are not a source of insanitation and discomfort. But the railway authorities being more educated ought to make adequate arrangements for the preservation of the health of their most numerous and paying clients and teach them by example and precept to observe the rules of hygiene.

Railway Board Labour Member

The debate on the railway budget has shown that the volume and kind of work

which the Railway Board has to dispose of does not necessitate the appointment of an additional member. It has been argued that the proposed additional member will deal with labour problems. But the man proposed to be appointed has never had anything to do with Labour.

Indians have been urging for a long time past that one at least of the members of the Railway Board should be an Indian. Now the powers that be pretend to believe that that desire can be satisfied by appointing an Anglo-Indian gentleman to the proposed fifth membership, because he is a *statutory* Indian. We do not desire in the least to be uncomplimentary to Anglo-Indians (new style). But as they already hold more posts in the railways than they are entitled to by their numbers and education, it would not be playing the game to give them one of the highest railway posts on the ground of their being Indians of a sort.

Bengal and Railway Profits

Our impression is that more passengers and goods are carried by the railways to and from stations in Bengali-speaking areas than in any other regions in India. In this way also Bengal is a great source of income to the Indian Empire. This may or may not be a reason for allowing Bengal to keep some of this income, but it certainly is not one of the reasons, as the Permanent Settlement is said to be, for doing the greatest financial injustice to the most populous province in India.

Calcutta University Convocation

At the Convocation of the Calcutta University held last month, Dr Urquhart, the Vice-Chancellor, spoke as follows on the rights and duties of teachers, students and the guardians of students.

We are dealing at least with boys who want to be men, who are on the threshold of manhood, and who cannot, therefore, be subjected to the same kind of discipline as is suitable for school-boys. Analogous in this respect between one country and another are unsafe. In England, for example, at least in the older Public Schools and Universities boys are kept in scholastic and academic holding strings a little less than in India or in Scotland. Whatever the relative merits of the educational systems may be, the fact remains that we cannot in India or even in the barbarous country of Scotland count upon the same degree of tradi-

tional pressure in the direction of conformity to rule and custom.

To my mind the relation between the academic authority and the student is of the nature of a solemn contract in which the teacher promises to respect the rights and privileges and personality of the student, and, on the other hand the guardian promises to support the authority of the teacher. The teacher must stand in some sense *in loco parentis* otherwise he has no continuing of security; he cannot for any length of time stand in opposition to the parent or to the collective enlightened community. If the contract of which I have spoken be broken, and if it be broken, as may occasionally happen by the academic authority, then the adage that discipline must be maintained at all costs would prove to be mechanical, archaic and peculiarly futile. If we can maintain our discipline only by the persistent refusal to admit that there may have been a mistake such discipline is not worth maintaining. Guardians may in that case quite conceivably exercise their right of withdrawal from the contract. But what I do urge is that the guardians should play the game that they should either withdraw their students from the colleges, or if they keep them there should resolutely uphold the authority of the college. They should not allow them to remain in college and at the same time actively or passively encourage them either individually or collectively to defy the academic authority. Otherwise the authority of the teacher an authority which has a greater traditional strength in this land than perhaps in any other, is irretrievably ruined. No satisfactory solution of the acute problem of discipline is possible so long as the relationship between the teacher and the community is one of antagonism or persistent misunderstanding. Discipline therefore depends on the satisfactoriness of the general situation and cannot be considered apart from that situation. Thus the duty of the University and of all educated men is so to serve the community that the diffusion of culture may come to mean the establishment of peace and goodwill. Only then will the difficulties of the present situation disappear.

His Excellency the Chancellor drew the attention of the graduates to the important part which they may and should play in the spread of education and culture among their sisters.

Reign of Terror in Bombay

Last month, for days there were rioting and bloodshed in Bombay. Men murdered other men in a cowardly and treacherous manner, not because of any personal enmity, but because the murderers and the murdered belonged to different religious communities. The situation in Bombay bears some resemblance to what took place in Calcutta a few years ago. In both places, Government could have speedily nipped the evil in the bud.

by rounding up bad characters and other means.

The kidnapping scare, in which, among other things, the reign of terror originated, shows the evil results of leaving the populace in a state of ignorance.

The fury of the mob was in some places directed against the Pathans, because probably many of them are usurious money-lenders, others were engaged as strike-breakers and blacklegs, many others had been employed in Bardoli to break down the passive resistance of the people, and some were notorious brothel-keepers. This is written subject to correction. For we are not fully acquainted with local conditions in Bombay.

A Bombay Paper on the Bombay Riots

The *Subodha Patrika* comments as follows on the recent bloody Bombay riots :

These riots will no doubt be used as an argument against the Hindu Muslim Unity. Many well-intentioned Hindus who were already inclined towards *Shuddhi* and *Sangathan* will believe in it more and more. There is no harm if the Hindus were to strengthen themselves for a purely defensive purpose. Supposing a Mahomedan mob attacks the Hindus, the latter must be in a position to defend themselves, and the Muslims could do the same thing in the case of an attack of a Hindu mob. What we would like to point out is that these riots need not cause alarm in the heart of those who are striving to achieve Hindu Muslim Unity. The riots have been mostly the work of the Hindu Muslim riff-raff of the city. No respectable Muslim or Hindu has joined it. On the contrary, some of the Muslim volunteers have courageously rescued several Hindu families residing in a Muslim locality and the Hindu volunteers have done the same. In spite, therefore, of the mischievous work of some of the self-interested leaders of the Hindus and the Muslims, we may fairly hope that, given a sufficient time, Hindu-Muslim unity will be an established fact.

Such rescue of Musalmans by Hindus and of Hindus by Musalmans was reported in Calcutta also during the bloody communal riots here.

Our contemporary next proceeds to point out a difference between Hindu and Muslim mentality :

Yet there seems to be at present a little difference between the Hindu and Muslim mind, which cannot be ignored. A Hindu is generally loth to kill, whereas a Mahomedan thinks it his religious duty. To kill a Mahomedan is no pleasure to a Hindu and he will try to avoid it as far as possible, whereas to *kill a kafir*, a Mahomedan would not hesitate even to give his life; therefore, the supreme duty of all peace-makers in the city is to change this mentality wherever it is found and make

Hindus and Muslims feel that the life of every man is sacred and none can do away with it with impunity.

It would not perhaps be scientifically accurate to characterize all Hindus and all Musalmans in the way that the *Subodha Patrika* has done. But the need and duty of changing this mentality, in whomsoever found, are supreme. Hence we agree with our contemporary in holding that

The sacredness of human life which is independent of all religious persuasions is the one thing that ought to be impressed upon all. The military and the police may keep the turbulent elements in the city under control for a while, but as soon as this control is removed they might break out in violence again. Moreover, this work does not pertain to the sphere of law and order, but is essentially the work of the religious teachers in the city. Violence is bad, bloodshed is harmful to those who shed it, and a man inflicts an irreparable injury upon his own soul by killing a brotherman, and the things that every religious organization ought to preach from the house-tops.

The Hindu-Muslim Problem

The same paper observes :

The Hindu-Muslim problem is the most vital political problem, but curiously enough it will have to be solved on religious grounds. Religious tolerance or freedom is not quite enough, as we have now realized to our cost. The consciousness of mutual rivalry is so keen both among the Muslims and Hindus that any accidental quarrel could be turned by the machinations of an idle agitator into a Hindu-Muslim feud. What we most urgently need, therefore, is education of the people into purer and more essential forms of religion. Pure Islam and pure Hinduism are seldom at variance with each other and when this is realized there will be no feud between Hindus and Mahomedans. We are, of course, not unaware, when we say this, of certain economic considerations which are involved even in the most bigoted of religious feuds but what we are driving at is that when people will know what pure religion is they will no longer be able to hide their economic motives under the guise of religion, and economic and industrial issues will be fought without mixing them up with any religious considerations, so that whenever there will be any feuds in Bombay they will at least be free from fanaticism, which makes one regardless of the lives of other as well as of one's own life.

Our contemporary suggests that

A conference of the religious leaders of both the communities is absolutely necessary. It may include representatives of other religions also. The function of the conference should be threefold—to fight unbelief; to bring out the essential unity behind all the divergent creeds and to organize the religious life of both the Hindus and the Muslims on this liberal basis. It is very simple to write about this work but it is the most complex and difficult of tasks to achieve. The Hindu-Muslim unity is the main key to

Colonel Lawence

It is well known that he had much to do with the breaking-up of the Turkish empire in Asiatic regions inhabited by Arabs. But that was several years ago. Why does he seek to clothe himself in mystery now? And why do the powers that be help him to do so?

Britain's Alleged Violation of Mandates

The following Reuter's telegrams have been published in the dailies:

BERLIN, JAN. 30.

That large sections of the German people are following with growing uneasiness the designs of the British Government to establish a unified Dominion from the various British possessions in East and Central Africa, including Tanganyika, was the subject of an interpellation by a Nationalist member in the Reichstag, asserting that the Hilton-Young Commission's Report showed that the British were planning to annex German East Africa.

BERLIN, JAN. 31.

A further German protest against the Hilton-Young Commission's report was voiced at a meeting of the Inter-Parliamentary Colonial Association in the Reichstag.

Dr. Schnee, ex-Governor of German East Africa, exhaustively reported on Britain's alleged plans

to annex East Africa, which, he declared, were in contravention of the League mandate system.

The meeting instructed Dr. Schnee to acquaint the Foreign Office with the Association's view that the British efforts must be definitely opposed.

BERLIN, JAN. 30.

The Nationalist interpellation in the Reichstag asks whether the German Government is keeping in touch with this 'danger threatening development', and whether it is ready to take the matter up through the German representatives on the Mandate Commission.

A New Offensive against Ceylon Indians

A new offensive, we understand, has been launched against Indians in Ceylon. The battle-cry has been slightly altered to read, no vote for any person who does not have an "abiding interest" in Ceylon. A member of the Ceylon Legislative Council and the Ceylon National Congress, named Mr. Forrester Obeyesekere, has published a statement in the press to the following effect:

Only last Friday Mr. deSilva assumed a well-known gentleman in my presence that all Englishmen in Ceylon had an 'abiding interest'. So, whatever the language used at the meeting which might have appealed to the popular sentiment, we are expected to differentiate in regard to the Indians only.

It is quite plain from the above that those Sinhalese—mostly Buddhists, it is said—who propose to discriminate against immigrants, want to favour the British above Indians. This is not only unwise and unstatesmanlike, but also cowardly and snobbish.

"Witch Murder" in America

The Literary Digest writes:—

One of the strangest murder trials in modern times came to a close recently at York, Pennsylvania, where John H. Blymyer, thirty-three, John Curry, fifteen, and Wilbert G. Hess, eighteen, were convicted and sentenced for killing Nelson D. Rehmeyer, an aged farmer, whom they accused of having "hexed" or bewitched them. Rehmeyer was beaten to death in his own house after a struggle, robbed, and his body burned, we learn from the news despatches. His assailants say that the killing was not premeditated, the object of their visit being to break the evil spell, or hex, which he was alleged to have put upon them and upon young Hess's family. To free themselves from this, according to their statements, they believed it necessary to obtain from Rehmeyer a book called "The Long Lost Friend," or else to cut from his head a lock of hair and bury it eight feet underground. He was killed, they say, because he resisted their efforts to get the lock of hair.

In an article on the social implications of this "witchcraft murder," in *The Digest* of January 5,

we quoted a dispatch to the New York *Evening World* in which Dr. L. U. Zech, coroner of York County, Pennsylvania, is alleged to have said that at least half the residents of the City of York believe in witchcraft. "I never made this statement," Dr. Zech writes us.

Yes, but in Dr. Zech's opinion what proportion of the residents of the City of York do believe in witchcraft?

Miss Mayo's country is civilized and self-ruling

Military Training for Indian Students

Colonel Crawford's amendment of Dr. Munje's resolution regarding military training for Indian students has been accepted by the Legislative Assembly.

The amendment recommends that with a view to removing the defects in the character and training of Indian youths as emphasized by the Skeen Committee steps should be taken as early as possible to provide compulsory physical training games and drill for Indian boys attending schools and colleges between the ages of twelve and twenty and provide and encourage the use of miniature rifle ranges.

Mr. G. S. Bajpai, Secretary of the Education Department, accepting the amendment pointed out that it was accepted only in the case of centrally administered areas where the schemes would be put into operation as funds permitted. As for provincial Governments the Government of India would forward copies of the report of the debate and ask them to report to the Government of India on the action taken from time to time.

As for rifle practice he was glad that Dr. Munje had admitted that what he meant was miniature rifle range practice. The Government of India, therefore, accepted the principle of this portion and it would obviously be the duty of the Government of India in consultation with local Governments to devise ways and means of putting it into practice. Here again the Government of India would ask the provincial Governments for reports of the action taken thereon from time to time.

Practically nothing has been gained by the passing of this amended resolution. Dr. Munje probably accepted this amendment in the spirit of making the best of a bad bargain.

The use of miniature rifle ranges perhaps bear the same relation to the use of rifle ranges provided for the training of actual soldiers as manufactures on the laboratory scale bear to manufactures on commercial scale. Make-believes and toying with weapons are not wanted. If our boys and young men need to know to some extent what fighting actually means, they should have facilities for real military training.

But even this miniature rifle practice

they are not sure to have. What Mr. G. S. Bajpai could promise on behalf of Government was that the scheme would be put into operation in centrally administered areas which are a very small fraction of the whole of British India, and even that as funds permitted. Funds may not be available for the purpose till the Greek Calends.

As for the provinces, which constitute almost the whole of British India, the Government of India would forward copies of the report of the debate to the Provincial Governments and ask them to report to the Government of India on the action taken from time to time. This is a nice but not too clever, unfamiliar and opaque device to shelve the whole thing. It has been adopted again and again.

Every politically-minded Britisher and Indian knows that Government does not like the idea of our boys and young men being physically fit, still less of their being trained to fight. But in modern warfare bodily strength alone does not count. Nor would *lathis* count in a possible war of independence. So why cannot Government go in immediately for compulsory physical training alone? That would give the European Burra Sahibs in Government and mercantile offices healthier clerks. Possibly if the physical training spread to the villages, there would be a supply of healthier mill and factory hands also for the European owners of mills and factories. But we must not conceal that we want to be our own clerks and coolies.

Want of funds is a stale excuse. For when British imperial interests are at stake money is always available. Let us take into consideration the military expenditure of India about two decades ago and in some recent years. In 1908 the military expenditure stood at Rs. 27,97,13,000 and in 1909 at Rs. 28,76,58,950. In 1920 the military expenditure was Rs. 83,22,49,500 (estimate). So the military expenditure in 1920 was thrice as much as that in 1908, exceeding the latter by more than 50 crores of rupees. Yet Government could find these 50 additional crores 1920 was, it might be said, an abnormal year. But even in recent normal times, say in the year 1927-28, the military services cost Rs. 56,72,19,000. So, taking the military expenditure in the two normal years, 1908 and 1927-28, we find that it had almost doubled, though the total revenues of India had by no means increased by a hundred per cent. in the interval. This shows that

and the sight of blood. Moreover, the idea sought to be implanted in them that fighting is something very mysterious and wonderful, will then vanish from their minds. Physical courage will add to their moral courage also. The sense of discipline will go to improve their character.

Bengalis and Timidity

Bengalis have been maligned as being particularly timid. Not many Bengalis it is true, have fought as mercenary soldiers of Britain. But in other kinds of fight, literal and figurative, physical and moral, Bengalis have not given a very bad account of themselves. As the political-police records among other things show, Mr. F. H. Skrine, I. C. S. (Retired), writes in his recently published book, *Indian Hope* (W. Thacker & Co., London 1929):

Considerations of space forbid me to discuss all the allegations made in the *Times* on *Warren Hastings*, but I must refer briefly to the charge of cowardice. No quality is so widely diffused as physical courage and healthy Bengalis possess it in a marked degree. (p. 39)

The Evils of Militarism

We are aware of the evils of militarism. But militarism as implied in imperialism and the keeping of foreign peoples in subjection is a different thing from what we are aiming at. We want simply to get rid of the fear of wounds and weapons; we want only to have the power of self-defence. Throughout the ages India, even when she had the power, generally showed no liking for politically subjugating and economically exploiting foreign peoples, which goes under the name of imperialism.

We yield to none in our longing for that golden future when armies and armaments will not be required and will disappear, and when intellectual, moral and spiritual force alone will suffice to keep the peace, not only between nations, but also between the private citizens of the same country. But armies cannot yet be dispensed with, nor can the police force of any country.

For a people who cannot be unpacifist even if they want to, for those who are pacifists by compulsion, it would be ridiculous and *unreal* to join the ranks of the pacifists of countries whose governments and people can and do fight.

Everything in its proper time and place. Let us first have the power of self-defence.

Let us first have the courage and the real ability to do fighting, and then it may become us as a nation to forgo the right of armed self-defence and die, if need be, without fighting as civil protesters and resisters.

Outlawry of War

We rejoice at the very thought that the Outlawry of War may in some near or distant future become an accomplished fact. We can, therefore, share the feelings of the editor of *Unity* (of Chicago) when he wrote in its issue of January 21 last:

The Editor feels sad in prospect of the fact that he will not be sitting in his accustomed chair when the Briand-Kellogg Treaty is ratified by the Senate and thus will not be able to join his voice to the great vociferation of acclaim which will go up throughout the nation and the world when this event takes place. In anticipation of the hour of ratification which will probably fall at about the hour this editorial note is printed the Editor herewith records his jubilation at the culmination of the campaign for the Outlawry of War which he joined first among all the journalists of America with eager hope and firm conviction but with no thought of so great a triumph in so short a space of time. He would at this same moment extend the deep and heartfelt congratulations of *Unity* to Mr. Salmon O. Levinson, originator and chief advocate of the Outlawry idea implicit in the Treaty who has had the mostably happy experience of witnessing the fulfilment of his hopes at a time when he is still vigorous and strong to continue the work thus happily begun and carry it through under his inspired leadership to ultimate completion.

While many idealists in America want the outlawry of war—our sympathies are entirely with them—in the universities, colleges and schools of America military courses figure largely and conspicuously, as the following extracts from *The World Tomorrow* for February will show:

The increasing influence of the military department in colleges and universities has been so gradual that it is easily overlooked. During the world war the Government organized officers' training corps in most important schools and after the war it held fast to this arrangement wherever possible. Military training has become compulsory for two years in scores of colleges and universities; high schools and junior colleges have accepted military units, naval training, corps aviation and gas units have been introduced and found favour.

The writer then gives a list of the academic 'credits' given in some universities and colleges for military training, and says: "Hand in hand with the credits granted marches the number of courses offered in Military Science and Tactics."

At Ohio State University this number reaches the astonishing total of 50. At Massachusetts

Commission there was one which wanted all peasants and farmers and their womenfolk to be educated. It is to be presumed that as the result of the complete and very expeditious carrying out of that recommendation the entire agricultural population of India of both sexes has now become learned in all kinds of lore, particularly agricultural lore, and that they have fully mastered and followed in practice the results of all the researches carried on by the Government agricultural establishments in the various provinces of India. For, banking facilities have always existed whereby they have always been able to finance their agricultural operations. So our farmers and peasants and their wives, having exhausted all the scientific and up-to-date methods of agriculture hitherto discovered, applied to the Government of India to give them the benefit of newer knowledge and methods. Hence the Central Council of Agricultural Research has been created in response to that demand. Its members are to be imported from Britain, because that Island is the most progressive agricultural country in the world. And, of course, there is also unemployment among agricultural experts there. We should protest and start a No-Tax campaign if agricultural machinery also be not imported from England in large quantities.

Hindu Law of Inheritance Amendment Bill

The Hindu Law of Inheritance Amendment Bill as amended by the Council of State has been accepted by the Legislative Assembly.

The Bill provides that a son's daughter, daughter's daughter, sister and sister's son shall in order so specified be entitled to rank in the order of succession next after a father's father and before a father's brother provided that sister's son shall not include a son adopted after sister's death. The bill refers only to the Hindu males dying intestate and to those who but for the passing of the Bill would have been subject to the Mitakshara Law in respect only of property and it applies to such persons in respect only of property of males not held in coparcenary and not disposed of by will.

Some justice has been done to Hindu women, though not as much as could be desired. The ancient Hindu Laws of Inheritance were juster to them.

In this world of the living, near Hindu female relatives are more loving and practically helpful than distant male relatives. There-

fore it is natural that the former should have preference as regards inheritance.

Those living Hindu males who have natural feelings, unwarpd by superstition, would welcome the Bill.

It is to be regretted that some leaders of the Hindu Mahasabha, which has for its object the rejuvenation and preservation of the Hindu community, opposed this Bill. The Hindu community cannot be strengthened and preserved except by full justice to its women and its lower classes, who form the majority.

Welcome to Mr. Srinivasa Sastri

By his eloquence, learning, culture, tactfulness, statesmanship and personality, Mr. V. S. Srinivasa Sastri has raised India in the estimation of the people of South Africa. The cordial and enthusiastic welcome which he has been receiving in many places is fully deserved.

United Provinces Budget for 1929-30

In the United Provinces Legislative Council, Mr. A. W. Puri, acting Finance Member, summarized the anticipated financial position of that province in 1929-30 thus:

With an opening balance of 18 lakhs we anticipate revenue receipts of 13 crores 7 1-2 lakhs and debt head receipts of 3 crores 37 1-4 lakhs, totalling 16 crores 62 3-4 lakhs. Against this we propose to spend 12 crores 39 lakhs against the revenue head, and 3 crores 81 1-2 lakhs against the debt head. The total closing balance will then be 42 1/2 lakhs composed of 15 1/2 lakhs under the Famine relief fund and 26 1-2 lakhs under provincial resources, including the balance under the United Provinces Development loan.

The position of Agra and Oudh is thus better than that of Bengal. In some details, too, the U. P. Budget for 1929-30 is better than the Bengal Budget for the same year. In Bengal the increase in police expenditure is much greater than the increase in educational expenditure. But in the United Provinces, the position is reversed. There under the head of "Police," the increase is 2 1/2 lakhs, but under that of "Education" it is 5 lakhs.

RAJAH TODAR MAL
From an Old Painting

RAJAH TODAR MAL
From an Old Painting

knows, the cordial ally in the gigantic struggle in which Europe committed suicide—and, last of all, comes the wrestle between the White Race, enfeebled but still greedy, and Asia which makes its sudden appearance upon the world stage, where Europe has forced her to come, after having insulted her in the first instance, and then, armed her.

I have always maintained that in all these conflicts each side remained ignorant of the other, of his true nature, his rights and reasons.

Since the close of the Great War, I find myself united with friends whom I greatly esteem, in a common desire to defend liberty and find some remedy for social injustice. But in this, as in previous struggles, it is my lot to find that there are few among these friends with whom I feel myself really in unison, for, I am, and always was, essentially religious in the liberal sense of the term, though wholly emancipated from the bondage of any exclusive article of faith.

Now, I find, on the one hand, people whose hearts are in religion, who keep themselves shut up within the four walls of their chapel, who not only refuse to come out of their prison (it is their right not to, they say!) but would, if they could, deny the right to live to all who live outside; and on the other, my companions and associates, who have, most of them, cast off their religiosity (it is their right—thoey, too, say!) and are, often, to judge from appearances, too inclined to think it to be their mission to combat and to deny the right of existence of persons who are religiously-minded. The result of it all is the futile spectacle of a systematic attempt to destroy religion by men who do not perceive that they are attacking something whose nature they do not understand. A discussion of religion based on the mere husk of historical and pseudo-historical texts, which time has rendered barren or covered with its own excrescences is of no avail. Such a process may be likened to an attempt to explain the intimate phenomena of mental life by dissecting those physical organs which are only their vehicle. This confusion of identifying the power of the intellect with the organs through which it expresses itself, which our rationalists make, seems to me to be as illusory as the confusion common to the religious of bygone ages of identifying the powers of magic with the words, the syllables and the letters in which they were expressed.

The first condition of knowing, judging, or, if anybody is so disposed, of combating any or all religions is to have experimented the fact of religious consciousness upon oneself. Not even those who have followed a religious vocation, are qualified to speak of it, for, if they are sincere, they will recognize, that religious vocation and religious experience are two separate things. There are many highly respectable priests who are believers from submissiveness or from prudential and indolent motives, who have never felt the necessity of a religious experience, or, not possessing the strength, have shrunk from gaining it. In contradistinction to these, are the numerous persons who, while believing that they are free from all religious beliefs yet live immersed in a kind of supra-rational state of the mind, which they style Socialism, Communism, Humanitarianism, Nationalism, or even Rationalism. It is the quality of the thoughts, and not their object which points to the source from which they have sprung or permits us to affirm whether or no they emanate from religion. If our thoughts turn intrepidly to the quest of truth at any cost, if they apply themselves to it with wholehearted sincerity, ready for any sacrifice, I shall call them religious, for, it is activity of this kind that presupposes faith as a goal of human effort, as something which rises above the life of the individual and at times above the life of the society that be, and even above the life of entire humanity. Even scepticism, when it proceeds from natures which are vigorous and true to the marrow of their bones, when it is an expression of strength and not of weakness, marches with the same glorious army of religious souls, while your thousands of cowardly believers, in crowds clerical or laic, who do not believe because they choose to believe, who only wallow in the stable in which they were born and chew the comfortable cud of their convenient beliefs before racks filled with hay, have no shadow of a right to bear its colours.

We know the tragic words about Christ—*he who shall be in agony till the end of the world*—I do not, for my part, believe in a single personal God nor, above all, in the God of the only supreme sorrow. But I do believe that in all that there is in this world and in man of joy and sorrow and in all the varied aspects of life there is a God in perpetual birth. The entire creation is renewing itself every moment. Religion

progress. His acceptance of the material and scientific conquests of the European mind is complete. But he considers them as the starting point of a new departure. He wishes for India that she should utilize these methods and go beyond them, for, he believes *humanity is going to enlarge its domain by the acquisition of a new knowledge, new powers, new capacities, which will lead to as great a revolution in human life as did the physical science in the 19th century.*

It means the deliberate, methodical incorporation in the body of positive science of intuition, the scout and the advance guard of the mind, of which logical reasoning is the main force, the instrument of consolidating its conquests. No more a break in the continuity between divine unity and toiling man no more any question of renouncing Nature as illusion in order to liberate oneself in God. We liberate ourselves fully only by accepting the primordial Nature with virile joy, by marrying and taming her. There is no abdication, no blind veil. From the heart of the Unity which has been conquered, from the calm and tireless Being, the totality of Life, the Cosmic Sport in all its varieties are embraced by our energies with full knowledge and open eyes. God acts in and through men. Liberated men become, in body and in soul the *channels through which God acts in the world.*

Thus, the fusion of the completest possible knowledge with unrelaxed activity becomes more and more perfect in the profound and heroic religious life of India, whose eternal we are witnessing to-day. And the last of the great *Rishis* holds in his hand in firm unrelaxed grip, the bow of mental energy. It is an uninterrupted flow from far yesterday to the to-morrows which are farther still. All the spiritual life of history is nothing but one—the *One who is ever on the march.*

We have just begun to understand the tremendous journey which the human mind has made in these two centuries, since the *Awakening* of the 18th century. It has liberated and emancipated itself from the old classical synthesis which had become too narrow, with the help of a destructive, revolutionary, rationalistic criticism. Then came the experimental and the positive sciences with their unbounded hopes and resources and their infinite promise, to be followed towards the close of the 19th century, by

their partial failure and a sort of earthquake and sinking of the ground, which shook the structure of thought to its foundations, and last of all, the uncertainty of scientific laws, the entry of Relativity into the arena, and the incursion of the Sub-conscious. Old rationalism, menaced by it, passes from the attitude of offence to that of defence. But old faiths which reason has undermined cannot find their old foundations, on which they might build again.

Here comes the promise of an era of new synthesis in which a broader rationalism conscious of its limitations, will ally itself with a new intuitionism resting on surer grounds. The United effort of the East and the West will create a new order of thought more liberal and more universal. And, as it always happens in such creative ages, the immediate result of this new spiritual orientation will be an afflux of strength and audacious confidence, an activity which will animate and nourish the spirit, and a renovation of individual and social life.

Where the mind is without fear and the head is held high

Where knowledge is free

Where the world has not been broken up into fragments by narrow domestic walls

Where words come out from the depth of truth

Where tireless striving stretches its arms towards perfection

Where the clear stream of reason has not lost its way into the dreary desert sand of dead habit

Where the mind is led forward by thee un-
ever widening thought and action—

Towards that goal we are making our
way in the midst of tempests, guided by
our stars

III

But we have not come to that yet. For the present, let us go back to the personalities who have opened to us the road to the new point of view, from whose vantage ground we can descry the unperceived unity of human thought and of the human herds, jostling against one another in the arena.

I am going to recount the life stories of Ramkrishna and Vivekananda.

The subject of this book is *threefold*, yet one. It compares the story of two extraordinary lives—one half-legendary, the other truly epical—which have unfolded themselves before our eyes in our own times, and the account of a powerful system of thought at once religious, philosophical, moral and

social, which India has brought forward from the depths of her past, and is offering to-day to Humanity.

Though the human interest, the fascinating poetry, the charm and the Homeric grandeur of these two lives are sufficient, as you will all find, to explain why I have spent two years of my life in exploring and tracing their course and making them accessible to you, it is not mere curiosity that has prompted me to undertake the journey. I am not a dilettante. I do not bring to jaded readers reasons for flying from themselves, I ask them to discover themselves, to seek and find the Self, naked and profound, without the mask of falsehood I have made for myself a company of these seekers. It does not matter to me whether they are dead or living, and limits of ages or nations do not count with me. For the bare soul there is neither East nor West; these are but outward trappings. The whole world is its home. And this house, built by all, belongs to all.

I hope, I shall be excused, if, in order to make intelligible the intimate processes of thought out of which this book has come, I have for a moment put myself on the stage, but I have done so because it was convenient to cite my case as an example, and not because I believed myself to be in any way exceptional. I am one of my own people. I represent thousands of Western men and women who have not the means nor the time to express their thoughts. Every time that one of us speaks out from the depth of his heart and with the object of liberating himself, he enfranchises, at the same time, thousands of living silences. It is the echo of their voice, and not my words that I ask you to listen to.

I was born and I passed the first fourteen years of my life in a district of central France where my family had been settled for centuries. My lineage is exclusively French and Catholic, without a tinge of foreign connections. And the early environment in which I was almost hermetically sealed till my sojourn in Paris, was that of an old Nivernais district which permitted no alien influences to percolate into it.

In this locked up vase, shaped from the clay of Gaul and its blue sky and the water of its rivers I found all the colours and the impressions of the universe. When later in life I followed, staff in hand, the roads and alleys of thought, nowhere did I find anything that was strange to me. All these varied

aspects of the mind which I had seen or divined were, from the very beginning mine. Outward experience in this case only completed the realization of states of mind, of which I had the consciousness, though not always the key. Neither Shakespeare, nor Beethoven, neither Tolstoy nor Rome, none, that is to say, of the masters on whom I had been nurtured, revealed to me anything but the 'Open Sesame' of my subterranean city, my Heren-lanum, which sleep under the beds of its lava. I am convinced that it slept within the breast of many of those who live around me; only, they ignore its existence as I did. Few venture beyond the first stage of the digs laid out for their daily use by their practical wisdom, manipulating its necessities with economy, or beyond the will of those master minds who have forged the unity, by turns Royal and Jacobin, of France. I admire the structure. Historian by profession, I see in it one of those masterpieces of human effort enlightened by intelligence. *Aere perennius*. But after the ancient custom which required that in order to make the work endure, the living body of a man should be walled up in the masonry, our master architects have entombed in their work thousands of palpitating souls. People no longer see them under the facing of marble and Roman cement. But, at times, I seem to hear them, and under the noble roll of the liturgy of 'classical' thought, the man who listens, may hear it, too. The ritual on the high altar takes no account of them, but the faithful who follow, that docile and distracted crowd which rise and kneel at the prescribed signs, ruminate in their dreams on those other herbs of St. John. France is rich in souls. But the old peasant woman hides it, just as she hides her money.

I have just recovered the key of a lost staircase which leads to some of these proscribed souls. The stars in the wall, coiled like a serpent, rises from the profound depths of my Self to those high terraces whose forehead is crowned by stars. None of the things I saw there were to me sights unknown. I had seen them all before—I knew this very well—but I did not know where I had seen them. I had more than once recited from memory, with its lapses to be sure, the lesson in thought which I had formerly learnt—from one of my old, old selves was it? To-day I read that lesson again in its clarity and fullness, in the book which is held out before me by that unlettered genial soul, by the man

who know every one of its pages by heart Ramkrishna.

Him I present to you, in my turn, not as a new book, but a very old one, which all of you have gone through, though many might have stopped only at the alphabet. At bottom, it is always the same book that one reads, only the script varies. But eye ordinarily remains fixed upon the rind, forgetting to bite at the kernel.

It is always the same book. It is always the same man. The eternal Son of Man. Our son. Our God born again. At each of his returns he reveals himself just a little richer of the universe.

With the differences that time and place makes Ramkrishna is a younger brother of our Christ.

We may, if we like, show, as free thinking exegesis are trying to do to-day, that the doctrines which Christ preached were current in the Oriental world before his time, and sown abroad by the thinkers of Chaldea, Egypt, Athens and Ionia. Yet we can never overrate the personality of Christ, (it does not matter whether it is fact or only legend—these are but two orders of the same reality) from prevailing rightly in human history, over the personality of a Plato. It is a monumental and a necessary creation of the soul of humanity. It is its finest fruit grown in one of its autumns. The same tree has produced by the same law of nature life and legend. They are both of the same living flesh, and the emanation of its vision, breath and moisture.

I bring to Europe, which ignores it, the fruit of a new autumn, a new message of the soul, the symphony of India, which bears the name Ramkrishna. It can be shown, as

we shall try to do, that this symphony, like that of Beethoven, is built up of hundred musical elements of the past. But the master spirit in which all these elements are brought together, and who organizes them in a supreme harmony is always the man who gives his name to the work, though generations might have toiled upon it. And it is he, who from his victorious signpost, marks out a new era.

The man whose figure I am invoking to-day was the crowning glory of two thousand years of spiritual life of a people of three hundred millions. Dead, these forty years, he is the soul which animates modern India. He was neither a hero of action like Gandhi, nor a hero of art or intellect like Goethe and Tagore. He was a little village Brahmin of Bengal, whose external life passed within its narrow frame-work, without stirring events and outside the political and social activities of his times. But his spiritual life embraced the multitudinous throng of gods and men, it formed a part of the very source of divine energy of Shakti, of whom Vidyapati, the old poet of Mithila sings:

There are very few who reach back to the source. This insignificant villager of Bengal, who listened to the message of his heart, has found his way to the shores of the inner Ocean. He has wedded himself to it, thus realizing the precept of the Upanishad:

I am older than the radiant gods. I am the first-born of the Essence. I am the artery of Immortality.

I wish to bring to the ears of reverent Europe which has murdered sleep, the pulse-beat of this artery. I wish to sprinkle its lips with the blood of Immortality.

English Residents With Mahadji Sindhia

By JADUNATH SARKAR, M.A., C.I.E.

MAHARAJAH Mahadji Sindhia rose from the position of a village headman (*patil*) to that of the dominating force in the politics of Upper India for nearly one generation. The more deeply the original records of this period are studied, the

more clearly does the greatness of his character come to light and win our admiration for his sense of reality in politics, his accurate perception of the forces of the age, his unfailing judgment of the character of men, and his power of choosing the right

instruments for his purposes and giving them his full confidence and perfect latitude of action. As a mediator between the English and the Peshwa, and later between the Emperor of Delhi and the rest of India, Sindhya was the pivot of Indian politics, and this position of unique importance and power he used for the good of all parties.

Only a small portion of the contemporary records, concerning him has been printed, viz., the state-papers of Warren Hastings ending early in 1785, edited by Forrest (with a few letters of Cornwallis in Ross's *Cornwallis Correspondence*), and the Marathi despatches from Hingane, the wakil at Delhi, to Nana Farnavis, published by Parasnis (supplemented by "echoes" in Khare). But there are four other sources in manuscript, namely, (i) a very large mass of despatches and news-letters in the Imperial Record Office, (ii) the Persian memoirs (*Ibratnamah*) of Fakir Khair-ud-din, who was the confidential adviser of Shah Alam II's heir, (iii) collections of Persian news-letters now in Puna, and (iv) Marathi despatches preserved in private possession at Kotah and other places.

The earlier dealings of the English with Mahadji Sindhya, ending with the conclusion of the first Maratha War, are known to students of Warren Hastings's administration. In this paper I shall try to illustrate the later relations between these two Powers.

DAVID ANDERSON

We know that Col. Muir concluded a peace between Sindhya and the English Government in October 1781 (Forrest's *Selections*, iii. 813). On 5th November following, Hastings sent from Benares Mr. David Anderson on a deputation to Mahadji, after delegating to him "the full powers and authority vested in me (W. H.) by the Governor-General and Council for the purpose of negotiating and finally concluding a treaty of peace between the Company and the Maratha State." (Forrest, iii. 821.) With Mr. David Anderson went his brother Lt. James Anderson as his assistant. David wrote from Sindhya's camp on 27th February, 1783, reporting the ratification of the treaty with the Maratha State after a long delay. Extracts from his diary in Sindhya's camp in June of that year have been printed by Forrest (iii. 976).

David Anderson's position was a very difficult one, because the English rejected the Maratha claim to *chauth* from Bengal

Bihar and Orissa and at the same time declined to make an offensive and defensive alliance with Sindhya. Happily, Tipu Sultan, the most disturbing factor in Indian politics at this time, was a menace to the English and Maratha Governments alike, and therefore Sindhya did not find it politic to break with the English. Mahadji's chief minister, the Bhao Bakhshi, was of a conciliatory disposition and he loyally co-operated with Anderson in promoting peace and amity between their masters.

David Anderson became in time a warm supporter of Sindhya and used to promote the latter's interests whenever consulted by the Governor-General. Mahadji, in his turn, had a great liking for him. [*Ibratnamah*, iii. f. 60.]

JAMES ANDERSON

At the end of 1783, D. Anderson's weak state of health, due to a recent dangerous illness, induced him to resolve on a voyage to Europe. But early next year Hastings decided on a visit to Lucknow, and he called David to his side, as he had a high opinion of his capacity. James Anderson succeeded his brother as English Resident with Sindhya. A curious example of the punctiliousness of the decadent Mughal Court is given by Khair-ud-din in his account of James Anderson's first audience with the heir-apparent of Delhi (on 20th Nov. 1784). The Hindu Mahadji, the Christian Anderson and the Muslim Shahzada had three different dinner hours and it was long found impossible to choose a time when all three of them could be brought together without inconvenience to any of them! [*Ibratnamah*, f. 68.]

Major Browne had been appointed as English Resident with the Delhi Emperor in March 1783. Two years later, the acting Governor-General, Sir John Macpherson, recalled Browne to Calcutta, ordering James Anderson to look after the British interests in Delhi, as Sindhya now virtually controlled the Emperor. Browne took leave of Shah Alam II on 19th April 1785. In his despatches he wrote against Mahadji as a man of rough temper and utter faithlessness. [*Ibrat.*, f. 75.]

Sir Charles Malet was appointed by Hastings, subject to Sindhya's consent, British Resident at Puna for the purpose of arranging an alliance against Tipu Sultan. "And in order that he might receive complete instructions in the general line of his negotiations and be enabled to establish a

concerted plan of correspondence with our minister at the Court of Mahadji Sindhia, he was ordered to go immediately to the camp of Sindhia, at Agra, as on his way to Calcutta."* [Forbes] He reached Sindhia's camp near Mathura on 17th May 1785 and lodged with James Anderson. He had his audience with Mahadji on the 20th of that month, and with the Emperor on 5th June following (It is amusing to compare the accounts of these interviews as given from the English side in Forbes and from the Mughal point of view in *Ibatnamah*). The object of Sir Charles Malet's mission to Mahadji Sindhia having been accomplished by the conciliation of that chieftain to the establishment of his embassy at the Court of Puna, he received orders early in July to proceed to Calcutta, there to receive the requisite powers and instructions from the Governor-General. He left Agra on 21st July for Cawnpur, the nearest military station belonging to the E I Co' (Forbes, ii 433)

CAPTAIN KIRKPATRICK

In November 1786, Captain Kirkpatrick succeeded James Anderson as British Resident in Sindhia's Court. He was by temperament less tactful than the Andersons in dealing with a man of Sindhia's character and position. A petty brawl between their followers led to a rupture between him and the Marathas, but the breach was quickly closed by Lord Cornwallis's wisdom and strength. I describe it below from *Ibatnamah*.

On 24th January 1787 a washerman of Rajah Deshmukh [Mahadji's son-in-law and commander] was washing clothes on the bank of the Jamuna at Delhi when a sepoy of Kirkpatrick's escort came there for his bath and forbade the man to wash clothes there. The man did not listen to him. High words passed between the two. The sepoy hit the washerman on the head with a stick. Rajah

Deshmukh's Maratha followers crowded on the bank, seized the sepoy and beat him severely, breaking his arms and legs. The Company's sepoys brought their wounded comrade away to Captain Kirkpatrick, clamouring for justice. The Captain ordered them to seize the offender, on hearing of which the Maratha soldiers prepared for battle. Then Kirkpatrick thought better of it, and wrote to Rajah Deshmukh demanding that the offender should be arrested and sent to the English for punishment in their presence. Murar Rao the steward of Rajah Deshmukh, replied that he would hold an inquiry and when the originator of the riot was traced he would be delivered to the English.

Kirkpatrick, on getting this evasive reply, immediately left Safdar Jang's mansion where he was quartered, and marching out of the city encamped at that Nawab's tomb, six miles outside. Next day, Murar Rao visited him for settling the dispute. But Kirkpatrick persisted in his original demand, and wrote to Mahadji, complaining against Rajah Deshmukh. On the other side the backs of the Maratha sardars were also up, it became a point of honour with them to protect their countrymen who were involved in the fracas on the river-bank.

Kirkpatrick after a few days' halt, marched from Delhi straight to Sindhia's camp and demanded the punishment of the offenders. The Mahajah delayed and wrote to the Governor-General against Kirkpatrick. After vainly waiting for over a month, Kirkpatrick left Sindhia's camp for Farrukhabad, entrusting his duties to Mr Macpherson.

Meantime Sindhia's letter had reached Lord Cornwallis, then on a journey to Upper India. The Governor-General wrote a grave letter of advice to Kirkpatrick, which the latter rightly took to be a reflection on his diplomatic skill and patience. The Captain's reply, dated 16th March 1787, is a very long document, explaining away all the charges against him and reviewing the situation. It contains a sketch of Sindhia's character drawn by an acute if hostile observer. He writes—

"A continuance of the misunderstanding which has hitherto unhappily subsisted between Sindhia and me, when combined and co-operating with other fears and suspicions, which are constantly excited in his mind by the most frivolous circumstances, would have a tendency to increase the natural jealousy and distrust with which he views all our

* His journey is described (from the diary of his surgeon Mr. Cruso) in Forbes's *Oriental Memoirs*, 2nd ed. ii 438-421. Leaving Surat on 12th March 1785 he reached Agra (via Unnao and Gwalior) on 3rd May and was lodged in the Taj Mahal. The object of the visit was (as Khair-ud-din faintly puts it) to get Sindhia's permission for Malet's embassy to Puna. Mahadji delayed giving his assent, as direct negotiations between Bombay and Puna would have lessened his own importance as the recognized mediator between the English and the Peshwa's Government. But Anderson's tact overcame his objection.

proceedings. That our personal differences, however, should produce such an effect as this, is owing entirely to the peculiarity of his character..

"My sole claim on him has been for such a return of respect and attention as I judged due to my situation and essential to the honour and interests of your Lordship's Government.

"Your Lordship may confidently rely on my proceeding with the utmost caution... I never under any circumstances, proposed taking so strong a measure as the formal

quitting of Sindhia's camp; and as to threatening him, on any occasion with the resentment of our Government.. Your Lordship does not think it possible for me to be guilty of so outrageous and unwarrantable a conduct."

Next year (1788) William Palmer became Resident with Sindhia, and when Mahadji went to Puna (1792) on the visit from which he never returned in life, Palmer continued to stay in Sindhia's territory at Gwalior, Ujjain and other places.

Some Observations On American Industry

By JAGADISAN M. KUMARAPPA, M.A., Ph.D.
(Formerly known as John J. Cornelius)

THROUGH continued efforts to solve the problems presented by natural and environmental conditions, each country makes its unique contribution to the achievements of man. In her attempt to solve the economic problem offered to her, America is ushering in a new era in industry. Since the World War she has made tremendous progress in the economy of business and industry, and has come to occupy the foremost place among the industrial nations of the world. A critical study of the growth and development of industry in America reveals several contributing factors without which, one may safely say, America could never be where she is to-day in the world of power and wealth. An attempt is made in this article to make a brief survey of the factors which have contributed so largely to American industry and to her national prosperity.

Although the United States of America is about twice as large as India in area, yet its population is only one-third as large. Being sparsely populated, America imports from Europe practically all of the labour she requires. Thus in the economic development of America, European labour has played and is playing a very significant part. Nevertheless, such alien race groups give rise to many serious problems from the

point of view of national unity. The low-class European immigrants bring with them different languages, customs and habits. In fact, there are more languages spoken in America than in India. Hence even culturally one finds tremendous dissimilarity in different sections of the United States. In this respect India is very much better off than America, since in spite of her many languages, India has a well-founded cultural unity. The heterogeneous population of America has given rise to the serious problems of assimilation of the alien elements and of the preservation of American ideals and traditions. Indeed, it is these problems which have ever been at the bottom of the American immigration policy. By restricting immigration, America hopes to assimilate the unassimilated and to lessen the problem of the alien element in her national life. But it is interesting to note how every step taken by the American Government to restrict European immigration has had its inevitable effect on the development and character of American industry.

Let us take, for instance, the present immigration policy of the United States and its effect on labour from Europe. Northern Europe has been and is still supplying mostly skilled labour, and Southern Europe, largely unskilled labour. But inasmuch

as the present immigration policy favours north European immigration, it tends greatly to restrict unskilled labour. When the supply of unskilled labour is decreased in the face of increased demand for it, it is nothing but natural that the wages for manual labour should rapidly increase under such conditions. Such shortage of labour compels the American employer to economize in utilizing human labour and to find other substitutes for human agency. This necessity has become the mother of the enormous mechanical devices and inventions and of the rapid mechanization of the American industry. Thomas E. Robertson, Commissioner of the Patent Office, remarks in his annual report that the grand total of patent applications reached 116,931 during the last fiscal year. This is about 3,000 greater than the total of the previous year. With every period of restriction of foreign labour, the American industry puts forth fresh efforts to adapt itself to the changes in the labour market by substituting the very latest machinery and equipment. So much so that to-day machinery has been so perfected in America that the most complex manipulations are carried on unaided by human hands.

A visit to an ordinary bakery, for instance, makes one marvel at the amount and the nature of the work an American makes his machinery do for him. It mixes the flour, bakes the loaves, sorts them according to different weights, wraps each artistically in water-proof paper and seals them. A visit to an American farm will show to what an extent complicated processes are now being carried on by machinery. For instance, every year there are more than 100,000,000 acres of corn grown in the United States. The work of harvesting it is a tremendous job and one that costs the farmers of the country somewhere between Rs. 900,000,000 and Rs. 1,200,000,000 each season. A farmer can plough from five to fifteen acres a day depending almost entirely upon the equipment he puts into operation.

With two-row and four-row cultivators, travelling at the rate of four miles an hour, he can cover thirty-three acres and sixty-five acres respectively in a ten-hour working day. The corn grower now harvests his corn with a labour-saving mechanical corn-picker and husker pulled by tractor. The mechanical picker not only reduces the number of men required to harvest the corn, but also,

under most conditions, cuts the cost of the work about in half. Similarly the shortage of labour compels the American farmer to do his ploughing, levelling, sowing, binding, thrashing etc., with the aid of machinery. Machines even dig potatoes, peanuts and so forth, they also milk his cows, separate the cream, churn butter and do for him a thousand other things. Similarly the lady of the house finds a shortage of domestic labour, and of course, the machine must come to her rescue. Machines now wash her linen, iron her clothes, clean her rugs. Every detail of housework is thus being carried on now by the use of machinery.

Such mechanization of life and the enormous home market have resulted in mass production—the most marked characteristic of American industry. In her home market America enjoys an advantage such as few other countries in the world enjoy. Europe, for instance, is divided up into small states, each jealous of its neighbours, they have been greatly influenced by the social philosophy of Hobbes, Darwin and Nietzsche. Many of the European thinkers have gladly accepted the struggle for existence and the survival of the fittest as the normal and cardinal principles guiding their social, political and commercial life. Being jealous and suspicious of its neighbours, each state raises insurmountable tariff walls and suffers from unparalleled international rivalries.

The United States, on the other hand is entirely free from such barriers within the continent. That is to say, though the United States is governed by a high tariff policy in its relation to the outside world, yet, unlike Europe, she enjoys an exceptionally vast home market controlled by the policy of free trade. It will be difficult to find another such market anywhere else in the world. Such a situation is bound to develop more the spirit of co-operation rather than that of suspicion. Further it enables a factory or industry to be situated at the point most favourable to its growth and expansion, and at the same time enjoy the benefit of the whole market of the continent. Such an excellent combination of the use of machinery and of an vast a market could not but result in mass production.

There is another advantage which the United States enjoys over the old world. The small European states have their own civilizations, characteristic tastes and age-old customs. That means that industry in Europe

must produce a great variety of articles to meet the differences in tastes and refinements of culture. On the other hand, the United States has a population of about one hundred and twenty millions of people who are so much alike in their habits and modes of living. Such uniformity renders the requirements of the people very similar and consequently greatly limited is the demand for variety. This national tendency to uniformity is intensified by a system of unconscious education or scientific publicity for the purpose of increasing the consumption of the goods produced. Nowhere else in the world are the principles of advertising studied so thoroughly and applied so scientifically as in the United States. In fact, a practical science of publicity has now been developed with the aid of economists, psychologists and scientists, and there is hardly a university to-day of any decent standing that does not offer courses in publicity and advertising. The tremendous effort put forth by businessmen to increase the consumption of their goods has resulted in raising advertising not only to the level of a science but also to that of an art.

A sight of the electric displays of signs and advertisements in any of the main streets of American cities, a glance over the pages of American journals and magazines or at bill-boards and placards in stations and subways will clearly show how America has made advertising an art. These advertisements declare the excellences of the wares advertised. Shaving-creams, chewing-gums, tooth-brushes, auto tyres, salad dressing, washing machines, vacuum cleaners etc. etc., are advertised in varying colours, attractive pictures and telling expressions. Frequently even sex is played up to arrest the attention of the passer-by. The buses, street cars, subway trains etc., carry all kinds and sorts of posters. Even in the movies they are displayed between films. Radio stations maintain themselves on fees paid by firms and companies for advertising their goods between different items of the broadcasting programme. Thus advertisements are used by American business for the purposes of educating the public and controlling its tastes.

Such control of the tastes of the people through scientific advertising facilitates standardization and mass production. To what an extent the American public has thus allowed itself to be so

standardized is well described by Sinclair Lewis in his *Main Street* thus: "Nine-tenths of the American towns are so much alike that it is the completest boredom to wander from one to another. Always, west of Pittsburg, and often east of it, there is the same lumber-yard, the same railroad station, the same Ford garage, the same creamery, the same box-like houses and two-storey shops. The new, more conscious houses are alike in their very attempts at diversity; the same bungalows, the same square houses of stucco or tapestry brick. The shops show the same standardized nationally advertised wares; the newspapers of section three thousand miles apart have the same 'syndicated features'; the boy in Arkansas displays just such a flamboyant ready-made suit as is found on just such a boy in Delaware, both of them iterate the same slang phrases from the same sporting-pages, and if one of them is in college and the other is a barber, no one may surmise which is which."

Though standardization, from the economic point of view, is a profitable means of production, yet from the point of view of human personality one entertains grave misgivings as to its value. Where business standardizes the individual and limits the fuller development of his personality in order to produce goods on large scale and sell them at reduced rates for the purpose of profits, it is there one notices the predominating spirit of materialism in America. It must also be pointed out that such limitation of human personality is brought about in the interest of those wealthy few who control industries. It is this aspect of capitalistic industrialism of the West, and particularly of America, that Mahatma Gandhi unsparingly condemns. He seeks greater freedom for creative personality in the economic life of the country, but this is the very thing which a captain of industry considers a serious handicap to big business. Only when the consumer is standardized and the producer is reduced to a mere automaton can there be large scale production. At the Ford factory, for instance, one sees men spending their whole life-time doing nothing else but piercing holes in tin plates or tightening up the screw at the same place. Man is thus made to take his place as part of the huge machinery, but that is, indeed, the place for man in this new doctrine of production.

The shortage of labour and increased

to be between Rs. 21,000,000,000 and Rs. 24,000,000,000.

At present some determined attempts are being made to reduce the cost of distributing goods. The greatest progress has probably been made by the chain store system. According to figures gathered by the Chamber of Commerce of the United States, the sales of the chain stores have doubled in the past eight years, while the department stores have gained only 31 per cent. during the same period. This growth in sales of the chain stores is largely due to the low prices at which they can sell because of the successful fight they have waged against all kinds of waste in distribution. These stores, because of their combined buying power, buy direct from the manufacturer, thus saving the middleman's profit and cost of doing business. The most important development in the future of mass retailing will come through the formation of chains of department stores. They can, says Mr. E. A. Filene, proprietor of a leading department store of Boston, well include 50 to 100 stores with combined sales of a billion, even two billion, dollars a year. Each department of each store must in turn become a chain of similar departments. If such combinations are brought about, he says, distribution costs can be cut 25 and perhaps 50 per cent. Drug stores are also trying to bring about a co-operative chain in order to cut down distribution costs and increase sales. 1,000 retail drug units are to be combined into an independent combination to be known as the Drug Service Corporation. This chain will have a stock turn-over of from Rs. 60,000,000 to Rs. 90,000,000 this year. The Corporation will provide a perfect service jobbing system to its membership, and will manufacture a complete line of merchandise to be controlled and distributed by the members of the Co-operative Chain.

Similarly for the sake of economy, elimination of waste and reduction of distribution costs, and in order also to withstand the strong competition which has developed in many lines a large number of mergers have been developed. Last year was really a "year of mergers" in trade and industry in the United States. Mergers in such important lines as motors, oil, chain stores, dairy products and railroads have been brought about. The main advantage of these mergers are said to be the elimination of superfluous sales

agencies, economies in manufacturing, and in many cases, the acquisition of strategic sales locations and nationally known trade marks.

Some Companies have started mail order houses for distribution. Outstanding among these are Roebuck & Co., and Montgomery Ward & Co. Enormous increases are reported in this type of retail distribution. They are now trying to augment their strictly mail order business by the addition of numbers of retail stores of various types. Montgomery Ward & Co. report a total of more than 8,000,000 customers in all States of the Union and in many foreign countries. This company is pushing plans embracing the opening of retail department stores in 1,500 towns with a population of 5,000 or more. By the end of this year it is expected that more than 200 of these stores will be in operation; additional and larger units are planned for the larger cities. Gross sales of both the mail order houses have grown with remarkable steadiness in the last five years. Sears, Roebuck & Co., reported total sales in 1923 of Rs. 636,621,812, this aggregate increasing to Rs. 775,026,708 in 1925, while in 1927 the total sales were Rs. 878,781,771. Montgomery Ward & Co. reported sales in 1923 of Rs. 403,933,308; in 1925, they increased to Rs. 552,287,907, while in 1927 they went up to Rs. 607,211,907. The new steps taken by these companies are expected to effect even greater sales in the future.

An interesting contribution to scientific distribution is made by one of the research organizations to aid the business of the concern involved. This was the division of sales territories along non-geographical lines. This particular concern is interested in plumbing supplies, and has every wholesaler of these lines in the country charted. In establishing its salesmen's territories it utterly ignores lines which divide states and counties. The territories are arranged solely in relation to the number of jobbers in a given area, and the buying habits of the population. For example, the western part of Vermont is tied up with New York State because users of plumbers' supplies in that section buy them in the latter State. This situation is duplicated in other parts of the country, where it has been found through research that the avoidance of strictly geographical divisions of territories makes for more efficient and less costly distribution.

Through such methods of efficiency, mass production and scientific distribution, America

has come to hold the foremost place in the industrial world within a short period of time. Among the favourable developments which have characterized the period since the World War are the introduction and development of new industries, the expansion in volume and output of the older industries, the perfection of methods of developing efficiency, cutting out waste, speeding up deliveries of goods, the knitting together of business activities of every kind into larger and more harmonious units. More and more the corporate industries of the United States are becoming the property of the public, more and more are individual citizens investing their wealth and their savings in corporate securities. It is estimated that about 15,000,000 men, women and children to-day own stocks or bonds of one type or another, while millions more are indirectly affected by such ownership.

This new era in American industry is in its first stages only. The coming decade will witness its expansion and extension far beyond its present stage. With the vast broadening of corporate activities the machinery for carrying on the business of the country has grown in equal ratio. Banking facilities for the financing of this modern business giant have become immensely greater than ever before. Investment banking for the mobilizing of capital has become one of the gigantic cogs in the wheel of American life. And all other activities necessary to serve this economic giant, such as engineering, auditing, research and statistical facilities have all been enlarged and made scientific. Thus America is bringing about a silent revolution in industry, and her methods have already begun to penetrate into other parts of the world and revolutionize their industrial life.

There is much for countries which are less developed industrially to learn from America's economic organization, but one should not be blind to the shortcomings and limitations of the methods of American industry. We must keep in mind that machinery cannot produce everything and naturally, therefore any system that depends on it wholly must be limited. At the present time the Americans are interested only in producing those things which can be turned out in great quantities with the help of machines. The result is that an economic situation has been created in the United States where the cost of anything hand-made is tremendously expensive, and, as a recent French writer has pointed out such high cost of hand-made articles contradicts the general principle that prices are lowered by standardizing the product.

But the most serious objection to the American system is the one raised by Mahatma Gandhi, namely that standardization is unsuited to a whole group of industries which seem to depend mainly on the creative genius of the people. Mass production destroys the value of an article where distinction is not only the main purpose but also the expression of the creator's individuality. But wherever the machine can succeed there American genius will succeed with it. Wherever artistic ability and individual skill not maximum output are demanded, there American genius, as one finds it to-day, will fail. America has perfected her machinery to that extent that wherever large scale production is required she is able to produce goods at low cost and pay high wages. America's abundant natural resources, her enormous capital, her shortage of labour, and her vast home-market have contributed largely to this unique character of American industry.

American Diplomacy At Its Best

By Dr. TARAKNATH DAS, Ph. D.

1

THE success of the American Revolution and the establishment of the Republic of the United States of America was due to the will of the American people to

fight for liberty and the remarkable diplomatic sagacity of the founders of the Republic, especially of Benjamin Franklin, the greatest of American statesmen.

At the outset, the American people were

not seeking absolute independence from British rule, but they wanted freedom within the British Empire. Those who advocated absolute independence were in a minority and they were classed as "American Rebels"; while the majority of the American people were "Loyalists" and were opposed to separation from Britain. The far-sighted minority, seeking absolute independence, had a very difficult work before them, when they attempted to convert the majority to the cause of American Independence. These wise statesmen did not follow any dogmatic method to convince the people of America that Britain would never willingly give up the special privileges enjoyed by the British Parliament, British ruling-class and merchants; but they followed indirect methods, and in course of time made the American people see the wisdom in the programme of American Independence.

Statesmen like Benjamin Franklin and others advocated that the American people should petition the King so that they should not be deprived of their natural rights of freedom. Various petitions were presented to the British King, which were ignored. Then it was decided by these wise statesmen that they should send deputations to the British Court to plead the American cause. It is a historical fact that the members of the American delegation were insulted and sneered at when they tried to argue the case of American freedom before the rulers of the British Empire. Thus the American statesmen proved that presenting petitions and sending deputations to the King and His Court were futile and they by an indirect process made the liberty-loving people of America realize that in order to gain their freedom they should fight.

These statesmen also realized that the American people could never defeat the mighty power of Great Britain, unless they were helped by other Great Powers, and Britain also was completely isolated in World Politics, so that she would not receive any support from any quarter against the struggling Americans. In this they succeeded. This achievement of American diplomacy is the greatest in its whole history. Autobiography of Benjamin Franklin, Life of Beau Marche, Diaries of John Adams, the writings of Jefferson and of Thomas Paine, Diplomatic History of American Revolution by Wharton and other works should be studied by all who wish to understand the

foundations of American diplomacy at its best. The American statesmen of the Revolutionary era—the founders of the Republic of the United States of America—were never isolationists. They sought foreign alliances to promote American independence; but they refused to be entangled in such foreign alliances which would force America to fight for other nations which might be against her genuine interests. They wanted to co-operate with other nations on the basis of reciprocity to promote and protect American commerce. They were ardent advocates of the "Rights of Neutrals" and "the Freedom of the Seas." Hon. Justice Dr. John Bassett Moore in his work on "Principles of American Diplomacy" has very ably discussed the contributions of the American statesmen of the revolutionary days in the fields of international relations and international law.

II

During the period of the American Revolution and the years immediately following it, American statesmen not only held their own in diplomatic contests with British statesmen, but won signal victories. However, to enforce their conception of American rights on the seas, they did not hesitate to fight the War of 1812 against Great Britain in which the mighty British fleet suffered defeats from the navy of the infant republic.

After 1812, British statesmen thought it to be wise to seek American co-operation; and thus by entangling America in the net of British World Politics, they would be able to dominate America indirectly. Lord Canning, as British Foreign Minister, tried his best to bring about an Anglo-American Alliance, so that America and Great Britain might follow a common policy in the American continents against other European Powers who were Britain's political and commercial rivals. Again American statesmanship, under the leadership of John Adams and Monroe, scored a signal victory in formulating and making known the famous Monroe Doctrine, one of the corner-stones of American Foreign Policy. The doctrine has survived more than a century and America will try to uphold it with all her might against all oppositions from any quarter.

III

The diplomatic history of American expansion from the Atlantic to the Pacific, the purchase of Alaska from Russia, the purchase

Ser P C Ray ploughing the fields at the Govt Farm Faridpur with Bhadrolog youths under training

Dibendra Nath Mitra, District Agricultural Officer, Faridpur. Mr Finham, the Director of Agriculture Bengal, supported it.

Frankly speaking I did not then interest myself in the scheme as I thought that it was like all the schemes of the Government and was more a pious wish which would never be translated into action. I did not, however, forget the scheme and it crossed my mind several times but I had neither the inclination nor the time to get first-hand information about the details of the scheme and whether it was at all put into operation. When Rai Sahib Dibendra Nath Mitra came to see me in the afternoon of the 1st January 1929 and requested me to open the Agricultural Show which was to be held at the Government Farm, Faridpur towards the end of January 1929 the first thing I asked him was about this scheme. He said that five "Bhadrolog" youths were undergoing a training under him at the Government Farm, Faridpur, according to the lines of the scheme and they were working very satisfactorily. I took it as a mere whim saying of an official I was going out then for my usual evening stroll and I had also then a visitor with me. I said good-bye to the Rai Sahib most reluctantly without giving him any promise that I would be able to open the show as I had various engagements at the time when he wanted me at Faridpur. The Rai Sahib with his usual modesty took the dust of my feet and disappeared. I received a long letter from him on the 4th of January which contained threats couched in modest language

as well as entreaties and all sorts of temptations for my comfortable stay at Faridpur—fresh milk, boiled vegetables, camp bed etc. You must come and see what we are doing here. Being a public man interested in the development of the country's resources you are morally bound to cancel all your other engagements to encourage us in our honest and earnest attempts to uplift the country' was the concluding sentence of his letter. It was a very bold letter.

The show was fixed for the 28th January 1929 and I had to arrive at Dacca on the same day to deliver a few lectures at the University there. I accordingly wrote to the Rai Sahib and said that if it was sometime in the first week of February I could have easily come down to Faridpur on my way back from Dacca. I was not so keen on opening the Show but on seeing the youths who were undergoing the training at the Farm. The Rai Sahib wrote in reply saying that they could not postpone the show till the 1st week of February but were prepared to change the date of the opening of the show from the 25th to the 27th January to suit me and I could leave Faridpur on the 27th to reach Dacca on the 28th January. I had no other alternative than to accept the invitation, but I said I would stay at the Farm for three days with a view to be acquainted with the details of the scheme of training of Bhadrolog youths in practical agriculture and would see for myself how the youths were working. Mr. Ellis, the District Judge and President of the

show, sent me a courteous letter and I also replied to him accordingly.

I arrived at Faridpur on the 25th January 1929. I am grateful to mention that there was a representative gathering at the station to receive me. I went straight to the Farm and I must thank Mr. Sukumar Sen, I. C. S., Additional Judge, for kindly taking me there in his car. Arriving at the Farm I asked the Rai Sahib to furnish me with the details of the scheme. He handed over to me a copy of the scheme which runs as follows :—

Government have sanctioned a scheme, for dealing to some extent with the question of unemployment among the middle-classes. It provides one year's training in practical agriculture at the Government Agricultural Farm, Faridpur. During this year's training, instruction in agricultural carpentry, elementary veterinary knowledge and the

The Jute Crop grown by the youths under training

principles of co-operative credit will also be given. During this period of training, the boys or young men will be required to work at the Government Agricultural Farm

as labourers and will be paid Rs. 12 a month for their labour on the Farm. Free accommodation will be provided for them. They will be required to arrange for their own meals and bring their own utensils, furniture, bedding, lights etc. After the year's training each boy or young man will receive provincial settlement of a 15 bigha plot of *khush mahal* land free of rent for three years, and will also be advanced Rs. 200 by Government under Land Improvement or Agricultural Loans Act for initial expenses, these advances being made on the personal, joint and several security of two persons acceptable to the Collector. The advance with the usual interest, would be recovered in four annual instalments, commencing from the second year after the money is advanced a further condition being that, if for any reason that provincial settlement is terminated by the Collector at any time the whole amount or such balance as is outstanding will be immediately recoverable from the two sureties.

Having been given the land and the loan, each boy or young man will bring the land into cultivation with his own hands and will not be allowed to let out the land in farm or *barga* settlement, nor in any other way sublet the land or any portion thereof. The work done on the land will be inspected every half year by the District Agricultural Officer and the *khush mahal* Officer, and the Collector will decide on their reports whether the arrangement should continue. An attempt to let the land in farm or *barga* or to sublet it, will involve immediate cancellation of the provincial settlement. At the end of the three years, provided satisfactory progress had been made, an ordinary *raiatwari* settlement will be made on the usual terms obtaining in the Government estate in which the land is situated, no *Salami* being charged. Further land may also be settled at the Collector's discretion up to the limit which can be cultivated personally by each boy or young man and his family.

An agreement for the experimental period will have to be signed by each candidate. A copy of the agreement will be supplied on application.

It is proposed to give effect to the scheme with five boys of the Bhadrakal class in the beginning, and the first batch of five boys will be taken for training from the 1st March 1928. Preference will be given to inhabitants of this district.

would come and work with the youths himself. It was unfortunate that he did not stay at Faridpur for long.

If all the Collectors take an interest in the scheme it would be a permanent one and it would also be possible to increase the number of youths for training. The scheme, in my opinion, should also be tried in other districts where there are opportunities of such a training.

I stayed at the Farm for three days and lived a new life there. I was not sorry for

having cancelled my engagements in Calcutta and come down to Faridpur. I went there as a learner and have learnt and seen many things which have made me wiser and happier. I must close by paying my love and best compliments to Rai Sahib Debendra Nath Mitra for his honest and earnest labours. He has endless energy and great powers of organization. He has a special knack of getting things done. He is the life and soul of the nice little Farm at Faridpur and specially of the scheme which I have described above.

The Garden Creeper

By SAMYUKTA DEVI

(18)

IT was five o'clock, in the evening. The day had been a cloudy one. Mukti had to get up very early that morning, as she and some of her friends had made a trip to the Ghoom Lake and enjoyed a sort of picnic there. Bella, the friend of her childhood, whose highly modern frocks used to excite the envy of the child Mukti, was one of the party. When at last they reached Darjeeling in the toy train of the Darjeeling-Himalayan Railway, it began to rain heavily. The party was looking very tired and travel-stained. All the porters, their wives and children, who also worked there, had crowded under the tin sheds, on the platform. The electric lights, illuminated part of the platform and railway offices and made it possible for people to see each other. Outside a dense fog had gathered and nothing could be seen. Bella, Mukti and the other girls had put on heavy waterproof coats and were standing at the extreme end of the tin-shed, anxiously looking out at the heavy shower. They wanted to get out of this shed and be in their warm and cosy homes. But they could not think of starting, until the rain abated a little. Their gay silk parasols, looked totally inadequate to the situation. The boys of the party, disdained all protection, and constantly ventured out in the rain, only to come hurrying back at the

shrill scream of protest that greeted their adventurous attempts. Mukti lost all patience at last. She gave Bella a slight push, saying "Let's go. The rain does not matter. We shall get drenched of course, but it won't harm us much, if we get into dry things quick enough."

Bella was trying her best to protect the skirt of her dress, from the merciless shower and she answered petulantly, "No dear, the rain would spoil my new dress utterly. I bought this parasol too, only the other day, at the sale. See how pretty the embroidery is on the border. If I had known, that the weather was going to be like this, I would not have brought it at all. Now you want me to go out in this awful rain, so that it might be ruined totally. I simply don't dare. Go alone, if you are so impatient."

"Oh, I see," said Mukti, a bit sarcastically. "your dress seems exceptionally dear to you. I am afraid, I consider my health more valuable than my dress."

"Don't try to pose as a saint," said Bella, with some heat, "I have seen many like you. Why should you think of your dress? From the looks of it, it does not seem to deserve much consideration."

Another girl now intervened to avert the threatening quarrel. "There now Bella, don't be so childish," she cried "Your highly fashionable education has made you very silly. You don't even understand jests."

"Babu?" she cried, "come in, come in. A visitor seems to me a godsend now. I was about to die of sheer ennui. Nobody has been to see me. But how kind of you to call. You are a born philanthropist."

Mukti pointed to a chair, so Dhiren understood that she wanted him to stay. He sat down, but he was completely at a loss for words. It was his duty to cheer up the lonely invalid, but what was he to say to her? Mukti came to his rescue, by asking "Where did you go in the morning?"

"I had been to the cantonment," said Dhiren, "I like to watch the soldier's at target practice."

Mukti was very curious to know what kind of an affair that was. Dhiren began to describe it to her. The subject was one with which he was familiar, so he did not lack words now. He had always felt himself inferior to Mukti, whenever he had any opportunity of talking to her. But now the position had been reversed. He was bent on making an impression on Mukti and talked on, for all he was worth. In Calcutta too, he had been an interested spectator of all military parades and manoeuvres. In his hostel he was the recognized authority on all such subjects. So it was not at all difficult for him to impress this girl deeply, with the abundance of his knowledge.

"You would have certainly become a field-marshal by this time, had you happened to be born in England," said Mukti at last. "How did you manage to gather so much information? It was extremely interesting."

Dhiren's heart sang with gladness at this sweet praise. "Oh, it's nothing," he stammered, "one comes across all sorts of information, if one goes about a big town."

As he got up to go, Mukti seemed to regret his departure. "I shall have to sit alone again," she said, "illness is so tedious! Every one else walks about according to his or her sweet will, I alone am condemned to sit in this hole. The morning is the worst of all. The whole day lies before you."

Dhiren hesitated a bit, then said "Tomorrow, I shall pass by this way again. I may drop in here."

Mukti laughed to herself at his manner of expressing his eagerness to come. "You are very kind," she said. "Very few people are willing to waste their time, entertaining sick people."

"Oh, please don't think I am doing anything uncommon," said Dhiren. "In our

hostel, it is quite a part of the day's work to look after invalids and cheer them up." This was as near to a pretty speech as he could get.

Next morning, he was there even, before they had tea. Mukti's fever was still continuing. So, Dhiren came there next day and the next. The day, she really got well and went out to sit in the bit of garden they had. Dhiren was again punctual in his visit.

"You are four minutes late," laughed Mukti as soon as she saw him.

Dhiren was surprised. "Do you notice the time, whenever I come?" he asked.

"What else can I do?" asked Mukti, "I have so few visitors. So, I pass my time, looking for them."

Dhiren did not know what exactly she meant. But he felt very glad.

(20)

It was nearly evening and the sun's slanting rays fell on the balcony of the first floor of Shiveswar's house. A girl was sitting in a corner, in the midst of a miniature grove of roses and ferns, in order to shelter herself from the heat. She had a book on her lap, but her eyes were elsewhere and so was her mind.

Who knew the young lady very well. Is not she the laughing and prattling Mukti? But she seemed a bit changed. The look in her eyes was no longer that of a child, it held a certain depth, her gay vivacity had given place to the serious demeanour of a woman.

"Mukti?" someone called from inside.

"Here I am, father," cried Mukti in return, but before she could get up and go in, Shiveswar himself came out on the balcony and stood leaning against the iron railings.

The father too, was changed very much in appearance. Shiveswar had always possessed a very fair complexion, but now his skin looked like parchment. His tall figure had a slight stoop, and his hair was turning gray at the temples. The house, the garden, the inmates, the servants, all were there as before, still the whole place looked different. All joy seemed to have gone out of it.

Shiveswar had just got up from a long spell of sickness. The doctor had not yet given him permission to stir out of his rooms. His health had been declining for the past few years. But he was not a man to give in to sickness or fatigue, unless absolutely compelled. Whenever he felt

too weary to stir hand or foot, he would goad himself into working harder, thinking nothing was the matter with him, except the inherent sloth of Asiatics. He was not too old to work, by any means and he angrily refused all advice, which suggested retirement.

The trip to Darjeeling the year before, had improved his health a good deal. But on his return he strained himself too much, with the result that he became very much worse soon after.

His mother began to feel extremely anxious about him. But she had no influence over Shiveswar. She would talk and scold and reason, all to no purpose. Shiveswar would try to listen, but after a while, he would walk out abruptly, without giving her any definite answer. The old lady would wipe her eyes and think "He never listens to anyone. Had his poor wife lived, she might have exercised some control over him." She would recall with regret now, that long lost, long forgotten, daughter-in-law, who spoke so little, yet who alone could make her stubborn son see reason.

It was difficult to know, how much Shiveswar himself missed his wife, for during these long eighteen years, he had never talked about her to anyone. Once, only when Mukti was but a tiny child she had run in eagerly to her father, after seeing the beautiful mother of one of her classmates. "Was my mother too, as beautiful as Toonoo's mother?" she had asked.

Shiveswar had picked her up, in his arms and replied "My little mother, your mother was more beautiful and wonderful, than any person I have ever seen."

Mukti had left the college hostel for good. She continued her studies as a day scholar. When she returned from Darjeeling, there were some talk of going to the hostel again. But her grandmother's opposition became too vehement this time to be resisted. Mukti too, took the old lady's side. She was fed up with that institution and perfectly determined not to go there any more. She was even ready for hunger-strike, if her father insisted.

But Shiveswar gave in after a somewhat weak opposition. Both Mukti and her grandmother were surprised. Mukti had made ready for a stubborn fight, and she felt rather disappointed at being cheated out of it.

The fact was, Shiveswar was beginning to lose some of his stubbornness with the decline of health and years. In his youth,

he had been ready to sacrifice everything and everybody for the sake of principles. He had sent away the child Mukti to the boarding school, in direct opposition to his mother's will, because he thought it right. Mokshada had cried and so had Mukti. Even Shiveswar's own eyes had not remained dry when he returned after leaving the child there. But the knowledge that he had acted according to his convictions, had served to keep him up.

But now he looked at things from a different angle. His health was declining and he was beginning to feel the need of someone to lean upon. Mukti was the only object of his affections and he could not bear the thought of being parted from her. By the side of her youthful face, he would sometimes see another one in his mind's eye. That face too, was equally young and unscarred by evil. But it was gradually growing dim, as if a mist was enveloping it.

Shiveswar had another reason for keeping Mukti at home now. In his opinion, the girl was able now to judge between right and wrong and she had been receiving good education too. So the superstitious and idolatrous practices of his mother, would not hurt Mukti much now. But the chief reason was that he could not bear the thought of living alone again, in his big and silent house. He had few persons, whom he could call his own, and he wanted those few round him now.

So it was settled, that Mukti was to stay at home. The decision pleased everyone concerned.

Shiveswar understood very soon that he had done a wise thing by keeping his daughter at home. When Mukti had been away, he used to return from the court to meet the bearded faces of his boy and hearer and receive their salaams. He had to spend his evenings alone in the large gloomy house, and curse his own hard luck. But now-a-days, things had changed, very much for the better. There was Mukti to welcome him, with her smiling face. His evenings were not so dull, as before. He sat in Mukti's room, listening to her ceaseless talk and joining in it now and then. His mother too, would come in sometime, but she would not stay long, as she understood very little of their learned conversation. But Shiveswar never bent a retreat. If Mukti talked about the border of her newest sari or the cut of her friend's blouse, he would find it no less

interesting than her criticism of Continental authors. Mukti had no friends of her own age and sex, so she had to talk to her father on all sorts of subjects. Shiveswar too, had begun to like it.

Shiveswar's illness nearly drove his mother frantic. Her son and his daughter had hitherto been the sole objects of her affection. Shiveswar used to make her furious very frequently, by his heterodox ways, but she was immensely proud of him, for all that. She had gone away from him, in anger, time after time, to her orthodox relations, but she had returned to him again before long, for the sole reason that he alone filled her life, to the exclusion of everything else. Moreover she had brought up Mukti from the day of her birth and she fought a ceaseless fight with her son, to keep the child within the folds of orthodoxy.

Mukti had to take entire charge of her father during his illness. Her grandmother was old and distracted with anxiety, so she could not be trusted with anything of importance. Mukti too, felt anxious at times, but with the habitual optimism of youth, she would regain hope and cheerfulness the next moment and go on with her work. Shiveswar could not bear her out of his sight and she too liked to be near him. Mokshada would be in and out of the sick-room all the day long. Her anxiety would not let her remain outside, but the sight of her son's sufferings would soon drive her out again.

There was another constant visitor in the sick-room, that was Dhiren. He had undergone a marked change. He did not look at all like the boy, who used to blush if brought face to face with Mukti and who would leave flowers for her in some hidden corner and escape unobserved. He has become quite one of the family. Mokshada would seem overjoyed whenever he came in. Shiveswar had always been fond of youthful company and he had come to like Dhiren very much. Ever since he had fallen ill, Dhiren had been a regular visitor by his bedside, and he had even put up in the house for a week or so, when Shiveswar was passing through a crisis. His fellow boarders at the hostel had been kidding him about this, ever since. They refused to believe that he had stayed merely from philanthropical motives. Dhiren bore their insinuations and open attacks very patiently. These things would pass off, he mused, but

the memory of the grateful look, which Mukti had cast at him, when he agreed to stay, would remain treasured in his heart for ever.

Readers would understand from this that Dhiren was still very far from being worldly wise. He valued a look from a pair of dark eyes above the friendship and favour of the rich and influential Shiveswar. There are certain types of men who lose all their zest in pursuit when the quarry is within sight, but it was otherwise with Dhiren. Whenever he found any favourable signs, his ardour would increase a hundredfold.

His relations with Mukti had become much easier now. Dhiren was very glad about this, but he was hardly satisfied. He wanted far more than this. Mukti's opinion about him had evidently improved much. She did not think him a boor or a fool now. But was that all she thought about him? Dhiren would have given anything to know, what that slip of a girl thought about him.

Dhiren used to envy the girls very much. They seemed to be self-sufficient. But men were totally different. Some other person would suddenly become far more important to them than their own lives. The more his heart hungered for Mukti, the more her apparent indifference pained him. Thus far and no further, seemed to be her message to him. She had granted him a certain amount of friendship, but would not grant anything more. He could not rest without seeing her every day, but this made him all the more miserable.

It was hard to tell what Mukti really thought about him. But that she thought about him was certain. And it was more than probable that had her thoughts been known, Dhiren would not have cursed his luck. But the poor boy was wholly in the dark. Sometimes he would hope and sometimes he would despair utterly. Mukti was an enigma to him.

He came daily to see Shiveswar, more often than not, he would come twice a day. His perplexities increased every day. Mukti was very anxious about her father, and she was being overstrained too. So Dhiren could not expect, that she would pay him much attention. But could she not spare him even a bit? Would she have behaved like this to a man, she cared for?

But she was changed, saw that clearly enough. He did not know, whether the change boded good or evil for him. He would think and dream, but he could arrive at no solution.

(To be continued)

Religious Poets of Modern Germany

BY HEINRICH MEYER-BENFET

THERE is a strong current of religious life running through our time which, without being the outcome of the War was strengthened by it. It goes for the most part to the old religious communities, and the Roman Catholic Church, the mightiest the most tenacious and the most adaptive of these organizations, has the greatest success, whereas within the Protestant Churches its influence is more dissolving. On the other hand new societies are rising and spreading such as Monism, Theosophy, Christian Science, and though some of these can hardly be named religions, properly speaking, they do the same service to their adherents. Also in the literature of our time the religious note is strong and dominant to an uncommon degree. Here I shall not speak of poets in whom old tradition is still alive. So I shall pass over the Christian poets proper, as for example, Gustav Schuler who, with all his delicacy of feeling and his skill in re-ification, in his religion as well in his poetry, still walks the trodden path. Or Jakob Kneip who in his *Living God* brings before our mind in unbroken childlike simplicity and genuineness the religious world of popular in-rooted Catholicism, with its feasts and pilgrimages, its visions and miracles. I am only thinking of such poets who are not continuators of old tradition, but beginners of new Religion, who do not bear the burden of the past or exhaust their strength in fighting against the past, but in whom there is as Zarathustra says, "the spirit of the child, a new beginning, a holy year." They are less numerous, but more important in the history of mankind, and only among them do we find men of pre-eminent genius.

That which seeks and finds expression in these poets is a new form of religious life. We may call it modern religion, but we cannot speak of the, or of one, modern religion. There is no tendency towards the formation of a congregation round a personal centre. All is free, flowing life with as many centres as there are original, creative minds. Still some common features may be traced, some fundamental differences from

the traditional Christian belief and feeling though we find them just as distinct and vigorous in many who stick to Christianity. These modern men are not merely seeking God, but they have found their God and have him as their personal possession in blissful security. Although their growth is not yet complete, though they are not without longing and desire for the infinite cannot be comprehended and there are high and low tide in their religious life as everywhere still their state is different from that seeking and groping without direction which is so widespread in our time. That which is at the bottom of their religion and is common to them all may perhaps be expressed in the formula of Schleiermacher, the great renovator of German theology in the nineteenth century 'immediate vision and experience of the universe' experience of the universe as a unity, experience of ourselves as parts of this all comprehending unity, experience of our connection with each and every being as part of this same unity. In this monism of feeling the term God becomes mesential. It is of little importance whether we shape the object of our feeling in the idea of a personal God or we have it in a pantheistic or an atheistic form and there are cases where we cannot decide which form is prevalent, e.g. Goethe, the prototype of this modern feeling. That which matters is this feeling of universal connectedness with mankind as well as with nature without intermediate link. Whereas the old creed fashions its god as a separate being and opposes him to nature and to man, the modern man knows no beyond, no transcendend god (Here, "in the midst of our home and our work rolls the sea, and even here lies the other shore waiting to be reached—yes, here is the everlasting present, not distant, not anywhere else") For him all is a great unity in which opposites are fused. Even the opposition between nature and freedom, though not extinguished, loses its severity and its predominant importance. The rigorous ethics of duty is converted into the ideal of a more natural, instinctive

goodness; the consciousness of sinfulness, the feeling of the necessity of a salvation, the want of mediation and mediators ceases. The opposition of God and man gives way to the feeling of intimate connection and relationship. God within ourselves. Humble surrender and filial trust in the infinite universe replacing the all too human father-god, from which we cannot expect pliancy to our private desires and interests and in which after all we feel secure.

If we now seek the expression of this feeling in literature, we are met at the very outset with the lofty name of Goethe. Some poems of young Goethe, as "Ganymed" some pages of the *Souvenirs of Werther*—both published in 1774, much before the possibility of Indian influence—are the earliest manifestations of this new feeling for nature, manifestations of a depth, 'purity' and intenseness which is seldom equalled, never surpassed. But in the course of the nineteenth century the most illustrious names are not German, though of Germanic origin: Walt Whitman, Emile Verhaeren. And in our time no nation whatsoever has a religious poet who might be compared with Rabindranath Tagore. Still, among the German poets of to-day there are some who may claim our attention, and of these I here select three who are very different in type and so, taken together, give a good idea of the extensiveness and variety of this modern world-feeling.

In the first place, I would mention Rainer Maria Rilke whose *Stundenbuch* (Book of Hours, i.e. horary prayers, of the monks in the Catholic cloisters, 1906) has become the manual of many modern men, and who has a considerable following chiefly among the young generation. He is pronouncedly a religious poet, and in a certain degree more religious than modern. If we refer religion to the passive and contemplative side of human life—active life being the sphere of morality, Rilke certainly is on that side. The soul of his poetry is "experience of the universe"; surrender to things. "In mere listening and astonishment be still, my deepest life, that thou mayest know what message the wind brings thee who has died since this was written before—the hitches begin to quiver. Be wide, my soul, that thy life may prosper, spread thyself like a festive garment over the meditative things." (*Early Poems*, p. 17.) But, of course, not experience of the things, single and accidental as they are, but ex-

perience of the universe in the things, the feeling of final unity within them and between the soul and the things, by virtue of poetical "Einfühlung". ("These are the hours where I find myself; the meadows are darkly waving in the wind, the bark of all hitches is glimmering, and evening comes over them. And I am growing in its silence; I would blossom with many branches, only to range myself with them all into the one great harmony." (*Early Poems*, p. 85.) Things are symbols of a hidden meaning which we must seek out and which at last we only find in our souls. All single things end in one great unity which Rilke calls God. His poetry is much occupied with God, more than that of other modern poets. He solemnly proclaims His grandeur and strives to express His mysterious essence in a wealth of similes and metaphors. But at the same time he is conscious that this God is only the outward projection of his inward feeling of unity. And so we meet terms which sound unusual, but have parallels in older mystics: man creates God, God is the son of man and so on.

The predominant passivity in Rilke is partly explained, and is certainly strengthened by the circumstances of his private life. He is the last offspring of a very old house; so, he feels himself as an end and final link. His face is turned towards the past; he lives with the past, bears its burden, its weariness, and also its treasures (though not in a material sense). He is the heir. He is lonely, without companions, isolated and a stranger in the modern world. He hates and detests large cities and longs for more primitive forms of life. His favourite type is the Russian monk—the *Book of Hours* brings him before our mind even by its title. Evidently he is deeply impressed by that which he has seen and experienced in Russia, in a world which is as distant as possible from modern Europe. And himself is the very opposite of those great prophets of the modern world, Whitman and Verhaeren. So Rilke seems to be a very religious, but not really a modern poet, rather a romanticist, one who looks backward, not forward. With all that, we must keep in mind that the past has for him only the value of a symbol, that all these conceptions which he takes from medieval Christianity are only images and similes, even the ideas about God. And Rilke himself is conscious of this fact as he is conscious of the time in which

he lives, "I am living just, when the century ends. One feels the wind of a large sheet waving, which God and you and I have filled with letters and which turns on high in unseen hands. One feels the splendour of a new page where everything may yet become. The silent powers are measuring their scope and looking darkly at each other." That which is essential and central with him is modern; that deep feeling of all-connectedness and all-knowing which unites man with the whole universe and with everything in it.

Franz Werfel is of quite another type, though he is also a son of Prague, he is the leader of the younger generation which follows him with enthusiasm. With him outward nature, landscape plays but a modest part. His realm is the world of man, who is the blossom and the crown of the world. So in the poem "Smiling, breathing, striding" "The smile is the essence of light. Not the sun is light, only in the face of man light is born as smiling—Man's breath is the essence of universal breath. Not the wind which dives into woods and meadows and turns the leaves the breath of God is born in the breathing of man—Striding is more than the coursing of the starry sphere, the dancing ecstasy of space. In the striding of man the path of freedom is born. Smiling, breathing and striding are more than the course of light, the wind and of the stars. The world begins in man." But this world of man he embraces in its widest expanse with ardent love. He begins his book of poetry with a prologue To the Reader (p. 4) "My only desire is to be akin to thee, O man! Whether thou be a negro or a rope-dancer or an infant still in the sheltering care of a mother, whether thy maiden-song float across the yard or thou steer thy raft in the gleam of evening, or thou be soldier in war or child of evening and midnight. For I have lived through every destiny. I know the feeling of lonely girl harpists in musical bands, the feeling of shy governesses in foreign families, the feeling of debutantes who trembling stand near the prompter's box.—So I belong to thee and to all! Pray do not withstand me! O, that it might once happen that we, brother, might fall in each other's arms!" This poem, one of his earliest, reminds one of Whitman not only in the trend of feeling, but also in the primitiveness of the artistic workmanship, the carelessness of form, the long rolling verses

without measure and rhythmical movement. Werfel in his beginning lacks sureness of taste, he offers flat or prosaic passages side by side with sublime and intense poetry. The religious herald is stronger than the artist. His strong point lies in his talent for entering into other existences and that, generally, with a tinge of compassion. He stands in an original relationship with early Christianity. So he makes Jesus the vehicle of his feelings in one of the most famous and most characteristic of his poems, a poem remarkable for the indifference it shows for its repulsive theme, and for the excessive tension of feeling, the intensity and splendour of artistic expression "Jesus and the Way of Carcasses." Such is its tenor:

Jesus with his disciples is descending the mountain by a smooth path they have chosen. All at once their course is arrested by a crumbled stone wall with a gate and on entering they perceive a great stream of rotting carcasses of asses, snakes, rats and other animals. The sight and smell is so loathsome that they fall into nausea. He himself is sick choling and cries to God imploring him that he may be filled with perfect love in which there is no room for disgust. And suddenly a storm of excitement rushes across his face, his forehead radiates with light, he bends down, grasps the smaller animals, hangs them round his shoulders and crowns his hair with them "And as he stands thus in the dark day, the mountains crash asunder, lions crouch round his knee, a flight of wild geese rushes down, the sky bursts, and the dove of God ways ecstatically in the blue wind." In this universal and compassionate love, Werfel, though a Jew, seems to be the most Christian of these modern poets. But perhaps not "though", but because he is a Jew, for is not Christianity a scion, a new development of the Jewish religion? Werfel at least sees it as such in his recent play, *St. Paul among the Jews*. At the same time Werfel is pronouncedly modern in his extraordinarily high estimation of man. However poor and miserable the single man may be, Man is the highest that he knows, and this belief in man and love for man is the most salient feature in his religion.

In all poetry of compassion there is a secret self contradiction, for compassion longs to do away with suffering, and this cannot be done by poetry. Werfel feels this too. "Why, my Lord and God, didst thou create me for the vanity of speech, that I link

words and bear presumptuous pride?—Why didst thou not give me two hands full of help, and eyes, double stars of consolation, and the voice of April raining music of kindness?" Hence two ways lie open: Where compassion becomes predominant, the man will choose the way of charity and practical Christianity, of social work; where the artist is superior, he will have to overcome compassion and resolutely accept the world as it is. This has been the way of G. Hauptmann and of Franz Werfel, too, who is now one of our richest and most genuine poets.

If the romanticist Rilke dwells by preference in the darkness of evening or night, Ernst Lissauer feels at home in the full day. "I am so entirely full of the joy of day: the soft silvery lustre of the moon is but for me the blissful warrant that the sunken sun, though in hidden space, still shines on. She is white with invisible day. She shines the certainty of a new morning." His religion is the religion of day, as it was Goethe's. And like Goethe, so he too, in contrast with the Christian Werfel, is in some sense a heathen. His religion does not centre in altruistic pity; his ideal is man resting in himself and performing his law, the will of God; going through a development which is at the same time natural growth and conscious self-forming. Lissauer is an artist, and his religion, like that of Rabindranath Tagore, is the religion of an artist. The work of an artist is, properly speaking, not something which he makes, but which he receives and realizes; it is a gift from above or from within like the fruit of a tree. "I am a tree and am waiting for the burden to be born out of me. Time floats through my branchery." It is that work of man which is most like the work of God: it is creation in the full sense of the word. So Lissauer's idea of God is fixed by this analogy. God is the creator whose life is indefatigably creating; and creative men are his image, his sons, his co-operators in his work of creation. But that which is really creative is the spirit. So God is spirit, and the Christian symbol which is the centre of Lissauer's symbolism is the descent of the Holy Ghost. Nature as well as mankind is the manifestation of the spirit, and history is a succession of continual outpourings: Eternal Whitsuntide.

Already Lissauer's first volume *The Field* (Der Acker, 1907) contains religious poems; it ends with the "Prayer", which is the first expression of his creed. But the period of

his expressed religious poetry begins with his "Pfingstgesänge" (Songs of Whitsuntide), which appeared in the quarterly *Die Tat*, June 1911, just before the War. Then, Lissauer was carried away by the shock of the War which he had long felt coming; but he soon found his way back into his own world, the inner realm, and in the first winter of the War he wrote his first Psalms which were published in *Die Tat*, June 1916 and 1917, and afterwards incorporated in the book *Eternal Whitsuntide* (1919). They are on the whole testimony about God and express different aspects of his being. "The Psalm of Abundance," "The Psalm of Slowness," "Thou God whom I believe in, art not a God of haste; thou art a slow God and thy blessing is with the leisure. The rash and hasty are unholy before thee. Thou whom I confess, burning in the white light of thy intuition—let them run and lose themselves in their haste; I look on them in astonished calmness. I have time, for I have eternity.—Thou hast not botched up the world as a jobber. Through thousand-year-days didst thou sit in meditation, looking before thee; then thou hast moved heavily and begun to build and hast joined and joined together, through thousand-year-days.—Long, long is all growing and full of slowness. Slowly grows the root, that it may thrive to the summit; slowly grow the mountains, layer upon layer; slowly grow the peoples, generations upon generation; slowly grows the custom, slowly grows the law, slowly grows the song and myth of the nations." Lissauer is aware that we cannot get a cognition of God's essence; we are only touched by him in our feeling. "Thou God whom I believe in, I cannot understand thy word; but sometimes I feel it wafted through me. God, I cannot comprehend thy being, but sometimes I feel it burning me. Never do I behold thee, God whom I believe in; but sometimes I feel as if I mirrored thee." But man has to prepare himself for this visitation. And so the monition hangs constantly like a sword above his head: "Thou shalt build round thee a wide stillness in which thou dwellest that I may dwell in thee. Thou shalt make thyself habitable for my will—that is my will."

The *Pfingstgesänge* which open the volume are still more programmatic. The outpouring of the Spirit did not happen once in history, it goes on continually throughout the centuries. The Pentecostal flames wander above countries and times, unseen by common

Wooden Sculpture of Ancient Bengal

By N. K. BILATTASALI M.A.

Curator, Dacca Museum

BARAHAMIHIRA, author of the famous compendium *Brihatsamhita*, directs that images for worship are to be made of metal, wood, stone or clay. Stone images have been found in such surprising profusion in this stone-less country of Bengal, that one wonders how it was possible for this flourishing craft to go out like a lamp with the advent of the Muhammadans: It did go out, without question. Images of the period between 1100 and 1200 A.D. can be counted by thousands, while it is difficult to enumerate more than a few that can be ascribed to 1200-1300 A.D.

The art perished, but the productions of art remained, thrown into the nearest tank or ditch at the time of the Muslim invasion, and thus preserved to posterity. The laudable efforts of Dr Abanindra Nath Tagore have succeeded in reviving the indigenous method of painting. It is indeed regrettable that the

pre-Muhammadan days? To seek for an answer to this question, the inquirer will have to come to the neglected Museum of Dacca, which is the only institution of Bengal which has succeeded in collecting

Fig. 1

numerous well-preserved samples of the lost art of sculpture in the Museums of Rajshahi, Dacca and Bangiya Sahitya Parisat of Calcutta do not inspire artistically-minded Bengalis to attempt to make this noble art live again.

If one wants to know how Bengal sculptors carved in stone, one has only to go to the Museums named above. The collection at the Indian Museum is very deficient in Bengal sculpture, though the present Superintendent, Rai Ramaprasad Chanda Bahadur is making heroic attempts to remove this defect. But how did the artists carve in wood in

Fig. 2

Fig. 4

a number of very valuable samples of pre-Muhammadan wooden sculpture.

Fig. 1 illustrates a marvellously well executed piece of carving in wood.

Fig. 5

intended to form the capital of a pillar. It was found under the loam of a very old tank in Vikrampur in the Dacca District. On the tank stand the ruins of an ancient pre-Muhammadan temple,

Fig. 6

commonly called *Dent*. Numerous antiquities have been discovered from time to time from these ruins, the most remarkable being a monolithic pillar of granite, two feet square at the base and about eighteen feet long. A huge pillar like this is indeed a wonder in low-lying East Bengal.

The wooden capital has been very much eaten into by loam but the four-armed figure of god Vishnu, seated in the centre in a

Fig. 6

Fig. 4 depicts two carved wooden pillars each about 11 feet in height. They were discovered at the southern end of the great artificial lake at Rampal, the site of the ancient capital of Bengal under the Munsinganj police station of the Dacca District.

The carvings of the remaining three faces of Pillar No. 1 are illustrated on fig. 5.

Fig. 6 illustrates the carvings on the remaining three faces of pillar No. 2. Face I of this pillar, illustrated on figure 4, depicts a well-carved Krittikumukha, a familiar device of the pre-Muhammadan days. Face II depicts a nautch-girl, in almost an

Fig. 7

meditative pose can still be distinguished. The few patches where the original carving is still intact look like fine needle-work or ivory carving. The whole is a fine artistic piece of carving of pleasing proportions.

Fig. 2 represents god Vishnu standing in the conventional pose. It was discovered from a village under the Muradnagar police station of the Tippera district and presented to the Dacca Museum by Mr. J. C. French, I. C. S. The piece is so weather-worn that it is not possible to form a correct estimate of its artistic merits.

Fig. 3 represents the half-bird, half-man Garuda, the vehicle of the god Vishnu. The face beams with a happy intelligence that does one's heart good to behold and speaks volumes for the skill of the artist who fashioned it

acrobatic pose. Face III depicts two amazons shooting at birds. Face IV is occupied by foliage.

It should be noted that in decorative designs at the middle and at the top, the two pillars differ from each other. This would suggest that they were not a pair but the odd ones of perhaps two different pairs. The details of the lotus designs at the base are also different in the two pillars.

The latest acquisition, a massive carved lintel, measuring 10' 10" x 8' x 9" is depicted on fig. 7. The door of the frame of which this was the top-piece was 8' x 7" wide. This lintel was recovered from the loam of a tank just below the ruins of a pre-Muhammadan temple at the village of Nateswar in Vikrampur (Dacca). The design is the old

ism in the face of the world races, we must give due respect to the India House that will speak of those wonderful structures of India so that to feel and think that India is with us, for us and for them, for the benefit of the societies of the

Empire and world societies in general. We sincerely hope that due consideration will be given to the facts, and that they will not be treated as merely a passing notice as it has always been.

Prof. Jadunath Sinha's Rejoinder

To
The Editor,
The Modern Review

Sir,
I have given you much trouble in requesting you to publish my letters in connection with my controversy with Dr. S. Radhakrishnan. But I assume you, this is my last letter. And I shall be very much obliged if you will kindly publish it in your esteemed journal.

I am thankful again to Dr. Radhakrishnan for his reply to my second letter published in the February number of the *Modern Review*. He seems to be very much upset by my letters. He has not been able to ignore them. He has broken his habitual silence and replied to both of them. I am extremely sorry that I have been dragged into this unfortunate controversy by an unusual contingency. Nobody would like to see an enormous portion of his unpublished book appear beforehand in the work of somebody else, who had access to his manuscript. In fact, the passages from my thesis, which have been incorporated by Dr. Radhakrishnan in his work, are too many to be pointed out. I have given only a few passages in my two letters as samples of his unacknowledged borrowings from my thesis. In my first letter I have quoted those passages from Dr. Radhakrishnan's work borrowed from my thesis which are printed in small type. In my second letter I have quoted many passages from his book, which are printed in bold type. No journal would agree to publish all the passages. But Dr. Radhakrishnan says, "Mr. Sinha seems to have felt that his attempt so far as textual renderings were concerned, was not quite successful and so is anxious to make out in the second letter that he is giving his 'own interpretations' in several passages." (*Modern Review*, March, 1929, p. 321). I need not remind the reader that in my first letter I requested the Editor of the *Modern Review* to allow me, on a future occasion, to give further proofs of his unacknowledged borrowings." (*M. R.*, Jan., 1929, p. 100). I had written my second letter before I read Dr. Radhakrishnan's reply to my first letter. My second letter and his first reply were published together in the February number of the *Modern Review*. I had to follow certain order in writing these letters. My first letter contained many textual renderings and some interpretations. My

second letter contained some textual renderings and several interpretations. Dr. Radhakrishnan has no reason to think that I wrote my second letter because I felt that I could not succeed in making out my case in my first letter.

There is such a striking similarity in the parallel passages given in my letters that it is impossible for one to think that they are independent of each other. Dr. Radhakrishnan is fully conscious of it. So, in his first reply he threw out a hint that he had delivered lectures on many topics discussed in his *Indian Philosophy*, Vol. II, which were incorporated by me in my thesis. He specially mentioned his lectures on the Sankhya theory of Self-consciousness and the Mimamsaka theory of knowledge, because they were discussed by me in that part of my thesis, which had been published in the *Meerut College Magazine*, long before the publication of his work. I have already given a fitting reply to this insinuation. (*M. R.*, March, 1929, pp. 372-376). I have shown how his 'original' lectures on the Mimamsaka theory of the Self incorporated in his book were reproduced almost *verbatim* not only from the published portion of my thesis, but also from the works of such eminent scholars as Dr. G. Thibaut and Dr. Ganganath Jha without acknowledgment. (*Ibid.*, pp. 373-376). Dr. Radhakrishnan knows full well how far his plea of University lectures will stand. So, he has not pressed this point further in his second reply. He is wisely silent on it in spite of the Editor's note on this point in the February number of the *Modern Review*.

The published passages from my thesis given in my letters are extremely discomfiting to Dr. Radhakrishnan. They are the most convincing proofs of his unacknowledged borrowings from my thesis. So he has tried in all possible ways to explain away the close similarity between his version and mine with regard to the published passages. He does not attach any importance to the unpublished passages from my thesis. But I have already said that in exامnee he is not expected to take every precaution so that his thesis may not be tampered with by an unscrupulous examiner, if any. It was by mere chance that some portions of my thesis had been published before the publication of Dr. Radhakrishnan's work. And when so many passages from the published portion of my thesis have been shown to be reproduced

by adding the text which has not been quoted by Dr. Jha. Similarly, with regard to passages (10-21) he claims my version as his own by adding a certain text which is not in my version. The insertion of this additional text by Dr. Radhakrishnan only shows that he consulted the original work referred to by me in my account, hunted out a particular passage, and inserted it in his version. It proves nothing beyond it. It by no means proves that he could not have mentioned this text, if he had depended on my account which does not contain it. Nobody could expect such an argument from Dr. Radhakrishnan. Moreover, he has not been able to give even the correct reference. All the arguments involved in passages (10-21) are to be found in the Chowkhamba edition of *Sāstra-dīpikā* used by him on pages 157-159, and not on pages 158-159. So, even his reference is not correct.

Besides, all the passages (10-21) are not translations of Sanskrit texts. For instance, there is no text corresponding to passage No. 10. There is the text in *Sāstradīpikā* which runs as follows. *Jñānakriyā hi sakarmikā karmabhūte 'rthe phalaṃ janayati pākādivat, tacca phalamandriyikas jñāna-jāyamāparoksyam, lingādijanyam tu pāroksyam.*" (Ch. S. S., p. 257). It may be rendered into English thus, "The act of cognition having for its objective an object produces an effect in the object like the act of cooking; and that effect produced by sensory knowledge is directness (of apprehension), while the effect produced by inferential knowledge and the like is indirectness." Thus passage No. 10, in my version is not at all a translation of the above text, and it has been reproduced *verbatim* by Dr. Radhakrishnan along with the Sanskrit words within brackets. Passage No. 14 is simply a repetition of passage No. 12. There is no separate text in *Sāstradīpikā* on which it is based. There is a text much later in *Sāstradīpikā* which has been translated by me in passage No. 22. Passages 12, 14, and 22 mean the same thing.

But still because I have repeated the same argument thrice in my thesis, Dr. Radhakrishnan also has done the same.

Passages (12-13) are based upon the text "*jñāna-kriyāvarako yal kartṛbhūtas-yātmanah karmabhūta-sya cārthasya parasparam sambandho vyāpti-vyāpvalakṣaṇaḥ sa mānasapratyakṣavagato vijñānam kalpayati, na hyagantukakāraṇamantaregātmano 'rthapratī vyāptirvamatpattumarhati.*" (*Sāstradīpikā*, Ch. S. S., p. 158). It may be rendered into English as follows. "The relation of the pervader (*vyāpti*) and the pervaded of (*vyāpva*), which subsists between the self which is the agent of knowledge, and the object which is the objective of knowledge, through the instrumentality of the act of cognition, is apprehended by internal perception, and proves the existence of the cognitive act; without an accessory cause the self's relation to the object, in the form of that of the pervader to the pervaded, cannot be produced." I have not explained the nature of the relation between the self and the object (*vyāpti-vyāpvalakṣaṇasambandha*). I have brought out the significance of the

above text in passages 12-13. And Dr. Radhakrishnan also has brought out the significance of the text exactly in the same way.

Dr. Gangunath Jha interprets the above text in the following way:

"Every act of Perception involves a certain relationship between the *perceiver* and the *perceived*—the former being the agent, and the latter the object of that act; this agent-and-object relationship is not possible without some activity on the part of the agent; hence the presence of this relationship leads to the inference of its invariable concomitant, i.e., the action of the agent; and it is this action that, in the case of knowledge, is known as 'cognition'; and it has been shown to be inferable from the relationship between the cognising self and the cognised object." (*The Prabhākara School of Purva-Mīmāṃsā*, pp. 27-28).

Dr. A. B. Keith interprets the above text in the following way:

"Every act of perception involves a relation (*sambandha*) between the self and the object; this relation implies action on the part of the self as agent, and this action constitutes the cognition, which is inferred from the relationship between the self and the object" (*The Karma-Mīmāṃsā*, p. 21).

Dr. S. N. Das Gupta interprets the above text as follows:

"Every perception involves a relationship between the perceiver and the perceived, wherein the perceiver behaves as the agent whose activity in grasping the object is known as cognition." (*History of Indian Philosophy*, p. 384).

I have interpreted the above text as follows:

"A cognition is inferred from the relation between the subject or knower and the object known, which is apprehended by internal perception. If there is not an adventitious condition intervening between the self and the object, how is it possible for the self to be related to the object? Therefore, from the specific relation between the subject and the object involved in knowledge we can infer the existence of cognition." (*Vide the Modern Review*, February, 1929, p. 214).

Dr. Radhakrishnan has interpreted the above text as follows:

"The cognition is inferred from the relation between the knower and the known, which is apprehended by internal perception. Were it not for this other factor intervening between the knower and the known, the self could not become related to the object. From the specific relation involved in knowledge between the subject and the object the existence of cognition is inferred." (*Indian Philosophy*, Vol. II., p. 400).

Thus it is clear that the versions of Dr. Jha, Dr. Keith, Dr. Das Gupta as well as my version are substantially different from one another. But Dr. Radhakrishnan's version is practically a *verbatim* reproduction of mine. Thus he is not so faithful to the text, as to my version of it.

10-53. Dr. Radhakrishnan says, "Passages 10-53 are unpublished and I do not propose to deal with them in any detail" (*Modern Review*, March, 1929, p. 322). In his first reply he did consider the passages from the unpublished portion of my thesis also. And in his second reply also he has considered passages 10-24, and tried to prove that

by all; and some particular words are used by two or more writers to express some particular ideas. This never justifies the inference of any "borrowing." But one cannot possibly explain the connection of these words exactly in the same order in the writings of different persons without the hypothesis of plagiarism. Sometimes two persons may think alike. But how can they write alike in the very same language in numerous places in giving their own interpretations? Besides, I have elaborately explained the significance of each word I have used in explaining the distinction between indeterminate and determinate perception in my thesis.

54-61. With regard to these passages, Dr. Radhakrishnan points out that there are differences in the two versions. I myself admit it. I wrote in my second letter, "The above extract is a beautiful specimen of paraphrasing and summarizing." (*M. R.*, February, 1929, p. 219.) He has paraphrased some passages and summarized others from my thesis. But why do I believe that he borrowed his version from my thesis? I gave the reason in my second letter, "The author has always referred to *Sāstraṭīpikā* with *Yuktisamprapant* in his work. (vide pp. 376, 379, 381, 381, 383, 385, 393 etc.) But here only he refers to the other edition of my book with *Sāstraṭīpikāprākāśa* to which I have referred here." (*Ibid.* p. 219) Dr. Radhakrishnan is silent on this point. I was confirmed in my belief that he borrowed his version from mine when he charged me with incorrect reference with regard to a passage from *Sāstraṭīpikā* in his first reply, because he did not know that there was another edition of this book with *Sāstraṭīpikāprākāśa* from which I quoted. I have already pointed it out in my first rejoinder. "Evidently, Dr. Radhakrishnan, is not aware of the existence of *Sāstraṭīpikā* with *Prākāśa* which contains 622 pages. He has always referred to the Chowkhamba edition of *Sāstraṭīpikā* which contains only 474 pages, in his *Indian Philosophy*, Vol. II. But, then, how does he refer to the other edition of *Sāstraṭīpikā* (pp. 487-490) on p. 482 of the above work? I have shown in my second letter (*Modern Review*, February, 1929, p. 219) that he has borrowed that part of his exposition from my thesis along with its reference, published in the *Meerut College Magazine*, January, 1924." (*M. R.*, March, 1929, p. 378.)

62. "This is my own exposition of the classical distinction between the view of Vācaspati and that of Viśānabhikṣu in Sāṅkhya philosophy." (*M. R.*, February, 1929, p. 219.) But Dr. Radhakrishnan complains, "Mr. Sinha gives the passage dealing with this topic, omits certain words from it and retains others which happen to be similar to mine and then complains that I have borrowed from him. My version is not identical with his, but the use of the words 'modification' for *vyūti* and 'reflection' for *pratibimba* makes him believe that his 'own exposition' is adopted by me without acknowledgment. No argument is possible." (*Italics mine, M. R.*, March, 1929, p. 322.) I omitted three words from my version. To satisfy the curiosity of the reader I give the full version below.

The self knows an external object only through the psychic function or mental modification on

which it casts its reflection. This is the view of Vācaspati-misra. Viśānabhikṣu assumes that the self casts its reflection on the unconscious mind functioning in a particular way, and the mental function which takes in the reflection of the self and assumes its form is reflected back on the self; and it is through this reflection that the self knows an external object." (*Meerut College Magazine*, January, 1924, p. 94).

Dr. Radhakrishnan has reproduced the italicised portion of my version as follows:

"While Vācaspati thinks that the self knows the object through the mental modification on which it casts its reflection, Viśānabhikṣu holds that the mental modification which takes in the reflection of the self and assumes its form is reflected back on the self, and it is through this reflection that the self knows the object." (*Indian Philosophy*, Vol. II, 1927, footnote, p. 293. *Italics mine*).

Thus it is quite clear that Dr. Radhakrishnan has reproduced my version *verbatim*. If he has omitted certain words given in my version, it does not prove that he has made it his own. But still the great Doctor does not feel the least hesitation in saying, "My version is not identical with his." Certainly, 'no argument is possible.'

Again, Dr. Radhakrishnan says, "Here Mr. Sinha claims that it as his 'own exposition' of the distinction between Vācaspati and Viśānabhikṣu regarding the self's knowledge of an object. The distinction is a very familiar one. (See Das Gupta, *Indian Philosophy*, p. 260)." (*Ibid.*, p. 322.) Though the distinction is familiar among scholars of Indian Philosophy, which I myself wrote in my second letter (*M. R.*, Feb. 1929, p. 219), yet probably it has been presented for the first time in English by Dr. Das Gupta in his *History of Indian Philosophy*, 1922 (p. 260). He expresses his idea in his own way. These buddhi changes are so associated with the reflection of the *puruṣa* in the buddhi that they are interpreted as the experiences of the *puruṣa*. This explanation of Vācaspati of the situation is objected to by Viśānabhikṣu. Viśānabhikṣu says that the association of the buddhi with the image of the *puruṣa* cannot give us the notion of a real person who undergoes the experiences. It is to be supposed therefore that when the buddhi is intellectualized by the reflection of the *puruṣa*, it is then superimposed upon the *puruṣa*, and we have the notion of an abiding person who experiences."

My version is entirely different from that of Dr. Das Gupta. But Dr. Radhakrishnan's version is a *verbatim* reproduction of mine. Still he insists that his version is not identical with mine!

He quotes a text from Viśānabhikṣu's *Yogārtika* (I. 4), on which, he says, his version is based. There are two sentences in the Sanskrit passage quoted by him. Between the first and the second there are only thirty sentences! And still these scattered sentences have been brought together and interpreted by Dr. Radhakrishnan in exactly the same language as mine! How can there be identity between two independent interpretations of the same text? I do not understand why Dr. Radhakrishnan quotes the text here. Does he want to show that he is not 'incapable

Numerical evidence, both San-kritic and Perso-Arabic, has been calmly ignored by this Perso-Arabist editor:

(1) The San-krit coins of Sultan Muhammad bin Sam issued in imitation of the Gold Gahwar came with the Muslim king's name in Nazari and bearing the figure of a goddess Lakshmi in defiance of Muslim Law (*Catalogue of Coins in the Indian Museum* by H. N. Wright, Vol. II, p. 17).

(2) Silver coins directly copied from the coins of the Chahamana king Prithviraj II (Channingham's Coins of Mediaeval India 386, No. 12.)

(3) The medal struck by Iltutmish in memory of the final conquest of Kanauj and Kora which could not be completely read by Nelson Wright (*Indian Museum Catalogue* Vol. II, p. 21 No. 39) but which was read by me 16 years ago (P. & J. A. S. B. Vol. IX, p. 288 note 3) This is corroborated by the *Talaqat-i-Nasiri* (English Translation, p. 627). The conquest of Kanauj previously attributed to Muizzuddin Muhammad bin Sam (*Ibid.* p. 191) is not attributed to any other Turkish king after Iltutmish, proving that the final conquest was due to that king. The name Kanauj is still pronounced Kannauj thus proving the correctness of the Muslim spelling, Qinnauj.

(4) The coin of Chahama-dora struck in subordination to Iltutmish (*Indian Museum Catalogue* Vol. II, p. 24, Nos. 77-9).

(5) The medal of Muhiyuddin Yuzbak of A. H. 653, struck in memory of the final conquest of Nudrah and Umaran (in Orissa), which proves to some extent the truth of his sack of the capital of Orissa and the extent of Muslim conquest towards the south or in the Delta of the Ganges in 1255 A. D.

(6) The important medal struck by Sikandar Shah bin Ilyas Shah in A. H. 759 at Kamrup *urq. Chaulistan*, proving that Sikandar had actually conquered Southern Assam some time before 1357 A. D., which was corroborated by my discovery of an inscription of his son Ghiyasuddin Azam Shah of Bengal in the collection of the Kamrup Anusandhan Samiti of Gauhati (*Ibid.* Vol. II p. 152, No. 88). The new inscription will be published in the Annual Report of the Archaeological Survey of India for 1925-26. There is no reference to the conquest of Assam by Sikandar Shah bin Ilyas Shah in any of the pages devoted to the history of Bengal (pp. 260-66.)

(7) In his treatment of Raja Ganesha the editor as well as the author of this chapter has failed to include two new kings of Bengal whose coins I brought to notice at least 18 years ago (*Annual Report of the Archaeological Survey of India* 1911-12, pp. 167-70), and which subject was elaborated by Mr. Nalinikanta Bhattacharya on pp. 117-25 of his work published in 1922. Bhattacharya's work is mentioned by Sir Wolsley Haig in his bibliography to chapter XI (p. 649) but it is evident from the index that he had not the leisure to go through the book, as even the index does not contain the names of Damjamardana or Mahendra (Index, p. 723 and 735).

The learned editor's knowledge of the geography of India, specially the North-east, is equally faulty. Relying solely on Persian authorities he places Nulambur's capital, Kamalapur, in Assam (p. 271) though it is well known that the name was Komtapur and it is now called Gosanikari

in Cooch Bihar. Similarly Nasiruddin, Nasrat Shah's important campaigns in Assam are totally lost sight of though they are so graphically described by Sir Edward Gait (*History of Assam*, pp. 83-91).

Similarly in the scrappy and incomplete chapter on the history of Sindh and Multan the learned author has failed to avail himself of Perso-Arabic Epigraphical literature published even nine or ten years ago in his own mother-tongue. In Chapter XIX one fails to find any reference to the Mughal invasions of Sindh during one of which Prince Muhammad Khan, son of Jam Nindor Nizamuddin, was killed by the Mughals of Ilari Rud a little before A. H. 855-1451 A. D. (*Annual Progress Report of the Archaeological Survey of India Western Circle for the year ending 31st March 1920*, pp. 51, No. 15-58).

Chapters I to XIX demonstrate the inability of the mere Perso-Arabist to write any part of the history of India. For the 17th century even Jadunath Sarkar must learn Portuguese, Marathi and English in addition to Persian and Arabic in order to write the history of Aurangzeb. Continental scholars have now understood that they must go through recent scholarly works written in Bengali, Hindi, Marathi and Tamil in order to be able to deal with any part of the long history of India. Consequently Sir Wolsley Haig omits to state the fact that the murder of a Sultan of Bengal by Raja Ganesha is mentioned in a Bengali metrical work composed in 1568, *Adraail-prakasa* (*My History of Bengal*, Vol. II, p. 171, Note 30). In a similar manner the learned editor and author has failed to grasp the importance of Mahamahopadhyaya Gauri Shankar Bhattacharya's history of Rajputana in Hindi which is not mentioned even in the bibliography to chapter XX. Any man attempting to write Rajput history without consulting this great masterpiece must prove himself to be a failure. Yet it is in this chapter that the editor-author has had the good sense to consult somebody who possesses some experience of Hindu historical works. If the editor-author had relied entirely on his anonymous friend then he would have been saved the numerous hopeless blunders that still remain in this chapter:—

(1) "On Bhimpal's flight to Ajinero in 1021, his kingdom became a province of Mahmud's empire" (p. 507). Bhimpal was not the last king of the Shahiya dynasty of Und. The name of the last king was Trilochanapala (Rajatarangini, 7th Taranga verses 63-7). Bhimpal was not regarded as an independent monarch (Stein-Chronicles, vol. I, p. 271 note).

(2) "After 1181 the Kalachuri rajas of northern Chedis disappear, having probably been supplanted by Baghel chiefs of Rowa" (p. 501). The Kalachuri rajas were certainly ruling in 1195 A. D. as proved by Kielhorn more than 20 years ago (*Epigraphia Indica* Vol. V, App. p. 27, No. 180) and a Haig only makes himself ridiculous when he fails to consult Franz Kielhorn about Hindu History.

(3) "In 1060 he and Bhim II of Gujarat attacked and crushed Bhoj, the learned king of Malwa" (p. 510). There was no Bhima II in 1060 as the first king of that name belonging to the Chalukya dynasty of Gujarat was living in 1029 A. D. This is clearly a mistake for Bhima I, and Bhima II was a contemporary of Muhammad bin Saman and Qutubuddin Aibak, as he ruled from 1199

Numismatical evidence, both Sanskrit and Perso-Arabic, has been calmly ignored by this Perso-Arabist editor :

(1) The Sanskrit coins of Sultan Muhammad bin Sam issued in imitation of the Gold Gahwar coinage with the Musalman king's name in Nagari and bearing the figure of a goddess Lakshmi in defiance of Muslim Law (*Catalogue of Coins in the Indian Museum* by H. N. Wright, Vol. II, p. 17).

(2) Silver coins directly copied from the coins of the Chahamana king Prithviraja II (Cunningham's *Coins of Mediaeval India* 386, No. 12.)

(3) The medal struck by Iltutmish in memory of the final conquest of Kanauj and Kora which could not be completely read by Nelson Wright (*Indian Museum Catalogue* Vol. II, p. 21 No. 39) but which was read by me 16 years ago (P. & J. A. S. B., Vol. IX, p. 288 note 3). This is corroborated by the *Tabaqat-i-Nasiri* (English Translation, p. 627). The conquest of Kanauj previously attributed to Muizzuddin Muhammad bin Sam (*Ibid.* p. 491) is not attributed to any other Turkish king after Iltutmish, proving that the final conquest was due to that king. The name Kanauj is still pronounced Kannauj thus proving the correctness of the Musalman spelling Qinnau.

(4) The coin of Chahada-deva struck in subordination to Iltutmish (*Indian Museum Catalogue* Vol. II, p. 24, Nos. 77-9).

(5) The medal of Muhiyuddin Yuzbak of A. H. 653, struck in memory of the final conquest of Nudiah and Umarkan (in Orissa) which proves to some extent the truth of his sack of the capital of Orissa and the extent of Musalman conquest towards the south or in the Delta of the Ganges in 1257 A. D.

(6) The important medal struck by Sikandar Shah bin Ilyas Shah in A. H. 759 at Kamrup *urf. Chauldhan*, proving that Sikandar had actually conquered Southern Assam some time before 1357 A. D., which was corroborated by my discovery of an inscription of his son Ghiyasuddin Azam Shah of Bengal in the collection of the Kamrup Anusandhan Samiti of Gauhati (*Ibid.*, Vol. II p. 152, No. 39). The new inscription will be published in the Annual Report of the Archaeological Survey of India for 1925-26. There is no reference to the conquest of Assam by Sikandar Shah bin Ilyas Shah in any of the pages devoted to the history of Bengal (pp. 260-66.)

(7) In his treatment of Raja Ganesh the editor as well as the author of this chapter has failed to include two new kings of Bengal whose coins I brought to notice at least 18 years ago (Annual Report of the Archaeological Survey of India 1911-12, pp. 167-70, and which subject was elaborated by Mr. Nalinikanta Bhattacharya on pp. 117-25 of his work published in 1922. Bhattacharya's work is mentioned by Sir Wolseley Haig in his bibliography to chapter XI (p. 649) but it is evident from the index that he had not the leisure to go through the book, as even the index does not contain the names of Danujamardana or Mahendra (*Index*, p. 723 and 735).

The learned editor's knowledge of the geography of India, specially the North-east, is equally faulty. Relying solely on Persian authorities he places Nilambar's capital, Kamalapur, in Assam (p. 271) though it is well known that the name was Koutajpur and it is now called Goalakari

in Cooch Bihar. Similarly Nasiruddin, Nasrat Shah's important campaigns in Assam are totally lost sight of though they are so graphically described by Sir Edward Gait (*History of Assam*, pp. 83-91).

Similarly in the scrappy and incomplete chapter on the history of Sindh and Multan the learned author has failed to avail himself of Perso-Arabic Epigraphical literature published even nine or ten years ago in his own mother-tongue. In Chapter XIX one fails to find any reference to the Mughal invasions of Sindh during one of which Prince Muhammad Khan, son of Jam Nindoor Nizamuddin, was killed by the Mughals of Hari Rud a little before A. H. 835-1451 A. D. (Annual Progress Report of the Archaeological Survey of India Western-Circle for the year ending 31st March 1920, pp. 51, No. 45/58).

Chapters I to XIX demonstrate the inability of the mere Perso-Arabist to write any part of the History of India. For the 17th century even Jadunath Sarkar must learn Portuguese, Marathi and English in addition to Persian and Arabic in order to write the history of Aurangzeb. Continental scholars have now understood that they must go through recent scholarly works written in Bengali, Hindi, Marathi and Tamil in order to be able to deal with any part of the long history of India. Consequently Sir Wolseley Haig omits to state the fact that the murder of a Sultan of Bengal by Raja Ganesh is mentioned in a Bengali metrical work composed in 1568, *Adaitia-prakasa* (My History of Bengal, Vol. II, p. 171, Note 30). In a similar manner the learned editor and author has failed to grasp the importance of Mahamahopadhyaya Gauri Shankar Hirachand Ojha's History of Rajputana in Hindi which is not mentioned even in the bibliography to chapter XX. Any man attempting to write Rajput history without consulting this great masterpiece must prove himself to be a failure. Yet it is in this chapter that the editor-author has had the good sense to consult somebody who possesses some experience of Hindu historical works. If the editor-author had relied entirely on his anonymous friend then he would have been saved the numerous hopeless blunders that still remain in this chapter :—

(1) "On Bhimpal's flight to Ajmere in 1021 his kingdom became a province of Mahmud's empire" (p. 507). Bhimpal was not the last king of the Shahiya dynasty of Und. The name of the last king was Trilochanapala (Rajatarangini, 7th Taranga verses 63-7). Bhimpal was not regarded as an independent monarch (Stein—Chronicles, vol. I, p. 271 note).

(2) "After 1181 the Kalachuri rajahs of northern Chedis disappear, having probably been supplanted by Baghel chiefs of Rewa." (p. 501.) The Kalachuri rajahs were certainly ruling in 1195 A. D. as proved by Kiehlhorn more than 20 years ago (Epigraphia Indica Vol. V, App. p. 27, No. 186) and a Haig only makes himself ridiculous when he fails to consult Franz Kiehlhorn about Hindu History.

(3) "In 1060 he and Bhima II of Gujrat attacked and crushed Bhoj, the learned king of Malwa." (p. 510). There was no Bhima II in 1060 as the first king of that name belonging to the Chalukya dynasty of Gujrat was living in 1029 A. D. This is clearly a mistake for Bhima I, and Bhima II was a contemporary of Muhammad bin Sam and Qutubuddin Aibak, as he ruled from 1199

Committee are aided at the present time by the independent Yakut, Kazakstan, Central Asiatic, Trans-Caucasian, and Bishkir Commissions, as well as by the special exploration Commissions of the friendly people's Republics of Mongolia and Tannu-Tuva, and of the Buryat-Mongolian Soviet Republic. It has been the policy of the Committee to encourage the formation of local cultural research centres by means of enlisting the interest of local young scientific forces, by organized support to local research institutions, by assistance in the organization of national scientific libraries, museums, and so on.

To this cycle of activities connected with the study of the individual territories of the Union and of adjacent countries, belongs also the activity of the Polar Commission which takes constant care of the scientific researches of the Polar Geophysical Observatory at Matotchkin Shar, of the Commission for the study of lake Baikal and its station on the Baikal, and finally, of the Pacific Committee organized last October in connection with the participation of the U.S.S.R. in the International Pacific Association.

The Commission for the compilation of a reference volume under the title of "Science and Scientific Workers in the U.S.S.R." will publish in the spring a reference volume on "Scientific workers of the U.S.S.R. outside of Moscow and Leningrad" which all constitute the first instalment of a complete record of over 14,000 scientific workers who are active in various parts of the Soviet Union.

The whole of the Academy's activity, cursorily reviewed above, has been marked by two fundamental lines: the close organic connection of the Academy's scientific work with the process of the internal economic and cultural constructive work of the Soviet Union, and the considerable strengthening of the Academy's international relations.

It would be difficult to enumerate in detail the varied international congresses and conferences in which part was taken by representatives of the Academy. Altogether there were thirteen congresses and conferences of this kind in which over 30 of the Academy's delegates have taken part. Let us mention some of them: the Washington International Soil Conference, the Budapest International Zoological Congress, the International Congress of Physicists, the Como International Telegraph and Telephone Congress dedicated to the memory of Alexander Volta, the Berlin International Congress on Heredity

and Genetics, the Congress of Slav Geographers and Ethnographers in Poland, the Paris Congress of Industrial Chemistry, the Prague Congress of the International Association on Geodesy and Geophysics, the Rome International Limnological Congress, and a number of others. Furthermore, our scientists have taken part in a number of local Conferences, as in recent years there has been continuous growth in the practice of reciprocal invitation of scientists to national conferences. Thus the All-Union Botanical Conference in Leningrad was attended by scientists from the West, and the Academy of Sciences, in its turn, was represented at the Conference of German Mineralogists at Breslau, and at the Conference of French Historians in Paris. On foreign scientific missions, there were seventeen academicians and twenty-eight corresponding members and associates of the Academy, who have visited fourteen countries in Western Europe and in North America.

The members and associates of the Academy who were sent on various missions abroad have delivered numerous lectures in the various countries at diverse scientific conferences and before scientific associations and circles, whilst of a particularly organized character was the "Week of Soviet Science" in Berlin, in which part was taken by five members of the Academy, four corresponding members, and one scientific worker. This Conference represented an interesting experiment which was to afford an opportunity to German scientists to get acquainted with the achievements of Soviet science in the course of the last ten years, not through publications or papers, but through living intercourse with representatives of Soviet science. The Conference was organized by the Deutsche Gesellschaft zum Studium Osteuropas with the assistance of *Notgemeinschaft der Deutschen Wissenschaft*.

The third line in the international relations consisted in the joint organization of common scientific researches, expeditions, etc., by the scientists of several countries. Particularly close in this respect has been the Academy's connection with Germany, where preparations have been carried on jointly with the *Notgemeinschaft der Deutschen Wissenschaft*, in the person of its energetic leader, Professor Schmidt-Ott, for the organization of an united geographical expedition to Turkmenistan and also to the Buryat-Mongolian Soviet Republic. Preliminary organizational work

is also being carried out for similar joint scientific enterprises with French scientists

Such, in general outline, has been the Academy's activity in the past year:

A Young Indian Artist

MR. K. Rama Mohana Sastri is a young artist of talent who has shown very great promise, especially in portraiture. Mr Sastri is only twenty-three years old, and is a native of Masulipatam in Andhradesa. After a

which has been universally admired. From what I have seen of Mr Sastri's work it seems to me that his forte is portraiture. His portrait sketches in pencil have a remarkable strength and fidelity and evince a most admirable grasp of character. In this he reminds one of another Indian artist Mr Mukul Dey, Principal of the Government Art School in Calcutta who has already established his reputation as an etcher and portraitist of the first rank. Mr Sastri is contemplating the publication of a volume of portraits of South Indian great men and celebrities, which will be quite a distinctive

full school career in the National College at Masulipatam with special study of Sanskrit, he joined the Andhra Jatiya Kalashala learning his art there for four years and studying under Mr Pranode Kumar Chatterji. He has exhibited his pictures in most of the important exhibitions in India, and competent critics including Dr J H. Cousins have highly appreciated his work. His pictures show the modern Indian school at a uniformly high level and European connoisseurs of art, as much as Indian art lovers who understand these things, have bought some of his pictures. Mr Sastri has designed the seal of the Andhra University

production. One of Mr Sastri's sketches—that of Mr Nandalal Bose—is published in the present number of the *Modern Review* together with Mr Sastri's own portrait from the pencil of Mr Nandalal Bose.

S. K. C.

Presidential Address at the Twelfth Session of the All India Hindu Mahasabha, Held at Surat, 1929

By RAMANANDA CHATTERJEE

It is undoubtedly true that all over the world every man owes a duty to the nation to which he belongs. But in addition to that duty, he has his duty to the family he belongs to, and the religious community or other section or class to which he belongs. Even in countries which are inhabited almost entirely by people professing a single religion, it is found that those who belong to different sects of that religion, such as Roman Catholics, Anglicans, Baptists, etc., try to promote the welfare of the particular sects to which they belong. Thus they do without neglecting their duties as citizens or as members of a household. That is to say, they belong to particular political parties, particular religious sects and particular families, and do their duties to all. Some may belong also to trade unions, learned societies, chambers of commerce, etc., and do their duties as such. Nobody contends in those countries that there is any necessary antagonism between a man's duties to the nation and his duties to smaller groups. Even the greatest of statesmen in those countries may belong to these smaller groups, and many have actually so belonged. No charge of communalism in a bad sense is brought against them. Similarly in India, the charge of communalism cannot justly be brought against Ananda Mohan Bose, President of the Sadharan Brahmo Samaj and also of the Indian National Congress, against Lajpat Rai, President of the Hindu Mahasabha and also of the Indian National Congress, or against Madan Mohan Malaviya, President of the Indian National Congress and also of the Hindu Mahasabha. What is true of them is true also of nationalist Hindu Sabhites of lesser note. They all try to change the various Hindu bodies into compact bricks for the Indian national edifice, instead of allowing them to remain like loose dust or shapeless mud, not fit to build palaces with.

Among the inhabitants of India are to be found men and women following some one or other of all the historic religions of the world. Here we also have political

organizations open to persons of all religions or no religion, such as the Indian National Congress and the National Liberal Federation. As Hindus form the majority of the population of India, they have, all along, as a matter of course, constituted the majority of the members of these political bodies, and have been their most active workers. Their political zeal is neither un-Hindu, nor unnatural. For though during certain periods of their history Hindus may have been rather unpolitically-minded, it is in their sacred epic of the Mahabharata, Santi Parva, that one finds the following verses:—

"Majet Trayi dandauntan hatayām,
sarve dharmāḥ prakṣaḥyeyur-vivardhāḥ;
Sarve dharmāḥ-helāshramānām hatāḥ syuḥ.
kṣātre tyakto rājadharme purāṇe.
Sarve tyakto rājadharmeṣu drisṭā,
sarvāḥ dikṣhā rājadharmesu yuktāḥ;
Sarvā vidyā rājadharmeṣu choktāḥ,
sarve lokā rājadharme prabṛitāḥ."

"When Politics becomes lifeless, the triple Veda sinks, all the *Dharmas* (i. e., the bases of civilization), (however) developed, completely decay. When traditional State-ethics are departed from, all the bases of the divisions of individual life are shattered.

"In Politics are realized all the forms of renunciation, in politics are united all the sacraments, in politics are combined all knowledge; in Politics are centred all the Worlds".—K. P. Jayaswal's translation.

It is to be understood that, in these verses from the Mahabharata, by politics is meant the politics of a free people. Politics of a certain kind is also needed in order that a dependent people may be free; but it is not of the petitionary or theatrically minatory variety.

But even the politics of a free people does not include all kinds of human activity, inner and outward, though all such things are intimately connected, directly or indirectly, with politics. Much less does the politics of dependent peoples comprehend all their activities, including their culture. To conserve and promote all these, something in addition

INDIAN Womanhood

Dr. KUSHANADEVI R. PATHI, is the first Langavat lady in Kannatak who has received high medical education in England. After passing the M.B. B.S. examination of the Bombay University in 1924, she proceeded to England in 1925 for further studies in Medicine and Surgery. She was aided by the Sir Desai of

(Edinburgh) during this month and is expected to sail home in April.

B. BHAGINATHY AMMA is the proprietor and editor of the *Mahila*, a leading Malayalam monthly which commenced publication some

Dr. Kushanadevi R. Pathi

Sirsangi Trust and Charitable Fund, Belgaum. She has now obtained several degrees of the Dublin University and in February last, was elected Fellow of the Royal Faculty of Physicians and Surgeons Glasgow (F.R.C.S.). She is appearing for F.R.C.S.

eight years ago in the interests of the women of Kerala (Malabar.) The patronage of H. H. the

Janet Mahan of Travancore has been a source of inspiration and support to this talented lady editor. She presided over the Arayar (sic) (sic) (sic) Conference held recently in Central Travancore.

Miss S. Srinivasan, Sub-Assistant Inspector of Schools Palamcottah, has been nominated as a Member of the District Educational Council Tanjore.

Miss S. Srinivasan

Miss F. Samuel

Mrs. Dada Mutha

Nationalism has come to have a sinister significance because in Europe it has been generally of the predatory sort. But Indian nationalism is not of that character. It only wants the restoration of the birthright of Indians in India; it does not seek to deprive any foreign people of their rights in their countries. Similarly, the Hindu Mahasabha does not seek to have for Hindus any political, economic or civic rights or privileges to which they are not entitled by their numbers, educational and other qualifications, character, ability, public spirit and tax-paying capacity. And, in particular, the Hindu Mahasabha does not want for Hindus any fixed share of anything which may indirectly leave an inequitable portion for others. It stands for open and fair competition, for an open door for talent irrespective of considerations of race, creed, or complexion. It is one of its objects "to promote good feelings between the Hindus and other communities in India and to act in a friendly way with them with a view to evolve a united and self-governing Indian Nation." Its other objects are concerned mainly with the internal affairs of the Hindu community. The promotion of the political interests and rights of the entire Hindu community is mentioned last. And it is added in a note that "the Mahasabha shall not side or identify itself or interfere with or oppose any political party." Thus leaves the members of the Mahasabha free in their individual capacity to join or not to join any political party.

The history of the Mahasabha shows that its political activities have been purely of a defensive character. It has put in an appearance in the political arena only when in its opinion the political interests of the Hindus have been jeopardised. And, so far as my knowledge goes, it has not been as active in certain political matters as it could justifiably have been. Whether this has been due to forbearance or some other causes, I do not know. I will give an example.

The qualification of electors for the Council of State, for example, are not the same for Muhammadans and non-Muhammadans. A person can become an elector for the Council of State if he was in the 'previous year' assessed, in Bengal, on an income of not less than Rs. 12,000 in the case of non-Muhammadans and Rs. 6,000 in the case of Muhammadans; and in Bihar and Orissa on an income of not less than Rs.

12,800 in the case of Non-Muhammadans and Rs. 6,400 in the case of Muhammadans. A non-Muhammadan in Bengal becomes an elector if he pays land revenue amounting to not less than Rs. 7,500 in the Burdwan and Presidency Divisions and not less than Rs. 5,000 in the Dacca, Rajshahi or Chittagong Divisions, but a Muhammadan becomes an elector everywhere in Bengal if he pays land revenue amounting only to not less than Rs. 600. In Bihar and Orissa, a non-Muhammadan can become an elector if he pays land revenue amounting to not less than Rs. 1,200; but a Muhammadan obtains the same right by paying not less than Rs. 750 as land revenue. Thus do political and civic human values differ in some provinces in the estimation of Government according to the creed one professes, a Muhammadan being *ipso facto* held to be better qualified to exercise the right of citizenship than a non-Muhammadan. The Hindu Mahasabha may rightly protest against such deliberate efforts to depress the Hindus.

Perhaps what has more than anything else made the Hindu Mahasabha unpopular with the bulk of Indian Mussalmans is its effort "to preserve and increase the numerical strength of the Hindus," which is one of its declared objects. Non-Hindu communities in India, like the Muhammadan and the Christian, particularly the former, have increased vastly at the expense of the Hindus and the aborigines of India. Therefore, anything done to arrest this process cannot be looked upon with favour by the followers of those non-Indian faiths. Still more unpleasant must the reversal of the process be to them. But I do not see how one can logically and justly object to the Hindus' doing what the others have been doing for centuries—particularly as the Hindus have not gone in for the accession to their ranks of "rice" Hindus, of non-Hindu women abducted or confiscated and obliged to be converted, of men tempted to come over by the prospect of marriage, of persons induced to be converted by the prospect of economic advantage, and of persons forced to be converted by terrorism of any kind. The Hindu Mahasabha and Hindu missions connected with it, formally or informally, want re-conversion and conversion only by fair, open and legitimate means.

Non-Hindus allege that Hinduism has never been a proselytizing faith, and that,

therefore, conversion to Hinduism is a new departure, and hence, an aggressive move. Assuming that Hinduism has never been a proselytizing religion, I do not see what spiritual, moral, rational or legal objection there can be to Hindus adopting a new method to meet a new situation. Every individual and every group has an inherent right to take all legitimate steps for self-preservation and maximum usefulness. "New occasions teach new duties", and "new times demand new measures". That a new situation has arisen is quite plain. In most provinces of India the Hindus now form a smaller percentage of the population than they did fifty years ago, the percentage showing a decline at each successive census. This is true also of India as a whole. In 1881 the Hindus were 7,432 per 10,000 of the population but in 1921 they were only 6,841 per ten thousand of the population according to the Census of India Report, 1921, vol. 1. In some provinces or parts of provinces there has been an actual decline in the number of Hindus. For example, in the United Provinces of Agra and Oudh during the decade 1911-21 the Hindus have decreased by 347 per 10,000 and in the previous decade they decreased by 130 per ten thousand. These decreases are not, of course due mainly, but are so only partly to conversion to non-Hindu religions. But whatever the causes the Hindus are entitled to combat them by all legitimate means. During the decade 1911-21 the Hindus have decreased in numbers in West Bengal by 32 per thousand, in North Bengal by 32 per thousand, and in the whole province by 7 per thousand. The main cause of these decreases in these areas is not conversion to non-Hindu faiths. But whatever the causes and the extent of their responsibility for these decreases the Hindus must try to combat all of them by all fair and scientific means. It is to be noted that in some other areas conversion is a cause of considerable decrease. The Report from which I have quoted before states:—

The Punjab Superintendent estimates that during the last decade Hinduism has given 40,000 converts to Muhammadanism and nearly three times that number to Christianity. The losses elsewhere are much smaller but everywhere a steady drain is going on. P. 122

According to the same Report Christianity got 700,000 converts during the decade 1911-21 in the whole of India.

Imitation is the sincerest form of flattery, and if the Hindus become proselytizers like the followers of Semitic faiths, the latter ought to feel flattered.

I have hitherto taken it for granted that Hindus had not until recently admitted non-Hindus into their ranks. This, however, is not a historical fact. The Hindu methods of proselytism may have been different from the methods of non-Hindu religions. But from time immemorial, Hinduization has gone on continually. According to the definition of the Hindu Mahasabha, Buddhists are also Hindus. Vincent Smith says that both Buddhism and Jainism may be regarded as offshoots of Hinduism. In the opinion of Prof Rhys Davids, the Buddha was the greatest and wisest and best of Hindus. Weber holds that Buddhism may be regarded as a reformed phase of Hindu religious and ethical activity. Now, it is well-known that Buddhism was the earliest and foremost of proselytizing religions both in and outside India. The Hindu Mahasabha considers Sikhism also to be a form of Hinduism, which originated some centuries ago. It also has initiated both Hindus and non-Hindus into its faith. I need not refer to the activities of the modern Brahmo and Arya Samaj movements.

But even if one confined one's attention to the Hindus proper to those who are called Brahmanic Hindus in the Census Report, one would find that Hinduization has gone on from time immemorial. I need not and have no time to go into details. But there is sanction for such conversions or initiations in the ancient Hindu scriptures, as well as in the later Devala Smriti. It is not merely the Brahmans and the so-called other higher castes who are Hindus. Persons of all castes, however humble who call themselves Hindu belong to that community. Taking these latter first, it is clear from their features, complexion, manners, and customs, and in some cases, their languages, that they are Hinduized autochthons or indigenes. But even if we take, say, the Brahmans of different provinces of India, neither the man in the street looking at them nor the votaries of the science of anthropology would say that the Brahmans of Kashmir, Bihar, Bengal, Orissa, Andhradesha, Maharashtra, Gujarat, Kerala and Tamil Nadu, were sprung from one and the same original stock descended from the same Arya Rishis. The eminent orthodox Brahman scholar Mahamahopadhyay Pandit

doctrine of the immanence of the Supreme Being and the practice of contemplation or meditation.

I do not say all these things to boast and feed our vanity. Rather should we be ashamed that we are so unworthy of our lineage. I mention all these things only to revive confidence in our latent capacity. Let us meditate and achieve self-realization, and then

go forth to play our part in the world in the firm faith that the Paramatman immanent in the universe and transcending the universe will not fail to give us *Siddhi* according to our *Sadhana*, though it may not be according to our desire or expectation. For,

"Karmanyevadhikaraste ma phalesu kadachana," "It is for us to work, but not to demand its fruit."

Artificial Silk

Dr B. C. BHATTACHARYA, B. SC. TREN.
(Manchester)

THE name of artificial silk is now a household word in Europe and America, thanks to its extensive use in dress materials and in the hosiery trade. In the U. S. A. they call it Rayon.

Artificial silk—the newest of the textile fibres—is at once the triumph of technical skill and industrial enterprise. Its development during the last quarter of a century has been nothing short of phenomenal. At the present time its production far exceeds that of natural silk with which it was at first supposed to compete. The world's production of the different textile fibres in 1923 is given in the following table :

	Metric Tons (1 M. ton = '9842 ton)
Cotton	5,227,000
Jute	1,590,000
Wool	1,364,000
Artificial silk	47,500
Natural silk	33,600
Ramie	1,130

It will be seen that in 1923 artificial silk constituted only about 0.6 per cent. of the world's textile fibres. But its increase during the next few years has been considerable. In 1926 the output of artificial silk was practically double that of 1923.

Artificial silk consists of thin cylindrical filaments, a number of which are twisted together to form a yarn. In lustre it resembles and in some cases surpasses natural silk. Because of the smooth nature of the artificial silk filaments, they do not catch dirt as easily

as cotton or wool and therefore require less frequent washing.

A no less important factor is the price. The relative prices of yarns of different kinds are shown in the table below :

	1913		1919		1927	
	s.	d.	s.	d.	s.	d.
First quality viscose (artificial silk)	5	3	16	0	5	0
Canton silk, discharged (natural silk)	17	4	59	8	23	0
Italian "mercerized"	21	4	73	8	36	0
Egyptian "mercerized"						
cotton	2	1	7	10	3	5½
Botany worsted (wool)	3	0	17	6	6	7

A few facts emerge from the above table. Taking the figures for 1927 we see that, in the first place, the price of viscose is less than one-seventh of that of Italian silk (natural) and about one-fifth of that of Canton silk. Secondly, the price of viscose is intermediate between those of Egyptian mercerized cotton and Botany worsted. Thirdly, of the five textile fibres under consideration viscose is the only one of which the price is actually lower than what it was in 1913. The last fact is most significant. Indeed, it has been said that of all the textile fibres artificial silk represents the best value at the present moment.

If there is one thing which more than any other militates against the still more rapid expansion of the use of artificial silk, it is the fact that it loses a considerable part of its tensile strength when wet. This

lems, too, be under any delusion that reservation of seats for them, both where they are in the minority and in the majority, will secure for them a perpetual lease of powers and rights any more than the possession of supreme political power in the past in India and elsewhere has prevented their downfall. The present generation of neither Hindus nor Moslems have the right or the power to make any artificial, unjust and illogical agreements binding on their descendants. Still less can the present or any other generation make such agreement binding on the Power that rules the destinies of nations.

In addition to communal strifes, conflicts between labour and capital and between cultivators and landholders have begun to loom large on the horizon. It is necessary in the highest interests of the Hindu community and of all other communities that the points at issue between the parties should be settled by mutual consultation and agreement. Nay, these points should not arise at all. There are Hindus among labourers and peasants and their leaders, and among capitalists and land-holders. I appeal to them all not to take to the warpath in occidental fashion, not at least till the fullest trial has been given to methods of arbitration and conciliation.

In all climes and ages givers have been richer than receivers. The teacher, the man who has to impart spiritual, moral or intellectual truth, must be superior in his possessions to the man who acquires knowledge for himself alone. Hence for India to be rich in the possession of inward treasure, her sons and daughters must be in a position to give. They must not be mere learners and borrowers. In the ancient world they were rich in the possession of immaterial treasure, because they were givers. Let them again prepare themselves to take up their ancient role. A few have already in modern times become world teachers. This is the way to promote our religious, moral and intellectual interests.

But in order to give, one must also receive. He alone can give who has life. Life connotes adaptation to environment, assimilation of that which is good and elimination of that which is evil or injurious.

Let India's children, therefore, fearlessly face all climes, races and cultures. Let them go forth, as their ancestors did in days of yore, to all corners of the outer and inner world, to give and

take. The strong can digest and assimilate all that is good and reject all that is bad. Let us not be afraid of world forces and the world current. The Hindu who in modern times worked earliest and hardest to break through India's prison-house of physical and intellectual isolation, Ram Mohun Roy, had no such fear. Firmly grounded in Hindu faith and culture, he assimilated what was good in other faiths and cultures, too. He had faith in the unmeasured capacity of his people for continuous improvement. In the course of a controversy with a European Christian, he wrote —

"If by the Ray of Intelligence for which the Christian says we are indebted to the English, he means the introduction of useful, mechanical arts, I am ready to express my assent and also my gratitude. But with respect to Science, Literature or Religion, I do not acknowledge that we are placed under any obligation. For by a reference to history it may be proved that the World was indebted to our ancestors for the first dawn of knowledge which sprang up in the East and thanks to the Goddess of Wisdom, we have still a philosophical and copious language of our own which distinguishes us from other nations who cannot express scientific or abstract ideas without borrowing the language of foreigners."

This was no unhistorical vain boast. The Rev. Dr. J. T. Sunderland writes in 'India in Bondage Her Right to Freedom' —

"India contributed enormously to the advancement of civilization by giving to the world its immensely important decimal system, or so-called Arabic notation which is the foundation of modern mathematics and much modern science."

India early created the beginnings of nearly all of the sciences, some of which she carried forward to remarkable degrees of development, thus leading the world. To-day, notwithstanding her subject condition she possesses scientists of eminence.

The world is indebted to India of the past for many priceless treasures. My hope and aspiration is that India of the not distant future, too, may again be such a benefactor. Sir Oliver Lodge has said that man's ethical condition lags behind his scientific and mechanical achievement. Hence there is no moral restraint sufficient to make wars and murderous economic competition impossible. Will not India be able to teach the world a better way? Will not her message of *Ahimsa* and *Matri* triumph in politics, economics and industry?

Discussing in *The International Review of Missions* the subject of what Christianity can appropriate and assimilate from Hinduism, the Rev. Mr. Pelly, Vice-Principal of Bishop's College in Calcutta, mentioned the Hindu

ENGLISH

EARLY ENGLISH INTERCOURSE WITH BURMA (1587-1743). By Prof. D. G. E. Hall, Longmans. Pp. viii + 276. 1's 6d. net.

One by one the empty corners of Indian history are being filled up for us with accurate knowledge, thanks to the patient ransacking of original records and the concentration of light from diverse sources by a band of true scholars. C. R. Wilson settled for us the early history of the English in Bengal and incidentally refuted "the Boughnath myth" (i. e., the story of Dr. Gabriel Boughton having healed the Princess Jahannara of her burns). The Strachey's have illuminated the rebellion of Capt. Keigwin and the early history of Bombay. A. Wright has given us the two Annesley of Surat. And now Prof. Hall's researches among the India Office and Madras records have produced the standard history of the British connection with Burma while it was of a purely commercial character. If the story has not the importance which Child's wars or Job Charnock's settlement, if it lacks the interest of Keigwin's rebellion, it is solely due to the nature of the subject,—the E. I. Co. had no valuable stake in Burma, and their Syrian factory failed mainly because "it was decided to transfer Fort St. George's ship-building orders from Syrian to the more efficient and less expensive Parsi yards at Bombay" (p. 11.) The near presence of raw materials is not the decisive factor in economics in every age. On the whole, the Burma ventures of the English traders were precarious and unprofitable through the local kings' hostility. In 1759 "the whole (English) factory staff at Negrais was massacred, and once more the Company ceased its operations in Burma" (p. 211). When these were renewed, the political factor dominated the economic, and "the relations between the two [nations] began to develop along entirely different lines, culminating in the Anglo-Burmese war of 1824-6."

In the history of Burma and African a new chapter was opened by the arrival, in the early sixteenth century, of what the local chronicles

speak of as the "great boats", viz., the sea-faring ships of the Portuguese, and that fascinating, if blood-stained, history is fairly well known.

Prof. Hall's book throws a pleasing light on "the humanity and hospitality of the old-time Buddhist priesthood of Burma", to ship-wrecked foreigners, and furnishes curious information on the "long established custom to provide with wives all foreigners who were forced to make a protracted stay in the country.... The custom was commented upon by Linschoten in the 16th century. No foreigner on leaving the country, however, might take away with him either his Burmese consort or her children." Thomas Bland, a sea-captain, had a real (i. e., Christian) wife in Madras and a temporary Burmese wife in Syriam. The real wife was dissuaded from accompanying her husband to Syriam on the grounds that the Burmese wife would poison her if she put in an appearance at Syriam" (11 (p. 100).

This is the first volume of the "Rangoon University Publications," and the series could not have made a better beginning.

J. SARKIS

CO-OPERATIVE MOVEMENT IN INDIA, A COMPARATIVE STUDY. By J. L. Raut, (Tutaporevala) pp. xii + 130. Rs. 2.

This book is a compilation from the notes kept by the author during his tour through the four provinces of Bombay, Madras, Bengal and U. P., and the author's aim is "to stress the practical side of the Co-operative movement, which he believes 'has always been overlooked'—though the administration reports tell a different tale. For such an important task, the book is too slight. It is not exactly a mosaic of extracts, but it does not go far enough and never rises above the commonplace, while as a collection of statistical data it is professedly insufficient.

PA GLIMPSE OF ASIA. By Upendra Nath Barooah xii + 110. Rs. 1-10.

The author has been hardly fair to himself or to his readers by publishing in 1928 a "sketch

the bulk of the Indian population reside and it was here that his arduous task lay.

INDIAN EDUCATION IN NATAL.

"The Capetown Agreement provided, *inter alia*—"In view of the admittedly grave situation in respect to Indian education in Natal, the Union Government are willing to appoint a Provincial Commission of Enquiry and to obtain the assistance of an educational expert from the Government of India for the purpose of such inquiry."

With a view to bringing about this Education Enquiry Commission, Dr. Malan, the Minister of Education, wisely left the matter of approaching the Provincial Council of Natal in the capable hands of Mr. Sastri, who spared no time in winning the sympathy of the Administrator of Natal, Sir George Plowman, whose term of office was then expiring. His successor, the Hon. Mr. Gordon Watson was equally sympathetic and was keen to help Mr. Sastri in his mission. With the assistance of the new Administrator his interviews with the members of the Executive accelerated the appointment of the desired Enquiry Commission, which began its labours in the month of April 1928.

The whole period during which the Commission sat, was passed with anxiety by Mr. Sastri who was present throughout the sittings and who feared that sufficient evidence might not be forthcoming in Natal, the result of which would be that the Commission would report that Indians were not anxious for their education and that their illiteracy was, therefore, due to their own fault. It was only on the last day of the Commission that the Natal Indian Congress wound up the overwhelming mass of evidence tendered by representatives from every centre in Natal, wherever Indians resided, by its comprehensive statement, and it was then that Mr. Sastri felt a ray of hope in the Commission. The discovery that out of about 32,000 children of school-going age only 9,155 were receiving education, that teachers were being miserably paid, and that the school buildings deplorable, unsightly and insanitary, came as a shock to the people of Natal. Hundreds of children were being turned away because there was no accommodation in the schools and thousands more were running about illiterate because there were no schools, though the parents were most anxious that their children should be educated.

The eagerness on the part of the Indians for education and the amount of self-help were fully demonstrated by facts and figures. Moreover, the fact that some eight to nine thousand pounds of the Union Government's subsidy on Indian Education were being misapplied annually by the Provincial authorities was brought home to the Commissioners.

Mr. Kichlu with Miss Gordon, the educational expert sent out by the Government of India, worked day and night in compiling statistics and rendering valuable information on the subject, and their help and assistance in this connection were immensely appreciated by the Commission and the Indian community.

The favourable report of the Commission resulted in the Provincial Government spending the whole amount of the subsidy and thereby improving the existing conditions to an appreciable extent.

Side by side with this part of the work, Mr. Sastri appealed to the Indian community of Natal for funds for the establishment of a college where facilities could be afforded for the training of teachers and provisions made for higher education. The appeal was well responded to and a munificent sum of sixteen thousand pounds was subscribed within a period of two months. A site of some six acres in the Borough of Durban for the building of the Training College and High School was applied for, and after a strenuous fight put up by both Mr. Sastri and the Community, some 2½ acres were allotted by the Durban Town Council on leasehold tenure. The foundation-stone for the college—appropriately named the "Sastri College" was laid on the 24th August, 1928 by the Administrator of Natal and the building operations have now commenced.

It has been arranged for the buildings, when completed, to be handed over to the Provincial Government, which would conduct the college on modern lines. Mr. Sastri wished that the college should be staffed with qualified teachers from India and this has been agreed to by the Education Department. Moreover, it is his ambition that in course of time, the staff should be replaced by South-African Indians themselves, and for this purpose he has appealed for funds to create scholarships and it is hoped that his appeal would not fall on deaf ears.

COBORDON OF ILLEGAL ENTRANTS

If there is anything that would remind Mr. Sastri in his later years, as the most

Liquor trade, of their honest livelihood. Not only did Mr. Sastri make the position clear to General Hertzog, the Prime Minister, that it was a breach of the spirit and letter of the Capetown Agreement, but stood firm with the Community in its protest against the obnoxious section. The Government fortunately withdrew the section and thereby averted a disaster to the settlement of the Indian question. Unfortunately for us there are still certain sections in the Act, which may adversely affect the Indian employees, but Mr. Sastri has made representations to the Government that it should seriously consider amending the sections so as not to create any hardship to those at present employed.

HOUSING AND SANITATION

The Capetown Agreement further provided that "the Union Government are willing to take steps under the Public Health Act for an investigation into sanitary and housing conditions in and around Durban, which will include the question of (1) the appointment of an advisory committee of representative Indians and (2) the limitation of the sale of municipal land to restrictive conditions".

In this regard Mr. Sastri's endeavours to have an elaborate investigation in which the Union Government, the Provincial and the local authority with two Indian assessors would take part, were in vain, owing to the provincial and local authorities being unwilling to adopt the suggestion from a fear that it might lead to responsibilities which they were not prepared to accept at the present moment. However, the Central Housing Board, which was equally competent to do the work, made the necessary enquiries and its report which was published a few days ago was most favourable to the Indian community, and in most appropriate terms commented upon the utter disregard of the Durban Corporation to the housing of Indians resident in Durban.

SOCIAL UPLIFTMENT

Having been a worker nearly all his

life in the cause of humanity in India, Mr. Sastri felt soon after his arrival, that the social needs of the community were sadly neglected and those who were at the head of affairs from time to time were simply engrossed in the political life of the community only.

His first lecture in Durban on "Social Service" was not only an intellectual treat but was full of inspiration to the young men and women in the community. Previous to this he addressed the women of Durban on "Child Welfare". Both these lectures resulted in the formation of an Indian Child Welfare Society and a Social Service League, both of which are doing excellent work. Mr. Sastri himself contributed a sum of ten pounds per month to the former Society. In all his private conversations with prominent Indians, he has impressed upon them the urgent necessity of social work among the community so that it may be able to uplift itself and thus become an invaluable asset to South Africa.

Mr. Sastri has not been unmindful of the necessity of creating a friendly feeling between the European and Indian communities in order that the long-rooted prejudice may gradually die out. With a view to bringing about this happy state of affairs he delivered a series of lectures in the important centres of the Union on Cultural India, Indian Philosophy, Indian Drama and other interesting subjects. A remarkable feature of his lectures was that the halls were filled to overflowing. His masterly exposition of the various subjects always held his audience spell-bound. He was hailed as an intellectual genius and the philosopher-statesman of India.

His orations were the means of creating a very friendly feeling between the two great races. His magnetic personality and genial disposition won for him many true and loving friends from both the communities, who felt exceedingly sorry to miss him when the time came for him to depart from the shores of South Africa.

The Bauls and their Cult

The Bauls of Bengal and their Cult of Man forms the subject matter of an illuminating study in the *Visva-Bharati Quarterly* by Sri Kshiti Mohan Sen, than whom no one is more competent to speak of these retiring class of devotees and of their fascinating tenets. Proceeds the writer after deriving the word *Baul* from *Tanu* in its sense of nerve-current and of regulated breathing exercise :

According to this cult in order to gain real freedom, one has first to die to the life of the world whilst still in the flesh,—for only then can one be rid of all extraneous claims. Those of the Bauls who have Islamic leanings call such "death in life" *tanu*, a term used by the Sufis to denote union with the Supreme Being. True love, according to the Bauls, is incompatible with any kind of compulsion. Unless the bonds of necessity are overcome liberation is out of the question. Love represents the wealth of life which is in excess of need. The idea appears to be the same as that under which the *uchusta* (surplus) is exalted in the Atharva Veda (XI, 9). It should also be noted that Kalir, Nanak and other upper Indian devotees use the word *baur* in the same sense of madcap and in their verses there are likewise numerous references to this idea of "death in life."

Devotees from generally the lowest rank of Hindu and Moslem communities are freely welcomed by the Bauls who would enter, however, no temple or shrine ; for the human body is the temple of God, the Man of the Heart, they hold.

Most Indian sects adopt some distinct way of keeping the hairs of head and face as a sign of their sect or order. Therefore, so as to avoid being dragged into any such distinctions, the Bauls allow hair and beard and moustache to grow freely. Thus do they remain simple, they say. The similar practice of the Sikhs in this matter is to be noted. Neither do the Bauls believe that pick of clothing or largeness of body conduce to religious merit. According to them the whole body should be kept decently covered. Hence their piece of cloth, they rather rags and make it of *sannians*. In this they are different from the ascetic monks, but resemble rather the Buddhist

The Bauls do not believe in aloofness from, or renunciation of, any person or thing; their central idea is *yoga*, attachment to and communion with

the divine and its manifestations, as the means of realization. We fail to recognize the temple of God in the bodily life of man, they explain, because its lamp, is not alight. The true vision must be attained in which this temple will become manifest in each and every human body, whereupon mutual communion and worship will spontaneously arise.

Many such similarities are to be observed between the sayings of the Bauls and those of the Upper Indian devotees of the Middle Ages, but unlike the case of the followers of the latter, the Bauls did not become crystallized into any particular order or religious organization. So, in the Bauls of Bengal, there is to be found a freedom and independence of mind and spirit that resists all attempt at definition. Their songs have given expression to the very heart of rural Bengal. With no claims to erudition or prestige of tradition the spiritual heights attained by these social outcasts are yet rare even in the highest of religious orders. Their songs are unique in courage and felicity of expression. But under modern conditions, they are becoming extinct or at best, holding on to external features bereft of their original speciality.

They acknowledge none of the social or religious formalities, but delight in the overhanging play of life, which cannot be expressed in mere words, but of which something may be captured in song, through the ineffable medium of rhythm and tune.

Their songs are passed on from Master to disciple, the latter when competent, adding others of his own but, as already mentioned, they are never recorded in book form. Their replies to questions are usually given by singing appropriate selections from these songs. If asked the reason why, they say : "We are like birds. We do not walk on our legs, but fly with our wings."

Our religion is *Sahaja* (natural, simple), hence timeless, claims the Baul.

Bauls who have a smattering of the scriptures say that in the first three Vedas, traces of this *Sahaj* religion are to be found while as for the Atharva Veda, it is full of it. They claim further, that the followers of the *Sahaj* cult of the Bauls are specially referred to in the Vedas under the name *Nirantiga* or *Nirantiga*, being described as those who conform to no accepted doctrines, but to whom, having known the truth in its purity, all directions are free. Not bound by prescribed rites or ceremonies, but, in active communion with all by virtue of their wealth of the natural, they are ever mobile. I have, as a matter of fact, found in the Atharva Veda many references to the *Trutgas* (which may be translated as *non-formalists*) in these identical terms.

The Bauls say : in the body is the essence of

Toothed Net for Air-Mail Delivery

Successful tests with a special landing net for the delivery of mail-bags and other parcels from moving airplanes are reported in *Popular Mechanics* (Chicago, February).

"The bag, attached to a rope, is lowered from the plane, and as the ship moves over the net, which is stretched on uprights, the rope is severed by sharp teeth on one of the crossbars of the cage. The bag is let down from a reel controlled by the pilot, and is kept from falling forcibly to the ground by the net. This is considered an advantage over some other methods proposed for delivery of packages from planes while in motion, and is an improvement over the parachute idea, as no time is lost in recovering the bundle. There is an ample supply of rope on the reel so that the pilot does not have to descend to a perilously low altitude to make delivery. The cage is strongly braced, and can be set up or taken down in a few moments."

The Net to catch Air-Mail on the Fly

Did Dumas Steal "The Three Musketeers" ?

We learn from R. S. Fendrick, who writes, in a copyrighted Paris dispatch to the *Philadelphia Public Ledger*, that a hornet's nest has been stirred up by a movement at the real D'Artagnan's birthplace to give him a monument and credit Dumas, in the inscription, with having immortalized him. Literary critics are pointing to historic evidence that Dumas did not create D'Artagnan, but "lifted" him from a chronicle written in the Bastille a century and a half earlier by Gatien de Courtilz de Sandras, the "scribbler" who had offended Louis XIII.

Mr. Fendrick tells us that Dumas simply rewrote and jazzed up, in about 1845, a book that Courtilz de Sandras had published in 1700. The proof of this is said to be overwhelming.

The grave, clever and swashbuckling D'Artagnan actually lived in flesh and blood, altho the *mousquetaire* was not nearly so dashing as he has been painted. His right name was Charles de Batz-Castellmore, but he took his mother's name of D'Artagnan. His family, belonging to the lesser Gascon nobility, lived in the region between Pau and Toulouse, in the extreme south of France.

It has often been alleged that Dumas and the dozen-odd "ghosts" who worked in his romance factory were notorious plagiarists, but the extent of this plagiarism is still unknown to-day. They stole much of the stuff from books printed several

Title-page of Count de Sant'Is book from which Dumas took the story.

excellent and, and now, disappointed. Nevertheless Dumas was a very fine, refined man, or as the

Alexandre Dumas

French say a cook who could always adjust the right sauce to his dish. They called his novel factory the kitchen.

As the result of the exposure of Dumas a plagiarist the good people of Gascony can not agree to whom they should give credit on their monument for immortalizing their hero Count de Sant'Is was undoubtedly his original biographer if one can call his work a biography but Dumas really put him on the map.

Bauls who have a smattering of the scriptures say that in the first three Vedas, traces of this *Sahaj* religion are to be found, while as for the Atharva Veda, it is full of it. They claim further, that the followers of the *Sahaj* cult of the Bauls are specially referred to in the Vedas under the name *Naraita* or *Nyuntaita*, being described as those who conform to no accepted doctrines, but to whom, having known the truth in its purity, all directions are free. Not found by prescribed rites or ceremonies, but, in active communion with all by virtue of their wealth of the natural, they are ever middle. I have, as a matter of fact, found in the Atharva Veda many references to the *Tratya*, (which may be translated as non-conformists) in these identical terms.

The Bauls say : in the body is the essence of

settled to-day, in the light of its bearing upon the private home.

This intellectual training is what we usually call education. But it is evident that the name is a mistake. It is her awakened sense of responsibility that constitutes the truly educated woman. It is her love and pity for her own people, and the wisdom with which she considers their interests, that mark her out as modern and cultivated and great. The geography and history that she has learnt, or the English books she has read, are nothing in themselves, unless they help her to this love and wisdom. Scraps of cloth will not clothe us, however great their quantity! There must be a unity and a fitness, in the garment that is worn. Thus new knowledge, however, in a truly great woman, will modify every action. Before yielding blindly to prejudice, she will now consider the direction in which that prejudice is working. If she indulges her natural feeling, will it tend to the establishment in India of nobler ideals, or will it merely make for social vanity, and meaningless restrictions? Even the finest of women may make mistakes in the application of these new principles. But honest mistakes lead to knowledge and correct themselves. The education of woman, then is still, as it always was, a matter of developing the heart, and making the intellect efficient as servant, not as lord. The nobility of the will is the final test of culture, and the watch-towers of the will are in the affections.

Reminds us the Sister.

Let us suppose that a girl learns to read and write and spends her whole time afterwards over sensational novels. The fact is, that girl, in spite of her reading and writing, remains uneducated. Reading and writing are nothing in themselves. She has not learnt how to choose her reading. She is uneducated, whatever be her nationality. That many Western people both men and women are uneducated in this deepest and best sense, is proved by the character of common railway-book-stall periodicals. Education in reality means *training of the will*.

It is not enough to render the will noble: it ought also to be made efficient if the true educational ideal is to be attained; and it is this latter phase which necessitates our schooling in many branches of knowledge and activity. But efficiency without nobility is worse than useless; it is positively destructive. Infinitely better, nobility without efficiency, the moral and ideal preparation for life, without any acquaintance with special processes.

The Right Way to Educate a Girl

In course of her presidential address at the Patna Session of the Women's Conference published in the *Educational Review* Ram Lalitkumari Saheba of Mandi points to the right way of educating girls by presenting in the line marked out by Anatole France:

These principles are beautifully summed up in a passage in the *Crime of Sylvestre Bonnard* by the famous European novelist, Anatole France. 'It is only by amusing oneself that one can learn,' he writes. 'The whole art of teaching is only the art of awakening the natural curiosity of young minds for the purpose of satisfying it afterwards; and curiosity itself can be vivid and wholesome only in proportion as the mind is contented and happy. Those acquisitions crammed by force into the minds of children simply clog and stifle intelligence. In order that knowledge be properly digested, it must have been swallowed with a good appetite. I know Jeanne! If that child were entrusted to my care, I should make of her—not a learned woman, for I would look to her future happiness only—but a child full of bright intelligence and full of life, in whom everything beautiful in art or nature would awaken some gentle responsive thrill. I would teach her to live in sympathy with all that is beautiful—comely landscapes, the ideal scenes of poetry and history, the emotional charm of noble music. I would make lovable to her everything I would wish her to love. Even her needlework I would make pleasurable to her, by a proper choice of the fabrics, the style of embroideries, the designs of lace I would give her a beautiful dog, and a pony to teach her how to manage animals; I would give her birds to take care of, so that she could learn the value of even a drop of water and a crumb of bread. And in order that she should have a still higher pleasure, I would train her to find delight in exercising charity. And inasmuch as none of us may escape pain, I should teach her that Christian wisdom which elevates us above all suffering, and gives a beauty even to grief itself. That is my idea of the right way to educate a young girl.'

German Scientists' Use of War Prisoners

Conrad Hoffman, an American who was in Germany in August 1914 to June 1919 as a Y. M. C. A. Secretary serving the Allied prisoners of war, furnishes in the *Young Men of India* an interesting account of the service of his Association and of the propaganda work by the Germans among the Indian prisoners in Germany. Incidentally the writer speaks of the valuable use that German scientists made of these prisoners in their study and research.

The German scientific genius, ever alert and active, came into play here in spite of pre-occupation with war technique. So many representatives

check to the flow of reality introduce a dualistic conception, just as the recognition of the two faculties, intuition and intellect, does?

The real value of Bergson's philosophy lies in its assertion of the *allogical*, rather than in any positive construction of its own. Bergson has shown the hopelessness of rationalism as we find it to-day. As I have pointed out elsewhere, unless rationalism thoroughly recasts its logic, there is no possibility of meeting Bergson's charges. Happily, rationalism seems to be aware of this and has already done a good deal to remove its original rigidity. But a good deal of up-hill work still remains ahead.

Whilst Bergson attacks the citadel of rationalism with new weapons, the schools of neo-realism of the present day assail it with the old rusty weapons. But rationalism is more than able to hold its own against this new attack. There may be valiant fighters in the realistic army, like Bertrand Russell and Moore in England and Perry in America, but unless the neo-realists change their methods of attack, they do not seem to have much chance of success.

Education in English Villages

Sir Michael Sadler's paper on 'The Educational Needs of England' published in *The English Review*, (reproduced in *The Educational Review* for March) is full of useful suggestions and observations. Remarks the distinguished educationist on the question of education in English villages:

In some villages the time is ripe for a small institute like the Village College at Sawston,—which the Secretary of the Cambridgeshire Education Committee, Mr. Henry Morris, has found generous supporters to build. There are many signs of a growth in England of communal enjoyment of good music and of art. For happiness in social relationships, for the fostering of intelligent interest in the beauties of the countryside and in urban architecture, and for the creation of a culture more widely shared than has been possible in England for many generations, it seems desirable that steps should quickly be taken—well-considered but evicting steps—to provide the buildings in which the new communal culture may find a centre and a home. Music, both vocal and instrumental; pictures, wall-paintings, drawings, and sculpture, both in the form of original works and in reproduction; textiles, pottery, and furniture of fine but plain design; drama; books (including fiction), and advice as to choice of books; classes and lectures, both for systematic study and for stimulus.—We are all appreciating these things more, finding greater pleasure in them, realizing their place in the mosaic of life, thinking of them as related to one another, as significant of some new impulse towards communal unity and not merely as separate fragments in the decorative background of private life. Broadcasting, with its thoughtful regard for adult education; the gramophone; cheap reprints of good books; the burgeoning of new life in the public library system; the Carnegie Trust benefactions for

country libraries, serving rural districts; the musical festivals in various parts of England; the Eisteddfods in Wales; Sir Joseph Duveen's encouragement to exhibitions of the work of young British painters; the untiring efforts of the Arts League of Service; the lectures given in the National Gallery, British Museum, Victoria and Albert Museum, and in the public galleries in many of the larger provincial towns; the activities of the tutorial classes under the Joint Committees representing the Universities and the Workers' Educational Association; the work of the Rural Community Councils; the series of important addresses given to the Luncheon Clubs at Leeds, Manchester, and Oxford and the public spirit of rotary clubs and other societies; not least, the increasing attention given to music and the graphic arts in the Press and the growing interest in architecture, sculpture, town-planning, and the preservation of the beauty of the countryside; these are all signs of a strong movement in public opinion. Education, as we in England conceive it, is something wider and more atmospheric than organized teaching in school or college. The latter is, indeed, an essential part, but only a part of a larger whole which envelops us as children and as adults, colours our thoughts by its suggestions and presuppositions, and penetrates our life.

England lags far behind England; even elementary education of the conventional type is not provided for her. None the less it is useful to know what village people should know.

The Salt Revenue and the Indian States

Col. Haksar, Political Member, Gwalior State, traces in course of an article in *The Asiatic Review* (reproduced in *The Feudatory and Zemindari India* for February) the history of the control exercised by Government of India on the salt production of the States, and relates how the policy injures the States politically and economically:

Treaties and agreements were negotiated with all States in whose territories salt was produced. In Rajputana the Sambhar Lake, and later other salt-producing districts, were leased by Government and became part of the Government monopoly. In other States the production of salt was entirely prohibited, and the Darbars were required to destroy salt-pans and to prevent their subjects from collecting the natural salt which in some districts occurs without the necessity for any process of manufacture. Other States, again were permitted to produce salt but forbidden to export it either abroad or into British India. Two States were permitted to export salt to foreign nations, but not to any part of India. Thus control was secured to the Government of India, and a uniform system of taxation imposed upon the whole country.

Certain States are allowed to produce salt for their own consumption, and certain others receive

Evolution and Man

After nearly sixty years of research, the theory of evolution as applied to the origin of the human species has not yet met with final acceptance at the hands of the scientists. Tennessee might become the butt of ridicule of the whole civilized world, but the opinion of a competent scientist, at any rate, deserves respectful consideration. *The Literary Digest* quotes the opinion of Dr. Austin H. Clark, the noted Biologist of the Smithsonian Institution, which has created some sensation in scientific circles:

Man is not cousin to the ape, he is an "accident" an "abnormality," to all intents and purposes a product of special creation, announces Dr. Austin H. Clark, noted biologist of the Smithsonian Institution. The statement detonated through the press like the explosion of a bomb, and brother scientists sprang to the defence of the accepted theory of evolution with denunciations of Dr. Clark's evidences as so much "rubbish," "absurd" and "distressingly vague." But Dr. John Roach Straton, pastor of Calvary Baptist Church, New York, arch Fundamentalist and foe of the theory of evolution, on the other hand, is "glad to hear a responsible man speak the truth," and behoves the time for it is "most opportune." However, Dr. Clark does not discard the theory of evolution; he modifies it. Instead of evolution by a process of gradual developments, he believes it has come about by a series of jumps from one major form of life to another. He expresses his views in *The Quarterly Review of Biology*, a publication which has a limited circulation in scientific circles. "So far as concerns the major groups of animals," he says, "the creationists seem to have the better of the argument. There is not the slightest evidence that any one of the major groups arose from any other. Each is a special animal-complex related more closely to all the rest and appearing, therefore, as a special and distinct creation." According to Dr. Clark's belief, "man appeared in the Pliocene age, just preceding the ice age. He appeared suddenly and in substantially the same form as he is in to-day. There is not the slightest evidence of his existence before that time. He appeared able to walk, able to think, and able to defend himself." Dr. Clark holds that there are no missing links. "Missing links," he says, "are misinterpretations."

Dr. Clark's hypothesis does not scrap the Darwinian theory altogether. While he admits that variation plays a decisive part

in the creation of varieties and breeds within a particular species, he does not allow that these variations, even at their widest, can create new species. Dr. Clark's opinion has by no means been received with approval by other competent scientists.

"It sounds incredible that he should have made such a statement," says Roy Chapman Andrews, who has devoted years to exploration in the Gobi desert, as he is quoted in a United Press dispatch. Dr. William K. Gregory, professor of paleontology at Columbia University, finds Professor Clark's theory "distressingly vague" according to the same source, and Dr. Arthur H. Weyssse, of the Boston University Graduate School, is quoted as saying it is "absurd." "Dr. Clark's theory won't make a ripple," says Dr. Henry A. Pilsbury, curator of the department of molluscs and invertebrates at the Philadelphia Academy of Natural Sciences, as he is quoted in the *Philadelphia Record*. "It conforms neither to the theory of evolution nor to the Fundamentalist doctrines, as I understand them. It is inconceivable to believe that two freaks so completely altered and modified as Dr. Clark suggests, could propagate a race or separate species." The same paper quotes Dr. Henry Leffman, professor of chemistry in Franklin Institute, as saying that "science knows no accidents. Everything that happens has a natural cause. If man appeared suddenly, in what form did he appear? Was he a white man, a red, or black man? Dr. Clark substitutes violent evolutions for successive evolutions."

Einstein and America

Two months ago, Renter cabled the news, which most probably passed unnoticed in this country, that the new work on which Professor Einstein had been engaged for more than a decade was out at last, and that it consisted of six pages. This pamphlet, bristling with formidable mathematical signs, unintelligible to the ordinary lay man is believed to embody a new and comprehensive cosmic philosophy. Einstein himself has estimated that there are perhaps twelve men in the world who can understand his new theory, but that has proved to be no obstacle in the way of its blooming into a

journalistic stunt of the first rank. The theory, says *The New Republic*

Has resulted in an extraordinary journalistic hullabaloo. The American press and the leading New York journals in particular, from the moment that his new publication was announced, have squandered columns of space upon it in an amazing fashion. Dozens of mathematicians and physicists have been induced to write signed articles about its significance each article more obscure than the last. When the document itself was finally made public the *New York Herald Tribune* led the whole thing, cabled from Berlin a lead which involved great expense and long labor by two groups of men, one at either end of the cable. The *New York Evening Post* attempted to transmit the text by telephotography, and heroically printed a facsimile of part of the result, even though it was largely illegible. Other papers were similarly enterprising. The press associations combed Germany for scholars, preferably Americans, who could comment off hand on the new theory, and their views were called out and published, adding to the confusion already caused by the preliminary speculations of their brethren.

People of a less energetic country might well wonder over the why of it all, and the explanation which the *New Republic* offers of this inexplicable enthusiasm shoots a revealing search-light into the psychology of the people of America.

In part, the reporting of the Einstein theory was mere journalistic bounce and (as John Galsworthy might say) zingo. Like the saluting by the leg-lap in a smart hotel it was a needless and useless bit of swank intended to show that the editors are on their toes. Today's offering they said in effect is a document containing (so we hear) one of the great discoveries of all time. We can't understand it and neither can you but since we undertake to print all the news without guaranteeing that it will be intelligible here it is such journalistic super-service as is peculiarly American just as our newspapers are typically the most voluminous in the world. So far as I can be learned, neither the British nor the Continental press has paid a tenth as much attention as have the Americans to the Einstein story. Those English duties which we have examined have printed only such facts as an average intelligent person grasp have printed them once and let it go at that.

By American standards, there is no doubt that the editors were right and that the publication was good business. Their readers probably enjoyed the subtle compliment of the assumption that they might be able to comprehend these complicated formulae, they wanted from plain curiosity to see what the stuff looked like. While they know very well that there is an aristocracy of intellect, probably they like to pretend even with an ostentatious self-deprecation that there is none, that one man's brain is as good as another's. The English (does?) they might say, no, I haven't read it yet. But I clipped it out.

A Chinese Statesman

In one of the latest numbers of *The Living Age*, we read the following sketch of the personality of Lu Cheng-Hsiang, a great Chinese statesman and twice prime minister of the Republic.

While varied fortunes have overtaken the statesmen at the Paris Peace Conference, none can touch for romance the fate of China's official champion Lu Cheng-hsiang, scholar, diplomat and gentleman has turned his back upon earthly pomp and glory to become a Benedictine monk.

This renunciation of worldly things has behind it all the logic of the Chinese of the old school, with the culture of a man thoroughly at home in Western civilization. Born in the great meeting place of Chinese and alien civilizations, Lu Cheng-hsiang went from the Shang-hai of the 1890's—when the foreigners was all powerful in the Orient—to Manchuria-ruled Peking as a servant of the last dynasty to occupy the Dragon Throne. His career as the spokesman of China abroad began with his appointment to represent China at the first Hague Conference of 1899. He repeated this taste of the world at the Second Hague Conference of 1907. From the Chinese Revolution of 1911 through all the troublous war years, Lu Cheng-hsiang bore his share of national adversity with the added burden of premiership during two of Republican China's innumerable political crises. His final public acts at the Peace Conference of 1919 were those of a man sadly disillusioned.

Throughout his career, he brought an adroit technical knowledge of diplomacy to support his country in its moments of greatest physical impotence. Though he had behind him the perfect equipment of the diplomat of the Western World, there was always in him something of Oriental fatalism, the Chinese quality of will that robbed him of the success which blunter qualities might have achieved.

His bespectacled Oriental eyes looked out across the Peace Conference table at the lofty Western leaders who had brought China into the World War under the slogan of the victory of right over might, only to rob the revolution-born Republic of all the things that the once proud Middle Kingdom had hoped to secure in the great settlement. The tremulous Chinese mousta-hos could flutter like the agitated whiskers of a white mouse as their master pleaded the Chinese cause in the most perfect French that was spoken by any foreigner at the Paris Conference, but the sparse Oriental whiskers like strangely drabbing, could not hide a chin which lacked the driving power of a man of action at the crucial moment of his career. His virtues were negative qualities; there was nothing in his perfect diplomatic manners which could meet the hard facts in the way of secret engagements which Japan dropped on the peace table with the determined bang of a powerful fist.

This cycle of conferences, possibly brought home to Lu Cheng-hsiang the false face which covers so many of the acts of nations. When he returned to China, he felt the full force of his country's failure at Paris—the devastating political divisions at home. After serving as Minister to Switzerland in 1922, he withdrew from all public life in the

years that followed and turned to the West, whose ways had used him so harshly, for the consolation of the Catholic Faith. As a gesture of renunciation, he sent Pope Pius XI, in 1927, a chest symbolic of his blasted hopes. Within, there were all the civil, military, and diplomatic decorations that make a Chinese diplomat of eminence an impressive figure in any gathering. Accompanying the tumbles of men's honour, there was a letter, from Lu to the Holy Father which set forth his decision to withdraw from official life and seek the consolation of cloistered religion.

Toward the close of last year, the slender figure of Lu Cheng-hsiang, once the spoke-man of 100,000,000 men, entered the Rembrandt-like gate of the Benedictine monastery near Bruges, to become a novice of the monks of Saint Andrew in the homeland of his Belgian wife. Early in 1929, this Chinese who knows so much of the pomp and deceit of nations completed his novitiate and took the vows in the Black Friars which shut him for ever from the pageant of world pretence and power.

Marshal Foch's Story of the Armistice

As years pass, materials for the history of the War and the eventful years which followed it accumulate. Events preceding the Armistice are not so well known from the Allied side as it was from the side of the Central powers. In the recently published papers of Colonel House was included M. Clemenceau's report of Marshal Foch's historic interview with the German plenipotentiaries who came to sue for peace. Now, M. Stephane Lauzanne, editor of *Le Matin* has obtained from Marshal Foch an interview about how he met the German delegates and how the Armistice was signed. Marshal Foch's account given below is published in *The Living Age*:

When Weygand came into my private car on the cold, rainy morning of November 8th to tell me that the German plenipotentiaries had just arrived, I glanced out of the window. We had stopped on a spur near Rethondes, in one of the thickest parts of the forest of Compiègne. It had been raining for several days and the soil was so swampy that, although the train of the Germans was only about sixty yards from my own, it had them. Along this footbridge four men were advancing.

As I looked at them I said to myself, "Behold the German Empire, beaten and asking for peace. *Eh bien!* Since it is coming to me, I shall treat it as it deserves. I shall be firm and cold, but without bitterness or brutality."

They came into my car looking stiff and pale. One of them, whom I assumed to be Matthias Erzberger, mumbled a request that I make the necessary introductions. But I was content merely to reply: "Have you any papers, gentlemen? If so, let us examine their validity." Whereupon they showed

me papers signed by Prince Max of Baden, which I regarded as satisfactory. Then I turned to Erzberger and asked: "What do you want?" He replied, still mumbling: "We have come to receive the proposals of the Allies for an armistice." I stopped him abruptly. It was the only time that I was cutting. "I have no proposals to make." The four Germans looked at each other. "Well," said one of them, Count Oberdorff, "*Monsieur le Maréchal*, tell us how you want us to put it. Our delegation is ready to ask you for the conditions of an armistice." But I insisted: "Are you formally asking for an armistice?" "Yes," "Then please sit down and I will read you the conditions of the Allies."

I began to read the conditions of the Armistice slowly. After each paragraph I stopped to allow the interpreter to translate. Then I watched the men to whom I was talking and as the translation proceeded I studied the impression it was making in their faces. Little by little I saw disturbance spread over their countenances. Winterfeldt especially was very pale. I believe he even wept. When the reading was finished, I said simply: "Gentlemen, I will leave you the text. You have seventy-two hours to reply. At the end of that time you may let me have your observations in detail." Erzberger, however, became apathetic. "In heaven's name, *Monsieur le Maréchal*," he said, "do not wait seventy-two hours. Stop the fighting to-day. Our armies are a prey to anarchy. We are threatened by Bolshevism. Bolshevism may sweep all Germany and menace France itself." "I do not know in what condition your army may be," I answered. "I know only in what situation my own armies find themselves. Not only is it impossible for me to stop the offensive, but I am giving an order for redoubling the vigour of the pursuit." Winterfeldt intervened in his turn: "But, *Monsieur le Maréchal*, it is necessary for our staffs to meet and discuss in detail the carrying out of the Armistice. How can they do this if hostilities continue? I beg you to halt hostilities for technical reasons."

Again I replied. "Technical discussions can take place just as well seventy-two hours from now. Until then, the offensive will continue." That was the last of it. The four plenipotentiaries rose and departed.

A little after two o'clock in the morning, the German plenipotentiaries came back to my car and began a final discussion. They demanded that, in view of the troubled conditions of all Germany, the army should be allowed to keep a larger number of machine guns to maintain order. I therefore allowed them five thousand machine guns and a hundred motor trucks. That was all. At exactly 5:15 in the morning, they signed the Armistice, writing their names in big, angry letters. At seven o'clock I ordered my car and started for Paris. At nine o'clock I reached the war Ministry in the rue Saint-Dominique, and was shown into M. Clemenceau's office. He did not seem in a very good humour and he asked grumpily: "What have you yielded to the Germans?" My only reply was to hold out the document. I added that at eleven o'clock he might fire a gun and announce the end of the fighting. He wanted this to take place at four o'clock in the afternoon at the moment when he was mounting the tribune in the Chamber. But I insisted: "In two hours

the last shots will have been fired and the firing will have stopped over the whole front. It is impossible to keep the populace of Paris from knowing. Some other people who were in the office especially M. Kautou, joined me in my insistence. All right," the Tiger finally agreed. "I'll try the gun at eleven o'clock." I had nothing to do now but retire. *Monsieur le President* said I my task is finished. Yours is beginning.

Mr. Osbert Sitwell's Wishes for 1929

"Sitwellian" as an adjective or "Sitwellism" as a noun, says the *Lancet*, has almost come to supplant 'highbrow' in England. The three Sitwells, Osbert, Siegfried, and Edith are an English trio whose books are rather well known in America and while the three pursue their course of correcting their own country's aesthetic sins some of them go-spl spills over upon us. Mr Osbert Sitwell is regarded as important enough to be included in a list of people asked by the *Daily Mail* to tell what they most desire for 1929. His wishes embrace a programme of world-wide reform.

"That people would realize that another war would destroy everything of beauty, everything that makes life worth living for them every remaining shred of prosperity in Europe.

That in consequence there should be a real and genuine outlawry of war.

That the numerous old gentlemen who say that such a condition is impossible should be relegated to colonies.

That all those ignorant men who like and believe in war headed by actual politicians including Mr. Winston Churchill should be conscripted to form a special permanent League of Nations' Army which should act for it as the police force in any town in every serious dispute.

That it should be the rule of every nation that before it goes to war its chief war-makers must first engage in single combat with their rivals of the other countries and that it must be a fight to a finish.

That Mr. Baldwin should retire at the earliest possible opportunity into that private life of agriculture and reading-the-classes-by-the-fire for which he so often sighs in public.

That Sir William Jeyson Hicks would join the Anglo-Catholics and allow us to read the Prayer Book in peace if we want to.

That in the cause of kindness to animals electric foxes and electric rooks should be substituted for the genuine articles in our national sports of fox-hunting and rook beating.

That there should be a permanent programme of opera, omitting the works of Wagner (this last wish is for myself) in a permanent national opera house and that Mr. Edgar Wallace should be compelled to attend it every night so as to become familiar with the music, but that this might not interfere with the output of his books.

"That horses, dogs, and most statues, should be barred from London's streets.

That actors and actresses should give up golf and take to acting instead.

That the Albert Memorial should be placed on the top of the Albert Hall opposite (each seems to cry out for the other), and that the Victoria Memorial should be completed by a gigantic glass case placed over it.

That if the next Royal Academy exhibition at Burlington House is as dull and bad as the last one some after-dinner speaker should tell the truth about it at that year's annual banquet.

That two plays by Shakespeare should enjoy a joint simultaneous and successful run in the West End of London.

That people generally would at last realize that to be intelligent is not only more satisfactory but also better fun than to be stupid and that therefore the word 'highbrow' in their mouths is more of a compliment than a reproach that twines are given us just as much as the foot, to be used and that there is nothing intrinsically wrong in using them.

That people would read the books they talk about and understand the books they read.

That the entertainment taxes should be abolished and instead a special boredom tax levied on golf, cricket, hockey and footballs.

But perhaps it would be better to compress all these wishes into one—Sitwellism—though I know not for what it stands except love of beauty, ability to express it some wit, and a good deal of common sense—seems already judging from the correspondence on the subject, to have reached the dimensions of a political problem.

Would it not be wiser, therefore, to crystallize all these desires into the simple one that I should become dictator? There is only one drawback—alas! I do not believe in dictatorship. Yet public opinion again enters in and I would be willing to overcome even this personal disinclination in order to be of help and benefit to my country.

The Problem of China's Superfluous Soldiers

The problem of China's superfluous soldiers, says the *China Journal* is to find wives for them.

China's population offers a peculiar phenomenon not known elsewhere in the world, and that is that it contains a higher proportion of young adult males than females; the ratio between these being 125.6 males to 1000 females between the ages of fifteen and twenty-six. This means that one out of every five young marriageable Chinese men must go without a wife. Add to this the fact that in most farming families there is not enough land to go round, and we can see the reason why there are so many young Chinese men willing to become soldiers or bandits somewhere about two million of them, neither have nor can have a wife and home of their own. And this is just about the strength of China's army to-day.

Before disbanding these soldiers, the Government must find a means for settling

racists the alarms raised about the chances of a war with Britain, and all the talk of the removal of rivalry in warship-building at the very time we are signing the Hellogg Peace Pact, the final victory of the fifteen cruiser programme seems to meet with general acquiescence. Over in England, the *London Times* calmly says: "The United States is the judge of its requirements and the figure which it has chosen to describe its deficiency in cruisers will not and cannot act as a stimulus to naval construction over here." President Coolidge did not like the retention of the three year time limit in which the ships must be built, but Washington correspondents report that he will accept what Congress has done. The *New York World* which supported the President's position as against that of the Senate majority, cannot see that the building of these ships really conflicts with the Hellogg Pact and it wonders whether this approach towards cruiser parity with Great Britain will not in the end help furnish a practical basis for naval agreement. The cruiser bill authorizes the building within three years of fifteen ten-thousand ton cruisers and one airplane carrier and is finally passed by a Senate vote of 68 to 12, on the fifth it includes an approval of a treaty regulating the freedom of the seas and a request that the President encourage further arms limitation in which event he is authorized to suspend the construction authorized by the bill. The argument that the fifteen-cruiser bill will actually help bring about an agreement with Great Britain on further limitation of naval building is set forth by Mark Sullivan in one of his *New York Herald Tribune* dispatches from Washington.

It is idle to hesitate about saying that one purpose of the bill is to give evidence to Great Britain of the American state of mind.

That purpose is to show Great Britain that America either must live a limitation agreement with Great Britain or in the alternative America will build a number of cruisers adequate for its needs. It is apparent that America is determined to have at least these fifteen cruisers and probably many more eventually. If there are to be further negotiations with Great Britain for limitation our Government's hand is strengthened powerfully by what Congress has just done. It is in time to come a question whether Great Britain can persuade us to agree to limitation.

The Buddhist Movement in Europe

The *British Buddhist* publishes the following account of the Buddhist movement in Europe by Mr A H Perkins, who spoke on

the subject at the annual dinner of the Students' Buddhist Association of Great Britain and Ireland.

The Buddhist Movement may be said to have started in England some thirty to forty years ago, when Sir Edwin Arnold published his wonderfully inspiring work *The Light of Asia*. That book enlightened the West as to what Buddhism really was and what it taught and led many to the feet of the All-Enlightened One. In the year 1896 the Ven. Anagarika Dharmapala came to England from the Congress of Religions in Chicago. His visit prepared the way for the mission of Bhikkhu Ananda Metteya who in the year 1900 returned to his native land and started the Buddhist Society of Great Britain and Ireland. The most active and enthusiastic member of this society we have with us this evening is the person of Mr Francis J. Payne who has done more than anyone to spread the ideas of Buddhism in the West. We are grateful to him—most grateful that we can say.

With Mr Payne's name we must also couple that of Mr J. F. McKelmore—better known under the name he took when entering the Sangha, *Saddhana*. He too has done splendid work for the movement in the West especially along literary lines. He has a score of books to his name his little *Lotus Blossoms* has delighted many a seeker of the Buddha Wisdom and his translations of portions of the Pali scriptures and of the works of Dr Dahlke have brought the Dhamma before the cultured man of the West as none others have done.

Of Dr Dahlke himself it is not necessary to say much his eloquent voice and pen have spoken for themselves. He did splendid work for the Cause in Germany where religion and philosophy are studied and appreciated as they are not here and it is with the greatest regret that all interested in our movement heard of his passing away.

At the present time there are three Societies working to spread a knowledge of the Dhamma in Great Britain—the Buddhist Lodge, the Maha-Bodhi Society and the Students' Buddhist Association. Of these the SBA is the youngest but if it is young it is very active and energetic.

The Maha-Bodhi Society and the Buddhist Lodge are also working each in its own way to make wider known the exalted teachings of the Holy One with their unequalled wisdom and standard of ethical culture and mind training, and if each one of their members will only work with sincere aim to spread these teachings by example and precept, we shall know that we are indeed helping forward the evolution of the world for the benefit of Gods and Men.

have condemned it wholeheartedly. No Indian ought ever to entertain such an idea which brought, along with other things, ruination of our mother country. We must always consider we are Indians and therefore in all political matters we must never divide ourselves into Hindus and Moslems or Bengalis, Punjabis, Gujratis, Beharis, Madhassis, and others.

It is very sad to observe that the Muslim Community has taken a lead in the advocacy of sub-communal franchise. There is no anti-Islamic propaganda in Fiji and we therefore disagree with their resolution.

We do not at this moment wish to go fully into this resolution but must say that the Muslim community have no ground to presuppose that the elected members, wherever they may be, will not represent the interests of the Muslim Minority Community which forms a part of the Indian Community. However we trust that our brethren will yet realize the folly of their advocacy for sub-communal political rights to Indians in Fiji and in a bold claim what is due to them. Let us get together and do good to ourselves as well to the Indians our land of adoption.

We wholeheartedly support the sentiments expressed in these words but we would ask the editor of the Fiji Samachar one question.

'Is it not a fact that an Arya-samajist preacher delivered some speeches in Fiji against Islam?'

We have from the very beginning condemned such communalistic speeches and we will continue to do so whether they come from Arya-samajists, Mohammedans or Christians.

We understand that a Sanatanist preacher in South Africa is trying to create disunion among the Hindus by his foolish utterances. We have asked our correspondents in the Union to send us authentic news about it and in the meanwhile we warn our compatriots there against the mischief that may be done by such fanatics.

The Work of our Agent in Malaya

Here is an extract from the Malayan Daily Express.

Coming back to the Indian Immigration Committee's decisions we find that the question of fixing an adequate standard wage for Kelantan has been finally settled. The Committee has decided upon the higher standard of 35 cents for men and 15 cents for women for Indian labourers in Kelantan. It must be noted that Kelantan, like Trengganu is not easy to reach either by land or water. By sea one has to make a three days' journey from Singapore and that too throughout the year, a long railway journey through South Sum is equally tedious. In addition to these obstacles which employ Indian labour are scattered all over the State. Although immigration into the State

has been going on for some years past, we understand that no officer of the Labour Department has found it convenient to visit the State to inspect the conditions until quite recently. For the first time since the establishment of the Indian Agency, the present Agent undertook the very tedious railway journey at the beginning of last year. About the same time the Controller of Labour also visited the State. Rao Sahib Subhaya Naidu is reported to have forwarded an exhaustive memorandum after his return making several proposals for the amelioration of labour conditions. The public have had no opportunity of knowing the precise nature of his proposals but we have no doubt that the recent decision of the Indian Immigration Committee, the amendment of the labour laws of the State and the proposal to appoint a whole time Labour Officer for the State are the direct outcome of his efforts. In this connection it might also be mentioned that Mr Naidu has also visited another remote Underrated State—Borneo. We understand that with regard to labour conditions here too he has submitted a memorandum the outcome of which will be watched with interest.

We published a criticism of Rao Sahib R Subhaya Naidu's Report for the year 1927 and it is our duty therefore, to draw the attention of the Indian public and the Government towards the good work that Rao Sahib has been doing for our labourers in the F. M. S.

East African Indian National Congress

A special session of the East-African Indian National Congress will be held at Mombasa in the second week of April and Pandit Hridaya Nath Kunzru M. L. A. has been invited to preside over it. No better choice could have been made under the present circumstances. Pandit Kunzru is one of those very few Indian leaders who take an interest in our problems. His love for Indians overseas is not of recent growth. For many years past he has been writing and speaking about Indians abroad. He helped Pandit Madan Mohan Malviya in his agitation against indenture slavery when the latter brought his resolution in the Council at Delhi. In the Assembly also he never misses an opportunity to put questions about our problems. It should not be forgotten that Mr Kunzru is a man of many-sided activities. His work for the Scva Samiti Boy Scouts movement is well known in India. During times of floods and famines he has always come forward to help the needy and the afflicted. We hope this special session of the East-African Indian National Congress will be quite successful under his able guidance.

Death of a Fiji Indian Girl

Ramrati, an Indian girl who had come from Fiji to receive her education in India, died at Kanya Mahavidyalaya, Jullundur, some time ago. Her picture, that was taken after her death along with other girls of Fiji, is reproduced here. Ramrati was the only child of her parents and it was her earnest

desire to receive higher education in India and qualify herself for the work of teaching her illiterate sisters in Fiji. It was with considerable difficulty that she could persuade her parents to send her to India. We sympathize with them and pray that the mission of her life may be fulfilled by her sisters who are studying in the Kanya Mahavidyalaya.

NOTES

A Great Hindu Leader on Social Reform

On the occasion of the birthday of Sree Gouranga Deb the Hindu Mission of Bengal organized a Conference of Hindus of all castes and sects in a huge pandal erected on the Wellington Square, Calcutta. The Conference included among its side shows an All Bengal Physical Culture Tournament and an exhibition which added greatly to the attractiveness of the Conference. The Physical Culture Tournament was specially interesting and included contests in short sticks, quarter staff, sword, dagger, archery, wrestling, judo, weight-lifting, boxing, feats of strength etc. etc. A large number of girls also participated as contestants in the tournament.

Pandit Pramathanath Tarkabhusan was elected president of the Hindu Samaj Sammelan as the above Conference was called. His address was vigorous, critical and uncompromising in its assertion of the right of modern Hindus to mould their social system anew in the light of pure knowledge, modern requirements and with a view to shaking off completely a thousand years' reaction and accumulated evil. He said that our external enemies were not so dangerous to our life and progress as were the internal enemies, ignorance, conservatism of the decadent sort, evil conventions, destructive social habits etc. We ought to explore afresh the ancient Shastras, the books of knowledge of the Hindus, which contain the spirit of the great Hindu civilization and reform our present decadent ways of thinking and living with the help of the knowledge we shall thus acquire so that we shall be able to revive the glory of the ancient Hindus. The reason why we are to-day feeble and worthless and devoid of achievement in all fields of life, is that we are disunited and cowardly. If we do not shake off the evil practice of splitting up our society into false groups of high and low, touchables and untouchables and boldly

denounce all things which obstruct our coming together as one compact body, our total annihilation will be only a question of time.

He then continued and asserted that Raja Ram Mohan Roy was the pioneer social reformer of Bengal and since his days, also, we can see the ultra-conservatives pompously trying to frustrate all attempts at social reform in the name of religion and the Shastras. Prevention of Sati, widow-remarriage, foreign travel, removal of untouchability, Shuddhi and similar matters demanded social action ever since those days, but barring Sati none was tackled with anything like the energy that one expects to be displayed in such important social matters. We can find two reasons for this spirit of inaction or half-heartedness. First, the so-called political leaders of the country always talk social reform but never actually try to do anything. One cannot find any evidence in their activities of their firm conviction in the infallible truth, that without social reform we can never expect to gain that ability which one inevitably associates with the idea of Swaraj. Boycott of foreign goods, propagation of Khaddar, Non-co-operation, non-payment of taxes etc. appear to these leaders as chief weapons of wresting Swaraj from our rulers. That without the uprooting of social inequities, evil customs and disintegrating conventions we shall never be able to make fruitful in our life whatever we may earn by means of political stratagem, is either not understood by them or, being understood, is consciously neglected. If it is the latter, could one dream of a greater shame?

The learned president then made a running review of the condition of the Hindus of Bengal. Among 1,31,00,000 Hindus in Bengal 13 per cent. were upper castes, 29 per cent. middle caste and -58 per cent. such caste as were not even fit to act as driver of

water for the Brahmans. They could not even hope for a glimpse of the earthly gods, the Brahmans. These men are Hindus, but the upper few among the Hindus do not even care to know what a life of misery, dirt and darkness they live. They are the men who march at the forefront if it comes to a fight or if it means sweating and hard work: but the soft-handed upper classes show their gratitude to these brave soldiers of Hinduism by a species of studied contempt, the parallel of which cannot be found in human history. It is from among these neglected and insulted men that Mussalmans and Christians have picked out their largest number of converts. Here is the greatest weak point in the body of organized Hinduism and those that devote their energies to the continued retention of this weakness are the greatest enemies of Hindu Society. The president then put some solid arguments against the views preached by the anti-social ultra-conservatives and exhorted all Hindus to go in whole-heartedly for thorough social reform. We have been able to give only a general summary of his address above. The original address which is in Bengali deserves perusal.

A Hindi Treatise of History Proscribed

Readers of the *Modern Review* are well-acquainted with Major B. D. Basu's historical works among which "The Rise of Christian Power in India" is the most important and voluminous. Some time ago Pandit Sunderlal of Allahabad undertook to write a book in Hindi based mainly upon Major Basu's "Rise of Christian Power in India." Pandit Sunderlal probably put into the Hindi book many things which are not found in Major Basu's book and left out much that was in it. However that might be the Hindi book was purported to be a historical study of English rule in India and was called *Bharat men Angrezi Rajya*. Taking into consideration Pandit Sunderlal's reputation as a man of the highest idealism one may have no doubt regarding the truth of the contents of his book. We certainly believe he wrote the truth and nothing but the truth.

The book came out on the 18th of March 1929. A copy of it was sent to the Government of U. P. on the 20th and reached them, evidently not before the 21st. The Government proscribed it on the 22nd, as seized all copies of it from

the post office even before that date. There are two sides of this act of Government. One concerns everybody and the other the author and the publisher of *Bharat men Angrezi Rajya* :

First, we must challenge the Government's right to suppress an historical treatise which to all appearances could not be propaganda, incitement to murder or stimulation of class hatred or something else of that nature. Even if it contained only such historical truths as paraded against the British that should not go against the book; for do not the government support the printing, publishing and sale of some books of "history" which contain only truths (as well as untruths and half truths) to prove the greatness of the British? What objection can then the Government have to somebody showing the world the other side of the shield? Next, how could Government learn at all what the book contained in such a short time as twenty-four hours? The book contained over 2,000 pages and being in the vernacular, required to be translated before Government could humanly and legally pronounce an opinion on it. Could this be done in twenty-four hours? Was this done at all? Or did they take only the opinion of some sneak of a spy before shutting out of circulation a two volume treatise of history on which, one of the most sincere and ardent of India's workers has laboured hard for months and a business man has spent thousands of rupees? Can such governmental conduct signify that there is peace in India and that people are free here to carry on their daily work unmolested? If the Government think that historical truths should not be taught for they might increase our knowledge and brain-power, they might also some day think (like the politician of the *Arthashastra*) that Indians should not eat enough for that would increase their bodily strength. Then probably the products of rice and flour mills would be confiscated, just as the products of printing-presses are being confiscated to-day. The fact is that Government must not think that whatever goes against them is criminal. If Great Britain has committed crimes in India, no amount of repression will prove these criminal acts moral in the eye of the historian. The easiest way to have a clear conscience is not to knock one's accuser hard on the head.

Doctor of Divinity Bestowed on a Non Christian

In these days of communal antagonism, it is refreshing to find any signs of mutual appreciation among members of different communities. Recently some Unitarian Christian gentlemen and ladies of high standing in that well-known community visited India in connection with the centenary of the Brahmo Samaj. Among them was President Franklin C. Southworth, A. M., D. D., LL. D. of the Meadville Theological School of U. S. A. On January 29, 1929 President Southworth held a Convocation

forceful expression and of interpreting with fairness and sympathy various religious movements and tendencies, as a missionary passionately devoted to the task of bringing the emanating principles of the Brahmo Samaj into the religious life of India for the enrichment not only of India but also of the world, and ever ready to undertake the most arduous journeys to any part of India in response to an appeal for service you have given yourself for more than a generation to the varied work of the famous leadership with the same self forgetting devotion which has characterized not only the great Hindus and Gurus of your race but also the saints and ministers of every faith. And in the midst of these labours you have found time to the lasting detriment of your health for organizing and carrying on work among the depressed classes.

Holding from a distance the apostolic zeal with which you entered into the work of your illustrious predecessors and have helped to perpetuate and strengthen the institution they founded, observing the fortitude with which in spite of difficulties and discouragements and serious physical infirmity you have proceeded with your great task your brethren of the Faculty and Board of Trustees of the Meadville Theological School have conferred upon you the Honorary Degree of Doctor of Divinity and have authorized me to hand you this diploma in token of the same and never in the history of the school has this degree been more worthily bestowed.

Dr Hemchandra Sarkar M. A. D. D.

What Harvard does During Summer

The following account of the Harvard summer school will serve as an eye-opener to the authorities of Indian Universities who think they have overdone things if their regular lecturers hurry up matters by giving more than a bare minimum of lectures during session. As few subjects and as slowly as possible seems to be our motto here. Let us see how Harvard does it.

BOSTON—One hundred and sixty-five courses by 103 instructors are to be offered by the Harvard summer school of 1929. It is announced by P. P. Chase '00 dean of the school, and university marshal. The courses which will begin July 8 and last through August 17 are open to men and women without formal application, and can be applied for credit at the university of the student.

Courses will be offered this year in architecture, astronomy, botany, chemistry, the classics, economics, philosophy of education, educational psychology, history and education, educational administration, elementary education, secondary education, educational measurements and statistics, vocational education, vocational and educational guidance, the teaching of school subjects, demonstration courses, engineering sciences, English, fine arts, French, geology, German, Government, history, horticulture, hygiene, Italian, mathematics, medical sciences, music, philosophy, physical education, physics, psychology, social ethics, Spanish and zoology. In addition there will be opportunity to engage in special research.

at the City College Hall, Calcutta and bestowed the degree of Doctor of Divinity on Sri Hemchandra Sarkar of the Sadharan Brahmo Samaj, Calcutta. This is perhaps the first occasion on which this degree has been bestowed on a missionary worker of a non-Christian community and may be welcomed as a sign of that inter-communal fellowship to the coming and establishment of which we are all looking forward. In the course of his Convocation speech President Southworth said:

Hemchandra Sarkar, preacher, lecturer, editor, author, organizer, social reformer, missionary, possessing as preacher the ability to inspire your fellow-men with the love of righteousness and to bring them into the presence of the Eternal, as a writer, gifted with the power of lucid and

Kabul seen from Elsewhere

Afghan affairs are a dangerous topic to us. For as subjects of Great Britain we are not supposed to speculate about matters Afghan. Nevertheless, we may add to our knowledge of Afghanistan by reading through the following account of the usurpation of the Afghan throne by Bacccha-i-Sakao as published in the London, *Daily Telegraph* of February 2, 1929:

FROM OUR SPECIAL CORRESPONDENT
Peshawar, Friday.

Kabul is a city where rioting and sabotage are a daily feature, a city where the inhabitants are living in daily terror of more terrible occurrences, and where no one knows who rules, nor what may occur at any moment. This was the picture of the Afghan capital presented to me to-day by one who has watched every event since the dramatic fight of Amanullah, and who to-day arrived at the more peaceful outpost of Peshawar.

Two Vickers Victoria aeroplanes left for Kabul yesterday morning. One of them returned with several Indian passengers and a British Air Force sergeant. The other machine is remaining temporarily at Kabul, and probably will return with the Vickers Victoria machine which has for several days been stranded in the Kabul aerodrome.

It appears that Bacha-i-Sakao, the bandit king, misled ex-king Amanullah, and under a promise of support against the Shinwars persuaded Amanullah to give him Regular troops, 80,000 rupees (£6,000), titles, and ammunition. Having secured possession of the necessary war material, Bacha-i-Sakao then turned round on his monarch, forced his immediate abdication, and proclaimed himself King.

To-day every entrance to Kabul is impassable. Dense snowdrifts prevent the movement of troops. Regular or irregular and at Kabul the bandit king is looting and doing everything to provide himself with funds and material against the coming spring, when the capital will be attacked from several fronts.

So far as the British and foreign Legations are concerned, there is no immediate need for anxiety. Bacha-i-Sakao realizes that the friendship of foreign nationals is essential in case he is obliged to evoke the aid of the foreigners to remove him to safety when the counter-attack is launched. While the bazaar streets are coloured red with the blood of those murdered daily, the Legations' precincts are comparatively safe, and every possible safeguard is offered to foreigners. The bandit king realizes that his term of office as Amir of Afghanistan must finish with the arrival of the spring, and he is at present resting on his laurels.

All the British in Kabul are well, though the conditions there are difficult. So soon as the weather clears it is hoped to bring back all the foreigners and to have Kabul to decide its own destiny, but at present the aerodrome is snowed up with an upper coating of frozen ice, and landing and taking off is hazardous.

We had been told a somewhat different story. To us Bacccha-i-Sakao is a fanatical

fighter of a Jihad. Many of our Moslems have learnt to admire him as such and will perhaps like to see him made pucca King of Afghanistan in place of the heretical Amanullah. But the above version takes the green flag from Bacccha-i-Sakao and turns him into a most commonplace traitor and adventurer.

What Part did Sir F. Humphry Play in Kabul

We are rather puzzled by the following account of Sir F. Humphrys' activities in Kabul which we take from the *Continental Daily Mail* of January 28, 1929:

Sir Francis Humphrys has done magnificent work. He has been instrumental in saving thousands of lives in Kabul and rescuing scores of foreigners from positions of danger.

His participation in the change to the reign of terror directed by Bacha-i-Sachao, however, is generally criticized in the strongest language by Moslems in India, and there is no doubt that that feeling is also shown in Kabul.

The inhabitants are openly praying for the return of Amanullah after seeing the work of his successor, who has visited his private prejudices on all classes. Hindus particularly have inspired the cruellest reprisals.

The revulsion of feeling in favour of the ex-king may well visit itself on the British Minister, who to save the lives of those in Kabul put the strongest man at the moment in power.

It is now clearly proved that he only acted in accordance with his unequalled knowledge of future developments.

He is now in real danger—perhaps greater than ever before. He would be in a grave difficulty if he had to hurry the rebel off the throne, though this does not mean that he is in favour of Amanullah.

India on Trial

The above is the name of a new book on India and her political future. It is evident from the name given to the book that the author considers it a great crime on the part of India to have been exploited mercilessly by Britain. If punishment is any proof of crime, we also agree with the author; for have we not been punished thoroughly during the last two hundred years for our "crime"?

No one will say that the book has been written at the command of the India Office; but the following introductory notice of the book shows how nearly 'made to measure' it is, though in fact it is 'ready made.'

Mr. Woolcott, who spent many years in India as a journalist, shows how essential it is for India

The first is the policy *i. e.*, the "wisdom, or unwisdom, expediency or in expediency, propriety or impropriety" (in the words of Mr. Srinivasa Iyengar) of the case. At a time when the conservative party in England is seeking re-election this large scale demonstration of anti-communist zeal in India by the appointees of the same party, is likely to be interpreted as an election stunt and, as such, the case will very largely lose the seriousness which it rightly deserves as a case of conspiracy to upset the government by use of force. Had it been an isolated case of some infringement of the law of the land, the question of whether one should try to bring the offenders to book would have depended entirely on the officer who detected the offence. But we find this case received close attention from such high and remote persons as the Secretary of State in London. There was therefore no question of its coming up in the usual course of things. The wisdom or unwisdom of taking it up now must have been discussed by higher authorities than that official in Meerut at whose instance apparently so many searbes were carried out and well-known public men arrested. It seems that even the President of the Legislative Assembly thought that there might be something unwise, inexpedient and improper about the case being precipitated with such dramatic *cclat*; or would he permit an adjournment of the House to discuss the policy of the whole affair? The Viceroy however thought such a discussion improper as the case was *sub judice* and prevented the discussion. He was surely within his unbounded rights to stop the discussion—there are few things that the Viceroy cannot rightfully do—but was it wise to gag the House in that fashion? Would it not surprise the world very much to see the Viceroy taking so much interest in a matter which the Home Member, Mr. Crerar, declared was "nothing extraordinary" and nothing "outside the ordinary criminal law?"

Next there is the matter of locating the place of trial at Meerut. Many people will ask where is Meerut and for their information The *Indian Daily Mail* of Bombay has given us the following account of Meerut:

Meerut is the administrative head-quarters of Meerut District, United Provinces, and Military Cantonment, situated in 29 deg. 1' N. and 77 deg. 13 E., 97 3 miles by rail from Calcutta and 83 1 miles by rail from Bombay. The city is the seventh largest in the United Provinces. ... The derivation

of the name is uncertain. ... Meerut obtained an unenviable notoriety in 1857 as the spot where the Mutiny broke out in Upper India. ... The native city lies south of the Cantonment and east of the railway line. The streets are generally of mean appearance and badly arranged. ... In the Cantonments the finest building is the Church, which was built in 1921, and has a hand-some spire. There are also a Roman Catholic Church and a Mission Chapel, an asylum for the relief of distressed European and native Christians, and a club. The Mall is one of the finest station roads in India. Besides being the head-quarters of the ordinary District staff, Meerut is the residence of the Commissioner of the Division of the same name, Superintending Engineers of both the Roads and Buildings and Irrigation branches of the Public Works Department, and two Executive Engineers in charge of divisions of the Upper Ganges Canal. The Church Missionary Society and American Methodists have their principal stations here, besides several branches in the District.

The arrests, we learn were made at the instance of the District Magistrate of Meerut. Assuming that that gentleman is best equipped to detect all-India conspiracies, we still hold that the trial should have taken place in a more important place than Meerut. The argument cannot, perhaps be put forward that as the Meerut Court was first and directly concerned with the case, it should have preference in the matter of holding the trial; for, from what the Home Member said in the Assembly, one can readily see that the case had more in it than mere Meerut. It would be difficult for the accused persons who have been dragged there from hundreds of miles away to arrange for their proper defence at Meerut. Therefore, at least for the sake of fair trial and justice a place should have been chosen where good lawyers are always available readily and in large numbers. The name Meerut no doubt conjures up bloody visions of the Indian Mutiny, but that is neither here nor there. That may impress people whose knowledge of India does not go beyond some fearful tales of the Indian Mutiny; but Meerut remains an unimportant and out of the way town nevertheless.

Mahatma Gandhi's Arrest and Conviction

The arrest and conviction of Mahatma Gandhi at Calcutta has much that is delightfully farcical if one looks at it in that way. It is from a different view point a truly representative instance of that bureaucratic bumpiness which makes life so disgusting-ly intolerable to all self-respecting persons

in India. Let us go over the case even cursorily and see what it has to teach us. Some gentlemen, of undoubted high standing decide that they should hold a peaceful demonstration in a public park to do a little propaganda against the use of foreign cloth and for the encouragement of Home Industry. There is evidently nothing criminal in this attitude, for nearly all members of the British Parliament consider it a fine thing to encourage national industries (naturally) at the cost of foreign ones. Even the British as well as Indian Post Offices deface postage stamps with the inscription 'support British (or Indian) Industries.' So that we may assume that the persons who assembled on Shradddhananda park to preach boycott of British cloth were within their rights to do so. The method they chose to impress the assembled crowd was a bonfire of foreign cloth. The police of Calcutta at once discovered that such a bonfire would contravene a certain police regulation which forbade lighting fires with some kinds of combustible in a public thoroughfare. Whether a park is such a place or not does not concern us. The Court has decided that a park does fall within that regulation. The police therefore went to the park and in their zeal to uphold the regulation scattered the assembled crowd with the help of *lathi* blows and arrested the leaders of the lawless crowd among whom the chief was Mahatma Gandhi.

What one desires to learn from the Calcutta police is whether they always show so much zeal when people light fires in the streets. We have seen on various occasions fires burning in the streets of Calcutta with no police men to extinguish the same or to disperse any onlookers or nearby persons with the help of the cudgel. It is therefore natural for one to feel surprised at the Shradddhananda Park affair. The police deliberately took advantage of a slight infringement of an insignificant and rusty (through disuse) police regulation and vented their wrath rather viciously upon the boycotters whose real crime was not lighting fires but Boycott. Would anybody justify a *lathi* charge by the police to stop a violation of the law for which the violator is fined only one rupee? The disproportion between the offence and the police action is evident to everybody. What would Government say if the police cracked the skull of a motorist for parking

his car in the wrong place? Would they not severely handle that super-zealous traffic constable or sergeant? What are they going to do then with those members of the Calcutta Police who so aggressively charged upon a peaceful meeting of law-abiding citizens, urged by a disguised zeal, apparently to uphold the law but really to obstruct the boycott movement?

The Shradddhananda Park affair also shows how dangerously ignorant of facts relating to India are even the highest of British bureaucrats. Lord Winterton, at the time of Gandhi's arrest informed Parliament that Gandhi had not been arrested. Mahatma Gandhi pointed out in the press that only arrested men are made to sign personal bonds as he was made by the Calcutta Police. We believe he must have been arrested, even though the police generously did not handcuff him, for how else could he have been tried in Court and fined rupee one?

Prabasi Banga Sahitya Sammilan

Mrs Arundhati Hira

the last residue of the Disarmament Conference will be wiped out and then two Great Nations will engage in building navies according to what they believe is necessary to protect their commerce. And if we come to building a navy to protect commerce we must not only build against England, but we must build against any combination at sea that England can make, and if that were the case the future would have nothing in store for a fearful burden of taxation upon the American people and possibly in the end another cataclysm like that of 1914.

The right of neutrals at sea during war-time seems naturally to be America's pre-occupation for America expects to remain neutral during most wars of the future. This means that if there be freedom of seas as desired by America, in any war of the future in which Britain might get involved the latter's attempt to blockade her enemy will largely fail as a result of the American rights at sea. Therefore, expecting to fight more wars as Great Britain evidently does she dares not agree to observe this principle of freedom of the seas. And, America with her growing and worldwide commercial interests desires to be prepared against any eventuality in which a belligerent naval power, may be Britain will injure her commerce in order to apply the strangle hold of blockade on an enemy with perfection.

The whole affair it seems, rests on the question of neutral rights, just as it did when America entered the battle field in the Great War as an act of revenge on Germany for injuring her commerce by unrestricted submarine warfare. American commerce has grown since then and so has America's determination to be prepared against any future repetition of Germany's destructive conduct by some other nation.

The trouble is that Commerce, Imperialism and War are so closely related that one may not expect to profit from any of them without going in for the others. America's present attitude may be one which is merely commercial and entirely peaceful, but with a relatively powerful navy and increased commerce, she may soon begin to use her navy to further increase her commerce and then 'protect' the latter solidly by political conquest.

Germany Springs a Surprise on Naval Powers

Germany has sprung a vital surprise on the "powers" by building a powerful miniature dreadnaught within the tonnage limit set by the Peace Treaty. It was then thought that cruisers below 10,000 tons could never hold their own against heavier battleships and therefore Germany was 'made powerless' by the tonnage limit mentioned above. But German ingenuity has got the better of Anglo-French political craft. Germany has under construction a 9000 ton 'cruiser' driven by internal combustion motors of 50,000 horse power, 'that could put two of America's 10,000 ton 'treaty' cruisers out of commission, and even offer a "stiff argument" to a 35000 ton battleship'. The steel armour of this 'vest pocket dreadnaught', as the Americans call it is welded instead of riveted. This has saved 1,000 tons in weight. The weight of its engines is also very low compared to the average of the general run of cruiser engines. The *American Literary Digest* says:

Although not quite so fast as the British and American cruisers of the same class naval experts of both countries admit that the six 11-inch guns of the German ship could dispose of even the most modern cruisers built under the terms of the Washington treaty before it could get within firing range. For the guns of the miniature dreadnaught within their range of fifteen nautical miles are said to outrange the 8-inch guns on the British and American cruisers by several miles.

The new German cruiser has also a cruising range equal to the British and American ships of the same class, but can travel 33 per cent faster than the latter, so we are told.

Enacting the role of a modern *Emden*, it is easy to conceive that one of them might paralyze high-seas commerce in any war to which Germany was party.

Regarding the armament of the *Erzatz Preussen*, as the new ship is called, we are given the following details:

The main battery of the *Erzatz Preussen* will be supplemented by eight 5.9-inch guns to repel torpedo attacks, and four 3.4 inch anti-aircraft guns. She also carries six 19.7-inch Torpedo tubes on two triple mounts. The new German ship will be able to throw from her six 11-inch guns a broadside totalling nearly 4000 pounds, for each shell weighs 662 lbs. Eight 8-inch guns, with shells weighing 260 lbs apiece, could answer this with a broadside of not much over 2000 lbs.

Thus, broadside for broadside, the German ships would have the post-conference cruisers

out-gunned nearly two to one. The 8-inch guns can be fired faster, but against this must be balanced the long range of the German 11-inch gun, which is reported to have an extreme reach of 30,000 yds., or 15 nautical miles.

The new German ship has set naval men thinking in Europe and America. Just as during the War Germany upset the naval equilibrium by using newer types of under-water-craft, will she in a war of the future turn things topsy-turvy by her freak surface crafts of which the *Eisatz Priussien* is merely a forerunner?

Moslem League breaks from Nehru Report

It has not been much of a surprise to us to learn of the summary rejection of the Nehru Committee Report by the Council of the All-India Moslem League on March 28 at New Delhi. It is however sad to note that Moslem leaders have at last definitely gone over to communalism in order to achieve success for the Musalmans of India through political action. How far individuals may hope to attain success in any walk of life—economic, intellectual, moral or spiritual—through increased voting power is however a highly doubtful question. More votes do not make men more rich, more wise, more efficient, more self-sacrificing or more virtuous for any length of time. *Voting strength* should be the expression of *real strength* rather than its parent. However, let us proceed with the facts of the rejection of the Nehru Report by the Moslem League. The press report of the rejection reads as follows:

Nehru Report in respect of the communal settlement were changed they would immediately withdraw their support to it;

"And whereas the National Liberal Federation delegates at the Convention took up an attitude of benevolent neutrality and subsequently in their open sessions at Allahabad adopted a non-committal policy with regard to Hindu-Moslem differences;

"And whereas the Sikh League had already declined to agree to the Nehru Report;

"And whereas the Non-Brahmin and Depressed Classes were entirely opposed to it;

"And whereas the next reasonable and moderate proposals put forward by delegates of the All-India Moslem League at the Convention, in modification of the Nehru Report, were summarily rejected by the Convention the All-India Moslem League is unable to accept the Nehru Report."

The reasons for the rejection are rather puzzling and look like forced rationalization of a powerful, elemental and irrational desire. Why should the conditional acceptance of the Nehru Report by the Congress affect the Moslem attitude towards it? The conditional acceptance has nothing to do with the Moslems; its aim is to keep the Nation's right to adopt different methods for the obtaining of Swaraj intact, in case the British refused to make the Nehru Scheme effective. Would the Moslems like to see the Congress pledged to a scheme of reforms which our masters will not accept? It is only sensible for the Congress to give a true limit to the British for accepting that scheme after which other methods will be used to get concessions from them. We do not see why this point should worry the Moslems, or for that matter anybody else other than the British. Secondly the Hindu Mahasabha's insistence upon keeping the Nehru Scheme absolutely intact has displeased the Moslems. This again is incomprehensible; for anybody can see that by even slight alterations the entire nature of a scheme of reforms may be changed. The Moslems could also have insisted similarly. But why should the Mahasabha's desire to keep the Nehru Report intact discredit the latter to the Moslems? The other reasons given are also not very convincing. Only the last one explains the situation. It means that the Moslems are not agreed to a policy of give and take. They agree to the taking only.

The Fourteen Points

The memory of President Woodrow Wilson the Peace-maker has been honoured by the fourteen points put up by the uncompromising

Mr. Jinnah. These fourteen points may mean the beginning of a great political conflict just as Wilson's fourteen brought about the end of the greatest of armed conflicts. Let us see what Mr. Jinnah's fourteen points are. We are told:

The League after an anxious and careful consideration most earnestly and emphatically lays down that no scheme for the future Constitution of the Government of India be acceptable to Muslims in India until and unless the following basic principles are given effect to and the provisions are embodied therein to safeguard their rights and interests:

(1) The form of the future Constitution should be federal with residuary powers vested in the provinces.

(2) A uniform measure of autonomy shall be granted in all provinces.

(3) All Legislatures in the country and other elected bodies shall be re-constituted on the definite principle of adequate and effective representation of minorities in every province without reducing the majority of any province to a minority or even equality.

(4) In the Central Legislature the Muslim representation shall not be less than one-third.

(5) Representation of communal groups shall continue to be by means of separate electorates as at present, provided it shall be open to any community at any time to abandon its separate electorate in favour of joint electorate.

(6) Any territorial redistribution that might at any time be necessary shall not in any way affect the Muslim majority in the Punjab, Bengal and North-West Frontier Provinces.

(7) Full religious liberty, i.e. liberty of belief, worship, observances, propaganda, association and education shall be guaranteed to all communities.

(8) No Bill or resolution or any part thereof shall be passed in any Legislature or any other elected body if three-fourths of the members of any community in that particular body oppose such a Bill, resolution or part thereof on the ground that it would be injurious to the interests of that community or in the alternative such other method is devised as may be found feasible and practical to deal with such cases.

(9) Sind should be separated from the Bombay Presidency.

(10) Reforms should be introduced in the North-West Frontier Province and Baluchistan on the same footing as other provinces.

(11) Provisions should be made in the Constitution giving the Muslims an adequate share along with other Indians in all the services of the State and in self-governing bodies, having due regard to the requirements of efficiency.

(12) The Constitutions should embody adequate safeguards for the protection of Moslem culture and for the protection and promotion of Moslem education, language, religion, personal laws, Moslem charitable institutions, and for their due share in grants-in-aid given by the State and by the self-governing bodies.

(13) No Cabinet, either Central or Provincial, should be formed without their proportion of Moslem Ministers of at least one-third.

(14) No change to be made in the Constitution by the Central Legislature except with the concurrence of the States constituting the Indian Federation.

THE ALTERNATIVE

The draft resolution also mentions an alternative to the above provisions in the following terms:

"That in the present circumstances the representation of Muslims in different Legislatures of the country and of other elected bodies through separate electorates is inevitable and further that the Government being pledged over and over again not to disturb this franchise so granted to the Moslem community since 1909 till such time as the Muslims choose to abandon it that Muslims will not consent to joint electorates unless Sind is actually constituted into a separate province and Reforms in fact are introduced in the North-West Frontier Province and Baluchistan on the same footing as in other provinces and further it is provided that there shall be a reservation of seats according to Moslem population in the various provinces but where Muslims are in a majority they shall not contest more seats than their population warrants."

(Note: The question of excess representation of Muslims over and above their population in the provinces where they are in minorities to be considered hereafter.)

Point 3 demands "adequate and effective" representation of Muslims where they are in a minority but does not quite demand equality or more than that. This is singularly graceful. Point 4 merely demands for a section of the Indian people forming 20 per cent of the whole a representation of not less than 33 per cent. Following this principle the Hindus in Bengal may well claim a 50 per cent excess of seats in the legislature compared to their number. That is to say, instead of having say, 41 seats per centum they should be given 66. Or if so much cannot be conceded to mere Hindus let them have 49.9 seats per centum in the Bengal Legislature. This arrangement will not further infringe point 3 of Mr. Jinnah's 14 points. A similar arrangement could also be made for the Hindus in the Punjab and the N.W. Frontier Province.

Point 7 is rather promising of trouble. Full freedom of propaganda, for example will lead to many repetitions of *Rangula Rasul*, *Rasala Farman* and corresponding Muslim *Fatawahs* (not that the latter are prohibited now).

Point 12 demands protection for Moslem culture, language etc. We do not understand this. Are we to apply the infant industry argument here or should we call these Key Industries. That is to say, must we believe that Moslem culture etc. are just beginning to grow now

and would be crushed out by other and stronger cultures etc if left unprotected or is it that the very existence of the Moslems depends on their retaining their culture, language etc.? By the way, what is the Moslem language? Arabic, Pushtu, Persian or Urdu or none? Point 13 is most favourite-wife like. If in a province the Moslems form only 10 p. c. of the population or 5 p. c., must one appoint there 33 p. c. of all cabinet members from among these few Mahomedans? Most of the points are a bit vague. Hence one finds it difficult to comment on them properly. We hope these points will be soon published with explanations for the benefit of the public.

Leader of Indian Delegation to League of Nations

Sir Pheroz Sethna's resolution demanding leadership of this year's Indian delegation to the League for an Indian drew from the Government a confession to the effect that this year's leadership may also fall on an Englishman or an Indian Prince. We do not think an Englishman or an Indian Prince could in any sense be a representative of the Indian nation. If the Government would not trust a true representative of the nation to lead the Indian delegation, they should at least have the decency and honesty not to call the person chosen representative of the Indian nation. He should be called what he truly is—A nominee of the British rulers of India.

A British General Writes Indian History for the American Press

The *Living Age* of America publishes an article in its March 1929 number on "How the British came to India: A brief outline of the History of the Great Asian Peninsula and the Racial Hotchpotch it contains." The writer is a former Quartermaster General, Lt. General Sir George MacMunn, K. C. B., K. C. S. I., D. S. O. The entire history of British occupation of India has been written up by the distinguished military man in less than twelve hundred fifty words out of which a few hundred words contain only touring hints and journalistic smartness. Let us take a few samples from this excellent historical monograph.

Although the article is meant to tell the reader how the British came to India it

devotes most of itself to telling how good the British are and how the Aryan Hindus came to India and how savage, unjust, and tyrannical they were. Thus one is told, "Nearly all of the inhabitants acknowledge the rule of Great Britain and do so cheerfully and happily, though at present it has pleased some of the intelligentsia whom the British have educated in their own system to turn bitterly hostile to their European step-parents." When the Aryan Hindus came to India they came with "culture of some kind and a developed religion, the Hindu religion, which survives in all its early conceptions even to this day." They conquered the Dravidians and "they also wrought the greatest injustice that ever man unto man has done." They turned the conquered people into slaves who are forced to do every kind of unclean and hard work. "Sixty million of them exist in Hindustan to this day, and, when the Prince of Wales was in India four years ago, they surrounded his car in many places by thousands, crying that from the British alone did they get protection and justice, praying and petitioning that India was not fit for Homo Rulo in any form. A curious story, incredible almost, yet as true to-day as five thousand years ago." Then there is the story of a deceased Indian sweeper in France whom the Indians would not allow to be buried with the Indians and who was later buried by the British next to a "crusading knight."

Then the Hindus conquered more and built temples and developed a great civilization. Then prince Gautama came and preached, but his colourless cult could not appeal to the colour-loving Indians. So Hinduism remained supreme. Then, came Alexander who conquered and formed alliances and went away.

Again for hundreds of years Hindus fought against one another but never in all history" could any Hindu prince rule over all India. Then came Islam. First, the Arabs invaded the Indus valley and next their Turkish converts set up a throne at Delhi. "The conquerors spread over India, forcibly converting many, and tempting others by the simplicity of their faith, so that gradually there were no Hindu rulers left." But the Turkish rulers also failed to make one kingdom out of all India. They also fought among themselves. Then came the Moguls who for a short time ruled peacefully and well, but fell to quarrelling soon. At

that time there were some English traders in India who had to defend themselves, for the Moguls could protect them no more. Then they became more powerful and at last became rulers, for the Moguls had ceased to rule. So, "for the first time in history" the Indian people got "peace and prosperity". Their land became "homogenous" (and they lived happily ever after).

Bengal's Involuntary Service or Disservice

In his book, entitled "India's Hope," published this year, Mr F H Skrine, I C S (Retired), writes with reference to Bengal —

"The province proved of immense value during the era of struggle and consolidation. Its revenues enabled the East India Company to carry on the warfare in which it was involved, and to pursue the policy of annexation which was forced upon it. Sixty years ago Sir George Chesney declared, in his *Indian Policy* that Bengal was the one part of India worth retaining were the rest to go." His words apply with tenfold force at the present day — p 30-40.

In some of our back numbers we have referred to the fact that Britain's Indian Empire was built up in its early stages mainly with Bengal money, and we have also given authorities for this statement. Mr Skrine's testimony is a fresh proof. As for Britain's political expansion, so for her 'industrial revolution' and growth in the eighteenth century, she is greatly indebted to Bengal. Brooks Adams writes in his work on "The Law of Civilization and Decay" (Sonnenschein, London)

"Very soon after Plassey the Bengal plunder began to arrive in London and the effort appears to have been instantaneous, for all the authorities agree that the industrial revolution, the event which has divided the nineteenth century from all antecedent time, began with the year 1769." Pp. 263-4.

The author then goes on to give details to prove his assertion, and these are to be found in Major B. D. Basu's book "Rum of Indian Trade and Industries."

The political and economic services thus rendered by Bengal to Britain were, however, involuntary and inglorious. But even if they had been otherwise, Bengal could not have claimed anything in return from a grateful Great Britain. For gratitude is a word which is not to be found in the dictionary of imperialists.

Sir George Chesney has declared that Bengal is the one part of India worth

retaining were the rest to go, and Mr Skrine has confirmed his dictum emphatically. Perhaps no subject country can be held under subjection for ever unless the spirit of its people be crushed. One wonders whether that is the reason why Bengalis have suffered to a great extent from the "lawless" methods of deportations, internments, etc., in addition to the legal methods of repression.

What has been spoken of above as Bengal's involuntary services to Britain, may be considered disservices by the inhabitants of those provinces which were annexed by Britain by using the revenues of Bengal. To all such aggrieved non-Bengali Indian patriots, Bengal may say in self-defence that she was not a conscious and consenting party to the use of her revenues in this way.

It is to be hoped that present-day non-Bengali patriots will not stand in the way of Bengal's obtaining financial justice on the ground of her past unconscious and unintended offence. If Bengal be enabled to spend at least as much for education, sanitation, agricultural improvements and industrial and commercial expansion as any of the other and less populous provinces of India, her children will gratefully repay this friendly service by redoubling their efforts to win a glorious position for the whole of India.

Europeans' Debt to Orientals

Oliver Schreiner writes in "Man to Man", p 179

"We Northern fair-skinned have had great men; our glimpses of new truths, new masteries over matter have added our gain to humanity's sum of riches even in the direction of creative art, but when we look around us on what we call our civilization, how little is really ours alone and not drawn from the great stream of human labours and creation so largely non-European?"

England in 1869

Alfred Russel Wallace wrote in 1869 in "The Malay Archipelago," (p. 593): "We are the richest country in the world, and yet... more than one-tenth of our population are actually Paupers and Criminals." What is England like now?

NADIR SHAH

From an old Painting in the India Office

Probst Press, Calcutta

VOL. XLV
NO 5

MAY, 1929

The End of Nadir Shah

NADIR Shah has been rightly called "the Napoleon of Asia" (Sykes) From Asia Minor to Delhi none was able to withstand his victorious arms. Like Napoleon he founded an empire stretching over half a continent. Like Napoleon he restored the orthodox State Church to his country. Like Napoleon he brought the spoils of many nations to his capital. Both of these supermen made themselves national idols, but lived to be execrated by their countrymen for the massacres they ultimately inflicted. Their end was equally tragic: the French emperor died a miserable captive at St Helena, the Persian fell under the assassin's dagger. Their empires perished with them. Napoleon's in his lifetime, Nadir's immediately after his death.

II

Nadir Shah had entered Delhi as conqueror on 9th March 1739 (Old Style) and left it on 5th May, laden with the plundered wealth of the Indian people and the plundered treasures of eight generations of emperors. His territorial gains from the Mughal empire were Afghanistan, and all Panjab and Sindh west of the Indus, besides Tata and other

His soldiers and subjects shared these splendid gains of their chief from a rich and effeminate people. From the conquered city of Delhi Nadir Shah issued a proclamation (16th March) excusing the entire population of Persia from the payment of revenue for three years. The chiefs of his army were lavishly rewarded, and the common soldiers received eighteen months' pay together, of which one year's was an advance payment and six months' pure gratuity. Even the camp-followers received Rs. 60 per head as salary and Rs. 100 as bounty.

III

From India Nadir returned to Kabul on 21st November, but set out in a few days to subdue Khuda Yar Khan, the governor of Sindh, whom he pursued to Amarkot, in the heart of the Indian desert (26 Feb 1740), and entirely crushed.

Then followed in rapid succession the conquests of Balkh, Bukhara and Khwarizm (modern Khiva), which carried the frontier of the Persian empire to the Oxus river. The Sultan of Constantinople sent his armies from Kars to Bagharand to oppose the Persian advance, but Nadir utterly routed these forces.

The only place where his arms failed of success was Daghestan, west of the Caspian Sea. The highlands of this province are covered with forests and difficult of access through the broken hilly nature of the land surface and the utter lack of roads. The natives are sturdy fighters, extremely fond of liberty and expert in raiding the neighbouring lands. For many centuries they successfully defied the Turks, Russians and Persians. The air in the lower passes is pestilential. No food for a large army can grow locally, while the lack of roads and the enemy's ambushes prevent the coming of provisions from a distance. Nadir fought the Daghestanis fiercely in 1742 and 1744, but had to retire precipitately in order to save himself from starvation or complete investment. Heavy snow-fall during the retreat increased the losses and sufferings of his army. He could hold only the coast-towns in the plains.

Daghestan was the Moscow of this Asiatic Napoleon. The spell of his invincibility was now broken. Rebellions broke out in many places of his empire,—in Fars and the ports of the Gulf of Oman, in Shirwan, Tabriz, Astrabad, Sistan and the land of the Kurds (Khabushan). Everywhere the rebels set up pretenders to the local thrones and killed the loyal officers of Nadir.

V

Strangely enough, the ferocious tyrant also developed into a miser. The gold and jewels brought away from Delhi were hoarded by him, while the cash was exhausted in these long wars.

Two ambassadors from Nadir, named Muhammad Ali Beg and Muhammad Karim Beg, came to Muhammad Shah the Emperor of Delhi with some presents and a complimentary letter. After a few days they reported that Nadir Shah had entrusted them with an oral message to the effect that owing to his wars in Central Asia Daghestan and Asiatic Turkey, and the vast expenses of his army, their master's treasury had become empty and he would consider it a friendly act if the Emperor of Delhi would help him with fifty or sixty lakhs of Rupees in cash! Muhammad Shah replied, "My brother the Shahanshah, when taking leave of me had advised me to believe only in what he would write to me and never to accept as genuine any oral message, which might be an invention of his envoys. Besides, owing to the weakness of my Government, the violence and disobedience of the peasants and landlords, and the slack administration of my local officers, nothing is coming to my treasury from the provinces. My expenses exceed my income." After sending this reply, Muhammad Shah and his ministers lay trembling in fear lest Nadir Shah should repeat his invasion, and they were relieved only when they heard of his death! [*Ashub.*]

Nadir Shah now resorted to the cruellest extortion to fill his treasury. As his Secretary writes, "These rebellions only increased the violence of his temper and his acts now became even more mild. He summoned the administrators (*amals*) of the provinces, to render accounts, and though no defalcation was proved against them and no complaint was made by any subject that they had taken illegal exactions, Nadir declared them as owing heavy sums to the

1453. How he was related to his predecessor is not known nor is it clear why he left Majapahit and resided at Keling.

After him for three years there was an interregnum. Then two princes followed one another on the throne of Majapahit. Both of them had short reigns and the last left the capital.

The king, who is usually called Bhra Vijaya V, reigned from 1468-1478 and died in his capital. Such are the unconnected facts which we know about the last years of Majapahit.

It is generally accepted that Majapahit fell in 1478. Sir Stamford Raffles gives the popular Muhammadan version of the story. Among the wives of Browijoyo was a Chinese lady. She was repudiated by the Javanese monarch, when pregnant of Raden Patah. She had to seek shelter with Arya Damar, the chief of Palembang (the old Shrivijaya in Sumatra), who was a relation of Browijoyo. Raden Patah, when he grew up, accompanied by Raden Husen, a real son of Arya Damar, came to Java from Sumatra after becoming converts to the Muhammadan religion of which Palembang was the most important centre. Raden Patah, who was really the son of Browijoyo, became a devotee while his step-brother Raden Husen sought temporal advantages and soon became the commander-in-chief of the Majapahit army. Raden Patah began to intrigue for the subversion of the Hindu religion. Having at last formed a considerable party and mustered a respectable force, he gave the command to a Javanese—for he himself was not a military leader. This is said to have happened in 1468 A.D. The Muhammadan force was defeated by the Hindu army under the command of Husen. Raden Patah was, however, not discouraged by this defeat at the hands of his step-brother. He obtained succour from the faithful at Palembang and was soon able to assemble a fresh Muslim army. Husen, still the commander of the Hindu army of Majapahit, was now in his turn defeated. Majapahit fell and was destroyed. And this triumph of Islam took place in 1400 Saka, i.e., 1478 A.D.

This version however is refuted by an inscription dated 1408 Saka (1486 A.D.) found engraved on a rock in the south-east of Surabaya. Prof. Krom in his now book on the Indo-Javanese period (Indo-Java-anische Geschiedenis) gives all the facts

bearing on this matter brought to light by recent research work. In this inscription a Brahman, Brahmaraja, versed in the four Vedas, is mentioned as the recipient of gifts from a Hindu ruler. This Brahman is represented as having inspired this king with ambitious ideas which led the prince to a position of overlordship. This prince is mentioned in the inscription as living at Jinggan "where the battle was fought against Majapahit." The name of this king is given as Ranavijaya Girindravardhana and it is he who may have seized Majapahit in 1478 A.D.

The coast-line of Java was however already Islamized, but the Muslim rulers of these places still recognized a Hindu suzerain ruling inland.

Barros, a Portuguese writer, writes about 1498 A.D. that in the East (he means thereby the Archipelago and the Malay Peninsula) the Hindus ruled but Malaka, a part of the Sumatran coast and some sea-ports in Java were in Muhammadan occupation. Barros refers to the influence of Islam as a pest which spread from Malaka along trade channels.

Malaka, in the second half of the 15th century, had become a great emporium of trade between East and West (i.e., China and Java on one side and India and Arabia on the other). In India Gujrat was the province which had most frequent trade relations with Malaka.

Thus at the end of the 15th century the suzerain power was still Hindu though places on the sea-coast were fast becoming Muhammadan. In 1509 Malaka itself, the stronghold of Islam, was afraid of an attack by the Javanese Hindu king. In the same year the first Portuguese ships appeared before Malaka. In 1511 came Albuquerque himself from Cochín capturing Gujrat ships wherever he could find them.

There was a Hindu settlement in Malaka which was a discordant element in a Muhammadan atmosphere. The leader of the Hindus, Timut Raja, entered into secret negotiations with the Portuguese. The Javanese Hindu king himself sent an ambassador with presents to Albuquerque—for he was not on friendly terms with the Sultan of Malaka who oppressed his Hindu subjects. The Sultan was driven out by the Portuguese.

In 1513 Albuquerque wrote to the king of Portugal referring to the Hindu overlord of Java as seeking the alliance of the Portu-

guesa. Albuquerque adds : The other towns, which are in his territory, will necessarily be on friendly terms with us—or we shall send a small fleet to the help of the Javanese king.

The last trustworthy Portuguese account of Hindu Java is of the year 1514. The Governor de Brito writes to King Manuel of Portugal in January, 1514—"Java is a great island. There are two Kafir (i.e., non-Muslim) kings—one is called the King of Sunda (W. Java) and the other of Java. The rulers on the coast are Muhammadan and some of them are very powerful. They have many ships and great influence."

The Italian Pigafetta, who travelled in these regions in 1522 with the great Magellan, writes—"The greatest towns in Java are these: Majapahit, the king of which place when he lived was the greatest prince of all the islands and was called Raja Pati Unus, and then Sunda, Daha, Demak, Gajamada, etc."

Now we know from earlier Portuguese accounts that Pati Unus was a warlike Muhammadan prince of Jipara (in W. Java). He had fought naval action with the Portuguese admiral d'Almeida in 1513 in which he was beaten only with great difficulty by the Portuguese. After this Pati Unus is mentioned as the conqueror of Sunda (westernmost part

of Java). Did he also win for Islam the great eastern kingdom of Majapahit? The last Hindu ruler of Java must then have fallen before the victorious arms of Pati Unus between 1513 and 1522.

Later Javanese tradition, as recorded by Sir Stamford Raffles, points to another person as the champion of Islam. This Muslim apostle was the Sultan of Cherbon (in W. Java)—still revered as Sheikh Maulana. He was an Arab by birth and he and his two sons are said to have conquered and converted the whole of West Java towards the close of the 15th century. The ruling Muhammadan princes in West Java still look on Sheikh Maulana as their common ancestor.

Thus the Arab traders, who first came to Sumatra and Java as early as the end of the 7th century—to carry on trade and commerce with the Farther East succeeded by the beginning of the 16th century in winning political supremacy and propagating their religion throughout the Archipelago and the Malay Peninsula. But already enterprising mariners from Portugal and Spain had made their appearance in the arena and the Dutch were soon to follow. Political supremacy was to be wrested soon from the Muslim princes but the religious supremacy of Islam is still unquestioned in these regions.

A Tribune Of The People

By "VINOD"

DR. Samant Mehta's is a household name to-day in Gujarat. Excepting Sir A. V. Thakkar, that most unostentatious and silent social worker, the friend of the Bhils and the untouchables, there is hardly another man to-day in the province who occupies that lofty, unique position amongst the ranks of social workers that Dr. Mehta occupies. It is not always desirable to attempt an estimate of the life-work of any individual when he is alive. The task is extremely difficult if the writer is on terms of close friendship with him. In this short account, therefore, an attempt is made only

to acquaint the reader with the man as he appears to the public. To know Dr. Mehta in true perspective, one requires to recall to his mind two pictures—one of a fashionable young Indian clad in perfect European costume and living in an English style in pre-Non-Co-operation days, the other of a peasant-like looking social worker, anxiety-craven, sweating under his brow with his little kit in his hand while measuring on foot a little distance here or there under a scorching sun, living amongst the poor, as one of them in Non-Co-operation and in post-N-C-O-days. That furnishes, in short, the

That night Nadir Shah was sleeping in the tent of the daughter of Md. Husain Khan. A strange unrest had seized him. He repeatedly entered the tent and came out of it, unable to stay in one place. His attendants were perplexed but durst not ask him the reason of it. Hasan Ali Beg, one of his oldest and most faithful servants, inquired what ailed him. Nadir Shah called him to his side and told him that he had had an evil dream, which Hasan Ali must keep a secret from others. The Beg pacified him and Nadir Shah retired to his tent. Here he was so fully overcome by sleep—the reaction of his late excitement and alarm—that he did not undress himself but merely took off his *nadiri* crown (with four *algrettes*) and laid it down on the floor, and soon closed his eyes in a deep slumber which was to be his last.

Md. Salih Khan rushed forward and struck his sword at Nadir's shoulder, severing his arm. But the lion of Persia was not yet dead. That voice of thunder which had rung clear above the din of a hundred battles and heartened the Persians on to victory against fourfold odds, had not yet been stilled. Salih Khan quailed before Nadir's glance and roar. He had struck his first blow when maddened by fear, but immediately afterwards reaction drove him to the opposite extreme. He stood rooted to the ground by terror, his feet unable to move and his hand to rise. Just then Muhammad Beg Qachar entered the tent, and taking in the situation at a glance, promptly finished the perilous business by cutting off Nadir Shah's head,—“that head which in loftiness of power and grandeur had soared into the highest heaven.” (*Mujmil*)

Fall of the Last Hindu Kingdom of Java

By DR. BIJANRAJ CHATTERJEE, M.A., D.LITT. (Paris)

THE last Hindu kingdom of Java was Majapahit—a name which its poet and historian Prapancha translates into Sanskrit as *Bilva-tikta*. This principality in East Java rose to the height of its power under King Hyam Wuruk (1350-1389 A. D.). Hyam Wuruk (a Javanese name meaning the young cock) is also known by his title of Sir Rajasanagara in Prapancha's chronicle *Nagarakritagama*. This king and his *pati* or minister Gajamada brought the whole Archipelago under the sway of Majapahit. This maritime empire stretched as far as New Guinea to the east and the Philippine Islands to the north. Many names given in the long list of its dependencies cannot now be identified—some of these may have been places on the north-west coast of Australia. Considerable portions of the Malay Peninsula also acknowledged the suzerainty of Majapahit. But after the death of this great king Majapahit's foreign possessions rapidly fell away. Majapahit itself had to fight for its existence against enemies among which the most formidable was rising power of Islam.

Before we commence the history of its decline and downfall we might turn for a moment to a bright picture drawn of the great capital city by Prapancha in his *Nagarakritagama*. Prapancha was a contemporary of Hyam Wuruk and followed the king during the royal tours:—“The capital Majapahit (*Bilva Tikta* or *Tikta Shripala*) is encircled by a wall of red brick—thick and high. On the west there is a great open space surrounding a deep artificial lake. Brahma-sthana trees, each with a *bodhi* terrace at its foot, stand in rows, and here are posted the guards who keep watch by turn in this public square. In the north there is a *Gopura* with iron gates. Towards the east there is a high cupola—the ground-floor of which is laid with *vajra* (cement). From the north to the south runs the market square—exceedingly long and very fine with buildings all around. In every Chaitra the army meets here. In the south there is a fine cross-road and a wide and spacious open space. North of this square there is an audience hall where the learned and the ministers sit together. East of it is a place where the Shaiva and the Buddhist priests speak and argue about their doctrines. There is also accommodation here for making offerings during the eclipse of the moon for the good of the whole country. Here also are the *homakundas* in

1453. How he was related to his predecessor is not known nor is it clear why he left Majapahit and resided at Keling.

After him for three years there was an interregnum. Then two princes followed one another on the throne of Majapahit. Both of them had short reigns and the last left the capital.

The king, who is usually called Bhra Vijaya V, reigned from 1468-1478 and died in his capital. Such are the unconnected facts which we know about the last years of Majapahit.

It is generally accepted that Majapahit fell in 1478. Sir Stamford Raffles gives the popular Muhammadan version of the story. Among the wives of Browijoyo was a Chinese lady. She was repudiated by the Javanese monarch, when pregnant of Raden Patah. She had to seek shelter with Arya Damar, the chief of Palembang (the old Shrivijaya in Sumatra), who was a relation of Browijoyo. Raden Patah, when he grew up, accompanied by Raden Husen, a real son of Arya Damar, came to Java from Sumatra after becoming converts to the Muhammadan religion of which Palembang was the most important centre. Raden Patah, who was really the son of Browijoyo, became a devotee while his step-brother Raden Husen sought temporal advantages and soon became the commander-in-chief of the Majapahit army. Raden Patah began to intrigue for the subversion of the Hindu religion. Having at last formed a considerable party and mustered a respectable force, he gave the command to a Javanese—for he himself was not a military leader. This is said to have happened in 1468 A.D. The Muhammadan force was defeated by the Hindu army under the command of Husen. Raden Patah was, however, not discouraged by this defeat at the hands of his step-brother. He obtained succour from the faithful at Palembang and was soon able to assemble a fresh Muslim army. Husen, still the commander of the Hindu army of Majapahit, was now in his turn defeated. Majapahit fell and was destroyed. And this triumph of Islam took place in 1400 Saka, i.e., 1478 A.D.

This version however is refuted by an inscription dated 1408 Saka (1486 A.D.) found engraved on a rock in the south-east of Surabaya. Prof. Krom in his new book on the Indo-Javanese period (Indo-Java-nische Geschiedenis) gives all the facts

bearing on this matter brought to light by recent research work. In this inscription a Brahman, Brahmaraja, versed in the four Vedas, is mentioned as the recipient of gifts from a Hindu ruler. This Brahman is represented as having inspired this king with ambitious ideas which led the prince to a position of overlordship. This prince is mentioned in the inscription as living at Jingga "where the battle was fought against Majapahit." The name of this king is given as Ranavijaya Girindravardhana and it is he who may have seized Majapahit in 1478 A.D.

The coast-line of Java was however already Islamized, but the Muslim rulers of these places still recognized a Hindu suzerain ruling inland.

Barros, a Portuguese writer, writes about 1498 A.D. that in the East (he means thereby the Archipelago and the Malay Peninsula) the Hindus ruled but Malaka, a part of the Sumatran coast and some sea-ports in Java were in Muhammadan occupation. Barros refers to the influence of Islam as a pest which spread from Malaka along trade channels.

Malaka, in the second half of the 15th century, had become a great emporium of trade between East and West (i.e., China and Java on one side and India and Arabia on the other). In India Gujrat was the province which had most frequent trade relations with Malaka.

Thus at the end of the 15th century the suzerain power was still Hindu though places on the sea-coast were fast becoming Muhammadan. In 1509 Malaka itself, the stronghold of Islam, was afraid of an attack by the Javanese Hindu king. In the same year the first Portuguese ships appeared before Malaka. In 1511 came Albuquerque himself from Cochin capturing Gujrati ships wherever he could find them.

There was a Hindu settlement in Malaka which was a discordant element in a Muhammadan atmosphere. The leader of the Hindus, Timut Raja, entered into secret negotiations with the Portuguese. The Javanese Hindu king himself sent an ambassador with presents to Albuquerque—for he was not on friendly terms with the Sultan of Malaka who oppressed his Hindu subjects. The Sultan was driven out by the Portuguese.

In 1513 Albuquerque wrote to the king of Portugal referring to the Hindu overlord of Java as seeking the alliance of the Portu-

guesse. Albuquerque adds : The other towns, which are in his territory, will necessarily be on friendly terms with us—or we shall send a small fleet to the help of the Javanese king.

The last trustworthy Portuguese account of Hindu Java is of the year 1514. The Governor de Brito writes to King Manuel of Portugal in January, 1514—"Java is a great island. There are two Kafir (i.e., non-Muslim) kings—one is called the King of Sunda (W. Java) and the other of Java. The rulers on the coast are Muhammadan and some of them are very powerful. They have many ships and great influence."

The Italian Pigafetta, who travelled in these regions in 1522 with the great Magellan, writes—"The greatest towns in Java are these: Mayapahit, the king of which place when he lived, was the greatest prince of all the islands and was called Raja Pati Unus, and then Sanda Daba, Demak, Gajamala, etc."

Now we know from earlier Portuguese accounts that Pati Unus was a waikeke Muhammadan prince of Japara (in W. Java). He had fought naval action with the Portuguese admiral d'Andrade in 1513 in which he was beaten only with great difficulty by the Portuguese. After this Pati Unus is mentioned as the conqueror of Sunda (westernmost part

of Java). Did he also win for Islam the great eastern kingdom of Mayapahit? The last Hindu ruler of Java must then have fallen before the victorious arms of Pati Unus between 1513 and 1522.

Later Javanese tradition, as recorded by Sir Stamford Raffles, points to another person as the champion of Islam. This Muslim apostle was the Sultan of Cheribon (in W. Java)—still revered as Sheikh Maulana. He was an Arab by birth and he and his two sons are said to have conquered and converted the whole of West Java towards the close of the 15th century. The ruling Muhammadan princes in West Java still look on Sheikh Maulana as their common ancestor.

Thus the Arab traders, who first came to Sumatra and Java as early as the end of the 7th century—to carry on trade and commerce with the Farther East succeeded by the beginning of the 16th century in winning political supremacy and propagating their religion throughout the Archipelago and the Malay Peninsula. But already enterprising mariners from Portugal and Spain had made their appearance in the arena and the Dutch were soon to follow. Political supremacy was to be wrested soon from the Muslim princes but the religious supremacy of Islam is still unquestioned in these regions.

A Tribune Of The People

By "VINOD"

DR. Sumant Mehta's is a household name to-day in Gujarat. Excepting Sjt. A. V. Thakkar, that most unostentatious and silent social worker, the friend of the Bhils and the untouchables, there is hardly another man to-day in the province who occupies that lofty, unique position amongst the ranks of social workers that Dr. Mehta occupies. It is not always desirable to attempt an estimate of the life-work of any individual when he is alive. The task is extremely difficult if the writer is on terms of close friendship with him. In this short account, therefore, an attempt is made only

to acquaint the reader with the man as he appears to the public. To know Dr. Mehta in true perspective, one requires to recall to his mind two pictures—one of a fashionable young Indian clad in perfect European costume and living in an English style in pre-Non-Co-operation days, the other of a peasant-like looking social worker, anxiety-craven, sweating under his brow with his little kit in his hand while measuring on 'feet' a little distance here or there under a scorching sun, living amongst the poor, as one of them in Non-Co-operation and in post-N.-C.-O.-days. That furnishes, in short, the

real keynote to an understanding of the man. His cultural attainments, his ideals, his convictions have not changed, they are just the same as they were two decades back but they have only been now directed into another channel and it is now altogether a changed life.

Culture and intelligence he inherited in abundance. He is the grandson of that eminent Gujarati scholar and novelist Nand-hanker Mehta on the maternal side. He was given the best available education both here and in England. In the early portion of this century, it was considered almost an essential in life for a young man aspiring for a brilliant and lucrative career to be educated in a foreign land, necessarily in England. In Dr. Mehta's case, not only were the circumstances favourable, but there was an affluence of means. The moulding of life in his early days was influenced by and had a distinct stamp of the atmosphere and environment of a royal family, his father being the Gaekwad's personal physician. However, even in those days, as in those, his religious temperament, his notions of social usefulness, or service, and love of independence were the same.

The future is to all men a sealed book. Hardly did this young man know when he joined the Baroda State Service on return from Europe that a day was awaiting him when he would be called upon to take up his cudgel against the same service of which he was once a high official. The young cricketer, a terror on the field at Navsari in these days, he had no idea that a much wider field was awaiting him in life, where he was to be called upon to play not the gay, recreative cricket but a much harder game—a life of penance of a true Karmachari. Dr. Mehta soon realized that sport was not the whole of life in India, but only its recreation. Though a great social force in Gujarat to-day, the stamp that the young medical officer and his large-minded liberality and almost instinctive courtesy left on the public life of that town is still to be felt in all its splendour.

Dr. Mehta later served the State in many capacities and rose to a very high rank. But, the Government service and that too in an Indian State, never once damped his spirits, enthusiasm or love of independence of speech or action. The Government service even to-day as in these days, is a synonym for servility. The best of our men have unfor-

unately under its suffocating influence succumbed to the temptations of a life full of pomp and power. Dr. Mehta not only allowed these temptations to have a sway over him and that is why he has been found stubbornly fighting the administrative cranks of that once progressive State. Unlike many an Indian youth, he has imbibed the spirit of liberty in England, not of licence. That stands in good service to him to-day. Very few persons had facilities which Dr. Sumant enjoyed, of having not less than five tours round the world, and it was during these tours with the Maharaja, that he got opportunities to come into contact with the best intellects of these lands, with the young Egyptians, radical Republicans and Parnellites of Ireland, and thus to cultivate a very broad view of life. The first sparks of patriotism in him were ignited in those countries and he acknowledges the fact with a grateful heart even to-day.

This much about his early life. Even then he was connected with many institutions in this province and had put in a fairly creditable record in the field of social service. But then his real solid work commenced since he gave up the lucrative post in the Civil Service of the State. As an officer he was very popular, he was not dreaded and forsaken as officials generally are, by the people, barring a few flatterers or hangers on who always find their place where officialdom reigns supreme. This officer was cast in a different mould. He used to mix freely with the people and tried to penetrate into their lives, their hardships and their miseries. While in districts on duty, he was never a burden to the people, and resented the slightest indulgence, if offered to his children, even by his friends. Stern rigidity was the rule of his life. If there is one individual who has rendered the greatest possible service in the cause of advancement of female education in Gujarat, it is Dr. Sumant. Of course his cultured wife was his helpmate in every activity of his. Names of both Sumant and Sharda Mehta will go down to posterity—will be remembered by them with gratitude when Gujarat reaps in future the fruits of this benediction they have bestowed on her.

To-day village life and Sumant are two synonymous terms, though in old days, village life was not less dear to him. He has never flinched a bit from wandering about from cottage to cottage in the Rani-

of supreme importance to Gujarat which was destined to lead India and be in the vanguard of national development. The mere recognition of the desirability of freedom cannot be an inspiring motive. There are few Indians at present, whether loyalist, moderate or nationalist in their political views, who do not recognize that the country has claims on them or that freedom in the abstract is a desirable thing. But most of them, when it is a question between the claims of the country and other claims, do not in practice choose the service of the country, and while many may have the wish to see freedom accomplished, few have the will to accomplish it. There are other things which we hold dearer and which we fear to see imperilled either in the struggle for freedom or by its accomplishment. Dr. Mehta was above all these and has not paused for a moment to consider, while consecrating his life to the service of the country, whether he was not risking his well-earned pension. It must have been very difficult for him to rough it out to the extent he has at present done.

Dr. Mehta is also reckoned as an inspiring writer, though here too he is a thorough utilitarian and would write only on subjects that would directly or indirectly help his missionary activities. Those who are to-day ardent admirers of his writings will be surprised to know that only ten years back Dr. Sumant could not write Gujarati well. He soon perceived, when on the threshold of this new life, that a nation could not grow without finding a fit medium of expression for the new self into which it was developing without a language which would give permanent shape to its thoughts and feelings and carry every new impulse swiftly and triumphantly into the consciousness of all. Realizing this he made a strenuous effort to obtain mastery over the language of the populace for whose betterment he had dedicated himself to work. He very ably edited that premier monthly of Gujarat, the *Yuga Dharma* for over a period of two years, in the forced absence of Sjt. Indulal Yagnik in Baroda jail and proved that he could shoulder even a literary venture. *Yuga Dharma* proved to be a veritable medium for Dr. Mehta to preach his ideals of "Yuga Dharma" (i. e. the religion of the present age). His writings may not rank as first class literary pieces, but they at least display his sincerity of purpose, his courage of conviction

and a transparent geniality of heart and soul.

Dr. and Mrs. Mehta are connected with many educational institutions of Gujarat. Both of them were amongst the chief lieutenants of Sjt. Vallabhbhai Patel in the Bardoli campaign and rendered yeoman's service to the cause. But Dr. Mehta's main life-work consists in the emancipation of the Baroda State subjects. He is to-day the unchallenged leader of two millions of Baroda subjects groaning under all the evils of the rule of an absentee ruler. They have always in times of their trials, turned their eyes toward him and felt that the rudder of their ship was in quite safe hands. His lead has never yet failed them; and he commands their entire confidence. He is the soul of the Baroda State Subjects' Conference (Praja Mandal) and his masterly Presidential addresses at the Bilimora special session of the Praja Mandal and the Sojitra Agriculturists' Conference reveal his wonderful grasp of the problem of the agriculturist and his oneness with the cause of the forsaken and the poor. He stands to-day at the door as a cautious watchman to safeguard the interests of 20 lacs of human souls.

It would be an unpardonable omission not to mention, in this narration, Shrinati Sharada Mehta, a name to conjure with, a name so universally revered and respected throughout the length and breadth of this province. In the whole of Dr. Mehta's stormy life, his home has been the green spot. Sharada Mehta is the presiding deity of the "home", a solace to many an agrieved soul and wounded heart. This couple has been for over two generations, an ideal for young Gujarat. The wells of that small hut-like bungalow in Sayaji Ganj must have witnessed many a broken heart coming to its occupants to seek solace and going out full of hope and joy. Many a young missionary may have derived their inspiration from this quarter. Dr. Mehta's house in this sense is not a residence but an institution—the birth-place of many fruitful schemes. For her serene sincerity, her over-flowing kindness and love to all, her culture and her social nature, Mrs. Sharada Mehta stands unequalled. She is an ideal housewife, a loving mother and a sincere friend and is a living contradiction to the prevailing false notion that educated ladies could never be good housewives. She has in adapting herself to her husband's

life of renunciation and service displayed an admirable spirit of sacrifice Mrs Mehta, now in her fifties, was the first amongst Gujarat Hindu ladies to graduate from the Bombay University, one of the early pioneers of female education. In imparting the highest possible education to her daughters she has given an impetus to the movement she all through pioneered. One of the girls is a Science graduate while the other has been reading at the London School of Economics. After graduating from Karve's University Mrs Mehta takes a very keen interest in Karve's University and is a member both of its Senate and the Syndicate. These are some of the merits of the lady who is to-day a great social force in the province of Gujarat, but her greatest attraction is her "Motherhood". She is the very personification of that divine spirit Mahatmani once while proposing her to the Chair of the Social

Conference at Godhra paid a very high tribute to the afore-said virtue of hers by saying that "he would very much wish—aspire—to be born to her," and the Mahatma is hardly a man who unnecessarily lavishes encomiums on any person. Such is the lady Dr Mehta had the good-luck to secure as his life-companion Mrs Mehta can unreservedly claim not a little share in all the successes in his life. All honour to the man who may not be a *Sadhu* but who is striving by his deeds, unconsciously though, to attain to *Sadhu*. His is a life of strange vicissitudes, with its bitter trials and its glorious poverty. May he enjoy it long, exemplifying the words of the poet

'To serve thy generation, this thy fate,
Written in water, swiftly fades thy name
But he who loves his kind does, first
and late

A work too great for fame"

Some Men I have Known

B. NAGENDRANATH GUPTA

ANANDA MOHAN BOSE

IT was during my stay at Karachi that I first met Ananda Mohan Bose at Lahore. On my way from Calcutta to Karachi in 1887 I halted for a few days at Lahore and stayed with Sitala Kanta Chatterji, then Editor of the *Tribune*. I found there Ananda Mohan Bose with his wife and his brother Dr Mohini Mohan Bose. That was the beginning of our acquaintance. At the Bombay Congress in 1889 we lived together in the same house Surendra Nath Banerji and several others were also there. We had our meals together. Our conversation referred often to Charles Bradlaugh, who was attending the Congress and whose accession to the representation of India in the House of Commons was a great gain. Afterwards I met Ananda Mohan Bose several times in different places. He came to Lahore to interview Sardar Dyal Singh in connection with the founding of a theistic college in Lahore, and he called on me on that occasion.

Ananda Mohan's brilliance and intelligence were stamped upon his features. He had a fine face and particularly bright eyes, and was an excellent conversationalist. As a public speaker he was fluent and impressive. There was a story about him which I believe was quite true, that Mr Sutcliffe, a famous Principal of the Presidency College, Calcutta, used to say that Ananda Mohan was the most brilliant student that had ever passed out of the college. I never heard him gossiping or discussing other people. The last time I saw him was in 1899, the year that the Congress was held at Lucknow. Romesh Chandra Dutt was President elect and one afternoon, while I was sitting with him in his house, he proposed that we should go and consult Ananda Mohan Bose, who was living close by, about certain matters connected with the Congress. We just walked over to the house and found Ananda Mohan ill and lying on a sofa. It was his last illness for he never quite recovered from it. He was in evident pain but that

did not prevent him from keeping up an animated conversation for a pretty long time, discussing the lines that should be followed at the next Congress and letting R. C. Dutt have the benefit of his experience of public life. Romesh Chandra had recently retired from the *Indian Civil Service* and though he was a publicist as well as an ex-official, he rightly considered that Ananda Mohan Bose would be able to give him valuable advice.

KALI CHARAN BANERJEE

Kali Charan Banerji was present at the Lahore Congress of 1893 and came to see me at my house one morning. Of course, I knew all about him, had seen him often in Calcutta and had heard him speak, and considered him one of our finest public speakers. Besides, his nephew Bhavani Chandra (Brahmabandhava Upadhyaya) had told me all about his beautiful domestic life. The best speech of Kali Charan that I had heard was at a meeting at the Calcutta Town Hall to protest against the arrest and imprisonment of some members of the Salvation Army, Commissioner Booth-Tucker being one of them, in Bombay on a charge of obstruction of a *public thoroughfare*. *The party* had just come out to India and were preaching in the streets of Bombay in their own fashion when all of them were arrested and locked up. Keshub Chandra Sen presided over the Calcutta meeting and the best speech was made by Kali Charan Banerji who asked those present whether they would show sympathy or antipathy with the salvationists and spoke with great force and eloquence. It was an honour and a pleasure to have him sitting in front of me and talking with great simplicity and frankness. Several years afterwards when his health was failing rapidly, Kali Charan Banerji was present at the Calcutta Congress of 1906, where were heard the first mutterings of the storm that broke out in a tempest the next year at Surat. Kali Charan fainted at the Calcutta Congress and was taken home.

I had of course heard of his remarkable career and the grit and perseverance that had enabled him to overcome all difficulties and to obtain the M. A. and M. D. degrees of the Calcutta University. I spoke personally to the Calcutta graduates in Lahore and wrote to others who lived in other districts in the Punjab. Every one of them voted for Dr. Nil Ratan Sircar. After the Congress of 1892 at Allahabad I paid a flying visit to Calcutta and while passing the Senate House on College Street saw a crowd on the steps and at the entrance of the Hall. I suddenly remembered that the election of fellows was in progress and I thought I would inquire how it was going on. At the head of the stairs I met my friend, excited and jubilant, and he rushed in and brought out Dr. Nil Ratan Sircar, who warmly thanked me for the Punjab votes, which had been given to him solid, a few minutes later Ashutosh (afterwards Sir) Mukerji, who had been counting and checking the votes in a room came out and he was surrounded by the friends and supporters of the candidates. In reply to their eager questions Ashutosh Mukerji said, "I cannot tell you about the other candidates yet but you all know who will top the list", and we understood that Dr. Nil Ratan Sircar was leading by a substantial majority. This was the beginning of a friendship which I prize and I and mine have been the recipients of many kindnesses from Sir Nil Ratan Sircar. Somehow or other I have admired Calcutta mostly from a distance, but during my periodical brief stay my people often have had the benefit of Dr. Sircar's great skill as a physician. I remember in particular a striking instance of his devotion to the science of medicine. In the house next to mine on Grey Street were living some relations of the late Sarada Charan Mitra, at that time a Judge of the Calcutta High Court. There was a girl of about twelve living in the house who had an attack of high fever. Dr. Sircar had been called to the house of Sarada Charan Mitra on the other side of the road to examine someone and there he was asked if he would kindly also examine the girl in the other house. He went over at once, examined the patient very carefully, refused a fee and said he would come again. I was with him and he told me it was a very peculiar case, but the symptoms were not yet sufficiently marked to enable him to pronounce a definite opinion. He came again in the afternoon, and I went with

him to the bedside of the little patient. The suspicion that Dr. Sircar had was confirmed at the second examination. It was a case of scarlet fever. There was the high temperature, the peculiar rash on the stomach, the throat trouble and all the other symptoms. In England and Europe scarlet fever is well known and dreaded as one of the most fatal diseases of children. Dr. Sircar said he had not seen diseases of children. Dr. Sircar said he had not seen a single case in his experience and he had actually brought his books for consultation and to verify the symptoms. As all eruptive fevers are highly contagious Dr. Sircar thought it imprudent for me to be present. I might carry the infection to my children though I might not catch it myself. But as I did not touch the patient I prevailed upon Dr. Sircar to let me stay. From that day until the girl was quite out of danger and convalescent Dr. Sircar visited her twice and sometimes three every day explaining to me the distinguishing symptoms and the various stages of the disease. The skins of the palms and the soles of the feet came off entire and Dr. Sircar put them in a jar of spirit and took them away. Long strips of lough came up from the throat. Dr. Sircar not only accepted no fees but he used to compound and bring the medicines himself and spend long hours watching and examining the patient who was in a very critical condition for some days. It was not the professional physician but the kind-hearted physician devoted to his noble science the enthusiastic scientist exerting all his skill of healing that I saw during the protracted and serious illness of that child. Singularly enough it was an entirely isolated case and no other was heard of either in Calcutta or elsewhere.

PRATAP CHANDRA MAJUMDAR

I had seen Pratap Chandra Majumdar at the house of Keshub Chandra Sen and I knew that he had spoken kindly of the little brochure I had written after Keshub's death. During my stay in Lahore Pratap Chandra Majumdar came to that city on mission work. The Brahmo Samaj of Lahore was not affiliated to any particular section of the Samaj and preachers belonging to the New Dispensation, the Sadharan Brahmo Samaj and the Prarthana Samaj of Bombay were all welcomed and invited to preach and deliver lectures in the Samaj building.

I met Pratap Chandra at one of his lectures and afterwards he came to see me at my house. He was staying in a room near the Brahmo Samaj and I asked him whether he was quite comfortable. Pratap Chandra Majumdar used to suffer from diabetes and was rather particular about his food. He complained that the Panjabi food was not to his liking, though otherwise he was quite comfortable. I ventured to suggest that he should take his meals at my place and he immediately agreed to my proposal. The next morning he came to breakfast and after a hearty meal we had a long talk about Keshub Chandra Sen and the political and other signs of the times. Pratap Chandra Majumdar was a highly intellectual man of wide culture, an admirable writer and speaker, widely travelled and had an attractive manner of conversation. I met him once more in Calcutta some years later in a tram-car. He told me he wanted to read the eleventh *Skandha* of *Shrimad-Bhagavat* with a Pandit and be wanted to know whether I knew of anyone who could help him. I gave him the names and address of two or three Pandits. Pratap Chandra Majumdar died shortly afterwards.

SIVA NATH SASTRI

One of the most delightful and lovable men I ever met was Pandit Siva Nath Sastri of the Sadharan Brahmo Samaj. Like Pratap Chandra Majumdar he came to Lahore to deliver some lectures and sermons in the Brahmo Mandir. After his first lecture Abinash Chandra Majumdar of Lahore introduced me to him and the next afternoon he called on me, and afterwards hardly a day passed that we did not spend some hours together. Before I met him I knew Siva Nath Sastri as a fascinating Bengali writer. Born in an orthodox Brahmin Pandit family, he had broken through the trammels of caste and had joined the Brahmo Samaj. After the schism over the Kuch Belur marriage he had gone over to the Sadharan Brahmo Samaj of which he was a leading member. Siva Nath Sastri was deeply religious, but he was by no means an ascetic or a habitually grave man. He was an excellent humorist both as a writer and in conversation. He wrote a screaming parody of a poem by Bankim Chandra Chatterjee and when I repeated a few lines which I happened to remember he laughed and recited the rest of the poem. He was full of anecdotes and

flashes of humour, and occasionally he was a bright mimic. He knew that I dabbled in literature, and spoke appreciatively of certain essays written by me. He told me numerous anecdotes about Ramkrishna Paramahansa and Swar Chandra Vidyasagar, and as we both happened to know Rantann Lahiri intimately we exchanged our impressions about that remarkable man. After the death of Rantann Lahiri Siva Nath Sastri wrote his life. I met him once again in Calcutta shortly before his death.

DR. KALI PADA GUPTA

Another winter visitor to Lahore was Dr. Kali Pada Gupta of the Indian Medical Service. For some time he was Sanitary Commissioner to the Government of Bengal. He was a native of Halisahar so that we were fellow villagers. I saw a good deal of Kali Pada Gupta during his stay at Lahore. He was a Christian, but he was a homely Bengali of the good old school, and was proud of the fact that he was a Kulim Vaidya. He rightly reproached me and some of my people for having done nothing for the village of our forbears. He himself had a house in Calcutta, but he took great interest in the well-being of Hali-sahar and gave some money for the building of a hospital. He was a frequent visitor to the village and personally knew most of the residents. He was very different from the class of the "England returned" Bengalis of those days, men who pretended to have forgotten everything about their own country, because they had passed two or three years in England.

RADHA RAMAN RAHA

Radha Raman Raha was one of the first two Bengalis who had proceeded to the Punjab, the other being Golaknath Chatterji. They were both Christians and had come under the influence of Dr. Alexander Duff. There was no railway at that time beyond Raniganj, and the rest of the long way to the Punjab had to be traversed in bullock-carts and camel vans. Radha Raman Raha had been a teacher in a Mission School for some time and was in charge of the Religious Books and Tracts Society when I went to Lahore. The first house I occupied was just opposite the premises of the Society in which Radha Raman had comfortable quarters. We became good friends at once, and our friendship

remained unbroken until Radha Raman's death in 1910. He was about 51 years of age when I first met him. He had never married and there was a romance of disappointed love in early life. Radha Raman was a short man with benevolence and kindness beaming in his eyes, and face. He was a devout Christian, but lived like a Bengali wearing the dhoti at home, and chapkan abroad. From his small income he helped several persons, including Dr. Kali Pada Gupta, to complete their studies in England. He was a great friend of students, and constantly looked after the Bengali students reading in the Lahore Medical College. The leading Bengali residents like Pratul Chandra Chatterji, Kali Prasanna Roy, Jogendra Chandra Bose, Chandra Nath Mitra and Dr. Braja Lal Ghose treated him with great respect and he generally spent his evenings with his Bengali friends. But his Punjabi, English and American friends were equally well aware of his worth and showed him every respect. He was frank and simple and a man of high character and never spoke a single word in disparagement of Hindus or their religion. He retired in 1894 and used to spend the winter months at Lahore, and stayed every year with me as long as I was there. Pratul Chandra Chatterji and Kali Prasanna Roy were much older friends of Radha Raman than myself and they used to chaff him for giving me preference over them.

ABINASH CHANDRA MAJUMDAR

Abinash Chandra Majumdar was a member of the Sadharan Brahmo Samaj and held an appointment in the Railway office at Lahore. He was a man universally respected for his high character, amiability of disposition, and unflinching readiness to help the distressed and deserving. He had learned homeopathy and gave homeopathic medicines free to a number of patients every morning. He had also an installation of Buisson's Vapour Bath for anti-rabic treatment, which was used on one occasion in my own family. Abinash Chandra was to be found wherever any good work was to be done. He was one of the most gentle-hearted men I have met, as well as one of the sincerest and most devout. He was an instance of a man who was widely admired and esteemed for the goodness of his heart. He had only a small income and lived a simple life, but the time

came when every community in Lahore paid him the homage due to a great and good man. After his retirement and when his health began to fail he used to spend the winter months at Lahore, while the summer and monsoon months were spent at Solon half way to Simla from Kalka. The last time I saw him was at Lahore in 1921. He was then very feeble though his intellect was quite unclouded, and people still came to him for help. He died the following year in the seventieth of his age, and his remains were followed to the cremation ground by practically the whole of Lahore.

KALI PRASAD ROY

When I went to Lahore Kali Prasanna Roy, a graduate in Arts and Law of the Calcutta University, was the acknowledged leader of the Indian Bar, while Sir William Rattigan was the leader of the other section. I had known K P Roy before I went to Lahore for he had been my guest at Karachi for a month, where he had gone for a change. We became very intimate friends at Lahore, and the family intimacy was maintained even after K P Roy's death in 1904. Kali Prasanna was not a scholarly man but he was an accomplished advocate, brimming over with humour and wit. He was a man of great independence of character and marked dignity of bearing. Kali Prasanna was among the early Bengali settlers in the Punjab. He was greatly respected and was elected Chairman of the Lahore Congress Reception Committee in 1900.

SIR PRITUL CHANDRA CHATTERJI

The other most prominent member of the Lahore Bar was Pratul Chandra Chatterji, a man of considerable culture and charming manners. He was widely read and had the gift of making conversation. He had built a house and was one of the leading members of Lahore. He was what is called an acceptable man among all sections of the community. He was a member of the Punjab University and was for a short time an additional member of the Governor-General's Legislative Council. The first Indian Judge of the Punjab Chief Court was Pandit Ramnarain, a Kashmiri Brahmin, but he officiated for only a short time, and died soon afterwards. Pratul Chandra

was appointed a Judge early in 1894 and was afterwards confirmed. He told me an amusing incident of how his appointment was regarded by the other Judges. After his appointment he called on one of the Judges, an English Civilian, who told him bluntly, "I don't like the idea of having a Bengali on the Bench, but to you personally I have no objection." P C Chatterji wrote admirable judgments which are still highly praised in the Punjab. In politics Pratul Chandra was a cautious man and took care not to offend the bureaucracy. After his retirement from the Bench, he was appointed Dewan of Nabha, but he held this appointment for only a year. Towards the end of his life he was almost a daily visitor at my house in Calcutta, but when the end came in 1917, I was away at Bombay.

LALA LALCHAND

Lala Lalchand was also a Calcutta graduate and a leading lawyer. He was the President of the Dayananda Anglo-Vedic College and a prominent member of the Arya Samaj. After the retirement of K P Roy, and the elevation of P C Chatterji to the Bench, Lalchand became the leader of the Bar. Once he officiated as a Judge of the Chief Court for a year. Later on, another man who had nothing like the standing of Lalchand, was appointed to the Bench, and was subsequently confirmed. When the next vacancy was offered to Lalchand he rightly refused it. Lala Lalchand was highly respected for his ability and high character, and filled an important place in the public life of the Punjab.

BLAIR RAM SINGH

Blair Ram Singh was a native of Amritsar, and a carver in wood. He had received no education and was merely one of the many artisans to be found in that city. John Lockwood Kipling, Principal of Mayo School of Art, Lahore, discovered him as a craftsman of unusual gifts, and when Indian artisans were wanted for decorating the Indian Darbar Room, in Queen Victoria's Palace in the Isle of Wight, Ram Singh was selected on the recommendation of Lockwood Kipling. He more than justified his selection for his decoration of the Darbar Room was a work of art and the Queen and almost

all the members of the Royal Family were much interested in his work and showed him much kindness. He picked up a little English just sufficient to maintain a conversation, and on the conclusion of his work was sent back to India, as Vice-Principal of the Mayo Art School, an appointment which was specially created for him, at the personal recommendation of the Queen. Ram Singh used to come to me constantly to get letters written to the Queen and to members of the

Royal Family. He showed me several short notes in the characteristic hand-writing of Queen Victoria, Princess Beatrice and others. He received orders to send some furniture designed in Indian style for the Princess. Ram Singh afterwards became Principal of the School. He retired about 1915 and died a little later. He was undoubtedly a man of genius which showed itself in numerous original and striking designs of decorations and decorative art.

Comment and Criticism

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the aving of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, The Modern Review.]

"Mahatma Gandhi and the Calcutta Congress"

I am young and perhaps that may be the reason why I could not control myself when I read a note under the heading "Mahatma Gandhi on the Calcutta Congress" in the February issue of such a representative and widely-read magazine as the *Modern Review* certainly is.

Does the editor of the *Modern Review* mean to charge the Mahatma of having lured delegates to the Nagpur Congress for the passage of his Non-Co-operation movement or of having connived at others doing the same for him.

You say that the Mahatma was either blind or kept his eyes closed when the late Mr. C. R. Das was alive, presumably, as it would appear, because the Mahatma dared not do or speak anything against Mr. Das, or against his pleasure! This indeed is another terrible charge against the Mahatma, though the world as a whole now fully know that he is not the man any the least fit for such a charge.

P. K. Krishna Menon

Editor's Note.—We never said or suggested that Gandhiji ever hired or was capable of hiring

delegates, nor could we ever imagine that any intelligent man could misconstrue our words in such a way. Similarly, we never suggested that Mahatma was afraid of Mr. C. R. Das.

An Unhistorical Adage

In the March number of the *Modern Review* (1929, Page 291), Babu Nagendra Nath Gupta in his article "Govindadas Jha, the poet of Mithila" says—"It is merely a case of Muhammad and the mountain. The mountain being at Mithila we have no alternative but to negotiate its heights." Nagendra Babu has borrowed this proverb from the mischievous propaganda of the Christian Missionaries against Islam. This misconception has been repudiated by the Muslim authors and writers. The life and smallest accident of Hazrat Muhammad (may peace be on him!) have been truthfully depicted in the world-renowned six works of Illiis (Sir Sithra) on which is founded the structure of Islamic religion. But nowhere in any work of the Islamic literature such a false story is found.

The Indians That Ceylon Wants*

By ST NIHAL SINGH

SOME time ago the Health Officer of Newera Eliya—Ceylon's famous mountain resort—complained at a meeting of the Improvement Board of the scarcity of scavengers and the difficulty, in consequence of keeping the town in as good a sanitary condition as he would like to have it. He suggested that an Indian in their employ, presumably himself a sweeper, be sent to South India to recruit Indian sweepers.

needed from Southern India and yet save the money that they would have to spend upon sending one of their own men to the Madras Presidency to import them.

Newera Eliya is not the only place in Ceylon which looks to India to supply her with men and women to keep her streets clean and remove nightsoil from private residences and hotels. The same is true of Colombo, Kandy, and many another town

A Group of Indians Employed by the Colombo Municipality to act as Sweepers and Conservancy workers. They live in the shadow of the Incinerator.

Thereupon an unofficial member of the Board suggested that the good offices of the Controller of Indian Immigrant Labour—a highly paid and exceedingly efficient Irishman belonging to the Ceylon Civil Service—be sought to enable them to get over the difficulty. Through that device the residents of that Ceylon sanitarium would, he hinted, be able to secure all the scavengers that they

in the Island. I do not, in fact, remember any place of any importance that I have visited in Ceylon—and I dare say there are not many even among the Ceylonese who have travelled much more extensively than I have in this Island—where the conservancy work was not left entirely to Indians.

Some time ago I was visiting Anuradhapura, which once was the proud capital of the Sinhalese kingdom but now is little more than a collection of monuments of a glorious past. A motor lorry drove into the yard of

* This article may not be reproduced or translated in or outside India without first securing the written consent of the author.

the Grand Hotel, where I was staying. The sun was at the meridian and the day suffocatingly hot. The men standing in the conservancy lorry looked, however, to be Indians and I went out to find if that was the case.

Sure enough, they were Indians. They were employed by the local Council and went from place to place collecting nightsoil and refuse. The driver of the lorry and his helper were, however, sons of the soil.

Two of the many Indians who collect the nightsoil and garbage for the Kandy Municipality. They have not passed out of bullock-cart stage.

The other day the "latrine cooly" of the Grand Oriental Hotel in Colombo, which has been my home for nearly two years, salaamed me very obsequiously and told me that he was "going ludha." He had his tip and went away.

The next day I found another man at work in my bath-room. He, too, was an Indian.

On the north-eastern edge of Colombo the Municipal Corporation presided over by a British member of the Ceylon Civil Service, another exceedingly able officer—has erected the refuse destructor. One day when I was out inspecting the slums in the company of a highly socialized member of the Municipal Council, I asked to be taken there so as to be able to study the system of refuse

disposal. In a small room at one end of the building I found some men at work shovelling garbage into the furnace. They wore dirty clothes and were barefooted. One of them had a cut on one foot, which looked sore and angry. When I called the attention of the overseer to the danger of infection that that man ran he replied: "Sir, these men are supplied with boots and I am constantly after them to get them to wear them. But when my eye is off them for a moment they slip off their boots and go at their work barefooted. What can I do?"

Upon enquiry I found that all these men were Indians. They lived in the "lines", built in the shadow of the tall chimney of the destructor. So did other Indian scavengers in the service of the Municipality.

The "lines" were not bad, as "lines" go. Each family was given a double room—one opening into the other—and the verandah in front.

The petty official who showed me round remarked that he feared that lodgers were taken in. When he remonstrated, however, they were passed off as relations. It was impossible to tell, he philosophically added, who was a relation and who was not.

"Why did the Municipality put these lines down right in the shadow of the incinerator?" I next enquired.

"The process that we employ is supposed to take away the smell," was the reply. But my own olfactory nerve told me another tale.

Presently I expressed the desire to make a photograph. Men, women and children trooped out and stood nonchalantly in the burning sun while I made the snapshot.

Upon my return to my rooms in the Hotel I found a friend who lives in Kandy waiting for me. Once the capital of the Sinhalese kingdom, that town is still supposed to possess a tooth of Gautama the Buddha. When I told this friend where we had been she said that only the other day she had had some trouble with a Sinhalese servant. She had ordered him to remove some mess from floor. He refused and made her understand

children Did the doctor wish them to lower themselves to the level of the coolies ?

It appears to me, however, that our people at home are unconscious of this fall. Or if not unconscious, they are apathetic and do not care how they and their kind suffer in the estimation of other nations

The huge incinerator where the refuse gathered from Colombo streets and homes by Indians is burned, on the outskirts of the city. Indians live in the structure over which it towers.

In other countries it is different—in Italy, for instance. For years and years, to my personal knowledge, Italians have been going to Belgium, France, Britain and the United States to engage in beggary. They usually took along with them monkeys, or acquired (or even hired) them after they got there. They also obtained (nearly always rented by the day or week) barrel-organs and “lurdy-gurdies”—mechanical music-players. Thus armed they

went about the streets grinding out tunes while the monkeys they took along with them collected the coins. They really made monkeys of themselves.

So long as Italy was half asleep nationally she did not care. With the awakening that has recently taken place, however, apathy toward that sort of thing has disappeared. Some time ago a powerful agitation was started to prevent Italians from going out of the country to engage in occupations abroad that brought all Italians into contempt.

Some Italians declared that to prevent their countrypeople from going out of their home-land would be to condemn many of their poorer compatriots to poverty and probably to actual starvation. That was an argument for improving the economic condition of the State, and not for permitting injury to be done to Italian honour, was the rejoinder. It was moreover asked how many Italians actually went out of the country to engage in such a calling, and what percentage they formed to the population left behind. It would only be a case of a drop in the bucket if these few persons were compelled to stay at home.

When the matter came to the notice of Mussolini, he, with one stroke of the pen, forbade the issue of passports to any Italian who had been known to have engaged, or wished to or it was suspected, would engage in a calling that would lower his nation in the estimation of the foreigners among whom he chose to practice it. So effectively has that edict been carried out that I understand, the Italian “monkey-men” have ceased to be the common sight in European and American countries that they once were.

I commend that example to Lord Irwin!

Pandit Ishwar Chandra Vidyasagar

By BRAJENDRA NATH BANERJEE

Retirement From Government Service

VIDYASAGAR had done his work as an educational officer with extraordinary zeal and intelligence. He had reformed Sanskrit education, laid the foundation of vernacular education, and promoted female education in Bengal. His official superiors

were quite satisfied as to his ability. It was, therefore, natural to expect that he would be appointed to the post of Inspector of Schools, South Bengal, which had recently fallen vacant, on account of Mr. Pratt having gone home on leave. In fact, some conver-

The effect was immediate and far-reaching. Imitations came to these young artists from all parts of the country where people eagerly awaited the artists' arrival to show them these beautiful things of the spirit.

V R Chitra and P. Haribaran had been at the Kalabhavan for more than six years. Their works were praised and purchased at many exhibitions in India and abroad. Their homes are in South India, and they started this Itinerant Art Exhibition with the object of showing to their countrymen what the Kalabhavan artists had done for the development of art in India.

Their first haltage was at Vizagapatam. There never was before this an art exhibition at this place. The people there daily watched the doings of these young artists with eager suspense. At last the doors of the Town Hall were opened by Mr. Narasingha Raju, President, Madras Legislative Council. Visitors, who were waiting to be admitted, thought when they saw what

In the Rains—Jadupati Basu

The Dancer—P. Haribaran

was before them that they had come to a temple instead of an Art Exhibition. The floor was decorated with the finest decorations of *Alpona*, the rooms were filled with flowers and furnished in real Indian fashion, with simplicity and dignity. Incense was burning in a corner and filled the air with divine fragrance. The pictures were tastefully arranged according to a well thought-out colour scheme and composition. The exhibition remained open for five days, and there by the side of fashionable folk stood the uncared for village man, who came from his distant home in the country. The poor villagers were admitted free and welcomed by the artists, who took them round explaining in detail each picture in the exhibition. It was marvellous to see with what uncommonly good taste these common simple folks of the country appreciated and enjoyed the exhibits. A day was specially reserved for the ladies, who came in multitudes to make their offerings at the shrine of beauty. From Vizagapatam the artists went to Berhampore and in succession passed on to Vizianagram, Cocanada,

End of the Village—P. Hanuman

The Wood-cutter—Gauri Devi

Rajahmundry, Bezwada, Masulipatam, Guntur and Madras. Enthusiasm in these places was so great that shortly after the Exhibition in many of these places art societies were

formed to discuss art subjects and hold art exhibitions. The artists never failed to encourage the common people to come and see these works of art in any of these places.

life. Then art was not merely an ornament but people lived, moved and had their being in art. Even to-day we see this living art when a country girl decorates her door-steps and mud-walls with *Alpona* and 'sans', 'kanthas' and other articles of daily use with beautiful embroideries.

This fine artistic sense, beautifully expressed in everyday requirements of

Art is taught in schools and colleges to enable the student to earn a living, and art wares, good, bad and indifferent, are exhibited incongruously huddled together at some exhibitions in cities, which have developed into fashionable functions where society people pay their annual 'visits for the sake of form.

And the artists now-a-days feel ashamed

The Paromet—Sarendranath Kar

Jodhba—Indusudha Ghosh

exhibiting them year after year in the villages and small provincial towns, giving the common people food for enjoyment and keeping them informed about the current movements of the art world.

Thus in Japan even a poor farmer has at least one good picture in his cottage which he 'worships' night and day.

The Kalabhayan artists of Santiniketan, with the help of the great master Nandalal Bose, have turned their attention to this

detection and the first Itinerant Art Exhibition was held this year in the Madras Presidency.

Two of the Kalabhayan artists are the founders of this movement. They collected really good pictures by celebrated artists, including Abanindranath Tagore and Nandalal Bose, travelled from place to place throughout the Andhra country, overcoming all obstacles by sheer force of their enthusiasm, and showing these pictures to people who never saw them before.

Home—Keshava Rao

The Itinerant Exhibition has finished its work for this year but the young exhibitors have given to the people of Madras a joy which they will always remember in silence and which will give them strength to bear the burdens of life with a cheerful smile.

It is hoped that artists of other provinces will follow the example of the two young Kalabhavan artists and help their people to live a more beautiful, more joyous and nobler life.

THE MAKER OF IMAGES
By Nandalal Basu

Prabasi Press, Calcutta

through the small windows the dust still danced after the cleansing and sweeping. Big sheets of coloured material were put on the walls decorated with small bunches of evergreen leaves and heather, all the floor was covered with sand, and rows and rows of tables and benches were brought.

When the evening before the marriage-day came, only little was left to be done outside, but in the kitchen and in the "brewery" work was still going on merrily. During the day the neighbours had come with their "sends," i.e. the daughter of each neighbour brought each a basket containing a chicken and some eggs, or sweetmeats or such other things. The girls were served with coffee and cakes, and after a few words with the bride they went away.

Now in the evening when no more people were expected, all began cooking. Together with other meat, chicken after chicken disappeared into a big tub formerly used for brewing beer, in another tub were prepared all sorts of vegetables. This work was all done by the bride's friends and Maren-cook who was commanding at the top of her voice. From time to time the children came "to have a taste." They were scolded a little and sent away with a piece of cake.

The only person unoccupied was the bride herself standing watching in one corner looked upon almost with pity as she was not allowed to do any work.

Little by little all went to sleep, only Maren-cook kept sitting up near the fire with her eternal coffee-pot, sometimes sleeping, sometimes drinking coffee and sometimes looking after the fire, and from time to time she opened the covers of the tubs to see if it was boiling inside, and a promising smell filled for a time the whole room.

It was very early the next morning. The sun had just got up and the dew-drops were still lying laughing on the grass and leaves, but work was already going on in the barn, there were some, yet busy arranging the plates, cutlery, sandwiches and cakes for those who were to follow the bride to the church. The girl's friends who were to dress the bride and serve the guests, came dressed in light white dresses and white aprons, and also soon after, the first carriages came. The visitors as soon as they arrived, were shown into the sitting-room to greet the parents of the bride, and to see the presents which had been sent to the girl. All the presents were arranged on a table together with

a deep glass vessel, which little after little was getting filled with envelopes containing money-presents. The guests mostly gave cutlery of silver, glass things, or money, as presents.

Then they went to the barn where they did full justice to the cooked and baked things. If there was time left, the farmers would go to the cow-shed to inspect all, and afterwards they might go to the fields to see how the harvest was getting on. In the meanwhile the farmers' wives would go to the mother of the bride and learn how many bedsheets, table-cloths, towels, and such things the bride had got from her mother's house, then they might shed a few immediate tears to show their sympathy for the mother who was going to marry off her only daughter so far away in the town.

In the bride's room was merry-making and laughter. Her friends, who were the only persons to see her on her marriage-morning, teased her so much.

Then came the time for going to the church, the bells were chiming, all were waiting in their carriages to let the bride's carriage pass first. All along the road from the farm to the church one could see the flags in the gardens waving in the breeze in honour of the happy young couple.

The bridegroom with his relations and friends had come before, and after the bride's party had been seated there was a moment of complete silence before the bride entered, led by her father. On her first step into the church the organ set in with full force. It was a proud father who led his young, beautiful daughter over the church-floor, but it was a still prouder young man who was standing in front of the altar ready to receive her. The bride was beautiful. She was dressed absolutely in white, from her white shoes to the white veil falling richly folded from her golden hair; a little garland of myrtle was put round her head on the veil, from under which a few stray locks of of hair playfully curled near her temples; in her arms she kept a bunch of deep-red roses. Her face was pale and her eyes downcast. Only once she raised them towards her future husband, two big brown eyes they were, and a shadow of a smile flew over her face and her pale cheeks for an instant got colour.

The church was decorated with the flowers of the season, and their scent mixed with the smell of naphthaline from clothes long time kept away, made the air very heavy.

When the questions were put: "You must serve, obey, love, and honour your husband," her answer was a clear "yes"; and the bridegroom also answered the question with a firm voice. The priest made a short speech after which some hymns were sung and all slowly left the church.

The couple on their arrival were received by the young friends who did not go to the church but arranged things for the feast. They were led to the sitting-room and after seeing the presents they sat down together on a divan to receive the guests. Aunts and uncles whom they perhaps never had seen came and blessed them, cousins conveyed their congratulations and general talk began until a voice was heard. "Food is ready."

All got up to join the procession to the barn. In the middle of the long rows of tables was made a special arrangement for the bride and the bridegroom with flowers and coloured paper. There was silence when the soup and the meat were eaten, but when the chicken was brought the tongues were a little loosened, and as the meal advanced the true deep humour of the Danish peasant began to play. The doctor, the veterinary surgeon and other swells of the high society of the little town delivered some speeches. A few songs were sung and the tables were left for going into the garden. A town-photographer had come to take some pictures. All were gathered and the photos were taken with the necessary ceremony; the gathering of

about hundred and fifty persons was asked to smile; it was not, however, necessary to say this because the good meal had already made their faces shine with delight, but as a part of the ceremony of the art of photography this remark was not to be left out.

The party scattered itself round about, some in the field, some in the house and the youth and the young girls began to play old games like "the widow", "cat and mouse", or "hide-and-seek" round the whole house. So the time passed on until tea-time, with its delicacy of sweets, and again the great meal in the evening made a break.

After this the priest and his wife started for their home, followed by most of the guests; only the near neighbours stayed on to see the departure of the bride the next morning. The bride with her husband retired to the bed-room of her parents, where they were to spend their wedding-night.

The next morning arrived and with it the departure of the young couple. The girl with big tears in her eyes said good-bye to her crying parents and everyone else—only her younger brother was nowhere to be found. Then she started with her husband, but when the carriage began to move she began crying like a grieved child.

Suddenly somebody jumped into the carriage and she felt a kiss on her forehead, but when she looked up, nobody was there. Her young brother had taken leave from his departing sister.

which is far deeper than others which are easily explained.

Dhiren, Dhiren, everyone seemed determined to talk only about him. How did he become of such importance that everyone was raving about his absence? And what indeed had he done for them after all? Ran up and down the stairs a dozen times a day! For this he had earned the eternal gratitude of the family, filled all empty places in the house, made up for all loss and want? And no one now remembered him, who had so long filled every niche and corner of the house with merriment and laughter. As long as he had been with them, Mukti at least had her time and her life full, she never had any time for brooding. A big gap had appeared in her life. When he departed and she missed him terribly in everything. So when she saw another usurping his place in the family and everyone else's heart, a thorn seemed to enter her heart.

She was ready to excuse her grandmother for making too much of Dhiren. She had never liked Jyoti much. But her father too? She forgot for the time being that Shiveswar never had the habit of expressing his love in words. It made Mukti quite furious to think that he had forgotten Jyoti who had been as a son to him, and fallen in love with this newcomer.

A doubt was constantly appearing in Mukti's mind that she too perhaps had unconsciously joined this faithless band. This served to make her all the more furious with the others. What would Jyoti think if he could see them all from across the seas? What would he think of Mukti, especially? Mukti who was his sole joy, the partner of all his sorrows and all his joys, who had wept while bidding goodbye to him? Though nothing had been spoken they were virtually pledged to each other. Then how could she now take back a thing which she had already given away in order to entertain another person with it? As she thought of Dhiren, the expression on her face grew stern. Was not he a fine friend? He was trying by all means to supplant a friend in every way, while that poor boy was abroad studying.

Mukti got up from her bed. She opened the drawer in her writing table and took out all the letters. Jyoti had written her and all his photographs. She arranged and re-arranged them. The latest one he had sent her was taken standing, with a dog by his side. His hair

appeared wind-blown and he wore a calm philosophical expression. "A lady nearly fell out of her chair", he had written under the picture, "so entranced was she on seeing this". Mukti had sent him by the next mail the ugliest of her photographs and had written under it—"A gentleman nearly went mad, seeing this one. He hired a taxi, drove to the Ochterlony Monument and jumped down from it". Mukti had received a beautiful present from him on her last birthday. It was a necklace of Italian workmanship. When she had finished looking at the photographs and reading the old letters, she arranged them carefully, and taking off the gold chain she habitually wore, she wound it round them all, thus tying them together. She put on the new necklace, Jyoti had sent and went out of the room. The necklace hung over her heart like an amulet guarding the fair kingdom within from all danger of intrusion or invasion.

The fierce invader, against whom Mukti was taking so many precautions was at that time sitting on a balcony of a three-storied house in Shyambazar enjoying a rather drab sunset. Most of the other inmates of the hostel had gone out for evening walks or to some playground to witness a game of football or hockey. Dhiren had not ventured out simply because if once he went out, he could never resist going to Bhowanipur. To go to a house unasked hurt his pride and especially now when he had begun to feel unwanted, unwanted at least by the person who was his only incentive for going there.

So he determined that he would not go out at all, however great the urge. What if a letter should arrive now? A letter bearing only these few lines in a girlish handwriting: "Come at once. In great trouble." What then? Mukti would call him only in case Shiveswar grew worse. But Dhiren did not mind. He was really hungry for that call.

Poor Shiveswar did not know that the boy whom he had begun to love almost like a son had very little claim to his affections. He was at that moment wishing him violently ill so that he might have his daughter's company.

It was already evening when Shiveswar's friends left. Mokshada had carried a lamp to

every room of the house according to the orthodox custom and then had come back to her room to rest. Mukti came in again as she was feeling rather lonesome and her father had too many visitors in his room. She could not go out for a drive or anything, as the invalid might want her anytime. So the only alternative was a sojourn to Mokshada's room.

She took up a comb and began to comb the scanty white hair of the old lady. Mokshada began to relate in glowing words the wealth of beauty and the abundance of heavy wavy locks she had possessed in her young womanhood. Mukti was getting deeply interested when Shiveswar came in slowly. Mukti began to clean the comb and asked, "Father, who were the strange gentlemen? Are they all gone?"

"There was only one strange gentleman," Shiveswar said. "He is a doctor from Delhi. He has recently returned from England. I used to know his father slightly, so he came to look me up. A fine young chap. He has no sort of prejudices."

Mokshada interrupted him rather eagerly, "To which caste does he belong?" she asked.

Mukti understood at once, what she was driving at and turned away her face to hide a smile. "Why do you want to know that grandma?" She asked, "You are not going to engage him as a cook, are you?"

Shiveswar answered, "I don't know mother. His name is Naresh Dutt. A Kayastha, probably."

Mokshada lost all interest in the chap. "Oh, then it does not matter," she said. "Was not that your doctor Anadi who came with them? What does he say about you now? You may eat anything you like now, I suppose? They have nearly starved you to death with their nonsensical dietings."

Shiveswar sat down in a tired listless manner and drew Mukti's hand on to his forehead. "Yes mother," he said, "They will allow me to eat everything now. But they are going to send your son into exile. Anadi is for ordering me out of Calcutta at once. He wants me to take rest for a year, at least for six months. But I am fed up with these rest cures and changes of air. I want to begin my work again."

Shiveswar's health had really begun to cause anxiety. Mukti really had to work very hard during his last illness, and she felt very angry with him for trying to get all again. He could very well afford to take a

rest. He had no need to sacrifice his health. So she decided to be very firm.

"No father," she said, "You must go to Simla for a change. I won't let you get unwell again staying in this heat."

Shiveswar laughed and stroked her head, "You want to drive me away?" he asked, "But my dear, I am tired of doing nothing."

Mukti too smiled and said, "No, no. I too, shall go with you. I shall chatter all the time and take you about everywhere so that you would not get any time for getting bored."

Shiveswar thought for a moment, then said, "All right, little mother, I shall think about it. But you are too young now to waste your time nursing a chronic invalid. And your education, too, would suffer. You have already neglected it too much during my illness."

Mokshada now put in again. "There is not a single man in the family beside you. In times of need I feel it doubly. Your daughter has to do the work of a son as well and outsiders have to be called in. If you had given your daughter in marriage in right time, there would have been someone to help you and to call your own. But you are too busy to think of your daughter's marriage even."

Mokshada was becoming very anxious about Mukti's marriage. She was shooting up like a young palm-tree, but Shiveswar paid no heed whatever to it. Other girls of her father's family who were of the same age with Mukti were already the mothers of children, while Mokshada's grand-daughter remained a school-girl still. Sometimes she would feel quite mad and wanted to beat her forehead on the ground and howl out her misery. Whenever she asked Shiveswar about Mukti's marriage, he would put her off with "All in good time."

Up to this time, the good time had failed to come. Shiveswar never thought about the matter at all. So Mokshada had now decided to take matters in her own hand and to settle Mukti's marriage. She was ready even to brave her son's anger. How would she look people in the face, if her own grand-daughter remained an old maid? She had brought up the child herself, had she no rights over her? The prestige of the family must be maintained in spite of the crazy notions of her son.

But as soon as she had settled all these, Shiveswar fell ill and drove all other

Shiveswar "What can we do unless there is a suitable bride-groom?"

"There are no luck of bride-grooms," said Mokshada. "What kind of a boy do you want?"

"The kind Mukti would like", said his son.

"Oh is that all?" asked Mokshada, very much elated. "That can be easily arranged."

Shiveswar closed his eyes wearily and a sigh escaped him.

"So much the better," he said. "But I am not at all anxious about it."

Mokshada remained silent for a few minutes, then she began again "Poor

Dhuren," she said, "he did so much for you during your illness. Even a son could not have done more."

Mukti re-entered just at that moment. She found her grandmother looking very cheerful and heard her father saying, "Yes, Dhuren is a very fine chap. There's not many like him."

Poor Mukti! The more she desired to forget Dhuren the more everybody dinned his name in her ears. He seemed to have become an object of paramount interest in the family.

(To be continued)

Dr. Radhakrishnan's Vedanta

By MAHES CHANDRA GHOSH

THE VEDANTA COMMENTARY, TO SANKARA AND RAGANATHA. By Dr. Radhakrishnan. Published Nov. 6, 1928. By Messrs. George Allen and Unwin Ltd. Pp. 347. Price 10s.

Originally this book formed part of the second volume of the author's *Indian Philosophy* and has now been separately reprinted without any change. But strange to say it does not contain the list of abbreviations. It has no index.

The book has been written in a clear and eloquent style.

The subject discussed is difficult, but the author has tried his best to make it intelligible even to students of average intelligence and has so thick been successful. But the book can scarcely be used for any philosophical purpose—it is marred by so many grave defects. We shall point out some of them.

(1)

Our author has drawn materials from books which may be called Sankara-Apocrypha, viz.—*Atmahodhya* (pp. 47, 172, 181 etc.), *Hasanuljila* (p. 48), *Iyana to Iyana* (p. 49), *Satasloki* (pp. 113, 183), *Haristati* (p. 219), *Kampanasancaka* (p. 183), *Anandaharan* (p. 139), *Manushyapancaka* (p. 62, 183), *Dakshinamurti Stotra* (p. 111, 124 etc.), and even *Andrasamantaka* (p. 186), *Viveka-cudamani* (pp. 47, 144, 142, 146, 215) and *Upadesa-Sahasra* (pp. 72, 117, 187, 191).

The authorship of the commentary of *Nrisinha-tirumala*, *Atharvashika* and *Atharvasiras* is unknown. It is doubtful whether Sankara wrote the commentary on the *Svetasvatara Upanishad*. So all these books should be rejected wherever possible for the exposition of Sankara's views. We can appeal

only to his commentary on the (i) Ten classical Upanishads, (ii) *Brahma Sutra*s and (iii) the *Itihasa*. Had our author been a careful student of these commentaries, he might have easily omitted the apocryphal literature.

In expounding Sankara the expounder's first business should be to appeal to Sankara himself. But our author has sometimes appealed to other authorities. We may cite an example or two.

(a)

To prove that *Sruti* is not authoritative in scientific subjects, our author has quoted a passage from *Bhagavata* (page 81 note 3). He might have quoted Sankara's commentary on *Br. Up. II. 1.20* (page 297 *Anandashrama Text*).

(b)

Again to prove that Brahman has no internal difference like a tree having leaves, flowers, fruits, etc., he has referred to *Purandara* II. 20 (p. 101). But he might have quoted *Bhashya*, *Brahma Sutra* I. 31 and II. 11. There are similar examples also in Sankara *Bhashya*, namely, ocean with its water foam, bullocks etc. (*Bhashya*, *Br. Sutra* II. 11. 11), the *Br. Up. V. 1*, the cow with its dew lap, horse's tail, etc., and so on.

(c)

Sankara was followed by a host of brilliant writers—*Sahas*, *Suresvara*, *Padmapada*, *Vacaspati*, *Anandagiri*, *Srinivasa*, *Prakasatman*, *Citsukha*, *Vidyasara*, *Prakasamanda*, *Appaya-dikshita* and many others. One important feature of the book of our author is that it describes some of the fundamental principles of most of the post-Sankara philosophers. The credit is due to our author for making the subject accessible to general readers. The credit is no less due to Professor

*We have received this book from the publishers for review. Editor, *M. R.*

Mahendra Nath Sarkar, who had published his "Studies in the System of Indian Thought and Culture" in 1925 and "Comparative Studies in Vedantism" in 1927.

Our author's exposition of post-Sankarite philosophy, though brief, is clear. This portion is excellent for popular reading. But the treatment is not scholarly. Instead of going to the philosophers themselves, he depends for their views principally on *Siddhanta-lesa-Sangraha*. Our author's knowledge is secondary and that of his readers will be tertiary.

Here are some of examples of his quotations from the S. L. S.

BORROWED AND ACKNOWLEDGED

(1) Page 118, No. 7 (Vacaspati's views), (2) Page 122, note 2 (The views of Bharatitirtha and the authors of *Tattva-Suddhi*, *Prakatārtha* and *Kaumudi*), (3) P. 168, note 4 (views of *Tattva-pradipika*), (4) P. 168, note 5 (views of *Kaumudi*), and so on.

BORROWED BUT NOT ACKNOWLEDGED

(1) Page 118, note 5, (2) P. 162, note 4 (Suresvara's) (3) Page 176, note 1 [S. L. S. p. 80, Benares ed.] (4) Page 203, note 1 [Chitsukha from S. L. S. Benares ed. p. 509] (5) Page 210, note 3 [S. L. S., p. 512.] (6) Page 203, note 1. Here a passage is attributed to *Citsukha* but it is really the language of Appaya-dikshita, [S. L. S., p. 509]. Vido *infra*. (7) Page 81, note 1. A passage is said to be quoted from *Bhāmāti*. But it is really the language of S. L. S. giving the views of *Bhāmāti*. Vido S. L. S. page 280. (8) Page 119, note 2. The author writes "*Vivaraṇa* which takes its stand on S. B. i. 1, 20; i. 2, 1." He seems to make this remark simply because those two references are given in the S. L. S., p. 69, Benares ed. (9) Page 119, note 1. A passage is said to be quoted from S. L. S. i. But it is really quoted from the commentary on that book. Vido S. L. S. page 72, lines 22-24. Benares ed. (10) Page 176, note 4.

In the body of the book, the author writes— "The author of *Panāpāṭha* *Īśvara* regards the jīva as a reflection of *Īśvara*." In the foot-note he says that these take their stand on the *Antaryami* Brahman of Br. Up. and such passages of the Gita as XVIII. 61. As regards the Pan. *vir*, we can say that in that section, the Upanishad mantra only is quoted (Vido Benares ed. p. 66) and no Gita verse is quoted there. In the S. L. S. also, the Upanishad only is quoted. It is in the commentary of the S. L. S. that both the passages are quoted (Vido S. L. S. page 100). Our author's statement in the note seems to be based on this commentary.

(11) In the two lists of 'References' given in this book (pp. 221 and 287) and in the list given in his *Indian Philosophy* vol. II, we find the names of magazine articles and books of secondary importance. But he has omitted the names of books from which he has made many quotations. These include translations of the most obscure books; for example,

(1) *Khandana-Khandi-Khadya* (Dr. Jha's translation)
(2) *Advaita-Siddhi* (Dr. Jha's translation)
(3) Translations of Sankara Bhāṭya on the *Chāndogya Upanishad* and seven smaller classical Upanishads (by Dr. Jha, and Sitaram Sastri). He

has also borrowed (but without acknowledgment) from the English translation of *Sambandha-Parīkha* (Introductory portion of Suresvara's *Vartika* on Br. Up.) by S. V. Aiyar (Vido *infra*).

(iii)

One of the authorities of our author is S. S. S. S. (*Sarva-Siddhanta-Sara-Sangraha*) which has been many times referred to (pp. 46, 72, 147, 148). It is, by some, ascribed to Sankara. But he cannot be its author, as it contains references to the *Bhagavata*, which, according to our author, was composed about 900 A. D. (Vido p. 233), whereas Sankara flourished a century or two earlier (Vido p. 13). Apart from this, the book is of uncertain date and value; it is uncritical and unreliable.

(iv)

In one place (p. 176) the author writes—

"It comes out also in another passage of *Pancadasi* where *prakṛti* with its power of protection in prominence, is called *māyā*; the same with power of concealment dominating, is *avidyā*."

In a foot-note (f. n. 1) he writes— "These views are adopted by *Tattva-viveka* also." The author uses the word "*also*" and definitely gives us to understand that *Pancadasi* and *Tattva-viveka* are two books and one is different from the other. But the fact is that *Tattva-viveka* is the name of the first chapter of *Pancadasi*. Our author found, in *Siddhanta-lesa-Sangraha*, the name *Tattva-viveka* and also found there the exposition of the views of *Tattva-viveka* (p. 80, Benares edition) which seemed to him to be analogous to what he thought to be the views of *Pancadasi*. This is how he was misled.

It may be mentioned here that S. L. S. generally uses not the name *Pancadasi* but the names of the chapters of this book, viz., *Citrādīpa* (p. 83), *Natakādīpa* (p. 184), *Kṛtasthādīpa* (pp. 180-212) etc.

(v)

In one place (p. 37) our author says—

"In the *Padma Purāṇa* *Īśvara* is said to have declared to Parvati: "The theory of *māyā* is a false doctrine, a disguised form of Buddhism, etc."

In foot-note 1, he quotes the following verse: *māyāvādam asau cāstṛam, etc.* (i. 14)

In the same page he writes—

"The concluding words of *Siva* in the *Padma Purāṇa* are to the effect that 'the great system, the *māyā* theory, is not supported by the Veda, etc.'"

In a note on this passage he quotes—

"*Vedāntīyaṇa māhātīstṛam māyāvādam avidīk-*

am." The sentence quoted last is not the concluding words of *Siva* in the *Padma Purāṇa*. The sayings of *Siva* on *Māyāvāda* are found in the *Padma Purāṇa*, Uttara Khanda, chapter 236, VV. 2-27. Dr. Radhakrishnan's first passage is the seventh verse and the last a part of the 11th verse. The 11th verse cannot be the concluding words of *Siva* whose speech runs up to the 27th verse of that chapter. It may be noted here that there are 255 chapters in the Uttara Khanda of the *Padma Purāṇa*. Chapter 234 also contains the sayings of *Siva*; so what our author calls 'the concluding words of *Siva* in the *Padma Purāṇa*', are neither the concluding words in the book nor in chapter 236.

The fact is that *Vijñāna-Bhikṣu* has, in the

introduction to his *Samkhya Paravara Bhāṣya* quoted 21 lines from that chapter (ch. 236) of the *Pādma Purāṇa* without specifying the chapter and verse and the last verse quoted by him contains the line—

Vedānta in mahāyāna, etc. (the great system, the Māyā-Vēda is not supported by the Vēda, etc.) But Viṣṇu-Bhikṣu has in his *Bhāṣya* on 1. 22, quoted only three lines which our author has also quoted (vide *Supra*). It seems almost certain that Radhakrishnan has quoted these lines from an edition of the *Śiṅkhya-Pravacana Bhāṣya* and it may be from the edition of the *Padma Purāṇa*. If so he was misled by the translations given in that book. The *Bhāṣya* has in one place been translated thus—

The doctrine however is not a tenet of the Vedānta system as we learn from the concluding words of Śiva

वेदमार्गं महाशिव
मायावादमिदम् ।

The great system, the doctrine of Māyā containing the truths of the Vēda, but not supported by the Vēda. (Padma office ed. pp. 46-47). Our author's translation may be compared with the translation quoted here. The text has 'Vakya-sat' which has been translated here by the concluding words of Śiva. Viṣṇu Bhikṣu means by it the concluding words of Śiva in the speech already quoted in the introduction. But as our author has not seen the original text in the *Padma Purāṇa* he thinks that these are the concluding words of Śiva in the *Padma Purāṇa*.

Our author's reference to 1. 14 is unimpeachable.

(vi)

Dr. Radhakrishnan writes in one place (p. 234)—

Utsukhadeva says that mokṣa is the realization of all bliss.

In foot-note 1 he quotes—

अवशिष्टमनसं प्राणिः ।

Readers will necessarily think that the text is quoted from Utsukha's book. No our author has not gone to the original source. He quotes it from the *Siddhanta-leśa* (p. 70) line 2 Benares Edition. Moreover he has not thoroughly understood what it in what connection. Appaya-dikṣita (author of S. L. S.) has used that phrase. We shall quote Utsukha's idea of mokṣa from his own book—

अवशिष्टमनसं स्वभावम्—

अवशतोऽपि विनिर्दिष्टमनसं वक्ष्ये,

विनिर्दिष्टमनसो मोक्षः ।

(Page 361 lines 7-8 : Nirṇaya-sagar Edition of Tattva-pradīpikā).

The commentator explains it thus—

अविद्या विरोधान्नो

विद्या विनिर्दिष्टमनसः ।

The literal translation of the text is—

The consequent of the self (whose nature is

* All the texts are printed in Roman character in the book.

full bliss) by *avidyā* is bondage; the destruction of that *avidyā* by *vidyā* is mokṣa. (The portion within brackets is given in the text.)

This is made clear in the commentary, which may be translated thus—

The concealment (of the self) by *avidyā* is bondage (बन्ध) and the disappearance of *avidyā* by *vidyā* is mokṣa.

In the *Tattva-pradīpikā*, Citakṣa has examined various theories of mokṣa and discarded them all in favour of his own theory described above.

(vii)

REFERENCES

When our author quotes a passage from the *Bhāṣya* on the *Brahma Sūtras*, he gives full reference. The references to the Upanishads and to the *Bhāṣyas* on some of them are also full. This shows that our author understands the value of documentary evidence. But even he is not always careful. Some of his references are vague, some wrong and some misleading.

VAGUE REFERENCES

(1)

Page 56, note 1.

The author quotes a passage from the *Fedanta-paribhāṣa* (1) and gives no reference. Then he writes— See also *Pravara-pramāṇa-samgraha*.

The section referred to consists of 103 pages, Royal 8vo (Benares ed.).

(2)

Page 113, note 2.

A passage is quoted from the *Bhāmata* (on *Bhāṣya*, Br. Sūtra 1. 33) but the reference is simply *Bhāmata*. The *Bhāmata* is a big commentary and very few can find out the passage.

(3)

Page 168, note 4.

A passage is quoted from *Siddhanta-leśa*, p. 180 lines 3-6 (Benares Edition) but the author's reference is simply *Siddhanta-leśa*.

It means somewhere in a chapter of 263 pages, Royal 8vo.

(4)

Page 234, note 3.

Some names are given in the *Tejantara-Samgraha* (page 158 (Benares ed.)). These names are quoted by our author and his reference is simply *Volūtha-Samgraha*. It means running a book of 264 pages, 8vo.

(5)

Page 61, note 2.

The author writes Cn. Plato "God's mind is the rational order of the Universe". (713, E. Jowett's version).

In many modern editions of the text and of the version of Plato passages are indicated by the pagination and division of Stephana's edition. Two or more books may have the same reference. For example, the passage marked by 40D may belong to the *Apology*, *Timaeus* or *Phaedrus*. So the reference 713, E. given by our author is meaningless. Very few can find out the passage, if there be such a one. It can mean only "The Laws, 713, E." But the passage is not there.

There are many other vague references.

WRONG REFERENCES

(1)

Page 62, note 5.

The reference is to "S. B. i. 4. 1 : i. 3. 7." But the idea is not there.

It may refer to S. B. i. 1.4 (vide Thibaut's trans. Vol. i, page 35).

(2)

Page 64, note 1.

A passage is quoted and the reference is to i. 2. 29. It seems to mean 'S. B. i. 2. 29.' But the passage is not there. It is in S. B. ii. 2. 29.

(3)

Page 151, note 3.

A word is quoted and the reference is to S. B. i. 1. 14. It is not there. It is in S. B. ii. 1. 11.

(4)

Page 175, note 3.

The reference is to S. B. iii. 2.9. It is wrong. The idea referred to occurs in Saṅkara Bhashya, Br. S. ii. 3.43.

(5)

Page 175, note 4.

The reference is to S. B. iii. 3.43. Wrong. It is in S. Bhashya, Br. Sutra, ii. 3. 43. Etc. etc.

MISLEADING QUOTATIONS

*In many places our author explains the views of an author by quoting a passage not from that author, but from a second-hand source. But at the same time he implicitly gives us to understand that the passage has been quoted from the original source. Here are some examples :

(1)

Page 84, note 1.

He quotes—

तात्पर्यवती श्रुतिः प्रत्यक्षाद् बलवती, न श्रुतिमात्रम् .

(Bhamati)

He writes 'Bhamati' within brackets after the passage. Thereby he gives us to understand that the language is that of Bhamati. But it is really quoted from Siddhanta-lesha of Appaya-dikshita who gives there a summary of Bhamati in his own language. (Vide S. L. S. p. 280, Benares Edition)

(2)

Page 175, note 6.

In the body of the book our author expounds the views of Samkshepa-Sarvoka and for confirmation quotes the following passage in foot-note 6—

अविद्यायां चित्तवित्तिम्ब ईश्वरः,

अन्तः करो चित्तवित्तिम्बो जीवः ।

As the author does not give further reference, it is understood to be the language of that book. But this is not the fact. The passage is quoted from and is the language of—Siddhanta-lesha. (Vide p. 82 lines 3-4, Benares ed.).

(3)

Page 23, note 5.

In the body of the book the author expounds the view of Gaṇḍapada and in the foot-note quotes the following passage bearing on the subject—

यथा रात्रौ नेष्टेन तमसाऽविनश्यमानं सर्वं

धनमिव, तद्वत्प्रज्ञानं यत् ।

The readers will necessarily think that the language is that of Gaṇḍapada. But the fact is that it is a passage of Saṅkara's commentary on Māṇḍūkya Up. 5 (and not even on the Karika of Gaṇḍapada).

CITIMORS REFERENCES

Our author has quoted some passages from Sureśvara and his references are—

(a) Varttika p. 109, pp. 110-113 (Vide page 49, foot-notes 9, 10)

(b) " pp. 189 and 512, 791-795 (Vide page 42, note 3)

(c) " p. 258 (Vide page 96, note 4)

(d) " p. 927 (Vide page 129, note 4)

(e) " pp. 110-113 (Vide page 167, note 3)

The word Varttika is vague. Sureśvara has written two Varttikas, one on Br. Up. and the other on Tat. Up. So the references are ambiguous.

The abbreviations 'p' and 'pp' necessarily mean 'page' and 'pages'. But in no edition of those Varttikas will be found those passages on the pages referred to by the author. The fact is that all those passages are taken *verbatim* from S. V. Aiyar's English translation of the *Sambandha-Varttika*, which is the introductory portion of the Varttika on the Br. Upanishad. Before those passages there are figures indicating the numbering of the verses of the original work. These verse-numbers have, in our author's book, appeared as the pagination of the *Sambandha-Varttika*!

We need not explain psychologically how this mistake was committed.

(viii)

DRAMIDA

In one place (p. 234) our author mentions the names of six teachers, one of whom is Dramida. His reference is simply "*Vedānta Samgraha*." On Dramida he writes—

"Saṅkara, according to Anandagiri, refers to this writer in his commentary on the Chān. Up. iii. 10.4." (p. 234, foot-note 2).

The reference is wrong. Saṅkara has written no commentary on iii. 10.4. But in the commentary on the fourth mantra of iii. 8, he has referred to iii. 2.4 and iii. 10.4 and explained all together. Our author seems to have taken it from Thibaut (Vide the Vedānta Sūtras, Vol. 1, p. xxii).

He has committed another mistake. In the *Vedānta Samgraha* (p. 154, Benares edition), the name of the teacher is Dramida. But according to Anandagiri it is Dravida ṛṣiḥ: (vide also his Comm. on Saṅkara Bhashya Br. Up. ii. 1.20). According to Vacaspati also the name is Dravida (vide Bhamati on Bhashya, Br. Sutra i. 1.4). Dramida and Dravida seem to be the same person. But our author should have discussed the subject before pronouncing that Anandagiri spoke of Dramida.

(ix)

In one place (p. 17) he writes—

"Rāmānirṭha criticises *Advaitasiddhi* in his *Tanungui*."

It is not Rāmānirṭha but Rāmācārya (or Vyāsa

Rāmācārya) who is the author of Tārangam Itamatritha is a distinguished commentator of many philosophical books of the Advaita School.

(x)

In one place (p 271) we find Prapañtha is complete resignation to God."

In foot-note 7, he writes—R. B. G. [Rāmānuja's Bhāṣya on the Gita] Introduction to ch. vii and vii 14. Six factors are distinguished as prapañtha which are (1) ānukūlyasya sampattiḥ (2) prah-luṅgasya varjanam, (3) rakṣishyātā vāstavaḥ (4) gopitva-varanam (5) karpayam and (6) ātmasamarpanam."

We are implicitly given to understand that these six factors are described in R. B. G. Intro (ch vii and vii 14). But this is not the case. We find there neither these words nor even the idea.

In the Vaiṣṇava literature of Bengal these are known as *Sarāṅgati* and are embodied in three lines of verse of *Haribhakti-vilāsa* (vilāsa xi section 411 *Vaiṣṇava-tāntam*—quoted in *Caṭṭanya Caritāmrta*, Madhya lila, Pañcoda. 22). We have not been able to trace it to an earlier source.

(xv)

ASTROLOGY OF A MISTAKE

In one place (p 194) he has committed a curious mistake. He translates a passage thus:

"On the removal of *avidyā* of the nature of *Brahman* one abides in one's own self and attains the supreme end. (Itahe ours)."

The text quoted in a foot-note 2, is—*Avidyā bhūvitiḥ vālmānya vāsthanam para prapñtha* (S. B. Tai. I p. Introduction). This passage explains what *parapñtha* means. The true translation is—

"Abiding in one's own self after the removal of *avidyā* is the attainment of the supreme end."

The author's translation does not give the true sense and his translation of *avidyā* by *avidyā* of the nature of *Brahman* is meaningless. One may be curious to know how he has come to translate the passage in that way. To account for it we may quote the translation of the passage by Mahadeva Śaṣtri which is—

"One is said to attain the supreme end when one abides in one's own self on the removal of *avidyā* i.e. ignorance of the nature of *Brahman*—p. 1 (Tai. Up. p. 3). (Itahe ours). Our author has removed the word *ignorance* (necessarily with or) and has got the phrase *avidyā* of the nature of *Brahman* and then has slightly changed the construction of the sentence and the result has become curious."

The word *avidyā* may mean ignorance of the nature of *Brahman*. If the word *ignorance* is to be removed, it must be removed along with its adjuncts [= of the nature of *Brahman*], that is the whole portion—'ignorance of the nature of *Brahman*'—is to be removed. The retention of the adjunct becomes meaningless while the principal word is removed.

(xii)

In foot-note 4 page 192, our author writes—

Suresvara compares the *jīva* to a prince carried away by a cowherd and brought up in rural associations. When he became acquainted with his royal descent he gave up his other occupations and realized his kingly nature."

यकप्रोः स्मृतिद्वारो

न्यायमो निरुक्तिः ।

वेदिकमतोऽवस्था

वत्समस्वदि वाक्यः ॥"

Our author has made many mistakes here. It was not Suresvara but Bāṇhara who first recorded the story. Even he wrote that he took it from those who were versed in traditional lore (*sampradaya*) Vīde Bhāṣya Br Up. ii 1 29 (p 297, Anandasrama Edition).

In commenting on this passage Anandagiri mentions the name of Bhāṇḍacārya.

In the Vartika on the above mentioned passage of the Br Up p. Suresvara describes the story in verse (Vartika Br Up. ii 1 507—516 Anandasrama edition pp 970—972). The verse quoted by our author is not Suresvara's. It was composed by Appayya-dakṣiṇa embodying in it the sense of Suresvara's verses. [Vīde *Siddhanta leśa-saṅgraha*, pp 122—123, Benares edition]. Our author has taken the story and the verse from S. L. S. But had he read the book carefully he would have found that even there mention is made first of the Bhāṣya of Br Up. and then of the Vartika.

(xiii)

PLAGIARISM

In one place (p 173) the Professor writes—

"In the commentary of the *Bṛhadāraṇyaka Upaniṣad* Sankara suggests the theory of reflection. As the appearance of sun and moon in water is a mere reflection and nothing real, or as the appearance of red colour in a white crystal is a mere reflection of the red flower and nothing real, since on removing the water sun and moon only remain and on removing the red flower the whiteness of the crystal remains unchanged, even so the elements and the individual souls are reflections of the one reality in *avidyā* and nothing real. On the abolition of the *avidyā*, the reflection ceases to exist and only the real remains" (p 173 lines 14—23).

In foot-note 2 the reference is to S. II Br Up. ii 4 12.

Dr. Hor. translated the *Bṛhadāraṇyaka Upaniṣad* in 1876. In 1891 it was republished by Toolaram Tātya in *The Twelve Principal Upaniṣads* (Eng. trans.) Dr. Hor. writes in a footnote on ii 1 12 of the *Bṛhadāraṇyaka Upaniṣad* thus—

"I give here in a somewhat different language, some of the images which Sankara uses in explanation of this passage [ii 4 12]. As the appearance of the sun and moon in water is a mere reflection, and nothing real, or as the appearance of red in a white crystal is a mere reflection from a red substance and nothing real, for on removing the water, the sun and moon only remain not their reflections, or on removing the red substance, the whiteness of the crystal continues unchanged,—thus the elements and the individual souls are reflections of the one soul upon ignorance and nothing real for on removing the ignorance by knowledge the soul alone remains while those reflections cease to exist" (p. 248 lines 16—25) Itahe ours."

of a helper or the modification of ones inner nature. The language of Sankara is—

स्वकार्यं पतितम् अन्यत् वास्ति इति परस्पर-सदुक्त्ये ।

Anandagiri explains it to mean—

सवादी-स्वगत-भेद-हीनम् ।

That is, when we use परम् (Eham) it means that

(i) There is no other entity of the same class

(ii) There is no inner differentiation in that one.

In explaining the meaning of the word चक्षितोऽयं (adesthyam) Sankara takes the example of the pot. When a pot is made there are more than one cause, viz., the clay, potter and so on. But in the case of adesthyam there are no other entities besides itself. Anandagiri explains it to mean—

विगतीय-भेद शून्यम् ।

That is, it excludes the idea of another entity having a different nature.

So we see that both the words are significant each having a special meaning of its own.

(xvii)

Subjectivism

Our author says, Sankara insists that the two worlds mental and material are not of the same kind (p. 22).

Again—Sankara repudiates the view that the things of the world are phantoms of our creation (p. 44).

That is only a half truth. The whole truth is that he was both realist and subjectivist. Both naturalist and illusionist. There are innumerable passages establishing each position. We shall not try to-day to harmonize all these passages but shall quote those passages which will prove him to be a subjectivist and illusionist.

(1)

In the Bhasya, Gaudapada karika (n. 25) Sankara identifies himself with Buddhist subjective idealists. He says

यदा वासना चित्तस्य

विज्ञानादिनाऽभ्युपगता

तदनुमोदितमस्मान्निवृत्तिः ।

It means—We too approve of the conclusion of the *Tyana-culins*—that the mind चित्त assumes the forms of pots and other things.

Here it is definitely stated that Sankara and the *Tyana-culins* are subjective idealists. The world is, according to them, a modification of the mind.

(2)

In Bhasya, Mundaka Up. n. 14 Sankara says—सर्वे हि चन्द्रादयः विद्यमाने

It means the whole world is really a modification of the mind (चन्द्रादयः विद्यमाने)

Here also we arrive at the same conclusion

(xix)

Waking Experience

In one place our author says—'Sankara rejects all attempts to reduce waking experience to the level of dreams' (p. 118).

In another place we find the following passage—

Nowhere does he say that our life is literally a dream and our knowledge a phantasm' (p. 152).

The Doctor is over-confident. Here we quote some of the remarks of Sankara.

(a)

Sankara accepts the views of Gaudapada karika n. 4 and defends the position in the form of a syllogism.

(i) The proposition (प्रतिज्ञा) is—'what is seen in the waking condition is unreal.'

(ii) The reason (हेतु) is—'because it is seen.'

(iii) The example (दृष्टान्त) is—'what is seen in dreams is so.'

(iv) The application (उपपत्ति) is—'As what is seen in the condition of dream is false so what is capable of being seen in the waking condition is also false.'

(v) The conclusion (निगमन) is—'what is seen in the waking condition is false.'

We may or may not accept the reasoning of Sankara but his conclusion is that the waking experience is as unreal as is the dream experience.

(b)

The same conclusion is affirmed in the comment (a) on the next two verses (n. 5, 6). In the commentary on n. 7 he raises the following possible argument against his own view.

That the objects of waking experience are false like the phenomena of dream, is not correct for, the former consisting of food, drink, etc. also used as tangible means to tangible ends, whereas the latter are not such. So the futility of the objects of waking experience assumed from their similarity to the phenomena of dream, breaks down (Dvandvātr).

In reply to the above argument of the opponent, Sankara says—'The argument is not correct. Then he controverts the above argument and re-affirms his own conclusion.'

(c)

In the Bhasya, Br. Up. n. 118 we had the following passage—

स्वप्ने दृष्टाभ्यारोपित

यदाच भूतत्वेन लोका

च विद्यमाना एव मन्ताः ;

'एषा जागरितोपि इति वक्ष्येत्स्वम्'

(Anandarama ed. pp. 279-280) What is perceived in dream though certainly non-existent is falsely attributed to the self. The same should be affirmed of waking experience.

(xx)

MOKSHA AND THE WORLD

(A)

About Sankara's views on moksha our author writes—

The Turya or the fourth state has been called *प्रसन्नोपशमम्* (*prapancopasamanam*) by which Sankara means 'the absence of the states of waking, dreaming and deep sleep' (प्रसन्नोपशममिति जाग्रदविद्या-प्रसन्नोपशमम्) vide Bhāṣya, Māṇḍūkya Up. 7 and not what our author makes him to mean (p. 205).

The attainment of this state is *moksha*. From the above exposition of the true state of the Self, it is evident that our author's view of *moksha* is altogether wrong. It cannot mean 'changing the face of the world and making it anew,' as our author thinks. What he means are higher experiences of our work-a-day world. These experiences as explained by our author presuppose the existence

(i) of an objective world which can be seen in a new light and which can be changed and transformed into the kingdom of God and (ii) of a subject with activities of the mind—(knowing, feeling and willing) for changing, transforming and experiencing anew that objective world.

But even in the third state the objective world has vanished and the activities of the mind with its nineteen avenues of experience and knowledge have ceased to exist. So in the last two states there is no objective world to be modified and no activities to modify it.

The state of deep sleep approximates to the fourth state. What worldly experience is not possible in deep sleep cannot be possible in the fourth state.

As in the third state so necessarily in the fourth state the objective world, objective experience and subjective experience—all vanish like the dream world. What remains is one undifferentiated homogeneous Being which is the Self in its own truest nature. This is *moksha*.

(xii)

CREATION

We shall now discuss Sankara's views on Creation, as the subject is allied to what we have already discussed.

In Indian scriptures *true* creation means *Parinama* transformation. This world is a modification of God. There is a variety of expressions to express this idea. God becomes many, He transforms himself into this world, this world came out of God, all these expressions truly interpreted, support the theory of Real Creation. Vedic texts describing this sort of creation are called *Parinama-Srutis* (परिवान-श्रुति). According to Sankara such *Parinama-srutis* do 'not express *parinama*'

न चेय परिवान श्रुति-
परिवान प्रतिपादनार्थाः ।

Bhāṣya, Br Sūtra, II 127

The object of such texts is to impart instruction about the identity of the Self with Brahman who is above this phenomenal world.

According to Sankara there is no creation, so this apparent world is non-existent.

(1)

In another place (Bhāṣya, Br. S. II. 1. 33) he says—"These vedic texts on creation (सृष्टि-श्रुतिः)

do not refer to the truest reality (परमार्थ-वित्या). We must remember that these refer to this phenomenal world which is imagined by *avidya* (अविद्या बलित) and characterized by name and form." Their object is to teach that Brahman is our Self.

(2)

Sankara's Bhāṣya on Br. S. IV 3 14-15 to be read in full. We quote below Tibaut's translation with slight modifications.

Sankara says—Nor will it avail our opponent to say that Brahman possesses manifold powers, because *Srutis* declare it to be the cause of the world's origination, sustentation and final retraction for those passages which deny difference have no other sense (but just the absolute denial of all difference).

But in the same way also those passages of *Srutis* which state the origination and so on of the world have no other sense i.e. cannot be understood to teach anything but just the origination and so on of the world.

To this argument Sankara says—

This is not so we reply, for what they aim at teaching is the absolute oneness of Brahman.

(गलान् परतन्व प्रतिपादन परतन्वः)

Sankara further says

Thus the passages of the *Srutis* about the origination and so on of the world aim at teaching the unity of the Self, and Brahman cannot therefore be viewed as possessing manifold powers." (Bhāṣya IV 3 14)

We thus see that according to Sankara (i) Brahman cannot be said to possess power (शक्ति) and (ii) there is no creation, and so there is no world.

(3)

The same idea occurs in the Bhāṣya of the Br. Upanishad. In one place he says—

"It is thus established that the words about creation etc. are meant to shew the unity of the self" (सृष्टि-श्रुति-वाक्यानाम् शास्त्रेणैव दर्शनाय परतोपपत्तिः) Br Up. 1 47 (Anandasrama ed. p. 120, lines 14-15)

(4)

The same idea occurs in the following sentence of the same section.

सृष्टि-श्रुति-वाक्यानाम् शास्त्रेणैव प्रतिपादय परतन्वः प्रहनेव वक्ष्ये शब्देन

(The same ed. p. 127, lines 25-26).

(5)

In the Bhāṣya of II 20 of the same Upanishad, we find the following—

परमार्थैकत्वं प्रत्यक्ष-श्रुति-व्यति-रिचि-प्रत्यक्ष-प्रतिपादनानि चान्वयति

(Anandasrama ed. p. 206, lines 27-28).

It means—The texts declaring the origination, sustentance and re-absorption are meant for confirming the belief in the unity of the supreme Self.

(6)

Here is another sentence—

तस्मात् उत्पत्त्यादि श्रुतः

आत्मैकत्व-प्रतिपादनपरः ।

(Bh. Br. Up. ii 1. 20; p. 297, lines 11-12, the same edition).

It means—"Therefore the *Śruti* texts declaring the origination, etc., are for establishing the unity of the Self."

(7)

The following is another sentence in the same section—

तस्मात् एकत्व-प्रत्यय-दाश्रयाय सुखं-मणि-लोहारिण विष्कुलिग-

दृष्टान्तान् उत्पत्त्यादि-भेद-प्रतिपादनपरः ।

(Ibid. p. 298, lines 20-21).
It means—"The examples of gold, gem, iron, and sparks of fire, are meant for confirming the belief in the unity of the Self and not for establishing the origination and other differentiations."

(8)

Here is another sentence in the same section—

तस्मात् एकत्वेनैव-व्यप-दाश्रयाय यत्र सर्वेदान्तेषु उत्पत्ति-स्थिति-प्रतयादि-कल्पना, न तत्त्ववय-करणाय ।

(Ibid., p. 299, lines 4-5).
It means—"Therefore the *kālpana* (imagination or fiction) of the origination, sustenance and re-absorption (found) in all the *Vedāntas* are meant for confirming the belief in the unity of the Self and not for believing those (stories) to be actual facts."

(9)

The sixth question in the *Prasnopanishad* is about the *Purusha* with sixteen *Kālās* (कला) The *Purusha* is the Highest Self and *Kālās* means parts. Sankara explains it by *avayava*, i. e., body. There sixteen *Kālās* are *Prana*, *Siaddha*, *Ahara*, *air*, *fire*, *water*, *earth*, *senses*, *mind*, *force*, *strength*, *lapali*, *mantra*, *karma*, *worlds* and *name*. In the second mantra it is said that these *Kālās* rise in *Purusha*. In popular language, the rise of *Kālās* means the creation of *Kālās*.Sankara, in his commentary on this passage, says that the *Purusha* is really without *Kālās*, निष्कल, *nishkalah*; but through *avidya* he appears to be with *Kālās*, *sakala* *iva*. He uses the particle *iva*, which means—"as it were". It shows that *Prana* and other *Kālās* are not really in the *Purusha*; it is only through *avidya* that we attribute these things to him. Sankara then says that the *Purusha* is non-dual and pure unity and therefore cannot be described except by super-imposition *advāropam* *antarena*.

It becomes therefore necessary to say that everything arises, exists and disappears in him. This defect is then remedied by the elimination of what was super-imposed (अभ्यासोप-व्यनश्यते). First it is said that all things arise in him. Then it is said that these things have been falsely attributed to him and that nothing can in truth arise in him.

This method is always used by monistic philosophers. In his commentary on the *Gita* xiii. 13, he adopts the same method and quotes the following saying in defence—

अभ्यासोपापदाश्रयाभ्यां

निष्प्रपञ्चं प्रपञ्चयेत्

(adhyāropāpavādābhyām nishprapañcam prapañcyate. That which is without prapañca is described by *adhyaropa* and *aparāda*.*Prapañca* means that which appears, i. e., the world; *adhyaropa* means super-imposition, attribution and *aparāda* means negation, denial.

First we attribute something to Brahman, then we deny it. The indoscribable is thus described.

In the *Bhashya* of *Prasna Up.* vi. 4, Sankara says that the creation is due to *avidya* and it is like the vision of two moons, goats, flies, etc., created by defective eye-sight (तेमिरिकन्दृष्टि-सृष्टः)or like the vision objects created in dreams (सपुन्यसृष्टः *Svapna-drik-Srisṭisṭh*).The *Mundakopaniṣad* ii. 1. 3 says that *prāṇa*, *manā* and other things are born from God.Sankara, in commenting on this, says that the creation of all these is due to *avidya* and that these things do not really exist in God. These are falsehoods (अवृत) and are objects of *avidya*.

The Highest cannot be said to have these, as a son-less man cannot be said to have a son when he sees a son in dreams (अपुनस्य स्वप्नदृष्टेन पुत्रेण सपुन्यम्) ।

Here the world is compared to objects seen in dreams.

(12)

At the beginning of the *Bhashya* of *Āitareya Up.* ii. 1, Sankara has discussed the meaning of creation. According to him.(i) It is *arthavada*, i. e., hyperbole,

(ii) But it is more reasonable (युक्तर) to call it a story as people usually fabricate, (लोकवय इत्यदि-प्रवरः).

The creation story is invented to explain and comprehend easily the truth that, like a juggler, the Great Juggler the omniscient and omnipresent God, has created all these things.

(13)

In the concluding section of *Bhashya*, Br. Up. iv. 4. 25, Sankara has thoroughly discussed the subject. We give here a summary of the section.

When we teach about numbers, we draw some figures and say 'this figure is one', 'this figure is ten', 'this is hundred' and so on. Here we teach numbers and not these lines.

Again, when boys are taught the alphabet, we use paper and ink and draw certain lines; then we teach them letters. No one says that paper, ink, etc., are letters. Letters *varṇas* are taught by what are not letters.

Similarly when we wish to impart instruction about Brahman, we imagine origination, sustenance and re-absorption of the world. But thereby we create heterogeneity in what is homogeneous. Then we remove this defect by such precepts "neti", "neti", "not this", "not this".

However, God must have listened to his silent prayers at last. His wife died one day after suffering for months and her relatives came and took away the child. Dinabandhu's heart ached for a few days as he looked at the empty and silent room, but he soon managed to comfort himself. Though he had lost his wife and his daughter too had been taken away from him, yet he had been saved much expense. Three annas daily came up to nearly six rupees a month, and the price of the rice too was not negligible. This thought cheered him up considerably and he began to collect his interest with more zeal. His shop too prospered more and more.

His daughter Satyabati did not come back to him. Years passed on. Every year, at the time of the Durga Puja, he would spend twelve or fourteen annas over a striped or checked sari for his daughter and send it to her. He would select one of his poorer clients and send it by his hand so that it might not cost him anything. Thus once a year, he heard from his daughter. The rest of the time, he forgot that he had a daughter at all. As she was with her mother's relatives, he did not think it necessary to offer them money for her board or lodging. They might be offended if he did so, he told himself. Satyabati's marriage too was celebrated in her maternal uncle's house. Dinabandhu happened to be busy over a law-suit then and he could not manage to be present. He did not send any money or presents either. Years passed on as before and Dinabandhu saved that annual expenditure of twelve annas too. It would hardly do to send only a sari to his son-in-law's house. One should send presents and sweets also. But he had no wife to manage these things for him, so he did not try to do anything.

His homestead presented a sorry spectacle to the sight. The bricks began to fall off now, the plaster had fallen off long ago. The grounds around and the yard became full of grass and undergrowth. After nightfall nobody dared to pass that way for fear of treading on snakes or scorpions. Dinabandhu had no fear in him. He would move about

in the night like a creature of darkness. It cost money to have a lantern burning, so he did without any sort of light at all. Only one small earthen lamp burnt in a corner of the room in which he lived. Its dim light served only to make the surrounding darkness all the more full of terrors. Even thieves were afraid of the place. So Dinabandhu did not find it at all difficult to live within this ruined house with untold wealth in his possession.

But Dame Fortune is proverbial for fickleness. Dinabandhu had bad times in store for him. His daughter Satyabati became a widow and as there was nobody now in her mother's family who could give her shelter, she came back to her father. Both her grand-mother and her uncle were dead. She did not come alone, her son Balai, a boy of seven or eight, came with her.

The first sight of the boy nearly drove Dinabandhu crazy with anger. Whence did this imp of satan arrive to trouble his peace? Satyabati was his daughter after all and he had once been accustomed to spend money for her. So her reappearance did not cause him so much uneasiness. She would cost him even less now than she had done before as she was a widow and would have but one meal and that too without fish or meat. Dinabandhu was getting old and rheumatic, sometimes he would scream with pain the whole night. He could not move hand or foot to get himself a glass of water even if he died of thirst. People advised him to engage a servant as servants were cheap in villages. He would have to give the man his board and a salary of two or three rupees at the most. But Dinabandhu did not dare to keep any one inside his house. He did not know whom to trust. What if the fellow should make off with his life's savings? He preferred any amount of suffering to such a calamity. But he could trust his daughter. She would look after him much better than a paid servant, and she would not take any money for her pains. Besides she would eat much less than a servant. So he was glad on the whole to get his daughter back.

He stepped carefully over the thorns and insects that overran his yard and came out to welcome his daughter.

"Come in, my dear" he said, "to think that I should have lived to see this day. But God knows best."

"I hope you are all right, father," said Satyabati rather drily. "I had to come away

* A portion of the food-offerings made to a god.

might regret it. One of the rooms got a thatched roof and the kitchen too was repaired. Satyabati and her son cleared off the bushes and the undergrowth that had turned the front yard into a jungle, and made walking safe. The darkness, too, was illumined now by two or three lamps. As Satyabati cooked every day, Dinabandhu too began to share their breakfast. Since he was being made to pay through the nose, he did not see why he should suffer unnecessary privations. But he was adamant on one point. He would not allow Satyabati to cook more than once a day. It was asking too much of him. Why should not the boy be satisfied with the *prasad* from the village temple in the evening? Dinabandhu had hitherto lived solely on it. Satyabati was helpless. But she could not allow the boy to go hungry at night. She used to hide some rice and curries for him from the morning's cooking, and with that the boy had to remain content.

Nowadays, the old man was being looked after properly. He was receiving fresh cooked food every day. If he felt thirsty at night he had but to ask for water; if the pain in his legs increased, his daughter would come and rub them with warm oil. During the long Indian winter, he used to suffer very much from cold, as he had no adequate clothing. But now Satyabati had given him one of her quilts, seeing his pitiable condition. Though it was an old one, yet it gave him quite good service. If he had to go out in the evening, he could do so safely now, there being no snakes or scorpions in the front yard. If he felt too bad to go out his grandson Balai would go in his stead and carry out his orders scrupulously.

boy is running wild. Why not put him in the village school?"

Dinabandhu flared up at once. Put him to school indeed! Was not he the son of a Nabh? And who, if you please, was going to pay the fee and buy him books and slates and a hundred other things? Who was going to get him clothes? It was none of his concern.

But as usual he felt afraid of his daughter and could not voice his indignation. "Who will pay the school-fee?" that was all he could utter.

Satyabati remained silent for a while. Then, "Very well," she said, "It's only eight annas a month. I shall pay it."

"And who is going to find the books and stationery?" asked Dinabandhu. But Satyabati walked out of the room without deigning to answer.

Old Nibaran Mukherjee was in sole charge of the village school. He had just returned home after his day's work and was washing his hands and feet in the front yard of his house, when someone bowed down to him.

The evening shadows had deepened still more by the aid of the smoke rising from his kitchen and cattle pen, so the old man could not distinguish who the person was.

"Who is it?" he asked, peering down, "I am afraid, I don't see clearly in the evening."

Satyabati introduced herself. "I have been here, quite a long time," she said, "But could not come before to pay my respects to you. Please be kind enough to take in my son. He is simply running wild."

Old Nibaran had never been celebrated for charity or philanthropy. Still, Satyabati was a daughter of the village; moreover, she was a widow, so she could hardly be dismissed at once. He tried to compromise. "I am helpless, my dear," he said, "the school does not belong to me. I am but a paid teacher. If you can pay the school-fee, I shall have your boy admitted at once. I may procure him old books and slates. That's as much as I can do. You know my financial condition very well, my daughter. Instead of helping others, I need help myself."

"All right, Sir," Satyabati said. "If the school-fee must be paid, I shall pay it. Please remember about the books and things."

Next morning, Balai bathed and dressed in clean things and was taken to the old schoolmaster's house early. Satyabati again

he was safe from thieves, for the time being. He stayed on at the shop and did not return even at night.

To Satyabati the world grew dark. What could she do alone, in this horrible ruin, over which the shadow of death already hung? She felt sure now that the boy would die. Deceptive hope whispered in her ear that he would get well, but she hardly had the strength to believe it. The boy was sinking fast.

There was not a single person in the house, who could have helped her. She could not leave the unconscious boy to seek help in the village. If the boy should ask for water? There was none to give it to him. If he should roll down from the bed and hurt himself. Merciful God, why do you send such trials to poor human beings? She knew for certain now, that she would lose her son, but the cruellest blow to her heart came from the knowledge that she had not been able to give him a drop of medicine or to do anything to lessen his agony. God showed her a little mercy towards the last. She did not have to witness the death spasms of her only child. In the darkness of night, Balu passed off into the great unknown leaving the worn out woman sleeping. He did not bid her any farewell perhaps because she had been unable to lessen his suffering.

Next morning villagers found a woman rushing about wildly and calling to people. Her son had died and his body was lying uncremated. Her father had left the house a couple of days ago.

No one went to her help. They belonged to an inferior caste. Moreover, the boy had died of a mighty infectious disease. So every one she approached ran away from her.

"Get away, you wretched woman," they shouted from a distance. "Because your son is dead, you want to destroy the whole village?"

"Send for your old father," another advised, "and tell him to inform the police. They will send the district board sweepers to take away the body. Who do you think is going to carry the body of the old miser? When he dies, nobody would touch the old vulture."

Satyabati returned home. Her darling Balu, the light of her eyes! So nobody would touch him! But the mother was still living. She had not been able to save him, but she could arrange to go with him. She laughed shrilly like a witch, as she made her plans. Even the walls of the ruined building shook at her demure laughter.

There was no lack of wood anywhere. She collected a pile, then she dragged down the straw for the thatch, with the help of a bamboo. Everything was ready for the cremation. She took her child in her arms, and came and sat down in the middle.

"Now there will be no lack of people to watch over your money," she cried and set fire to the straw. "We two, mother and son, shall act as keepers to your wealth."

As the bright flames leapt up to the sky spreading a red glare all around the villagers became conscious that something unusual was going on. There was a great commotion. Everyone shouted and ran, but nobody knew what to do. They did not dare to approach the terrible fire, they could only stand at a safe distance staring or ran hither and thither aimlessly.

Dinabandhu was about to sit down to his breakfast of fried rice when a lad ran up to him shouting, "Your house is on fire. Dinabandhu."

"What? What did you say?" cried the old man springing up. He ran headlong down the street leaving the lad far behind. The fire had by that time spread to the wood and bushes, surrounding the ruins. The villagers remained staring aghast at the conflagration.

"Where have you been, you old rascal?" cried a woman from the crowd, "Your daughter has burnt herself to death."

"I am ruined, oh Lord!" screamed Dinabandhu and sprang headlong into that sea of fire.

The villagers deserted that part of the village after this event. Nobody would pass by that way even. Some dare devils tried once or twice. They were found insensible on the road. The old man, his daughter and her son were reported to dwell inside the charred ruins. They kept watch over the buried treasure.

INDIAN Womanhood

It is a happy sign of the times that more and more of our sisters are engaging in educational and social work.

Examination and the Miss MAYKAR Scholarship in the M. A. Examination. She next joined the staff of the Crosthwaite Girls' School at

Smt. Jamnat Hulekar

Miss Zainab Rahim

Allahabad and worked there for three years. She travelled for a year and a half in England and Germany, where she studied the Educational and Social problems of the West.

Miss ZAINAB RAHIM is an enlightened Bengali Muhammadan lady. She received her

early education in the Diocesan College, Calcutta, passed the B. A. Examination in 1929. Miss Zainab is now conducting a Girls' High School at Dinapur as its Head Mistress.

She has been awarded a Post-Graduate scholarship by the Dacca University and will soon proceed there to complete her studies.

In China

Some Chinese Generals Whom I Saw

By RAJA MAHENDRA PRATAP

I

MARSHAL FENG YU HSIAO, THE CHRISTIAN
GENERAL

IT was a day in July, 1925 I together with another Indian friend was going to Kalgan to see Marshal Feng. The train was crowded. We were in a second-class carriage by no means comfortable. To our great astonishment we noticed Mr Hsu Chien, formerly Minister of Justice, in another carriage. He was also going to Kalgan. We had seen him at several party dinners or meetings of Kuomintang. He knows English. He gave me some names of hotels where we could stop. He, however, added that someone from the Marshal might come to the station to receive us.

Beautiful scenery of the Hankau hills comes and goes. The historical Chinese wall is pierced through and we pass on. Nothing hinders us. We are going to Kalgan to visit for the first time the famous Christian general and we are wrapped up in thoughts of the coming events.

The train pulls up at the Kalgan station. Not knowing the language of the country, and without interpreters, we are naturally a little anxious. The former Minister of Justice (he is now again the Minister of Justice in the Hankow government) comes to us to help us. In the meantime, however, appear three or four men and they enquire about us. The minister tells us that they are from the Marshal and that we should follow them. They take us to a waiting car, outside the station. I and my friend Mr Chiransingh are taken to a Russian hotel. We wash ourselves and take

a light meal. Now arrives a message from the Marshal. We are to see him at once.

In a small little building not far from the hotel is the head-quarter of the ruler of the north-west provinces of China. We enter the main gate, pass a courtyard and we are shown into a small room. A tall, thickly-built man is standing there. I pass him and proceed to shake hands with Mr Hsu-Chien who also happens to be here. He, however, quickly directs my attention to the stout and tall man plainly attired and mentions softly, "Marshal." I feel a little upset. I apologize. He smiles and invites us to take seats. Mr Hsu-Chien acts as interpreter. I present to the Marshal my book, *The Religion of Loie*. After the customary exchanges of greetings and mutual compliments, I begin to express my views on society, politics and religion. I further explain the object of my visit. "I want to go to Tibet and Nepal and I want the help of Marshal Feng." He heard everything very attentively and in the end agreed to my request. He also asked me to speak before his officers. I became his guest in his guest-house.

What impressed me most about the Marshal was his simple life and keen desire to learn everything new. He will come to the guest-house now and then. He will sit on a small simple chair in front of the bungalow. His guests will flock to him. There were many Christian priests staying in the house. All spoke freely and expressed their views on the burning questions of the day.

On two days I spoke to the officers of the Marshal in the large meeting hall. He himself came on both the days and sat cross-legged on the floor without cushion or carpet.

I, spoke in English and a Christian chaplain from Hunan province translated my speech. And the Marshal was throughout very busy in taking down notes from what I said.

There was yet another great general at Kalgan in no way less interesting. He was only a subordinate of Marshal Feng, but he was also a great personality. I hear that he has since died. Therefore, I must do homage to his memory. He was a pious and orthodox Christian and strictly vegetarian. He did not live in so simple a building as his master, the Marshal. He occupied the government "Yamen" or palace. He was the civil governor of the province. His name was Chuang-Chi-Chang. He also invited me to dinner and asked me to speak before his numerous officials and the town nobility.

In 1926, when Marshal Feng proceeded to Russia, this General Chuang-Chi-Chang became Marshal and the acting Commander-in-Chief of all the Feng's forces. The latest news is that this illustrious general still lives!

II

SINNING FU : GENERAL MA-CHI

I will not trouble kind readers with the accounts of several fine generals or governors whom I met on my way to Tibet. They were very interesting to me and certainly very helpful in my difficult journey. However, as their account may not be found of general interest, I shall pass over them here and proceed immediately to relate my story of General Ma-Chi.

This man is not even a governor of one province. Legally he is a subordinate of the Governor of Kansu who resides at Lanchan. But this general Ma-Chi has formed his own province. He rules to-day or ruled when I saw him, from outer Mongolia to outer Tibet. All the Mussalman generals in the different parts of Kansu are either his relatives or his subordinates. As a leader of Islam he has a great influence in the land of Tungans—the Chinese Mohamedans. He is the ruler of all his surveys. He has an army of ten thousand warriors. They are all practically Mussalmans. They are not all well armed with modern implements of war but their proverbial courage and lust of war make them dangerous enemies to those who dare to oppose the will of General Ma-Chi.

I together with an Indian friend, Mr Daswanda Singh, a student of the California University, proceed to take dinner at the palace of the general. For lack of a better interpreter my Chinese servant accompanies us. As we enter the inner gate of an inner courtyard, I am astonished to find two rows of soldiers flanking our passage. As we approach them, up goes the salute from the military band. What is it? We begin to ask each other. A private dinner or an official reception? But we are no officials. We are poor wanderers on the face of the earth. I simply try to serve our common human family. We are going to Tibet and Nepal to see whether we can do any service to India from those countries. Our Indian friends in California collected money for our expenses. We are poor little things! But here, we are suddenly received as the ambassadors of a great power. We are greatly impressed. We walk on. We enter a big hall beautifully furnished with customary Chinese furniture. The long rolls with some beautiful writings adorn the walls. Electric lamps are also hanging but they are not lighted. But we have no time to look round. The general receives us and asks us to sit on silk cushioned Chinese chairs. There are several guests present. A few more arrive. In this surrounding my Chinese servant who was a rickshaw driver a few months before does not sit in. His education is nil. He knows only a few words of English but we have no other interpreter. Our honourable friend, a Kuomintang party man who was to accompany us throughout our trip as interpreter returned from Lanchan. We must as best we can speak through our Chinese servant. He also did his duty well. To our great relief, however, a young student among the guests at the table happened to know better English. He kindly helped us.

We took our seats around a big table. Dish after dish was brought, there was no end of courses. Twenty, thirty, forty different kinds of plates we must have tasted. We forget to count and it was a pity we had no counting machine at hand.

Later on this general gave me a public address. The Indian, of course national Indian, and the Chinese republican flags flew over our meetings. It was a greatly impressive ceremony.

I must mention that without the aid of General Ma-Chi I could not have been

successful in taking our Indian mission to the "independent" Tibet of the Dalai Lama

III

SICHUAN
SOME LOCAL GENERALS

The stories of Tibet will be related somewhere else. This article deals with China. Let us, therefore, hurry to the Chinese province of Sichuan in order of my travels. We entered this province when we emerged from Tibet.

I met a local general at Tachin lu, the capital of Chinese Tibet in the south. Formerly the Chinese generals of Tachin lu were as powerful as the general of Sining Fu, but since some time they are only subordinates of the Yachow general. The present commander may not be very important but the place cannot lose its importance. It is the meeting place of China and Tibet. The general gave us quarters in a private house. The host was a local merchant of some importance. He was half-Chinese and half-Tibetan but looked like an Indian.

The general gave us a dinner and came to see us. I forgot to mention that the Sining general had also paid us a visit. And before I left Kalgan on my first visit to that town Marshal Feng-yu-Hsang himself came to my room to say good-bye. The Chinese authorities on the whole are very polite people and they try to express their kindness by dinners and visits if they can find time.

IV

YACHOW

The only unpleasant experience we had was with the general of Yachow. He somehow did not care to see us. The worst of it was that twice he invited us to breakfast or tea, and twice, when we had arrived at his palace, informed us through some of his adjutants and interpreters that he was too ill to receive us. His political secretary came to us at our Chinese inn and brought presents of European brandy and some Chinese biscuits. I did not accept the brandy as I am "dry-in-principle", but thanked him profusely for the presents which were a symbol of his kindness. The secretary told us that the British Consul-General at Chengto, the capital of Sichuan, had demanded our arrest and therefore the Chinese authorities in the province were not in a position to extend to us the welcome which we deserved.

I did not hesitate to express my dissatisfaction at the general's attitude in not receiving us, but I added that if this seeming unkindness of the general can help China in any way, we will not be sorry.

The American missionaries of Yachow gave us a much more friendly welcome. We had a fine dinner in their home. That, however, is another story. We are dealing here only with Chinese generals.

V

MARSHAL WU-PEI-FU

"The meeting is arranged tomorrow, you will go to see Marshal Wu-Pei-Fu," was the message delivered by my honourable friend Mr Hu, the Vice-Minister of Education. It was in August 1926. The news came quite unexpectedly. I was driven out of Japan a few days earlier. Now I had no other wish but to return to Afghanistan and forget the hardships of a long, adventurous journey in the charming gardens of that country. I had no political ambition for the time being. I will be glad, I said, if I can sit an hour before a half-opened flower and hear the guitar of a flowing stream and enjoy the love songs of a mad nightingale. But no, I was not to retire yet to the scenes of one thousand and one nights. Strange to say, when I reached Afghanistan, the curtain of winter fell on my romantic imaginings, and the sense of duty to the cause of humanity drove me back to spin round the world for the fourth time.

My habit of wandering took me away from Peking. I must first describe my meeting with Marshal Wu. Early in the morning, next day, a motor car arrived and brought an assistant of Mr Hu to my hotel. He took me in his car to the railway station. Here I met Mr Wang, another of my friends and we all went together to board the special train waiting for us. In half an hour we arrived at the headquarters of the Marshal, just outside the capital of the celestial republic.

Through the lines of trains we reached the platform where the train *de luxe* of Marshal Wu and his staff was standing. We wait a couple of minutes in front of the office wagon of the Marshal. Through one big plain glass window I get a glimpse of a man talking apparently with someone else whom I do not see. This man has very fair colour and his eyes are also not black. He must be some Englishman who had come to see the Marshal, so I thought.

We are now shown into the wagon. To my great astonishment the fair-coloured man whom I had seen through the window is the Marshal himself. He stands up, comes a step forward, shakes hands and asks me to sit on a chair near to his office table. I present him my book *The Religion of Love* in a Tibetan silver temple. This leads us to a religious and philosophical discussion. Twenty minutes are taken up by the Marshal in propounding the Chinese philosophy. When, however, our topic turns to political problems, the Marshal emphatically asserts that the British have no right to meddle with Tibet. It is a purely Chinese question. He further promises to help me, in case I proceed once again to that country. He told me that he was trying to unite whole China "by force" and when China was a strong, healthy power, she should surely like to see her neighbours in a healthy condition. For the time, however, he had nothing else to think about, save the well-being of China.

He now invited us to take a breakfast with him. We went out of the wagon. The breakfast or rather lunch was served on

the open platform. A passenger train passed the platform where we were taking our meal. It did not disturb the Marshal in his discourse on the social problems of the day. The food was very simple. As soon as we finished, the Marshal received several telegrams. A couple of new visitors came to see him and I and my friends took leave from him.

VI

A LAST WORD

My impression of the Chinese generals, on the whole, is that they are all patriotic in their innermost sentiments, but as some of them of the Marshal Wu-Pei-Fu's type try a good deal more than what an individual can achieve, at least what they can individually accomplish, they look around for help to attain their goal. And since some of them unconsciously accept help from the enemies of China they are encouraged to fight against one another. The lovers of order, peace and happiness throughout the world have surely a duty to do their utmost to help the honest souls of China in re-establishing normal conditions in their beloved country.

"TUTU"—By Krishna Lal Bhat, Kalkiawan, Baroda

temple at Gaya is worshipped by millions of devout pilgrims who throng to that holy city. This halo of divinity which time has gathered round her noble figure should not however blind us to the full historical character of this great sovereign of Indore. By setting her up on a pedestal and giving her our worship, as we do to millions of our deities, we hardly do justice to a great woman and a great sovereign, who worked and laboured and fought for the welfare of her State, and gave it every ounce of her energy during a long reign of thirty years. Ever since her assumption of sovereign authority and till well-nigh her very end, she held firmly in her hands the reins of administration; she defended it against powerful enemies within and outside the State; she supervised the government and initiated wholesome laws; and she left behind her an administrative tradition which saw the State through in many periods of stress and storm. She is too well known as a holy woman and as a saint; I propose to confine myself to her governmental principles and measures and to seek to find out their bearing on the political problems of the present day.

The sovereign authority of Indore belonged indeed to Ahilya Bai; but it would be improper to label her government as autocracy pure and simple unless we also point out its limitations under such a sovereign as herself. She certainly did not regard the state as a personal, hereditary possession wherewith to further selfish or dynastic ends. She recognized the restraints put upon the sphere of autocracy by the dictates of religion and the demands of customs and conventions. Her complete identification of herself with her people toned down the despotic principle completely and conducted far more to the well-being of the State than it would have been possible in those days from representative government.

Though Indore was for all practical purposes what we call a sovereign State, it formed a part of the Mahratta confederacy and had certain obligations towards that great political system. The battle of Panipat had violently shaken but not in any sense broken the Confederacy and Mahratta leaders were busy retrieving so far as possible that great disaster. Ahilya Bai perceived that as a woman it would not be possible for her to fulfil the responsibilities that devolved on the head of a branch of the Mahratta nation for the common cause and the common

ideal. For this reason she associated with herself as the titled sovereign of the State a worthy scion of the royal family, named Tukoji Rao Holkar. Tukoji was appointed to be the Commander-in-Chief of the State and in this capacity he co-operated with other Mahratta leaders, such as the famous Mahadaji Scindia and others, in distant expeditions, in Northern India and the Deccan. Tukoji used also to collect and receive the revenues of those districts of Indore in the vicinity of which he would stay for business of state. From Ahilya Bai he would get further supplies in the shape of money and men. If any man ever had an opportunity of turning against his master and making himself the sovereign, Tukoji Rao Holkar had that in ample measure. But it would be grossly unjust to that manly soldier even to suggest that such an idea ever flitted across his mind. Ahilya Bai had been asked many times to adopt a son and designate him as her successor. Not even its spiritual significance could induce the statesmanlike queen to adopt such a course. Though Tukoji was older than her in age he used to address her as mother and the most cordial relations existed between the two. The strict subordination of the military to the civil administration, which is a necessary condition of stable and orderly government, was established in the Holkar State by the loyal reverence which Tukoji unquestioningly paid to Ahilya Bai and her deep affection for him and constant solicitude about his welfare. Sir John Malcolm, who made a diligent enquiry about the relations which existed between the two heads of the State, was filled with genuine surprise and admiration at the unanimous reports which reached him about the absolute want of any jealousy between the two personages, and has concluded that there was reverence on one side and maternal care on the other. This does not mean that there was never a hitch between the two and never a conflict of principles. These occurred from time to time, but they passed and never left a scar behind. On one occasion Tukoji had permitted a servant of the Indore government named Shivaji Gopal to accept a job under the Peshwas. He unfortunately did not think it necessary to inform the queen about this incident. When Ahilya Bai heard about this breach of administrative etiquette, she called Tukoji to her presence, and asked him, since he

Iodine Injector For Teeth To Eliminate Pulling

To an abscess and so make it unnecessary to pull teeth afflicted with them, a southern engineer has devised an injector which drives iodine far into the roots of the affected member. It is expertly constructed and has been successfully tested, according to reports.

X-Rays Detect Art Fakes By Revealing Age

Spurious paintings are sometimes detected by X-rays which show a difference in the structure of new and old materials. For instance, an old painting has been retouched by a modern artist to make it resemble the work of a recognized master, or some other method has been followed to disguise a subject. If materials of widely varying age have

Detecting art fakes with the aid of X-Ray

been employed, the difference is likely to be detected by the penetrating rays and the photograph that is taken with their aid.

When Major Segrave Steps on it

The average motorist, who seldom drives faster than sixty miles an hour, will find it difficult to realize what it would feel like to travel at about four times that gait. So far, only one man has driven an automobile at such breath-taking speed

Major Segrave's Racing Car—Golden Arrow

—Major H. O. D. Segrave, of Great Britain; the American driver, who attempted to break the Major's record, established on March 11 at Daytona Beach, was killed, along with a photographer, when his 1,500-horse-power machine got out of control.

The Major's living-Napier Special, which established a new world's automobile record of 231.30 miles an hour, is steered partly by an airplane-type rudder, and is held to the ground so that its wheels will maintain traction by tiny planes which, if tilted upward, "undoubtedly would make it soar through the air in giant leaps."

Major Segrave and his Wife

Thousands of breathless spectators packed the grand-stand, at Daytona Beach, on the day of the race against time. Thousands of people stretched along the sand dunes. Obtaining a four-mile start the British Major drove his glistening twelve-cylinder machine at a dazzling pace along the sandy stretch, steering by means of a peep-sight trained

The Indian Army should immediately be re-organized as a self-sufficient fighting force. All arms and munitions should also be manufactured in India. With a little state aid private enterprise can easily tackle this latter problem.

One thing more: recruitment in the Indian army is restricted to certain races and castes. This is dangerous for the races and castes or even provinces which have been unjustifiably declared *non-military* by the British. There are no people on earth who are non-military as a race. With proper training all races can produce good fighters. As to races which have been good fighters only a century ago, but have ceased to be so on paper due to political reasons, they should make very fine soldiers if only they are given a chance to prove their mettle. The Indian army should recruit its personnel proportionally from all provinces. This may perhaps rub up vested interests the wrong way, but that cannot be helped.

The Girl of Today

E. I. Tampoe's advice in the following, reproduced from *The Indian Ladies' Magazine* for March will be endorsed by many who are interested in the emancipation and fullest development of the girls of today:

The girl of to-day is confronted with—

1. The difficulties of modern environments.
2. Anti-war conditions of living.
3. Her absolute emancipation.

4. The growing and varied demands made on her as never before:

5. The over-increasing struggle for existence;
6. And last but not least, the excess of women over men.

These and similar conditions have led her to shape her life as though she was meant to be, not a complement to man, but his equal, whom she must replace sooner or later.

Such extraordinary performances as swimming the channel, piloting an aeroplane, captaining a ship, motoring round the world, entering Parliament, and filling pulpits, may be admirable and praiseworthy. But, in doing these, a woman misses her highest vocation in life.

In the design of God, and the order of nature is the man or the woman the head in the home and family, in the Church and the State? This is not a question of inferiority or superiority in any respect, but of God's providential and infinitely wise order of nature.

When a woman forsakes her home for the pulpit or Parliament, she is forsaking her supreme opportunity in life. The nations of the world need wives and mothers.

The girl of to-day seems to find her greatest delight in doing what mere man does. That a healthy out-door life with a keenness for all sports, and a liberal and higher education, is essential, not only for her well-being, but also to the world at large, is commonplace. But her freedom to develop soul, mind and body should fit her to be a more ideal wife and mother, than her grand-mother was.

Village Water Supply

The following information regarding the Bombay Government Scheme for water supply in villages—a dire necessity in the Bengal villages as well—is gathered from the editorial notes of *The Bombay Co-operative Quarterly* for March.

The Government of Bombay initiated in the year 1925 a very important departure in the administration of the Famine Fund, which, until then, was being utilized for measures of relief or for provision of employment in times of distress. Sir Chunilal Mehta, then Revenue Member, decided with the consent of the Legislative Council to use the Fund for measures of protection and prevention instead of merely for the alleviation of distress after it occurred. One of the directions in which the resources were to be employed was the building up of reserves of Kaddi and of grass in famine areas and the other the investigations of and assistance to schemes for supply of water both for drinking purposes by the construction of Bandharas (bunds across streams) and tanks in suitable localities. Co-operators may well claim some credit for this interesting innovation in Government policy, because in their Provincial Conference of 1921 they adopted a resolution urging Government to undertake a vigorous policy for the construction of protective irrigation works in famine areas and for providing facilities for well-digging, erection of Bandharas, excavation of tanks, installation of pumping plants in the famine tracts of the Presidency. Government appointed in 1925 a Special Engineer in charge of Minor Irrigation Works who has now under him a staff of over forty assistants and surveyors. His activities which were confined at the start to the four famine districts of the Presidency now extend to thirteen districts, including four districts in Gujarat. During the year 1928, 113 additional proposals were received for consideration bringing the total number of proposals received to 1627. Out of 236 schemes under investigation during the year, 117 were rejected as having been found impracticable, and 25 projects were submitted to Government for inquiries were completed and, in the Deccan, particularly the special Engineer states in his report that "considerable progress has been made with Bandharas and irrigation tanks, ten schemes having been adopted for the Ahmednagar district alone, 16 schemes were under construction last year, and it is gratifying to find that satisfactory results have been obtained from the few schemes which have been completed and are now being worked successfully. The demand for investigation is as keen as ever, and Special Engineer's office appears to be flooded with proposals for inquiry.

Bengal requires such a scheme urgently.

Kashmere Stats and the Kashmerese

The following interview of Sir Albion R. Banerjee to a representative of the Associated Press (reproduced in *The Fendatory and Zemindari India* for March) gives a glimpse of the conditions of the Kashmerese.

The Problem of University Education

Is university education meant for everybody who has the leisure and the means to afford four or five years of refined idleness and more or less easy schooling? Or does it require special kind of aptitudes, and aims at a very specialized kind of finished product? It does, says Dean McConn of the Lehigh University (U. S. A.), writing in *The New Republic*. He attributes the decline in the quality of University education to the admission, in increasing numbers, of pupils who are plainly unfit for the course of study which they expected to profit by:

The swollen enrollments of the present day include a substantial majority of young people who by all accounts, including their own, have not come primarily for studies but for other activities connected with fraternities, athletics, and the like. I try to do full justice to the striking educational values which these other activities afford. But, after all, those values, though highly "practical" for worldly success, are not the same values which we seek through letters and science. The two sets of values are indeed not only disparate, but in part discordant. And consequently, the gross predominance on our campuses, both in numbers and in social prestige, of those devoted to the other activities has, in the common phrase, "dragged down the standards," involved the faculties in innumerable concessions and compromises, and very nearly banished any true spirit of learning and understanding. (There is none so naive as to suppose that "college spirit," of which we hear so much, has any reference to such matters.) Learning and understanding present themselves in our colleges nowadays as things which are pale and ineffectual and second-rate as compared with social leadership or athletic prowess. And I do not see how this situation can change so long as we continue to receive large numbers who, in Professor Veblen's phrase, "have no designs on the higher learning." So, in picturing an ideal college, I begin by excluding this group.

But the question still remains: whom to exclude. Can we say of a given number candidates for University education that they are inherently unsuited for it? Dean McConn faces this issue squarely and has no hesitation in saying that:

There is a large number of young persons of college age with respect to whom I would agree

to all that. Young men and women whose characteristics and qualities are already set and determined one way or the other—some few whose quest of beauty and truth cannot be wholly thwarted by the most unfavorable environment or the most inept teaching; and a somewhat larger number in whom no conceivable presentation of liberal values can be expected to awaken any real response.

How they have come to be that way is another question—whether by biological inheritance, or through the effects of social heredity in those early years which nearly all psychologists agree in considering decisive. But for the college officer as such this question is irrelevant. The point for him is that very many of our young people are already, before they come to him, predetermined, some to enlightenment, and some to an agreeable, energetic but by no means unserviceable barbarism.

There is a general background to this dark picture. It is the decline of idealism in modern society. Dean McConn sums up his case in a finely written, though melancholy, conclusion:

This brings us to a great and sad truth, which is the root of the matter (as I see it), namely, that in our present world, and for long years to come, the adherents of any great and fine faith, whether of Christian unworldliness or of humanistic unworldliness or any other must, if they would keep the virtue of their faith, be content to remain a saving remnant—a comparatively small group increasing only by slow degrees.

Of course, they will be missionaries; no one can hold fervently to any faith without burning to proselyte, or without believing that in the end the truth and beauty which he perceives with such delight must become apparent to all and gladden the whole world. And, being but men, with so short a span, we desire that they should prevail in our day, or at the least make measurable strides. Hence springs a noble but disastrous haste, which cannot be satisfied to build slowly, adding only true converts, but must have also half-converts and merely nominal converts in large number,—who quite innocently, misunderstand and deface the whole creed. This tragic zeal has wrought the degradation of nearly every great cause. When Christianity took over the Empire and began to baptize by nations it practically ceased to be Christian; to most of the new hoards, Christ could be only another war-cry and a new kind of magic. And when humanism seeks to enroll all the children of the bourgeoisie it finds itself turned into—fraternities and football.

This is why it seems to me that instead of continuing in all our colleges to "have a try at

largely due to his interest in antiquities that the request was granted. Various delays ensued, but finally, in the spring of 1900, preparations were completed and Chinese passports secured. One fine May morning Dr. Stein at last set forth, with a caravan of sixteen camels and ponies, for a year's work in the land of which he had long dreamed.

Since then his life has consisted of prolonged periods of exploration, and even longer periods devoted to the task of writing up the results of his researches. This steady desk labour is disagreeable to him but he has never shirked it. By preference he accomplishes the task in his Kashmir camp, living in a tent, which is where he feels most at home, working from morning to dusk, and spending his evenings in long walks at the foot of the great mountains.

Exploration in the desert is possible only in the winter, due to the heat and wind storms at other times, so the summers of his periods of research were devoted to geographical work in the mountains. This entailed as difficult mountain climbing as is to be found anywhere. Stein would often ascend until his men were overcome by mountain sickness, and could go no farther. On one occasion he lost the toes of his right foot through frostbite. But it was the work in the desert which was the most trying. The exacting and often delicate process of excavation had to be carried on in a temperature which varied from freezing point in the day to ten below zero at night. Several days' march into the desert was usually necessary, and this meant limited rations, as all their food and water—the latter in the form of blocks of ice—had to be carried with them. Often they could not find enough wood for a fire at night, and Stein, with fingers too numb to write or to read the little volume of Horace he always carried with him, would have to go to bed as soon as the day's work was done, in order to keep warm. For such earthly ills as toothache there was no help to be found, save that provided by a medicine kit.

Many thrilling moments came to him in the course of his discoveries. One was the finding of an ancient frontier wall of China, built in the second century A. C. and long since forgotten, and of fragments of letters written by the soldiers impressed for service on this desolate and dangerous outpost. Another was the finding, in the 'Caves of the Thousand Buddhas,' of a chapel which had been crammed full of manuscripts and paintings and then walled up many centuries ago, probably on the threat of a barbarian raid. Of these he managed to send back thirty cases full to the British Museum. Another tense occasion, of a disagreeable nature, was when he and his men crossed the desert at its widest, and failed to find the river they were counting on. Just as Columbus' men once rebelled for lack of land, so Stein's men threatened mutiny for lack of water; and it was only when their supplies were gone and hope was nearly abandoned that the life-giving stream was found.

The Youth of France

M. George Duhamel, the distinguished French writer contributes a very penetrating

analysis of the psychology of the youth of France to the *Deutsch-Französische Rundschau* translated in the *Living Age*.

In my opinion, the primary characteristic of this generation is its suffering. It is not a question of a suffering which equals that of the War; it is not a question of physical hurt nor of bodily wounds nor of fear of death. None of the young people of whom I speak have known that fearful spiritual and bodily degradation which characterized the War and from which the people of that time could free themselves only by taking refuge in either death or a despairingly heroic attitude. No. I believe that the young people have suffered as carelessly planted trees suffer, trees which are badly cared for, which grow miserably in unprotected places, in barren soil, and which develop crookedly because they lack elements that favour their growth. This suffering remains unconscious and for this reason it is, perhaps, the more to be dreaded. It restrains the joy of living of children who have not, like us who are slightly older, the memory of an existence which, if it was not more beautiful, was at least easier, more pleasant, and more harmonious.

But the modern discontent is primarily due to spiritual causes. The younger generation of France has lost its best leaders, its most highly qualified guides, it has grown up in the midst of family anxiety and tears. It has lost fathers, older brothers and teachers. For many years it has attended schools that have become inferior. In spite of the earnest efforts of old men and devoted women it has not had the instruction that it would have received from the young teachers who were sacrificed on the battlefield. Bad as all this has been, the younger generation has been harmed even more by a curious opposition which becomes more noticeable from day to day. I mean the opposition that they feel between the moral values which have been taught them and the realities of the convulsively distorted world in which they have had to live. Because it is not possible for them, as it was for our generation, to console themselves with the almost idyllic memories of a time gone by, they are not quite conscious of the foundation of their maladjustment. But I do not doubt that they are full of indignation and that they have a vague contempt for the generations which preceded them.

Such contempt easily masters young men as long as they have not yet experienced the first surprises that real life has in store for them and have not yet faced their first personal failures; but in normal times they find compensation for all that in such qualities as enthusiasm, gratitude, or admiration, with all of which modern youth seems unacquainted. I do not think I am mistaken in asserting that young people to-day are possessed by malicious resentment and a peevish impatience with everything. For example, there has never been such indifference or disdain for the virtues required either by war or peace, as there is to-day.

This profound *malaise* has had different effects according to the temperament of the persons affected. To-day the youth of France may clearly be classified in four or five different groups:

The younger generation of France has, generally speaking, quickly passed beyond this phase of littleness and in doing so has become divided within itself. Some believe that they can free themselves from their unrest by flinging themselves into that whirl of pleasure which has been set in motion in all the lands of the earth by a social order seeking means to forget its errors and the dangers which lie in wait for it. Fortunately these represent a very small fraction of society a fraction whose loss we doubtless should not regret.

Others, and they form the majority who are not temperamentally inclined to reflection or to the endurance of suffering for long periods have wisely sought wholesome diversion and forgetfulness in athletic sports. I do not attribute all virtues to this intoxication with sport and I approve it only with reservations but for a large group of the younger generation for whose energies our prejudiced age allows no outlet sport it must be admitted, is a good school of endurance.

Many brilliant and highly gifted young people have also sought their salvation in restless work. They are waiting their war preparing themselves. Their enthusiasm for study gives them hope and solace.

I must say a few words about another group who have not succeeded in disentangling themselves from the problems of the age. In the minds of most of these young people moral and social concerns seem more important than metaphysics. They are the restless ones the unprisoned ones, the sentimentalists, the pseudo-sceptics the ideologists. A greater number than one would believe revolt strongly to the appeal of the political parties. They do not wait to stand idly awaiting the decadence of the older generation whom they hold responsible for their misfortune and because their youth makes them incapable of moderation they join at the first opportunity the most extreme party, factions, which recklessly exploit their youthful zeal, their fresh and eager spirit without giving any very careful consideration to the ultimate goals to be sought.

Though this group of young people is divided within itself, it cannot on the whole be regarded as weak or insignificant. Before very long it will certainly be making itself felt. It does not feel the weariness of the older generation—indeed it scarcely understands that weariness. It is alert. It wishes to be busy. It wishes to find as quickly as possible a place for itself and a sphere of activity suited to it. Without quite understanding what it is doing it hopes to find success where so many other generations have shattered themselves and bruised their spirits. We must give ear to its whimpers which often have a tone of ill-will about them. We must take the younger generation seriously when it cries out, in a voice that is as yet scarcely mature. Open the door at once, you older people or we shall beat it down.

Knut Hamsun's Outburst

Scholars, particularly such of them as are also college dons have a remarkable flair for hunting out influence. One German

Professor attempted this more or less unconscious exercise on Knut Hamsun, with a result that ought to make imprudent investigators wary. The account is published in the *Living Age*.

A certain German Professor, Herr Walter Berendsohn recently published an article about the Norwegian novelist Knut Hamsun, which aroused a spitting protest from Hamsun that must have been to say the least, quite unexpected to the learned German. It would appear that Professor Berendsohn has gone a little beyond the facts in his description of Hamsun, ascribing to him ideas that he does not have and discovering in his work the influence of authors whom he has never read.

Mr Hamsun in an article recently published in Norway protests vigorously.

Berendsohn says that I became acquainted with Thomas Mann in Munich writes the indignant novelist. To the best of my knowledge I never in my life met Thomas Mann. If by any chance I did at one time see him in Munich we certainly did not converse because I did not at that time know any German and have not since learned it. I know a foreign language. That later I was unable to forget Thomas Mann and that he helped me in matters of style are also wild inventions of this professor. I have read, in translation, one book by Thomas Mann, namely *Buddenbrooks* which I consider a significant unimpressive work. It was sent to me several years ago but it lay around unused until a little less than a year ago before I read it. It is certainly to my disadvantage, but this one book by Thomas Mann, which I read scarcely a year ago is the only work of his which I know. Professor Berendsohn knew this perfectly well because to a series of increasingly important questions from him I replied in no uncertain terms warning both to him and to his publisher, who is also mine in Germany. But this scribbling literary scholar as he calls himself goes right ahead to state the opposite of what I told him.

Furthermore in an interview, he spreads the news that I have been influenced greatly by Wedekind—of whom I have never read a syllable.

Is my work then entirely unaffected by other writers? Of whom is such a thing true? There is perhaps no one who has been more influenced than I. I am not made of stone. I am susceptible, impressionable, even hysterical more than other people it seems to me, I have probably learned something from all the authors I have read. But the greatest impression was made, in my younger days, by Dostoevski, Nietzsche, and Strindberg. The first two and part of the third I had to read in translation. I repeat, I can't say how much I have learned from other writers but no scribbler can say that I have been "influenced" by authors whom I have never read.

The learned German's reply to this outburst has not yet appeared.

The Chinese Renaissance

In the *China Journal* for March 1929 Mr Arthur de C Sowerby analyses the

tendencies of the so-called Chinese renaissance. There is a general idea current, says Mr. Sowerby, that something is happening in China akin to what took place in Europe when the peoples of that continent emerged from the superstition and ignorance of what are known as the dark ages. But the true significance of what is happening, says Mr. Sowerby, is quite different:

During the latter half of the Manchu Dynasty China seems to have been losing ground, chiefly as the result of corruption in high places and a general forsaking of the ideals of their predecessors on the part of the people. Undoubtedly contact with the West has had something to do with this. Everywhere the people seem to have fallen under the spell and glamour of Western products, in many cases to their own immeasurable benefit, as for instance, in the use of Western machinery and appliances, in others to their irreparable loss, as in the adoption of the cheap and ugly crockery, household furniture and pictures they purchase in such quantities from the West in place of the beautiful and invariably artistic products of their own country.

The Chinese people have fallen into the error of assuming that because the superiority of certain things belonging to the Western culture and civilization, such as, say, the engines of war, over those of the Orient has been proved, all the products of the West are superior to those of the former. We are referring, of course, to the Chinese of the large cities and treaty ports who have come into contact with foreigners, and not to the inhabitants of rural districts and the far interior who scarce know what a foreigner looks like.

Apparently it is this awakening of the Chinese mind to the supposed superiority of everything Western and the widespread desire to exchange the utensils, appliances, clothing, art and architectural forms and even customs of old China for those of the West that constitutes what is called the renaissance of China.

With regard to the higher amenities of life—art, literature, music—very much the same thing is happening. The old standards are going, going fast; but what is taking their place? There is unquestionably a forward movement in literature and a tremendous activity in the Chinese journalistic world, mainly brought about by an easier system of using the character than was in vogue in the old days, but we do not know if this is resulting in the production of any really great literature. There are a few Chinese scholars who have taken up the intensive study of their own classics, applying the methods of higher criticism, and they are accomplishing great things. In this direction there is undoubtedly a minor renaissance going on in China to-day.

A similar attempt has been made in regard to the art of China, but with what success it is hard to say. It is, perhaps, in her art that China shows the greatest decadence, and certainly what is taking its place to-day cannot possibly be considered as belonging to a renaissance. There are still many artists of the old school, and it is maintained that many of them are extremely good, but the whole

trend of art work to-day in China is away from the standards of the past and in the direction of the appalling stuff that is produced in Europe by people who have no right to the name of artist. The young Chinese self-styled artist of to-day dabbles in oils, using the most glaring and inharmonious colours, and delights in grotesque representations of the female nude—all under the impression that he is following in the footsteps of the great European masters. He has forsaken the style and technique of his ancestors and despises that marvellous touch and delicacy combined with strength and sureness that are such marked features of the great masterpieces of Chinese painting. Some are actually trying a combination of the styles and techniques of the East and the West, mostly with disastrous results.

But the worst decadence is to be found in the homes of the people, where that refinement and supreme good taste that was once so characteristic has given place to the vulgarity of the hoipolo, of the West.

The new spirit that has got China in its clutches is in no sense a renaissance, a re-birth or revival of what was best in China's culture after a period of stagnation or decadence: it is an indiscriminate adoption of the worst phases of an alien civilization aesthetically speaking, that is to say, a ruthless mixing of the latter with what is left of the old. We see this on every hand, in the buildings erected by the Chinese to-day, in the work of the young actors on the Chinese stage, in the decorations and furnishings of the homes, in the dress of the people and in the production of the artisans, silver smiths, brass workers, furniture manufacturers and the like. The great mass of the Chinese seem to have lost all appreciation of their great and wonderful heritage in the arts, and yet have no real idea of what is good in the art of Western countries, and the result is deplorable.

Ten Commandments of Social Justice

The *Literary Digest* publishes the following ten commandments of social justice, which, it adds, the minister of to-morrow must add to the familiar ten commandments of personal righteousness:

I

"I am the Lord thy God, but thou shalt remember that I am also the God of all the earth. I have no favourite children. The Negro and the Hindu, Chinese, Japanese, Russian and Mexican are all my beloved children.

II

"Thou shalt not measure a city's greatness by its population or its bank clearings alone, but also by its low infant mortality, its homes, playgrounds, libraries, schools and hospitals, and its low record for bootlegging, prostitution, robbery, and murder.

III

"Thou shalt remember that no civilization can rise above the level of its respect for and ideals of womanhood.

subject that he enjoyed his greatest Parliamentary success, converting by his single speech, as Asquith wrote to him, a whole hostile or indifferent House. Again, he was for some years at the end of his life the very active President of the Institute for Adult Education, addressing over fifty meetings on its behalf in a single year in all parts of the country. He only gave this up in 1926, when his health had already begun to fail.

Many readers of this book will wonder that it did not fail earlier. The amount of work recorded is enormous, from his early days at the Bar, when he had his career to make and lived in perpetual and solitary industry, to the later years of wealth and fame when his life was crowded with political, judicial and social engagements and yet was always forced to make room for his own philosophic studies as well as for educational efforts on behalf of others. He once told a friend that when he got home, however late, from the House of Commons he always had an hour's philosophy before going to bed; adding that he never went to bed before one or got up later than six. No well of human energy however deep, can long hold out against so many buckets being sunk into it during so many hours of every day. Haldane was not old, as age goes to-day, when he died; and he had been visibly failing for several years. No doubt he would have made the same choice if he had to live his life again. He had used every atom of his powers and had lived many lives in his seventy years.

Men and Machines

Mr. Stuart Chase is contributing to *The New Republic* a series of thoughtful articles on men and machines in which he is pointing out the possible dangers that the employment of machinery may have in store for humanity. Having dealt with the dangers from mechanization, the loss of handicraft skill, social standardization, degeneration in the quality of goods, recreation at second-hand rather than direct participation increasing unemployment, he goes on to deal with the three great potential dangers of the machine. These, according to Mr. Chase, are: (1) mechanized warfare; (2) complexity of mechanical specialization; (3) and the drain on natural resources.

On the whole, these three dangers are becoming steadily worse; the more serious because all are long-term bills, and the full value of the instrument has not been assessed. Men have always been loath to bother about bills for vague sums, collectible in the vague future. That is posterity's job, and what, after all, has posterity done for us?

It is true that there are a few peace advocates who are worrying about the next great war—sometimes with a fair amount of publicity. It is true that there is a still smaller and less active group of conservationists who are worrying about oil, lumber, minerals, and coal—with very little publicity since Theodore Roosevelt dropped the subject. Neither of these problems has really been driven

into the public consciousness; people think of them as worthy causes that deserve an occasional contribution, like homes for poor widows. For every article in the newspapers picturing the impending smash of the next war, I find a dozen jauntily featuring the latest super-dreadnought and anti-aircraft guns—and the ratio shows where the public interest really lies.

The threat of over-specialization, in the sense that we are increasingly dependent for our food, water, and other necessities on a mechanical process, which only a few technicians understand in detail and no one understands entirely, has rarely been touched upon—let alone realized in the public consciousness. We turn a faucet, and water gushes out. If it doesn't we telephone indignantly to the plumber, who fiddles with a wrench and makes it gush. Where it comes from, and how, we neither know nor care. We would as readily think of the sun standing still—more readily, in fact, for the city people seldom see the face of the sun—as of water not flowing from faucets after the proper telephoning and tinkering. Yet a handful of technicians could bring just such a miracle to pass in a few hours, and before connections could be reestablished by amateur engineering—if, indeed, they could be reestablished—we should run to the scum of the salt water tides, mumbling with thirst.

An engineer once explained to me how a hundred key men, operating its veins of water, power, gas, sewage disposal, milk supply, and communications, could snuff out the life of a great city, almost as neatly as though every crevice had been filled with poison gas. The machine has presented us with a central nervous system, protected with no spinal vertebrae, lying almost naked for the cutting. If for one reason or another it is cut, we face a terrifying, perhaps a mortal, crisis. All previous cultures have thrived with hardly any central nervous system at all; they could be destroyed only village by village, for each was largely self-sustaining.

The machine is swallowing natural resources at a fantastic, an inconceivable rate. It has used up more oil in the past ten years than had been consumed before that since the beds were laid down, some millions of years ago. It has used up more minerals since 1900 than in all previous history.

To the time of Watt, men lived chiefly on the interest from their store of natural resources. Increasingly since 1800, and for the past generation with blind fury, it has been tearing into its capital on a scale that precludes replacement. All the western nations have proved their fitness to be called prodigal sons; but the gayest, most light-hearted, most charmingly rattle-brained of the whole family is certainly the United States of America. This stippling lights his cigarette with a million dollars' worth of coal, and throws the match to kindle a million-dollar forest fire. "Our habit of stepping on the gas," says George Otis Smith, "has brought the mineral industry close to the danger line." And he adds that a nation's wealth may also be measured by its power to last. The rate at which a spendthrift divorces himself of his capital has ever been a poor measure for the value of an estate. We are already beginning to import raw materials in increasing amounts, and before we know it, our sometime economic independence will have run its course, we shall be

Giuseppe Mazzarella, an Italian Exponent of Juridical Ethnology

By BENOYKUMAR SARKAR, M.A.

THE most essential part of Mazzarella's scientific work is consecrated to the study of ancient Hindu law. He considers Hindu law to be one of the most important juridical systems of mankind on account of the great wealth of its materials and the multiplicity of the phases of evolution which it has passed through. In his judgment the importance of Hindu law consists, further, in the vast extent of its area of formation as well as of its directions, and in the continuity of its development which has also involved scientific reconstruction in affinity with the more antique periods of pre-history. He believes, moreover, that Hindu law is immense in its proportions and that it is possible to ascertain the links which connect it with all the other manifestations of Indian civilization. Indeed, the ancient law of India possesses for legal ethnology the same importance as Sanskrit in the science of language.

Mazzarella (born 1868 in Calabria, Southern Italy) got his doctorate in jurisprudence at the University of Naples (1890). He was for some time an advocate in his younger years but he gave up the profession and took to the study of juridical ethnology. In 1909 the title of "free docent" in this science was conferred upon him by the University of Catalonia. This is the only docentship in ethnological jurisprudence conferred in Italian Universities. The same year his book entitled *Le antiche Istituzioni processuali dell'India* (The ancient Lawsuit Institutions of India) and three memoirs on *Prestito nell' antico diritto indiano* (Debt in ancient Indian Law) were awarded the "royal" prize as the result of a competition arranged by the *Rale Accademia dei Lincei*, the greatest scientific institution of Italy. In 1923-25 he was entrusted with regular lectures on Roman Law and Institutions of Roman law at the University of Camerino. Since 1926 as the result of a competition he has been occupying, as

professor, the chair of juridical ethnology at the University of Catalonia, the only chair of its kind in Italy.

In 1899 was published his first book *La Condizione giuridica del marito nella famiglia matriarcale* (The legal position of the husband in the matriarchal family). It concerns itself with the most archaic types of matrimonial union. Since then without interruption for nearly three decades he has been devoting himself exclusively to juridical ethnology. This science in the first phase of its development which may be considered on the whole as circumscribed between *Mutterrecht* (Matriarchy) of Bachofen and *Ancient Law* of Sumner Maine as well as *Grundriss der ethnologischen Jurisprudenz* (Groundwork of Ethnological Jurisprudence) by Post, had a character almost entirely descriptive and historical. The scope of this aspect of the science lay essentially in the collection of a really immense factual material reflecting the juridical life of all peoples, extinct and living, accessible to scientific investigators, and the determination of the origins of all social institutions.

Since the beginning of his career, Professor Mazzarella has before himself had the objective of transforming juridical ethnology from a purely descriptive-genetical into an interpretative discipline such as is capable of determining the causes and the general laws of the legal phenomena. In order to effect this transformation he had to start with the consideration of a typical system of reference corresponding to given conditions, a system such as might be reconstructed accurately and minutely on the basis of an examination of historical sources and analysed under five different aspects: (1) morphological (reconstruction of the component juridical norms, and of the institutions in which they are embodied, determination of the links which connect the norms with their respective surroundings), (2) stratigraphical (determination of the fundamental types

Of the two works bearing chiefly on the law of ancient India the first *Le antiche Istituzioni Processuali dell' India* (The Ancient Lawsuit Institutions of India), published in 1900 is complete. It comprises the study of the Hindu law relating to law-suits during all the six epochs, and under all the five aspects mentioned above. It was on account of this treatise that the "royal" prize of the *Accademia dei Lincei* was conferred on him.

The second book dealing as it does with the ethnological study of all the juridical systems of India excluding the law-suits discussed in the previous work is naturally larger and is not yet complete although it has already reached the sixth volume (which forms volume eight of his *Studi di Etnologia Giuridica*). These six volumes are given over to the study of the juridical institutions of the epoch "naradiana" from the exclusively morphological aspect. The seventh volume which is going to be published in 1929 will deal with the penal institutions of the same epoch and will complete the first part of the morphological section of the work.

The four successive parts of the same section are to deal with the structure and the connecting links of the juridical institutions,

as well as with the integration of the institutions themselves during the other three historical epochs, on the basis of data furnished by auxiliary and indirect sources. Next will follow the stratigraphical, genealogical, psychological and philosophical sections of the work which will naturally be much briefer than the morphological section which constitutes its foundation.

This treatise on India when completed is to be known as *Etnologia Analytica dell' Antico Diritto Indiana* (Analytical Ethnology of Ancient Indian Law). The remaining portions of this vast work are expected to appear at the rate of one volume a year.

Those who would like to acquaint themselves with Mazzarella's methodology as well as standpoints in regard to Hindu law in the perspective of comparative jurisprudence and ethnology are advised to begin with his book *Le Antiche Istituzioni Processuali dell' India* (The Ancient Lawsuit Institutions of India), published in 1909, which may be regarded as an introduction to his entire work. The volume is, further, important as the study of one of the most essential branches of the Hindu legal system. It covers seven hundred pages in origin 1 Italian.

The Memory Of The Sea

By MARCIA JANE BABBITT

When in the desert land of hot-baked sands
The sun sinks low,
I close my eyes and dream of other lands
That I was wont to know.
Forgetting heat and wind and sand I drift—
Dreams come to me,
And once again I wander there alone,
Beside the sea.

Upon the blue horizon far away
The white sails gleam;
I see the shadow cast by ending gulls
Pale sunbeams stream.

Through fleecy clouds that fleck the heaven's
blue—

Peace comes to me,
Wafted through roaring of the waves,
Up from the sea.

Though in some inward place I must abide,
This will I always know;
Ever the sun-kissed waters move and move
Restlessly to and fro;
And ever shall a lasting peace hold sway
Deep in the soul of me,
Never can winds, nor sands, nor suns erase
From memory, the sea.

(Literary Digest)

hands. We are not in favour of sparing anybody who gives the wrong lead, however highly placed he may be. If it is found out that Mr. Sastri has given utterance to the ideas as reported by the *East African Standard* he ought to be mercilessly criticized. Even if Mahatma Gaudhi were to advise our people in East Africa to yield on the question of common roll his advice should be rejected. But we ought to see that we do not do any injustice to these helpers of ours by condemning them before hearing their point of view in full. Mr. Sastri is departing for East Africa very soon and we hope he will give an early opportunity to remove the misunderstanding that might have been created.

A request to Maulana Mohammed Ali

Maulana Mohammed Ali has announced his intention to visit South Africa in the near future. A country where Gandhiji lived and toiled for twenty-one years should be considered a place of pilgrimage by every Indian and if Maulana Mohammed Ali were to go there in that spirit we should heartily congratulate him on his decision. But unfortunately he is at present in a reactionary mood and is behaving like the worst of communalists. We are afraid he may not spread communalism by his speeches in South Africa. If Gandhiji could succeed in his Satyagrah struggle against the powerful Union Government it was chiefly on account of his intense faith in Hindu-Muslim Unity which he could achieve there through his suffering and self-sacrifice. There were in South Africa Mohammedans of the type of Mr. Kachalia who sacrificed their all for the cause and if Maulana Mohammed Ali can draw some inspiration from their lives he will return to India a sower and wiser man. Maulana Mohammed Ali has been President of the Congress and the least that can be expected from him is that he will not allude to the Hindu-Muslim problems of India in his speeches on South Africa.

Our people abroad have their own problems to solve and they do not want to be burdened with troublesome controversies from home.

"Conditions In Aden"

A correspondent writes:—

Aden is a Military Settlement, which came into existence as such about the year 1839. Before a batch of Bombay soldiers took it,

it was in existence, not as a Military Settlement but as a peaceful little place with old historic and Mythical Associations. The people had known traders from Kathiawad, for many years, before the British conquest. There are spots pointed out where, formerly, the houses of some rich "Bunias" stood. There are three temples—one of them is in a corner of a hill and believed to be very ancient; it is dedicated to the Goddess "Mata". Hindus believe that this was the place where King Jarasandha had lived: a hole in the rocks through which a man can enter is identified as the place where Bhima had struck with his "Gada" or club.

India used to send her cotton goods to Arabia; but now, the merchants hailing from Kathiawad are only petty subordinate middlemen of British manufacturers. Parsee merchants seem to have thrived on military contracts, the sale of liquor and provisions. It cannot be said that any Indians here are following occupations that are free from evil. All including the actual soldiers are interested in earning their livelihood by supporting the scheme of this Military Settlement to bring Arabia and the adjoining territory under commercial exploitation by Great Britain and her friends for the time being at least.

India has been bled as usual for creating this Settlement, as other places outside India, e.g., Burma and Afghanistan. The lion's share of the profits of exploitation has always gone to the British Capitalists. India and other Asiatic, African or coloured people have to take the crumbs falling or graciously thrown from the white man's table. If any of them dares to complain, the Big Stick is sure to be pointed at. The coloured people individually find it more comfortable to live under the British Flag than under their own rulers (as we Indians do in India) because there is more of safety of person and property. In the interior of Arabia the people seem to be under such depressing old-time conditions amounting to feudalism and slavery that they enjoy being able to avoid them by coming to places under British control. Even the Somalies are so happy here that they dread being deported back to Somaliland.

Aden, thus, is a place where there are and can be no politics so far as the people are concerned. Of course, the Resident is nothing but political—he is even called

"Political" Resident and he has several assistants who also are described as "Political" though they may be doing judicial work simply. The only politics therefore, are Government Politics so far they used to be guided by the Governor of Bombay or the Viceroy of India. Lately the Colonial Office has taken over charge of the Settlement of Aden. The Resident did not care, as people think, for anything but the political influence of Great Britain over Arabia.

The Indian Government is allowed to do the civil administration, in the name of the Resident. But no one really cares what happens so far as the people are kept quiet. Military Officers have been kindergartening in legal work—later some persons with civilian qualifications were introduced. And yet people do not think they have succeeded in obtaining real justice. In a place like Aden people are apt to become arbitrary without checks from superior officers, such as District Judges and High Courts.

But the people really have no choice. They must take what justice the Courts are pledged to render, without a murmur.

In this country, the position of Indians is very peculiar. All have to remain in a humble position. They have no rights, except what the Government suffers them to enjoy.

Stories are current that on one occasion the "Bania" shopkeepers were severely dealt with and humiliated because on one of their holidays (Amavasya) they did not greet and salute some European would-be customers. A similar incident happened in the case of Mahomedan shopkeepers. But the story goes that they did not remain quiet under the Resident's threats of deportation etc., they cabled to the Viceroy, as people say. A few years ago some people went to a place called Sheikh Othman and burnt their caps as in those days many people had done in India. It is said that a Parsee Police

Officer knowing of this, brought the matter to the knowledge of the Resident. The Resident ordered the prominent "Bania" traders to wait upon him and they were "Samphaved". It can thus be seen why a European solicitor exclaimed to his assistant "No one's liberty was safe in Aden" and he left this place, before the actual storm, after having seen a cloud.

The Parsees indeed are more prominent than other Indians, but even they, big and small, have personal experience of having to submit to unequal treatment, compared with Europeans.

The present Resident has been here, for a few months, he has made a good beginning, by telling the Arabs that the country being theirs, they will receive great consideration. He told the Indians that Aden was really developed by their trade, that is why they would be considered of importance. We may assume that he must have told Europeans, something equally if not more, pleasing. Whether the Resident actually succeeds in making every community happy remains to be seen. He is not master of himself, no matter howsoever well-meaning he may be. He has to obey orders given from Downing Street and even the Parsees find it hard to do business when the Indian and European troops are no longer in Aden, because the Royal Airforce people have supplanted them, these people are catered for by the Home and Colonial Stores. There has been no trade for many months now and the prospects do not yet seem hopeful.

Some people are afraid of a repetition of the colour bar practices of colonial Governments. A well-informed Indian Officer told me that we Indians might one day be told to clear out of Steamer Point which might be reserved for the white people and Indians might be asked to reside in places such as the Crater and Sheikh Othman.

NOTES

Meerut Conspiracy Case

Along with the organs of Indian public opinion, the Working Committee of the Indian National Congress has strongly disapproved of the wholesale arrests of labour leaders and workers, including several members of the All India Congress Committee, and the large number of house searches all over the country. The Committee has also strongly condemned the method adopted by the authorities of bringing the accused from all parts of the country to one place, and that too an out-of-the-way place like Meerut, where they will be deprived of facilities and privileges which are open to such accused in presidency towns, to which the great majority of the accused belong. Of the thirty-one persons arrested ten belong to Bengal, thirteen to Bombay, five to the United Provinces and three to the Punjab. Only two persons belong to Meerut. Common sense and fairness would dictate that the place of trial should be such as would suit the convenience of the largest number of the accused. That would be either Calcutta or Bombay. A jury trial can be demanded in these cities and there are many other facilities easily obtainable there. In Meerut trial by jury cannot be demanded except by the two European accused, nor can a sufficient number of lawyers of eminence be engaged there by the accused for their defence without incurring excessive expenditure.

Punishment of Under-trial Accused

The punishment of men before they have been proved guilty after lawful trial is repugnant to all ideas of justice. Assuming either that all the accused are guilty or that some are guilty and some are innocent, the punishment of the guilty before they have

been convicted is unjust, as they are thereby practically given a heavier sentence than they deserve; and the punishment of the innocent is absolutely unjustifiable. But under existing conditions of trial of some accused, as particularly exemplified in the case of the accused in the Meerut conspiracy case, they are sure to have been practically punished, whether at the conclusion of the trial they be proved guilty or innocent. For, not to lay stress on the fact that many of those arrested were taken for long railway journeys *hand-cuffed*, many have been kept in solitary cells in the Meerut jail. Confinement in solitary cells is ordinarily meant for hardened and turbulent criminals adjudged guilty after trial. There is not the least justification for the confinement of any of the accused in this case in solitary cells. It may lead to mental derangement and other evil results. The food given to the accused is insufficient, unsuitable, badly cooked and served in iron vessels which discolours them and makes them distasteful. In consequence some of the accused have already fallen ill. Even if the friends and relatives of the accused were allowed to supplement their diet, it would be very difficult for them to do so, living as they do at a distance of hundreds of miles from Meerut. The heat of Meerut in summer is such that to most of the accused it must be intolerable. The inhabitants of U. P. towns like Meerut who are free (we mean those who are not in jail, for no Indian is really free) generally sleep at night in the open in summer. The accused are not only not allowed to do so, but they are plagued by mosquitoes against which they cannot protect themselves by using mosquito-nets, as these, we understand, are neither supplied nor allowed to be supplied.

The trial will probably last a year or so. To live in jail for such a long period under the conditions described above is a real punishment. But confinement under such

conditions is not the only punishment which the accused are to undergo. They are to spend large sums of money on lawyer's fees, etc., for purposes of defence, which would be heavier in Meerut for Calcutta, Bombay or Allahabad practitioners than in the latter places. Their relatives and friends would have to reside at Meerut for a year or so, and that would mean much expense. The accused would be precluded from earning anything during the period of their trial, and afterwards, too, so long as their health remains weak or so long as they are not able to secure new jobs. The health of some may be ruined permanently.

So this trial, under all the circumstances described above, means additional heavy punishment for those who may be adjudged guilty, and very unjustifiable punishment for those who may be declared innocent by the Court.

If such unjust treatment of under-trial prisoners, as they are called, be inevitable under the law and the jail rules as they stand, these should be amended without any avoidable delay and juster and more humane ones substituted for them. But if there be any remedy under present conditions, the authorities concerned should take the remedial steps at once. They should not, in their own interest, allow the suspicion or charge of vindictiveness to remain unchallenged. Those who have undertaken the humane and patriotic task of arranging for the comfort and defence of the accused should also seek such remedies as are available.

Defence of the Meerut Accused

Some of the difficulties of the accused in the Meerut case in properly defending themselves have been already incidentally referred to above. There are other difficulties. The magistrate in charge of the case has been remanding them into custody repeatedly without hearing what they or their counsel have got to say. He does not give notice of the time and place of the hearing of the applications for remand. This may justly rouse suspicion of ignorance or defiance of the law or of bias on his part, which ought to result in the case being taken away from his hands. Cannot the High Court be moved for the proper remedy?

Another difficulty of the accused is that

even from the city of Meerut the jail is a few miles distant, which makes consultation with or giving instructions to lawyers, etc., a rather hard job. Nor can the accused do this safely by letter, as all their correspondence is opened and read by C I D people and other officials.

It has been already observed that lawyers would charge heavier fees in Meerut than in their usual places of practice. We do not know at what figure the defence fund now stands. Usually, for years past, Bengal has not given much to any fund not started by the Swarajya party or not connected with the name of some prominent leader of that party. At present, there is before the Bengal public a Swarajya party appeal for two lakhs of rupees. Before that has been appreciably responded to, the Bengal Government has asked the people to face the expenses and turmoil of a general election. Therefore, so far as Bengal is concerned, the prospects of the defence fund do not appear bright, whatever they may be elsewhere. But nowhere must the friends of the accused despond. Persistent endeavour wins even under very unfavourable circumstances.

Appeal to Non-co-operating Lawyers

A hope has been expressed that as many, if not all, of the accused are public workers, some out of numerous patriotic lawyers may proceed to Meerut for defending them, accepting merely their expenses. It may not be hoping against hope. All over India, many lawyers non-co-operated with the courts and gave up their practice. There were many distinguished men among them. Many have resumed practice, some have not. Would it be too much to hope that some able men among both classes would agree to defend the accused on nominal fees if they cannot do so absolutely gratis? Names need not be mentioned, but it is well known that, in the case of a few prominent lawyer-leaders, the fees which they lost in their days of Non-co-operation have proved, unintentionally of course, a very good investment; for now they charge and get fees many times heavier than they ever dared ask for before Non-co-operation. They are particularly favourably situated for making some further sacrifice, reckoning the year 1929-30 an additional year of lawyers' Non-co-operation.

Meerut Trial and Public Safety Ordinance

When thirty-one persons were arrested on a charge of conspiring to deprive the King of England of his empire in India, permission was asked for in the Legislative Assembly to move for an adjournment of the House to discuss the *policy* of the arrests and subsequent trial. President Patel granted the permission sought, but the Governor-General stood in the way, on the ground that such a debate would involve the discussion of certain matters which were *sub judice*. His Excellency's decision is final; otherwise it could be pointed out that it was the *policy* of the arrests and trial which were proposed to be discussed, not the guilt or innocence of the accused or anything connected therewith.

However, when the same kind of argument was repeated by President Patel, Lord Irwin's government did not in practice accept it as valid and in accordance with the intention of the rules governing the proceedings of the Legislative Assembly. Partly in the words of Lord Irwin, it came about thus.

After the Public Safety Bill had been referred to a Select Committee this year, that Committee presented a unanimous report which Government were prepared to accept. Before further proceedings were taken in the Assembly Government took action against thirty-one alleged Communists on a charge of conspiring to deprive the King of England of the sovereignty of British India. When the Bill, as reported by the Select Committee, was again before the Assembly for consideration, the President of the Assembly suggested that the fundamental basis for the Bill was virtually identical with that of the conspiracy case, and consequently that it would not be possible to argue the case for the Bill without arguing the case for the prosecution and making statements which were likely to prejudice the trial. Moreover, in order that there might be a full and reasonable debate, in meeting the arguments of the supporters of the Bill, the opposition would have to discuss or refer to matters *sub judice*. The President accordingly advised Government either to postpone the Bill till the conclusion of the conspiracy trial or to withdraw the conspiracy case and then proceed with the Bill. The Home Member in his reply tried to controvert the President's views. He questioned the power of the chair to refuse to allow the Government to

proceed further with the Bill at that stage and made it plain that they could accept neither of the alternative suggestions put before them by Mr. Patel, as in their opinion the passing of the Bill was a matter of urgent importance.

After duly considering the reply of the Government given through the Home Member, the President affirmed his views on the 11th April 1929 and ruled that the further consideration of the Bill in the present circumstances was out of order.

In consequence the Governor-General addressed both houses of the Central Legislature, trying to explain why it was necessary for him to obtain by ordinance the powers for the Executive Government which could not now be obtained through legislative enactment. He did not in his speech call in question the correctness of President Patel's interpretation of the rules. But he observed that the latter's view was against the intention of the rules. So they would be changed in order that similar dead-locks might be averted in the future.

If a similar situation had arisen in a really free country having popular representative government, the Executive would have submitted to the Speaker's ruling. But in India, which has a sham parliament, as soon as the foreign bureaucracy find that they have unwittingly given the Speaker powers which can be used to baffle them, at least temporarily, they at once decide to curtail those powers.

Public Safety Ordinance

The Public Safety Ordinance applies to any person (not being an excepted person) who—

(a) directly or indirectly advocates the overthrow by force or violence of the government established by law in British India, or the unlawful destruction of property, or unlawful interference with the ownership of property; or

(b) seeks to foment or utilize industrial or agrarian disputes or other disputes of a like nature with the object, directly or indirectly, of subverting by force or violence organized government in British India; or

(c) is a member of, or is acting in association with, any society or organization, whether in British India or elsewhere, which advocates or encourages any such doctrine or activity as is described in sub-clause (a) or sub-clause (b) of this clause, or which is affiliated to, or acts in connection with, any such society or organization;...

This shows how wide the net has been cast.

The definition of "excepted person," quoted below, shows that Indian British subjects and Indian States subjects need not fear *this* law, the existing laws being considered sufficient for them —

(1) "excepted person" means any person who is—

(a) an Indian British subject or
(b) a British subject ordinarily resident in India, or

(c) the subject of a State in India and a person shall be deemed to be ordinarily resident in India who, for a period of not less than five years immediately preceding the date on which the question of the application to him of this Ordinance arises.—

(i) has regularly resided or maintained a residence in India, or

(ii) has carried on any trade, business or profession, or held any office or employment in India and for the purposes thereof has resided in India at regular intervals during that period.

But Indians love liberty for others as well as for themselves. So, they cannot be indifferent to the fate of those who may be unjustly victimized by the Ordinance. Persons are to be directed by the Governor General in Council without any trial to remove themselves from British India when he is satisfied that they are fit for such punishment.

The "applications and appeals" provided for in it are not much of a safeguard. For, in the case of applications, it is laid down—

The High Court may on application made by or on behalf of any person in respect of whom a removal order has been made set aside the order on the ground that such person is an excepted person but on no other ground.

As regards appeal, it is stated—

The person appealing against the removal order shall be given an opportunity to attend before the Bench in person or by pleader and show cause against the making of the order, and for this purpose the Bench shall, if he so attends, furnish him with a general statement of the grounds on which the removal order was based together with such details or particulars if any, as the Bench with the consent of the Governor General in Council may include therein but neither he nor any pleader appearing on his behalf shall be entitled to be made acquainted with any details or particulars of the facts or circumstances laid before the Bench by the Governor General in Council and the Bench shall save as herein otherwise provided, treat all such facts and circumstances as confidential.

Meerut Trial Dilemma

Should at least one European and one Indian out of the alleged 31 conspirators be

convicted at Meerut, that would show that the existing laws were quite sufficient to bring to book both Indians and foreigners of that description and that therefore the Ordinance was unnecessary. But should all the accused be found innocent and be acquitted in consequence, that would show that 'the fundamental basis for the [Public Safety] Bill' and therefore for the Ordinance was no basis at all.

Super-Crackers in Legislative Assembly

Even after reading the very alarmistic descriptions of the second bomb thrown in the Legislative Assembly, which was stated to have been more powerful than the first, one cannot help thinking that the bombs were super-crackers and that the miscreants who were responsible for the injury to persons and property and the sensation were luckily not explosive experts. They were fools also. For acts like theirs cannot do real good to anybody.

"The Modern Review and Professor Radhakrishnan"

A letter has appeared in the *Calcutta Review* under the above heading with the following prefatory words —

The following letter was sent to the Editor *Modern Review*, on the 20th of January for publication. He however declined to publish it on the ground that it was not desirable for them to interfere in the controversy between Professor Radhakrishnan and Mr Sinha.

It is a fact that we did not publish the letter in question, written by Dr. N. C. Ganguly. We communicated to him the reason in a private letter, authorizing him to publish the reason, if necessary. To the best of our recollection the reason we assigned was to the effect that, as the parties to the controversy were themselves carrying it on, it was not necessary to publish any letter of any friend of any party.

The reason for this decision of ours is that for practical considerations there ought to be a time limit and a space limit in controversies—particularly in those carried on in a monthly journal. Such limits it would have been difficult to set, if the Sinha-Radhakrishnan controversy, instead of being like a single combat between the two persons concerned

were allowed to degenerate into a melee, with only one combatant on one side and several on the other. We refrain from commenting on Dr. Ganguly's letter.

"India in Bondage: Her Right to Freedom"

"India in Bondage: Her Right to Freedom" by the Rev. J. T. Sunderland was published on December 21, last year. The first edition having been exhausted, a second is in course of preparation. It will contain some additional matter.

Government and "The Free Press of India"

According to a note on the relations between the Government of India and news agencies, prepared by Mr. S. Sadanand, managing editor of the agency known as the Free Press of India, Government discriminates in favour of the Associated Press of India and the Indian News Agency, owned by Reuters's Agency and the Eastern News Agency Ltd., and against the Free Press of India. What is done in favour of the Associated Press of India consists in payments from the Government of India and the Provincial Governments, amounting to about rupees one lakh and a quarter as subscription to news agency telegrams, free first class travel on the Indian railway system, free use of trunk telephones, reduced telegraph charges and discriminatory treatment in regard to Government news. It is also stated that "ordinary" press telegrams of Reuters, the A. P. I. and the I. N. A. are transmitted as "express," while the telegrams of the Free Press are subjected to serious delays, and complaints elicit no relief. Under the circumstances Mr. Sadanand is justified in saying that the effect of this favouritism shown to the former and injustice done to the latter is "to convey the impression to the newspapers that, to the extent that it lies in the hands of the Government of India, either acting as a body or acting through its individual officers, it is intended to place at a distinct disadvantage the papers subscribing to the Free Press of India with a view to compel them either to give up the 'Free Press of India' services or to subscribe to the other services also."

The same impression may be created by the fact that among the hundreds of house

searches recently carried out by the police were the offices of the Free Press of India.

The usefulness of the press in any country depends greatly on the publication of unbiassed news and unbiassed comments thereupon. If news agencies are subsidized by the Government of the country, particularly when that government is a foreign bureaucracy in a dependent country interested in the preservation of its monopoly of power, the news supplied by them must necessarily be largely such as would not go against the interests of the powers that be or offend them in any way. The press cannot do its duties properly when the supply of news is thus vitiated at its source. A corrective may be applied if an independent unsubsidized news agency exists. But if such an agency be sought to be killed by unfair means and if that attempt succeeds, a most undesirable state of things must ensue.

Hence an earnest attempt should be made by the members of the central and provincial legislatures to prevent the direct and indirect subsidization of any news agency and to place the telegraphic messages of all agencies on the same footing as regards quickness of transmission, rates of payment, etc. It is a matter which does not concern the news agencies and the daily newspapers alone, but also the public of India at large.

Accidental Coincidence?

Not unoften has it been noticed that, whenever Government want to add to their armoury some new weapon of repression, in the shape of a new law or a new ordinance, or whenever they arrest a good many persons on charges savouring of anarchistic or revolutionary activities, bombs are thrown, revolvers or pistols are fired, house searches by the police are rewarded with finds of bombs, pistols, explosive substances, &c., "red" pamphlets and leaflets are broadcasted by 'unknown' parties, and threatening letters are received by officials and non-officials. These strengthen or are used as evidence to strengthen Government's case for "resolute government."

The question is, is it due merely to accidental coincidence that such things happen repeatedly?

In days of yore, when progress in science and mechanics had not led intelligent and thinking men to lose faith in many gods

and goddesses, such coincidences would perhaps have resulted in the creation of a new god or a new guardian angel who had the bureaucracy under his special protection and who, therefore, caused such things to happen as would serve their purpose exactly. But at present faith in numerous deities is a vanishing quantity. And, as for the power to create new deities, it has been entirely lost—in civilized countries in any case. How are we then to explain the aforesaid coincidences?

There are two alternative ways. One is to put them down to mere accident or chance. But what is chance or accident? Perhaps, if scientifically investigated accidents would reveal some law governing their occurrence. But we are not at present prepared for such investigation. Let us, therefore, mention the other alternative.

It is that these things are brought about by agents provocateurs. The belief in the existence of such agents has long prevailed among our countrymen. It has received confirmation from the revelations made by *The Tribune* in connection with the doings of an U P agent provocateur in the Punjab. Of course, high Government officials have all along denied the employment of such persons. Such denials show either that they indulge in diplomatic lying, or that the agents are employed without the knowledge and consent of these officials.

Who, then, employs them and pays them? The public belief is that they are employed by the C I D or secret police and paid from what is known as secret service money. As the setting apart of such money from the public revenues requires the sanction of the Government, the highest functionaries cannot disclaim all responsibility for the use made of such funds.

Of course, the C I D or secret police would deny the existence of a single agent provocateur. But, then they must explain the aforesaid coincidences. To call them accidental does not convince anybody. Let us have from them a real explanation in all seriousness. A political sermon from Lord Irwin would be a bad substitute.

The employment of spies and informers may be a necessity under present conditions for the best of governments, but the employment and connivance at the doings of agents provocateurs cannot be a necessity for any enlightened government which has a reputation to lose.

"The Hindu" on a Hindu Mahasabha Resolution

The Hindu illustrated weekly writes —

The Mahasabha the prime object of which, a resolution claims is to eradicate communalism as rapidly as possible from the public administration of the country, passed a resolution which, to proceed from a body bent upon eradicating communalism seems rather curious. It asked for increased representation of the Hindus on the Punjab police service. The terms of this resolution throw light on the psychology underlying the Sabha's altered attitude towards the Nehru Report and the communal problem in the country. In view of the fact that Moslems have been persistently agitating for larger and larger employment of Moslems in the public services of the country, the resolution runs, the Hindu Mahasabha draws the attention of the Government to the fact that in the police services, particularly in many provinces even where they are in a minority, and also in the military forces, Moslems have been recruited in large numbers quite out of proportion to their numerical strength or educational efficiency and therefore requests the Government to take immediate steps to increase the recruitment of Hindus to such services."

It may be pointed out here that the resolution nowhere mentions "the Punjab police force" in particular, or demands increased representation of the Hindus on it.

The resolution wants increased employment of the Hindus in the police and military services, because in many provinces they are practically discriminated against in those departments. It particularly mentions provinces where Moslems are in a minority but have nevertheless been recruited in numbers "quite out of proportion to their numerical strength or educational efficiency." It should of course, be clear to the meanest understanding even of Hindus that if in any province a minority community be vastly superior in educational qualifications and general efficiency and the majority be deplorably inferior in those respects, recruitment to the services from the minority community must necessarily be disproportionately large. But such is not the case with some of the provinces in India in which the Moslems are in a minority and which the Hindu Mahasabha had in view.

Take the police services in the United Provinces of Agra and Oudh, for example.

In the U P 84.18 per cent of the population are Hindus and 14.46 per cent are Muhammadans. According to the census of 1921, the proportion of literates among Hindu males was 67 per thousand and that among Muhammadan males 65 per thousand. Referring to the latter, Mr E. H. H. Edye, I C S., census superintendent, 1921, wrote in his Report that "it seems that they

[the Musalmans] will in the next decade fall even further behind."

Let us now see what proportion of the posts in the U. P. higher police services is held by the Muhammadans, who form 14.46 per cent. of the population and who are not, to put it mildly, vastly superior to the Hindus in education. Our authority is the U. P. Civil List corrected to October 1, 1928, any later issue not yet being to hand.

There are 58 posts of Superintendents, of which two are vacant. Nine of the remaining 56 posts are held by Indians, five of them being Hindu and four Muhammadan.

There are fifty-one posts of Assistant Superintendents, of which nine are vacant. Of the remaining 42, ten are held by Indians. Of these six are Hindus and four are Muhammadans.

Omitting vacancies, there are forty-seven Deputy Superintendentships. Of these forty are held by Indians, of whom sixteen are Hindus and twenty-four are Muhammadans.

There are twenty-five temporary and officiating Deputy Superintendents. Twenty of them are Indians, eight being Hindus and twelve Muhammadans.

In the lower police services also similar favouritism is conspicuous.

It is not in the police services alone that in the U. P. the Hindus are discriminated against. That is the case in the Executive Services also. Let us take a few figures.

Of the seven Listed Superior Executive posts, one is held by a person bearing a European name, and three each are held by Hindus and Muhammadans.

Of the Deputy Collectors two hundred and twenty are Hindus and one hundred and fifty-eight are Muhammadans.

In the U. P. members of the Subordinate Executive Service are called Tahsildars. There are 203 of them. The number of Muhammadans in this service also, as well as among the 45 officiating Tahsildars, is disproportionately large. We have no time now to count and give the exact figures, but will do so if our statement be challenged.

There are other services which, if examined, will reveal a similar state of things.

In executive work, physical fitness is or ought to be a *sine qua non*. There is no readily available means of judging the comparative physical fitness of Hindus and Muhammadans in Agra and Oudh. But perhaps the following remarks relating to the vitality of Muhammadans and Hindus would

show that the former are not appreciably superior to the latter in this respect, if they are at all superior:

"These are all admirable reasons why the Muhammadans should be more vital than the Hindus; but I do not propose to discuss them, because I can find no evidence of the greater vitality than they are supposed to cause." (Italics ours)—Mr. E. H. H. Edge, I. C. S., Superintendent, Census Operations, in the U. P. Census Report for 1921, page 58.

There is no easily available test by means of which the moral character of different communities can be ascertained. Some years ago, we used to examine the annual jail reports of Bengal, Bihar and U. P. to find out which community supplied what proportion of the convict population of prisons. For several years, we found that the Moslem community furnished more than its proportionate quota. This would perhaps go to show that the Muhammadans as Muhammadans were not morally superior to the other religious communities, though undoubtedly some Musalmans must be superior to some Hindus and vice versa.

Taking all grades of all services into consideration, U. P. Moslems would be entitled to one-sixth as many posts as U. P. Hindus, in proportion to the respective numerical strength of the two communities. What we suggest, however, is not any fixed proportion. Appointments should be made by open competitive tests, including physical tests. We are sure the Hindu Mahasabha would agree to this. It has suggested increased Hindu recruitment, and open competition is sure to result in such increase. But even if open competition did not result in increased recruitment of Hindus, but, on the contrary, resulted in their decreased recruitment, there would then be no just cause of complaint against the Government. For, what is wanted is an open door for talent, not favouritism towards any community at the expense of others.

The Hindu discovers the taint of obnoxious communalism in the Hindu Mahasabha's resolution. Is it then a characteristic of angelic nationalism to be indifferent to the unjust treatment of one's own community? Does favouritism shown to any community at the expense of others promote even the cause of nationalism or of efficient and honest administration either? We venture to think the Mahasabha has rendered some service to nationalism

total revenue of the Central Government comes through Bengal."

We have repeatedly drawn attention to the glaring and deliberate financial injustice done to Bengal all along. We do so again in this connection. If the public men of other provinces wish to be generous to the Frontier Pathans, let them not think of doing so at the expense of Bengal. Let them subscribe to vast endowment funds for the N-W Fr. Province of which the interest may suffice to meet crores of deficit year after year.

Even Bengali Muslims should understand that they have less and worse sanitation, education etc., than they are entitled to, because Bengal's revenues are in part wasted on the Frontier, which has never done and will never do anything particularly for them, and that if that region be made a Governor's province, still more money from Bengal would be squandered there and the chances of financial justice to Bengal would be remoter still than now. But bankrupt provinces have not meant and would not mean financial injustice to only one province—all provinces have suffered and would continue to suffer more or less.

Hindu Mahasabha's Alleged Change of Front

It has been alleged in some Anglo-Indian and Indian papers that there has been a change of front on the part of the Hindu Mahasabha with regard to the Nehru Committee's Report. The truth of this allegation cannot be accepted without scrutiny.

At the last session of the Hindu Mahasabha, held at Surat on March 30 & 31 and April 1 last, the Nehru Committee's Report as a whole was not taken into consideration, only a resolution was passed with regard to the recommendations of that report in respect of the Moslem demands as amended and adopted by the All Parties Convention. So even if that resolution were a reversal of some previous resolution of the Mahasabha, it could not be called a change of front in respect of the Nehru Report as a whole.

Our next point is that, even before the Surat session, the Mahasabha had never considered and either supported or rejected that Report. It was signed by its Chairman on August 10, 1928. Therefore, when the Jubbulpore session, preceding the Surat session, met on April 7,

8, 9, 1928, it neither had nor could have the Nehru Report before it for consideration. Thus, as that report was never considered as a whole or in part by the Hindu Mahasabha before the Surat session, the allegation of a change of front or *volte-face* is baseless. And as at the Surat session only a resolution regarding the recommendations relating to the Moslem demand was passed, any statement to the effect that the Nehru Report was rejected there is also incorrect.

It may be alleged that, though the Hindu Mahasabha did not accept or reject the Nehru Report, its authorized representatives had accepted it. The present writer asked the responsible office-bearers of the Mahasabha present at Surat whether any authorized person or body had appointed any such representatives, but he could get no definite or satisfactory answer.

The All Parties Conference appointed the Nehru Committee on May 19th, 1928, but the Jubbulpore session of the Mahasabha had already met during the previous month. So the Mahasabha could not possibly have appointed its representatives, in anticipation, for a then non-existent committee. A Committee was appointed no doubt at the Jubbulpore session 'to confer with any committees appointed by other public bodies for the purpose of drafting a Swaraj constitution for India'. Whether here 'appointed' signifies 'to be appointed in future' also is more than we can say. Moreover the Nehru Committee was appointed, not for drafting a Swaraj constitution but 'to determine the principles of the constitution for India'. This may seem a mere hair-splitting distinction. So let us pass on to the next point.

The resolution by which the Mahasabha appointed the above committee at Jubbulpore states:

The committee is directed to adhere strictly to the fundamental propositions laid down in the above resolution.

One of these fundamental propositions is 'Sind should not be separated from the Bombay Presidency'. Thus and some other "fundamental propositions laid down in the resolution" have not been strictly or even loosely adhered to in the Nehru Report recommendations. So, if any real or so-called Hindu Mahasabha representative on that Committee accepted these recommendations he acted *ultra vires*.

Among the gentlemen forming the Jubbulpore Committee mentioned above, the

one vacant seat and the applicant for it happens to be a Hindu. He is turned away merely on the ground of his religion. There are special Muhammadan educational institutions in almost every province, but even in ordinary schools and colleges students are made to feel that their religion is a disqualification. We do not for one moment suggest that the numerous Hindu Musalman riots can be explained by this singular regulation, but it is undeniable at the same time that the seed of a certain kind of communal feeling is sown in our schools and colleges.

N G

Surat Session of the Hindu Mahasabha

The twelfth session of the Hindu Mahasabha was a success, according to the standard of success usually adopted. That is to say, the gathering was large, the delegates and visitors behaved themselves in an orderly and earnest manner, several very important resolutions were passed and some of the speeches were good. The speakers belonged to both the sexes. The number of women among the audience was considerable. As in Gujarat Hindus including Jains, do not observe purdah, the attendance of the fair sex could easily have been larger.

The real success of any such gathering should be judged by the actual carrying out of the resolutions. As the President of the Surat Session pointed out in his concluding speech, resolutions are what the delegates are *resolved* to carry out or see carried out. No conference or congress can be a success unless they are carried out.

On account of some local circumstances, preparations for the session had to be commenced rather late and completed in a hurry. But thanks to the devotion and indefatigable and unrelenting exertions of Dr. Ragh, the Chairman of the Reception Committee, of Mr. Wamanrao Mukadam, V. L. C., the General Secretary and all their co-workers, every arrangement was complete in time. We may suggest that the seating arrangements in big conferences should be such as would enable the President to be near enough to the rostrum of the speakers to enable him to easily follow what they say and to guide and control them, if necessary. It would also be a distinct advantage if resolu-

tions for submission to the subjects committee were drafted earlier than they are in our congresses, conferences, etc.

Mr. Wamanrao Mukadam

The arrangements for the accommodation and entertainment of the delegates were excellent. Mr. Chunilal Dalal, a wealthy member of the reception committee who was in charge of the President's bungalow where many delegates were also put up, and all the young volunteers were exemplary in their zeal, attention and civility. No caste distinctions were observed in dinners, etc. Men of all castes and no caste sat together to take their meals without any enquiries or curiosity as to one another's caste.

Dr. Ragh's speech was brief but to the point and quite outspoken.

Of the resolutions we should like to mention a few as very important. Clause 4 of resolution V ran as follows:

"The Hindu Mahasabha is of opinion that every Hindu, to whatever caste he may belong, has equal social and political rights."

This recognition of the equality of political rights is not without significance, but as India is not yet self-ruling, as the alien rulers alone

can give or not give such rights, there is at present no means of judging whether the Hindus are earnest in making such a declaration. The case is different, however, with social rights. It is for us to show in practice that we are sincere in declaring that all Hindus have equal social rights. Such a declaration is a recognition of the complete social equality of all Hindus without distinction of caste, creed or sect. "Social" is a very comprehensive word. It includes not only "educational" but "religious" as well. We do hope for the sake of humanity and justice and in its own interests, the Hindu community will give complete effect to this resolution without any reservation. It must not be supposed that it is only the Brahmins or the Arya Samajists who want social equality

The tenth resolution was in part worded thus :

"The Hindu Mahasabha regrets to see that unemployment is increasing day by day among the Hindus and that many professions, such as those of carpenters, blacksmiths, bricklayers, weavers, tailors, shoemakers, bangles (*motibars*), etc. are going out of their hands. The Mahasabha therefore declares that all the professions of the above kind are dishonoured and necessary for the community and that the Hindus should not hesitate to take them up."

We personally know of high-caste Bengali and Madras Hindus engaged in tanning and shoe-making on the factory scale. What is wanted is the practical recognition of the dignity of the work done by the poor tanner or shoe-maker in his cottage or hut. So with reference to some of the other crafts and occupations.

The eleventh resolution ran as follows :

"The Mahasabha, representing all sections of the Hindus of India, expresses its feelings of brotherly love and sympathy to all Hindus—Brahmins or Buddhists—residing outside India (e.g., Indo-China and Indonesia) and to all others who in common with the Indians derive their spiritual culture from the great mother culture of ancient India."

"This Mahasabha further emphasizes the necessity of reviving the ancient connection between India and these countries, specially Siam, Cambodia, Java, the Hindu island of Bali, China and Japan, with a view to a brotherly co-operation in enriching and strengthening for the benefit of all humanity this our common spiritual heritage."

Preliminary efforts have already been made in this direction, and these countries have been visited by cultured Hindus with the object specified above. Professors Sunitikumar Chatterjee and Kalidas Nag went to Surat on purpose to enlighten the gathering there on the subject by speech and lantern slide exhibitions. As knowledge should precede action, it is to be regretted that no arrangements could be made there to take advantage of their first-hand knowledge. On their return journey the public in Ahmedabad and Ajmer requested them to give them lantern lectures, which was done.

The Hindu Mahasabha, along with some political organizations, passed also the politico-economic resolution on the boycott of foreign cloth. It was the right thing to do so, though it was not a special feature of the Mahasabha.

The substance of the resolution on *shuddhi* has our entire support. But we adhere to our oft-repeated objection to the use of the

Mr Chumilal Dalal

There is a growing party among those who alone used to be called Hindus formerly, which is for revolutionary changes in the social constitution of the community. This party succeeded at the last Calcutta session of the Hindu Samaj Sammelan in getting a resolution passed to the effect that "all Hindus are Brahmins." However unreal such a resolution may appear, its significance as a sign of the times can not be ignored. And its chief sponsor, a born Brahmin, has already invested many members of the so-called depressed classes with the sacred thread.

Chemistry, Anatomy, with other useful sciences, which may be accomplished with the sums proposed by employing a few gentlemen of Europe and providing a College furnished with necessary books, instruments, and other apparatus."

As illustrating the amusing assumption of superior knowledge, love of 'native learning' and wisdom on the part of the Anglo-Indian bureaucracy of Rammohun's days we print below two documents unearthed by Mr. Brajendra Nath Banerji :

MEMBERS OF THE GENERAL COMMITTEE
OF PUBLIC INSTRUCTION.

I am directed to transmit to you for information, the accompanying copy of a representation addressed by Rammohun Roy, to the Rt. Honble the Governor General in Council, expressing disappointment on the part of himself and his countrymen, at the resolution of Government to establish a new Sanskrit College in Calcutta, instead of a seminary designed to impart instruction, exclusively in the arts, sciences and philosophy of Europe.

2. In furnishing your Committee with a copy of the paper, His Lordship in Council cannot abstain from remarking, that it is obviously written under an imperfect and erroneous conception of the plan of education, and course of study, which it is proposed to introduce into the new College, that the defects and demerits of Sanskrit literature, and Philosophy, are therein represented in an exaggerated light, and that the arguments in favour of encouraging native learning as well as the positive obligation to promote its revival and improvement, imposed on the Government by the terms of the Act of Parliament, directing the appropriation of certain funds to the object of Public Education, have been wholly overlooked by the writer.

3. The letter of Rammohun Roy is not considered to call for any answer on the part of Government, but it will of course be at the discretion of your Committee to address any observations, which you may deem the occasion to require, either to Rammohun Roy himself or to Government.*

I have the honour to be, etc.

(Sd.) A. Stirling.

Persian Office
January 2nd, 1824
Actg. Depy Persian Secy. to Govt. In charge

[THE GENERAL COMMITTEE'S NOTE
ON THE ABOVE]

Under the discretion vested in the Committee with respect to addressing any observations on the letter of Rammohun Roy either to himself or to Government the Committee resolve that it is unnecessary to offer any remarks. The erroneous impressions entertained by the author of the letter are sufficiently adverted to in the letter from the Secretary to the Government, but had the views

taken in the letter been even less inaccurate the Committee would still conceive it entitled to no reply, as it has disingenuously assumed a character to which it has no pretensions. The application to Government against the cultivation of Hindu literature, and in favour of the substitution of European tuition, is made professedly on the part, and in the name of the natives of India. But it bears the signature of one individual alone, whose opinions are well known to be hostile to those entertained by almost all his countrymen. The letter of Rammohun Roy does not therefore express the opinion of any portion of the natives of India, and its assertion to that effect is a dereliction of truth, which cancels the claim of its author to respectful consideration.*

St. J. H. Harrington

President

General Committee of Public Instruction

Those who impudently disputed the claim of Rammohun to speak in the interests of his countrymen and accused him of disingenuousness and dereliction of truth, need not be answered. He was not alone in his views—he had friends and followers, but even if he were alone, he was the one outstanding personality of his age and country. To question his claim to speak for his country was mere pettifoggery. That the policy advocated, by him was afterwards accepted and that his anti-*Suttee* views were also accepted, go to show that though he had little following, he was entitled to speak and to be heard.

The members of the Education Commission, appointed by Lord Ripon in 1882, in the 6th chapter of their report, referring to Rammohun Roy's exertions, wrote :

"It took twelve years of controversy, the advocacy of Macaulay, and the decisive action of a new Governor-General, before the Committee could, as a body, acquiesce in the policy urged by him."

As regards his views on the Sanskrit education of his days, his critics forgot to note that he spoke of such education as was imparted *under Hindu pandits* of that time. It was really such as he said it was. The assumption that his critics had a better knowledge of Sanskrit literature and Hindu education was ridiculous. Rammohun Roy was far better acquainted with the precious and other portions of Sanskrit literature than all his critics combined. He was the first to translate and expound the Upanishads. There should be no mistake regarding his attitude to Sanskrit learning. Take the Vedānta, for instance.

Britain, India and "Outlawry of War"

Attention has been repeatedly drawn in this journal to the significance to India and other subject countries of Article 10 of the Covenant of the League of Nations, by which "The members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all Members of the League." As India is an integral part of the British Empire and as the territorial integrity of that empire would be destroyed by India being separated from it, this article stands in the way of India being ever independent.

A subtle controversialist may, however, say that the Article refers only to 'external aggression', meaning thereby that the Members bind themselves to preserve the integrity, say of the British Empire, if any foreign power tries to detach India from it, but they do not bind themselves to try to baffle any *internal* effort on the part of the Indian people to achieve independence. On the contrary, they admit by implication the right of the Indian people to become free by internal action, civil or military.

That is a permissible interpretation, and this loophole in the League article has not escaped the eyes of British diplomats. So they have been always on the alert to close it. The "multi-lateral peace treaty" for 'the outlawry of war', popularly known as the Kellogg Pact, sponsored by U. S. A., gave British statesmen their opportunity. This treaty was ostensibly meant for the renunciation of war; but whilst Egypt, Persia, Turkey, Afghanistan and Soviet Russia have declared for the acceptance of that treaty without any reservations, Great Britain, through Sir Austen Chamberlain, has made a very important and significant reservation which practically nullifies the treaty and in

addition gives her the power to prevent, by armed warfare, India and other nations subject to her becoming free by internal rebellion, whether armed or unarmed. This British reservation is embodied in paragraph 10 of the British note, which runs as follows :

"The language of article I, as to the renunciation of war as an instrument of national policy, renders it desirable that I should remind your excellency that there are certain regions of the world the welfare and integrity of which constitute a special and vital interest for our peace and safety. His Majesty's Government have been at pains to make it clear in the past that interference with these regions cannot be suffered. Their protection against attack is to the British Empire a means of self-defence. It must be clearly understood that His Majesty's Government in Great Britain accept the new treaty upon the distinct understanding that it does not prejudice their freedom of action in this respect."

That is to say, if the people of India try even by civil disobedience to become free, Great Britain reserves to herself the right to make war on the people of India to frustrate any such attempt. And Great Britain would undertake such war for the "welfare" of India! This reminds us of Mr. Bertrand Shadwell's lines :

If you dare commit a wrong
On the weak because you are strong,
You may do it if you do it for his good !
You may rob him if you do it for his good ;
You may kill him if you do it for his good !

So, by means of article 10 of the Covenant of the League of Nations and by paragraph 10 of the British note on the Kellogg Pact, Great Britain has provided against India becoming free by either external or internal 'aggression.'

All these facts and more were brought out by Senator Blaine in his very remarkable and outspoken speech in the United States Senate on the British reservation to the Kellogg treaty. As India's unofficial but accredited ambassador, Mrs. Sarojini Naidu repudiated the British reservations. Her letter to the Hon'ble Senator John H. Blaine was read by him in the course of his speech in the Senate and has found place in the United States Congressional Record. It runs as follows :

The issue you have raised in the course of the debate on the multi-lateral treaty with special reference to British reservations is of momentous importance to India. To accept such reservations in their entirety is to endorse and assume responsibility for all arbitrary policies and actions which might conceivably work to the detriment of my people in their legitimate aspirations and endeavour to secure full national freedom. As an unofficial

or popular Government of India. The Princes, too, need not give themselves lofty airs. The British Crown has no real power. Real power is wielded by the British people through their Parliament. So, if the Princes can have relations with the British people through the British Parliament, what is there derogatory in their having relations with the Indian people through an Indian parliament?

The Butler Committee know that in India the slow or rapid democratization of the constitution is inevitable, and therefore in future the Princes in dealing with the Governor General in Council would have to deal in part with some representatives of the Indian people. But the Indian people are 'untouchable'. So the Committee suggest that in future it is the Viceroy with whom the Princes are to have dealings, not the Governor-General. This will prevent any Indian from having any knowledge of the correspondence or negotiations with the Princes. One of the reasons given for the proposed change is, "it will relieve them of the feeling that cases affecting them may be decided by a body which has no special knowledge of them"! As if Viceroys have such special knowledge! As if a Viceroy can know more during his brief tenure of office than well-informed Indians born and living in India!

The Committee have suggested the direct recruitment of political officers from the British Universities. Why cannot States subjects do such work? Why cannot Indians of British India?

"The People" Lajpat Rai Number

The Lajpat Rai Number of *The People* is an excellent production, alike in the reading it provides and the illustrations. Particularly interesting and informing is the story of that great man's life written by himself, which is begun in this special number.

Hemendra K. Rakhit

The unanimously passed resolution in the 17th Annual Convention of the Hindustan Association of America, recording sincere appreciation of and deep-felt gratitude for the services of Mr. Hemendra K. Rakhit, the Editor-in-Chief of *The Hindustance Student*, puts in words what is recognized to be the general sentiment of the Indian community in general and the student body in particular in the United States of America regarding Mr. Rakhit's selfless and varied activities toward the cause of India in America. The resolution referred to is as follows:

"That this convention place on record its sincere appreciation and deep gratitude of the members of the H. A. A. to Mr. Hemendra K. Rakhit one of the founders of the H. A. A., for his selfless, conscientious and constructive work in formulating and building the activities of the association such as *The Hindustance Student*, the Loan and Scholarship Fund, Alumni Organizations, etc. We earnestly hope that the H. A. A. will continue to receive the same substantial and hearty co-operation from Mr. H. K. Rakhit during the years to come."

Out of a small student group disension held in Chicago in 1911 the Hindustan Association was formed so that the interests of the students from India in America may be safeguarded by mutual co-operation and that the culture and cause of India may be systematically presented before the people of America.

And to-day there are over fifteen chapters of the H. A. A., scattered throughout the U. S. A. at different university centers. During these years Mr. Hemendra K. Rakhit served the H. A. A. as President of several local chapters, twice as President of the H. A. A. itself, organized the Loan and Scholarship Fund of the H. A. A. acting as its Chairman for over a number of years. *The Hindustance Student*, the official monthly of the Association, may be said to be the fruit mainly of Mr. Rakhit's efforts. To those who know the difficulties of running a magazine in a foreign land, the labours involved in placing the Student on a firm foundation will be evident.

One of the most important features of the Student activities in general in America is the inter-relations of different national groups of students, and the Hindustan Association of America has been one of the actively interested organizations in the entire international student bodies in the U. S. A.

Besides Mr. Rakhit's permanent activities at International House, New York, where nearly 600 students and scholars representing over 60 different nations live, as Head of its Extension Bureau, and his work in connection with the H. A. A., he is constantly called upon to join and lead conferences of all sorts throughout the country. In the World Conference on Education, first organized in San Francisco in 1923, where eminent scholars from all over the world attended, Mr. Rakhit's paper on "India and the World" was received with great applause and much appreciation. Mr. Rakhit has been delegated to the several Cosmopolitan Clubs Conventions, twice to the Canadian Students National Convention at Montreal and Toronto, and the Y. M. C. A. and Y. W. C. A. Conventions.

The Chinese Students Association in this country invited Mr. Rakhit to edit a special issue of the Chinese Student Monthly, official monthly of the organization commemorating Tagore's visit to China.

He has also been president of the several cosmopolitan clubs at California and Wisconsin, of which university he is a graduate, and in 1920 he was elected Vice-President of the Association of Cosmopolitan Clubs of the U. S. A. He also organized the Young India League, founded by Lala Lajpat Rai. In all his activities he has earned the respect

The King's Representatives In Canadian Provinces*

By ST Nihal Singh

I

THE arguments that the British use to lull Indian clamour for high office sound hollow in Canada, where the people insist upon being their own masters. The Britons in India never tire of telling us of the advantages that we derive from having at the head of our provinces men experienced in British parliamentary affairs—men of front rank who come out to us with minds as clean as slates, fresh from the factory—men who spend some of the best years of their life in conditions that cannot be pleasant for them so that they may help us forward on the path of progress. In a country where all but three of the provincial governorships are treated as plum for the non-Indian members of the Indian Civil Service, professions of this character are unrelated to reality. Through iteration and reiteration, in season and out of season, they have, however, acquired a hypnotic force that casts a spell upon the unthinking Indian.

The case is quite different in Canada, where the people do not wish to share the management of their affairs even with their

own cousins across the water. There such shibboleths sound singularly ineffective.

I have had the opportunity of visiting the Dominion several times during the last quarter of a century. I have yet to come across a Canadian who believed that a man from the "old country"—as Britain is called there—comes out with a fresh mind or that an imported person views matters from an impartial—if not a wider—point of vision than a son of the soil holding a high office.

Most Canadians would instinctively put down such talk as mere propaganda upon the part of Britons to reserve to themselves certain important positions in units of the Empire overseas. Experience has taught them that the corners have to be rubbed off a man from the "old country"—however keen he may be before he can be of any use to Canada—or Canada of any use to him.

Canadians would sooner trust, in the highest post in a province, a man who has grown up among them. He is not likely, at least, to be ignorant of the conditions that people round about him have to face. Nor will he run away from them just as soon as he, at their expense, has acquired an insight into their character, just when he is beginning to be of some use to them. Having himself pushed his way to the top

* This article may not be reproduced or translated in or outside India without first securing the written consent of the author.

despite obstacles, he is sure to be sympathetic with those who are battling with difficulties—and his advice is likely to be of real assistance to them. He will put his back into making a success of his job because his interests are all centred there—and he has nowhere else to go. So the Canadians think—and not without reason.

National pride, too, comes into play. Canadianism has developed to a point that it will not permit the people to be beholden to Britain, though she be the mother country, for men to run their provinces for them.

Canadians feel, moreover, that the highest office in each province is their birthright. Any man who possesses the requisite qualifications should be able to rise to it. Nothing would whet the ambition of youth quite so effectively as such knowledge.

All these causes have combined to make Canadians frown upon imported governors. The appointment of "native sons"—to use a significant Canadianism—to be the King's representative in each province of the confederation has, in fact, been the practice for so long that it has become a mere commonplace occurrence, and little notice is taken of it when one is made.

II

Some Canadians there are who feel that even the highest office in the Dominion—that of Governor-General—should also be held by a Canadian. As a matter of policy they may consider it premature to agitate about it strongly. The Liberals have to reckon with the Conservatives, who, in the past, have found that it profited them to raise the cry of "Empire in danger."

It has, in any case, become a convention having virtually the force of law that the Canadian Ministry is consulted before the appointment of the Governor-General. No Briton who is not likely to be agreeable to the Ministry has a ghost of a chance to be chosen. It is an open secret that without the support of Mr. Mackenzie King (the Canadian Premier) the Earl of Willingdon would not now be occupying the highest office in the Dominion.

Even the designation of the King's representative at Ottawa has recently been altered from Governor-General to Viceroy. That change came in the wake of an act upon the part of Baron Byng of Vimy (Governor-General from 1921 to 1926) to

assert himself. Instead of dissolving the Parliament, as advised by Mr. Mackenzie King, he (at the suggestion of a former Conservative Prime Minister, it is said,) sent for the leader of the Conservative party (Mr. Arthur Meighen) and asked him to form a Government. The Meighen administration crashed in a few months and the constitutional issue raised by the Governor-General's action was to the fore during the election held during my stay in Canada in 1926-27. Shortly after the Liberals, with Mr. Mackenzie King at their head, were returned to power, the Imperial Conference met in London. Among its more important decisions was the alteration in the title of the British Crown's representatives in self-governing Dominions. The creation of Viceroyalties in place of Governor-Generalships certainly emphasizes the fact that the holders of these offices are vested with executive power only in name, and that power is really exercised by the Federal Cabinet—that they are merely the constitutional representatives of a Constitutional Monarch.

III

The same is true of the King's representative in each province. Known as the Lieutenant-Governor and given the courtesy title of "His Honour," he is supreme in provincial administration in the same sense that the Viceroy is all-powerful in the Federal sphere and the King in the British polity. In actuality the government of the province is carried on by the Ministry, and the Lieutenant-Governor is merely the ceremonial head. His office carries no real power.

Unlike the Viceroy, the appointment of the Lieutenant-Governor is made in Canada. When the term of one of them is about to expire, or when some one of them dies while in office, the Ministry at Ottawa selects a "native son"—who, if not actually born in the province, is at least deeply rooted in it—to succeed him.

Canadians are impatient of legal fictions and the press despatches invariably speak of the appointment as having been made by the Prime Minister and his colleagues of the Cabinet. Even during the days when the titular head of the Federal Government was known as the Governor-General, there never was any pretence that he actually selected any Canadian to serve as Lieutenant-Governor.

inspired in the French-Canadian a deep-rooted, almost pathetic, faith in the impartiality of the Judicial Committee of the Privy Council and other Imperial institutions in London. Out of these causes have sprung a loyalty to the British tie, mayhap even stronger than loyalty to Canadianism, that comes as a surprise to a stranger and that some day may possibly cause complications in Canadian national development.

I first met Dr. Perodeau in his office, a large, well-lit, quietly furnished room in the Government Building that is justly the pride of Quebec. At my request he outlined the nature of the duties that he was called upon to perform. After a few minutes' conversation he extended to my wife and me a cordial invitation to tea at his residence that afternoon.

One of the professors of the Laval University kindly motored me to "Spencer Wood," originally built to serve as the Governor-General's residence in Quebec. No longer required for that purpose, it was many years ago assigned to the Lieutenant-Governor of the Province, who, in consequence, is much better situated in respect of the historical associations of his official residence than Canadians occupying a similar office in the other provinces.

Compared with the "Lodge" in which Viceroys and Governors General live in India, or the palaces of the Maharajas and Nawabs that I have seen, this mansion looked quite unassuming. It had, however, been designed by an architect who knew his business. As I was conducted through the various rooms I found them tastefully decorated and furnished. The walls were hung with paintings of past Lieutenant-Governors and reminiscent of the happenings of other days. The conservatory at one end of the long, low building, stretching along the top of a green hill that rolled right down to the banks of the mighty St. Lawrence, seemed to be the pride of Dr. Perodeau, who particularly admired the bougainvillea with which the walls were covered. I could easily imagine that when the snow covered the landscape during the winter, the palms and ferns growing in it must have offered a welcome relief.

I visited "Spencer Wood," however, on a balmy, midsummer afternoon. The sun was shining brightly with almost tropical warmth really too warm for woolens. His Honour had arranged for tea to be served on the verandah.

A little King Charles spaniel played at His Honour's feet or nestled on a cushion beside him, and, now and again, without interrupting the flow of conversation, he would lean over and give it a morsel of food from the tea-table.

After tea we walked about the grounds, Dr. Perodeau conducting us to spots from where the best views of the river could be had. As we went along he pointed out to us places of historic interest in the vicinity and related the stirring events that, in days of yore, had been staged there—events that had finally crystallized Canada into the Dominion of to-day.

The Lieutenant-Governor of Quebec, I found, was exceedingly proud of his province. What French-Canadian—or, for that matter, British-Canadian—is not? Potentially, it is one of the richest among the provinces of the Federation. Development of some of the resources has proceeded farther there than in some other part of the Dominion. Industrial expansion has been greatly accelerated during recent years.

Stupendous schemes of water-power were in hand at the time of my visit, and we talked of them. Americans were, I was told, investing \$100,000,000 in developing one site alone. They intended to bring bauxite from somewhere in South America and, with the aid of electricity, which would cost them practically nothing, they were going to fuse it into aluminium. They intended to make paper, also—there were almost limitless reserves of forest all round the plant.

Dr. Perodeau was not a bit afraid of the American capital that was pouring into his province. He, in fact, was happy that money was being brought into Quebec. It provided development, made for prosperity. I must not forget to add that the province exercised control over it and made contributions to the provincial treasury.

American tourists, too, were coming in and spending large sums of money in Quebec. The natural beauties of the province attracted them. The roads were good for motoring. The money spent upon the highways was, indeed, proving to be a good investment from this point of view alone. The tourists from across the line were, in fact, indirectly paying for them.

The *habitant* (farmer) constituted the backbone of the province. He was hard-working, patient, persevering, frugal. He thought of the morrow, and did not live

to do with lumber (as timber is called in North America) and he took to the woods, tramped on foot from place to place, made a little money and set up in the lumber business. Later on his people elected him to the House of Commons at Ottawa, and he was their representative for many years when he grew tired of the job and went back to lumbering. This, in short, was the life-story of the man, related in a perfectly frank, good-humoured style, without the least trace of vanity or affectation.

Shortly before we reached Winnipeg this friendly Canadian came up to me and gave me his card. Printed upon it I found the name, "Theodore A. Burrows," and his address. "Look us up," he said to me pleasantly, "my wife and children will be pleased to see your good lady and you, just as I shall be."

Upon my arrival in Winnipeg I learned that Mr. Burrows, whose acquaintance I had made in this unceremonious fashion, was known as the "Lumber King of Manitoba." He had something like forty lumber depots in almost as many places in the province and drew supplies from forest reserves which he knew intimately, having tramped through them on foot when he was a young man. He was one of the wealthiest persons in Manitoba.

Success had not, however, spoiled this "native son." From his actions or talk no one could ever imagine that he could at any moment write a cheque running into several figures without winking. He ate the simplest food, dressed quietly, spoke softly, sang at socials and moved among his fellows without any ostentation.

Before I was able to avail myself of Mr. Burrows' invitation, he called on me at the Fort Garry Hotel, owned and operated by the Canadian National Railway, where I was stopping. One morning there was a knock at the door of my sitting-room in that hotel, one of the best managed hostleries I have ever known. On opening it I found him standing there. He came in, chatted awhile and renewed his invitation with even greater cordiality than before.

"By the time we return your call," I remarked to Mr. Burrows, "you will have left your private home for the Government House."

Mr. Burrows was surprised that I knew that he was likely to be appointed to the highest office in the province. He did not deny that he was likely to be. The appoint-

ment, in fact, was gazetted almost immediately afterwards.

The official residence of His Honour the Lieutenant-Governor of Manitoba was only a stone's throw from the Fort Garry Hotel. Hardly had he settled down: in that mansion, nestling at one corner of the Parliament Buildings surrounded by trees and shrubbery and well-kept lawns, when he invited us to a luncheon there.

I found that Mr. Burrows, as the occupant of the Executive Mansion, was the same simple, informal Canadian whose acquaintance I had made on board the Canadian Pacific Railway train bound from Ottawa to Winnipeg several months earlier. Upon our arrival in the drawing-room, a large, airy, well-lit room tastefully but in no way ornately furnished and crowded with books which His Honour had brought along with him when he moved in, we found him waiting to receive us. He shook hands with us with great cordiality and presented us to Mrs. Burrows and their daughter and son.

We had been asked to come fully half an hour earlier than the meal hour. We sat chatting in a ring. All the family, we found, were staunch Liberals and Liberals not only with the capital L. They were broad-minded and progressive.

His Honour, I found, had taken pains to familiarize himself with the history of his own country. He had a good grasp of the constitution. The election, which had been fought only a short time before, had made one thing clear. The Canadian people were not disposed to permit the representative of the Crown to interfere with government by the representatives chosen by Canadians at the polls. Mr. Burrows was constitutionally minded and he made it quite clear that he had every desire to respect not merely the letter of the constitution but also its spirit; and furthermore the conventions and practices that had grown up in his own province and in the Dominion.

When the gong sounded we all walked down the stairs to the dining-room. The food served was wholesome and well-cooked. There was plenty of it. No attempt was, however, made to "show off." We were not treated as strangers, but were made to feel that we were members of the family.

The talk around the luncheon table had the same tone of cordiality about it that it had had in the drawing-room upstairs. Mrs. Burrows and her daughter related their

official histories of the two Bijapuri Sultans whom he served, namely Muhammad Adil Shah reigned 1627-1656) and Ali Adil Shah II (reigned 1656-1672), by Zahur bin Zahuri and Nurullah respectively. These original authorities for the period were not available to Ibrahim Zubairi, whose Persian history of Bijapur named *Busatin-us-salatun*, written in 1824, had hitherto been our only source of information.

In the light of these first-rate materials and the annual Jesuit letters from Madura, it is now possible to trace step by step and in clear detail the story of how the Muhammadans seized the heritage of the recently shattered empire of Vijaynagar and crushed its numberless disunited, mutually jealous and warring Hindu feudatories, across the entire Indian peninsula from Goa to Madras. The Adil Shah of Bijapur conquered what are called in his Persian history "Malnad and Karnatak," i. e., first the Kanara country of Bednur, then Mysore, starting from the Ikeri or Nagar district in the west, on to Sera and Bangalore in the centre and the north Salem district in the south-east corner, and finally descending the Eastern Ghats the Madras plains up to Vellore Jinji and Walchandapuram within sight of Tanjore. The Qutb Shah of Golkonda seized the Hindu principalities due south and south-east of his capital, i. e., the country beyond the Krishna, lying north-east of these new Bijapuri acquisitions.

Between these two streams of invasion, Sri Ranga Rayal, the last representative of Vijaynagar royalty, was completely crushed out. He offered a long and desperate resistance. But his worst enemies were his own people. The insane pride, blind selfishness, disloyalty and mutual dissensions of his Hindu feudatories rendered all his efforts futile and the Muslims conquered Hindu Deccan piecemeal with the greatest ease and rapidity. As the Jesuit missionary Antoine de Proenza wrote from Trichinopoly (1659): "The old kings of this country appear, by their jealousies and imprudent action, to invite the conquest of entire India by the Muslims." [*Mission du Madura*, iii. 12]

Muslim territory to the nearest Hindu States across the frontier. These were easily defeated, often with the help of neighbouring Hindu princes, and the victors returned to their capital before the commencement of the rainy season, laden with the plunder of the forts and the promise of tribute. Next year, the raid was repeated to a more distant quarter, the Hindu chief humbled last year, as in duty bound, aiding his new masters in the attack on the independence and wealth of his brother Hindus. Or, if he proved recalcitrant or irregular in the payment of his tribute, he was crushed and his State annexed in the second expedition and made the seat of a Muslim viceroy. Thus the map of the Deccan was "coloured green" and the Muslim boundary advanced very methodically from point to point by regular stages, in a succession of ripples arising from one centre of power.

There could be no central authority for the defence of the Hindus as the imperial prestige and military strength of Vijaynagar dynasty was now gone, and their local Rajahs (*samantas*), blinded by folly and greed, were bent solely upon enhancing their own prestige by throwing off their former suzerain's authority and enlarging their petty States by fratricidal attacks upon the neighbouring Hindu territories.

On the other hand, the Muslim forces were united under one recognized central authority, which marshalled them under a regular gradation of officers and co-ordinated the movements of the columns invading different parts of the enemy country, so that every hard-pressed division was promptly reinforced by troops from other quarters, or a repulse to Muslim arms in one place was avenged next year by an overwhelming concentration of forces there next year. The proud Hindu kings acted each for himself and perished piecemeal in self-sought isolation.

The Muslim raiders seized the accumulated treasures of the Hindu kings of the Kanara country,—famous from the earliest times for its fertility of soil and richness in minerals and elephants,—and thus made "war pay for war." The Hindus being always on the defensive, could only lose, and each year they grew poorer and weaker, till the final stage of complete annexation was reached by an inevitable natural process. The Vijaynagar empire broke to pieces under the shock of the crushing defeat of 1565,—in spite of

Nandiyal (Karnul district) and eight other strong forts in that region.

In all these wars Shahji did not take any part beyond what has been mentioned above. His achievements, if any, did not deserve to be "mentioned in the despatches."

V

In June 1616, the prime minister Mustafa Khan was despatched from the capital to subdue the Kanarese country. By way of Bakargunda he reached the fort of Gunti (or Kunti) on the Malprabha (?) river, which he took. Thence marching *via* Gadag and Lakmishwar, to Honhalli [12 m. w. of Basavapatan] he met (3 Oct.) Asad Khan and Shahji, who had gone ahead, by order of Adil Shah, for the defence of the Karuatak frontier. The next stage was to Sakrapatan (near the southern end of the Shimoga district). At this time Shivapa Nayak, Dad (or Dodda ?) Nayak (Rajah of Harpanhalli), Jhujjar and Abaji Rao Ghatge, Keng Nayak's brother, the desais of Lakmishwar and Kopal, and Balaji Haibat Rao joined the Khan with their contingents.

Thence in successive marches he reached Shivaganga, * a famous holy place of the Hindus. Soon afterwards Venkayya (?) Somaji, the Brahman guru and envoy of Sri Ranga Rayal of Vellore, waited on Mustafa Khan, with peace offerings, to induce him to turn back from the invasion of the Rayal's country. In the meantime, the Rajahs of Jinji, Madura and Tanjore, who had once been vassals of the Rayal and had now rebelled against him,—had sent their envoys to Mustafa Khan to offer their submission to the Bijapur Government. The Rayal had immediately set out with 12,000 cavalry and 3 lakhs of infantry against these rebels. But the Rajahs of Tanjore and Madura persisted in their war of rebellion.

Mustafa Khan refused to be dissuaded from his purpose by "the deceitful words of the Rayal's envoy" and hastened towards the Kanvi (?) pass near Vellore. He agreed to stop wherever he would hear that the Rayal had withdrawn from the war with the three Rajahs and agreed to make peace with them. Somaji promised to induce the Rayal to return to Vellore in one week. He took

leave of Mustafa Khan and was accompanied by Mulla Ahmad on behalf of Bijapur to settle the terms with the Rayal and induce him to visit Mustafa Khan near Nilipatan (?) in the uplands of Mysore. For the Mulla's return Mustafa halted before a difficult pass 28 miles from Vellore. At first he had wished to detain Somaji in his camp and send Mulla Ahmad alone on his peace mission, but Shahji assured him that he had taken from Somaji solemn oaths of fidelity to his pledge and himself undertook entire responsibility for Somaji carrying out his promise.

Immediately on his arrival at Vellore, Somaji advised the Rayal to prepare for war and block the pass. On hearing of this breach of faith, the Bijapuri wazir decided to make a detour and first enter the kingdom of Jagdev Rao by the Kanvi (?) pass. This country consisted of the northern corner of the Salem district (the Kaveripatan or Krishnagiri taluq) and the adjacent part of the N. Arcot district. The Rayal hastened to defend the Kanvi pass. The wazir, who was at Masti [80 m. e. of Bangalore], advanced and on 20 December 1616 sent Asad Khan ahead of himself with a strong force. These men forced their way into Jagdev's country slaying the defenders of the pass, and then halted at a tank five leagues from Masti, for 20 days to level the path through the hills.

The Rayal advanced with a vast army, by way of Guriant and Krishnadurg, to attack the division left at the tank under Shahji and Asad's diwan, (Asad Khan having gone to Masti on account of illness). The wazir hurried up reinforcements, but while he himself was still six leagues behind Jagdev Rao, at the head of the Rayal's numerous troops, attacked the Bijapuris under Shahji. After a bloody fight the enemy were routed and Jagdev's mother was killed. The wazir soon afterwards arrived, rewarded his victorious subordinates, and then advancing, halted at the Kanvi pass, in order to ensure the safe crossing of it by his army.

Then by way of the tank where Asad had halted before, and the fort of Ankusgiri [40 m. s. e. of Bangalore], he reached Krishnadurg on 30 January 1617. After a siege Krishnadurg surrendered. Then the wazir sent a detachment to capture Virabhadra-durg, the capital of Jagdev. [25 m. s. of Ankusgiri]. It was taken after a severe fight and Balaji Haibat Rao left in it as commandant. Then the wazir resumed

Nandiyal (Karnul district) and eight other strong forts in that region.

In all these wars Shahji did not take any part beyond what has been mentioned above. His achievements, if any, did not deserve to be "mentioned in the despatches."

V

In June 1646, the prime minister Mustafa Khan was despatched from the capital to subdue the Kanarese country. By way of Bakargunda he reached the fort of Guanti (or Kunti) on the Malprabha (?) river, which he took. Thence marching *via* Gadag and Lakmishwar, to Honhalli [12 m. W. of Basavapatan] he met (3 Oct.) Asad Khan and Shahji, who had gone ahead, by order of Adil Shah, for the defence of the Karnatak frontier. The next stage was to Sakrapatan (near the southern end of the Shimoga district). At this time Shivapa Nayak, Dad (or Dodda ?) Nayak (Rajah of Harpanhalli), Jhujjar and Abaji Rao Ghatge, Keng Nayak's brother, the desais of Lakmishwar and Kopal, and Balaji Haibat Rao joined the Khan with their contingents.

Thence in successive marches he reached Shivagaaga, * a famous holy place of the Hindus. Soon afterwards Venkayya (?) Somaji, the Brahman *guru* and envoy of Sri Ranga Rayal of Vellore, waited on Mustafa Khan, with peace offerings, to induce him to turn back from the invasion of the Rayal's country. In the meantime, the Rajahs of Jinji, Madura and Tanjore, who had once been vassals of the Rayal and had now rebelled against him,—had sent their envoys to Mustafa Khan to offer their submission to the Bijapur Government. The Rayal had immediately set out with 12,000 cavalry and 3 lakhs of infantry against these rebels. But the Rajahs of Tanjore and Madura persisted in their war of rebellion.

Mustafa Khan refused to be dissuaded from his purpose by "the deceitful words of the Rayal's envoy" and hastened towards the Kanvi (?) pass near Vellore. He agreed to stop wherever he would hear that the Rayal had withdrawn from the war with the three Rajahs and agreed to make peace with them. Somaji promised to induce the Rayal to return to Vellore in one week. He took

Then the wazir resumed

imparted to him the happy news of the royal favour, and did his utmost to compose his mind. Shahji... decided to obey, and wrote to his two sons, who were residing in the above forts, to deliver them to the Sultan's officers immediately on the receipt of his letters. They obeyed promptly.

"Thus, all the numerous misdeeds of Shahji were washed away by the stream of royal mercy. The Sultan summoned Shahji to his presence, gave him the robe of a minister, and settled his former lands on him again."

After this we have no further mention of Shahji in *Muhammadnamah*, which stops abruptly with the capture of Vellore and the humbling of the Rajah of Mysore into a tributary vassal by Khan Muhammad, about 1650. There is thus a gap in our knowledge of Shahji's doings from 1649 onwards, which is very inadequately filled by the brief notices occurring in the Jesuit letters from 1659 onwards; but these letters deal solely with the history of Jinji and Tanjore and tell us nothing of what happened in Kanara proper or Mysore.

VIII

The letters of Abdullah Qutb Shah, drafted by Abdul Ali Tabrezi (British Museum, Persian MS. Addl. 6600) give some extremely valuable information on Karnatak history of this time. We learn from them that it was agreed between Bijapur and Golkonda that Sri Ranga Rayal's territory and treasures were to be conquered and divided between the two in the proportion of two to one,—two-thirds of them falling to Adil Shah and one-third to Qutb Shah. Then Abdullah writes whimpering to Shah

Jabau that Adil Shah had broken his promise and was forcibly taking away Qutb Shah's portion. On the other hand, the Bijapuri panegyrist Zahur complains, in his *Muhammadnamah*, that the ungrateful Abdullah,—whose forces had been defeated by the Rayal and who could not have won an inch of the Karnatak without Bijapuri support,—had formed a secret alliance with the infidel (i. e., the Rayal) and sent his general Mir Jumla to assist the Hindus in the defence of Jinji, but that Mir Jumla arrived too late. He was subsequently defeated, in another quarter, by the Bijapuri general Baji Ghorpare.

A letter from Abdullah Qutb Shah to Haji Nasira (his envoy at Bijapur) tells us that he had received on 6th Zihijja [probably in 1057 A. H. = 23 Dec. 1647 and not in 1058 A. H. = 12 Dec. 1648] a petition from Shahji Bhonsle, begging to be taken under his protection, but that Qutb Shah had then and repeatedly before this rejected Shahji's prayer and told him to serve Adil Shah. Another Hindu Rajah,—whose name reads in the Persian MS. as D-h-r-v-y-a-n (?)—had similarly offered to desert Adil-shahi for Qutb-shahi service. [Folio 20 b.]

The arrest of Shahji at Jinji was clearly due to these disloyal intrigues. He was coquetting both with the Rayal and Qutb Shah, and the latter sovereign divulged the fact to Adil Shah. We have seen how Shahji had been won over by the Rayal's Brahman agent Venkayya Somaji, during Mustafa Khan's first march towards Vellore, in November 1646.

Mrs. Naidu And Mr. Andrews In America

By Dr. J. T. SUNDERLAND

ON April 26th, Mrs. Sarojini Naidu, India's eminent and honoured social and political leader and poet, sailed from America for England. She had thought to go from America to Japan, but changed her plans and went to Europe,—for how long a time I do not know.

She had been in America almost six months, had travelled in nearly all parts of our great land, from the Atlantic ocean to the Pacific, and had delivered two hundred addresses—to audiences large and small, some of them very large. She had spoken many times in New York, several times in

The General Elections

By NAGENDRANATH GUPTA

Is it the unexpected that has happened in the General Elections of 1929? That is a question for the British public and British politicians to answer. When Parliament was dissolved the Conservatives in the House of Commons numbered 396 against a total combined opposition of 213. The Government majority of 183 was demoralizing. It gave the ministry a sense of complete security; it left the opposition in a position of complete helplessness. The Government became contemptuous of opposition in Parliament and in the country; it became contemptuous of its own adherents in the House; offices and preferments remained a close preserve for the immediate entourage of Mr. Baldwin, a Prime Minister of very average ability and possessed of neither insight nor foresight. The Government of Britain was as contemptuous as the Government of India; both were autocratic though the sources of strength were different. The British Government relied upon its overwhelming voting majority in the House of Commons; the Government of India relies upon the unlimited statutory power of the Governor-General to override the Legislature with the menace of force in the background.

On the eve of the elections the party leaders in Britain exhibited different attitudes: the smug complacency of the Conservative Premier was charming, if a trifle unwise; he thought he carried the confidence and the conscience of the country in his pocket and he asked for a blank cheque to carry on as he had done in previous years; among his other gifts the Liberal Leader has some histrionic talent and the gift of prophecy; the latter he exercised in predicting a fearful smash for the Conservatives, implying without specifying that the landslide would prove advantageous to the Liberals, and the former was noticeable in the round-robin testimonial obtained from businessmen just when the zero hour was about to strike; the triangular contest the Labour party displayed the greatest dignity, for the leaders avoided the cocksure impudence of

the Conservatives and also the hysterical extravagances of the Liberals. They looked like winners from the beginning.

There is no monopoly in pocket-boroughs. It is true that the Conservatives have such boroughs. The Universities are the safest of these. They do not change the complexion of their politics and vote solid for the Conservative candidate. But other parties have also pocket-boroughs. Labour has them and the number is increasing. The uncertainties of a General Election would be greatly minimized if there were a large percentage of safe seats, but it would strike at the root-principle of a contested election. Party Government means a constant fluctuation of the political barometer and a frequent veering of the political wind. The glass may be set fair at one moment and the next the mercury may be going down at an alarming speed. The pendulum must keep swinging or the clock marking the progress of political thought must come to a standstill.

The landslide came on or down with a rush. Constituency after constituency was captured by the Labourites and the air-castles of the Conservatives began tumbling down about their ears. But the wires are still held and pulled by capitalist agencies. When the Labour party was a long way ahead an absolutely unnecessary warning was sent out by telegraph and wireless offices that the returns must be accepted with caution as the Labour party was strong in the industrial centres but the decision of other important centres should be awaited. This was an abuse of the discretion possessed by news agencies for as a matter of fact the Conservatives never caught up with the Labour party which stands at the head of the poll. When this trick failed it was declared that Labour would not have an absolute majority as the Conservatives had on the last occasion. In the end it may be found that if the Conservatives and the Liberals unite they may have a very small majority over the Labourites; if the Liberals support the Labour party as they did in the

days of the first Labour Ministry there will be a larger and workable majority. That however, is a situation with which we are not concerned at the present moment. It may be noticed, however, that certain papers persist in calling the Labour party Socialists. Does that party call itself by that name? If not, the petty spitefulness of these papers stands self-condemned. If the free electors and electresses of Britain choose to have a Labour, a Socialist or a Communist Government it is their look out and the venom of party newspapers will make no difference.

To an interested student the General Election presents several important features. There is the huge increase in the number on the register of voters. The figures are not so staggering as those of the United States, which have a much larger population than the little islands of Great Britain, but still there is the large accession of fresh voters and the significant preponderance of women voters. Nearly twenty-three million votes were recorded and counted in two days. Communist comrades must console themselves as well as they can, for they have been wiped out and even comrade Saklatvala has been given his marching orders. The Liberals are down and out, they do not represent even a tenth of the numerical strength of the House. Mr Lloyd George has said that the Liberals hold the balance of power and they will use it fairly. What the Liberals were really hoping for was a come-back, but of that there seems to be no likelihood. Mr Lloyd George has evidently had his day. When he thrust out Lord Oxford and Asquith from the Premiership he had his opportunity but he made the grave blunder of holding on to a Coalition Ministry much too long and that led not only to his own downfall but the complete disruption of the Liberal party. Party Government in England can be stable only so long as there are two parties and there is a straight fight between them. A triangular fight very often camouflages the real issue, besides a pendulum cannot swing in three directions, and a patched up truce between two out of three duellists does not make for the stability of the Government. When Mr Lloyd George speaks of the balance of power he reminds one of another third party which played a powerful part in the House of Commons in the days of Mr Gladstone. That was the Irish Home Rule party. Under the leadership of Parnell the

Irish Nationalists held themselves close together as a wedge which could be driven in to split and break up any Government which refused to come to terms with the Irish party. But there can be no analogy between any English party which must hope for office and an Irish party which seeks nothing in England. The Liberal party is doomed to extinction and will be absorbed by one or both of the other two parties. It is at present in the position of the tail wagging the dog.

There is some mystery behind the Conservative debacle. The Conservative rout has been complete and their humiliation has been undisguised. Bad generalship, miscalculation and miscalculation of forces and the confident assurance of security are apparent and there may be other causes of which we out here may not be aware. It is like a capitalist having a large amount of capital in hard cash being declared a bankrupt and putting up his shutters.

Two individual elections may be cited as representing the zenith and the nadir of the campaign. Mr Ramsay MacDonald who has become Prime Minister for the second time, left his old seat and contested a new borough, Seaham in Durham-shire and bowled over his Conservative rival with a majority of over twenty-eight thousand votes. That was a signal triumph. On the other hand, Sir Austen Chamberlain, Foreign Secretary in the Conservative cabinet and holding a position next only to the Prime Minister, nearly lost his seat in the ancestral stronghold of Birmingham. It was there that the nadir of Conservatism was reached, for Sir Austen retained his seat by a majority of only forty-three votes.

There can be no question that women have played a great and probably a decisive part in this election. We have the high authority of Mr MacDonald himself for this statement. What the Suffragette movement had not succeeded in wresting from a Government composed of men the World War accomplished in four years. When the very existence of England as a free country was at stake the women and the apparently flippant girls performed the parts of men and they did it so well that it would have been the height of ingratitude to deny any longer the equality of their status with men. It was a Conservative Government that gave an extended franchise to women, and in the revised register the number of new women

voters exceeds that of the new men electors. The flapper is not merely fashionable and frivolous; she has proved herself a capable organizer and a promising politician. And she is certainly go-ahead. The sneering appellation of Socialists given to the Labourites has not alienated her sympathy with Labour, but quickened it. It is by hard manual labour, by driving motor cars and running buses, by working as porters and wireless operators, by helping to carry on the busy daily routine of national life that woman has obtained her rightful place in the electorate. Women have helped Labour to win and the House of Commons has a larger number of women to-day than ever before. In the new Labour Ministry Miss Bondfield holds the important office of Minister of Labour in the cabinet. Some day a woman may become Prime Minister. Why not? The hand that had been busy rocking the cradle will now take part in guiding the affairs of nations and steering the ship of state.

If the General Election has proved to be a rude awakening for the Conservatives it should serve to clear the air in India. The election campaign has been fought out without the slightest reference to this country. No election ticket bore the name of India. To all intents and purposes, so far as the election was concerned, such a place as India did not even exist. That is a true indication of the political feeling in England in respect of India. Tory or Whig, Labour or Socialist, no party as such cares a brass farthing for India. Out of office some politicians may speak a few words of lip-sympathy but they signify nothing. When the scramble for office comes India is let very severely and contemptuously alone. In office, scratch the most pleasant-spoken Labourite and you will discover a blood-red Tory. Mr. Ramsay MacDonald as Premier used more threatening

language towards Indian leaders than any Conservative or Liberal. Imperialism is the badge of political office in England and it makes no difference who wears it. All ministers and office holders are tarred with the same Imperial brush. When the occasion comes there is nothing to choose between a Birkenhead and an Olivier. India is a milch-cow and she will be used as such. For the rest, all the talk about India being given Dominion Status and a seat of equality with the self-governing Colonies is mere moonshine. The British Government is like any other foreign Government, and human nature is the same, East and West. Rudyard Kipling notwithstanding. The most obtuse among us should have realized for himself, by this time that the Government of India Act was never intended to give any modicum of real power to the Legislative Assembly or Legislative Councils, nor need any such expectation be entertained from the labours of the Simon Commission. There may be constant tinkering and trimming at the edges, but the central seat of power will show no inclination to shift and the Government will reserve the right of trampling through any opposition like a behemoth. The Government will give what it cannot keep, and it will strain every sinew and every nerve before it parts with any stored shred of power. It is perfectly normal and natural. For any party in India to expect anything from any party in Britain and to rest in hope is to build a fairy castle in the air and also to ignore that very wise and pregnant saying about self-help. It was an Englishman, Sir Henry Seely, who said that India could obtain her full rights without any violence if she willed it. That will of India, which will enable her to win through, is still in the making.

Uncle Sam's Other Island

By DR. SUDHINDRA BOSE

Lecturer in Political Science, State University of Iowa

WHEN Colonel Lindbergh, the world-famous American flyer from New York to Paris, was in Porto Rico, he was entrusted by the Porto Rican legislature to bring home to the American people a plea for Porto Rican freedom. The two most striking paragraphs in this message from the American island possession read as follows:

"The good wishes of Porto Rico will go with you to the land of the brave and the free, and to your country and to your people and will convey a message of Porto Rico not far different from the cry of Patrick Henry—'liberty or death.' It is the same in substance with but a difference imposed by the change of times and conditions.

"The message of Porto Rico to your people is, grant us the freedom that you enjoy, for which you struggled, which you worship, which you deserve and which you promised us. We ask the right to a place in the sun of this land of ours brightened by the stars of your glorious flag."

This cry for "liberty or death" raises in the mind of an observer a number of questions. Why aren't the Porto Ricans content to remain under the control of Uncle Sam? Hasn't America planted the fundamental ideas of liberty, equality and prosperity hitherto unknown in Porto Rico? Hasn't America introduced self-government, a gallant adventure in democracy? Haven't Americans transformed more than a million Porto Rican subjects into citizens?

For an answer to some of these questions I sought an interview with the Governor of Porto Rico, Honourable Horace M. Towner. I knew him years ago when he was a member of the United States Congress. He tried to mitigate some of the harsh features of the Indian Exclusion Act.

Governor Towner is justly proud of the political and economic progress that Porto Rico has made under his administration for the last five years. He points to the fact that the Island exports, ninety per cent of which is with the United States, have increased

annually from eighty-two million dollars in 1923 to one hundred and eight million dollars in 1927.

In finances, too, a similar progress is noticeable. The floating debt of Porto Rico amounted to only three million dollars in 1927, representing a reduction of nine hundred thousand dollars as compared with a year ago.

Hundreds of miles of new roads, and scores of new bridges were added during the last fiscal year. What is still more significant is that one-third of the income of the Island was expended for public education and progress made is "highly creditable". Governor Towner observed: "He has full sympathy with the legitimate aspirations of the natives; but he does not want to 'pull the millennium before it is ripe.' He wants to train them by education."

Why then should Porto Rico, whose inhabitants had known only how to bend their necks to the Spanish yoke, wish to give up the advantages of a liberal government under the United States regime? A conversation with Mr. Towner, who had recently been in the United States in connection with some insular affairs, would convince one that Porto Ricans are grateful to the United States for all it has done for them. Still, they wish to be free to control their own destiny in their own way. This attitude of the Porto Ricans, Mr. Towner intimated, is the revelation of how peoples, whatever the colour of their skins, whatever their race or religion, tenaciously cling to the ideal of independence. The longing for independence certainly exists in both of Uncle Sam's important island possessions—Philippines and Porto Rico. Perhaps this desire for freedom is inherent in human nature.

"At all times the Porto Ricans have been a peaceful people in ideals and desires," declared Towner. "Not once during the Spanish rule did they attempt revolt, and since the United States has been in control, they have never thought of revolt."

"For this reason the people have easily

and readily adopted the American form of government to suit their needs.

"Porto Rico, at the time of the Spanish-American war, saw the advantage of being under the control of the United States instead of that of Spain. When the American soldiers entered the Island, a friendly attitude was shown them by the Porto Ricans and instead of resisting the Americans they strewed flowers in their way."

Mr. Towner's talk betokened understanding sympathy. He had a thorough preparation for his duties in Porto Rico, while he was serving as the Chairman of the Congressional Committee of Insular Affairs. He is energetic (he was born, in 1855), hard-working, courageous, and a capable administrator.

Porto Rico lies in the warm waters of the Caribbean Sea. This Island is slightly larger than Sikkim State. Porto Rico, however, has a population of about 1,300,000,—65 per cent being white, the remainder, negroes and mulattoes. Porto Rico is overcrowded with a population approaching 400 to the square mile; but there has never been any famine since the country came into American possession. Indeed, the death-rate has been reduced by wise sanitation from 40 to 19 per thousand, and wages have been increased.

Porto Rico is mainly an agricultural country. Its chief products are sugar, tobacco, coffee, oranges, grape fruit, pineapples, and other tropical fruits. It is the country where "sugar-cane is king". Of all its exports, sugar products comprise more than half. Tobacco is the second important crop.

There are a few manufactures which are connected with cigars, cigarettes, embroidery, and straw hats. The industries of the people are, however, principally allied with agriculture. Indeed, two-thirds of the people are engaged in agriculture, and the agricultural experiment station at Mayaguez has reduced the ravages of plant diseases and is adding constantly to the list of crops which can be raised in that moist hot climate.

There is free trade between the United States and Porto Rico; but the regular United States protective tariff laws are applied in Porto Rico as against the rest of the world. America does not exact any direct tribute from the Island. All customs duties and internal taxes go into the treasury of Porto Rico.

I have met colonial rulers of French, Japanese, and English colonial possessions in different parts of Asia. My impression of a colonial governor is that of a cocky, shovel-hatted, stern-visaged man. What I saw in the Governor of Porto Rico was a slim, kindly man, in a dark, double-breasted plain coat. He is quiet and simple in manner. He may seem a bit reserved and aloof; but he is neither haughty nor pompous, the unmistakable ear-marks of European colonial satraps. I can well understand how this American won the hearts of the Porto Ricans the very first time he landed in their capital city (San Juan) with his Spanish greeting: "Viva Puerto Rico." Can you imagine an English Viceroy landing in Bombay with the Indian salutation of "Bande Mataram" on his lips?

Porto Ricans have been American citizens since 1917, when Congress passed the Jones Act granting all Porto Ricans the rights and privileges of citizenship. The Act also provided that those Porto Ricans who did not wish to accept American citizenship should remain citizens of Porto Rico. There were less than 300 rejections of this new citizenship. More than a million and a quarter of the Porto Ricans eagerly accepted the American citizenship.

The United States has tried to make the people of Porto Rico self-governing as rapidly as the United States thought it possible. Formerly the Porto Ricans had little or no participation in the government of their country. The Spanish Governor-General was usually a Field-Marshal. Sometimes he was an Archbishop. With the change of sovereignty from Spain to the United States in 1898, Porto Rico found a larger degree of self-government than it ever had before.

Porto Rico has to-day a legislature which is entirely elective. The Porto Rican legislature consists of two elective chambers; the Senate, composed of 19 members, and the House of Representatives, composed of 39 members. The Porto Ricans make their own island laws, expend their own revenue, and in almost every way conduct their government to suit themselves.

Porto Rico has practically manhood suffrage, there being no property or educational tests. It is interesting to note in this connection that voting is compulsory in the Island. A person not exercising his right to vote may be fined, or disfranchised.

The Governor of Porto Rico, who is appointed by the President of the United

States, has veto power, and he occasionally uses it. The Porto Rican legislature can, however, pass a bill over the Governor's veto. It can also make final appeal to the President of the United States.

A Commissioner from Porto Rico, elected by popular vote, sits in the Lower House of Congress at Washington. He has, however, no vote in that body.

Again, each municipality in Porto Rico elects its own officials to look after its own affairs. Indeed, local government is entirely in the hands of the people of the Island.

Porto Rico has its own system of courts. The judiciary of the Island, like its executive and legislative, is efficient. The judges of the higher tribunals are appointed by the President of the United States, and those of the lower courts by the Governor of the Island with the consent of the Porto Rican Senate.

"The Court records of the Island are remarkable," Governor Towner told me. "They show little time wasted, and proportionally few appeals to higher courts. This may be due to a higher type of judicial officers who receive their offices through appointment rather than by election. During the time that Porto Rico has been under the control of the United States, they have used well the privileges granted them and have made good."

Thus it will be seen that Porto Ricans have been essentially self-governing, at least for the last ten years.

It is often said that the only way to master the art of self-government is to practise self-governing. That the United States has hastened the process of self-governing is further attested by the fact that to-day out of 8,905 in government employ in both classified and unclassified service, 8,632 are native-born. The non-natives include the Governor and a few other administrative officials, technical employees, teachers of English in the public schools and professors and instructors in the University of Porto Rico.

A hard-shelled element in the European colonial system is the general belief that subject peoples are inferior and incapable of self-directed advancement. The whole race of Curzon and Cromers with their itch for power has made that the basis of their political creed. Now the American proconsul in Porto Rico does not take stock in such a dogma. No superiority complex burdens Towner. He is not of the old school of

imperialist bureaucrats. He is at all times courteous, as a Porto Rican put it to me. The spirit of his statesmanship is democratic rather than imperialistic and bureaucratic. Perhaps it is in such a helpful attitude lies the solution of some of the vexing colonial problems of our time.

When Porto Rico was under Spanish rule, there were only parochial church schools. There was not a single public school in the Island. Since the American occupation, a school system was established and education made compulsory.

While education is fundamental, it is often neglected by European colonial governments. The United States has probably made more progress in this direction than any other colonial power in the world.

Towner is a warm friend of education, being a former Lecturer in the State University of Iowa. In Porto Rico the number of pupils in schools has increased from 18 thousand in 1900 to 219 thousand in 1927. One of the tasks of Uncle Sam has been to weld the new with the old. The Spanish language, which is the exponent of the Porto Rican history and civilization, has not therefore been eliminated from the schools of Porto Rico. And Porto Ricans, as I said before, are allowed to devote one-third of their national budget to education. Despite all this, about 45 per cent of the inhabitants of Porto Rico are illiterate. But Senator Barcelo, President of the Porto Rican Senate, pointed out not long ago that even at that the condition of Porto Rico is not hopeless. He stressed the fact that when America won its independence from England, 80 per cent of the colonial Americans were illiterate. Senator Barcelo further rounded out his argument by saying that the illiteracy of his native country is to-day actually less than that of Spain, Argentina, Brazil, Chile, and several of the Southern States of this Federal Republic. Hence much of the routine ballyhoo about Porto Rican illiteracy is superfluous.

The yeast of new nationalistic ideas is at work in the Island, as it is everywhere else in the world. Men in all parts of the globe are stirred to their sense of nationality. And with this awakening has come the spirit of liberty to the hearts of the people. It is a great movement of destiny. The exclaiming wing of the Porto Rican nationalists, who represent a minority, do not like to see their country remain a mere 'subjected colony.'

They demand complete independence. The nationalists constantly carry on independence propaganda. No effort, however, is made by Governor Towner to interfere with this propaganda. Listen to these words from a leader of the Nationalist party of Porto Rico: "We have gained nothing with American citizenship. We continue to be the exploited colony, a sugar factory of American bankers with all of the duties but none of the rights inherent to the citizens of a free republic."

The large majority of the Porto Rican people are, however, asking for a greater degree of autonomy, including the election of the Governor by themselves. They even interpret the message handed to Lindbergh as merely a demand for more local self-government.

The political status of Porto Rico is at present in doubt. It is either a free State or a full self-governing territory of the United States. Shortly after his appointment as Governor, Mr. Towner himself headed a

delegation to Washington asking for an elective Governor for Porto Rico—an unheard of thing for a colonial ruler to do. Since then the request has been frequently repeated. According to Mr. Towner, an elective Governor is the next logical step for the Porto Ricans to take in their advance toward statehood.

Some years ago the late "Uncle" Joe Cannon, a Speaker of the Lower House of Congress, remarked that to admit Porto Rico to the American Union as a State would be like wiping a pig's tail with a silk handkerchief. Porto Rico has better prospects now. The Towner administration seems to have prepared the way for something more than a vague colonial status. And so greatly are the efforts of Mr. Towner appreciated that one of the leading papers of San Juan *La Correspondencia de Puerto Rico*, recently declared that if Porto Ricans are permitted to elect their Governor, Horace M. Towner would be their first choice.

The Task of the High School

By Dr. G. S. KRISHNAYYA, M.A. (MAORAS), M.A., Ph. D. (COLUMBIA),
Professor of Education, Mysore University

MUCH has been said and written about the task of the high school, and so in a little more from the point of view of one who has studied secondary education abroad may be graciously tolerated perhaps! The purpose of the modern high school will be discussed here with reference to certain specific heads. The divisions adopted cannot be claimed to be mutually exclusive, and so overlapping and repetition are inevitable. In fact, they are so related that they have to be taken all together. Limits of space forbid anything more than a brief and sketchy discussion.

The modern high school is playing and will continue to play, a very large part in the moulding of the younger generation. As time goes on, there will be a larger and larger proportion of the population passing through the high school.

TRAINING THE INDIVIDUAL.

If what we have said above is true, then the training of the individual is one of the

tasks of the high school. When children have to depend on the school for their training, owing to the questionable character of the influence of some homes, or the lack of parental attention, its responsibility increases tremendously.

The problem of health comes first. The secondary school should provide health instruction, inculcate health habits, organize an effective programme of physical activities, regard health needs in planning work and play, and co-operate with home and community in safeguarding and promoting health interests.

The individual will find growth difficult if he has not secured command of the fundamental tools of knowledge. This and more, the secondary school should give him. He should also be enabled to develop a democratic attitude towards the world's work and its relation to culture. "If any man will not work, neither should he eat."

The school should give him an acquaintance with the world he lives in, its peoples

conditions and needs. Tolerance and width of outlook may be cultivated thereby.

It would be of immense value to the pupil, if he could gain, while at school, the scientific habit of mind and develop the critical attitude. The sway of emotion and unreason would then be perceptibly diminished. The habit of thinking would also make for solidarity and stability.

Another important direction in which the school should train the individual is in the proper use of leisure. It should equip the person to secure from his leisure the recreation of body, mind and spirit and the enrichment and enlargement of his personality. It should treat art, music, literature etc. so as to evoke the right emotional response and provoke positive enjoyment. With the decrease in the hours of labour, this problem will become increasingly serious.

Finally, the school has the heavy responsibility for the development of the character of its pupils. It has them for a much longer period, each week than any other institution. Employed in it are men and women who are more or less experts in this field. The future of any nation depends on the kind of foundation on which it is built. The school has also the means by which to develop character—wise selection of content and methods of instruction in all subjects of study, the social contacts of pupils with one another and with their teachers, the opportunities afforded by the organization of the school for the development of personal responsibility and initiative, and above all, the spirit of service and principles of true democracy. "It is difficult to over-estimate the need for stressing this aspect."

SOCIAL EFFICIENCY

Much of what has been said above naturally applies here too. The individual is a member of society and it is as true that he grows in and through it, as it is that it grows through him and his work. The separation of individual from society has always led to mischievous consequences. The relation that exists between the two is one of action and reaction. Education should not only fit a man for society, but also give him the skills and attitudes which will enable him to transform society. The pupils should learn to grow up in a changeable and living world—a world in which desirable changes can be effected.

Social efficiency as an educational purpose

should mean cultivation of power to join freely and fully in shared or common activities. Civic education, whereby he will be taught to act his part well as a member of the neighbourhood, town, city or nation and be enabled to understand international matters is invaluable.

The school should also recognize as one of its objectives the training for worthy home-membership. It could help the pupils to take the right attitude towards present home-responsibilities and interpret to them the contribution of the home to their development. The home has great potentialities for good or for bad and the school can do not a little to harness them for good.

The question of vocational training in the high school is hard to settle. We believe that it is best to leave definite vocational training for other institutions and to consider the secondary school as preparatory for such institutions, and colleges. In other words, the education should be general. But since it is impossible to keep pupils in the secondary school very long it is necessary to make provision also for vocational education, so that no interests or aptitudes may be crowded out. The aim will be to make the individual a useful member of society, with a many-sided interest in its welfare, and to build up cordial co-operation in social undertakings.

GENERAL EDUCATION

The school should meet a variety of interests and should attempt to develop all-round persons. This can be done by subordinating deferred values as far as possible, by providing enough elasticity in the administration and enough flexibility in the organization of courses, and by a deep interest in individual pupils. In other words, the conditions for further growth should be guaranteed.

This principle is to guide the solving of the problem of specialization in school. Society has to see to it that no child is handicapped by not having certain essential requirements. When this precaution is taken specialization may be permitted.

A general secondary education would include matters relating to health, command of fundamental processes, worthy home-membership, citizenship, proper use of leisure and ethical character. The school should enable the pupil to get an appreciation of the significance of things and experiences and to be able to correctly evaluate them.

Neither languages nor formal mathematics should predominate as a rule. A symmetrical development of interests is to be desired, (individual variations not being ignored) and such subjects and activities as promise opportunities for growth should be included. Untrammelled by tradition, the work at school should be determined by a fresh investigation of the best means and conditions of growth.

SPECIALIZATION

This problem was dealt with somewhat briefly under general education. We laid down a principle that no child should be allowed to handicap himself by neglecting the mastery of the fundamental processes.

The secondary school is the place where specialization should begin. Modern psychology makes it possible to determine fairly accurately the aptitude and intelligence of children. With the advance of manual tests, intelligence tests, special aptitudes tests etc., specialization will be both encouraged and allowed with greater confidence. It would then be wrong and wasteful perhaps to detain a pupil strong in science because he happens to be weak in English. Individual difference should be definitely recognized. For safety, pupils may be allowed to try certain subjects provisionally, and then be asked to decide.

While not too early specialization is undesirable specialization is both worth while and necessary. It may be said that the majority of people have some outstanding interest or ability. Capitalizing this ability is specialization. When life is so complex, men have to recognize the need for a division of labour. The need for specialists cannot be overestimated. We should encourage experts in every line and give every one a chance to make his unique contribution.

All that may be claimed for this treatment is that it has scratched the surface, and perhaps barely that. It is a stupendous problem. Dogmatism is out of the question to-day. Abroad, educational philosophers are discussing these matters. Psychologists are carrying on experiments in various directions. The layman is conscious of a restlessness, and groping for something better. Here in India there is appalling need for a scientific approach to problems of curriculum and syllabus. And yet these matters are usually left to prejudice, ignorance and sectarianism. A Bureau of Educational Research which will make thorough study of Curricula, Text-Books, Methods—to mention only three—is an absolute desideratum. When funds are readily available for all kinds of commissions, committees, choultries etc., is it vain to hope that such a Bureau, equipped with an adequate research staff and capable of showing genuine and permanent results, will win for itself the necessary support and encouragement?

Economic Regeneration Of Turkey*

By KARL KLINGHARDT

IN considering the economic situation of post-war Turkey the thing which first of all strikes our mind is its loss of extensive territories and the consequent diminution of population. As the result of the Balkan war in 1912-13 Turkey lost her European provinces up to Adrianople and the World War robbed her of all her Arabian provinces: Syria, Mesopotamia, Palestine, Arabia and Egypt, the last of which paid an annual tribute of 19 million gold Francs to the Sultanate of Constantinople, the suzerain power.

Of course the loss of the provinces inhabited by non-Turkish populations or in which merely a few Turkish officers were posted, is in one sense a great relief to Turkey. If then, keeping equally in view the political and the economic situation of the country, it may be said that political advantages on the one hand and economic disadvantages on the other keep the balance straight, it must be admitted that the loss of provinces signifies a complete change in the economic life inasmuch as a complete reorganization of the trade and commerce in the separated provinces and also in the remaining part is now necessary, even though the economic condition is more or less primitive.

* Abridged translation by Batakrisna Ghosh of the original German article in Deutsche Rundschau April, 1923.

Another point of great interest for this economic reorganization of Turkey lies in the complete change of the situation of the people in the Turkish parent land Anatolia itself. Following the diplomatic arrangements at Lausanne and some migrations, expulsions and flights caused by the war over one and half millions of Greeks and about as many Armenians have left Turkey. Only in Constantinople they are represented in the strength of not quite a quarter million men. Now as the Turkish-Islamic population were inferior in trade and the Armenian and Greek elements were expert in it, even in Asia-Minor the trade and commerce was in their hands including even the very handicrafts, and so the expulsion of this section of the people as the result of the exchange of population according to the treaty was a serious loss to the economic life of New Turkey. The magnitude of this loss will be easily comprehended from the opinion expressed in the European and Levantine circles of Constantinople during the post war years (i.e. in and after 1923) that New Turkey would recall the Christian population which was expelled and alienated by way of exchange in order not to see the trade and commerce and all technical skill destroyed in the country however distasteful it may be to their Nationalism.

And lastly it must be noted in order to rightly characterize the task which the victorious Nationalists saw before them when they finally sheathed their sword in the late summer of 1923 that even during the war of independence disputes had also arisen among the Mohammedan population of Anatolia, Albanian and Circassian free-lances tried to fill upon the Kemalist movement from behind—attempt which ended only with their discomfiture and partial destruction. Finally the Kurdish element (originally about one and a quarter millions in the Turkish territory) rose up in the well-known revolt of early 1927 which likewise miscarried and was quelled after right Asiaty reprisals.

We should also mention here the losses of the eight years of war (1914 to 1922)—the robbers whose numbers were swelled by desperadoes of all sorts. The first work of reconstruction was that the regime of these robbers was put an end to in a few months with unusual dexterity and circumspection.

With the conclusion of the Lausanne Treaty the Mohammedans settled in the Greek territories or in the neighbouring separated provinces began to migrate back into the land. Nearly half a million men came in this way in course of this migration which extended over several years and which from non-Greek regions, e.g. Caucasus, North Persia and Syria, partly lowers even to this day. In spite of the undoubted positive advantage of this migration the task of giving shelter to these fugitives was too difficult for the country which was exhausted and devastated on all sides and the reorganization of which had only just begun. This migration therefore caused many miseries and sacrifices in the mother-land as was the case also with the Greeks. These are the facts which have drawn upon Turkey many unjust criticisms which may be right in some points but are certainly wrong on the whole.

The basic fact in connection with the population, budget and the balance of trade is that Turkey must remain for a long time to come an agrarian state a land which pays for the industrial products

imported into the country from the profits of agriculture, although in view of the possibilities of war there is an effort to make the country independent by means of industrialization at least in respect of the chief articles of food, clothes and equipments of war in case of such a danger. So first and foremost particular care was taken of the peasant population. The lands in the possession of the Greeks particularly in the West and then in the so-called Pontus region (East), and the immovable properties of the Armenians which lay mostly in the cities passed into the hands of parties of Turkish Greek lands were received in exchange for the lands evacuated by the Turks in Macedonia, Western Thrace and in the Greek Islands. With a single stroke of pen the Aschar, and other oppressive taxes were repealed and the farmer was relieved to the utmost degree whereas in pre-war times he was groaning under a great mass of taxes of all sorts. Further steps were taken to supply the peasants and the whole population in general with capital. Societies were established under compulsion as bases for the loans by official and semi-official banks. Depots of modern machines and agricultural implements were established and the state offered very favourable terms for the use of those implements. Implements and seeds were given cost-free to the new-owners. The so-called Muhaddeslers settled in the allotted land or on property which formerly belonged to the Christians or on lands lying fallow since the time of the war.

The ministry of agriculture is doing excellent work within the limits of a modest budget (1927/28) 600 Turkish pounds proposed. Budget of 1927/28—a department which in old Turkey was almost a sleeping institution has magnificent palaces in Constantinople. European experts among whom frequently German specialists are found are giving a scientific turn to it. Young Turkey has endeavoured with patriotic zeal to widen the knowledge and improve the methods of the Turkish farmer in the newly established agricultural schools and experimental institutions. Besides a very successful international agricultural exhibition in the cotton province of Adana (May to August 1924) 12 countries 46 non-Turkish firms exhibited, the model farm of the President of the Republic deserves mention which was established in the year 1925/26 in the region to the west of Angora though there the climate is unfavourable and water-supply insufficient. Among other things 18 German tractors are working there. The number of agricultural machines which is continually increasing in summer 1927 amounted to 1065 tractors and 134 motor or steamploughs. The first agricultural exhibition of Adana was followed by another in Smyrna in the summer of 1927. It was well managed and visited by the people in large numbers. Germany and Poland evinced the greatest interest in it. Moreover an exhibition ship of the Turkish Government the 7000 ton steamer Kara Donuz visited the ports of Europe in the summer of 1926 with Turkish produce.

Private model farms have been set up here and there mostly in the western part of the country also by the non-Turkish population but strictly as Turkish enterprises. These attempts on the whole have been crowned with success. The total area under cultivation is in some places much greater than in pre-war

times. Importation of American flour in the coastal towns have been badly beaten back specially in the Black Sea region. The devastating effect of the war which affected a full one-third portion of Asia Minor, has been for the most part made good since then. Certain retrogressions in trade, in the sphere of cotton for example, experienced even by the planters of Egypt, cannot naturally be avoided by the Turkish cotton producers in Smyrna and in the cotton district of Adana.

A few figures of the still incomplete statistics of Turkey give the following picture of the principal agricultural export products, (for 1926, then value of Turkish pound=230 R. M.).

Tobacco: Export of Smyrna tobacco (about 50 per cent of the production of tobacco) for 31.09 million Turk. pounds.

Laines: Smyrna export (about 90 per cent of the total export) for 1251 millions of Turkish pounds. This figure almost equals the pre-war export.

Opium: The post-war export fluctuates between 5000 and 8000 boxes=330 and 231 t., as against a pre-war production (of the greater Turkey) of 700 t. The Smyrna export in 1926 brought 3053 million Turkish pounds for about 2500 boxes.

Cotton: Smyrna exported 32,000 bales worth 2158 million Turkish pounds. That is about two-fifths of the whole produce, at least two-fifths come from Adana. A record harvest in 1921-25 brought alone there 100,000 bales which however caused a local fall of price and a discouragement of cultivation.

Figs: Smyrna export of 7309 million Turkish pounds, almost equals the total export which in 1927 was calculated at 26,000 t. against the 25,000 t. in round numbers, of the pre-war days.

Tanning Materials: Here too Smyrna is the chief export harbour with an export for 153 million Turkish pounds corresponding to a harvest of 35,000 t. That is only 60 p.c. of the pre-war production. The fall is due to the competition of chemical methods of tanning employed in Europe.

Licorice: Chief export harbour is likewise Smyrna. The export figure for a steady harvest in the last years amounting to 25,000 t. of roots was 319 million Turkish pounds.

Gum: The produce of 1926 with a Smyrna export of 724 t. was bad. The corresponding figure in 1925 amounted to 249 t. and in 1917 to 373. Before the war Anatolia produced 468 t. of the whole produce of (the greater) Turkey amounting to 5490 t.

Olive Oil: The Smyrna region produces only 30 per cent of the whole production, by far the greater part of which is used in the country for the soap factories and for preparation of food. The port of Smyrna exported in 1926 olive oil worth 0 118 million Turkish pounds. The production of this region in 1926 amounted to 17,509 t. In 1927 it was only a quarter of it, 1921 brought a good harvest of 25,000 t.

Haselnuts: Export harbours Kerasunt and Trapezunt on the Black Sea. They supply a large share of the world demand. In 1926 the produce was 15,000 t., in 1925 40,000 t. in 1924 however only 5,990 t.

Barley: For Smyrna the export of barley too

plays an important part. The export figure which amounts to about 96 per cent of the production and goes out as brewing barley, amounted to 176 million Turkish pounds.

Still another export figure is to be mentioned here: 4709 mill. Turkish pounds for

Carpets: It is only a fraction of the carpet figure which is here restricted to the Turkish productions. The valuable export of carpets purchased from Persia goes out by means of the ports on the eastern Black Sea.

Mohair: Of the produces of cattle, besides the wool of sheep and goat's wool "mohair" too is to be mentioned, which, with markedly fluctuating figures, has often held the third place among export wares—after tobacco and carpets. Before the War the export figure was 18 mill. marks. As the result of the ravages of the Greco-Turkish wars the number of cattle sank to one-third of the original number; now it has again risen to two-thirds of the same.

These statistics show that the war losses have been restored for the most part and that without the assistance of the Greek element which was so important for Smyrna production and Smyrna export in the pre-war days.

The programme of transport stands in immediate relation with the programme of agriculture. The land structure in the west with its relatively broad river valleys rising from the Ocean is favourable for transport. From before the war four lines of roads have been here: Smyrna—Egerdir, Smyrna—Aidin, Smyrna—Afium Karahissar and Smyrna—Panderma, altogether 1420 km.; In the remaining portion of Anatolia the Ora-lands (ova=plain), i.e. smaller & larger agricultural areas surrounded on all sides by mountains, are most common, the products of which can be exported only at a freight of 2—300 per cent. The ministry is pushing on public works with wonderful energy, so that in 1926 a great road from Angora to Erzerum via Kaisari was made, exclusively under state management, only particular sections being entrusted to Turkish and foreign firms (non-French, non-English), and Erzerum is connected with Kars and Tiflis by the roads made by the Russians at the time of the War. Similarly the state is constructing the first road across the country, from the Black Sea port Samsun to Ulukysla on Bagdad Road via Amasia—Sivas and to Adana and Mersina on the Mediterranean Sea. Till late in the year 1927 563 km. of this programme of 1706 km. had been constructed. The remaining portion has been entrusted to a Swedish, a Belgian and a German firm. As three other roads will be constructed, namely one from the Adana valley to Diarbekir, and to the copper mines of Arghana Maden, another from Kutahia through the mineral districts to Balikesir—Panderma and finally another from Angora to the inexhaustible coal fields of Samsulidak on the Black Sea, the whole length of this based construction amounts to 1950 km. According to the agreement it will be finished in five years though the payment by instalments shall go on for 10 years.

In these plans also the construction of the harbours of Samsun and Mersina is included—projects which along with the present-day French Syrian harbour of Alexandretta, have been the bone of contention among the European powers and their economic exponents. The construction

of the two parts has been a hindrance to each both technically and financially. However skilfully the Angora government may turn to its profit the hard competition in the world, yet it will make a big hole in the short purse of the government to see even one of the projects carried out within the five years. Moreover the harbour of Samsun must be reconstructed.

Turkish Commercial Navigation experienced a great encouragement by the arrangements of the Lausanne treaty. According to these arrangements the coastal navigation has been reserved for the Turks. For this purpose 30 Turkish companies have been founded the capacity of whose ships in 1927 amounted to 124,000 tons. Among them there are 61 passenger steamers with 40,000 tons and a park of sailing boats of about 2,000 vessels with 30,000 tons. All the companies will not last but the big ones certainly will. The premier company is the Saiti Sefin asked by the state. It is quite modern and is able to compete in the world trade though the freights are higher than those of French and Italian companies and it possesses a park of boats of nearly 30,000 tons.

The state takes the lead also in the general industrialization of the country. It encourages green support and privileges and first of all founds factories on its own initiative. Two great sugar factories (Apollin in Eastern Thrace and Vahik at Smyrna) were established. The factories for building materials (brick, cement, etc.) those for the production of food (mills and breweries) those for soap and perfumes and further the establishments for the packing of the export articles such as grapes, figs, etc. and spinning mills and weaving mills for carpets are being continually founded. Lastly there is the industry for war equipments which besides the army industry of 68 mill. Turkish pounds (1927-28) for 1927-28) occupies 1 to 2 mill in the general budget.

The private banks are more and more taking part in these enterprises particularly in technical establishments in the cities such as electric works and water works. For European companies there are many attractions here but they have to face many disappointments too. Attempts have been made to found mixed companies, i.e. nominally Turkish with the introduction of European capital in the form of machinery. Every time it takes a long time until the Turkish capital is collected so far as it is at all part—and until every kind of assurance has been given to the cautious and suspicious men who place the orders and until they on their part have acquainted themselves with the questions of all the Europeans firms. In this field and in things for which money was taken until the time of the war the impoverished Turkish people is taking its first steps. In pre-war days these things were completely in the hands of the foreigners while the Turks themselves had to remain satisfied with a poor batch.

The greatest problem of Turkey is the problem of capital that is the problem of that capital which is necessary to carry out the projected necessary industrialization and partial industrialization of the country. The scarcity of money of the Angora government is revealed on all sides and for this reason many economists have grave doubts about the future of Turkey. Of course a budget of 195 millions (1927-28) of which the sum

of 50 mill. Turkish pounds goes for war equipments while only 20 mill. are assigned for the innumerable public works to be done and only 2 1/2 mill. could be devoted to the reparation problem, is certainly very modest, especially when 780,000 square kilometres have to be reoccupied. But if in the first years after the war with about this sum the gloomy economic condition of the state could be successfully balanced the present condition must be regarded as a great improvement on the earlier days. Since the beginning of the period of loan (1834) the Ottoman empire had been existing on loan. The debts increased and at the same time more and more sources of income had to be mortgaged to meet these debts. A terrible end would certainly have come. This system of loan and control has been finally broken by the Lausanne treaty. On the other hand among international financiers there is little inclination to grant loans to Turkey at least so long as the question of pre-war debts is not satisfactorily solved. The Hague conference has imposed only 40 p. c. of these debts on Turkey. At the end of July 1927, after endless discussions, at last annuities were settled the first of which with 14 mill. Turkish pounds will be due in June 1928. The full annuity which will go on till 1951, amounts to about 30 mill. Turkish pounds according to the present exchange value. For a budget of 195 millions it is indeed a heavy burden.

As in the national debt department the strict-waistcoat of foreign guardianship has been done away with so also particular concessions, which in general may be regarded as treaties of exploitation have been subjected to new regulations. In a new settlement have to take place after the great National Assembly of Angora gets the right of annulling the pre-war agreements, so far as they have not already been provided for in the Lausanne treaty as for example, has taken place with regard to particular enterprises of the Armstrong Whitworth and Vickers Company.

A well-known object of dispute in this field is the Anatolian and Baidid road. Attempts at settlement have been up to this time always unsuccessful. Whatever that may be, one thing is certain the extraordinary privileges such as of mining within forty km. to the left and the right of the road will never be fully redeemed.

It is understandable that the Turkish Government have injured European capitalists through these financial operations to strengthen the state. When however the Turkish government repeatedly declares that it does not wish to take loan from foreign countries, one is naturally reminded of the story of sour grapes. In any case this shutting up of capital on the one hand and the refusal of capital on the other render it necessary for the state to mobilize the capital in the country. The confidence in the state which was formerly regarded only as a tax-taking organization has not yet been sufficiently well-grounded to raise internal loans in large amounts. The banks on the contrary, those with state assistance and the communal and private ones have arisen in a very promising manner. Immediately after the war the "Agricultural Bank" was founded with 30 mill. Turkish pounds as initial capital with numerous affiliated institutions. In 1926 it could count 27-28 milliards of Turkish pounds. The credit given for agricultural

purposes amounted in the years 1925 to 1927 to 15, 16 and 21 million Turkish pounds. In the "National Credit Bank" the state owns only 46 per cent against considerably stronger majority of shares in the Agricultural Bank. In 1927 this bank united with the "Commercial Bank" (Gösafta-bank) which is more modern and is carried on more energetically though it was originally a private bank. In 1926 another bank was established with 50 per cent state ownership to meet the demand of 300 million Turkish pounds for agricultural purposes. Other new banks in Angora and Constantinople are: "Industrial and Commercial Bank" (est. 1925), "Industrial and Mining Bank" (est. 1926), "Industrial Bank" (est. 1926), "Trade Bank" (est. 1926). The State Bank for Loans gave a loan of 75 millions in 1926. In most cases the initial capital was one or one and a half millions of Turkish pounds. Establishment of banks in the province is a very good sign though the million Turkish pounds is mostly only half a million or one.

The Turkish banks in their wonderful development successfully pursue two aims: beating back the advances of foreign banks and educating the people, particularly in the provinces, in money matters; this signifies mobilization of capital which till now was lying idle. The state agreement with the so-called Ottoman Bank (sent 1863 has been renewed for 10 years in 1925. The Turkish state has not yet been able to replace the monopoly of bank-notes.

The commercial districts of Turkey are those in which Turkey and Europe meet. The transformation of these districts has been wrought from the standpoint of the state: monopolies such as that of the well-known Turkish tobacco are now in the hands of the state. New monopolies are to come and play an important part in the budget, thus tobacco, petroleum and sugar each with 45 (all proposed for the economic year 1927-28). The monopoly is for the most part let on lease and under more favourable terms in private companies. States are noticeable. It was the rule in former Turkey, will be able to exact the full customs duties, in fact, only from the autumn of 1928 when by the treaty, will expire. In the meanwhile attempts were made to form Commercial agreements with the Lausanne treaty which were not connected and Commercial treaties, particularly favourable to with Greece, Bulgaria, Hungary, Poland, Switzerland etc. Of the great powers of the West Germany made the first commercial treaty concluded in October, 1926 and coming in side some remarkable lowerings of certain duties took place. It is evident that the freedom from the clauses of forced commerce of the Lausanne treaty will bring about an important change in

the customs duties in favour of the Turkish government and also a variation in the import and export value between the partner lands. The balance sheet of trade during the last few years gives the following data:

	1923	1924	1925	1926
Turkish Import in				
Mill. Turk-pounds	131.4	190.9	255.6	211.8
" Export " "	78.3	151.7	192.6	212.9

The general prosperity and the mitigation of dulness is clearly perceptible.

14 per cent of Turkish export goes to Germany which amounts to about 0.7 per cent of the whole import of Germany. 11 per cent of Turkish import comes from Germany (16 per cent from England, 18 per cent from Italy) which is about 0.8 per cent of Germany's export. In absolute figures our Turkish export in the year 1926 amounted to 75.4 millions R. M. and the import from Turkey to 51.7 millions.

Germany mostly imports tobacco, fruits, carpets, hide, tanning materials and various minerals while Turkey gets from Germany textiles (16 mill. R. M.), ironwares (16 mill. R. M.), machineries (12 mill. R. M.), chemicals (5 mill. R. M.), toys for children, glasswares, electric machineries etc.

The terrible diminution of population which has been referred to at the beginning, affects the sphere of commerce for the Europeans most painfully. Although in Constantinople perhaps still 60 per cent of the Greek and Armenian businessmen are settled (Constantinople was not included in the exchange of population), the Turkishization of the world there is undergoing a kind of Turkishization as the result of the advance of the Turkish merchant and business element steadily supported by the State. It is self-evident that these new Turkish tradesmen should be inferior to their predecessors. If therefore in joint activities with the Turkish people of all classes with their newly inflamed sense of self-consciousness various difficulties arise in Turko-European trade which were quite unknown in former times, it must be admitted, it is only natural. How sur- 50 per cent of the business personnel must be in Turkish and that the account books must be kept in Turkish and that also the communications with Turkish firms must be carried on in Turkish language! It was the greatest defect and the worst mistake of the Turkish people that for centuries it had left the control of the economic life of the country in the hands of foreigners. Now, in order to repair this monstrous inferiority of the people in knowledge and experience, the whole foreign economic activity has been made subversive to this task of reparation. The Turks who formerly stood aside disinterestedly and who were now taken under compulsion into the management of business.

In Constantinople, the great residence of all the non-Turks of Turkey, which contains about 260,000 non-Turks besides 510,000 Muslims (in pre-war days the number of the non-Turks was a little smaller, the number of the numbered 400 to 500,000), there rages a sea of complaints about the new epoch of Turkey and against the men of Angora—complaints which are just, that the development of New Turkey

grammatical purity, of accomplished scholars. The writings of that extraordinary man, Rammohun Roy, are too well known to require encomium from me. His celebrated petition to the King in behalf of a free press for India; his *Precepts of Jesus*; his *Appeals to the Christian Public*; his *Defence of Hindoo Theism*; *Translations of the Upanishads*, and various other tracts, are works that will immortalize the name of Rammohun; and leave future generations to wonder, that English writings of so much beauty and excellence should be the production, not of a natural-born Briton, but of an enlightened, self-taught, Indian Brahmin" (ii. 385).

It will be seen from the above extract that the Petition to the King against the Press Ordinance of 1823 originated from the pen of Rammohun.* This statement of Rickards thus confirms the general belief prevalent among us on this point.

As Rickards' book is extremely rare and the three letters of Rammohun printed in it have not, to my knowledge, been used by any of Rammohun's biographers, I reproduce them here in order to make more extensively known one of the manifold activities of the Father of Modern India:

My dear Sir,

I have this moment the pleasure of receiving your note of this day. I beg to apologize to you for having kept until this time, the volumes which you very kindly lent me. Interruptions prevented me from completing my perusal of them so soon as I wished; I now return them with my sincere thanks, and if perfectly convenient, you will I hope oblige me by a loan of the third, and by allowing me again a perusal of the second after a month or two. I think it is incumbent upon every man who detests despotism, and abhors bigotry, to defend the character of our illustrious minister, Mr. Canning, and support his administration if possible. I will therefore embrace another opportunity of performing what I consider my duty. In the meantime I remain with sincere regard and esteem,

My dear Sir,

Allow me to return the volume containing the evidence on the state of Ireland, which you so very kindly lent me. It is, I presume, impossible for an uninterested person to peruse it as it is, and not come to a determination to second the cause of Catholic Emancipation; I content myself with an appeal to your humanity and good sense. I regret very much that I, who am heartily anxious to co-operate with you in all religious and secular matters, should be compelled to differ so widely from you in this single but important point. As there is I fear no chance of any change, in our respective opinions on this subject I hasten to conclude this with my fervent wishes for your health and success in all your views and undertakings in India, and remain

Yours very sincerely,
Rammohun Roy

November 23, 1827.

My dear Sir,

I have been with infinite satisfaction given to understand by Col. Watson, that you opposed the emancipation of your Catholic fellow-subjects merely for the sake of argument, probably to know what the other party could advance in support of it. I was however at a loss [to understand] till yesterday that a person like yourself, so liberal in every other point and so kind even to a humble foreigner such as I am, should be unfriendly towards his own countrymen, and should be indifferent about their political degradation under the cloak of religion. I am now relieved from that anxiety, and wishing you with all my heart every success both at home and abroad, I remain

'Sir', protested Nitai warmly, 'I must read the speech as it should be delivered, otherwise how can it be impressive?'

'I haven't got such a powerful voice as you have, nor am I in the habit of addressing public meetings.'

'Very well, I shall lower my voice.'

Whether he read loud or low I had no mind to let Nitai go on and said, 'You need not trouble yourself to go on. What I want to know is, don't you think what you have read is highly seditious?'

'It may be so.'

'Would you make such a speech yourself?'

'I didn't think about myself. I wrote the speech for you.'

'But I have to think for myself.'

'Then you are feeling nervous?'

'I haven't the reputation of being a very courageous man, but that is no reason why I should also be a fool. I am prepared to face a charge of sedition for anything I may say, but I don't want to be run in for repeating something written by another man.'

'Then you will not deliver the speech I have written out?'

'I shall think over the matter, you may leave the papers with me.'

Nitai put down the speech and stamped heavily down the staircase in a temper.

III

The meeting was crowded. As I entered the hall following the volunteers there was an outburst of applause. There was more cheering when I was elected to the chair. I had written out my own speech and committed it to memory. I stumbled through it somehow. There was slight cheering when I resumed my seat but there was no enthusiasm. After the meeting I noticed Nitai standing near the platform and frowning. As I was leaving the meeting one of the leaders told me that my speech was not bad for a first effort and I would become more outspoken as I went on.

The newspapers came out the next morning with different comments. The Indian papers said that nothing bolder could be expected from a man like me. The Anglo-Indian papers were astonished that I had gone over to the disloyal party. I had served the Government with credit and it was ungrateful of me to join their opponents. The language of my speech was highly objectionable even if moderate.

The next day I got a letter from the Private Secretary to the Governor. He wrote:—'My dear Rai Bahadur, kindly come and see me to-morrow morning at 10-30.'

Is it generally known that in writing letters to titled Indians Europeans use only the titles in addressing them, and not their names? The name disappears under the title and the recipients of such letters are quite pleased. If a man is made a Rai Bahadur or a Khan Bahadur is the name given to him by his parents lost? This is not the practice in the case of English titles, for a man who has been knighted is not addressed as Sir Knight in letters. It now occurred to me for the first time that it was improper to address a man merely by his title, omitting his name.

I arrived at the Government House a little before the appointed time. The Private Secretary's Bengali assistant greeted me with an ironic laugh and said, 'Well, Rai Bahadur, have you become a leader of the new party?'

I replied somewhat dryly, 'Is there anything wrong in that?'

'You cannot live in the water and quarrel with a crocodile.'

'Does the water belong to the crocodile?'

A red-coated *chaprasi* came up and said, 'The Saheb has given you his *salams*.'

I went in to the Saheb. He said, 'Good morning, Rai Bahadur. Sit down.'

I took my seat on a chair facing the Saheb. There were some newspapers lying on the table, the Saheb put his finger on a passage in one of the newspapers and asked with a dry smile, 'Is this your speech?'

'Yes, sir.'

'Although not a very bad speech it is not quite loyal. You were an officer of the Government, who have honoured you with a title. It is not right for you to join the disloyal faction.'

I took out the *sanad* of my title from my pocket and placed it on the table in front of the Private Secretary. I said, 'I return the document of my title. I have served the Government long enough; in my old age I shall serve my country.'

The Private Secretary stared at my *sanad* for a minute and then said angrily, 'The Government rewards deserving persons, but it also punishes offenders.'

I quickly retorted, 'I am prepared for punishment.' Saying this I rose and walked out of the room.

Neither Fish nor Flesh

By NAGENDRANATH GUPTA

I

A pension and a pinjrapole (an asylum for old cattle and horses) are virtually the same thing, the only difference being that the first is intended for the benefit of bipeds while the second is for quadrupeds. All old animals do not find their way to the pinjrapole, nor do all old men get a pension. In this respect I am fortunate for I get a pension every month on the production of a certificate that I am still alive, but I felt that the deduction of income tax from my pension was a great hardship.

This was my first grievance against the Government, but it is as unwise for an old pensioner to rush into high politics as for an old animal to frisk about and butt against other animals in a pinjrapole. As the joints become gouty and rheumatic in old age so the mind also becomes stiff and rheumatic with advancing age. I would have been wise to have borne this fact in mind.

Before my retirement on pension the title of Rai Bahadur had been conferred upon me. A friend had explained to me that the title of Rai Bahadur was as good as Raja Bahadur for Rai meant Raja. I put up my name with my new title on a board and suspended it in front of my house. Whenever I entered or left the house my eyes rested on the name and title—Rai Bholanath Mitra Bahadur, and it also caught the eyes of passers-by. I knew a man who had been made a Rai Bahadur, and who was very much offended if any one failed to call him Rai Bahadur. I was not so particular but I certainly felt pleased when any one addressed me as Rai Bahadur.

No one ever knew when the country was flooded by an agitation with a long name. With the help of a dictionary one can make out what Non-co-operation means, but the difficult problem was who was to co-operate with whom. If we decline to co-operate with the Government all Government appointments must be given up and even the acceptance of pensions

becomes doubtful. Tenants may refuse to pay their dues to landowners, and eventually the barber and the washerman may refuse to co-operate with their customers. Why, if matters come to a head the mistress of my house and the mother of my children may turn round upon me and declare that she will not co-operate with me. What would become of me if she were to throw down her keys and ask me to look after the affairs of my household?

Some Rai Bahadurs returned their *sanads*, others returned the medals and decorations they had received. The board hung up at my entrance door began to attract unpleasant attention. My sitting-room was just over the street and I could see people passing and hear their remarks.

The remarks of the boys and young men in particular were very annoying. A glance at my board would set them talking somewhat in this fashion:

'Hullo, here is another Rai Bahadur!'

These are the flatterers of the Government.'

'They are branded on the back like artillery horses.'

'Bells are hung round the necks of cows, but here's a bell round the neck of a name.'

After listening to remarks of this nature for some days I took down the board with my name and title one evening and put it away in the lumber room.

II

An army on a battle field acknowledges defeat by hauling down its colours and hoisting a white flag. My battle-flag was the board with my title on it, and the base white wall became my white flag. Non-co-operation won the battle and I lost it.

The process, however, was reversed when it came to suing for peace. Usually, the party defeated sends messengers to seek peace, but the order was different in my case. I kept quiet in my room while messengers began coming in from the victorious party. Some were timid messengers, others were loud-spoken while still others

'Sir', protested Nitai warmly, 'I must read the speech as it should be delivered, otherwise how can it be impressive?'

'I haven't got such a powerful voice as you have, nor am I in the habit of addressing public meetings.'

'Very well, I shall lower my voice.'

Whether he read loud or low I had no mind to let Nitai go on and said, 'You need not trouble yourself to go on. What I want to know is, don't you think what you have read is highly seditious?'

'It may be so.'

'Would you make such a speech yourself?'

'I didn't think about myself. I wrote the speech for you.'

'But I have to think for myself.'

'Then you are feeling nervous?'

'I haven't the reputation of being a very courageous man, but that is no reason why I should also be a fool. I am prepared to face a charge of sedition for anything I may say, but I don't want to be run in for repeating something written by another man.'

'Then you will not deliver the speech I have written out?'

'I shall think over the matter, you may leave the papers with me.'

Nitai put down the speech and stamped heavily down the staircase in a temper.

The next day I got a letter from the Private Secretary to the Governor. He wrote:—'My dear Rai Bahadur, kindly come and see me to-morrow morning at 10-30.'

Is it generally known that in writing letters to titled Indians Europeans use only the titles in addressing them, and not their names? The name disappears under the title and the recipients of such letters are quite pleased. If a man is made a Rai Bahadur or a Khan Bahadur is the name given to him by his parents lost? This is not the practice in the case of English titles, for a man who has been knighted is not addressed as Sir Knight in letters. It now occurred to me for the first time that it was improper to address a man merely by his title, omitting his name.

I arrived at the Government House a little before the appointed time. The Private Secretary's Bengali assistant greeted me with an ironic laugh and said, 'Well, Rai Bahadur, have you become a leader of the new party?'

I replied somewhat dryly, 'Is there anything wrong in that?'

'You cannot live in the water and quarrel with a crocodile.'

'Does the water belong to the crocodile?'

A red-coated *chaprasi* came up and said, 'The Sahib has given you his *salams*.'

I went in to the Sahib. He said, 'Good morning, Rai Bahadur. Sit down.'

I took my seat on a chair facing the Sahib. There were some newspapers lying on the table, the Sahib put his finger on a passage in one of the newspapers and asked with a dry smile, 'Is this your speech?'

'Yes, sir.'

'Although not a very bad speech it is not quite loyal. You were an officer of the Government, who have honoured you with a title. It is not right for you to join the disloyal faction.'

I took out the *sanad* of my title from my pocket and placed it on the table in front of the Private Secretary. I said, 'I return the document of my title. I have served the Government long enough; in my old age I shall serve my country.'

The Private Secretary stared at my *sanad* for a minute and then said angrily, 'The Government rewards deserving persons, but it also punishes offenders.'

I quickly retorted, 'I am prepared for punishment.' Saying this I rose and walked out of the room.

'Is that any reason why I should not think of my country?'

'Let others think about it, what have you or I to do with it?'

While we were talking Mr. Chaudhuri came in. He was a Deputy Magistrate. Haraprasad introduced me to him. Mr. Chaudhuri shook me vigorously by the hand and loudly said, 'O ho! we have heard a great deal about you. You are one of the new leaders.'

'That's all hosh. Far from being a leader I have been turned out of the party almost before I had joined it.'

'Bravo! That's right. It is best for you to stick to your own old party.'

I kept back one or two little facts. I made no mention of my visit to the Private Secretary and of the return of the *sanad* of my Rai Bahadurship.

In the evening Haraprasad took me to his club. Some of the members were playing bridge. They chaffed me for some time but all the members were eventually satisfied that the reports about me were exaggerated and I was not an enemy of the Government.

After a couple of days Haraprasad told me that he had invited the Mullicks to dinner that evening.

'Who are the Mullicks?' I asked.

'He is a barrister. He is well off and is doing well in the profession. He has an English wife and both of them will come to dinner.'

'Did Mullick marry in England?'

'Well, no. She was a governess in an English family in this country and Mullick has married her lately. You will have to put on a coat and a pair of trousers this evening.'

'Why, what's wrong with the *dhoti*?'

'You see, Mrs. Mullick is after all an English woman. It doesn't look nice to sit at table with her in a *dhoti*.'

I became very indignant and said, 'Our fathers and grandfathers always wore the *dhoti*, and now it is to be looked upon as an indecent article of dress because you are having an Englishwoman as a guest. She is only a governess but if it were the Governor with his wife I would refuse to wear anything but my *dhoti* in any house in which I may happen to be staying.'

Haraprasad was in a quandary. He said, 'You are hopelessly old-fashioned. If you don't take off your *dhoti* how can you sit at table with them?'

'I don't care to sit with them at table nor do I care to meet your governess. I will have dinner in another room and I don't want your English dinner. I will take the food cooked by the Brahmin.'

I did not have an English dinner that night nor did I meet the Mullicks. The next day I returned home.

I never tried again to play the role of a patriot.

Rabindranath Tagore's Address to the Sikh Community in Canada*

I want to tell you what a very deep pleasure it has given me to meet you, my fellow-countrymen, who represent the Khalsa Diwan Society (The Sikh Community), both of Victoria and Vancouver, and indeed of the whole of British Columbia. My sorrow was very great indeed when I became so unwell after my lecture on

* Reported roughly from memory by C. F. Andrews.

Saturday night, that it was quite impossible for me to fulfil my engagement and come over to Victoria in order to be present at your annual festival on the Birthday of Guru Govind and on Baisakhi Day. You will know how eager I was not to disappoint you. But God's Providence ordered it otherwise and it was not in my power to make the journey to and fro without a serious breakdown in health which I was unable to risk at

to learn how to unite the two ideals of Canada and India, and I am sure you will do it.

You must keep the spirit of your religion and not merely the letter of it. It is the moral value of your religious faith that is unchanging. Its outward observances may be modified in order to meet the new conditions of Canadian life, but on the other hand there should be no change in the great moral injunctions which Guru Nanak and all the Sikh Gurus gave you. If you can thus fulfil the spirit of your religion you will be able to unite India and Canada together in your own lives and in the lives of your children. The best Canadians will understand you and will also respect your religion and thus there will be a growth in international friendship and goodwill.

I thank you with all my heart for the affection you have shown me and the love you have given me.

[Address presented to the poet Rabindranath Tagore by the Sikhs in Canada.]

April 15, 1929

Reverend Gurudev Ji :

We the representatives of the Khalsa Diwan Society have been asked to present to you on behalf of the Sikh community this slight token of our gratitude to you for the wonderful affection you have shown us by crossing the Pacific Ocean and enduring the storms at your very advanced age and in your enfeebled state of health in order to bring a message to Canada from our motherland and also to help us who are residents here and give us your encouragement and spiritual advice. We deeply regret that your ill health prevented you from being present in person at our festival at Victoria but we understand how difficult it has become for you to make incessant journeys in all kinds of weather and we would spare you as much as we can.

We thank you for sending over to us your representative Binalandhu Andrews who has conveyed your kindly message to us. We assure you that we shall take to heart the words of advice which he has brought us from you and that we shall do our utmost to prove ourselves worthy citizens of this land of Canada wherein we live, as well as India, the motherland from whence we have come. We would ask you to put our humble gift to any purpose in your own work in India which you yourself may choose.

We remain,
Your devoted admirers]

Educational Opportunities For Indians in German Universities

By DR. TARAKNATH DAS, Ph. D.

IT is a well-known fact that Germany's contribution to the fund of world-culture is immense. It may be claimed that modern Germany has done more for the cultural progress of the world than any other country. The Germanic people have themselves done marvellous things in fine arts, music, pure and applied science, literature, history, politics, economics, philosophy, medicine and other fields of human endeavour. German thought, German educational methods and institutions have influenced other nations, which have also contributed considerably towards modern civilization.

Dr. Schürmann, the present American Ambassador to Germany and formerly President of Cornell University, in a recent speech delivered before the students of Berlin

University, made it clear that, although at the present time great American universities can hold their own in Law, Medicine, Science and Engineering, yet it must not be forgotten that the very idea of the modern university with post-graduate studies and research facilities as exists in America to-day is derived from German cultural influence in America. According to President Thwing of Western Reserve University, the author of the interesting book *The American and German University: One Hundred Years of History*, more than ten thousand American scholars carried on their higher studies (specialization) in German universities; and they in turn have done considerably to mould the academic life of America.

No less an authority than the late Lord

scholars studying in German universities. The British Government is far too clever to oppose openly Indian students going to Germany; but it is a fact that a Ph. D. from a German or an American University does not receive the same recognition from the Government of India as an Indian

Deutsches Museum, Munich

graduate from a British University. The first difficulty—ignorance of the German language among Indian university students—is due to a defect of the Indian educational system. This can be remedied by adopting such measures that there may be adequate facilities and inducements for studying German as a second language in Indian higher educational institutions. The second difficulty can be overcome by the spirit of self-help among

The Opera House of Munich

Indians. Those Indians who are not anxious to be dependent upon government positions, but wish to achieve recognition, through their work and achievement, will ignore the discriminatory attitude of the Government of India and come to German and foreign

The Technical College, Munich

universities to acquire the best education possible.

The educational standard of German universities is higher than that of America. In fact, a graduate of a German gymnasium (higher school) can be favourably compared with an American student who has studied

The State Library of Munich

for two years in an American University. Thus it is safe to say that no Indian student who has not creditably passed the Intermediate Examination of an Indian university will be able to follow his studies in German universities. To secure a regular degree of Ph. D. a student must matriculate and fulfil certain requirements. These requirements vary according to the standing of students. An American university graduate is unconditionally allowed to attend a German university for a higher degree; and it seems a graduate from Indian universities will not have any special difficulty in securing regular standing in German universities. In my opinion that until the standard of

17. Leipzig (1409), 18. Marburg (1527), 19. München (Munich) (1472), 20. Münster (1780), 21. Rostock (1410), 22. Tübingen (1177), 23. Würzburg (1582)

There are Technical colleges at 1. Aachen, 2. Berlin, 3. Breslau, 4. Braunschweig, 5. Lausitz, 6. Dresden, 7. Hanover, 8. Karlsruhe, 9. Munich, 10. Stuttgart. Special Agricultural colleges are situated at 1. Berlin, 2. Bonn-Poppelsdorf, 3. Hohenheim (near

their work, I may say that prospective Indian scholars to German universities and colleges can secure all the necessary information from any of the agencies mentioned below. I am herewith giving the addresses of the information bureaus for foreign students connected with various German universities and Technical institutions:

1. Akademische Ankunftsamt. Berlin C 2, Universität.
2. Akademische Auslandsstelle Lennestrasse 26 Bonn, Germany.
3. Akademische Auslandsstelle, 2 Kurfürstenallee 15 Charlottenburg, Germany.
4. Akademische Auslandsstelle, Bismarckplatz 18, Dresden A. 24.
5. Akademische Auslandsstelle, Mertonstrasse 17, Frankfurt/Main.
6. Akademische Auslandsstelle, Neue Rabenstrasse 13, Hamburg 36.
7. Akademische Auslandsstelle, Marstallhof 5, Heidelberg.
8. Akademische Auslandsstelle, Universitätsamt, Jena.

The City Hall, Munich

Stuttgart) Weihenstephan (near Munich). In Berlin and Hanover there are special Veterinary colleges. Schools of Forestry are situated in 1. Eberswalde (near Berlin), 2. Hanoysch-Münden (near Cassel), 3. Tharandt (near Dresden). Schools of Mining are at 1. Clausthal (Harz), 2. Freiberg (near Dresden). There are colleges of Commerce in 1. Berlin, 2. Königsberg, Pr., 3. Leipzig, 4. Mannheim and 5. Nürnberg.

Since the conclusion of the World War, the German people have redoubled their efforts in spite of the most difficult situation to recover their position of a great nation in the field of world-culture, and thus they are anxious to welcome foreign scholars in their midst. I may say with confidence that nowhere in the world can an Indian student find a warmer welcome than in a German academic circle and institution of higher education. To help the foreign students in German universities and colleges there are academic agencies, in all important German educational centres, which render all forms of assistance. From my personal acquaintance with the authorities of the *Deutsche Akademische Auslandsstelle of Munich* especially Dr. Fritz Beck and Miss Helene Eichner and

Prof. Dr. Oswald Dunkel
Rector of the University of Munich

9. Akademische Auslandsstelle, Fassanenschloss-allee, Karlsruhe.
10. Akademische Auslandsstelle, Claudiusstrasse, Cologne/Rhein.

history, woman of any period enjoyed a better position in society than her European sister at any time before mid-Victorian era." Thus from the very earliest times the Hindu wife held property—dowry, presents and ante-nuptial property—in her own exclusive name and had absolute control and disposing power over it. Even to this day in some respects, at least in form, Indian woman's position is superior to that of her European sister. Thus unlike the Christian ceremony of marriage, the Hindu marriage rites do not require the wife to pledge obedience to the husband. There are clear injunctions of all Hindu Law-givers that in the home woman's position is superior to that of man and that only those families will prosper where they are honoured, adored, worshipped and are kept happy while that family quickly perishes where they grieve.

The present position of women as compared with that of the western women is as bad as that of Indian men as compared with Western men. But undoubtedly from about 500 B. C. there has been slow change in the status of women *vis à vis* the man. From that time onwards there has been perceptible a narrowness as regards the freedom and restriction as regards the rights of women *quæ* the man.

Competent historians and ethnologists give many reasons for this backward tide in the woman's status. They are mostly ascribed to the Muhammadan invasions, the unsettled condition and subjection of the country from that time onwards. The Muhammadan invaders used to carry away unmarried girls but their religion prohibited capturing married women whatever their age. On account of continuous wars and economic dislocation the woman became more and more dependent on man and his position *quæ* the woman improved.

With the end of wars, the restoration of peace (whatever it may be worth) and the general sprinkling of education there is a strong movement initiated by Hindu reformers to restore to the women the position which is her due. True this reforming movement is greatly retarded by Government and conservative opposition, mass illiteracy, economic and political degeneracy, but in spite of all these handicaps the movement is gaining strength every day. The formation of strong public opinion and spasmodic legislative measures have considerably raised the position of women, but much still remains to be done.

The Hindu Law has never been a static Code, it has always been dynamic, adapting itself to changing circumstances. It is meet and proper that it adapt itself to the present circumstances. It is from this point of view that I venture to suggest the following proposals for the reform of the marriage laws.

MARRIAGE BY VOLITION OF THE BRIDE

Under the Christian marriage rules, the bride is given away in marriage. At the present day this is a mere formality, the parents having nothing or very little to do with the actual choice of a husband; the marriage being purely the free volition of the bride. The mere idea and the mere form, however, conveys the idea of something inferior, something akin to a chattel, which is given away by someone who has, may be in pure fiction or mere form, the dominance over the thing given. The idea and the form itself is repugnant to the idea of two persons joining freely and of their own act in wedlock.

According to the Anglo-Hindu Law, as at present administered, marriage is brought about by their parents and the children themselves exercise no volition.

According to a decided case * betrothal and marriage is a contract made by the parents and the children exercise no volition, and there is no implied condition that the fulfilment of the contract must depend upon the willingness of the girl at the time of marriage. If the father has once betrothed his daughter in her infancy the prospective bridegroom can force the father either to marry the girl to him within a certain time, even if the girl be unwilling or wants a mere postponement of marriage by two years in order to prosecute her studies further. If the father does not want to be so cruel as to force his daughter, he must pay damages.

In ancient India, (a) some love-making on the part of boys and girls before marriage was always pre-supposed; the parties to marriage were grown up persons competent to woo and be wooed, qualified to give consent and make choice; (b) the bridegroom was supposed to have a home where his wife could be mistress..... and (c) the object of marriage was mutual happiness...†

INDIAN Womanhood

SHANTA NASHIKKAR B.A. is a graduate of the Bombay University. She was a child-widow and remarried last year. A popular story-writer, she has written a novel "Lagnacha Bazar" for the famous *Mahila-nyaya-Granthamala* which is conducted by Mr. Vasant Marathe Managing Editor of the *Grihalarmi*—the most popular high class magazine of Bombay, to which

she is a frequent contributor and by whose courtesy the illustrations in this section are reproduced

DR. INDUMATI SENJIT M.B.B.S. She received this year her final degree in Medicine from the Grant Medical College of Bombay, and has now been appointed House Surgeon in the Lahore Civil Hospital

Shanta Nashikkar B.A.

Dr. Indumati Senjit, M.B.B.S.

Now, please get in. Whatever are you doing? The train has started!"

Dhiren could not resist the temptation of showing off a bit. He went on talking to her holding on to the door of the moving train. When at last the train was about to pass out of the platform, he sprang into the compartment and began to wave to them. Shiveswar and Mukti waved back, then left the platform.

(26)

Three days later, Mukti was again on the platform of the Howrah station. This time it was to see her father off. He was going to Delhi.

After the train had steamed off, Mukti drove to the school hostel, straight away. She had sent on her things before, and therefore had no necessity to return to the deserted and gloomy house.

Mokshada, too, reached her village home, safe and sound. It was nearly three years, since she had been there, and her relatives welcomed her with an effusion that nearly suffocated her. This village was her father's home and the next village happened to be the home of her father-in-law. So she did not lack friends and relatives. The same railway station served for both the villages, which were separated only by a wide stretch of green field. Mokshada's father's village was called Shubpur, while that of her father-in-law was known as Uparpara. Country people are not fond of marrying their children to their neighbours generally, because both families know too much about each other. But as Mokshada was reckoned a great beauty in her days, this objection was passed over and she was betrothed at the early age of four.

The old village temple and the tank adjoining stood on the boundary line of the two villages. There were other tanks in the village, but none so beautiful. There were big gardens too, now run to jungle. A real jungle too, with towering *shal* trees, could be seen at a distance, while a chain of blue hills showed faintly on the horizon, far far away. A mile or so, to the right of Shubpur, ran a silver stream of water, with wide stretches of sand on both sides. It was named Rupeshwari, called *Rupai*, in short. The village people took their drinking water from this stream. The village maidens came every evening, with their brass pitchers, and carried away the water. Their anklets

tinkled, the water within the pitchers splashed and the sound of their sweet voices talking, filled the evening with music. The cowherds returned home through the fields, with their cattle and the village children played and shouted.

The village was beautiful, like a picture. But unfortunately its inhabitants were not what one would have expected them to be. Though it was Mokshada's native home, and she had returned to it, after a long while, she did not feel unalloyed pleasure at the company of her friends and relatives.

She had put up at her father's house, as her father-in-law's house was shut up. She had thought of going there once, to pay her respects to the old dignified building and to arrange about some necessary repairs. She had arrived late at night, and so had met very few people. Dhiren saw her to her house, then went off to his own. But the news of their arrival spread with the morning and everybody rushed to give the new arrivals a fitting welcome. Amongst the ladies gathered to greet Mokshada, old women and babies vied with each other in eagerness. A few boys, too, had mixed with them to get a share of the fun. Everyone had dressed up hurriedly, as Mokshada was the mother of a very rich son, and accustomed to fine things. The results had been deplorable in most cases, of which the persons concerned, were happily in ignorance.

As the welcoming crowd broke into the house, Mokshada came out of her room to greet them.

"Why didn't you bring your granddaughter too?" asked one of the fair crowd. "We would have liked very much to see her."

Mohini, a friend of Mokshada's girlhood days, put in, "I say, Mokshada dear, where did you give the girl in marriage? You did not condescend to remember us."

A young woman pushed her way through and asked eagerly, "The bridegroom is very good looking, is not he?"

The first old lady asked again, "How many children has your grand-daughter got?"

They never waited for any answer, being content with the sound of their own voices. Mohini asked again, "Is not Shiveswar ever going to take another wife?"

Mokshada found herself in a maze, she did not know how to get out of it. Somehow she managed to make herself heard.

After some more words, pleasant and otherwise, the ladies graciously departed. Mokshada was quite fed up. She wanted to run away from these terrible people. She was feeling furious with her son too. She could not blame the women. Mukti was really past the marriageable age, and they had a right to talk.

As days went on, she grew more and more troubled in mind. Village people are not famous for good manners and they did not spare Mokshada. Speeches, open and covert, hints and insinuations began to fill the old lady's ears. She heard many things about her family, which she had never dreamt of. She felt more and more clearly that her visit here had been a terrible mistake. She was so enraged and humiliated that she did not know what to do. She wanted to drag Mukti here, by her hair, and give her in marriage to the first man she saw.

Mokshada had two brothers. The elder was dead, the younger one did not live in the village. Her cousin Shyamkishor was the head of the house. He noticed Mokshada's plight and advised her, "Mokshada, get your grand-daughter married as soon as possible. We have the family prestige to keep up."

Mokshada wanted nothing better. But how to manage it? "Until my son comes back," she said, "how can I give his daughter in marriage?"

"Does your son object to having the girl married?" Shyamkishor asked.

"No, I don't think he has any objection," said Mokshada.

Shyamkishor felt encouraged. "Then I don't see what prevents you from arranging a match", he said. "If he does not object, why does not he himself settle about it?"

Mokshada sighed deeply. "You don't know my son, cousin," she said, "He is an amazing fellow. He does not care about these things at all. But he has got the devil's own obstinacy too. Nobody can act contrary to his wishes."

Shyamkishor laughed derisively. "You are a woman, after all", he said. "Your son is stupid, nothing more or less. Since he fails in his duty, you must act for him. I shall help you. If I, Shyamkishor Bannerjee, settle anything, your son would not dare to object. Leave everything to me. By the

way, is there any person your son prefers?" Mokshada hesitated. Then, "I am not quite sure," she said. "But you know Dhiren, son of Nilambar? My son said once that such a boy was a treasure to any man."

Shyamkishor nearly jumped with excitement. "Good Lord!" he cried, "You are really good for nothing. Since he had said it in so many words, what prevented you from grabbing the boy then and there? Nilambar's son Habla, you mean? I suppose he is called Dhiren now? Your son does not lack money. Give me five thousand and I shall bring over the boy this evening, dressed as a bridegroom."

Mokshada smiled a bit proudly. "I can do that too, cousin," she said. "And even without the five thousand. The boy holds me in high esteem. If I ask him, he will marry Mukti the next moment. But as my son is absent, I did not like to arrange anything."

"What if he is?" said Shyamkishor excitedly. "He is not returning within a year, isn't that so? But you cannot wait that long. We have to think of our prestige. Since the bridegroom is ready, let's celebrate the marriage. Write a letter to Shiveswar. That chap Dhiren is a good catch. If you don't grab him in time, somebody else will."

Mokshada became nervous. "No cousin," she said, "I cannot take so much responsibility upon myself. My son will be frightfully angry."

"Get away," cried Shyamkishor with contempt. "Afraid of your own son! What a woman you are!"

Mokshada remained silent. "All right," said Shyamkishor. "Let's think it over, for a day or two." He went away to the outer apartments.

The village people went on discussing Mukti to their heart's content. Hints and insinuations poured in unceasing streams. Old Shyamkishor, too, came in for a good deal of attention. He was the head of the house, and any sin of omission and commission reflected discredit upon him. Whispers of social ostracism, the most dread punishment social law could inflict, began to float in the air.

To America*

By V. V. OAK

Planning the journey to America, sufficient time should be given for at least a month's stay in Japan. The hope of India lies in many ways in imitating Japan. It is, therefore, worth while to study these industrious people. The beautiful mountain scenery, the attractive gardens, the pretty women with their Japanese dress and their cheerful smile, the busy streets, the social intermingling of the two sexes, the dignified yet courteous Japanese labourers, the *Jinrikshaws*—small carts drawn by human beings, the Buddhist temples, and above all, the general courtesy shown by the Japanese to foreigners which makes him "feel at home", all these things will help us to broaden our outlook and make us realize that the world is bigger than the length and breadth of our own country. After visiting the important cities like Kobe, Yokohama, Tokyo, and some small towns and villages, one might be able to get a fair idea of the hard-working Japanese and also understand the reasons why Japan has become the only powerful nation in the East. One intending to visit Japan would do well to take a Japanese steamer because by so doing he discovers a good deal of the Japanese customs and manners. All officers and servants on the steamers are Japanese. Besides, there are many Japanese travellers. The treatment to passengers is very courteous and contagiously healthy.

If one intends to attend a University on the Pacific coast, the shortest route for him is, of course, the Pacific route *via* Japan. However, there is a great advantage in taking this route even by those who intend to study in Universities located near the Atlantic coast. Japan, the land of the rising sun, is a miniature America in many ways. As the student-traveller passes Japan and reaches Hawaii, with its American civilization, he begins to learn more of American customs and manners so that by the time he reaches the shores of the Pacific coast he is fairly

well-acquainted with the American ways of doing things. A couple of months' stay on this side of the coast is enough to Americanize him with the help of our students already staying here.

February is the best time to start. This would take one to Japan just after the severe winter weather is over. After staying for two or three months, one might reach America by June. As almost all the Universities in the U. S. A. do not begin their regular term-work before the middle of August, there is plenty of time for the novice to acclimatize himself to the new social order. He may then join the University he has selected. He can profit more by his travel through Europe on his return journey than he would if he visits it before his stay in America. This country, being a mixture of so many races, gives one a chance of meeting all types of people. This westernization will naturally enable him to become an intelligent critic of Europe and her people rather than a "gaping admirer" of the life in Paris and London.

The best way to return to India *via* Europe would be to visit England and see not only the city of London but also the condition of the masses and the people living in suburbs and villages. From thence, one might go to Paris, Berlin, Genoa, Naples, Egypt, and finally to India.

After all is said, I must say that a student in choosing the route should be aided by his own judgment, the amount of time and money he has, and his intensity of desire to learn new things.

Students contemplating going to the United States or Canada to continue their studies cannot do better than consult an American travel agency, such as the American Express Company, about all their problems. Contrary to the usual opinion, the services of such agencies cost nothing, as they are allowed commissions by the steamship line and others whom they represent. Another advantage is that as they represent all lines, they are in a position to give the best and most impartial advice.

* Practical suggestions for travellers and students intending to visit the United States or India.

That means titanic activity. Activity is needed not only for the enrichment of the national exchequer, but also for the inner enrichment of the individual. We do not want money for money's sake, but for the higher purpose of national prosperity and mental freedom and growth.

"What kind of economic system should we build up?" Unhesitatingly the writer votes for large-scale industrialism with its recent developments like rationalization of industries for the logic of events compels. The problem of exploitation of the mass by the class does not trouble him as the question of distribution is, according to him, approaching solution. Mechanization would mean no greater mechanization of man than that he suffered in former ages when too most artisans worked mechanically and very few rose to the level of art. On the contrary,

If the heart is being starved to a certain extent in modern industrialism, it is being fed almost to satiety by the sense of power. The modern worker is an extremely efficient being, fully alive to and exulting in his inherent capabilities. This consciousness of himself as a dynamo of power and control of huge mechanical forces makes great compensation to the heart. No doubt it lacks variety and extent made up for in quantity. The fact is, this apparent man. He no longer seeks satisfaction in the consciousness of a puny, isolated individuality, however unique, but as a unit of a vast collective being, glorying in the collective glory and sharing in and influencing its life. This brings a great satisfaction to the heart.

The attainments of their leisure hours often make up for the loss of variety. The pursuit of hobbies has become a common practice with many. Those works of love offer outlets to individual peculiarities. Various types of public heart's desires. The medieval men lacked the sense of power in their work, though some of them found their heart's satisfaction in their skill; and joys of life were certainly limited and uniform.

The writer then takes stock of the unsavoury present-day tendencies and their implications, and bravely drives on to the conclusion:

We have to clearly understand the tendencies of modern industrialism before we can find out how to spiritualize it. Modern conditions, especially the economic conditions, are remoulding collective life on a new basis. If formerly family was the economic unit, now it is the individual. It is true that this description is more true of the West than of India at the present time. But there is no doubt that the same conditions are going to prevail also in India more or less, sooner or later. Signs are already patent. The joint-family system is rapidly disintegrating. And men and women, boys and girls are learning to think of their duties more in reference to a wider existence than the family. Conjugal relations are no longer the same as before.

In fact, industrialism which is the key-note of modern socio-economic developments in the West, in spite of some contrary forces, is also rapidly being accepted as the gospel in India. It is useless to seek to escape this. Swami Vivekananda said: "The society is for the individual, not individual for society." Strangely enough, individualism itself is generating the idea of a far vaster collective life than communalism ever did. Now individuals are learning to consider themselves first as members of nation or humanity and secondly as members of families. This change of outlook has meant change in various departments of life. Children do not consider that their first duties are to their parents. In the name of country or humanity, they easily overlook their parents. Wives are no longer satisfied with performing their duties by their husbands alone. They hear the call of duties also in the wider life of society and country. On the other hand, if the father is no longer the lord of all the family members, he is also no longer responsible for the entire well-being of them. The state must take up many of those responsibilities which formerly rested on the head of the family. The state has to look after the health and education of children. The state must provide for their living. The state must also provide for the old age.

In short, all the activities and functions of the community are now being slowly organized on a nation-wide basis, and as a result, the functions of family are being lost one by one. A family may be considered to have seven functions: affectional, economic, educational, protective, recreational, family status and religious. Almost all these functions are being slowly usurped by larger bodies...

This disintegration of the family is only a sign of a new integration. The individuals are being organized on a new basis. How does the individual fare in the change? It must be admitted that this revolutionary change has not always proved happy to the morals of men and women. But that is, perhaps, mostly due to the exigencies of the transition. For the new conception is not at least in so far as its possibilities are, concerned, nations or humanity and not in those of terms of or community as they used to do before. There is a growing sense of responsibility for much larger groups of men than the family. This widening of consciousness cannot but be spiritually uplifting. We must repeat here that the changes we have alluded to above are more real in the West where alone modern industrialism is fully active. It is true that the conditions described are not so true of India. But let us say again that a part at least of these changes will also be felt in India. Anyhow in judging the nature and take it as it is operative in the West, and in the West the modern men and women are feeling themselves more and more as units of the larger community of the human race. The feeling is yet incompletely expressed and distorted in its expression through the murky atmosphere of their yet unprepared mind. But the impulse, whatever its expression at the present time, is towards a universal sweep, comprehending the entire human race. If this tendency can be transmuted into a

the right type commercial bill of exchange. This development of the two-named trade paper in America at the expense of the promissory note has benefited both the banks and the business community. And all this progress in this line has been achieved in America during the dozen years which have elapsed since 1915 when the regulation was issued distinguishing the trade acceptance and giving it special privileges (Reed 110-115).

Sir Jehangir does not find any cause of despair as far as our enterprise in Joint Stock Banking is concerned:

It is a matter of congratulation to note that in point of talents, personality and ability several of the managers of the Indian Joint Stock banks have distinguished themselves. In the period of less than a quarter of a century at least three men of outstanding ability have stood out in the history of Indian Joint Stock Banking. Generally speaking as regards personal integrity too, our system has held its own. The disasters which the system has witnessed are due mainly to want of specialization and to the insufficient capital and resources of most of the newly started banks. However, some of our leading Joint Stock Banks are slowly but surely training up a class of specialized bankers and thus in time we shall overcome the danger of amateur banking in India (Banker's Magazine, August, 1925). As regards the other phase of banking specialization the rigid separation of banking from any other kind of business or trading much has been learned from the earlier crisis but there is still much room for improvement through legislation. So also, experience and legislation must co-operate in securing in the case of each new bank adequate resources at the start and their subsequent conservation as well as the building up of the necessary reserves.

As regards the clientele of the banks there seems little reason to complain and our banks can scarcely complain of the support given to them so generously by the depositing public from their very start. It is true that some bankers complain of the undue secretiveness of the clients as regards their financial position. But those who advance this line of criticism underrate the efforts made by English or American banks in order to secure information about the standing of their clients—efforts which are impossible in India owing to the small size and limited resources of most of our banks. It is well known that American banks maintain large and well-equipped departments for ascertaining the credit position of clients. These are supplemented by the regulations of the Federal Reserve Board which necessitate the development of the use of credit statements. In case of rediscounting increasing resort is had to credit statement of parties to bills and trade acceptances. It will be necessary in future for our banks to develop such an information department gradually and also to co-operate with each other in the matter and to exchange information.

On the much-debated question of State Bank vs. Shareholders' Bank the opinion of Sir J. C. Coyajee is fairly known. In the present paper he observes that State Banks exist at present in a few countries, mainly in those in which the Government is

socialistic; that advanced countries are now doing away with anything like dominating Government influence or control of central banks; and that Indian critics have belittled the influence of shareholders over the policy of central banks; and concludes Sir Jehangir:

Indeed one can go further and say that if the presence of shareholders had no other benefit but the negative one of keeping out political pressure the device of a shareholders' bank would have justified its existence.

India and Geneva

His visit to Geneva has convinced Mr. C. F. Andrews that India should not drop her relations with the League of Nations; on the contrary, she should try to make herself felt there. One effective way to do that would be to have an Indian to lead the Indian delegation before the Assembly—though perhaps Mr. Andrews may not be fully satisfied with the appointment of Sir Mahmood Habibullah an official as he is. There are at least three subjects on which the League can be of service to Indians. Reconsiders Mr. Andrews in the *Indian Review*:

Labour. More than once, I have said in public and I would again repeat the fact, that the amelioration of labour conditions in India by direct legislation has gone forward more quickly in the last ten years since the League was established than was possible in fifty years before the establishment of the League. Every one of the great landmarks in Indian labour legislation has been established since the establishment of the League. While up to the year 1919, it seemed quite impossible to obtain any more humane conditions with regard to labour, in mines and factories and mills, after 1919, every door seemed to be suddenly thrown wide open, and we have been pressing forward from one act of factory legislation to another, and all these have been on the whole in the right direction.

Opium. Opium has been with me a special subject for very many years, in the same way as labour has been. I have known both the impossibility of obtaining any progress at all before the establishment of the League and also the amazing rapidity with which reform has come in India since the League was formed. The turning-point came at the World Conference on Opium at Geneva in 1924-25. At that Conference, a crisis came. In the end, owing chiefly to the position taken by Sir John Campbell who represented India at the Conference, America withdrew her delegation. But this very act of non-co-operation proved the turning-point on the whole opium problem. From that day forward the opium consumption that originated in and from India has been remarkably reduced, and the reduction is still going on. It is quite possible that, in a few years' time, there will be such a change in the whole opium policy of the Indian Government that world opinion on the

kind of house-keeping. That is the work of politics. The home house-keeping and the national house-keeping which is called politics, are really all one; the two are very much dependent on one another. Politics are concerned with all kinds of things which affect our home life. Things we use at home have to be made, by what is called industrial work. Cooking vessels, furniture, *durries*, cloth, have to be manufactured, by hand or by machinery, and certain laws of the country govern the making and the buying and selling of all these things. Food-stuffs have to be grown by agriculture, and politics have to be very much concerned with agriculture. The question of better irrigation, so that the crops may have enough water stored up to enable them to grow for the nation's food, even if rain fails, is a matter which very much indeed concerns the women who have to obtain sufficient food for their households. Politics are concerned with all sorts of matters which women know as much about as men, or ought to know as much about, because they affect the women, and the women can affect them, very greatly. The women who have to watch their children starving when there has not been sufficient rain to grow enough food, could force the government to pay more attention to irrigation, to the building of tanks to store water, as was done in former times in India. Women could add the strong force of their feeling for their children, for their husbands, for all the starving people around them, to the feeling of the men about it, if they only know that they have the power, and gave a little time to what is called voting on important questions, studying those questions with the help of their menfolk, so that they can vote effectively, with knowledge and good judgment. Taking part in politics does not take too much time. Most women gossip with one another a great deal. They may talk about the terrible state of the poor people in famine time, they may talk about many things that are not mere gossip about one another, but they don't realize in India as yet that they can do something as well as talk...

Some things, such as the question of the food-supply, men perhaps may know as much about as women—though women may feel more, when they have to provide food for the family, and cannot get it. But some matters women know more about than men. The Age of Consent Bill, now before the Legislative Assembly, for instance, a bill which is of most vital importance to the people of India, both men and women, only the women can really decide about. Only women can really know at what age girls should be married. How can men alone possibly decide such a point except in theory? There is all very well, but in such a serious matter, which affects the vitality of the whole nation, the health and strength of the people—physically, and consequently in the expression also of intellectual and spiritual life—practical experience is necessary. Theory alone is not enough.

The Place of Science in Education

The *Educational Review* (April) draws the attention of the public through its editorial to the place of science in education

In spite of the teaching of elementary science in schools (though it is possible to effect considerable improvement in the matter), it is not sufficiently recognized that science is an essential element of culture. Speaking at the recent Ramsay Chemical Dinner in England, Dr. Levisstein had some valuable remarks to make on the subject:

Dr. Levisstein said, he would like to see a knowledge of physics and chemistry and other natural sciences considered to be as much a sign of culture as a knowledge of the classics. Properly taught there was as much culture to be derived from science as from the humanities, and more useful knowledge. The date when Ramsay discovered helium gas imprisoned in a stone called cleveite, now old, but a young stone when it first caught its helium and kept it, was of greater interest to a cultured mind, and of far greater importance, than the date of the Battle of Lutetia.

If some old bone revealed to the anthropologist the story of our evolution, was it not worth the knowing? If some old stone released helium after aeons we could not measure and this helium turned out to be a brick left over by the Master Builder of the Universe and Ramsay found it, was that not enough to immortalize the name of Ramsay? Was that a cultural achievement equal to that of suggesting a brilliant emendation in a Virgilian text? And yet we called the one a cultured scholar, a pursuer of the humanities, the other merely a man of science. An increasing number of our youth should be taught science, particularly chemical science, not to equip them for any profession but, as they learned classics, to train their minds, to teach them to think, and, in short, to educate them.

It would not be a bad thing at all to insist on an elementary knowledge of science even in colleges, so that every person who has passed out of the portals of a University may be familiar with such knowledge of natural phenomena and the world around us, as is necessary for every gentleman professing to be cultured.

Co-operative and Nation Building

The Hon'ble V. Ramadas Pantulu concludes his presidential address (reproduced in the *Federation Gazette* for April) to the Eleventh Session of the Bihar and Orissa Co-operative Congress appropriately emphasizing the role of co-operation in nation building. After an able discussion of the problem of finance, of cheap credit, of banking enquiry, of education and propaganda in relation to co-operation Mr. Pantulu remarks:

The economic, social and political development of Rural India demands the co-ordination of many factors and several agencies. It is now generally admitted that co-operation occupies a high place among them. Co-operators are therefore destined to play a noble and conspicuous part in India's Nation Building activities by helping programmes of Rural Reconstruction. It is true that the centre of gravity—political and administrative—which once lay in the villages shifted away from them to

concerned, first of all, with the question of the philosophy of life. Most of the students are attracted to modern materialism. The Chinese people have been more or less known as a practical people—a people who do not concern themselves much with religion, especially the organized aspect of religion. They are more or less satisfied with a kind of ethical course or a moral standard that is sufficient to help them to live an ordinary life. So that may serve to explain the reason why there may be a number of religious beliefs, for instance, in the same family, and a number of religious practices in the same family circle. The Chinese people are used to this attitude of tolerance and of freedom of belief, in the sense of freedom not to believe. With that background, Chinese students are easily attracted by this modern tendency towards materialism and atheism. The depressed economic life of the people in general serves also as a great stimulus to a general materialistic outlook.

The second main problem among the Chinese students is that of sex life. In the past the sexes in China were separated to a large extent and did not have a common social life. Education was limited to men in the past and the women as a rule were uneducated. Recently with the introduction of education and of co-education there is a free intercourse among the sexes and a change in the attitude towards family and marriage. So also you find that there is a great turn from the attitude of patronage on the part of parents towards their children particularly in the choice of life-partners and the right to have friends of the opposite sex. Side by side with these has come greatly increased popularity of the cinema, theatre, dance-hall and irresponsible literature. This is becoming a very pertinent problem in minds of students. There are more publications on sex problems in China to-day than on any other problem and I think if our religious publications could only match this amount of sex publications we should be doing a very great service to the students.

The third problem of major importance among the students is what we call the economic or vocational problem. Students mostly come from middle-class families in China. We have very few students from among the capitalist class. So parents have to earn sufficient money in order to support their children for their schooling. That always is a very serious problem with Chinese students. Sometimes they have to suspend their studies for a number of years just in the middle of their school year on account of this ever present economic pressure. These factors tend to make for pessimism among the students. And, it is all the more evident because of the very widespread desire to go on to higher studies. The problem of vocation is most baffling. The openings for men of higher training are few and competition is therefore keen.

The last problem among the students is not the least the problem of social or political order. The students are very much interested in all the modern theories of political and social reform. They are all beginning to take a great deal of

interest in all modern theories of life. Sometimes they may be very shallow or very spectacular in their study not being able to see those experiments being practised at first hand. But anyhow they find a very genuine interest in those recent theories of economic and social reform.

The Chinese situation bears very close parallel to the Indian situation. Students in India too, those who have a serious turn of mind, are concerned with problems of religion and the philosophy of life. Literature on sex-question of questionable scientific value which intend at money-making is flooding our markets too. Economically our students are worse off—once giving up they can hardly resume their studies. Politics is undoubtedly the great question with our students, but here our students are more easily misled than the shrewd, materialist-pragmatist Chinese.

Britain and Washington Convention

The announcement that Great Britain proposes to take steps to ratify the Washington Convention of 1919 on the hours of work gives *Welfare* of June 15, the occasion to observe:

The inauguration of the Labour Government was signalled by the announcement at Geneva that England will ratify the Washington Convention of 1919 regarding hours of work. She was a party of course to the Convention and was generous enough to affirm its decision on behalf of India as early as then; but her generosity and solicitude for the workers did not allow the British Government to enforce the agreement on the British industries. The industrialists of many countries have been from the beginning outspoken in their hostility to the Washington restriction of the hours of work per day to 8 and per week to 48 hours. It took ten years for England to affirm this decision. English workers have acquired an efficiency and technical skill which will enable them to successfully compete with workers of other countries; e.g. Japan who has not agreed to Washington Convention yet. But, how does India fare in the matter? One of the complaints of Bombay has been this that restriction of hours put them at an unequal position in competing with Japan. Indian workers are unskilled and inefficient, hence, their output per capita per hour is lower than those of the others. In accepting the Washington Convention British administrators tied India to a still lower output and necessarily to a suicidal industrial policy; while in their own home the British Government did not see any hurry in the matter. Was the step inspired only by consideration of the Indian workers' welfare?

Trotsky on Russia

Leon Trotsky contributes, from his exile in Constantinople, a remarkably detached estimate of the future of Russia to the *New Republic*. In it, as in all his pronouncements and activities, he shows himself to be the rigid Marxist that he always was. As the editor of the *New Republic* observes, "his detachment is that of a rigid Marxist and seems to lack a realistic view of history—the very thing on which he prides himself." Trotsky begins his article by asking

"If the Soviet power is at grips with ever growing difficulties, if the risks in the directorate of the dictatorship grows ever more acute, if the danger of Bonapartism cannot be avoided—would it not be better to make a start toward democracy?" Either plainly or indirectly, this question is put in a quantity of articles devoted to the latest events in the Republic of Soviets.

It is not my object here to decide what is best or what is not best. I am trying to bring to light what is probable, that is to say that which flows from the objective logic of developments. And the deduction at which I arrive is that nothing is less probable than the transformation of the Soviets into a parliamentary democracy or to speak more precisely, that such a transformation is absolutely impossible.

He bases this assertion on the general tendencies of European political development during recent years and on the character of the situation in Russia, which, he says, is principally economic.

The Soviet system is not a simple form of government that one could compare abstractly with the parliamentary form. Above all it is a new system of economic or "possessive" relations. It is essentially a question of property, the soil, the mines, factories and railroads. The labouring masses recall quite well what were the lords and the landed proprietors, the usurer, the capitalist and the "bosses" in Tsarist Russia. Among the masses there undoubtedly exists the most legitimate discontent against the existing situation in the Soviet State. But the masses want neither landlord, functionary nor "loss" (one must not overlook these trifles) in intoxicating oneself with commonplace about democracy. Against the return of the landed proprietor the peasant to-day, as ten years ago, will fight to the last drop of his blood. The landlord can only return to his fief from emigration astride a cannon, and he would after-

wards be obliged to sleep on his cannon as well. Truth to tell the peasant would more easily tolerate the return of capitalism, because so far the state industries only supply him with manufactured products on less advantageous conditions than the merchants of former days. This, I may remark in passing, is at the root of all the internal difficulties. But the peasant recalls that landlord and capitalist were the Siamese Twins of the old regime that they went out together that together they fought the Soviets during the years of civil war and that in the territories occupied by the Whites, the industrialist got back his factory, the landowner his land. The peasant knows that the capitalist will not come back alone, but in company with the landlord. That is why he wants neither one nor the other, and this is the powerful, though negative force of the Soviet regime.

Democracy, according to Trotsky, is a firm weather form of government utterly incapable of coping with the powerful currents of national and social struggle with which the world is seething to-day. After observing that—

A handful of impotent doctrinaires would have liked a democracy without capitalism. But the various social forces inimical to Sovietism want capitalism without democracy. That applies not only to the dispossessed landowners but also to the comfortable class of peasant. In so far as the latter have turned against revolution, they have always become the ally of Bonapartism.

he goes on to summarize in a compact form the conclusions at which he has arrived regarding the future of Russia:

1. The Soviet regime, independently of its Socialist aims, of which the protagonist is the vanguard of the industrial proletariat has deep historical and social roots in the popular masses, for it is an insurance against a restoration and a guarantee of independent development—that is to say, non-colonized.

2. The fundamental historical struggle against the Union of Soviets, as well as the internal struggle against the Communist power, is not carried on in the name of the conversion of the dictatorship into democracy but in the name of the conversion of the transitory economic regime of to-day into a capitalist regime inevitably dependent and colonized.

3. In these conditions, the switching off on to the rails of capitalism could only be obtained by means of civil war, cruel and prolonged and implying intervention from outside, either avowed or camouflaged.

there are losses due to the needle not being in the lines of "magnetic force" or "magnetic dip". The needle has to be re-magnetized and this occasions frequent changes in the field of magnetic force and prevents one's having a fixed value of magnification with the apparatus.

These drawbacks seem to me the reason for not employing the Magnetic Crescograph in the more accurate research works conducted in the Bose Research Institute in Calcutta.

More recently Sir J. C. Bose has invented another apparatus to demonstrate the alleged pulsatory movement of the ascent of sap. I am sorry to tell you that I cannot give you a detailed description of this new discovery, since it remains as yet unnamed and not described in any scientific journal that I know of. Even the *Transactions of the Bose Research Institute* do not enlighten us much. But we had the good fortune of seeing the apparatus when Sir Jagadish gave a demonstration-lecture in the Aula of the Geneva University in 1926. We then came to understand that the principles involved in this new apparatus are those of a lever and of optical magnification (as applied in the galvanometers). The plant of which the radial growth is to be measured, is placed between the lever and a fixed prop; the lever is extremely light being of porcupine-spine. Any expansion or contraction of the plant moves the extreme end (of the lever) which carries a wire supporting a weight and at the same time passing round the vertical axis furnished with a reflecting mirror.

The pressure exerted by the plant on the lever keeps the balance against the "pull" produced by the weight; any variation in the pressure will modify the balance and thus cause a movement of the spot of light from the reflecting mirror. To "damp" the movement the weight attached to the wire is immersed in water.

Unfortunately, this new invention suffers from some vital defects, which, in spite of the high magnification that the apparatus is capable of giving, debar its application in accurate research work.

Here the weight, being partially immersed in water, exerts a varying tension on the lever and thence on the plant whenever this latter has any variation in internal pressure or in other words, "radial growth"; and this is a factor, which, with our present-

day knowledge of the subject, cannot be evaluated. Moreover, the internal pressure of the plant itself being incalculable the results invariably become vitiated. Further again, with the variation of the turgescence of the plant, the pressure exerted on the walls varies; one should bear in mind that the constitution of the cell-sap and a number of other factors influence the turgescence of a plant. The extremely elastic porcupine-spine naturally absorbs a certain amount of the pressure exerted on it, and this is also, what we may call, incalculable, but all the same a factor which vitiates the result. It is also apparent that the device for bringing the spot of light to the original position is apt to induce the error of varying tension.

And even then with all these drawbacks the apparatus cannot be used for measuring longitudinal growth.

Our knowledge of growth-measuring apparatus was at this stage when my research-work led to my inventing an apparatus giving high magnification which could be relied on and thus used in accurate researches. This invention I have named the "microcrescometer" and for its general description I refer to the "*Archives de la Société Physiques et Sciences Naturelles*" (1928, vol. I, pp. 59-61).

The Microcrescometer

The microcrescometer consists principally of a lever KL (see figure) which is mounted on a vertical axis Y, rotating on two diamond pivots. The lever moves in a horizontal plane, and it is balanced. A fine gold thread (carrying two unequal weights A and B) is glued at the free end

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of a book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

ZAKA ULLAH OF DELHI: By C. F. Andrews. With an *Introductory Memoir* by the late Maulvi Naxir Ahmad; pp. demy 8vo 159+xxx. Eight Illustrations. Cloth, gilt letters. W. Haffer and Sons Ltd., Cambridge, England. 7s. 6d. net. (The printing paper and get-up are excellent.)

By the courtesy and kindness of Mr. Andrews we were able to publish this very interesting and instructive book serially in *The Modern Review*. But few of even those who keep monthly magazines bound in volumes ever turn to them for reading books published in them serially. Therefore, both those who have never read this memoir and those who have read it in this journal would do well to keep and peruse the book. Munshi Zaka Ullah was a scholar and a real gentleman and sincerely and deeply loved India as his motherland. He was a link between the past and the present in his days—one who had lived before the Mutiny, been through it and survived it. His family had been connected with the Mughal court for generations.

Apart from the value of this biography in itself, it is important from another point of view. The best means of establishing and preserving amity and goodwill between the Hindu and Musalman communities is for Hindus to know good Musalman men at close quarters and for Musalmans to know good Hindu men at close quarters. Those Hindus are fortunate who have trusted Musalman friends (and so are those Musalmans who have trusted Hindu friends). But they and other Musalman friends by perusing the life of Munshi Zaka Ullah. The paragraphs relating to his love of India and things Indian will bear reproduction.

Munshi Zaka Ullah's opinions on one point were very strong indeed. He objected vehemently to Musalmans, whose forefathers had been in India for many generations, regarding themselves as foreigners, or making a line of separation between their own interests, as Musalmans, and the interests of India itself. No subject roused him to indignant protests more than this.

"India," he said to me, with impassioned accents that I can still recall, "India" is our own mother-country, the country which gave us birth. We have made our homes here, married here, begotten children here; and here on this soil of India we have buried our sacred dead. India, therefore, must needs be dearer to us than any other country upon earth. We should love this very soil of India, which is mingled with the dust of our ancestors. For a thousand years our own religion of Islam has been intimately bound up with India; and in India, Islam has won some of the greatest triumphs for its own peculiar form of civilization. We should love, therefore, the history and government of India, which have been shaped by such great monarchs as Akbar the Great and his successors. I cannot bear to hear Indian Musalmans speaking without reverence and affection for India. It is in a new fashion, unfortunately springing up, which did not exist in my younger days. The fashion is a bad one, and should not be encouraged. By all means let us love our Musalman brethren in other countries, and feel their joys and sorrows; but let us love with all our hearts our own country and have nothing to do with the encouragement of those who tell us, that we, Musalmans, must always be looking outside India for our religious hopes and their fulfilment."

"Indian history, Indian poetry, Indian art, Indian music, were all great in his eyes; and he made no line of distinction between what was Hindu and what came from Islam. He was proud of every achievement and cherished it all as his own."

Munshi Zaka Ullah's character was marked by great tolerance and benignity. In the course of a letter written to Mr. Andrews, the Munshi's son Inayat Ullah says:

"He would not brook to hear a word said against the Hindus by any of his sons; and if even the slightest reference was made disparagingly, he would reprimand the one who made it and point out the mistake."

RABENDRANATH TAGORE'S LETTERS TO A FRIEND: Edited, and with two *Introductory Essays* by

C. F. Andrews With four illustrations in colotype. George Allen and Unwin Ltd. Ruskell House, 40, Museum Street London Ws 6d net pp. 195 Cloth, gilt letters

Mr C. F. Andrews was good enough to contribute to *The Modern Review* many of the letters contained in this beautiful volume. Other letters are published in it for the first time. And they have all been revised and divided into chapters with a brief explanatory summary of the circumstances in which the letters were written. There are, besides, two well-written essays on the Bengal Renaissance and on the personality of Tagore.

All the letters, except two were written to Mr. Andrews. They provide an intimate record of Tagore's feelings during the war and of the constructive ideas of fellowship between East and West that have filled his mind since the war ended. In a very personal way they introduce the reader to the deepest thoughts of the East about Europe and America and throw light on some of the most difficult problems of India. There are in them many charming descriptions, poems and reflections with unexpected saltness of wit interspersed. Many passages are written in a humorous vein.

There are so many topics dealt with in the letters that it is impossible to give any idea of them in this brief notice. But an exception may be made in favour of the letter concerning the Dyer debates in the British Parliament. The poet wrote. The result of the Dyer debates in both Houses of Parliament makes painfully evident the attitude of mind of the ruling classes of this country towards India. It shows that no outrage however monstrous, committed against us; agents of their Government can arouse feelings of indignation in the hearts of those from whom our Governors are chosen.

The unadvised condonation of brutality expressed in their speeches and echoed in their newspapers is ugly in its frightfulness. The feeling of humiliation about our position under the Anglo-Indian domination had been growing stronger everyday for the last fifty years or more. But the one consolation we had was our faith in the love of justice in the English people whose soul had not been poisoned by that fatal dose of power which could only be available in a dependency where the manhood of the entire population had been crushed down into helplessness.

Yet the poison had gone further than we expected and it has attacked the vital organs of the British nation. I feel that our appeal to their higher nature will meet with less and less response every day. I only hope that our countrymen will not lose heart at this but employ all their energies in the service of their country with a spirit of indomitable courage and determination.

The late events have conclusively proved that our true salvation lies in our own hands that a nation's greatness can never find its foundation in half-hearted concessions of contemptuous niggardliness.

"It is the sign of a feeble character to seek for a short-cut to fulfilment through the favour of those whose interest lies in keeping it barred—the one path to fulfilment is the difficult path of suffering and sacrifice. All great boons come to us through the power of the immortal spirit we

have within us, and that spirit only proves itself by its defiance of danger and loss."

Very appropriately the book has been dedicated to the memory of W. W. Pearson. Any profit from it will be devoted to the Pearson Memorial Hospital at Santiniketan. Mr. Pearson had accepted Santiniketan Asram for his home, where he felt he could realize his desire to serve the cause of humanity and express his love for India which was deeply genuine in his nature, all his aspirations of life centring in her. He had a great desire to see the Santiniketan Hospital rebuilt and equipped in an adequate manner for which he worked and contributed money whenever possible.

AN ENGLISHMAN DEFENDS MOTHER INDIA. By Professor Ernest Wood formerly Principal of the Sind National College, Hyderabad, and Author of many books and translator of several Sanskrit works. Demy 8vo pp. 468+vi+ix with sixty illustrations. Cloth Rs 3. Ganesh & Co, Madras.

This book professes to be a complete constructive reply to Katherine Mayo's 'Mother India', and that it undoubtedly is. Its author was specially qualified for his self-imposed task. During his three visits to India he spent altogether thirteen years in the country, travelling north and south and east and west and living in all parts of India, urban and rural, and among all the various main classes of Indians. As he has travelled in more than thirty countries in the course of four journeys round the world he was in a position to form a comparative estimate of the manners and customs and character of the people of India. He is also a Sanskrit scholar. Thus he writes with a sufficiency of knowledge derived from personal experience and observation, study and social intercourse with Indians that he is not an Indian has been an advantage in the writing of this book, for it has enabled him to write dispassionately and in a spirit of detachment without much effort. The illustrations help to serve the purpose of the book. They show that India is not the hell for her men and women and cattle that the female American hireling would have the world believe it is.

Besides the introduction there are 25 chapters in the book on: The Family, Marriage, Motherhood, Child birth, Childhood, Widowhood, Seclusion, Religion, Fate and Illusion, Indecency and Vice, Character and Manners, The Cow, Cruelty, Boys' Education, Girls' Education, Sanitation, Medicine, The Caste System, The Outcastes, The Princes, The Muhammadans, The Villages, Industries, Taxation and Expenditure, The Reforms. The last three chapters, which deal with economic and political subjects are written with such sobriety and moderation that they appear to understate the Indian case instead of overstating it or even putting it before the public in an adequate manner.

R. C.

FUNDAMENTAL PROBLEMS OF LIFE. By J. S. Mackenzie. George Allen and Unwin Ltd., London. pp. 384, 12s 6d net.

Prof. Mackenzie is well known as a writer on Moral and Social Philosophy and the present volume well keeps up his reputation as a thinker and a writer. The book is divided into two unequal

parts--the first and the smaller part dealing with the problem of value and the second and the larger part dealing with the problem of citizenship which in fact supplies the sub-title of the book, viz., *An Essay on Citizenship as Pursuit of Values*. In the first part the author discusses the nature and kinds of values and comes to the conclusion that it is possible to enlarge the usually accepted number, i.e., the three values of Truth, Beauty and Goodness, by the addition of Reality, Power and Joy. He sums up his philosophy of life in the statement that "intrinsic value is found in the creation of Joy through the apprehension of Truth by means of Power and the persistent effort to help in doing this is Goodness. In so far as this is in some degree achieved, it is Beauty." According to him, "the complete or ultimate Good would be found in apprehending the Truth that Love and Power give Reality to Beauty and Joy."

In the second part the author discusses the economic, cultural and political aspects of citizenship in order to find out how far co-operative action is conducive to the establishment of a world-commonwealth. The reader will find here many good suggestions and illustrations drawn from many fields of culture and the few repetitions that occur here and there do not make the reading wearisome. There can be no doubt that in spite of a bias in favour of British institutions the author is genuinely interested in the search for a solution of the world-tangle that depresses even the most optimistic politician at the present moment. The author's recent extensive tours in India and the United States have naturally coloured his presentation deeply in relation to these countries and the reader is agreeably surprised to find that the author has a good word to say even about the much traduced caste system of India as a solution of social organization. A sympathy and a benevolence that comes from old age and a desire to be at peace with the world make the writer see some good points in almost all social organizations; hence the book is singularly free from all polemics and if it suffers from indecisiveness here and there and a hesitation to drive a point home it avoids on the other hand supercilious arrogance and blind nationalism.

If the reviewer has to note any defect in the treatment he may refer to his oft-quoted *mot* of Carlyle "The tools to him who can use them," with the corollary that equity and not equality ought to be the objective of all social endeavour. Ruskin showed the danger of this position in his *Crown of Wild Olives*, where he inveighed against Capitalism by pointing out that there is a tendency to throw a man into a ditch and then to ask him to remain content where he was. "Equity for the present and equality as the ideal" is a better guide to conduct. Otherwise the imperialistic designs of powerful nations would always find justification for continuance in unlawful gain in relation to backward races on the pretext that they alone are able at the present moment to see the countries of the world most effectively for the benefit of the world. It is difficult to see how if in the world-commonwealth all the nations of the world are to be represented (p. 340) an opportunity to each nation, now in political subjection to develop along the lines of its own genius can be denied.

The writer has obviously no sympathy for those free nations who view with disfavour the octopus-like grip of Britain on all lands and who legitimately want a place in the sun for their enlarging population and expansive industries. He broaches the problem of equitable distribution of the globe (p. 239) but drops it unceremoniously as being a rather inconvenient question to a Britisher. He has in fact to admit that "the national point of view is prior to the international" which means abandoning the main purpose of the book (p. 326). Turning to his opinions regarding the East (and there is no doubt that he has mostly India in mind), the author doubts whether democratic forms of government would work as satisfactorily in tropical or sub-tropical countries where more constant--or at least more calculable--conditions prevail and where the attention turns more readily to patient speculation and prolonged reflection than to vigorous action." (p. 293) completely forgetting that in that case South Africa will come under this category and not the East alone. There is a curious family likeness between this statement of the Professor and that of Prof. Van Tyne, in his decidedly partial book *India in Ferment* (p. 57), who wonders "in moments of doubt whether the climate does not for ever preclude efficiency of administration by those who dwell always under its enervating influence. The reviewer cannot help thinking that the sympathies of the Professor are with the Capitalists and the Imperialists and he has grave doubts whether the labourer would accept the position of the Professor that as intellectual people find recreation in manual labour, therefore this labour ought to be enjoyed by the labourers themselves. For a past teacher of Logic this argument is indefensible.

The references to current literature on the subject are fair and full although the author writes mostly under the influence of two or three writers. Miss Follet being the principal one. One mistake in reference might be here pointed out: *Local Government in Ancient India* is not by Radhakamal Mukerji but by his equally distinguished brother Radhakumud Mukerji. The style is lucid and the book is well worth perusal by thoughtful persons.

H. D. BHATTACHARYYA

—
PRE-EXISTENCE AND RE-INCARNATION: By Wincenty Lutoslawski; Published by George Allen and Unwin Ltd. pp. 157. Price six shillings.

The author, the eldest son of a wealthy Polish nobleman, was born at Warsaw in 1863. His "Origin and Growth of Plato's Logic" (published in 1897 by Longmans, Green & Co.) has become a Classic. His next English work is "The World of Souls" (published by Allen and Unwin in 1924). This book has been highly spoken of by Professor James and other competent authorities. In the preface of this book Prof. James writes: "That he is versatile as well as scholarly would seem to follow from the fact that his previous writings, numerous, if not voluminous, embrace essays in five other languages--Polish, German, Russian, Spanish and French--and range in subject from chemistry to politics" (Page 5. The W. of S.). About his philosophical and theological views James says: "He is a spiritualist to the core; that is, he believes in individual souls as ultimate and

irreducible facts. The Universe is a great hierarchic system of such individual souls. In other words, Wincenty Lutoslawski is not a monist and either in the materialistic or the idealistic sense but a pluralist, a monodologist. The world has only the unity of a collection, an immense collection of living souls of all orders, from those most numerous ones at the bottom which animate the particles of matter to the single leading soul whom we all call God at the top. But this God is not the Creator in the Christian theological sense, he is only a leader, a worker upon forces that are often refractory. Between him and us there are intermediary spirits and our author if classed under cut-and-dried rubrics must be distinctly called a polytheist rather than a theist (*Ibid* pp. 6-7).

The author develops his views of the soul in the book under review. He believes in Palingenesis, i.e., the pre-existence and re-incarnation of the soul. He has advanced eight arguments to establish this theory (*vide* chap. II-1) and has discussed also the objections that may be raised against his conclusions (chap. VII). In chapter XV he discusses the Polish doctrine of Palingenesis which he accepts, contrasts it with the Indian doctrine of re-incarnation and Nirvana. His ideal is the service of Humanity. Plato dreamt of a State where the liberty of each citizen would become the safest guarantee of general welfare' (p. 123). Our author's ideal is to make this dream a reality and to establish the Kingdom of God on earth (p. 147).

His dream of discarnate life is very pleasant though in grandeur and sublimity it falls far short of Voltaire's creation of Micromégas, the Syrian young man with a thousand senses. The devotee of scientific knowledge says our author "can pursue his investigations even better after death than during bodily life. He may use the libraries of the world as he did in the body and to go from one place to another as his work requires. When he cannot understand anything in old books he can easily refer to their authors, if they are not re-incarnated. He needs no sleep, experiences no weariness, has no worries about supporting himself, and can devote years and even centuries to a single problem. Besides, there may exist libraries and laboratories for the discarnate far richer than any on earth. They may contain materialized reproductions of all the books ever written and of unpublished manuscripts lost to the incarnate scholar etc." (p. 127).

We would rather prefer the Syrian life of Micromégas with a thousand sense organs to the discarnate edition of this earthly life. But a rationalist critic would exclaim: "Ye who listen with credulity to the whispers of fancy and pursue with eagerness the phantoms of hope attend to Lutoslawski's tales etc."

The description of posthumous life cannot but be mythical and a book should not be judged by what is necessarily mythical. The author's conclusions, it has strong points as well. The arguments and inspirations of the author have not impressed us and we have not been able to accept his conclusions. But we must say that the book is powerfully written and will appeal to a large section of Hindu readers. There is no other book which has so eloquently defended the theory of Palingenesis.

MANASA CH. GHOSH

INDIA'S PAST. By A. A. Macdonell. Pages 273. Price 10s Oxford 1927.

An honest and painstaking attempt at presenting the cultural history of India from the remote Vedic times down to the close of the nineteenth century.

It comprises nine chapters. Of these the first three relate to the Vedic period. The fourth relates to the post Vedic period and carries the cultural history down to the rise of Buddhism. The fifth, sixth and seventh chapters deal with the literary history of India in all its branches—poetry, drama, science, philosophy, etc. The eighth chapter treats of the vernacular Indian languages and literatures and the ninth tells us the way in which India's past has been recovered or in other words it speaks of the sources of our knowledge regarding India's past—epigraphic, numismatic and other sources.

Some of the chapters especially that on the history of Sanskrit poetry and drama are written with a masterly hand, while others indicate perfunctory work. The treatment of Hindu philosophy however is very meagre and wanting in precision and clearness.

Chronologically considered the history given of India's past is often vague, indefinite and meagre but read as supplementary to the political history as told in the Oxford History of India by Vincent A. Smith (*vide* author's preface) the book is of considerable value to the students of Indian history.

The book considered from the method of treatment and manner of handling cannot compare with the author's previous works like the 'Vedic Mythology' and the 'History of Sanskrit Literature' and does not bear testimony to any massive scholarship, but it has the merit of being written in a straightforward and simple and unambiguous style.

It meets the requirements of a beginner only but will not be of much service to a research student of India's past either as an authority for the subject he investigates or as a source of information for carrying further researches.

BARODA AND ITS LIBRARIES. By Nriput Mohan Dutt. Pages 234. Price Rs. 2-4. Baroda 1928.

In this excellent book is given a very valuable and interesting account of the library movement in the progressive Baroda State. It contains also three Addresses on Libraries and Literature by H. H. The Maharaja, Gaekwad before the Gujarat Vernacular Society, the Baroda Library Club, and the Marathi Grantha Sangrahalaya (Library) Bombay. Besides an introduction by H. E. the Dewan of Baroda. Statistics given in the 32 appendices are very useful and well-got-up and well-done. They show the progress of the Library Scheme during the last seventeen years, as well as a classification for vernacular books (set of games and occupation in the Children's Playrooms, periodicals taken in the Reading Rooms of the Baroda City Halls for the Central Library, the 'Travelling Library', the State-aided libraries, the Tabular occupancy library associations and the Baroda Library Co-operative Society. The author has succeeded in conveying in a readable form much information which will be new and interesting to students of the subject. The 44 page catalogue of books on bibliography and library economy is certainly admirable.

A VIDYADHARAN

MODERN TRADE (Inland and Foreign): By *Shib Narayan Lala, A. I. S. I., F. C. I., Incorporated Secretary, London and Lecturer, Calcutta University. Messrs. Shankar & Co., 115 A, Amherst Street, Calcutta Pp. IX+301+2. Rs. 3.*

We have read Prof. S. N. Lala's "Modern Trade" with great interest. What characterizes it from usual text-books is its careful and accurate presentation of details of business as actually carried on in Calcutta. The author has amply succeeded in giving an inside view of the working of modern commercial houses. His book should, therefore, prove to be of use not only to students of commerce in our universities, but also to junior members on the staff of business firms. The in force in Calcutta with regard to hundis and the Indian Companies Act are a few among the many valuable features. For ready computation, compare the weights of raw jute in bales and tons, and appended.

One notices the lack of a proper index. Proof-reading has been somewhat hurriedly done, requiring a long errata. The publishers Messrs. Shankar & Co. are, however, to be congratulated for their enterprise in publishing such a well-bound and neatly-printed volume of great practical interest.

H. SINHA

AMONG THE SILENCES: (POEMS): By *Mr. Uma Maheswar, M.A. V. V. Press, Triandrum.*

There are fourteen metreless poems. Some of them show great poetical merit. What we think proper is that so young and promising an author should not parade the anguish of his heart so much. Byron profited little by it. It is for young men to plunge into work in the material world; but perhaps we are mistaken. Perhaps no poetry young author says:

It is all for a while we love and weep,
The pantomime is finished soon

The spoil of silence fall o'er us
And on the kingdom of the past!

By the way, we are so much accustomed to metre, that a metreless poem appears to many of us like a wheel without spokes. It threatens to become a rage in India, yet we should be delighted if such literature really created a new diversion.

"Critic"

APPRECIATIONS OF RAJA RAMMOHAN ROY AT HOME AND ABROAD: By *Girish Chandra Nag, B.A. E. B. Brahma Samaj, Dacca. Price As. 8.*

Raja Rammoohan Roy is rightly called the Maker of Modern India and any information about him is sure to be of interest to us all.

The brochure under review aims at collecting the expressions of regards, sentiments, opinions and impressions of eminent people of this and other countries as showing "the very high appreciation they had of the Raja's life and character." It is a very timely publication in view of the centenary of the Brahma Samaj which is now being celebrated.

Several errors and misprints, especially in quotations, meet our eye—principally owing to the compiler not having consulted the original authorities. The very interesting account of Rammoohan Roy left by Victor Jacquemont—a cultured Frenchman—has escaped the notice of Mr. Nag. (See *Modern Review*, June 1926, pp. 689-92). Jacquemont paid a visit to the Raja in his Calcutta residence in 1829.

BRAJENDRA NATH BANERJI

BENGALI

MEHEEN KATHA: By *Sri Hemlata Devi. Price eight annas. To be had at the Saroj Nalini Datta Women's Association, 45 Beniatola Lane and of all principal booksellers in Calcutta.*

This is a book of 74 pages on topics concerning the education of women and their work in the home and for society outside the home. The writer is an educated lady of mature judgment. What she has written comes up to our expectations. The brochure is thought-provoking and is marked by much originality and depth of thought. All educated Bengali women should read it—and men too.

BIDHABA-BIDABA: By *Sri Narendra Narayan Chakrabarti, Hindu Mission Book Depot, 7 Bechu Chatterjee Street, Calcutta. Price eight annas, pp. 128.*

This brochure on widow-marriage answers all objections and points out the need of widow-marriage in a convincing manner. The author Vidyasagar was led to ransack the Sastras to find out whether they sanctioned the marriage of widows and his ceaseless and fearless efforts to get widows married when he had discovered such sanction. In the next section the writer quotes verses from the Sastras in support of widow-marriage. He next discusses why widow-marriage fell into disuse (among some castes). In the following six sections he meets all the usual objections. After clearing his ground in this way, he dwells on all the reasons and circumstances which make widow-marriage an imperative necessity. He writes movingly and with much vigour.

R. C.

TAMIL

RUSKIN'S 'UNTO THIS LAST': Translated and published by *R. Ananthakrishnan, Baradewja Asramam, Shermadexi; pp. 132 Price 2½ As.*

A beautiful translation of the work; nearly got up and cheaply priced; worth reading by every student of labour problem and lover of humanity.

BENJAMIN FRANKLIN OR HOW TO AMASS WEALTH: By *Ananthakrishnan, Shermadexi; with a L. Coimbatore. Available for sale at Kamba Kadambari, Ashwappuram, Lakshy Road Post, Coimbatore, pp. 8+76+7. Price 6 As.*

The book is sure to make an impression on the reader for the adoption in his own life of the noble qualities of the hero that have made him the great

man he was; his wise sayings are also appended to the book

R G N PILLAI

MARATHI

"DNYAN-DIPA" OR THE GIST OF DNYANESHWARI IN SIMPLE PROSE. By V G Apte Editor Anand pp 264 Price Re one.

Mr V G Apte needs no introduction to the readers of the *Modern Review* as they are too well-acquainted with the short and pithy reviews of Marathi publications, appearing over his signature in this magazine. He has also the reputation in Maharashtra, of being a most versatile author of many parts and his style is characterized by an engaging grace of natural simplicity and lucid expression. He may be regarded as the father or at least the god-father of juvenile literature, as such in present day Marathi and his monthly magazine *The Anand* is at once the pioneer and the premier one amongst publications of that kind.

The book under review purports to be a lucid yet and summary in prose of the famous *Dnyaneshwari*—the most glorious and brilliant poetical exposition (Commentary) of the Gita in the simple Ori metre, by the poet saint and genius Dnyaneshwar, the work being written when he was barely sixteen. *Dnyaneshwari* is the unique treasure and ornament of Marathi literature, and is the Bible of the *Pavhari* cult in Maharashtra. But the perusal of the original work and the grasp of its main argument by the average lay reader are rendered rather difficult both on account of its archaic language and still more on account of the rich and luxuriant growth coating of poetical similes and illustrations that, like the profuse and thickly studded spruce blossom on a mango tree, almost hiding its permanent green foliage, many a time go to completely obscure the main doctrine and the logical reasoning of the Gita. Mr Apte by his present book has, therefore, rendered a real and very useful service to the Marathi knowing readers of this class by presenting in the form of a simple connected summary in prose the main trend and current of the teaching of *Dnyaneshwari* shorn of its rich and sometimes overpowering and perplexing poetical imagery. He has, however, taken good care to retain just such of the typical similes and illustrations from the original as would faithfully reflect the spirit of *Dnyaneshwar's* exposition of any particular point and at the same time, save the summary in prose, from being too barren and dry as dust. The book is thus a welcome and characteristic addition to that class of numerous works on and about *Dnyaneshwari* which may be generally named as *Helps* to the study of the *Dnyaneshwari*.

S N CHAPKAR

GRIHA-JIVAN-BASTRA By K R Sant and D R Jogalekar of Baroda Pages 289 Price Re 18

What a pity it is that we Indians, who are never tired of boasting of our past civilization have to take lessons in domestic science from Westerners! Yet such is actually the case. Our

domestic life is isolated from the progressive knowledge of science and is closely wedded to the manners and customs the origin or propriety of which is little known. The authors of this book had to go to an American lady to learn what an ideal home should be, and they have made good use of the knowledge thus gained and embodied in the book under notice. The book is divided into five parts dealing with human physiology cleanliness of the house, clothes, diet and rearing of children, home nursing etc. The information given is useful and the book may very well be recommended as a text-book in the higher forms of girls' schools.

V G APTE

GUJARATI

HALLARDY of Lullabies is still a third work by M. Megham. Its introduction entitled *Voice of Parental Affection* reviews the literature of this subject from all points of view as found in the several civilized countries of the world.

KIRANVALI is a very small book written by Abdul Latif Ibrahim of Dutch, at present in Europe. Although a Mahomedan by religion he is steeped in the philosophy of the Upanishads and the verses in this book are a result of such studies. He is barely twenty-five. This work of his is very promising.

(1) KERNAY BHAIYAN, (2) DHUVALI (3) BAI VIBHAR, (4) HATO. Published by Gandvi Sahitya Mandir of Surat are attractive little volumes, illustrated and written for the benefit of children. The stories are such as would interest the juveniles and the get-up of the books is such as to approach very nearly that of books on the subject published in England. The work is being turned out on right lines.

SUVARNAKESHI By Mrs Lavangika P Mehta, B.A. printed at the Lohanamitra Printing Press, Baroda. Pp 120 Paper cover Price Re 0-12-0 (1927)

The story written by the French novelist Theophile Gautier is translated in English as *The Fleecy of Gold*. Mrs Lavangika has translated these English version and a very creditable performance it is. She has thoroughly studied her subject, and entered into the spirit of it, before beginning her work as is shown by the notes contributed by her. They testify to her wide reading.

NEW NEW STORIES By J D Khandhadia Printed at the Lohana Printing Press, Baroda. Cloth bound pp 171 Price Rs 1-8-0 (1926)

A store-house of humour, depicting the present life of 'half bakul' youthful couples. It is bound to afford amusement to the reader.

RAJANILAL By Ardeshir Fyanni Khavardar Printed at the Khadayta Printing Press, Ahmedabad. Paper cover Pp 143 Price Re 0-14-0 (1926).

The Muse of Mr Khavardar, the well-known Parsi poet, has now entered on a new phase of activity. She has, as often happens with us Indians when ageing turned her face towards philosophy, and produced poems, in the vogue of Narsingh Mehta. The verses contained in this volume are of

of them can be more easily ensured than that of a larger and more unwieldy governing body as that of a democracy. While other forms of government are usually controlled by permanent bureaucracies, consisting of men who devote themselves exclusively to the work of government as their lifelong occupation, a democracy with its everchanging personnel, determined by instability of power and the briefness of the period of tenure of office, tends to produce a certain amateurishness in the governing assembly, which is not conducive to that high efficiency which is developed by forms of government ruling through bureaucracies, unhampered in their mental training and administrative experience by a solution of continuity. This danger is, however, now considerably reduced, if it has not been altogether conjured away by the steady rise of the average level of education which naturally reacts on the ability and the power of the governing body and by the emergence of the modern type of the professional politician, who makes of politics an object of lifelong study and pursuit and devotes to it the specialized competence which is necessary to cope effectively with growing intricacy and complexity of modern political life.

The second danger to which Mill has adverted lies in what Bentham has called "the sinister interests of the holders of power," and is still, with us. It is natural that all governments should advance the immediate interests of the party in power and democracy cannot be expected to rise above this natural human weakness. But democracy has undertaken a special trust which it must discharge if it is to justify itself. A monarchy or an oligarchy may well afford to neglect the general welfare of the community when it clashes with the narrow interests of the class whom it is their avowed object to serve. But that a polity which is professedly popular should encourage sectional interests to the detriment of the interests of the whole community, involves the negation of the fundamental principle of democracy. Democracy is anti-democratic when it allows class interests to override the interests of the community. This danger of democracy cannot be altogether removed so long as it remains, as it must ever remain—on account of the natural conflict of interests in the body politic—the rule of the numerical majority and not of the whole community. But it can be minimized, as it has been, by

providing such constitutional safeguards as the creation of a strong opposition to act as a moral check, backed by a public opinion enlightened and vocal enough to curb the unrestrained exercise of power.

While democracy has thus been protected against some of its evils, others still remain or have reappeared in a new form and others, essentially modern, have found their way into our democracies of to-day. The modern world is afflicted by a class consciousness which seems to be leading inevitably to a class-war between the forces of capital and labour. This is a serious menace to the future of democracy as is seen in the first fruits of a labour victory which has led to a ruthless dictatorship of the proletariat in Soviet Russia. Capitalism has, on the other hand, captured the governments of some countries which are being exploited by the "sinister interests of the holders of power," as in England, where a Conservative government has identified itself with the forces of Capitalism and has introduced class legislation designed to favour one section of the community at the expense of its general welfare. The organization of the capitalist resources by the formation of gigantic trusts and combines that is taking place all over the world,—the most powerful engine ever devised for the enslavement of labour and the setting up of the Servile State—is a formidable danger not only to modern democracy but also to modern civilization. It has been truly said that high finance is the most subtle, ubiquitous and potent of modern political forces and that the Demos is now no more than a puppet of banks and stock-exchanges. It insinuates itself subtly in international politics; it dictates the internal and external policy of governments; it controls the issues of peace and war. Capitalism is, at best, anti-democratic, at worst, anti-national. There is, as a rule, little idealism in governments, and democracy has been charged with lack of spiritual power; but a democracy in the grips of High Finance is a soul-less tyranny.

Our democracies are also being slowly undermined to-day by the canker of parliamentary corruption. It is a fallacy to believe that democracy is less subject to corruption than a monarchy or an oligarchy, on the ground that a man or a few individuals are more easily accessible than a large governing body. Democracy is, however, open to a more insidious, and a more subtle, form of corruption.

are now full-blown democracies and our dictatorships cannot be otherwise. We feel, therefore, that democracy is now as safe as ever. The world has been travelling broadly speaking, from monarchies, through oligarchies, to democracies; the centre of political power has shifted from the one to the few and from the few to the many and unless we are greatly mistaken, it must pass to many more. The trend of political evolution all over the world is in the direction of a growing democratization. In England the Reform Acts passed during the last century have gradually transferred political control from a territorial aristocracy to the middle class, from whom it is slowly passing to the labouring class. Our democracy has not been democratic enough, as it has been so far only middle-class government. The proletariat is growing increasingly restive under middle-class rule and is impatient to assume the

reins of government. They contend that even the representatives of labour are now, with a few exceptions, doctrinaire socialists drawn from the middle class, who, though they are free from the *bourgeois* mentality, have not tasted by bitter experience the fruits of their political and economic subjection. Socialism has been declared to be the economic side of democracy. The future of democracy lies, to our mind, in the Socialist state in which the political and economic control will lie with labour with representatives drawn from their own ranks. This will mark the final stage of democratic evolution because it will place political power in the hands of the largest section of the community—the proletariat. Democracy will then be truly, as far as it is capable of being, the government of the people for the people and by the people.

A Church of Queer Design

Take a mammoth pipe organ towering toward the sky and daring in the originality of design, this stately church of truly dignified beauty is a memorial in Copenhagen, Denmark, to N. F. S. Grundtvig a preacher who died fifty-six years ago while trying to reform religious views.

A Church of Queer Design

Folding Bicycle Carried Like a Typewriter

A collapsible bicycle which can be ridden to a town, folded up, and taken on a train in a small

suit-case has been brought out by a French bicycle-maker. He expects it to be popular among city dwellers who have no space in their apartments to store a full-sized machine, but would like to ride a bicycle to work or to and from the station when

Folding Bicycle Carried Like a Typewriter

travelling. Commuters also are expected to find special use for the bicycle—they can ride on it to the railroad station in the morning, check it, and pedal home again in the evening.

In spite of the small size of the wheels, it is said the machine is geared sufficiently high to attain a speed of twenty miles an hour on level ground, and that it is constructed strong enough to support a man of more than the average weight.

First American Cat Had Teeth Like Daggers

All modern cats, from tabbies to Angoras, are believed by Paul C. Miller, associate curator of paleontology at the University of Chicago, to have descended from a prehistoric feline whose bones he found recently in Nebraska.

For thirteen summers he searched for the big cat of antiquity he believed had roamed over the western plains 10,000,000 years ago. His search ended in the basin of Hat Creek, Sioux County, where he discovered an almost perfect skeleton of the extinct animal. Measuring nearly four feet in length, it possessed powerful dagger-sized teeth to tear its prey.

Speed Boat in Somersaults gives Water Thrills

Speed Boat in Somersaults gives Water Thrills

Something different in speed craft appeared recently at a Florida resort in an outboard motor boat that rolled over in somersaults at full speed without injury to the pilot. In that respect the boat is somewhat similar to those used by the Eskimos who run them completely over in their frail shells and bob out of the water again. The boat is so built that the interior is dry and the occupant is securely kept from falling out.

523 Chrysanthemums Bloom on a Single Stem

Five hundred and twenty-three chrysanthemums growing on one plant! With the nourishment brought from the ground by a single stem, a prize plant, belonging to the royal family in Japan, produced a whole roomful of blooms. A framework of light bamboo held the stalks in such a position that the plant appeared to be a huge pyramid of shaggy flowers.

Japan is noted for its chrysanthemum beds, some of the finest being found in the Hibiya Park, in Tokyo, where the unusual plant with its half-thousand blooms attracted crowds when it was exhibited recently. The chrysanthemum originated in the Orient. They were first found in China.

523 Chrysanthemums Bloom on a Single Stem

The Frontispiece

The picture by Mr. Kanu Desai, reproduced in the frontispiece depicts the popular "Garba" dance of Gujrat, which is joined by all classes of women. It usually takes place in a courtyard by the side of a road. The women sing old folk-songs and go round and round to the accompaniment of the music. The assemblage of colours, movements and sounds make it one of the most picturesque scenes of Indian life in Gujrat.

Jute in Bengal

By PRIYANATH SEN

IT is a welcome sign that the importance of jute to the economic life of Bengal is being more generally recognized and there are attempts to study its cultivation and trade from the national point of view. In the October (1929) number of the *Modern Review* a member of the Department of Economics of the Dacca University discussed the question of restriction of production of jute. He apparently does not approve of the Congress joining hands with speculators and middlemen in Calcutta to bring about a reduction in cultivation. He holds that these classes of jute dealers are from time to time engaged in spurious attempts to bring about reduction in out-turn and thereby to raise prices in order to profitably dispose of large stocks which they put by when jute sells at very low rates. As I had something to do with the Congress work in this direction I think the position should be cleared. The Congress as far as I know joined hands with no one in carrying on the propaganda for the restriction of jute cultivation. As the writer himself acknowledges the late Mr. C. R. Das fully recognized the importance of guiding the cultivators in the production of jute so that the best value might be obtained from the monopoly of Bengal in the article. That the people of this province are in sore need of it may be seen from the severe economic depression of the last three years owing to the fall in jute prices. Under the circumstances the first step undoubtedly is to curtail cultivation in order to give the producers the whiffling seen to the consumers. In this good success was achieved in Mr. Das's time when he seen from the jute prices of the season 1917-26. But tempted by the unprecedented return obtained that year the peasantry took to unrestricted sowing next year and the arrivals in Calcutta (excluding the quantity that reached Chittagong) came up to the enormous figure of 127,011 bales in the season 1926-27 (Vide *Jute Trade Journal*). This was over production by at least 25 per cent. But to think that prices fell in consequence immediately the new season began, is wrong. The Government estimate of production was only 108 lacs of bales for that year. The total quantity did not come up from the interior all at once and time had to pass to bring down the prices from the very high level there had reached during the previous season. The highest point reached by first grades that year was Rs. 130 in the last week of October 1925. Till the last week of January 1926 the prices soared above Rs. 125 and then they gradually fell. Even then it was the natural downward movement at the end of the season when consumers' requirements had been satisfied. It could not of course, be known before the end of June that the coming crop was going to be an unprecedentedly large one. Only about this time the big jute firms with agencies in the interior could perceive through their agencies that the sowings had expanded enormously. In the first weeks of February, March, April, May and June the prices corresponded fully to the above course of events. They were respectively Rs. 115, Rs. 102, Rs. 110, Rs. 82 and Rs. 88. Just at the beginning of the new season of 1926-27 there was a slight rally, the

quotation reaching even Rs. 90 and here the speculator perhaps got a chance. But as soon as the preliminary forecast was issued a rapid downward movement began again. By the second week of August 1926 the low figure of Rs. 58 was reached. The collapse was complete and from that time the prices have seldom gone above Rs. 70. Only for a few days they reached above Rs. 80 this year (1928) but that was also in anticipation of a curtailment which has really taken place but is not large enough to be effective. It is wrong to go by the average price of the Calendar year or even of a season. True indications of a year's supply and prices cannot be had before the year is very well advanced, and the markets fully correspond to these conditions. Another reason why the writer in the *Modern Review* has not been able to read the situation correctly is his taking single years. Low production of jute continually for four years previously and a larger demand for jute due to revival of industries in foreign countries after the War brought about a dearth of raw material and unusually high prices were paid in the season 1925-26. The trade grew nervous that the shortages may be permanent and made urgent representations to Government. The situation was however fully relieved in the following year by enormous over-production. In fact the pendulum swung full distance to the other side and the whiffling passed on to the consumers and it has been so till now. Learning by their experience of the previous year the mills both on the Hooghly and in Dundee have put by large stocks. It is stated that the former hold nine months' stock in advance and the latter seven months. Otherwise the output this year (1928), estimated to be below 100 lacs of bales would certainly have raised the prices much higher than what they are now (November 1928) namely a rupee or two below Rs. 10. The fact is the mills are in such a position that they can wait but the cultivators cannot.

The average world demand, another point raised in the article, certainly hovers round 100 lakhs of bales. There are now 30,000 looms in India and an equal number abroad. Both groups taken together have consumed just below 90 lakhs of bales during the post-war period. Of course, the number of looms did not rise all at once when the War ended and allowances must be made. To the above amount must be added 5 lakhs of bales, the estimated domestic consumption of India. This gives a world demand of about 95 lakhs of bales. If five years averages are taken for periods just before the War, throughout duration and immediately following it, the total output, as estimated by the Indian Jute Mills Association and supplied to the Department of Agriculture comes up to the following figures. Another five years' figures bringing up the period to the present year (1928) are also given. The amounts are in lakhs of bales.

Pre-war—9200

Post-war—8000

War Period—8312

Next 5 years—10324

The first period has been taken to extend from 1909 to 1913 the second from 1914 to 1918, the third from 1919 to 1923 and the fourth from 1924 to 1928. This (1928) year's total output has been taken from the jute forecast as the trade figures are not yet

available. The margins between the two sets of figures undoubtedly represent the stocks that are invariably left. This estimate is also corroborated by the movements of prices during the last three years. The supply and demand just before the War were almost on the same level. During the War the necessity for sacking for sand-bags kept the demand at almost the same level. Just after the War this demand disappeared but the industries in the belligerent countries had not revived, so there was less consumption. During the last five years matters have greatly improved. But as there has been much over-production latterly this has greatly depressed, as I explained above, the prices. For, after all it is the simple economic law of supply and demand which governs the situation. What the speculators can do is to influence the position for only a short time. When the final forecast was issued this year, (1928) for three days one group began to bear the market and kept down the prices in the future market. The opposition group of Bulls acting in the other way then got the upper hand, though temporarily, for circumstances were in favour of the former group. As the result of these operations however the leader of the second group was down by about 95 lakhs of rupees though the amount included other losses. The Bears have made up their losses for accumulated stocks; out-turn this season and some other factors are acting in their favour. The consumers have the whiphand fully now. The writer however makes a mistake in stating that there is no organized future's market in Calcutta. The Bhitari Bazar or the North Bengal Jute Association were not the only institutions of the kind. The leading body is the East India Jute Association Ltd., of which I was the first Secretary. It has rules of business drawn up on the lines of the Cotton Future Market of Bombay and is under a Board of Control of the Indian Chamber of Commerce. As long as I was in it (for about six months) the business was done regularly according to the rules. What is happening now I cannot say.

The writer sought to arrive at the amount of world demand from the statements of two presidents of the Indian Jute Mills Association. Not being in touch with trade the writer does not realize that such statements are made only with a purpose and they are at best very unsafe guides. For their purpose 80 lakhs of bales may be sufficient to meet the world demand on one year. On another this quantity may be hopelessly short. An indication may, to some extent, be had by reference to the recent decision of the Indian Jute Mills Association, in spite of repeated protestations that there is no additional demand, to extend the weekly hours of work of their constituents from 54 to 60. It is now stated that excess orders which the Continental mills are securing on the increase of world demand for jute cloth would otherwise be hopelessly lost. This extension of hours of work of the Indian Jute Mills would mean an increase of 6 per cent. in the total requirements for jute. It is held however that the action of the Indian Jute Mills Association would have a depressing effect on the new Mills that are being started in India and on Continental production. But at the same time it is admitted that there is a rapidly growing demand for burlap, the term used for jute fabrics in America. It may also be pointed out that it is not the old established concerns which

can always hold their own against new competition. There is therefore no reason for discouragement of the purely Indian enterprise which has taken this direction. All these factors point to the fact that the world demand for jute is certainly not going to fall below 100 lakhs of bales any more. To be guided by statements of presidents of Jute Mills Association whether of India or of other countries in matters like these, or to be guided by discouraging arguments mentioned above with regard to jute mill industry would certainly be a mistake. In the same way it is hardly worth while to take seriously the Secretary of the newly started Bengal Jute Dealers' Association. None of these people can be or are disinterested counsellors.

Those who took up, on behalf of the B. P. C. C., the question of jute cultivation fully know how far restriction is useful and where it should stop. The language of the Congress propaganda was quite clear. Neither a big nor a continued curtailment was advocated. Restriction was advised just to extricate the cultivators and the people of Bengal in general, from the present serious economic depression. Perhaps I may point out that more than 75 p. c. of Bengal's income is derived from jute. It forms 62 p. c. of the exports from Calcutta, through which pass all large amounts of commodities from other provinces. For the last three years the proceeds from the sale of jute has fallen by nearly 40 p. c. As almost every class of people of Bengal derive their income through distribution of money received by the sale of jute, the fall on this head is reacting universally. There is in consequence serious hardship all round. It is to remove this that the B. P. C. C. renewed the efforts of the Congress initiated by the late Mr. C. R. Das. If some of the speculators find it convenient and want to support the movement the B. P. C. C. would gladly welcome them. On the other hand, the least defection on the part of any one of these would be severely dealt with, by means which the B. P. C. C. fully possess. The Congress programme in this direction does not consist merely of restriction. It is advocated only as a temporary measure, and would not be necessary for more than a couple of years if properly carried out. The main object lies in educating the cultivators to control the prices. And I may mention that thirty lecturers are being trained to carry on the propaganda with the help of magic lanterns. An organization is also being built up throughout the jute growing area which, as far as I know, people of all shades of opinion shall be invited to join.

Every one will admit that there is great ignorance amongst us about the production and trade in jute and its economic bearing on the life of all classes in Bengal. I myself belong to Dacca and my country home is one of the principal jute markets of the Dacca district. I am directly interested in good prices being fetched by jute. But though I have lived all my life in Dacca and in the midst of important jute growing areas, I came to know of the economic importance of the commodity when in Calcutta. I have not found any of my class or others any better. It is only a thorough knowledge of this matter which can create the interest necessary for proper handling of the question. I, therefore, gladly welcome the article in the *Modern Review* though I had to differ from it on points. November 18, 1928.

By BENARSIDAS CHATURVEDI

Advice of Tagore and Sastri to Indians Overseas

There is a striking similarity between the advice that Rabindranath Tagore gave to our countrymen in Canada and that given by the Right Honourable V S Srinivasa Sastri to Indians in Kenya. Here are some extracts from the Poet's speech full text of which appears elsewhere in this Review.

"It is a great joy to me to find that here in this distant land you still keep up your own religious faith and do not neglect your Sikh religion. That is the right thing to do if you want to remain in this distant country with moral character and good social and family traditions such as those which still remain in India itself.

"You must keep the spirit of your religion and not merely the letter of it. It is the moral value of your religious faith that is unchanging. Its outward observances may be modified in order to meet the new conditions of Canadian life but on the other hand, there should be no change in the great moral injunctions which Guru Nanak and all the Sikh Gurus gave you. If you can thus fulfil the spirit of your religion you will be able to unite India and Canada together in your own lives and in the lives of your children. The best Canadians will understand you and will also respect your religion and thus there will be a growth in international friendship and goodwill.

"You must remember that you are guests in a new country and you have to observe the first law of hospitality, which is to accommodate yourselves as far as possible and pay every consideration to the manners and customs of this new country where your own children are being born and where

you yourselves have elected to live. This is a necessity in every country where people emigrate if goodwill and friendly feelings are to be observed. This does not mean that you are to alter all your own good customs and manners of living, but rather that you are to seek at every point to find a common meeting-place where your own life and the Canadian life coincide. To put what I wish to say in two words, you should do your very best to prove yourselves "Good Canadians."

Mr Sastri in his speech on Indians overseas delivered under the auspices of Kenya Central Indian Association spoke the following words:

"Now another word, if I may venture to do so. You are in a country very different indeed from India. And if one may speak with a certain amount of freedom, you are upon the whole, believe me, better off here than thousands or millions of your countrymen in India. In this country where nature and other conditions deriving from nature seem rather to favour you, your best interests will be safeguarded if you seek to transform yourselves as soon as may be into citizens of Kenya, adapt yourselves to the new conditions and the strange environments, and in as many ways as possible get accepted as desirable fellow-citizens by those with whom you have come to dwell.

"I am as much as any of you here proud of India, proud of her culture and civilization, proud of the high character of her men and women. It is not in these vital respects that I ask that you take yourselves away from your moorings. Be Indians in your outlook upon life, be Indians as to the value of individual character; be Indians in your religious tendencies and in your spiritual

aios. But in material circumstances, in outward ways, in adaptiveness to the new conditions there is no need at all why you should refuse to be moulded by your environments."

May we hope that our countrymen in other colonies also will take this advice to their heart?

Reception of Mr. C. F. Andrews by the Sikhs in Canada

Friends of Mr. Andrews, and they are found all over the world among Indians Overseas, will be glad to learn that Mr. Andrews has been able to win the hearts of our people in Canada also. Here is an account of his reception at Vancouver by the Sikh community as reported by a Canadian paper.

Rev. C. F. Andrews, "the man with the loving heart" was welcomed at Vancouver on Tuesday by the members of the Sikh colony.

Headed by officers of the Khalsa Diwan Society, the name under which the religious organization of the Sikhs is conducted here, several scores of Indians greeted Mr. Andrews effusively at the Great Northern depot and escorted him in a floridly decorated car to the Sikh temple on second avenue.

On the steps of the temple his admirers placed about the neck of the gentle humanitarian teacher and missionary a wreath of flowers. Then, all removing their shoes, they entered the temple, and an address of tribute to his self-sacrificing labours in behalf of the people of India in all parts of the world was read to him. Mr. Andrews afterwards spoke to the assembly in Punjabi.

"He is a man of true and loving heart," said Munsha Singh, member of the Khalsa Diwan Society, well known for his services as interpreter in the courts. "He knows no difference among men because of race, religion or colour. He is the same to all."

The Great Northern depot presented a picturesque scene as the great turbaned Sikhs assembled to meet the noted teacher. With the men were a number of brightly-clad women and children, who in Oriental fashion, kept to the background while the menfolk greeted "the man of loving heart".

A fleet of motor cars drove the visitor through the downtown streets to the Temple, where, after a picture had been taken, the reception was held. An Oriental orchestra

played its plaintive airs, to some of which there was a vocal accompaniment. Ooo of the priestly functionaries stood behind the altar, to which all the Sikhs did full obeisance on entering. The priest or leader intoned several passages from a great book of wisdom, which rested on the back of the altar, before Puran Singh, Secretary of the Society, read to Mr. Andrews, in English, the long address of welcome which had been prepared for him. Throughout the gathering the men sat noshed on the carpeted floor in informal groups, while the women gathered in a separate group on the far side of the hall.

Mr. Andrews has now left Canada for Trinidad and British Guiana. While in Canada he tried his utmost to remove the misunderstanding that has been created by Miss Mayo's *Mother India*. In his cable to Pandit Motilal Nehru Mr. Andrews urged for the appointment of an Agent of the Government of India in Canada. No doubt the suggestion deserves consideration at the hands of the Indian public and the Indian Government. Mr. Andrews is very hopeful about Canadian Indians getting full rights of citizenship in the immediate future but we confess we cannot share his optimism. We think that day is still far distant. The stories of inhuman indignities suffered by our people in Canada are still quite fresh in our memory and it will take a long time to forget the Komagata Maru tragedy.

Service for Educated Indians in the Colonies

Every week I receive two or three letters from educated young men desirous to proceed abroad to earn their livelihood and to serve the cause of our people in the colonies. It is really encouraging to see this spirit of adventure among these people but how to arrange for their emigration and settlement is a difficult problem indeed. The Government of India alone could do something in this direction but they have never paid any attention to this question. During the days of indentured slavery their only business was to supply cheap labour to the colonies and after its abolition their Emigration Department, which is huddled together with Land Education and Health, has followed a policy of drift.

Of course, they have done something for our people in South Africa, Malaya and Ceylon by sending their agents to these places and their efforts in that line deserve

five schools, and instructs the Governor to proceed with the scheme without even waiting for the necessary legislation. Yet it was 1919 before the first of these schools was built, and the second has not been started even now. Meanwhile, in 1913, at the request of the European elected members, Indians were excluded from the schools of Suva and Levuka. In 1914 the Council of Fijian chiefs took pity on the Indian children and suggested that they should be admitted to the Fijian schools; but the Government would not agree.

"Of the last ten years little need be said. The sequence of events is fresh in the memory of all, and much has already appeared about them in our columns. Nothing whatever was done until the Royal Commission in 1926, and its recommendations were shelved pending the appointment of a Director of Education. A year elapsed before anyone was appointed to this office, and a second year elapsed before his proposals were put before Legislative Council; even then the Ordinance was not passed, but consideration of it was again postponed and another Commission appointed. The Director of Education estimated that it was necessary to spend £ 27,000 on Indian Education this year, and a further £ 60,000 in the course of a few years: the Government proposes to spend £ 3,000 this year, and a further £ 25,000 at some future date as yet unspecified. Meanwhile £ 13,000 is spent on building a most admirable but quite unnecessary new hostel for the European Girls' Grammar School."

We are grateful to Doctor I. H. Beattie, the Editor, for this exposure and draw the attention of the Government of India to this miserable state of affairs.

A timely advice by an East African Journalist

Mr. B. N. Anantani, Editor of the *Zanzibar Voice*, East Africa, gave utterance to the following sentiments in his interview at Simla with a representative of the A. B. Patrika:

"Mr. Anantani deplored greatly the apathy and ignorance in India on question of Indians abroad. Solitary journals and institutions showed certain amount of enthusiasm to study the problem. Members of the legislatures hardly cared, even to understand it. The Government of India from time to time does make representations and send out help in the shape of delegations which is useful to do patchwork. This could hardly solve this problem.

"Finally, he appealed to India's leaders in and out of the legislatures to study well the problem of the Indians in Greater India and to chalk out a definite and clearly defined policy to have it decided from the powers that be as to what was to be position of so many millions of Indians residing outside India within the Empire. Are they going to remain within the Empire with any human rights which can keep them proud of being British citizens or not, should be the question before them for an immediate solution. He said that there was a great scope to develop India's trade with East Africa in general and Zanzibar in particular. Tanganyika and Uganda cotton can still be better placed in India. The coir rope industry in Zanzibar, which is a great coconut producing centre, will provide an excellent scope for Indian investments. What he wanted India to do was to study questions more thoroughly. Failing this, he feared the only province suited climatically and geographically for Indian colonization would be lost to Indian enterprise. The only remedy to get rid of the present unemployment of the Indian intelligentsia was to secure colonization with proper rights of citizenship. It is for Indians and the Government of India to see to that in time and with greater sincerity and enthusiasm."

Mr. Anantani has done well in speaking out quite plainly and his example ought to be followed by other colonial Indians who come to India occasionally but who neglect the opportunity of doing a little publicity for their cause.

hypothesis can they explain the fact that, whereas periodical changes in the personnel of the Government, to be brought about by the electorate, are considered indispensably necessary in England, in India, where the system of government is not a benevolent despotism, it is not considered necessary. No doubt, in India, too, no one holds the office of Governor-General, or Governor, or Executive Councillor for life. But, good, bad or indifferent, every such officer ordinarily holds office for his full term, and some have served under two or three British cabinets belonging to different political parties. That is to say, a Governor-General appointed by a Tory ministry may be and is found to be quite the right sort of man by a Liberal or a Labour Government. In India any British ruler is the pink of perfection in the opinion of all British political parties. That is so, because the object of all British political parties is to remain masters of India and to exploit to the full its material, intellectual, moral and muscular resources.

An objection may be raised that in Britain also the permanent officials and the magistracy are not changed after each general election. True. But there they are not the masters but the servants of the people. They only give effect to the laws made by others in Parliament. Here in India, the highest and higher governing officers are also law-makers. The power of the veto and of issuing ordinances make them more powerful legislators than the legislatures of India. These men are also judges. For, they can deport, intern and send men to jail without recourse to trial by courts of justice.

Supposing all Indians, even the ablest and best, are noodles and nincompoops and utterly selfish, without an iota of public spirit and patriotism, and, therefore, they are unfit to have real representative government, what stands in the way of the British people—the omniscient and perfectly altruistic trustees of the Indian people—what stands in the way of the British people placing India under entirely new cabinets, in the central and provincial governments, with new Governors General, Governors and Executive Councillors, after each general election? If the British rulers of Britain are fallible and liable to be replaced (and are generally replaced) at the will of the British electorate, after each general election, why should not the same rule be observed in

the case of the British rulers of India? Why are they deemed infallible in theory and practice?

Not that we want such a method of constituting Governments in India. On the contrary, we want as full a measure of ever-expanding self-rule as any people anywhere in the world have. The questions asked above are meant simply to show that the self-styled trustees of India are frauds and their trusteeship is a lie.

India and the Labour Government

On the accession of the Labour Party to power, there has been some speculation as to whether the Labour Ministry will do anything for India. It may or may not do anything—we should not expect it will. In any case it is unmanly to cherish any hope. The cherishing of such hope would add to the number of political idlers, weaklings and dupes. Nations by themselves are made. The surest means of making any body of men in power just and dutiful is to practically prove to them that injustice and neglect of duty will land them in pecuniary loss and various other kinds of trouble and inconvenience, amounting, it may be, even to disaster.

All British parties are agreed that India is not a party question. Which means that it is no party's business to please India by doing good to her. But, of course, it is the business of all parties to befoul India, whenever necessary. That may be one of the reasons why various Labour members have in the past made "friendly" speeches relating to India, and why Mr. Ramsay MacDonald wrote "The Awakening of India."

Critics and doers are different beings. The man in office and the man in opposition are not the same person. Out of office, a man has to promise the moon to the electors in order to get into office. Even our would-be M. L. A.'s and M. L. C.'s do it. But as we Indians have no votes for returning members to the British Parliament, the reason why members of the British Labour Party promised the moon to us, was probably to keep us from "mischief" as long as possible—to prevent making ourselves a nuisance as long as possible.

Even *The Morning Post* of London, not to speak of other papers, has praised Mr. MacDonald's choice of the Cabinet. That may be an indication of what to expect of

speech in that trial, and there is also Lord Haines Chelmsford Club speech, though Russia is not mentioned therein.

Blessed be statecraft and diplomacy

Another Reference to Some Meerut Accused

In our note on the Viceroy's justification of the Public Safety Ordinance, attention has been called to passages that may create prejudice against some at least of the accused in the Meerut case. Here are other passages from the same speech, which are objectionable for the same reason.

We have all along maintained that the ordinary law offered only a partial remedy in that one of the necessary conditions of its successful operation was a delay which in our view was dangerous. We had accordingly introduced the Public Safety Bill, of which the purpose had been generally assumed to be that of procuring the deportation of particular individuals. In the meantime while the Bill was still awaiting discussions in the Assembly, we decided on the evidence available to us to arrest and prosecute those persons among others under the ordinary law.

It is finally alleged that the evidence of a repressive policy is to be found in the fact that the Government has thought it necessary to prosecute certain individuals for offences against the State. On what does such an allegation rest? If the Government is right, as all sane persons would admit, to prosecute men who resort to overt action in violation of the law by what reasoning can it be judged wrong to take steps against those who make speeches to enter into conspiracies to inspire others and perhaps less prudent men to such violation? The assertion of Law is the clear duty of any Government, and what any Government has done is to bring to trial in the ordinary courts of the land persons who in its judgment have committed offences against the State or against public tranquility.

The system of judicial administration in India is a very defective and faulty one. The executive in some cases sanctions arrest and prosecution, prosecutes, and also practically sits in judgment on the persons arrested and prosecuted. For the trying magistrates are directly under the executive branch of Government. What is wanted is a judiciary, thoroughly independent of the executive, from top to bottom.

"India's Chief Ambassador I"

Sir B. N. Mitra, presiding at the Chelmsford Club dinner to the Viceroy, referred to His Excellency as "India's Chief Ambassador." That was not a correct description.

No official, however high his position, can be India's ambassador so long as India is a subject country. When India becomes perfectly free and has a national government, then the head of the government may be her ambassador.

Indian Leadership of League Delegation

It is no doubt better that an Indian official of the ability and public character of Sir Mahomed Habibullah should lead the League of Nations delegation than that an Englishman should do so. But what is wanted is that the delegation should be led by a non-official Indian of undoubted ability, independence and public spirit. When India becomes free and has a national government, the difference between official and non-official need not be always insisted upon.

Mahatma Gandhi on Search for Proscribed Books

Commenting on the search of Seth Jammal's Bombay residence for a copy of Mr. Sundarlal's Hindi history of British rule in India, which has been proscribed by the U. P. Government, Mahatma Gandhi writes in *Young India* :

The action of the police in searching Seth Jammal's house and offices, in spite of his assurance that the book was not in any of them, affords additional justification, if such were wanted, for the language used by him. The object of the search was clearly not to find the book, but to insult Jammal. The proper answer to this insult is for everyone who has Pandit Sundarlal's volume in his possession to inform the police, in his or her district of the fact of such possession, and challenge a search or prosecution or both. If this course is adopted by the public, and if there are many copies still untraced, the Government will soon discover that it makes of itself a laughing-stock by continuing the fruitless searches of numberless houses, searches of imprisons and the like, are effective only so long as they frighten the people.

Books are proscribed on the alleged ground of their containing seditious matter. So far as Mr. Sundarlal's book is concerned, which we have not seen, it has still to be proved in open court that it is seditious. It is understood that its publisher has appealed to the Allahabad High Court against its proscription. Is it legally correct under the circumstances to search for and seize and confiscate copies of it in the meantime?

Persons who paid for and bought the book, did so before it had been proscribed. They did not know that it would be proscribed. In the circumstances, is it right to harass them and confiscate their property? It would be only fair and equitable for Government to pay the price of the copies taken away from the purchasers.

Ignorance of the law is, of course, no excuse. But there is no law which contains a list of the books already proscribed and to be proscribed hereafter. Theft and swindling and murder and assault are offences in all civilized countries. But what is sedition in one country may not be sedition in another. And even in India Judges have differed as to what is seditious and what not. But supposing it were easy to decide definitely what is seditious, nobody even then would be able to say before reading an unproscribed book whether it was seditious or not. Hence it does not seem just or even good policy to harass or in any way penalize those who purchase a book before its proscription.

Proscription does not convince, though it may silence those within reach of the executive of a country. There are private individuals who, unable to meet the arguments of their adversaries, use the *ad baculum* argument against them to strike them down. Figuratively speaking, proscriptions and the like are *ad baculum* arguments used by the State.

Rabindranath Tagore on Non-co-operation

When the necessity, usefulness and wisdom of thorough-going Non-co-operation are again being considered, indirectly for the most part though, the extract printed below from a letter written from Paris on September 7, 1920, to Mr. C. F. Andrews by the poet, Rabindranath Tagore, with its reference to Mahatma Gandhi, may remind us of our duties. This letter was published in *The Modern Review* some years ago and has now been republished in "Letters to a Friend" (George Allen and Unwin Ltd.)

Let us forget the Punjab affairs—but never forget that we shall go on deserving such humiliation over and over again until we set our house in order. Do not mind the waves of the sea, but mind the leaks in your vessel. Politics in our country is extremely petty. It has a pair of legs, one of which has shrunk and shrivelled and become paralytic and therefore feebly waits for the other

one to drag it on. There is no harmony between the two, and our politics, in its hoppings and totterings and falls, is comic and undignified. The entreasy and anger, which alternately are struggling to find expression in the ludicrously lame member of this tragic partnership, both belong to our abject feebleness. When Non-co-operation comes naturally as our final moral protest against the unnaturalness of our political situation, then it will be glorious, because true; but when it is only another form of begging, then let us reject it.

The establishment of perfect co-operation of life and mind among ourselves must come first, through sacrifice and self-dedication, and then will come in its natural course the Non-co-operation. When the fruit completely ripens, it finds its freedom through its own fulfilment of truth.

Our country is crying to her children for their co-operation in the removal of obstacles in our social life which for centuries have been hampering us in our self-realization. We need co-operation in the sacrifice of love, more than anything else, to prove to our country that she is ours; and then we shall have the moral right to say to others; "We have nothing to do with you in our affairs." And for this, all the moral fervour which the life of Mahatma Gandhi represents; and which he, of all men in the world, can call up, is needed.

Mahatma Gandhi and, under his lead, the Congress have laid stress upon the carrying out of the constructive programme, including the removal of untouchability. "The removal of obstacles in our social life," spoken of by the poet, includes the constructive programme and much besides. So far as Gandhi is concerned, his profession and practice are the same. But it cannot be said that the Congress, which at present is practically the same as the Swaraj party, has shown much earnestness in carrying out the constructive programme. On the contrary, that party's activities furnish an illustration of what the poet wrote in the next paragraph of his letter, which runs as follows:

"That such a precious treasure of power [i.e., the moral fervour which the life of Mahatma Gandhi represents] should be put into the mean and frail vessel of our politics, allowing it to sail across endless waves of angry recrimination, is terribly unfortunate for our country, when our mission is to revive the dead with the fire of the soul. The external waste of our resources of life is great owing to external circumstances; but that the waste of our spiritual resources should also be allowed to happen on adventures that are wrong from the point of view of moral truth is heart-breaking. It is criminal to turn moral force into a blind force."

Council Attendance

Under the leadership of the late Mr. C. R. Das there was a departure from strict Non-co-operation in the form of the council-entry

from its working in future. But in order to gain the great object of self-rule which we have in view, we must decide to forgo these small advantages. Ten years of self-rule would bring us more progress and welfare than a century or more of other-rule. What is more, even if the tangible advantages of self-rule were temporarily smaller than those of other-rule, there would be more than enough compensation in the accession of self-respect and manhood, development of ability to manage public affairs, and the growth of self-confidence.

For these reasons Pandit Motilal Nehru's advice seems to us wise and timely.

Hand-spinning Among Mysore Agriculturists

The Week contains an account of what has been done successfully in Mysore to introduce hand-spinning as a supplementary occupation amongst agriculturists, by Government aid and encouragement, in localities where there are facilities for such an industry. This is how hand-spinning commenced.

The special organizer sent by the All-India Spinners' Association started work on 1st November, 1927. Sixty-two spinners, mostly Adi Karnataka weavers, were willing to re-start working their charkhas, if raw cotton was advanced to them and an undertaking was given that the yarn made would be purchased. When they found that the special organizer actually meant business, spinning spread rapidly to the surrounding villages. The average output of yarn for the first three months was about 500 lbs. and the number of charkhas had increased to 393 at the end of this period. The production during the succeeding three months was 742 lbs. and the number of charkhas rose to 560. By the end of June 1928 the number of charkhas had risen to 1,004. The total weight of yarn spun up to the end of August 1928, for the ten months since the commencement of operations in the centre was 7,741 lbs. and the price paid for this yarn is Rs. 6,711.

After spinning had become fairly established, advances of raw cotton were discontinued and the spinners were required to buy their own cotton. Advances of money were also discontinued in May 1928. The cotton spun in the early months was very coarse, the count ranging from 6 to 8 ball of 13 tola. The purchase by annas per also discontinued with a view to induce the spinners to spin higher counts and the purchase at present is effected mostly by length. The count of yarn spun at present varies from 10 to 18. The average production of a spinner for a month's working during spare time is about 2 lbs. and her daily earnings vary from $\frac{1}{2}$ to 1 anna a day. Small as this amount would seem, there are 1,000 spinners putting three or four hours of work at the wheel

Along with the introduction of hand-spinning in the centre, arrangements were made with some of the looms at Ballanval to weave the yarn into cloth. At first only towels could be made with the yarn. As finer yarn was produced, sheets, coatings and turban cloth was made.

The following paragraph gives an idea of the earnings of the weavers and their hours of work:

The total sales by the end of June amounted to Rs. 3,777, of which Rs. 714 was sold through the Stores Purchase Committee and the balance to the general public. The Stores Purchase Committee have since placed an order for about 15,000 yards of double thread coating cloth and 696 turbans with the centre and about half the production is absorbed by Government departments at present. Careful statistics are maintained of the earnings of weavers. It is found on an average that they weave about 62 yards of cloth a month and earn about Rs. 7 during the period. They work from two to three hours a day. A balance-sheet was struck at the end of June 1928. It was found that the working capital had suffered no diminution and it had on the other hand increased Rs. 132. The provision of Rs. 500 to meet any loss that might occur had proved unnecessary.

The Art of Article-"lifting"

In the last April number of *The Modern Review* we published an English translation of a French article by M. Romain Rolland under the heading "India on the March." Professor Kalidas Nag had obtained that great master's permission to publish a translation of the article in this Review, and that was stated in a prefatory paragraph signed by Dr. Nag. The translation was specially made for this Review.

Liberty has reproduced this translation in a mutilated form in its issue of June 23 last, page 19, without acknowledgement and without obtaining our permission. In this it has proved a true successor to *Forward*, which also lifted from our pages some articles by Dr. Sunderland and others without acknowledgement, though when Dr. Sunderland's book, "India in Bondage: Her Right to Freedom," was sent to it for review in December last by registered packet, it never noticed it. That was, no doubt, quite in keeping with its practice with respect to books sent to it from the Modern Review Office. For instance, when Major B. D. Basu's "Consolidation of the Christian Power in India" was sent to *Forward* for review, no review ever appeared; but immediately after the receipt of that book a leading article appeared in that paper containing extracts taken from the

minorities in other provinces, are entitled to the full consideration of their just and reasonable claims. But is complete rejection of the Report as an alternative to exaggerated demands the method of compelling its consideration? Does it not on the other hand show an unwillingness to face the facts of the situation from the broader point of view of the country? The Sikhs have the sympathy of every man who has a sense of justice and fairplay. If only, while making their demands they were to give proper consideration to the claims of other communities and also of the country as a whole, they would receive willing support from all quarters. I am sure it will not be too much to hope that they would reconsider their attitude and help in the achievement of national unity.

As regards the demands of the Muslim communalists, he observed:

The Muslim is worse. He got almost enough, but he wanted more. Unfortunately, however, in the process of wanting more, he began to demand too much. But I am not surprised at it. The section that has been, loudly proclaiming fantastic rights is the Simonite section of the Musalmans. It is mainly composed of men who never concealed their faith in the all-British Statutory Commission, although it has been unconditionally boycotted by all representative organizations, Hindu, Muslim and Sikh, in the country. They are men to whom the freedom of the country from alien rule comes merely as a bad second to communal privileges. However regrettable it may be, one is obliged to rule them out of consideration. Still there are persons in this section, like the Ah brothers, who do count. The fact that they have been led into the camp of national reaction is more tragic than anything else. The tragedy is that they are there without realizing it. For I believe that they have not yet surrendered their loyalty to the fundamental principle of Indian politics, freedom from foreign domination. And yet they are strengthening that very domination.

But this section alone, however vocal it may be, is not the whole Muslim community. It is not half as representative as it claims to be. It has been challenged by Nationalist Musalmans, who are very happily growing in strength from day to day. And it would have been successfully challenged but for the disorderly incidents at Calcutta in December and Delhi in April last. The Nationalist Musalmans believe in negotiation with the representatives of his own nation rather than in an appeal to those of the British. He would, therefore, suggest, as he did in April last, amendments to the Nehru Report, instead of applying to the British Government, directly or indirectly, for protection. Personally, I regard the amendments suggested by the Muslim League at Delhi as superfluous. But because I do not regard them as harmful, I would, in the interest of national harmony, earnestly plead for their acceptance.

When against this background, therefore, the Hindu reveals the impatience of narrow-mindedness, the picture becomes ugly. To take the Nehru Report again as an instance, the Hindu opposition to the communal settlement or to such modifications therein as are likely to increase its acceptability, is based mainly on academic grounds. Theories may be all right. Fidelity to the principles of political philosophy may be very admirable, but it seems to me that to insist too much on general constitutional or political theory is, in the present conditions, to neglect woefully the first and last necessity of contemporary Indian politics, I mean, the achievement of National Freedom.

This is why I do earnestly hope that, when the opportunity comes, my Hindu brethren will not be unwilling to respond to the advance made last April by the Muslim League, at Delhi.

As the editor of this Review presided over the last session of the Hindu Mahasabha, he might be expected to comment on the above extract from Dr. Ansari's speech. But the speaker's criticism of the Hindus is expressed in too general terms to make any comment practicable. One does not like to throw stones in the dark. The presidential address at the last session of the Hindu Mahasabha was meant to be an exposition of the Hindu attitude *vis-à-vis* Indian Nationalism, and to show that as a body the Hindus were true Nationalists.

Dr. Ansari's sobriety of tone is appreciated.

With respect to communalism in general, Dr. Ansari observed:

It is too harmful to be left to itself in the hope that it will die a natural death some day in the definite future. By dividing the nation into communities it is in the meantime killing each of them and protecting nothing but our slavery. It comes between us and our struggle for freedom. Communalism must, therefore, go. If there is to be action, the deck must be cleared. And no body of Indians can be expected to do it better or more effectively than you young men and women whose idealism is pure and who are free from prejudices.

Your first duty, therefore, is to carry on a relentless crusade against communalism as an active guiding principle of Indian political life.

A "Conceivable" Alternative Indeed!

London, June 22.
Reviewing the prospects in India in the light of Lord Irwin's speech and his suggestion that the new constitution ought to be a living organism with the power of spontaneous and unlimited growth, the "Manchester Guardian" advances a "conceivable alternative" to the old plan of progress dependent on dates and independent of events, namely:

An Executive should be appointed by the Viceroy or Governor from the Legislature and responsible, not to the Legislature, but to its appointer and vested with wide powers for the efficient conduct

of the administration even without the consent of the Legislature in case of need.

The paper expresses the opinion that such an Executive would in practice find it increasingly necessary to strengthen its position, by securing the support of a compact party in the Legislature thus gradually developing a Cabinet controlled by and responsible to the Legislature—(Reuter)

Indian newspapers have been spared the duty of commenting on this amusing suggestion of the *Manchester Guardian*. The *Englishman* has done it as follows

"The 'conceivable alternative' suggested by the *Manchester Guardian* to prevent plans of progress in Indian self government is not at all the sort of proposal one expects from that Liberal organ and conceivable" is the last adjective I should think of applying to it. If *Manchester* thinks to-day that a reinforced Executive appointed by the Viceroy, and responsible to him only would be welcomed by Indian opinion *Manchester* must be very poorly informed.

Further it is difficult to see why an Executive completely independent of the Legislature should in practice find it necessary to secure the support of a compact party in the Legislature.

Sir William Morris's Educational Appointment

Sir William Morris ex-governor of the U. P., has been appointed principal of Armstrong College, Newcastle. Some time ago Sir Thomas Holland of Munition Board owes fame, was appointed principal of the Edinburgh University. Does the appointment of men with Anglo-Indian traditions to high educational offices in Britain bode any good to that country?

Mr Lloyd George on Mahatma Gandhi

In a speech to the Welsh Calvinistic Methodists Mr Lloyd George indulged in high praise of Mahatma Gandhi which he no doubt deserves, though Gandhi's most devout *bhaktas* will admit that he is not the greatest Indian ever produced. But why of all men should the Welsh politician praise Gandhi? He must have had some object in view. But Gandhi, though a saint is not a simpleton. He is too wary to be caught in any trap. He will not walk into any politician's parlour.

Mr Lloyd George was mistaken in thinking that Christianity was permeating the life of the cultured classes in India. But he was right when he observed that a great obstacle to the progress of Christianity in India was the greed and hatred and strife of Western Christian nations.

A Myth About Lord Irwin

Writing in the *English Review* Mr. H. A. L. Fisher makes the plea that Lord Irwin should have a further term as Viceroy, because "Lord Irwin's elevation of character and conspicuous ability has deeply impressed the Indian mind and a change at this juncture will be very unfortunate." But Lord Irwin is still far from completing his term of office. It is not at all necessary to decide just now who should be the Great Moghal during the next term. The Indian view is that so long as India is ruled by a foreign bureaucracy instead of being self-ruling, it is a matter of indifference to her who the head of the executive government may be. As for his lordship having impressed the Indian mind, it is perfect news to us.

Anything But Self-rule for India

The *Manchester Guardian's* "conceivable alternative" has been noticed above. Englishmen love to delude themselves with all sorts of fantastic notions about the governance of India, which they think would make Indians immensely happy. One of these absurd fancies is that India is crying for a Viceroy of royal blood and "won't be happy without it." Do any chemical, physical, moral, intellectual, political and spiritual virtues, especially and invariably, characterize the royal blood in any country? Another is that the offices of Viceroy and Governor-General should be separated and two men should occupy the two thrones. And of course, India must pay for both of the twin gods. But financially sufficient unto the day is the one god thereof.

Unemployment in Britain and India

In Great Britain, to be employed is the rule, and hence, unemployment being the exception, exact statistics of the number of unemployed is available. The figures sometimes mount up to some 1,000,000. But in India unemployment is the rule and employment is the exception. So no statistical estimate of the extent of unemployment here is practicable—perhaps it is not thought desirable by Government.

It is the labourers in all countries who suffer most from unemployment. So the Labour Government in Britain has lost no time

in tackling the problem. But in India the problem is much more serious and urgent and vaster in dimensions. Will the British Labour Cabinet attend to it here?

Unemployment and poverty go together. India's poverty is phenomenal. Let Britain's present Prime Minister bear witness. Says he in "The Awakening of India":

"The people are the most industrious in the world; much of their land is fertile and yields rich crops; whenever a famine comes, they are stricken with starvation and die by the thousands, while millions are shattered in physical vigour. Sir William Hunter said that 40,000,000 people in India go through life with insufficient food; Sir Charles Elliot estimated that one-half of the agricultural population never satisfied hunger fully from one year's end to another. From thirty to fifty million families live in India on an income which does not exceed 3½d. per day. In July, 1900, according to the *Imperial Gazetteer*, famine relief was administered daily to 6,500,000 persons. The poverty of India is not an opinion, it is a fact. At the best of times the cultivator has a millstone of debt about his neck."—*The Awakening of India*, by J. Ramsay MacDonald, M. P., popular edition, pp. 102-3.

Mr. S. S. Thorburn, Financial Commissioner of the Punjab, declared that

"Seventy millions of Indian peasants are in such a condition of hopeless poverty that no reforms can do them any good. Testimony of a similar kind could be multiplied indefinitely"—*India: Impressions and Suggestions*, by J. Keir Hardie, M. P., Second Edition, pp. 3-4.

The following passages are taken from the *Report on Indian Constitutional Reforms*:

"Two dominating conditions will be quickly apparent to anyone who turns to the records and reports. One is that the immense masses of the people are poor, ignorant and helpless far beyond the standards of Europe" (para. 132). "The Indian Government compiles no statistics showing the distribution of wealth, but such incomplete figures as we have obtained show that the number of persons enjoying a substantial income is very small. It is evident that the curve of wealth descends very steeply, and that enormous masses of the population have little to spare for more than the necessities of life" (para. 135).

The Imperial Council of Agricultural Research

For a people who are so miserably poor, what is going to be provided first of all among the things recommended by the Royal Agricultural Commission is an Imperial Council of Agricultural Research, recently inaugurated by Lord Irwin. Indian peasants are evidently so well educated and so well-financed that all the agricultural researches hitherto carried out in India have been applied

to practice. And so, it seems, they were crying for more researches. That demand is going to lead to the supply.

The real fact is "that the immense masses of the people are poor, ignorant and helpless far beyond the standards of Europe," and are, therefore, unable to take advantage of agricultural research to any appreciable extent. Such research is undoubtedly necessary. But there is a mass of it yet unapplied. So according to the rule of first things first, the problem which should have been tackled before any other—at least simultaneously with any and every other—is the removal of the illiteracy and dense ignorance of the bulk of the male and female population of India, in order that, as desired by the Linlithgow Commission, their whole outlook on life may be changed.

But instead of this, we are going to have first of all something imposing, something which will tell the "civilized world" that great things are being done for the Indian peasant, something which will bring grist to the mill of some British "experts," some British manufacturers of agricultural machinery and implements, and others, including some educated Indians, in the shape of salaries, allowances, prices of manufactured articles, etc.

Floods in East Bengal, Assam and Burma

The floods in East Bengal and Assam are the most appalling and devastating within living memory. The district of Tipperah, Sylhet and Cachar are the worst sufferers. A very large area is still under water. It is impossible for men or cattle to live there. The area affected in Sylhet and Cachar alone is 5,500 square miles with a population of 17½ lakhs, the population of the worst affected area, which is 3,500 square miles, being more than 12 lakhs. Dead bodies of men, women and children have been seen floating on the waters of the rivers. Almost all the cattle in the affected areas have been destroyed and houses washed away. Thousands of people have been rendered homeless and foodless. Communications have been cut off. Helpless men, women and children have taken shelter on hill-sides, rail-roads, mounds, bunds, house-tops and tree-tops. Crops have been destroyed. Help of various kinds is urgently needed. The Governments of Bengal and Assam have

Increase of the World's Wealth

According to the League of Nations news sheets the world's wealth has been increasing. The majority of the world's population are in subjection to the minority. Is it meant that the subject peoples also have been growing in riches equally with the ruling nations? It is easy to understand that with the progress of scientific and mechanical knowledge and skill there must necessarily be a progressive development and exploitation of the natural resources of the world, adding to man's wealth. But the question is, what portion of this wealth falls to the lot of the subject peoples of the earth and the labourers of the ruling countries of the world.

So far as India is concerned, it is certain that more wealth is extracted from the bowels of the earth and obtained from the forests, cultivated lands, rivers and the animal creation than ever before. Nevertheless, the people of India are extremely poor. It is not enough that more and more wealth should be obtained from all sources. There should also be an equitable distribution of this wealth among all those to whom the sources of wealth naturally belong and all those who labour and otherwise contribute to the production of wealth.

Rights of the Masses and the Whitley Commission

Mr. I. B. Sen has been giving a series of educative discourses in College Square, Calcutta. In the course of one of them he is reported by the *Basumati* to have said :

(i) The abolition of private property and the consequent abolition of inheritance and of the wage system, (ii) abolition of parasitic middlemen in every sphere, (iii) the nationalization of the means of production, including land, mines, raw materials, machines and means of transport and (iv) production for the enjoyment of all but not for the profit of a few, are among the comparatively distant rights which, however, the workers in the cause of Swaraj must never forget in their pursuit of the immediate rights of the masses.

of inheritance appear to be based on natural justice. For instance, if a man inherits some bodily diseases, mental defects, disadvantages, etc., there does not appear to be anything wrong in his inheriting some compensating material wealth.

Mr. Sen passed on to mention the rights which the masses can immediately lay claim to.

Wiping out of certain classes of debts of agriculturists, right to employment and its corollaries, amplest maternity benefits, prevention of child mortality, minimum living wage fixed on a liberal scale, maximum working hours, old age pensions for the masses, right to as good an education as each child is capable of, abolition of untouchability, are among the immediate rights in which the masses should be educated and for which they should be taught to organize themselves and agitate.

This declaration of rights we can wholeheartedly support.

In conclusion Mr. Sen gave reasons and facts in detail to show why the labouring population of India cannot expect any appreciable advantage from the labours of the Whitley Commission.

Mr. Sen said that he did not mean that not even a crumb would be thrown at Labour out of the abundance ostentatiously displayed on the table of Messrs. Alexander Murray, Ibrahim Rahimtullah, Victor Sassoon, Ghanshyam Das Birla & Co. Some good would come no doubt from the commission counterbalanced nevertheless by the spirit of the Trade Disputes Act. But was such large expenditure during and after the sitting of the commission justified when no money was or would be available for years to give effect to even the acknowledged portion of the elementary rights of the masses?

What then could be their attitude towards the Commission? Let it alone. It should receive no attention from persons interested genuinely in the welfare of Labour who held the above outlined notion of the rights of the masses. The only attention it could and should receive was in so far as the advent of the commission served as an occasion for stimulating the education and organization of the masses to enable them to help themselves. Probably it was not possible to boycott the commission effectively any more than it was possible to boycott effectively the Simon Commission. But that was no justification for labour leaders diverting their energy from their main immediate duty—education and organization of the masses.

Byomkesh Chakrabarti

Memory of the tragic close of Mr. Byomkesh Chakrabarti's earthly career, which has now ended, fills the mind with painful thoughts. Gifted with a versatile intellect and great powers of application, he achieved brilliant success in his academic career.

The range of his intellectual interests and attainments will be evident from the fact that, after obtaining his M A degree from the Calcutta University, he taught in College such subjects as English, Mathematics and Physical Science. He then went to England to study agriculture at the Cirencester College. While in England he pursued legal studies also and was called to the Bar. Returning to India he adopted law as his profession and became one of the most successful and distinguished advocates of his time. He was Secretary of the Landholders' Association, President of the Bengal National Council of Education, Chairman of the Reception Committee of the special session of the Indian National Congress held in Calcutta in 1920 and President of the Bengal Provincial Conference. Towards the latter part of his career at the Bar, he turned his attention to banking and industries. He risked much and made sacrifices for the Bengal National Bank, which is now non-existent and which proved his ruin. Some of the men chosen to manage the affairs of the Bengal National Bank and the Banga Lakshmi Cotton Mills proved untrustworthy.

Mr Chakrabarti was for some time one of the ministers of the Bengal Government. He was an erudite Vedantic scholar.

Disarmament and World Peace

The Kellogg Pact has not completely outlawed war. Britain has made reservations, described in a previous issue of this journal, by which she would be able to have recourse to war to bring back to subjection any of her subject peoples if they tried to become independent by any means. Still, if that Pact and the proposed conversations between Mr. MacDonald and Mr. Hoover can prevent fresh future aggression on peoples who are not now subject to any of the predatory nations of the world, that would be some gain.

Keeping any people in subjection is a state of permanent aggression and warfare, something like a state of siege during war so long, therefore, as any country and people remained in subjection, it would not be correct to say that war had been outlawed.

It has been suggested that freedom of the seas and peace should be maintained by placing the oceans of the world under two spheres of influence, British and American. But will the other maritime nations agree

to this Anglo-American joint suzerainty over the ocean? And what of the air? Will that, too can that, too, be divided?

Debt of the Educated, to the Nation

We have repeatedly tried by speech and writing to impress on the minds of the educated classes the fact that they are indebted to the nation particularly to the masses, for the education they have received, and that therefore, if they try to educate the masses by personal service or by pecuniary contribution, they only repay their debt—they are not benefactors and patrons. That this is not a figurative statement but an actual debtor and creditor account has also been repeatedly shown by us in speech and writing. We shall illustrate our observation again by taking some figures from the Report on Public Instruction in Bengal for the year 1927-28. The table given below, compiled from this report shows the average annual cost of educating a student in different colleges and the share of the cost borne by provincial revenues.

College	Cost per student	Share borne by
		Prov Rev
Presidency	Rs 477 7	Rs 301 5
Princa Intermediate	431 9	343 4
Hooghly	311 7	427 2
Sanskrit	556 3	509 0
Krishinagar	523 8	435 6
Chittagong	208 4	120 3
Rajshahi	283 8	192 6
Islama	248 2	149 2
Aided Colleges	134 7	23
Unaided Colleges	105 9	nil

The share of the average annual cost of educating a student borne by provincial revenues comes from the taxes paid by the people, another share in all classes of colleges being borne by the students in the shape of fees. That portion of the taxes which is paid by wealthy people is really paid in the last resort mostly by the peasants and other labourers. Hence all persons educated in Government and aided colleges are literally debtors to the nation. Their debt is not measured only by the share of the annual cost of educating them borne by provincial revenues. Large sums were needed for the college and hostel buildings, for furnishing the libraries with books and for purchasing the scientific apparatus in the laboratories. The tuition fees paid by the students did not provide these sums even in part. These sums also are part of the students' debt to the colleges and, therefore, to society.

Another fact has to be taken into consideration. In Aided Colleges and even in Government Colleges some teachers receive inadequate salaries. If they had been as highly paid as the European and the adequately paid Indian professors, the cost per student and the share borne by the provincial revenues would have increased. So the enforced sacrifice of these underpaid teachers really means an addition to the debt of the students.

As regards the unaided colleges, it is true that no share of the current annual cost of educating students there is borne by the provincial revenues. But that does not mean that provincial revenues, and hence the people, do not contribute anything towards the cost of educating their students. In 1927-28, "A sum of Rs. 1,20,000 was distributed by Government, as previously, on the recommendations of Calcutta University among private colleges mainly for the improvement of libraries and laboratories. In addition to this amount a sum of Rs. 2,80,423 was spent by Government directly in giving capital and maintenance grants to non-Government Arts colleges during the year under review." During some previous years also such grants were made from Government revenues, that is, from the money paid by the people as taxes. For these large sums the students of unaided colleges are indebted to the masses mostly.

different items of income are derived in the last resort from the people. The cost of the buildings, laboratories, libraries, etc., belonging to the University, was met also in the same way by the people. Many university teachers are poorly paid, getting in some cases salaries, smaller not only than those of teachers in Government Colleges in the provincial service, but even than those of professors of the same or even inferior standing in some unaided private colleges. As explained before in the case of underpaid teachers in unaided colleges, post-graduate students are debtors to these underpaid postgraduate teachers.

Assembly Bomb-throwers

Batukeswar Dutt and Bhagat Singh, the two young men who throw into the Legislative Assembly in Delhi two bombs which did not and could not seriously hurt anybody and fired shots in the air, have been sentenced to transportation for life. Such a terrific sentence was quite uncalled for and is calculated to secure public sympathy for these misguided young men and make heroes of them.

Racial Discrimination in Jails

The note of dissent written by two members of the committee appointed to inquire into and report upon jail administration in the U. P. has served to draw attention to the racial discrimination in favour of "Europeans" (including Eurasians) in the jails there and probably in other provinces also. Pandit Jagat Narain and Hafiz Hidayat Hussain, the writers of the note, state that European prisoners are more comfortably housed, have some furniture, are given more clothing and more decent clothing, some bedding and more blankets, and better food of greater variety and greater in quantity than Indian prisoners. Moreover, the general arrangements to enable Indian prisoners to answer calls of nature in their cells are more suited to beasts than to men, whereas arrangements for the same purpose for European prisoners make it possible to observe health rules and decency. This is what can be gathered from the note of dissent. The dissenting members do not want European prisoners to be treated worse than they are, but they rightly contend that Indian prisoners, not only of the higher classes of society but of humbler ranks as well, should have

the consideration of the Education Department of the Government of Bengal.

To carry out the scheme, a medical officer will be appointed on the staff of every institution. He will investigate all matters relating to the health and physique of school students and co-operate with the physical instructor regarding games.

The sooner the scheme is carried out the better. The plan ought to have been adopted long ago.

A Labour College in Bombay

We look forward with hope to the establishment of a Labour College in Bombay under the auspices of the Prarthana Samaj. The details given below are taken from the *Subodha Patrika*.

The subjects that will be taught will include Economics, Sociology, Trade Union movement and Co-operative movement. The object of the College is twofold: to create a general intellectual awakening among the factory workers and to train capable men and women for sane labour leadership. Our experience of the last few years has taught us that anybody with a set of imposed ideas on Labour could become a labour leader provided he used sufficiently strong language against the Government and capitalists of the country. Such leadership is fated to failure because what holds good in the case of fully industrially developed countries, does not hold good in the case of India; and secondly, whatever shape the labour struggle may take, it must be thoroughly constitutional in its activities, that is, it must bring about the desired change by legislation and not by violence and bloodshed. It is the hope of the organizers of the College that it will turn out men and women equipped for labour leadership of a type that is thoroughly constitutional.

The institution is being started under the direction of a religious body like the Prarthana Samaj. The Samaj has taken an active interest in all the problems of social reform and, as Mr. Natarajan has said, labour ought to be one of the problems of social reform. Any way it is high time that we apply the principles of liberal religion to the solution of our economic and industrial problems. From the days of Raja Ram Mohan Roy down to the present time, the Brahmins and Prarthana Samaj have been engaged in all questions of religious, social and even political reform. Now the time has come when we have to take up the question of economic reform and it is through this the inauguration, and inspire the hearts of the younger generation.

The present labour movement in Bombay, we are told is mostly in the hands of men who have no organic conception of society as a whole.

The movement of social development, according to them, is based upon class consciousness, so that conflict between one class and another is a necessary part of social evolution. According to this view, economic power will be concentrated in one or the other class according to circumstances. Now,

it is possible to evolve social conditions which will make it possible for this economic power to be equally distributed among all classes. And this can be achieved not when people become class-conscious but when they become declassified, that is, rise above all class distinctions; class consciousness simply reverses the order of society so that the highest is brought to the ground and the lowest raised to the position of the highest, a process which is incompatible with true democracy. To found an economic and industrial system on a truly democratic basis is a task which cannot perhaps be achieved in a few years and yet the intended College may serve as a beacon light amid the surrounding darkness guiding the generations to come in the path of right progress and right living.

In this College only those teachers will be employed who are imbued with the spirit of liberal religion, but no attempt will be made to enforce any specific religious teaching upon the students. The general outlook of the College will be theistic.

This college will most probably supply a great need in the city of Bombay.

The lectures would be given in a very simple form, omitting, as far as possible, all technical terms, so that the students who have studied English up to the Matriculation standard may avail themselves of them. If the College gets a sufficiently large number of students from the mills, it is possible to arrange lectures to be given in the vernacular of the people.

In addition to the regular classes that will be held in the evenings, the College will organize right types of trade unions and labour clubs and arrange public lectures by eminent men on the varied problems of labour. At this stage it will not be possible for this institution to address itself directly to the mill-hands and other factory workers but it can pick up the best and the most intelligent among them to train for their future work of organizing and guiding labour. Some of the higher paid and higher educated workers in the mills will be able to take advantage of this opportunity.

Needless to say, this institution will not be a college in the ordinary acceptation of one affiliated to a university and teaching for degrees.

Charkha, Handloom and Exigencies of War

The use of the charkha and the handloom has been advocated on various grounds. But that their use may prove serviceable during the exigencies of war is not generally borne in mind. Yet in any possible world-wide war in the future, countries like India without a sufficient number of power-looms and spindles may find them invaluable as a means of protection against shortage of cloth. This is brought home to us by some passages in an address on "The Present Situation in the Textiles," delivered by Mr. Ethelbert Stewart, United States Commissioner of Labour Statistics, before the Labour College of Philadelphia, of which he has kindly sent us a copy. Says he:—

But the injury to society is not confined to monetary loss alone. Strained human relations caused by strikes and lockouts are also to be greatly deplored. They effect a breach in the ranks of Indians, who must all present a united front to win back their freedom. At this distance, we are not able to correctly understand the situation. But in the interests of all the parties concerned and for safeguarding the cause of Indian industry in general, the sooner an amicable settlement is arrived at the better. Such a settlement should be possible through the combined efforts of the labour leaders, the representatives of the mill-owners and Government.

Opponents of Widow-marriage at Karachi

A recent public meeting, held at Karachi for the discussion of the desirability of widow-marriage, was broken up by the rowdiness of its opponents. These men are pests of society.

To meet rowdiness with rowdiness would not be justifiable. But when bad men combine, there should be sufficient cohesion, courage and physical strength among the promoters of good causes to frustrate the efforts of rowdies without the aid of the police.

meetings these have to be habitual wearers of Khadi. This clause may be a hindrance to the proper running of the Congress machinery but not to setting it up. Whether the clause should or should not be removed from the constitution is a question which may be specially re-examined by the Congress and debated on its merits. If even at this hour Congressmen do not believe in Khadi, the cause should certainly be removed. If believing in Khadi they do not want it in the constitution, it should also go. If it is retained, for the good name of the Congress it should be strictly enforced.

We confess we do not exactly understand what is meant by being "*habitual wearers of Khadi*" "*at the time of voting at Congress meetings.*" If a man is completely clothed in Khadi so long as he is present at a Congress meeting, will he be considered a habitual wearer of Khadi? If not, for how long a period before and after Congress meetings should he be a *habitual* wearer of Khadi to be entitled to vote at Congress meetings? Our objection, not on personal grounds but on grounds of principle, to the insistence on the wearing of Khadi would remain even if the rule were interpreted to mean that Khadi must be worn at least at the time of voting.

MR. C. F. ANDREWS AND
MR. ROBERT RUSSA MOTON

Mr. Edward Carpenter, The Distinguished
Author whose Death is Announced in
the Dailies dated June 30, 1929

collego in the province, and of schools there is only one. The arrangements for technological education are quite incomplete and inadequate.

Women's Education in Bengal

The arrangements for the education of girls and women in Bengal are utterly inadequate. While there are several high schools for boys in even the most backward districts, there are districts which are still without a single high school for girls. There ought to be at least one completely equipped Government Girl's High School in every district.

In the District School Boards of every district there ought to be an adequate number of women members.

The Associated Chambers on Law and Order

People thought a miracle had happened when the [European] Associated Chambers of Commerce declared themselves in favour of the transfer of Law and Order to a Minister, of course an Indian. The Chambers have since corrected their mistake. *The Amrita Bazar Patrika* is, therefore, right in observing:—

'We hope now the European residents of India will eat their dinners with more relish and dance and sleep with a greater freedom from anxiety. The Associated Chambers of Commerce which in a spirit of self-forgetfulness advocated the transfer of Law and Order to the popular representatives have cried "toha" and swallowed their own words. In a letter addressed to the Secretary, Indian Statutory Commission, London, the Association has said that the majority of its members—various Chambers in the country—have now come to the conclusion that the transfer will be followed by dangerous consequences to the cause of peace and good Government in the land. It can by no means be countenanced.'

Our contemporary adds:—

This is just like the European Associated Chambers. Their previous action was rather a puzzle. As a matter of fact the Indian public were taken by a pleasant surprise when they found a body of British exploiters from whom far-seeing statesmanship was the last thing to expect raising their voice in support of a measure which amounted to the biggest curtailment of the Bureaucratic powers. But these short-sighted British merchants are mistaken. They want to perform the impossible task of successfully resisting the demands of a nation. They are anxious to keep India for ever as a preserve of the British power, 'a cattle farm' of England in the words of John Stuart Mill. They will be disillusioned.

Dr. Dey's Temporary Appointment

The appointment of Dr. B. N. Dey temporarily, for four months, to the post of Chief Engineer of the Calcutta Corporation, during the absence on leave of Mr. Coats, the permanent incumbent, has been refused sanction by the Bengal Government. The objections of the latter, assuming that they are correct, seem to us to be trivial. Could not Government guess that as the Corporation would have soon to find a permanent successor to Mr. Coats, his term of contract being almost over, they were bringing out a highly qualified Indian from England in order that he might be that man? Perhaps Government has guessed as much and does not want an Indian to get the post. If it be not permanently filled up by promotion—there is no reason why it must, a suitable candidate must be chosen who had previously nothing to do with the Calcutta Corporation. He must take some time to get acquainted with the routine work of the office. That Dr. Dey must also take that amount of time is no valid objection, in view of the probable fact that he may become the permanent incumbent shortly after the period of officiating incumbency has expired. It is amusing to find a Bengali like him, who grew up to manhood in the country and received his preliminary education here, described as an outsider. Why, he knows all about the habits of his people and the details of their houses, sanitary arrangements, the thoroughfares and lanes and plague-spots of Calcutta, and therefore he would take less time to take in the situation than a real outsider. As for Calcutta's engineering problems, they are not all quite *sui generis*. Dr. Dey knows a bit of his profession.

One wonders if the Bengal Government would have raised any objection if Dr. Dey had been an Englishman.

P. K. Telang

The death of Mr. Pandharinath Kashinath Telang is a loss to Indian journalism and to the cause of Indian progress in general. *New India* writes:—

With him *New India* had a special link, which was forged when he gallantly stepped in to fill the breach caused by the interment of Dr. Bessant and two of her colleagues, and, as editor of *New India*, kept the Home Rule flag flying jauntily during those critical months of 1917. His association with the paper was renewed in 1925, when he came again to Madras from Benares, his headquarters during the main part of his career.

the purpose of a brake to the unnatural actions of the Congress whenever it wanted to submit to the ever-increasing communal-demands of the Mussalmans.

Age of Consent Committee's Conclusions

The Tribune of Lahore writes :

According to the Mussoorie correspondent of the *Tribune*, the report of the Age of Consent Committee, which is unanimous on the main points, recommends 14 years as the minimum marriageable age for girls, 15 years as the age of consent in marital cases and 18 in extra-marital cases. If the information of the correspondent is correct, the

recommendations of the Committee, while they will not satisfy the more ardent reformers, are certainly an advance on the existing state of things. Fourteen years as the minimum marriageable age for girls is not an ideal thing but it would put a check to marriage before that age. Some difference of opinion may also exist among the reformers as regards the separation of the age of consent from that of marriage; but the Committee's recommendation, fixing 18 years as the consent age in extra-marital cases, is really welcome. It remains to be seen what attitude the Government of India, who have got an unenviable reputation for being lukewarm in matter of social reform, will adopt in respect of the report.

"Uncle Sham" *

The only excuse the author has for writing such a book is that it has been written under grave provocation.

Books of this type serve no purpose excepting the very doubtful one of retaliation. But retaliation is never a noble and elevating pursuit. Moreover, the author, along with many of our countrymen, forgets that it was not the American people who hired Miss Mayo to write her vile books, but probably some syndicate of Britishers. A research into the mental and moral perversions of a nation is no doubt of great value, if it be impartially done. But such impartiality can only be assured if the workers be a body of unbiased experts—preferably citizens of the nation under review. Such was the work of the Sydenham Commission on venereal diseases, held in Great Britain, and such would be—let us hope—that of the Wickersham Commission, recently instituted by President Hoover to enquire into the causes of lawlessness now prevailing in the U. S. A. Only those are entitled to criticize a people in these matters, who have lovingly served or are prepared so to serve that people.

The author has built up a very strong case against the people of the U.S.A., on the grounds of mental and moral depravity. But what nation or race is there on earth—with the possible exception of a few savage tribes who have preserved their pristine purity through isolation—that could not be thus indicted by the skillful manipulation of facts and fables leavened out with large doses of gross lies? We in India have had a taste of such work from the pens of two mercenary sexual maniacs, Abbe Dubois and Katherine Mayo.

The book under review presents the lurid picture of a nation steeped *en masse* in riotous debauch, and lawlessness, but somehow the deductions of the author seem to us to be at variance with other facts such as the work of seers like Emerson and Thoreau, educationalists like Charles Eliot and John Dewey, idealists like Abraham Lincoln and Woodrow Wilson, friends of subject peoples like J. T. Sunderland, and John Haynes Holmes, organisers like Gorgas, intrepid explorers like Peary and Byrd, aviators like Lindbergh and that of a

host of others. Only the other day, for example, we were stirred to the depths on reading of the tragic end of the extremely brave—if reckless—venture of a very courageous American gentleman at the lone ascent of Kinchinjunga. Would the author say that such high idealism, rigid adherence to principles and stern Spartan courage are the natural outcome of a degraded civilization? He cannot ask us to believe that such cases are but freak exceptions, since the names alone of such noble sons and daughters of the United States would fill a fair-sized book.

The fact is that a crime wave—however high the peak—does not prove that a nation is inherently criminal, any more than a heat wave proves that a country is within the torrid zone. We really have to judge, by the reaction of such events on the people. And judging from the information available the thoughtful American—who after all is the only one that counts in the cause of civilization, is very strongly resentful at the pass his country has been brought to through the actions of the lawbreakers and debauchees of his land.

The author does indeed say in a few brief sentences that there is a better side to American life. But what impression can this leave on the readers' mind in the face of a deluge of damatory and defamatory matter?

Coming to the question of the effect on its readers, there is another point to keep in view. Such a book would have the tendency to make the unthinking among the author's countrymen feel quite satisfied with themselves, nay, even to fill them with a sense of moral impeccability as a nation. Such a psychological result cannot be conducive to the good of our country. There is no alchemy by which the demerits of a foreign people can be transmuted into the merits of our own.

If the author's object was to prove that no American can afford to cast aspersions on the private or public morals of other nations' with impunity, then he has amply succeeded. In that case the book is meant for people of the type of Miss Katherine Mayo. But not having been cursed with the depraved fifth-grubbing instincts of that detestable female, we cannot say that we have enjoyed reading this book.

K. N. C.
